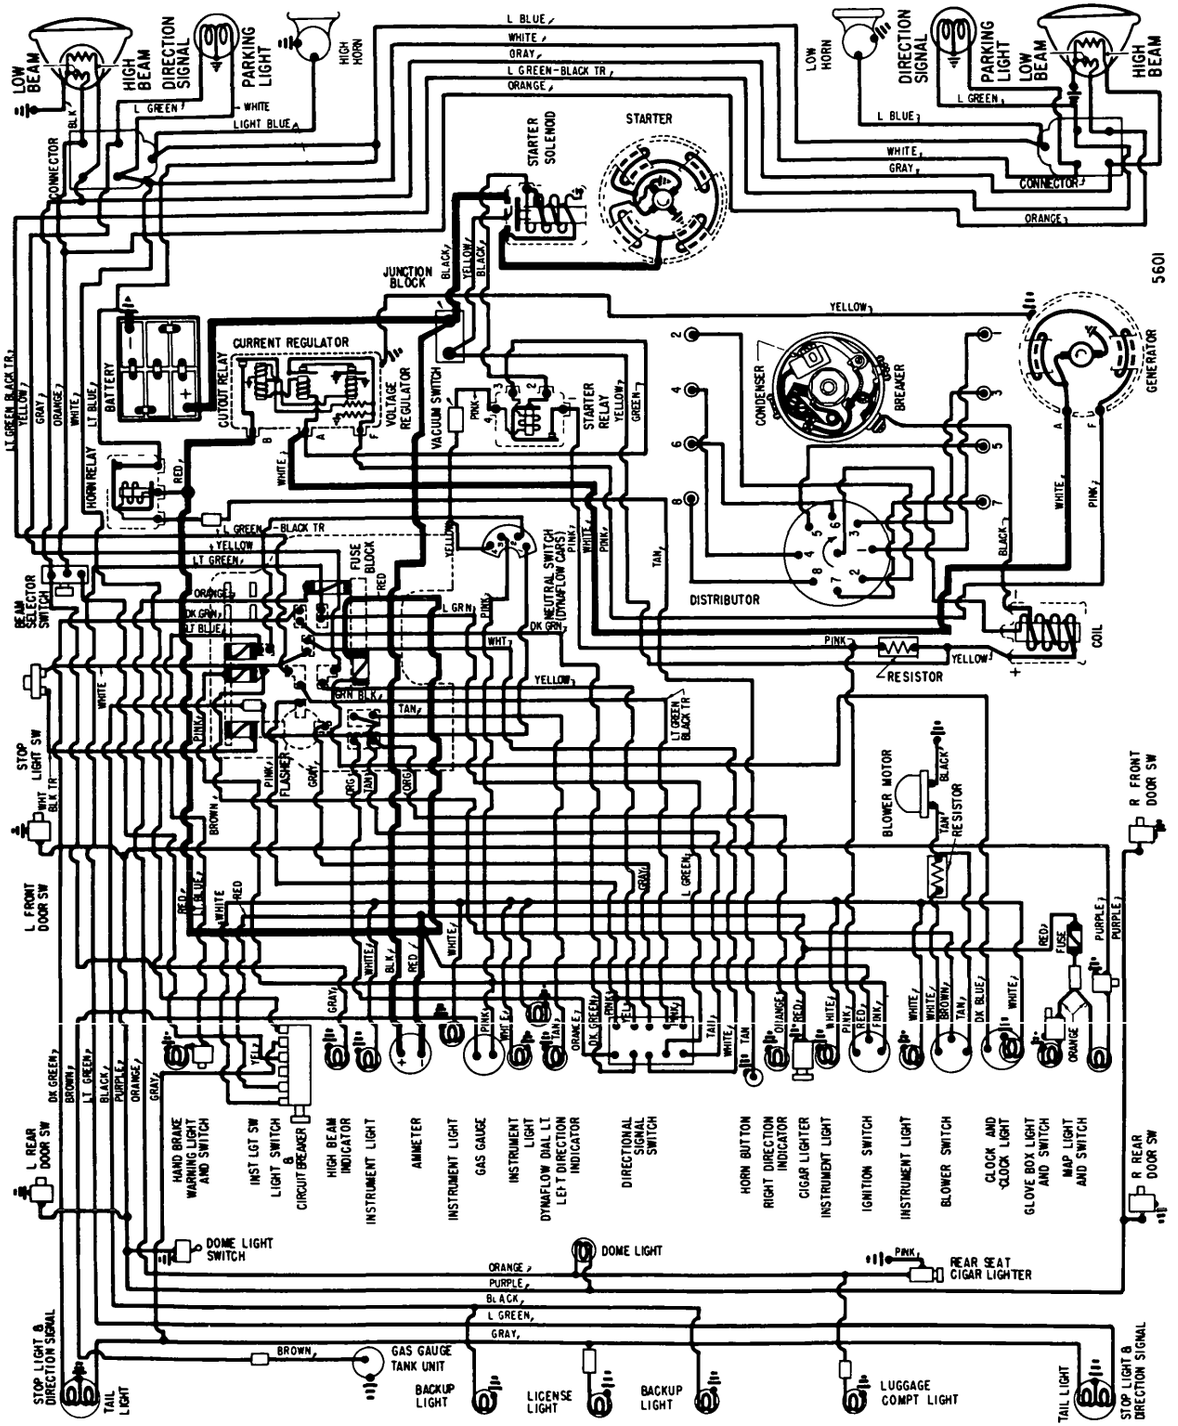
►*1956 SERIES 40 & 60 FAILURE TO OBTAIN FULL THROTTLE CORRECTION: If a Series 50 & 70 accelerator pedal stop is installed on Series 40 & 60, throttle cannot be opened fully. Series 50 & 70 stops is 1 1/8" long. Series 40 & 60 stop is 5/8" long.*



►***WATER IN AUTOMATIC CHOKE HOUSING CORRECTION:* This condition is caused by improper location of heat tube which is pressed into exhaust manifold. Correct by replacing exhaust manifold.**

DYNAFLOW THROTTLE LINKAGE

THROTTLE LINKAGE ADJUSTMENT: Adjust idle speed to 450 RPM. Disconnect throttle return spring. Disconnect throttle rod from lever on equalizer shaft. Back off stator pick-up lever adjusting screw on Dynaflow cars until screw end is flush with lever. Adjust throttle rod at carburetor so 5/8" of thread is exposed. Press accelerator against floor mat, hold throttle wide open and hold rod at hole in operating lever. Adjust lever on equalizer shaft to obtain 1/16" distance between rod and hole in lever. Tighten clamp and connect rod. With throttle closed to idle position, a minimum clearance of 1/16" must exist between equalizer lower lever and stop lug in mounting bracket. Adjust operating rod as necessary to obtain this clearance. On Dynaflow cars, depress accelerator pedal against floor mat, then turn stator pick-up lever adjusting screw against lever until all vertical play is removed from stator operating rod. Turn screw back 1/2 turn.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

DASHPOT ADJUSTMENT (Dynaflow Cars): Adjust dash pot only after throttle linkage has been adjusted and engine is at normal operating temperature. Rotate fast idle cam to extreme cold idle position (choke closed), hold throttle lever against .030" feeler gauge placed between stop screw and highest step of fast idle cam Adjust dashpot until it just clears arm of throttle lever, tighten locknut. With transmission in Direct Drive and brakes firmly applied speed engine up to about 1500 RPM and immediately release throttle, noting engine operation as throttle valves close. If engine stalls from too rapid closing of throttle valves, move dashpot forward until its action prevents engine stalling. If excessive time is required for throttle valves to reach closed position, move dashpot rearward Tighten locknut after each adjustment If proper control cannot be obtained by adjustment, replace dashpot.

CARTER 2-BARREL WGD
2378S (Synchro-mesh), 2400S (Dynaflow)

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7. LEFT barrel 2-3-5-8.*
Idle Setting– ¼-1¼ (2378S), ½-1½ (2400S) turns open Adjust both screws alike. Turn screws out for richer mixture
Idle Speed–450 RPM (Selector lever in Neutral on Dynaflow Cars)
Float Level–¼" (Gauge T109-31) between top of float (at center) and bowl cover.
Fast Idle Setting: .015" throttle opening or clearance between valve and wall on side opposite idle ports with choke valve tightly closed. Adjust by bending choke connector rod at lower angle.
Automatic Choke Setting: Centered (on index).
►*OTHER DATA: See "Carter WGD Carbur tors" in Carburetion Section.*
Dynaflow Throttle Linkage Adjustm nt: *S CARBURETOR above.*
Fuel Pump Pressure: 4½ - 6½ lbs. at pump outlet.

STROMBERG WW
Code 7-105 & 7-105A

►*1956 SERIES 40 (EARLY) LEANNESS CORRECTION (Cars with Code 7-105 Carburetors):* Install carburetor kit, Buick Part No 1392722 consisting of new idle tubes, main metering jets, and main discharge jets After modification, change Code No to 7-105A
►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7, LEFT barrel 2-3-5-8*
Idle Setting–1¾ turns. Adjust both screws alike. Turn screws out for richer mixture.
Idle Speed–450 RPM (Selector lever in neutral on Dynaflow Cars)
Float Level–3/16" below top edge of bowl (without gasket), with needle valve seated
►*OTHER DATA: See "Stromb rg WW (Buick) Carburetor" in Carburetion Section.*
Dynafl w Thr ttl Linkag Adjustm nt: *See CARBURETOR ab v .*
Fu l Pump Pr ssur : 4½ - 6½ lbs. at pump outlet.

CONTINUED ON NEXT PAGE

Form 22 A

CONTINUED FROM PRECEDING PAGE

CARTER WCFB 4-BARREL 2347S

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 1-4-6-7, LEFT barrels 2-3-5-8.*
Idle Setting—1 1/8 turns open Adjust both screws alike. Turn screws out for richer mixture.
Idle Speed—450 RPM with Dynaflow Selector lever in neutral
►*OTHER DATA: See "Carter WCFB Carburetor" in Carburetion Section.*
Dynaflow Throttle Linkage Adjustment: *See CARBURETOR above.*
Fuel Pump Pressure: 4½ - 6½ lbs. at pump outlet.

ROCHESTER 4GC 4-BARREL 7009200

►*STUMBLE ON LIGHT ACCELERATION (DURING COLD WEATHER) CORRECTION:* Change the accelerating pump spring from .041" to .042" wire diameter. *See "Rochester 4GC Carburetor" in Carburetion Section.*

►*STALLING OR LOADING UP WITH COLD ENGINE:* Install new Automatic Choke parts. See "Rochester 4-Barrel Carburetor on Pg. 82. NOTE: Carburetors stamped "C" on lower left corner of brass tag have these new parts and do not require modification.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 1-4-6-7, LEFT barrels 2-3-5-8.*
Idle Setting—Adjust idle mixture screws for smooth idle and recheck for correct idle speed.
Idle Speed—450 RPM with Dynaflow Selector lever in neutral.
►*OTHER DATA: See "Rochester 4GC Carburetor" in Carburetion Section.*
Dynaflow Throttle Linkage Adjustment: *See CARBURETOR above.*
Fuel Pump Pressure: 4½ - 6½ lbs. at pump outlet.

CARB. EQUIPMENT

Fuel Pump: AC. **Replacement No.** 4304.
Pressure - 4½ - 6½ lbs. at pump outlet.
►*LIGHT ENGINE KNOCK CORRECTION & FUEL PUMP ARM PRODUCTION CHANGE:* A light engine knock caused by early pressed steel type fuel pump arm striking timing chain cover can be corrected by replacing fuel pump with one having a forged arm, or pump with later type pressed steel arm (identified by daub of green paint on cover).
See "Fuel Pumps" in Carburetion Section.
Gasoline Gauge: AC. Electric type.
Dash Unit - AC No. 1518438 (Red & Green background on dial), No. 1518765 (Plain Black background on dial).
Tank Unit - AC No. 1518138 (Series 40 & 60), No. 1518137 (Series 50 & 70).
See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco 3KMR62. *12 Volt.* 9 Plate, 62 Ampere Hour capacity (20 hr. rate).
Ground Terminal - Negative (—) terminal.
Engine Ground - Between engine and cowl.

STARTER

Delco-Remy 1107646. *12 Volt.* **Armature** - 1926626.
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counter-clockwise at commutator end.
Brush Spring Tension - 35 ozs. min.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
11 ft. lbs.	Lock	5.2	460

Starting Switch: Delco-Remy Solenoid 1119760. *12 Volt.* Starter solenoid controlled by separate relay, Delco-Remy 1116876, and Accelerator Vacuum Switch (on carburetor). *See "Starter Controls" in Electrical Section.*

Accelerator Vacuum Switch: Carter 192-11U (Carter & Stromberg 2-Barrel), 192-21U (Carter 4-Barrel).

►*STARTER RELAY PRODUCTION CHANGE:* A new starter relay, Part No. 1116921 (made waterproof by dipping in vinyl plastic) replaces starter relay, Part No. 1116876.

Accelerator Vacuum Switch Setting—*See data on each carburetor type in Carburetor Section.*

Dynaflow Neutral Safety & Back-Up Light Switch: Delco-Remy 1998101. Mounted on steering column jacket under cowl. Connected in starter control circuit so that starter operative only when selector lever in "N" Neutral, or "P" Parking position.

Adjustment—*See "Buick Dynaflow Drive" in Transmission Section.*
►*NEUTRAL SAFETY & BACK-UP LIGHT SWITCH CONNECTION CAUTION: Wires must be connected in correct order as shown on wiring diagram.*

GENERATOR

Delco-Remy. *12 Volt.* As follows:

Model	Generator	Armature
Early (Without Air Cond.)	1102008 ①	1923535
Late (Without Air Cond.)	1102053 ②	1932900
All (With Air Cond.)	1102051 ②	1932900

①- With pulley. Delco-Remy 1102005 (without pulley).
②- With pulley. Delco-Remy 1102061 (without pulley).

Performance Data - Cold

Generator	Amperes ①	Volts	RPM
1102008	30	14	2150
1102051	35	14	2300
1102053	35	14	2300

①- Not maximum output. See Regulator.

Brush Spring Tension - 24-32 ozs
Field Current - 1.48-1.72 amps. (1102005 Gen.), 1.62-1.82 amps. (1102051 & 1102053 Gen.). All at 12.0 volts.
Rotation - Counter-clockwise at commutator end.

Belt Adjustment: 3/8" belt deflection with normal thumb pressure midway between generator and fan pulleys.
NOTE: On air conditioned cars, deflection should be ½" midway between fan and compressor pulleys.

REGULATOR

Delco-Remy No.	Use with Generator No.
1119003	1102008
1119168 ①	1102051
1119162	1102053

①- Delco-Remy No. 1119162 Regulator is service replacement for No. 1119168.
►*REGULATOR GROUNDING CORRECTION: See "Delco-Remy 1119000 Series Regulator" in Electrical Section.*
►*NOTE: Specifications below are for "Normal" settings. See "Delco-Remy 1119000 Series Regulator" in Electrical Section.*

Cutout Relay
Cuts In - 11.8-13.5 volts (hot).
Contact Gap - .020"
Air Gap - .020" (with contacts just closed).

Voltage Regulator
Setting - 13.8-14.8 volts (hot).
Air Gap - .075" with armature pressed down to point where contacts just opening.
Checking & Adjusting - *See Electrical Section.*

Current Regulator
Setting (1119003) - 30 amperes (hot).
Setting (1119162 & 1119168) - 35 amperes (hot).
Air Gap - .075" with armature pressed down to point where contacts just opening.
Checking & Adjusting - *See Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*
►*DIRECTION SIGNAL SWITCH STICKING CORRECTION: See "Electrical Notes" in Buick Special Data.*
Lighting Switch Removal: Disconnect battery cable from junction block and disconnect wires from lighting switch. Pull switch knob out to last notch, then depress spring loaded latch button on switch body while pulling rod and knob assembly out of switch. Remove switch mounting nut with wrench J1589 and remove switch and escutcheon from instrument panel.

Stop Light Switch: (Location)—On brake pipe distributor fitting near master cylinder on left side at transmission support.

FUSES: Located on fuse panel under cowl unless otherwise specified.
Back-Up Light - 10 amps.
Dome & Luggage Compartment Light - 20 amps.
Electric Clock - 2 amps.
Heater & Defroster - 20 amps.
Parking Brake Warning Light - 10 amps.
Stop & Direction Signal Lights - 9 amps.
Cigar Light - Special fuse in back of lighter.
Air Conditioner Motor - 15 amps. (in wiring connector near switch).
Air Conditioner Blower - 20 amps. (in fuse block)
Air Conditioner Clutch Control - 5 amps. (in fuse block).
Glove Box Light - 2 amps. (in wiring connector).

CIRCUIT BREAKER: 22 amperes. Vibrating type on Headlight Switch.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

HORNS: D lc -R my. No. 1999769 (Low Note), No. 1999770 (High Note). *12 Volt.*

H rn Relay: Delco-Remy 1116781. *12 Volt.*

Contacts Close—2.75-4.0 volts.
Contact Gap—.025". **Air Gap**—.015" (closed).

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own 90° V8 (All Series).

Series	Bore	Stroke	Displacement
All	4.00"	3.20"	322 cu. ins.

Series	Comp. Ratio	Rated HP	①Dev. HP
40 (Synchro-mesh)	7.6-1	51.2	
40 (Dynaflow)	8.9-1	51.2	220
50, 60, 70	9.5-1	51.2	255

①- At 4400 RPM.

C mpression & Vacuum Reading—*See TUNE-UP.*

►*ENGINE IDENTIFICATION NOTE:* See Engine Number for suffix digit designating each series. Series 40 engine also has vertical groove 3/8" wide and 1/8" deep) cast in engine number pad approximately 1¼" to rear of pad centerline.

►*ENGINE COMPRESSION RATIO NOTE:* Same cylinder head used for all engines. Different compression ratios on Series 40 is secured by the use of different pistons. Head gaskets are the same on all models (.015" thick). *See Piston data below.*

►*ENGINE DETONATION (Low Octane Areas):* If octane rating of available fuel results in detonation complaints, this condition can be corrected by lowering the compression ratio as follows:
Series 40 (Synchro-mesh) - 7.35 - 1 compression ratio can be obtained by using cylinder head gasket, Part No. 1343995 (.045" thick).
Series 40 (Dynaflow) - 8.4-1 compression ratio can be obtained by using cylinder head gasket, Part No. 1343995 (.045" thick).

Series 50, 60, 70 (Dynaflow) - 8.4-1 compression ratio can be obtained by using cylinder head gasket, Part No. 1343995; and engine pistons, Parts No. 1392566.

►*ENGINE KNOCK AT IDLE SPEED OR UNDER LIGHT LOAD CORRECTION (Due to loose harmonic balancer):* Check the balancer hub flat washer to see that it does not bottom against crankshaft, and that balancer bolt does not bottom in tapped hole in crankshaft. If either or both conditions exist, install a second flat washer between present washer and balancer hub, so that clearance exists between washer and crankshaft.

►*FAN SHROUD RATTLE CORRECTION:* Drill a 9/32" hole in bottom of shroud approximately 5/16" from edge of shroud and install a rubber bumper, Part No. 503865.

►*EXHAUST MANIFOLD STUD BREAKAGE CORRECTION:* When installing a new stud, drill out the old hole to .368" (size "U" drill) and thread with a 7/16"-14 tap. Install a 7/16" stud and file out flange holes to accommodate the larger stud.

ENGINE MOUNTINGS: *See "Engine Mountings" in Buick Special Data*

OIL PAN REMOVAL: Disconnect steering idler arm bracket from right frame side rail and lower steering linkage for clearance, then remove pan. *CAUTION*—Do not allow bracket to turn on idler arm (will change toe-in adjustment).

CYLINDER HEAD & GASKET: Same cylinder head and gasket used on all engines (except as noted in "Engine Detonation Note" above). Different compression ratios secured by use of different pistons as noted under "Pistons" following.

Cylinder Head & Gasket Installation—*See "Cylinder Head & Manifold" in Buick Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Buick Special Data.*

PISTONS

Pistons—Aluminum alloy, dome head, cam ground, full skirt with transverse slots in oil ring groove, Anodized finish.

►*PISTON REPLACEMENT NOTE:* Different pistons used as follows:

Model	Std. Size Piston No.
Series 40 (Synchro-mesh)	Buick No. 1392564
Series 40 (Dynaflow)	Buick No. 1392566
Series 50, 60, 70 (Dynaflow)	Buick No. 1392565

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with ¼" long dash following engine number have .010" Oversize Cylinder Bore & Pistons. Standard cylinder bore size: (All Models) 3.9985-4.0015".

Removal—Pistons and rods removed from above.

►*CAUTION*—Mark pistons, rods, and bearing caps with cylinder number before removal to insure correct reinstallation. Use Rod Bolt Guides (short guide J-5239-1 on lower bolt, long guide J-5239-2 on upper bolt) to retain bearing shell and assist in pushing assemblies out.

Fitting New Pistons: Clearance .0014-.0020". If micrometer used on pistons, measure at top and bottom of skirt 90° from pin hole (top diameter very slightly less than bottom in service). Use .003" x ½" x 12" feeler gauge to fit pistons with cylinder block in normal position. Insert feeler on lower side of bore 90° from piston pin hole. Pull to withdraw feeler should be 7-13 lbs. at 70°F. (piston and bore clean and dry).

Replacement Pistons: Standard ("High Limit" or maximum diameter production size) and .005", .010", .020", .030" Oversize. *NOTE*—Pistons furnished only with fitted pins.

Installing Pistons: Assemble rod in piston with oil spurt notch on same side as valve depressions in piston dome. *S e Rod Installation b low.*

PISTON PINS

Diamet r - .940". L ngth - 3.400".
Clearanc in Pist n-.003-.005", or easy push fit at 70° F.
Piston Pin R m val & Installation: *See "Piston Pins" in Buick Sp cial Data. CAUTION - Pist ns may b damaged if sp cial procedure and to ls not used.*
Replacement Pins: Std. size only. Fitted pins furnished with all new pistons.

PISTON RINGS

Ring	Width	End Gap	Sid Cl aranc
Compr	.078"	010-.020"	002-.004"
Oil	.186"	.015-.035"	0035-0095"

►*OIL RING NOTE.* Ring is three-piece (two rails and spacer) with expander. New rings are cemented assembly for ease in handling (will separate in service).

Replacement Rings: Production type rings furnished singly and in sets Standard & .010", .020", .030" Oversize. Special Service Ring sets furnished Standard (use up to .019" O.S.), & .020", .030" Oversize.

Installing Rings: Compression ring groove or bevel (on inner edge) upward. Oil ring expander gap ends should be at either end of piston pin (in unslotted portion of groove) and side rail gaps must be on valve depression side of piston (upward when installed in cylinder).

CONNECTING RODS

Length—6" **W ight**—22.16 ozs.
Crankpin Journal Diameter—2.249-2.250"
Out-of-round limit .0015".
Bearings—Durex 100A, steel backed, full precision type. Both halves interchangeable. No shims.
Clearance—.0002-.0023" (service limit .003").
Sideplay - .005-.012".

Replacement Bearings: Standard & .001", .002", .020", .021" Undersize. Size is stamped on back of bearing at or near tang.

Installing Rods: See Installing Pistons above. Install rods so valve clearance depressions in all piston heads and all spurt notches in all connecting rods are toward camshaft. *NOTE* - Rib on edge of rod cap will be on same side as conical boss on web of rod, and these marks will be toward the other connecting rod on same crankpin.

CRANKSHAFT

►*CRANKSHAFT & FLYWHEEL UNBALANCE OR VIBRATION (After replacement of parts - Synchro-mesh & Dynaflow Cars):* **See** *"Engin Balancing" in Buick Special Data.*

Journal Diameter—2.498-2-499". Five bearings.
Out-of-round limit .0015".
Bearings—Durex 100A, steel backed, full precision type. Both halves interchangeable. No shims.

BEARING NOTE—Bearing upper halves can be rotated out and in by using tool KMO-734 in oil hole.

Clearance - .0005-.0025".

Replacement Bearings: Standard & .001", .002" Undersize. *NOTE*—First four bearings identical and interchangeable. Rear bearing longer and flanged.

End Thrust: Taken by rear (#5) flanged bearing.
Endplay—.004-.008".

Crankshaft R ar Main B aring Oil S al: *Se "Crankshaft & Main Bearings" in Buick Sp cial Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Buick Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Buick Special Data.*

CAMSHAFT

►*CAMSHAFT THRUST PLATE & TIMING GEAR PRODUCTION CHANGE (APPROXIMATELY 5000 1956 CARS):* The camshaft thrust plate and spacer ring have been eliminated and the timing gear has been changed. If difficulty is encountered on these cars, install a standard type timing gear, spacer plate and thrust ring. The standard timing gear is identified by a round hub while supplementary gear has a cam shaped hub.

►*CAMSHAFT IDENTIFICATION NOTE & NON-INTERCHANGE CAUTION:* Camshafts are identified as follows: **Series 40 (Synchro-mesh Trans.)** - No grooves in land just forward of No. 3 camshaft bearing journal. **All Other Series** - Two grooves in land just forward of No. 3 camshaft bearing journal.

Journal Diameters—(1) 1.685-1.686", (2) 1.655-1.656", (3) 1.625-1.626", (4) 1.595-1.596" (5) 1.565-1.566". **Bearings**—Steel-backed, babbitt lined bushings. **Clearance**—.0005-.0035" (service limit .0015-.004").

End Thrust: Spacer ring installed on shaft between front bearing journal and thrust plate bolted to crankcase behind camshaft sprocket. **Endplay**—.004-.008".

Timing Chain: Link Belt. **Width** .688", **Pitch** .500" **Length** 26" or 52 links.

Camshaft Setting: Mesh chain on sprockets with two copper-plated washers (12 links apart) in line with "O" marks on sprockets with marks toward left side of engine. Turn camshaft so that keyway is straight downward, turn crankshaft so that #1 and #4 pistons are on top dead center, install sprockets and chain as an assembly.

Engine Front Cover Removal: *See "Engine Front Cover" in Buick Special Data*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Buick Special Data.*

VALVES

►*OIL FLOW REDUCTION TO VALVE MECHANISM NOTE:* Where the valve mechanism is receiving an excessive amount of oil and it is desirable to reduce the flow, a new plug having a .077" orifice can be installed in cylinder head. *See "Valve System" in Buick Special Data".*

►*VALVE ROCKER ARM PRODUCTION CHANGE:* A heavier type rocker arm with a relocated oil hole is now being used in production. The oil hole in the later type rocker arm is located in center of bearing casting and not in boss on rocker arm. The later rocker arm is completely interchangeable with early type.

Tappet Clearance: None in service (hydraulic).

Valve	Head Diameter	Stem Diameter	Length
Intake	1.750"	.3720"	4.704"
Exhaust	1.375"	.3715"	4.704"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	.378"	.002-.003"
Exhaust	45°	.378"	.003-.004"

Valve Seat Width—1/16" (3/64-5/64").

►*VALVE GRINDING CAUTION:* If height of valve stem end raised .075" by valve grinding, height must be reduced by grinding end of stem or replacing valve to insure correct operation of hydraulic lifter.

Valve Springs: Double springs used on all valves. Install springs with closed-coil end toward cylinder head.

Valve Spring Specifications

	Inner Spring		Outer Spring	
Valve	Lbs.Press.	Lgth.	Lbs.Press.	Lgth.
Closed	24-29	1.53"	43-48	1.5"
Open	58-64	1.15"	91-97	1.12"

Valve Guides: Drive old guides out from combustion chamber side using Driver J-269. Install new guides from top of head using Valve Guide Aligner J-5240-2 over guide hole and installer J-5240-1 to drive guide down until installer shoulder contacts top of aligner which will position guide correctly in head. Finish ream guides with Valve Guide Reamer J-129-3.

Hydraulic Valve Lifters: Barrel type.
Diameter—.8425". **Clearance in Block**—.0015-.003".
Lifter Overhaul & Testing - *See "Valve System" in Buick Special Data.*

►*VALVE GRINDING CAUTION: See Valves (above).*

Rocker Arm Assembly: *See "Valve System" in Buick Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Synchro-mesh Models

Intake Valve - Opens 25° BTDC. Close 77° ALDC.
Exhaust Valve - Opens 75° BLDC. Close 42° ATDC.

Dynaflow Models

Intake Valve - Opens 30° BTDC. Close 82° ALDC.
Exhaust Valve - Opens 78° BLDC. Close 44° ATDC.

Valve Timing Check—Timing chain cover must be removed to check chain and sprocket marks. *See Camshaft Setting under CAMSHAFT above.*

OILING SYSTEM

►***ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Buick Special Data.***

Crankcase Capacity: 6 qts. (refill), 8 qts. (dry engine). NOTE— 1 qt. additional for dry filter.

Normal Oil Pressure: 35 lbs. at 35 MPH.

Pressure Regulator Valve: In oil pump body. Not adjustable.

Oil Pressure Indicator - AC No. 1508362. Not electric.

Oil Pump: Helical gear (early cars), spur gear (later cars), in crankcase at rear of engine

Pump Overhaul—*See "Oiling System" in Buick Special Data.*

Oil Filter: Full-flow. On pad at right rear of engine. NOTE—Ball check valve in filter base by-passes oil directly to engine when pressure differential between inlet and outlet ports reaches 4½-5½ lbs.

Replacement Filter Element—AC No. PF-122.

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in rear end of valve lifter cover (air outlet) to which ventilator pipe is connected.

COOLING

►*FAN "OUT-OF-BALANCE" OR DRIVEN PULLEY CRACKING CORRECTION:* This condition may be caused by the counterbore in fan spacer being too shallow. Check to determine if the fan spacer is clamping fan driven pulley against water pump hub. If fan spacer does not clamp, deepen the counterbore to 3/8" using a 5/8" reamer, to provide clearance for water pump shaft.

Water Capacity: (Synchro-mesh Cars) 16.5 qts (without heater), 18 qts. (with heater); **(Dynaflow Cars)** 18.5 qts. (without heater), 20 qts. (with heater).

Pressure Valve: AC No. 850549 (7 lb.—Without Air Conditioning), No. 850559 (13 lb.—With Air Conditioning). Radiator Filler Cap.

►*PRESSURE VALVE NOTE:* ***A 13 lb. pressure valve (same as used on air-conditioned cars) may be used on cars without air conditioning, when operating in temperatures above 110°.***

Thermostat: Pellet type in water manifold above pump. (Std.) Buick No. 1391226 opens at 157-162°F. (High Temp.) Buick No. 1391225 opens at 177-182°F.

Water Pump: Packless, sealed ball bearing type.
See "Water Pumps" in Buick Special Data.

Pump Removal—Remove fan blade assembly, spacer, and pulley from pump shaft hub, then remove pump cover assembly and gasket from timing chain cover.

Temperature Gauge: AC No. 1513110 (Cars without air conditioning). No. 1513392 (Cars with air conditioning). *See "Temperature Gauges" in Miscellaneous Section.*

CLUTCH

►*CLUTCH EQUALIZER ASSEMBLY & ENGINE BRACKET INTERFERENCE CORRECTION:* Grind 1/8" from end of equalizer shaft nearest engine and grind off ¼" from both ends of the reinforcing ridge on equalizer engine bracket. Check to see that the long side of the clutch over-center spring extension is upward (this may be installed upside down).

Own. Single plate (conventional spring type).

►*CLUTCH NOTE:* Service replacement parts are not furnished for this clutch.
See "Buick Single Plate" in Clutch Section.
Clutch Disc No. - Buick No. 1391632.

Pedal Adjustment—Free travel ¾-1". Adjust by loosening locknut and turning adjusting nut on release rod at clutch fork.

Removal—Remove rear axle and transmission (See below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.
See "Buick Synchro-mesh in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Removal: Disconnect rear axle assembly and move it back out of way. Disconnect speedometer cable, shift rod and selector rod. Disconnect rubber thrust pad from transmission support and remove shims. Remove bolts attaching transmission mounting pad to support. Place a jack under engine and raise engine and transmission just enough to relieve load on transmission support. *(CAUTION - Note the location and number of shims).* Remove support from frame. Remove two top transmission to flywheel housing bolts and install Guide Pins J-851 to support transmission. Remove lower bolts and remove transmission, sliding it straight back. *CAUTION - If guide pins are not used and weight of transmission is allowed to rest on main drive gear in clutch driven hub, the drive plate will be damaged.*

DYNAFLOW DRIVE

"Variable Pitch" Dynaflow Drive. Torque Converter and hydraulically operated planetary transmission. A two position (high & low) stator is used in the torque converter to multiply engine output torque when required (controlled by accelerator pedal at the wide open position). *See "Buick Variable Pitch Dynaflow Drive" in Transmission Section*

►*DYNAFLOW OIL LEAKAGE CORRECTION (Oil flowing from breather pipe):* This condition caused by uncovered oil hole in transmission mainshaft. *See "Buick Dynaflow Drive" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Buick Variable Pitch Dynaflow Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING. See "Buick Variable Pitch Dynaflow Drive" in Transmission Section.*

Throttle Linkage Adjustment and Dash Pot Setting in Dynaflow Drive Cars. *See "Tune-up".*

Lubrication—Check fluid level in transmission every 1000 miles, drain and refill every 25,000 miles.

Checking Fluid Level—Engine must be idling with selector lever at "P" (parking) and transmission at normal operating temperature. Add oil to "Full" mark on dip stick only.

Capacity—10 quarts.(Add 1¾ pints for dry transmission). *Use only Special Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type A.*

►*OTHER DYNAFLOW SERVICE DATA See "Buick Variable Pitch Dynaflow Drive" in Transmission Section.*

UNIVERSALS

Saginaw & Spicer. One used (in torque ball at rear of transmission).

REAR AXLE

Own. Semi-floating hypoid gear type of new design, and torque tube drive.

►*1956 BUICK REPLACEMENT PROPELLER SHAFT INSTALLATION NOTE:* To prevent excessive pressure on the universal joint, the seal sleeve on front of propeller shaft should be pressed on so it is 1½" from forward end of shaft splines. To make sure that propeller shaft rear coupling is properly seated over the "O" ring seal on pinion shaft, it will be necessary to force shaft by hand until end of shaft protrudes 2" from torque tube front flange.

►*TORQUE TUBE FRONT FLANGE LOOSENING CORRECTION:* This condition is due to uneven flange which does not allow proper seating of bolt head. To correct, file flange rear face, under head of bolt so that a full bearing of the bolt is obtained. Install later type bolts, Part No. **186622** (identified by six radial marks in bolt head) and torque to 50-60 ft. lbs.

►*UNIVERSAL JOINT ROUGHNESS ON DECELERATION CORRECTION:* This condition may be due to the torque tube ball retainer being oversize or off center on the flange which prevents it seating fully in recess in end of rear bearing retainer. Correct by filing down outer diameter of retainer so retainer is free to float when torque ball assembled. Tighten flange bolts alternately.

►*REAR AXLE "CLUNKING" NOISE CORRECTION (At speeds below 25 MPH): May be caused by excessive clearance between differential side gears and bore in differential case. See "Buick Hypoid" in Rear Axle Sect.*

►*SERIES 70 REAR AXLE OIL PUMP NOTE:* Beginning with early May 1956 production, the oil pump formerly used in Series 70 rear axle assemblies has been eliminated. Service replacement parts connected with the oil pump have also been discontinued. When pump is removed for any reason, it should be left out of the assembly. Series 50 & 70 axle shafts and differential carriers are interchangeable.

►*REAR WHEEL BEARING OIL LEAK CORRECTION: See "Buick Hypoid" in Rear Axle Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Buick Hypoid" in Rear Axle Section.*

Axle Ratios

Series	Synchro-mesh	Dynaflow
40	3.91-1	2.23-1
50, 60, 70		3.36-1

►*REAR AXLE RATIO NOTE:* Ratio is stamped on bottom of axle housing as follows: 3/2 (3.23-1), 3/4 (3.36-1), 3/9 (3.91-1).

Backlash - .007-.009".

Axle Shaft Removal: Remove rear wheel and brake drum. Remove nuts attaching wheel bearing retainer plate to brake backing plate leaving bolts in place to support backing plate. Pull out axle assembly using Puller J-6176 with a slide hammer (be careful not to disturb brake backing plate). *See "Buick "Hypoid" in Rear Axle Section for disassembly procedure.*

Rear Axle Assembly Removal: Place stands under rear axle with wheels clear of floor and place a jack under center of axle housing so it supports weight of axle assembly. Disconnect radius rod at axle end. Disconnect lower ends of rear springs and lower ends of rear shock absorbers. Disconnect parking brake cable at rear cable sheave and at bracket on torque tube. Disconnect brake hose from pipe at frame cross-member and remove yoke (cover hose and brake pipe openings). Loosen torque ball retainer bolts so ball is free. Remove two opposite torque tube flange bolts, replacing them with 3" long guide pins, then remove other flange bolts. Roll rear axle assembly out from under car.

Wheel Bearing Adjustment: None required.

Rear Suspension: *See "Buick Rear Suspension" in Suspension & Wheel Alignment Section.*

Torque Ball Adjustment: New design torque ball assembly does not require adjustment.

SHOCK ABSORBERS

Delco. Direct-acting hydraulic (front & rear). Front shock absorbers mounted within front suspension coil springs.

Front Shock Absorbers

Model	Std.	200# Overload
40, 60 (Exc. 49, 69) Early	5522798	5383669
40, 60 (Exc. 49, 69) Late	5531226	5531225
49, 69 (Early)	5383669	
49, 69 (Late)	5531225	
50, 70 (Early)	5383669	5382679
50, 70 (Late)	5531225	5532070

Rear Shock Absorbers

Model	Std.
41, 43, 48, 63, 63D	5531240
46C, 46R, 66C, 66R	5531428
49, 69, 52, 53, 72, 73	5531242
56C, 56R, 76C, 76R	5531427

►*REAR SHOCK ABSORBER MOUNTING BOLT LOOSENING CORRECTION:* Replace the mounting bolt and nut with Part No. 454961 (bolt); and Part No. 454939 (nut). Torque to 80-90 ft. lbs. The later type bolt is identified by 6 radial marks on head.

FRONT SUSPENSION

Independent. Shock absorbers mounted within the coil springs.

See "Buick" in Suspension & Wheel Alignment Section.

►*FRONT TIRES RUBBING ON FRAME CORRECTION (Early 1956 cars):* Install a 1/32" plain washer under the bolt head of the rear steering arm bolt on both right and left sides.

►*ADJUSTMENT CAUTION:* Check spring height and position of Idler arm before changing adjustments.

Kingpin Inclination - 7° at 7/8° camber.

Caster - 0° to Neg. 2° (Neg. 1° desired at both wheels). *NOTE - This caster setting supersedes the former setting of Neg. ½° to Neg. 1½°.*

Camber - Pos. 7/8° to Neg. 5/8° (Pos. 3/8° desired). Camber on both wheels must be within ¾° of each other.

Toe-In - 1/16" to 1/8".

Toe-out on Turns—Outer wheel 20°, inner wheel 22½° ± 3/4°

STEERING

Manual - Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut type.

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: "Saginaw (In-Line) Hydraulic". Recirculating ball nut and worm type with the worm and ball nut, power piston and rack, and the power cylinder all on a single center line.

See "Saginaw (In-Line) Power Steering" in Steering Sect.

Steering Linkage - *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic (Single Anchor): Conventional two shoe with short molded lining front (Primary) and long molded lining rear (Secondary). Parking "Step-On" lever applies rear wheel service brakes.

See "Bendix Hydraulic (Without Eccentric)" in Brake Section.

►*BRAKE SQUEAK CORRECTION:* Install Anti-Squeak Spring, Part No. 1345469 on all four brake drums. Spring is installed on O.D. of drum and held in place with clips, Part No. 1172311, disregard hole in clip as inboard side of wheel will hold them in place.

►*BRAKE PEDAL TWISTING CORRECTION (MANUAL BRAKES):* On early 1956 Dynaflow models a bending or twisting of the brake pedal plate can be corrected by removing the brake pedal pivot lock nut, bolt and pedal as well as the dash insulator retainer. Drill a 9/32" hole through the cowl using the unused hole in brake pedal bracket as a guide. Install a ¼" x 20" x ¾" bolt, washer and locknut and tighten to cowl panel.

►*DISTORTED AND OUT-OF-ALIGNMENT POWER BRAKE PEDAL CORRECTION:* Loosen pivot bolt locknut on right side of brake pedal bracket and with pedal in fully released position, turn eccentric pivot bolt at left side of bracket until there is just enough clearance between push rod and air valve sleeve to prevent contact at any point in pedal travel. Tighten locknut, making sure that adjustment does not change. If the above procedure does not correct the trouble, it will be necessary to shim between pedal plate and power cylinder, as necessary to correct the alignment.

►*POWER BRAKE PEDAL SLOW RETURN CORRECTION:* Install Power Brake Pedal Return Spring, Part No. 1175435 on eccentric bolt and hook it back of brake pedal.

►*BRAKE MASTER CYLINDER PRODUCTION CHANGE:* A new master cylinder, Part No. 5456000 is being used in production and for service replacement. A new master cylinder repair kit, Part No. 5455765 is available and can be used on the earlier type master cylinder to convert it to the later design. *See "Buick Hydraulic Brake Master Cylinder" in Brake Section.*

►*PARKING BRAKE PEDAL SLIPPAGE CORRECTION:* This condition is caused by incorrect adjustment of parking brake release rod trunnion and can be corrected by adjusting the trunnion so when parking brake is in fully released position, the release rod spring will be compressed approximately ¼" to give it a desired preload of approximately 4 - 6 lbs. *See "Brake Notes" in Buick Special Data.*

Drums—Diameter 12" Rebore limits. .060

Wheel Cyl. Diameter—Front 1-1/8", Rear 1".

Replacement Lining & Shoes—Linings or shoes with linings come in Standard and .030" oversize, and differ between Regular and Power brakes, as well as between car Series.

Lining Width & Thickness

Model	Front Wheels	Rear Wheels
Series 40, 50, 60	2.25" x .187"	2.25" x .187"
Series 70	2.50" x .250"	2.25" x .187"

Braking Power - 53% Front, 47% Rear.

Clearance - Heavy drag and back off 15-17 notches.

Standard Master Cylinder: "Displacement" type. Located on engine side of cowl panel directly below brake pedal. *See "Buick Master Cylinder" in Brake Section.*

Checking Fluid - Maintain fluid level ½" to 1" below top of filler opening.

Removal - Disconnect brake pipe and tape end of pipe. Disconnect stop light wire, and disconnect push rod from brake pedal and remove brake pedal. Remove screws holding steering column jacket rubber seal retainer to floor pan and push it up on steering column jacket. Pull floor mat away from pedal plate and remove pedal plate and master cylinder together.

Power Brakes: Moraine Suspended type power brake unit (replaces conventional master cylinder). Reservoir is integral with master cylinder.

See "Moraine Power Unit" in Brake Section.

►*HYDROVAC POWER BRAKE NOTE If this type power brake found on car, see "Hydrovac Power Unit" in Brake Section.*

Checking Fluid Level - Maintain fluid level ½" to 1" below top of filler opening.

Removal of Power Unit - Disconnect brake pipe from master cylinder and tape end of pipe. Disconnect vacuum hoses from power cylinder, and stop light wires from switch. Place drip pan under reservoir and remove reservoir. Disconnect push rod from brake pedal. Remove eccentric bolt and remove pedal. Remove screws holding dash insulator retainer to pedal plate. Remove retainer and push steering column seal up column jacket. Pull floor mat out of way and remove pedal plate and power brake unit from car.

MISC. MECHANICAL

Air Conditioning: Frigidaire-Harrison type with solenoid controlled compressor clutch (compressor operates only with air-conditioning switch turned on). *See "Frigidaire-Harrison Air-Conditioning" in Miscellaneous Sect.*

Windshield Wipers: Cable operated vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators: Electric type with reversible motor in each window. *See "GM Electric Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters (Two-Way): Electric type with single reversible type motor for horizontal adjustment. *See "GM Two-Way Seat Regulators" in Miscellaneous Section.*

Power Seat Adjusters (Six-Way): Electric type with single reversible motor. *See "GM Six-Way Seat Regulators" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor. *See "Power Top Controls" in Miscellaneous Sect.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door pillar post.

Starting Serial Number - 001001 (at each plant).

►*SERIAL NUMBER NOTE:* The serial number (example 4D2001001) includes the following identification data in sequence:

Series①	Year②	Assy. Plant③	Serial No.
4	D	2	001001

① - See Series Designation below.
② - Year designation (1957).
③ - See Assembly Plant Designation below.

Series Designation

4 - 40 Special	6 - 60 Century
5 - 50 Super	7 - 70 Roadmaster

Assembly Plant Designation

1	Flint	5	Wilmington
2	South Gate	6	Atlanta
3	Linden	7	Framingham
4	Kansas City	8	Arlington

ENGINE NUMBER: Same as Serial No. (see above). Stamped on top **left hand corner** of crankcase directly forward of left front corner of valve lifter cover. This number is read from front of car.

►*ENGINE PRODUCTION CODE NUMBER NOTE:* This is a production code number (not used for licensing) stamped on top **right hand corner** of crankcase directly forward of right front corner of valve lifter cover. This number is read from rear of car. Symbols used with this production code number indicate the following: **Oversize Cylinder Bore (All Engines)** - Dash (¼" long) following production code number indicates all cylinder bores .010" Oversize. *See Pistons.*

Low Compression Engine (Series 50,60,70) - "X" preceding production code number indicates special lower compression engine. *See Compression Pressure (below) and Note under Engine Specifications.*

TUNE-UP

►*ENGINE DETONATION (OPERATION IN LOW OCTANE AREAS): See Note under Engine Specifications for recommended changes for foreign travel.*

►*SPECIAL LOWER COMPRESSION ENGINE PRODUCTION NOTE (SERIES 50, 60, 70):* Some engines produced with special 9.5-1 compression ratio for operation in areas with lower fuel octane ratings. *See Compression Ratio (following) and Note under Engine Specifications.*

COMPRESSION PRESSURE: (40 Synchro-mesh) 150 lbs., (40 Dynaflow) 170 lbs., (50,60,70 Std. 10-1 Ratio) 185 lbs., (50,60,70 Spec. 9.5-1 Ratio) 170 lbs., all at cranking speed. Cylinders should be equal within 10 lbs.

VACUUM READING: 14.5" minimum idling at 485 RPM.

►*ENGINE VACUUM NOTE:* 14.5" minimum at idling speed is normal and does not indicate defective valves.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

MANIFOLD HEAT CONTROL: Automatic thermostatic type located in right exhaust manifold. Valve must operate freely. Install thermostatic coil with approximately 120° wind-up counterclockwise to engage stop pin. Counterweight should be vertical with valve closed (cold engine).

IGNITION

FIRING ORDER: 1-2-7-8-4-5-6-3.

Cylinders - RIGHT BANK 1-3-5-7, LEFT BANK 2-4-6-8.

SPARK PLUG GAP: .030-.035".

Spark Plugs - AC No. 44. 14mm. *NOTE* - AC No. 42 Comm. may be used for severe service. Torque to 25 ft. lbs.

►*SPARK PLUG WIRE CAUTIONS:* Spark plug wires have linen core impregnated with carbon. Pulling on wire to remove may cause core to separate causing engine missing. To remove, grasp wire by boot. **Do not** pierce No. 1 spark plug wire when timing engine as this also damages core. To eliminate possibility of engine misfiring, spark plug wires must be installed in holding clips on rocker arm covers in same order as they are attached to the plugs.

COIL: Delco-Remy 1115100.

Ignition Current - 2.5 amps. idling, 4.5 stopped.
Resistor - Delco-Remy 1931614. 1.40-1.62 ohms.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by lead from starter solenoid-to-coil.

DISTRIBUTOR: Delco-Remy 1110870. New external adjustment "Window" type. *See "Delco-Remy Window Distributors" in Electrical Section.*

Condenser - Delco-Remy 1932004. **Capacity** .18-.23 mfd.
Contact Point Set - Delco-Remy 1931988.
Breaker Gap - .0125-.0175". See Note.
Cam Angle - 28-32°.

►*BREAKER GAP & CAM ANGLE NOTE:* Setting cam angle at 30° will provide .016" breaker gap.

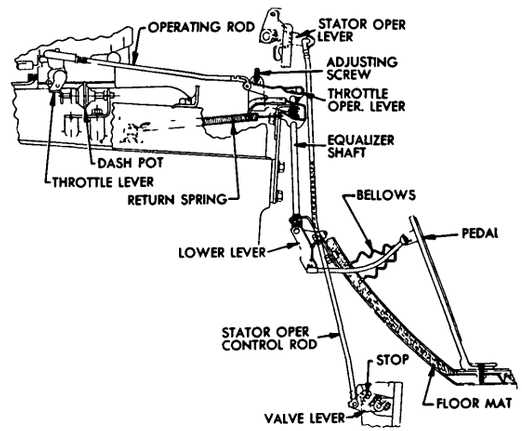
Breaker Arm Spring Tension - 19-23 ozs.
Rotation - Clockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	475	1-4	950
6-8	1150	12-16	2300
12-14.5	1875	24-29	3750

Vacuum Spark Control: Delco-Remy 1116106.

Vacuum Advance



Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	6.5-8.5
9-10.5	18-21	12-14

IGNITION TIMING

Setting - 5° BTDC at exactly 400 RPM.

►*IGNITION TIMING CAUTION:* Reduce engine idle speed to 400 RPM maximum and disconnect vacuum line to distributor when setting timing (Running engine at regular 485 RPM idling speed or with vacuum line connected will result in some centrifugal or vacuum advance). Reconnect vacuum line and reset engine idle speed to 485 RPM in neutral after timing completed.

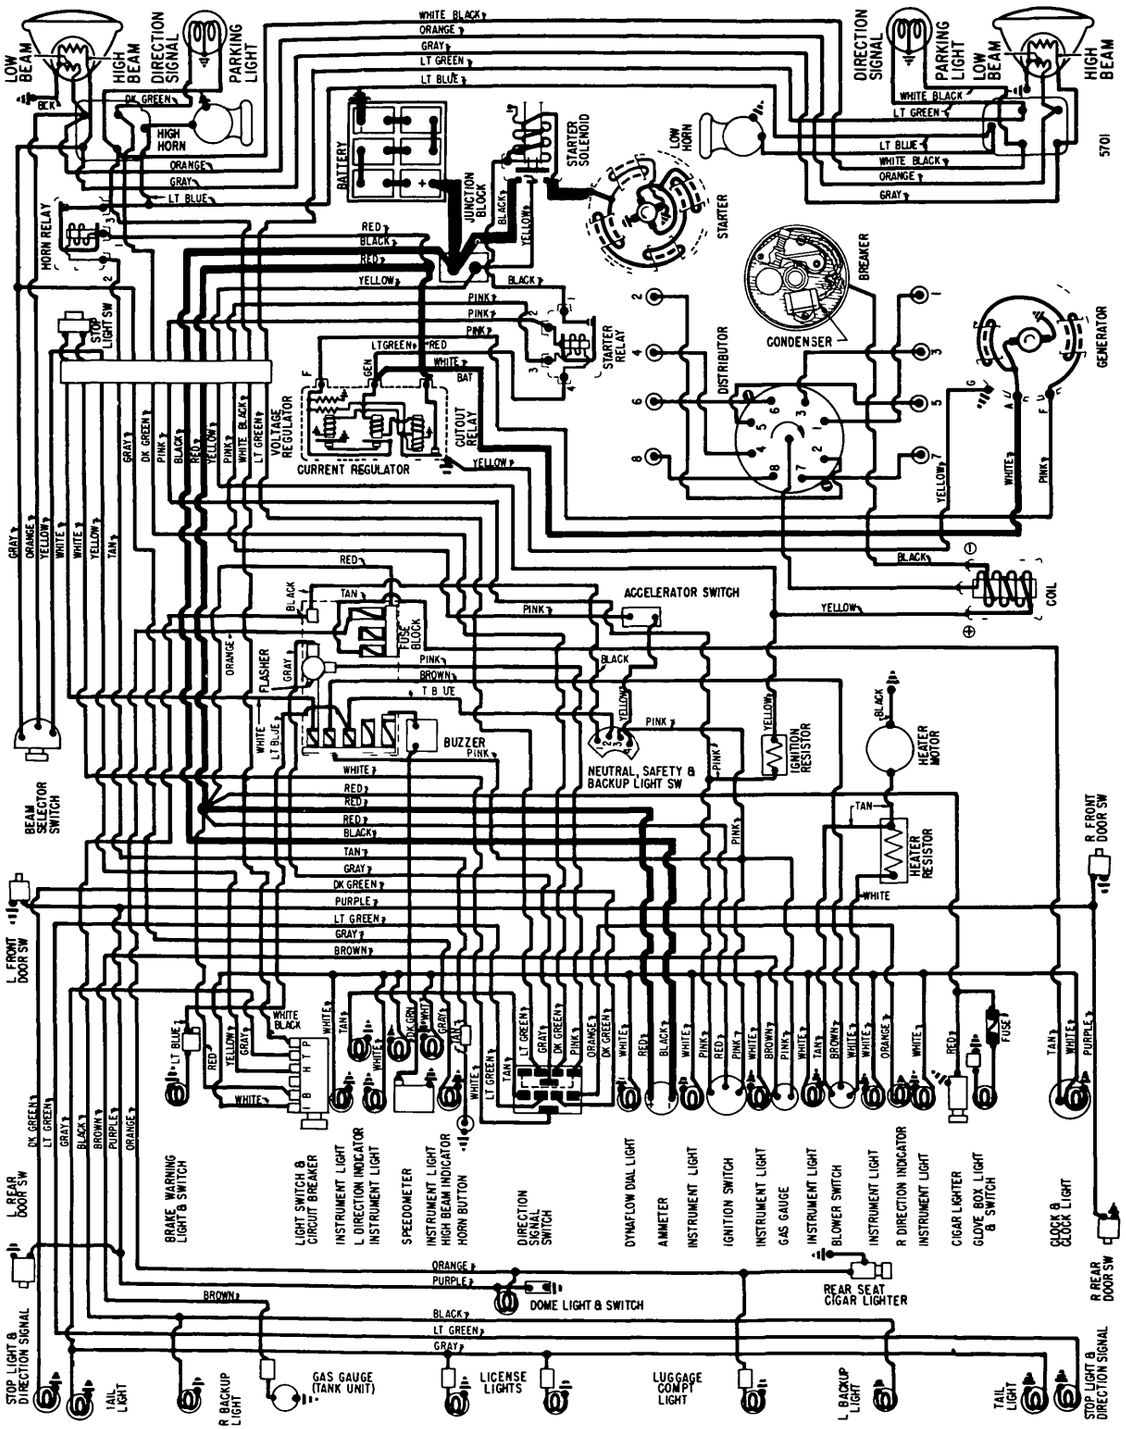
Timing Mark - Timing indicator marked with four lines indicating 0°, 2.5°, 5°, 7.5° BTDC, located on right side of timing chain cover below fuel pump. Line up mark on fan drive pulley (Series 40) harmonic balancer (Other Series) with correct line (5°) on timing indicator for normal operating conditions.

DYNAFLOW THROTTLE LINKAGE

CARBURETOR

►*CARBURETOR APPLICATION: 2-Barrel Carburetors (Carter WGD or Stromberg WW) used on Series 40, 4-Barrel Carburetors (Carter AFB or Rochester 4GC) used on Series 50, 60, 70.*

THROTTLE LINKAGE ADJUSTMENT: Adjust idle speed to 450 RPM. Disconnect throttle return spring. Disconnect throttle rod from lever on equalizer shaft. Back off stator pick-up lever adjusting screw on Dynaflow cars until screw end is flush with lever. Adjust throttle rod at carburetor so 5/8" of thread is exposed. Press accelerator against floor mat, hold throttle wide open and hold rod at hole in operating lever. Adjust lever on equalizer shaft to obtain 1/16" distance between rod and hole in lever. Tighten clamp and connect rod. With throttle closed to idle position, a minimum clearance of 1/16" must exist between equalizer lower lever and stop lug in mounting bracket. Adjust operating rod as necessary to obtain this clearance. On Dynaflow cars, depress accelerator pedal against floor mat, then turn stator pick-up lever adjusting screw against lever until all vertical play is removed from stator operating rod. Turn screw back 1/2 turn.



DASHPOT ADJUSTMENT (Dynaflow Cars): Adjust dash pot only after throttle linkage has been adjusted and engine is at normal operating temperature. Rotate fast idle cam to extreme cold idle position (choke closed), hold throttle lever against .030" feeler gauge placed between stop screw and highest step of fast idle cam Adjust dashpot until it just clears arm of throttle lever, tighten locknut. Check operation by quickly releasing throttle at 1500 RPM. If engine stalls, or excessive time required to return to idle speed, change dashpot setting slightly.

CARTER 2-BARREL WGD

Carter WGD, 2529S (Synchro-mesh), 2536S (Dynaflow).

►*LEAN PART THROTTLE AT 30-40 MPH (2529S):* Install parts in Buick Kit No. 1180737 (Metering Rod and Pump Plunger Spring). *See "Carter WGD Carburetors" in Carburetion Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*LOADING DURING WARM-UP (2529S):* Install new choke piston and change choke setting (see below) Fast idle speed on car should be change to 1800 RPM (from 1500 RPM) *See "Carter WGD Carburetors" in Carburetion Section*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7. LEFT barrel 2-3-5-8.*

Idle Setting - ¾ turn open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed - 485 RPM (Selector lever in Neutral or Park on Dynaflow Cars).

Float Level - ¼" (Gauge T109-31) between top of float (at center) and bowl cover.

Choke Lever Setting - .020" (Gauge T109-29), between lug on outer choke shaft lever and stop on inner choke shaft lever.

Fast Idle Setting: .028" clearance between lower edge of throttle valve and carburetor bore with adjusting screw on high step of fast idle cam. *NOTE - This setting supersedes previous specifications.*

Automatic Choke Setting: 1 point rich (first 2529S), 1 point lean (later 2529S with new choke piston - see loading during warmup correction above), centered on Index (2536S).

►*OTHER DATA: See "Carter WGD Carburetors" in Carburetion Section*

Dynaflow Throttle Linkage Adjustment: *See CARBURETOR above.*

STROMBERG 2-BARREL WW

Stromberg WW Code 7-106, A,B, & C (Dynaflow Cars).

►*HARD STARTING & LOADING IN COLD WEATHER:* May be caused by automatic choke thermostatic spring set 3 notches too rich If loading condition definitely established, correct by filing new "V" index mark in cover 3 marks counterclockwise from original index mark, file off original index mark *CAUTION* - Above correction should only be made to correct a loading condition Severe leanness will result if a normal carburetor is reworked

►*LOADING DURING WARMING UP:* Set carburetor to revised specifications listed below. Code 7-106B carburetors have these settings in production

►*CARBURETOR INLET SCREEN NOTE·* Carburetors with Code 7-106-C have filter screen at needle valve and seat fitting added to prevent entry of foreign material This screen to be removed at 1000 mile inspection Carburetors with new glass bowl filter do not have this screen

►*CARBURETOR PRODUCTION CHANGES & RECOMMENDED CHANGES FOR IMPROVED PERFORMANCE: See "Stromberg WW (Buick) Carburetor" in Carburetion Section*

Idle Setting - 1 turn open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed - 485 RPM with selector lever in Neutral or Park position.

Float Level - 7/32" (Gauge 73519) from top of float at center to top edge of float bowl (gasket removed) with needle valve seated.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fast Idl & Start Aid S ttings: *NOTE* - Choke thermostatic coil and cover must be removed for these adjustments (fast idle mechanism located within choke housing).

1) Open throttle to clear fast idle cam, fully close choke valve. Close throttle until fast idle lever rests on high step of cam. There should be no clearance between fast idle lever and lug on cam. Adjust by bending choke rod.

2) Close choke valve with light pressure on thermostatic spring lever until positioning lever just contacts choke positioning spring. Measure choke valve opening. Clearance between upper edge of choke valve and air horn wall should be .209" (No. 4 drill). Adjust by bending choke positioning lever.

3) With throttle valves fully closed, turn throttle stopscrew in until it contacts throttle lever, then turn screw in additional 6 turns. Hold choke valve closed and hold throttle lever against stopscrew, measure clearance between fast idle lever and high step of fast idle cam. Clearance should be .052" (No. 55 drill). Adjust by bending fast idle lever. *NOTE* - Throttle stopscrew must be readjusted for correct hot idle speed.

Automatic Choke Setting: Centered (at Index).

►*See "Hard Starting & Loading in Cold Weather" Correction above.*

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Stromberg WW (Buick) Carburetor" in Carburetion Section.*

CARTER AFB 4-BARREL

Carter AFB, No. 2507S. New design, 4-barrel downdraft carburetor with automatic choke.

►*CARBURETOR PRODUCTION CHANGES AND RECOMMENDED PARTS AND SETTING CHANGES FOR IMPROVED PERFORMANCE: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

►*HARD STARTING (DUE TO CHOKE STICKING):* Caused by choke linkage bind due to air cleaner silencer interference. Correct by using new type Air Cleaner Gasket No. 1458911. *NOTE* - New gasket will prevent above trouble and supersedes previous recommendation of use of two previous type gaskets (No. 1169957).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 1-4-6-7, LEFT barrels 2-3-5-8.*

Idle Setting - 1½ turns open. Adjust both screws (primary side only) alike. Turn screws out for richer mixture.

Idle Speed - 485 RPM in Neutral or Park.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

ROCHESTER 4GC 4-BARREL

Rochester 7010070 (First Cars), 7011570 (Later Cars). Replacement Carburetor Pkg. 7015777.

►*CARBURETOR PRODUCTION CHANGES & RECOMMENDED PARTS & SETTING CHANGES FOR IMFROVED PERFORMANCE: S e "Rochester 4GC 4-Barrel Carburetors" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels f d Cyl. 1-4-6-7, LEFT barrels 2-3-5-8.*

Idle Setting - 1½ turns open. Adjust both screws (primary side only) alike. Turn screws out for richer mixture.

Idle Speed - 485 RPM with selector lever in Neutral or Park.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4GC 4-Barrel Carburetors" in Carburetion Section.*

FUEL PUMP PRESSURE: 6½ lbs. maximum.

CARB. EQUIPMENT

Fuel Pump: AC. Replacement No. 4399.
Pressure - 5¼-6½ lbs. between 485 and 1500 RPM.

►*FUEL PUMP INSTALLATION CAUTION:* When installing pump, turn crankshaft to No. 5 firing position (will insure pump arm contacting eccentric and not riding between eccentric and sprocket).

►*FUEL PUMP DIAPHRAGM PRODUCTION CHANGE & CAUTION:* Pulsator diaphragm on first type pump may block off fuel inlet. Engines Nos. 241715 through 243399 and after No. 252511 have new type diaphragm and pump marked by daub of white paint on casting.
See "Fuel Pumps" in Carburetion Section.

Fuel Line Strainer (In Gas Tank): In fuel fitting in tank. Clean every 5000 miles, replace when necessary. *CAUTION* - Do not tighten fitting to more than 7-10 ft. lbs.

Gasoline Gauge: AC. Electric type.
Dash Unit - AC No. 1518703.
Tank Unit - AC No. 1518726.
See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco No. 562. 12 Volt, 11 plate, 70 Ampere hour capacity.
Grounded Terminal - Negative.
Engine Ground - Dash to right cylinder head.

STARTER

Delco-Remy 1107667. Armature - 1935851.
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
11 ft. lbs.	Lock	5.2	460

Starting Switch: Delco-Remy Solenoid 1119919. Starter Solenoid controlled by s eparate relay, Delco-Remy 1116921, and Accelerator Vacuum Switch (on carburetor). *See "Starter Controls" in Electrical Section.*

Accelerator Vacuum Switch: Carter No. 192-38U.
Accelerator Vacuum Switch Setting - *See data on each carburetor type in Carburetion Section.*

Dynaflow Neutral Safety & Back-up Light Switch: Buick No. 1178138. Mounted on steering column jacket under cowl. Connected in starter control circuit so that starter operative only when selector lever in "N" Neutral or "P" Parking position.
Adjustm nt - *See "Buick Dynaflow Drive" in Transmission Section.*

GENERATOR

Delc -Remy 1102066. Armature - 1932900.

P rformanc Data

Amperes	Volts	RPM
35	14.0	2510

Field Current - 1.69-1.79 amperes at 12.0 volts at 80°F.
Brush Spring Tension - 28 ozs.
Rotation - Counter-clockwise at commutator end.
Belt Adjustment: Check belt tension by using torque wrench on generator pulley. 20-25 ft. lbs. torque should slip generator pulley on belt.

REGULATOR

Delco-Remy 1119168. *NOTE* - Specifications below are for "Normal" settings.

Cut ut R lay

Cuts In - 11.8-13.5 volts (Hot). Adjust to 12.8 volts.
Contact Gap - .020".
Air Gap - .020" (with contacts just closed).

Voltag R gulat r

Setting - 13.8-14.8 volts (Hot).
Air Gap - .075" with armature pressed down to point where contacts just opening.
Checking & Adjusting - *S e "D lco-Remy 12 Volt Regulators" in Electrical Section.*

Current R gulator

Setting - 32-37 amps. (set to 35 amps.).
Air Gap - .075" with armature pressed down to point where contacts just opening.
Checking & Adjusting - *S e "Delco-Remy 12 Volt Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical S ction.*

Direction Signal: *See Electrical Section.*

Lighting Switch Removal: Disconnect battery cable from junction block and disconnect wires from lighting switch. Pull switch knob out to last notch, then depress spring loaded latch button on switch body while pulling rod and knob assembly out of switch. Remove switch mounting nut with wrench J-1589-A and remove switch and escutcheon from instrument panel.

Stop Light Switch Location: Located on master cylinder attached to engine side of dash panel.

LIGHTING CIRCUIT BREAKERS: 22 ampere. Located on light switch protects all light circuits that are not fused *(See "Fuses" below).*

FUSES: Located in fuse block under cowl.
20 Ampere. Protects Dome & Luggage Compartment lights.
10 Ampere. Protects Back-up & Brake Warning lights.
1 Ampere. Protects clock.
20 Ampere. Protects Heater Blower.
10 Ampere. Protects Directional Signal & Stop Lights.
2 Ampere. Protects Glove Box light.
2 Ampere. Protects Air Conditioner Clutch Control.

Horn Relay: Delco-Remy 1116920.
Closing Voltage - 5.0-9.5 volts, adjust to 6.5 volts.

CONTINUED FROM PRECEDING PAGE

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own 90° V8 (All Series).

Series	Bore	Stroke	Displacement
All	4.125"	3.4"	364 cu. ins.

Series	Compr. Ratio	Developed HP
40 (S M)	8 0-1	
40 (Dynaflow)	9 5-1	250 at 4400 RPM
50,60,70 Std.	10 0-1	300 at 4600 RPM
50,60,70 Spec ①	9 5-1	

① - See Special Lower Compression Engine Note below

►*SPECIAL LOWER COMPRESSION ENGINE PRODUCTION NOTE (SERIES 50,60,70):* Some South Gate cars, identified by "X" preceding Engine Production Code No *(see Engine Number)*, have Series 40 Dynaflow Pistons with compression ratio of 9 5-1 *(see Piston Replacement Note below)* *CAUTION* - Replacement pistons must be same type DO NOT mix 9 5-1 & 10 0-1 pistons (will cause very rough operating engine)

►*ENGINE OPERATION IN LOW OCTANE AREAS (FOREIGN TRAVEL):* Minimum fuel octane rating for satisfactory operation is: 91 (Series 40 Synchro-mesh), 98 (All Dynaflow Cars). If satisfactory fuel cannot be secured, compression ratio should be lowered by using export pistons and head gaskets as listed below. *CAUTION* - Some Series 50, 60, 70 Engines built with 9.5-1 Compression Ratio (same pistons as Series 40 Dynaflow Engine). *See Lower Compression Engine Production Note above*

Series	Piston	Head Gasket
40 (Synchro-mesh)	①	②1173567 (.045")
All (Dynaflow)	1392950	1173567 (.045")

① - Domestic & Export pistons are the same.
② - Can be used if desired (Export and Domestic gaskets are both .015").

►*VACUUM PUMP BUZZING NOISE (ENGINE COLD)* Caused by too high oil level allowing oil to enter vacuum pump through discharge opening. Check by disconnecting wiper hose at wiper motor and holding finger over end of hose. If noise present with hose closed and disappears when hose opened, correct as follows: Solder (do not weld) 1¼" long piece of 5/16" thin wall tubing in pump discharge opening to form a standpipe ¾" high above pump housing. *NOTE* - Engines between Nos. 109982 and 127199 and above No. 129976 have this tubing installed in production.

ENGINE MOUNTINGS: *See "Engine Mountings" in Buick Special Data.*

OIL PAN REMOVAL: Disconnect steering idler arm bracket from right frame side rail, and lower steering linkage for clearance, then remove oil pan. *CAUTION* Do not allow bracket to turn on idler arm (will change toe-in adjustment).

CYLINDER HEAD & GASKET: Same cylinder head and gasket used on all engines. Different compression ratios secured by use of different pistons as noted under "Pistons" following.

►*CYLINDER HEAD REMOVAL NOTE: See "Cylinder Head & Manifolds" in Buick Special Data.*

►*INTAKE MANIFOLD GASKET INSTALLATION CAUTIONS: See "Cylinder Head & Manifolds" in Buick Special Data.*

►*ROCKER ARM COVER INSTALLATION CAUTION: See "Cylinder Head & Manifolds" in Buick Special Data.*

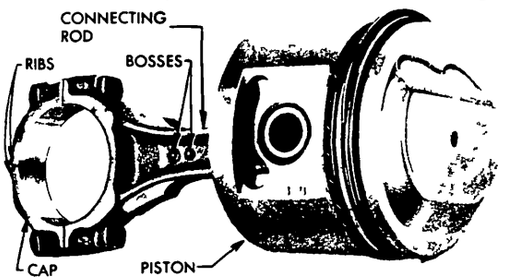
TIGHTENING TORQUES: *See "Tightening Specifications" in Buick Special Data.*

Compression & Vacuum Reading - *See TUNE-UP.*

PISTONS

Aluminum alloy, dome head (with shallow depressions for valve clearance), cam ground, full skirt with transverse slots in oil ring groove. Anodized finish.

►*PISTON PRODUCTION & REPLACEMENT NOTE:* Different pistons used as listed below Some Series 50, 60, 70 Engines have same pistons as Series 40 Dynaflow Engine (9 5-1 Compression Ratio) *CAUTION* - Same type pistons must be used in all cylinders Use of mixed (different compression ratio) pistons will cause very rough operating engine



Model	Std. Size Piston No.
Series 40 (Synchro-mesh)	Buick No. 1392769
Series 40 (Dynaflow)	Buick No. 1392771
Series 50, 60, 70 (Dynaflow)	Buick No. 1392770

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with ¼" long dash following Engine Production Code Number (see Engine Number) have .010" Oversize cylinder bore and pistons Std cylinder bore size is 4 1235-4 1265" (All Models)

Removal - Pistons and rods removed from above.

►*CAUTION:* Mark pistons, rods, and bearing caps with cylinder number before removal to insure correct reinstallation. Use Rod Bolt Guides (short guide J-5239-1 on lower bolt, long guide J-5239-2 on upper bolt) to retain bearing shell and assist in pushing assemblies out.

Fitting New Pistons: Clearance .0008-.0014". If micrometer used on pistons, measure at top and bottom of skirt 90° from pin hole (top diameter slightly less than bottom in service). Use .003" X ½" X 12" feeler gauge

BUICK PISTON & ROD ASSY

to fit pistons with cylinder block in normal position. Insert feeler on lower side of bore 90° from piston pin hole. Pull to withdraw feeler should be 7-13 lbs. at 70°F (piston & bore clean and dry).

Replacement Pistons: Standard ("High Limit" or maximum diameter production size) and .005", .010", .020", .030" Oversize. *NOTE* - Pistons furnished only with fitted pins.

Installing Pistons: Assemble rod in piston with oil spurt notch on same side as valve depressions in piston dome. *See Rod Installation below.*

PISTON PINS

Pins are press fit in connecting rod.
Diameter - .9994-.9997". **Length** - 3.500".
Clearance in Piston - .0004". Finger push fit.
Clearance in Rod - .0007-.0015". Press fit.

Piston Pin Removal & Installation: *See "Piston Pins" in Buick Special Data. CAUTION: Pistons may be damaged if special procedure and tools not used.*

Replacement Pins: Std. size only. Fitted pins furnished with new pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.	.077-.078"	.015-.025"	.002-.004"
Oil	.185-.186"	.015-.035"	.0035-.0095"

►*COMPRESSION RING PRODUCTION CHANGE:* Early enginesshave compression rings with chamfer on inner upper edge, later engines have chamfer on inner lower edge. Both types have "TOP" stamped on top face of ring.

Replacement Rings: Std., .010", .020", .030" Oversize in individual rings or in sets.

Installing Rings: Install compression rings *(See Compression Ring Production Change above)* with grooved or beveled side toward bottom of piston. Install oil ring expander with ends in area above ends of piston pin where groove is not slotted. Install oil ring over expander with gap on same side as valve depressions in piston head.

CONNECTING RODS

Length - 6.1" (Center-to-Center). **Weight** - 23.20 ozs.
Crankpin Journal Diameter - 2.249-2.250".
Out-of-round limit .0015".
Bearings - Steel backed M400 Aluminum, full precision type. Both halves interchangeable.
Clearance - .0002-.0023" (service limit .003").
Side Play - .005-.012" (Two rods).

Replacement Bearings: Standard and .001", .002", .020", and .021" Undersize. Size is stamped on back of bearing at or near tang.

Installing Rods: See Installing Pistons above. Install rods so valve clearance depressions in all piston heads and all spurt notches in all connecting rods are toward camshaft. *NOTE* - Rib on edge of rod cap will be on same side as conical boss on web of rod, and these marks will be toward the other connecting rod on same crankpin.

CRANKSHAFT

►*CRANKSHAFT & FLYWHEEL UNBALANCE OR VIBRATION (After replacement of parts - Synchro-mesh & Dynaflow Cars): See "Engine Balancing" in Buick Special Data.*

Journal Diameter - 2.498-2.499". Five bearings. Out-of-round limit .0015".

Bearings - Durex 100A (Rear Main), M400 Aluminum (All others), full precision type. Both halves interchangeable.

►*BEARING NOTE:* Bearing upper halves can be rotated out and in by using tool KMO-734 in oil hole.

Clearance - .0005-.0025".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Replacement Bearings: Standard and .001", .002" Undersize. *NOTE* - First four bearings identical and interchangeable. Rear bearing longer and flanged.

End Thrust: Taken by rear No. 5 flanged main bearing.

End Play - .004-.008".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Buick Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Buick Special Data.*

Vibration Dampener Installation: *See "Vibration Dampener" in Buick Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Buick Special Data.*

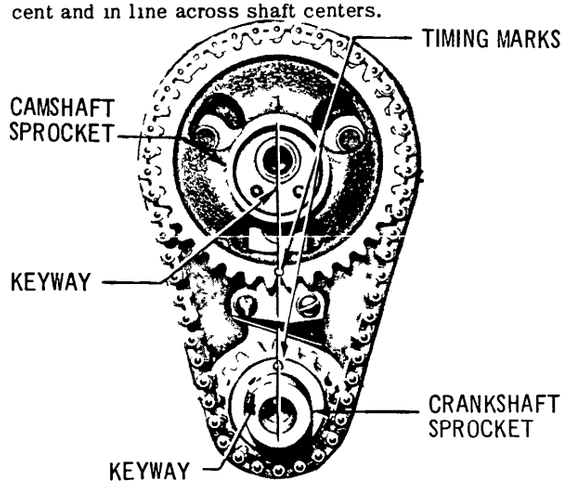
CAMSHAFT

►*NOTE* - 1957 camshaft journal O.D. is approximately .100" larger than previous types and cannot be used in previous engines. 1956-57 Distributor Gears and Valve Lifters are interchangeable.

►*CAMSHAFT IDENTIFICATION:* **Series 40 Synchro-mesh** - Has plain land just forward of No. 3 bearing journal.

All Others - Above land has two grooves.

Journal Diameters - **(1)** 1.785-1.786", **(2)** 1.755-1.756", **(3)** 1.725-1.726", **(4)** 1.695-1.696", **(5)** 1.665-1.666".



Bearings - Steel-backed babbitt lined bushings.

Clearance - .0005-.0035". Service limit .0015-.004".

End Thrust: Taken by hub of camshaft sprocket. Distributor and oil pump drive force camshaft to rear at all times.

Timing Chain: Link belt. **Width** - .688". **Pitch** - .500". **Length** - 26" or 52 links.

Camshaft Setting: Valve timing is correct when "0" marks on camshaft and crankshaft sprockets are adjacent and in line across shaft centers.

BUICK VALVE TIMING MARKS

Engine Front Cover: *See "Engine Front Cover" in Buick Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Buick Special Data.*

VALVES

Tappet Clearance: None in service (hydraulic).

Valve	Head Diam.	Stem Diam.	Length
Intake	1.875"	.3720"	4.704"
Exhaust	1.437"	.3705"	4.704"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	.423"	.003"
Exhaust	45°	.423"	.004"

Valve Seat Width—1/16' (3/64-5/64").

►*VALVE GRINDING CAUTION:* If height of valve stem end raised .075" by valve grinding, height must be reduced by grinding end of stem or replacing valve to insure correct operation of hydraulic lifter.

Valve Springs: Double springs used on all valves. Install springs with closed-coil end toward cylinder head.

Valve Spring Specifications

	Inner Spring		Outer Spring	
Valve	Lbs.Press.	Lgth.	Lbs.Press.	Lgth.
Closed	24-29	1.53"	43-48	1.5"
Open	58-64	1.15"	91-97	1.12"

Valve Guides: Drive old guides out from combustion chamber side using Driver J-269. Install new guides from top of head using Valve Guide Aligner J-5240-2 over guide hole and installer J-5240-1 to drive guide down until installer shoulder contacts top of aligner which will position guide correctly in head. Finish ream guides with Valve Guide Reamer J-129-3.

Hydraulic Valve Lifters: Barrel type.

Diameter—.8425". **Clearance in Block**—.0015-.003".

Lifter Overhaul & Testing—*See "Valve System" in Buick Special Data*

Rocker Arm Assembly: *See "Valve System" in Buick Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Synchro-mesh Models

Intake Valve - Opens 25° BTDC Closes 77° ALDC

Exhaust Valve - Opens 65° BLDC Closes 37° ATDC

Dynaflow Models

Intake Valve - Opens 34° BTDC Closes 83° ALDC

Exhaust Valve - Opens 76° BLDC Closes 41° ATDC

Valve Timing Check—Timing chain cover must be removed to check chain and sprocket marks. *See Camshaft Setting under CAMSHAFT above.*

OILING SYSTEM

►***ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Buick Special Data.***

Crankcase Capacity: 5 quarts refill. 6 quarts, dry engine. Add 1 quart for dry filter.

Normal Oil Pressure: 40 lbs. at 1600 RPM or 35 MPH.

Pressure Regulator Valve - In oil pump body. Not adjustable.

Oil Pressure Gauge - **AC No. 1508598.** Not electric.

Oil Pump: New combination gear type oil pump and vane type vacuum pump. In crankcase at rear of engine.

Oil Pump Removal & Overhaul - *See "Oiling System" in Buick Special Data.*

Vacuum Pump: Part of oil pump assembly. *See "Vacuum Pump" in Buick Special Data.*

Oil Filter: Full-flow. On pad at right rear of engine. *NOTE* - Ball check in filter base bypasses oil directly to engine when pressure differential between inlet and outlet ports reaches 4½-5½ lbs.

Replacement Filter Element - AC No. PF-122.

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in rear end of valve lifter cover (air outlet) to which ventilator pipe is connected.

COOLING

►*RADIATOR REPLACEMENT NOTE:* Cars with Air Conditioning (installed at factory) have larger radiator cores and shroud assemblies.

Water Capacity: 18 qts., 16.5 qts. without heater.

Pressure Valve: Radiator filler cap. 15 lb. type. *NOTE* - Use of lower test filler cap will cause engine to heat with loss of coolant.

Thermostat: Pellet type in water manifold above pump.

(Std.) Buick No. 1391226, opens at 157-162°F.

(High Temp.) Buick No. 1391225, opens at 177-182°F.

Water Pump: Packless, sealed ball bearing type.

See "Water Pumps" in Buick Special Data.

Pump Removal - Drain cooling system, loosen fan belt, remove fan blades, spacer, and pulley from water pump hub, and remove belt. Remove hose from water pump inlet, then remove pump cover assembly and gasket.

Temperature Gauge: AC No. 1513311. *See "Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Long 11CF No. 266716. Single plate, semi-centrifugal type.

See "Long" Clutches in Clutch Section.

Clutch Disc - Long No. 286176.

Pedal Adjustment: Free play 1 1/8-1¼". For adjustment procedure *See "Clutch Notes" in Buick Special Data.*

Removal: Remove rear axle and transmission (See below), remove flywheel lower housing. Disconnect release rod from yoke, remove boot. Remove spring washer which retains release bearing support and remove support. Pull yoke outward to release it from ball stud, remove yoke and release bearing through bottom of housing. Remove clutch cover screws uniformly to release spring tension after marking cover and flywheel for reinstallation. *NOTE* - Metal spacers placed between release levers and inner edge of clutch will aid removal and installation. Remove cover assembly and driven plate.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.

See "Buick Synchro-mesh" Transmission in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Disconnect rear axle assembly *(CAUTION:* Use 3" torque tube guide pins to save damaging torque tube seal). Drain transmission, remove clutch linkage shield, insert ¼ X 2½" bolt and nut (finger tight) in clutch equalizer and bracket. Remove clevis pin and

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

spring from outer end of clutch yoke and two bolts holding equalizer bracket to transmission. Disconnect speedometer cable, shift rod and selector rod from levers, rubber thrust pad from thrust bracket (leave attached to support). Disconnect rubber mounting pad from transmission support. Support engine at rear on jack, remove support from frame, noting number and location of shims. Loosen exhaust pipe so rear of engine can be lowered. Lower engine and transmission to clear X-member. Install guide pins and remove transmission.

DYNAFLOW DRIVE TRANSMISSION

"Variable Pitch" Dynaflow Drive. Torque Converter and hydraulically operated planetary transmission. A two position (high & low) stator is used in the torque converter to multiply engine output torque when required (controlled by accelerator pedal at the wide open position). *See "Buick Variable Pitch Dynaflow Drive" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION* *See "Buick Variable Pitch Dynaflow Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING* *See "Buick Variable Pitch Dynaflow Drive" in Transmission Section.*

Throttle Linkage Adjustment and Dash Pot Setting on Dynaflow Drive Cars. *See "Tune-up"*

Lubrication - Check fluid level in transmission every 1000 miles, drain and refill every 25,000 miles.

Checking Fluid Level - Engine must be idling with selector lever at "P" (parking) and transmission at normal operating temperature. Add oil to "Full" mark on dip stick only.

Capacity - 11 quarts. (Add 1¾ pints for dry transmission). *Use only Special Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type A.*

►*OTHER DYNAFLOW SERVICE DATA* *See "Buick Variable Pitch Dynaflow Drive" in Transmission Section.*

UNIVERSALS

Saginaw & Spicer. Saginaw (Front), Saginaw or Spicer (rear). Front joint enclosed in torque ball, rear joint enclosed in torque tube Front joint lubricated by transmission. Rear joint requires no lubrication.

►*"U" JOINT INSTALLATION CAUTION* Hole in spline of propellor shaft must align with mark on "U" joint to insure that "U" joints are 90° apart for proper alignment to avoid unnecessary vibration

►*1957 BUICK UNIVERSAL JOINT REPLACEMENT CAUTION:* 1957 type universal joints are marked with two notches in line with rear yoke of joint while 1958 joints are not marked but have two splines removed 45° off centerline of yoke. Proper alignment of 1957 propeller shaft with the 1958 joint would be difficult and possibly result in drive line roughness and vibration.

PROPELLER SHAFT

►*1957 BUICK PROPELLER SHAFT LUBRICATION CAUTION:* Cars having a rubber plug located in lower side of torque tube approximately 7 15/16" forward of differential carrier face require a special lubrication procedure as follows: Remove rubber plug and fill lubricant fitting in propeller shaft with **two quick shots of chassis lubricant each 1000 miles.** Replace plug making sure that edge of hole is properly seated in groove of plug.

►*1957 BUICK PROPELLER SHAFT PRODUCTION CHANGE & SERVICE REPLACEMENT NOTE:* A new propeller shaft having a lubrication fitting and an "O" ring seal to provide adequate lubrication between rear propeller shaft and pinion gear shaft splines is used in late 1957 production. A new package, Part No. 1388309 containing a late type propeller shaft, "O" ring seal, and rubber plug, is available for service replacement. When installing the new propeller shaft, a hole must be drilled in the torque tube for access to the lubrication fitting as follows Locate center of 13/16" hole by carefully measuring 7 15/16" from face of differential carrier (where torque tube is joined to carrier), and at a distance of 1 3/4" up on left side from bottom centerline of torque tube. Drill a 13/16" hole, then remove all burrs from inside and outside of hole. Install propeller shaft in the usual manner after installing the "O" ring seal in groove of pinion gear shaft just ahead of pinion locknut. Lubricate fitting *(see "Lubrication Caution" above),* then install rubber plug making sure that drilled edge of hole is fully seated in groove of plug.

REAR AXLE

Own. Semi-floating, hypoid gear type and torque tube drive

►*REAR AXLE LUBRICANT LEVEL CAUTION* Fill only to ¼-3/8" below filler plug opening DO NOT FILL TO FILLER OPENING
See 'Buick Hypoid" in Rear Axle Section

	Axle Ratios	
Series	Synchro-mesh	Dynaflow
40	3 58-1(43-12)	3 07-1(43-14)
50, 60, 70		3 07-1(43 14)

►*REAR AXLE RATIO NOTE* Ratio is stamped on bottom of axle housing as follows 3 07-1 (3/07), 3 58 1 (3/58)

Backlash - 007- 009"

Rear Axle Removal: Raise rear of car and place stands under frame Raise rear axle assembly on floor jack so it can be rolled free of car Disconnect radius rod at axle end, lower ends of springs, and lower ends of shock absorbers. Disconnect parking brake cable at rear sheave and at bracket on torque tube. Disconnect brake hose from pipe at X-member and remove yoke. Seal hose and pipe openings. Remove two opposite torque tube flange bolts and install 3" guide pins Remove other bolts and roll rear axle assembly from car

Wheel Bearing Adjustment None required.

Rear Suspension: *See "Buick Rear Suspension" in Suspension & Wheel Alignment Section*

Torque Ball Adjustment None required. *CAUTION* Two types used. Later type uses "O" ring seal in place of gasket with inner retainer change to use this type seal.

SHOCK ABSORBERS

Delco. Direct acting hydraulic (front and rear). Front shock absorber mounted within front suspension coil spring.

Model	Front	Rear
40, 60 (Exc. 49, 69) Domestic	5531037	
49, 69, 50, 70 Domestic	5531038	
40, 60 Export	5531038	
50, 70 Export	5534431	5535512
40, 60 (Exc. 49, 69) Export		5535523
56C, 56R, 76C, 76R Domestic		5535523
46, 69, 53, 73, 49D Domestic		5535522
46C, 46R, 66C, 66R Domestic		5535521
41, 43, 48, 63 Domestic		5535520

FRONT SUSPENSION

Independent. New design with steering knuckle mounted on upper and lower ball joints (no kingpin or knuckle support).
See "Buick" in Suspension & Wheel Alignment Section.

Steering Axis Inclination - 8° with 0° Camber. Both sides of car should be equal within 1°.

Caster - Neg. 1¾° desired (limits Neg. ¼° to Neg 2¾°). Both sides of car should be equal within ¾°.

Camber - Pos. ½° desired (limits Pos. 1° to Neg ½°). Both sides of car should be equal within ¾°.

Toe-In - 1/16-1/8".

Toe-Out on Turns - Outer wheel 20°, Inner wheel 23° (Manual Steering), 21¾° (Power Steering).

►*CASTER & CAMBER ADJUSTMENT NOTE:* Adjusting shims located between upper control arm inner shaft and frame bracket (shims may also be found installed in same position on lower control arm).

STEERING

Manual Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut type.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: "Saginaw (In-Line) Hydraulic". Recirculating ball nut and worm type with the worm and ball nut, power piston and rack, and the power cylinder all on a single center line.
See "Saginaw (In-Line) Power Steering" in Steering Sect.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BRAKES

B ndix Hydraulic (Single Anchor): Conventional two shoe with short lining (Primary), longer lining (Secondary). Front and rear linings are of different material and are not interchangeable. Linings are riveted to shoes. Parking "Step-on" lever applies rear wheel service brakes.
See "Bendix Hydraulic (Without Eccentric) Brakes" in Brake Section.

►*ALUMINUM FRONT BRAKE DRUM NOTE:* For model application and usage, *See "Bendix Hydraulic Single Anchor (Without Eccentric) Brakes" in Brake Section.*

►*BRAKE DRUM PRODUCTION CHANGE:* Motor Wheel Drums used on front wheels, *See "Bendix Hydraulic Single Anchor (Without Eccentric) Brakes" in Brake Section.*

►*BRAKE LINING PRODUCTION CHANGE:* Both Primary and Secondary brake linings for all four wheels have grooves and the same lining used on both power and manual brakes starting with production February 4th, 1957. Primary lining has "Blue" paint on edge, Secondary "Yellow".

►*FILLING & BLEEDING BRAKE SYSTEM CAUTION:* Do not spill fluid on backing plates of either front or rear brakes. Fluid will enter brake system around wheel cylinder opening or adjustment hole cover. On finned aluminum drums, fluid will be drawn into seam (between Cast Iron & Aluminum) and appear around aluminum pegs in cast iron ring (when heated) and cause serious damage to lining.

Drums - Diameter 12.017-12.023". Rebore limit 12,083".
Wh l Cyl. Diam t r - Front 1 1/8", Rear 1".
Replacement Lining & Shoes - Linings or shoes with lining come in Standard and .030" Oversize. Late type linings are same for manual and power brakes, but different for 70 Series.

Lining Length & Width

Model	Primary	Secondary
Series 40,50,60	10.094" X 2.25"	12.969" X 2.25"
Series 70	10.094" X ①	12.969" X ①

① - Front 2.50", Rear 2 25".
Lining Thickness - .187" (Series 40,50,60), .265" Front wheels, .187" Rear wheels (Series 70).

Braking Power - 53% Front, 47% Rear.

Clearance - .015" or adjusting screw backed off 15-17 notches from point where wheel can just be turned by hand.

Standard Master Cylinder: "Displacement" type. Located on engine side of cowl panel directly below brake pedal. *See "Buick Master Cylinder" in Brake Section.*

Checking Fluid - Maintain fluid level ¼" below lowest thread of filler opening.

Removal - Disconnect battery ground strap. Remove clevis pin from pushrod clevis, lift brake pedal to pull linkage out of way, then remove large nut holding master cylinder to cowl (Wrench 6618). Disconnect stop light wire connector from switch, brake pipe from master cylinder, tape end of pipe. Remove bolts holding master cylinder to air duct and remove master cylinder.

Power Brakes: Bendix or Moraine Power Brake Unit. Suspended type power unit (replaces conventional master cylinder).

►*NOTE:* Bendix unit is new type with "Hydraulic Reaction" control.
See "B ndix" & "Moraine" Power Units in Brake Section.

Checking Fluid Level - Maintain fluid level ¼" below lowest thread of filler opening.

Removal of Power Unit - Same as for standard master cylinder plus the removal of vacuum hoses from vacuum tee

MISC. MECHANICAL

Air Conditioning: Buick Air Conditioning with all components located ahead of the dash.
See "Buick Air Conditioning" in Miscellaneous Section.

Windshield Wipers: Cable operated vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators: Electric type with reversible motor in each window. *See "GM El ctric Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters (Two Way): Electric type with single reversible type motor for horizontal adjustment. *See "GM Two-Way Seat Regulators" in Miscellaneous Section.*

Power Seat Adjusters (Six-Way): Electric type with single reversible motor. *See "GM Six-Way Seat Regulators" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor.
See "Power Top Controls" in Miscellan ous Section.

►*AIR SUSPENSION CAR CAUTION: Before jacking, hoisting, towing, r working under car, s e SERVICE CAUTIONS and TOWING instructions in "Buick Air Suspension" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door p illar post. *NOTE* - Number (example below) includes identification data.

① ② ③ ④
4 E 2 001001

① - See Series Designation below.
② - Year designation (1958).
③ - See Assembly Plant designation below.
④ - Beginning engine number.

Series Designation

4- 40 Special. **6** - 60 Centruy. **8** - 700 Limited.
5- 50 Super. **7** - 70 Roadmaster.

Ass mbly Plant Designation

1	Flint	**5**	Wilmington
2	South Gate	**6**	Atlanta
3	Linden	**7**	Framingham
4	Kansas City	**8**	Arlington

ENGINE NUMBER: Sam as Serial No. (see above). Stamped on top l ft hand corner of crankcase directly forward of left front corner of valve lifter cover. This number is read from front of car. Number on right side of same area is Factory Production Code Number. *NOTE* - ¼" **dash** following Production Code number indicates that cylinder bores are .010" oversize. **X** preceding number (50, 60, 70, 700 Series) indicates 9.5 to 1 compression ratio with low compression pistons.

TUNE-UP

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel); See Note under Engine Specifications for recomm nded changes.*

►*SPECIAL LOWER COMPRESSION ENGINE PRODUCTION NOTE (S ries 50, 60, 70, & 700): See Note under engine specifications for South Gate production cars.*

COMPRESSION PRESSURE: (40 Synchro-mesh) 150 lbs. (40 Dynaflow) 170 lbs.; (50,60,70,700 Std. 10-1 Ratio) 185 lbs., (50,60,70,700 Low Compr. 9.5-1 Ratio) 170 lbs. all at cranking speed. Cylinders should be equal within 15 lbs.

VACUUM READING: 14" minimum at idling speed.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

MANIFOLD HEAT CONTROL: Automatic thermostatic type located in right exhaust manifold. Valve must operate freely. Check thermostat at 70°F (Room Temperature). Unhook outer end from stud. Hold valve closed. Wind-up required to hook thermostat on stud should be 3/8 turn.

IGNITION

FIRING ORDER: 1-2-7-8-4-5-6-3.

Cylinders - RIGHT BANK 1-3-5-7, LEFT BANK 2-4-6-8.

SPARK PLUG GAP: .030-.035".

Spark Plugs - AC-45 (Average Driving); AC-44 (Sustained High Speed Driving) Early, AC-45-S Later. Tighten to 25 ft. lbs.

►*SPARK PLUG NOTE:* AC-45-S has longer porcelain and electrodes for better anti-fouling under extended idling and low speed operation.

►*SPARK PLUG WIRE CAUTION:* To eliminate possibility of engine misfiring, spark plug wires must be installed in holding clips on rocker arm covers in same order as they are attached to the plugs and the coil to distributor high tension wire must pass UNDER the spark plug wires.

COIL: Delco-Remy 1115100.

Ignition Current - 2.5 amps. idling, 4.5 amps stopped.

Resistor - Delco-Remy 1931614. 1.40-1.62 ohms.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by lead from starter solenoid to coil.

DISTRIBUTOR: Delco Remy 1110870 (Std. Trans. & Early Dynaflow Cars), 1110934 (Later Dynaflow Cars). *See "Delco-Remy Window Type Distributors" in Electrical Section.*

Condenser - Delco-Remy 1932004. **Capacity** .18-.23 mfd.

Contact Point Set - Delco-Remy 1931988.

Breaker Gap - .0125-.0175". See Note.

Cam Angle - 28-32°.

►*BREAKER GAP AND CAM ANGLE NOTE:* Setting cam angle at 30° will provide .016" breaker gap.

Breaker Arm Spring Tension - 19-23 ozs.

Rotation - Clockwise viewed from above.

Automatic Advance - 1110870

Degrees Distr.	RPM	Degrees Eng.	RPM
.5-2.0	475	1-4	950
6-8	1150	12-16	2300
12-14.5	1875	24-29	3750

Automatic Advance - 1110934

Degrees Distr.	RPM	Degrees Eng.	RPM
0	625	0	1250
.75-2.5	925	1.5-5	1850
8.5-11	1875	17-22	3750

Vacuum Spark Control: Delco-Remy 1116106 (1110870 Distr.).

Vacuum Advance - 1116106

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	6.5-8.5
9-10.5	18-21	12-14

IGNITION TIMING

Setting - 5° BTDC at 400 RPM (Cars with 1110870 Distr.), 12° BTDC at idling speed (Cars with 1110934 Distr.).

►*IGNITION TIMING CAUTION (Cars with 1110870 Distributor):* Reduce engine idle speed to 400 RPM maximum when setting timing so that advance mechanism will not operate. Reset idle speed to correct figure after timing completed. *This procedure not required on cars with 1110934 Distributor.*

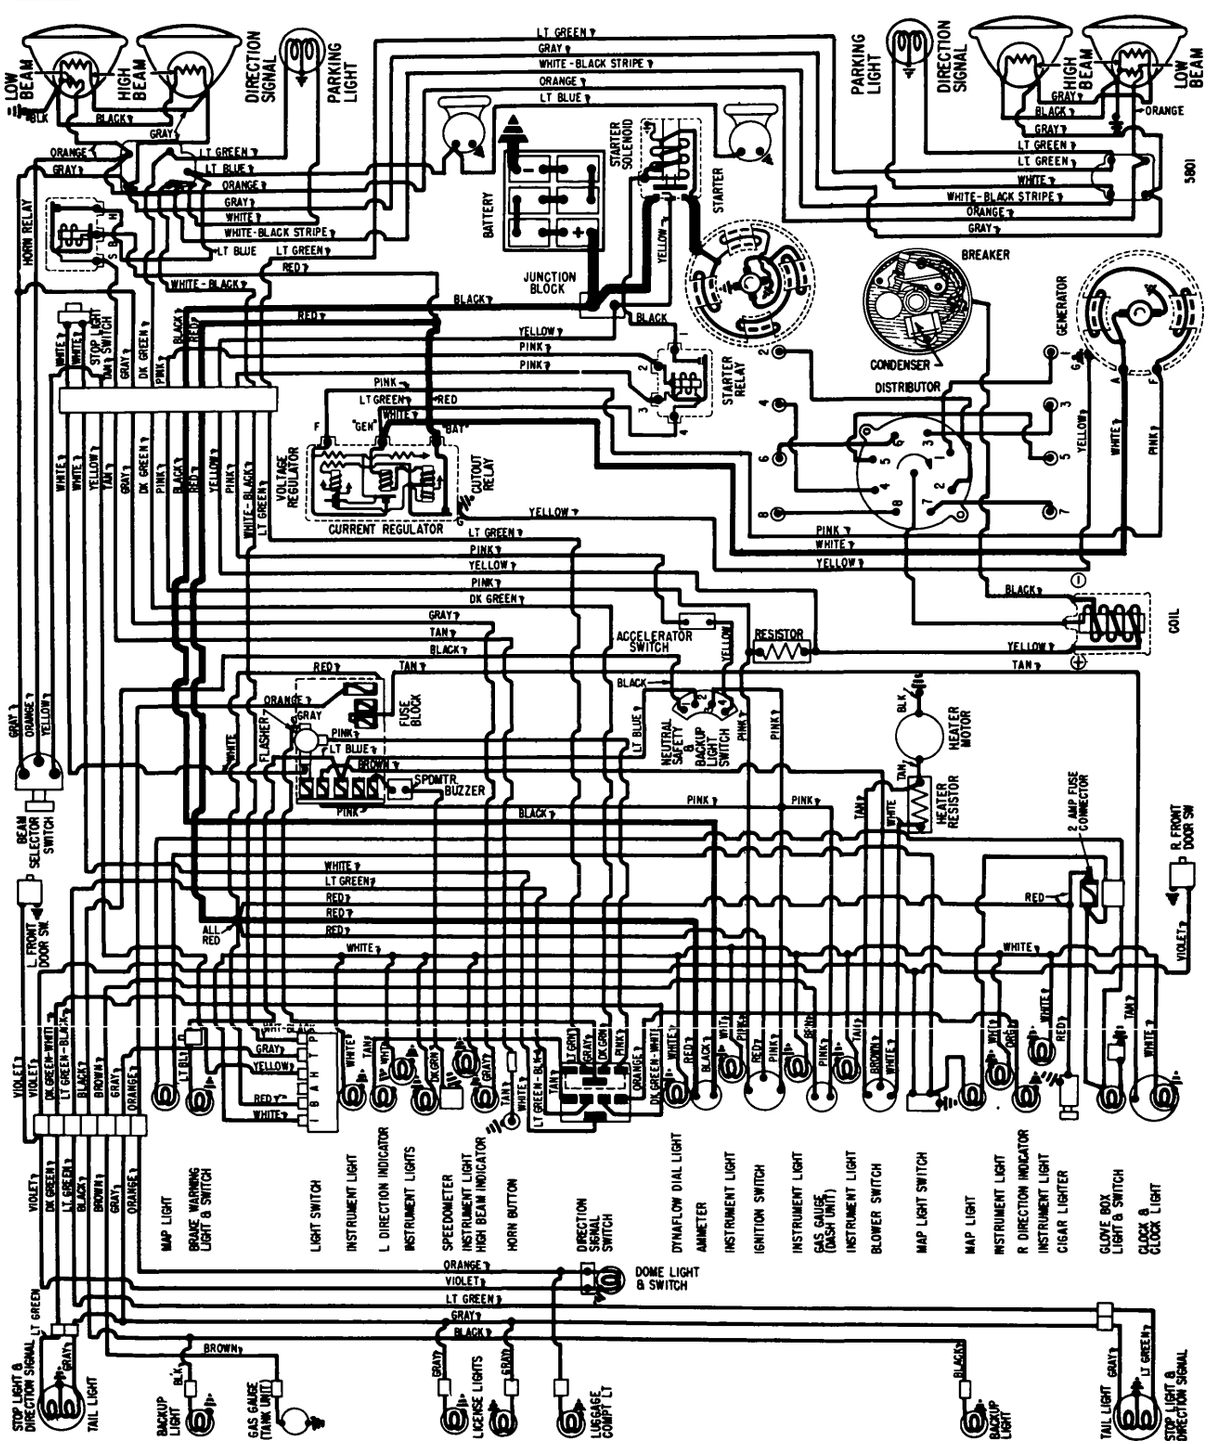
Timing Mark - (Early Cars) Timing indicator on right side of timing chain cover below fuel pump marked "O" and "5" with two additional lines indicating 2½° increments. **(Later Cars)** Timing indicator marked "O", "5", "12". Align correct mark with yellow line on pulley or balancer.

CARBURETOR

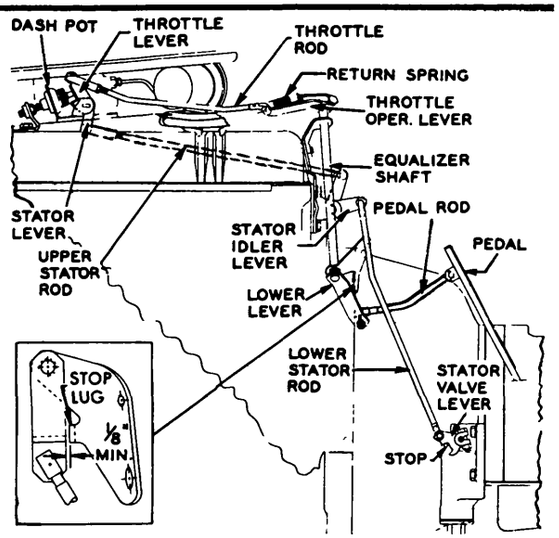
►*CARBURETOR APPLICATION: 2-Barrel Carbur tors (Carter WGD or Stromberg WW) used on S ri s 50, 4-Barrel Carbur tors (Cart r AFB or Rochester 4GC) used on Series 50,60,70,700.*

►*POOR RETURN TO IDLE CORRECTION (All Carburetors except with Engine Production Cod Nos. 586375 to 588199 inclusiv and 602728 (2-bbl.), 602741 (4-bbl.) continuous):* To correct this condition install new Throttle Lever Adapter and Rod Package (see table below) as follows: **Carter & Rochester Carburetors** - Remove and discard old throttle rod, install adapter with bolt in original rod hole in lever, install new throttle rod and connect rod to hole in adapter. **Stromberg Carburetor** - Remove and discard old throttle rod, enlarge **second** hole in throttle lever (not original rod hole) to ¼", connect new throttle lever in this hole. **All Carburetors** - Adjust throttle linkage (see below). *CAUTION* - Before connecting new throttle rod to linkage, check accelerator pedal linkage for freedom from binding and see that lower lever returns to its stop freely. After connecting throttle rod, make certain that throttle returns properly to point where stopscrew makes contact. Check linkage for binding, check all carburetor adjustments.

Carburetor	Buick Part N .
Rochester 4-Bbl	1388588
Carter 4-Bbl	1388589
Carter 2-Bbl	1388590
Stromberg 2-Bbl. (Rod Only)	1173922



►*CARBURETOR CHOKE STICKING CORRECTION (Exc. Cars with Production Nos. 585966 to 588199 Inclusive and 600788 Continuous):* Sticking condition caused by foreign material entering choke pipe and being drawn into choke housing. To correct sticking condition, install new type heat pipe (See Part No. for each type Carburetor below), in inboard side of right exhaust manifold instead of at the rear. Cut insulation to 8" for new pipe and use 5/16" x 3/4" long steel tubing for bushing in manifold when hole in manifold is 5/16". *NOTE* - Expand end of 1/4" pipe as necessary to get air tight fit in manifold.



Carburetor	Buick Part N .
Stromberg	1187019
Carter 2-Bbl	1187020
Rochester	1187021
Carter 4-Bbl	1187022

►*MANIFOLD FUEL DISTRIBUTION (All Carbs.): Carburetor RIGHT barrels feed Cyls. 1-4-6-7, LEFT barr ls 2-3-5-8.*

Throttle Linkage Adjustment (All Trans.): Adjust idle speed to 485 RPM (550 RPM Air Cond. Cars) in Neutral or Park. Adjust Stator Linkage (Dynaflow Cars) as directed below. Check adjustment of choke unloader (See Carter, Rochester, or Stromberg Carburetors). Disconnect throttle rod from throttle operating lever on equalizer shaft. Adjust throttle operating rod so that ½" of thread is exposed beyond locknut. Hold accelerator to floor mat (wide open throttle) and adjust throttle rod length, or change position of lever on shaft, so throttle rod is 1/16" short of entering hole in lever. Connect throttle rod to lever. Check throttle wide open position. Close throttle to hot idle position. Clearance between equalizer shaft lower lever and stop lug on shaft-to-cowl mounting bracket should be 1/8". Readjust throttle rod length, or position upper lever on equalizer shaft, to obtain this clearance.

CONTINUED ON NEXT PAGE

BUICK DYNAFLOW THROTTLE LINKAGE

CONTINUED FROM PRECEDING PAGE

Stator Linkage Adjustment (Variable Pitch Dynaflow): Hold throttle in wide open position, pull stator rod forward, adjust upper stator rod so ball joint at forward end will slip into stator lever freely, then **length n stator rod 1 turn.** Connect ball joint to stator lever. At wide open throttle there should be slight endwise stator rod movement.

Stator Linkage Adjustment (Flight Pitch Dynafl w): Disconnect stator rod from stator lever on carburetor. Hold throttle closed in hot idle position. Hold stator rod in full rearward position and adjust upper stator rod length so that ball joint slips freely in stator lever (lever in rearward position), then **sh rt n stat r r d 1 turn** for clearance at transmission stop, connect rod.

Dashpot Adjustment: Make this adjustment after Throttle and Stator Linkage Adjustments completed and with engine at operating temperature. Close throttle lever with fast idle screw on HIGH step of fast idle cam (extreme fast idle position). Adjust dashpot until it just touches throttle lever, then back off dashpot one turn for clearance. Check adjustment by operating engine at 1500 RPM in Drive (*CAUTION* - apply brakes firmly) and closing throttle rapidly. If engine stalls, decrease clearance slightly by moving dashpot toward throttle lever. If closing delayed excessively, increase clearance.

Starter Switch (Car Starter) S tting: (Synchr -m sh Cars) - Remove carburetor, connect test light (12 volt) across switch terminals, block choke valve so fast idle cam is at slow idle position, back off throttle stop screw. Lamp should light with ¼" (drill) clearance between primary throttle valve and wall of air horn, but not light with 7/64" (drill) clearance at same position. To adjust, change number of shims.

Dynafl w Cars - With throttle completely closed, fast idle cam on slow idle position, dashpot plunger clear of throttle, measure distance from diaphragm flange of

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

dashpot to near edge of dashpot arm on throttle lever. Then check distance again as switch closes (starter energized by opening of throttle). Switch is properly timed when difference between above two measurements meets specifications for that particular carburetor: (Carter 2 Bbl.)1 1/16-1 5/8", (Carter 4 Bbl.) 13/16-1 5/16", (Rochester 4 Bbl.) 13/16-1 5/8", (Stromberg 2 Bbl.) 1-1 7/16".

CARTER WGD 2-BARREL

Cart r WGD 2674S (Synchr -mesh), 2675S, 2845S (Dynfl w)

Idl Setting - ¾-2 turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idl Sp d - 485 RPM (550 RPM Air Cond. Cars) in neutral or park position.

Fl at L v l - ¼" (Gauge T109-31) between top of float (at center) and bowl cover.

Ch k L v r Setting - .020" clearance between lower edge of throttle valve and carburetor bore with adjusting screw on high step of fast idle cam

Fast Idl Setting: .026" clearance between lower edge of throttle valve and carburetor bore with adjusting screw on high step of fast idle cam.

Aut matic Ch k Setting: 1 point lean (2674S), Centered on Index (2675S, 2845S).

►*OTHER DATA: S "Cart r WGD Carburetors" in Carburetion S cti n.*

Thr ttl Linkag Adjustm nt (Auto.Trans.): *See CARBURETOR above.*

STROMBERG "WW" 2-BARREL

Str mberg WW, Cod 7-109 (Dynaflow Cars).

Idl S tting - 1½ turns out. Adjust both screws alike. Turn screws out for richer mixture.

Idl Sp d - 485 RPM (550 RPM Air Cond. Cars) in neutral or park position.

Float L v l - 5/32" (Gauge J-7294) from top of float at center to top edge of float bowl (gasket removed) with needle seated.

Fast Idl & Start Aid S ttings: Remove thermostat cover, throttle stop screw and spring and replace stop screw only, then proceed as follows:

1) With throttle fully closed, turn throttle screw in 7¼ turns from point of contact with throttle lever.

2) Bend fast idle lever (Tool J-5197) as necessary to obtain .076" (#48 drill) clearance between fast idle lever and high step of fast idle cam, with choke valve closed and throttle lever against stop screw.

3) Back out throttle stop screw ¼ turn. Bend choke positioning spring pick-up lever (needle nose pliers) so lever just contacts choke positioning spring with throttle at this position.

4) Remove throttle stop screw. With throttle open to clear fast idle cam, close choke valve by pushing up on thermostat spring lever. Close throttle so fast idl e lever is on high step of fast idle cam. Bend choke rod (Tool J-5197) so side of fast idle lever just clears upper index lug on fast idle cam and rests in corner formed by index lug and high step of cam.

5) Reinstall throttle stop screw with spring. Hold choke valve closed against #53 drill (.060"). Bend unloader link (Tool J-5197) so start aid spring just clears tang on choke unloader plate as throttle valve is opened.

6) Lightly close choke and fully open throttle so unloader arm kicks choke valve partially open. Bend unloader arm on throttle lever to obtain .144" (#27 drill) clearance between upper edge of choke valve and wall of air horn.

7) Press thermostat spring lever upward lightly until positioning spring lever just contacts positioning spring to close choke valve. Bend choke positioning lever (needle nose pliers) to obtain .209" (#4 drill) opening between upper edge of choke valve and wall of air horn.

8) Install choke cover and gasket. Adjust choke setting.

Automatic Choke Setting: 1 notch l.ean.

►*AUTOMATIC CHOKE NOTE:* Choke covers that do not have daub of white paint should have index marks removed and new index marks placed three marks counterclockwise from original position and a daub of white paint added.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Stromberg WW (Buick) Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL

Carter AFB 2676S, 2800S. 4-Barrel downdraft type with automatic choke.

Idle Setting - 1½ turns open. Adjust both screws (primary side only) alike. Turn screws out for richer mixture.

Idle Speed - 485 RPM (550 RPM Air Cond. Cars) in neutral or park position.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter AFB 4-barrel Carburetors" in Carburetion Section.*

ROCHESTER 4GC 4-BARREL

Rochester No. 7011600 (Early), 7013100 (Later). 4-barrel downdraft carburetor.

►*STALLING ON LEFT TURN CORRECTION (Carb. No. 7011600):* This condition may exist when throttle closed or during hard brake application and is caused by hole drilled through into choke passage of main body. To correct, plug hole (even with surface of main body), when a No. 30 drill will drop more than 3/4" into hole. *NOTE* - Remove Air Horn Assembly only to obtain access to hole.

►*ENGINE FADE-OUT ON SHARP TURNS CORRECTION:* To correct this condition increase float drop from 1 5/16" to 1 11/32". DO NOT change float drop unless above condition exists.

Idle Setting - 1½ turns open. Adjust both screws (primary side only) alike. Turn screws out for richer mixture.

Idle Speed - 485 RPM (550 RPM Air Cond. Cars) in neutral or park position.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4GC 4-barrel Carburetors" in Carburetion Section.*

FUEL PUMP PRESSURE: 5¾-7 lbs.

CARB. EQUIPMENT

Fuel Pump: AC, Type FU. Replacement No. 4399.

Pr ssur - 5¾-7 lbs. at 485-1500 RPM with gauge at pump height.

S "Fuel Pumps" in Carburetion Secti n.

Fuel Lin Filt r: Glass bowl fuel filter located between fuel pump and carburetor for visual inspection and cleaning.

Air Cleaner: Four DRY FILTER ELEMENT types used. Different cleaners used on 2- and 4-barrel carburetors and with or without Air Suspension. *NOTE* - DO NOT use Air Suspension cleaners on coil spring cars. Clean every 5,000 miles and replace element every 15,000 miles.

►*CLEANING CAUTION:* Drop element squarely on flat surface from 2" height, repeatedly, until dust is removed. Turn element over and repeat operation. DO NOT wash, air blast or oil element.

Gasoline Gauge: AC. Electric type.

Dash Unit - AC No. 1518999.

Tank Unit - AC No. 5640026.

See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco-Remy No. 560. 12 Volt, 11 plate, 70 ampere hour capacity.

Battery Ground - Negative.

Engine Ground - Dash to right cylinder block.

STARTER

Delco-Remy 1107667. Armature - 1935851.

Drive - Overrunning clutch (solenoid pinion shift).

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	ℂAmperes
0 ft. lbs	5100	10.6	65-100
	Lock	3.5	300-360

ℂ - With solenoid.

Starting Switch: Delco-Remy Solenoid 1119919. Starter solenoid controled by separate relay, Delco-Remy 1116921, and Accelerator Vacuum Switch (on Carburetor). *See "Starter Controls" in Electrical Section.*

Accelerator Vacuum Switch: Carter No. 192-38U (Carter and Stromberg Carb.), Rochester No. 7011372 (Rochester Carb.).

Accelerator Vacuum Switch Setting - *See data on each carburetor type in Carburetion Section.*

Neutral Safety & Back-up Light Switch (Auto. Trans.): Buick No. 1178138 (Dynaflow), 1118293 (Flight Pitch). Mounted on steering column jacket under cowl. Connected in starter control circuit so that starter operative only when selector lever in "N" Neutral or "P" Parking position.

Adjustment - *See "Buick Variable Pitch" or "Buick Flight Pitch" Transmission in Transmission Section.*

GENERATOR

Delco-Remy 1102101. Armature 1939839.

Performance Data

Amperes	Volts	RPM
45	14.0	2900

►*AIR CONDITIONED CAR GENERATOR NOTE:* Same generator used as on Std. car except that with Air Cond. the generator produces 5 ampere higher maximum output (generator has forced cooling by air duct).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Field Current - 2.66-2.88 amperes at 12.0 volts at 80°F.
Brush Spring Tension - 26-32 ozs.
Rotation - Counterclockwise at commutator end.
Belt Adjustment: Check belt tension by using torque wrench on generator pulley. 15-20 ft. lbs. should slip generator pulley on belt.

REGULATOR

Delco-Remy 1119600 (Std.), 1119601 (Air Cond.). *NOTE - Specifications below are "Normal".*
►*"DOUBLE CONTACT" REGULATOR NOTE: Both regulators have double contacts for voltage regulation.*

Cutout Relay

Cuts In - 11.8-13.6 Volts. (Adjust to 12.8 volts).
Contact Gap - .020"
Air Gap - .020" (with contacts just closed).

Voltage Regulator

Setting - 14-15 volts (Adjust to 14.5 volts) operating on upper contacts. .1-.3 volts lower operating on lower contacts.
Contact Gap - .016"
Air Gap - .067" (with points just touching).
Checking & Adjusting - *See "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

Current Regulator

Setting - 38-42 Amps.(1119600), 42-47 Amps. (1119601).
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy (Double Contact)Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Dual Headlights (4-Headlight System). *See "4-Headlights" in Electrical Section.*
Directional Signals - *See Electrical System.*
Autronic Eye: *See Electrical Section.*
Lighting Switch Removal: Disconnect battery cable from junction block and disconnect wires from lighting switch. Pull switch knob out to last notch, then depress spring loaded latch button on switch body while pulling rod and knob assembly out of switch. Remove switch mounting nut with wrench J-1589-A and remove switch and escutcheon from instrument panel.
Stop Light Switch Location: Located on master cylinder attached to engine side of dash panel.
LIGHTING THERMOSTATIC CIRCUIT BREAKERS: Delco-Remy 22.5 Amp. located on lighting switch. Protects Head, Tail Parking, License, and Instrument Lights.
FUSES: All fuses except as noted are located under instrument panel on left side.
5AGC. Air Conditioner Clutch Control.
1AGC. Clock
10AGC. Directional Signal & Stop Light.
20SFE. Dome & Trunk Compt. Light.
20SFE. Heater, Defroster, & Air Cond. Blower.
10AGC. Parking Brake & Back-up Light.
1AGC. Speedometer Buzzer.
2AGA. Glove Box & Map Light. In Connector.
Horn Relay: Delco-Remy 1116920.
Closing Voltage - 5.0-9.5 volts, adjust to 6.5 volts.
Amperage Draw - 7-12 amperes at 12 volts (All).

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own 90° V8 (All Series).

Series	Bore	Stroke	Displacement
All	4.125"	3.4"	364 cu. ins.

Series	Comp. Ratio	Rated HP	Developed HP
40 (S.M.)	8.0-1	54.45	
40 (Dynaflow)	9.5-1	54.45	250 at 4400 RPM
50,60,70,700(Std.)	10-1	54.45	300 at 4600 RPM
50,60,70,700(Spec.) ①	9.5-1	54.45	

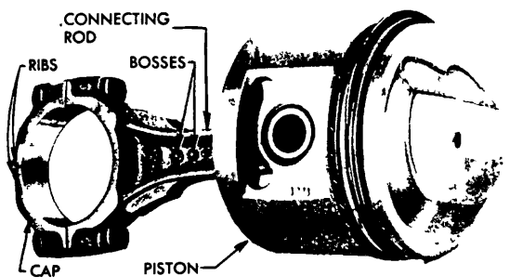
① See Special Lower Compression Engine Note below.

►*SPECIAL LOWER COMPRESSION ENGINE PRODUCTION NOTE (SERIES 50,60,70):* Some South Gate cars, identified by "X" preceding Engine Production Code No. (see Engine Number), have Series 40 Dynaflow Pistons with compression ratio of 9.5-1 (see Piston Replacement Note below). *CAUTION* - Replacement pistons must be same type. DO NOT mix 9.5-1 & 10.0-1 pistons (will cause very rough operating engine).

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel);* Minimum fuel octane rating for satisfactory operation is: 91 (Series 40 Synchro-mesh) 97 (All Dynaflow Cars). If satisfactory fuel cannot be secured, compression ratio should be lowered by using export pistons and head gaskets as listed below. *CAUTION* - Some Series 50,60,70,700 Engines built with 9.5-1 Compression Ratio (same pistons as Series 40 Dynaflow Engine). *See Lower Compression Engine Production Note above.*

Series	Piston		Head Gasket
40 (Synchro-mesh)	①	②	1173567 (.045")
All (Dynaflow)	1392950		1173567 (.045")

① - Domestic & Export pistons are the same.
② - Can be used if desired (Export and Domestic gaskets are both .015").



ENGINE MOUNTINGS: *See "Engine Mountings" in Buick Special Data.*
OIL PAN REMOVAL: Disconnect steering idler arm bracket from right frame side rail, and lower steering linkage for clearance, then remove oil pan. *CAUTION:* Do not allow bracket to turn on idler arm (will change toe-in adjustment).
CYLINDER HEAD & GASKET: Same cylinder head and gasket used on all engines. Different compression ratios secured by use of different pistons as noted under "Pistons" following. *NOTE* - Standard gasket is .015" thick. *See "Engine Operation in Low Octane Areas" (above) for lower compression ratio gasket data.*
►*CYLINDER HEAD REMOVAL NOTE: See "Cylinder Head & Manifolds" in Buick Special Data.*
►*INTAKE MANIFOLD GASKET INSTALLATION CAUTIONS: See "Cylinder Head & Manifolds" in Buick Special Data.*
►*ROCKER ARM COVER INSTALLATION CAUTION: See "Cylinder Head & Manifolds" in Buick Special Data.*
TIGHTENING TORQUES: *See "Tightening Specifications" in Buick Special Data.*
Compression & Vacuum Reading - *See TUNE-UP.*

PISTONS

Aluminum alloy, dome head (with shallow depressions for valve clearance), cam ground, full skirt with transverse slots in oil ring groove. Anodized finish.
►*PISTON REPLACEMENT CAUTION:* Same type pistons must be used in all cylinders. Use of mixed (different compression ratio) pistons will cause very rough operating engine.

Model	Buick Std. Piston No.
Series 40 (Synchro-mesh)	1392769
Series 40 (Auto. Trans.)	1392771
Series 50,60, 70, 700 (9.5-1 Ratio)	1392771
Series 50, 60, 70, 700 (10.0-1 Ratio)	1392770

►*ORIGINAL CYLINDER BORE CAUTION:* **Engines with ¼" long dash following Engine Production Code Number (see Engine Number) have .010" Oversize cylinder bore and pistons. Standard cylinder bore is 4.125" (All Models).**
Removal - Pistons and rods removed from above.
►*CAUTION:* Mark pistons, rods, and bearing caps with cylinder number before removal to insure correct reinstallation. Use Rod Bolt Guides (short guide J-5239-1 on lower bolt, long guide J-5239-2 on upper bolt) to retain bearing shell and assist in pushing assemblies out.
Fitting New Pistons: Clearance .0008-.0014". If micrometer used on pistons, measure at top and bottom of skirt 90° from pin hole (top diameter slightly less than bottom in service). Use .003" X ½" X 12" feeler gauge

BUICK PISTON & ROD ASSY

to fit pistons with cylinder block in normal position. Insert feeler on lower side of bore 90° from piston pin hole. Pull to withdraw feeler should be 7-13 lbs. at 70°F (piston & bore clean and dry).
Replacement Pistons: Standard ("High Limit" or maximum diameter production size) and .001", .005", .010", .020" and .030" Oversize. *NOTE* - Pistons furnished only with fitted pins.
Installing Pistons: Assemble rod in piston with oil spurt notch on same side as valve depressions in piston dome. *See Rod Installation below.*

PISTON PINS

Pins are press fit in connecting rod.
Diameter - .9995-.9997". **Length** - 3.500".
Clearance in Piston - .0004". Finger push fit.
Clearance in Rod - .0007-.0015". Press fit.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Piston Pin Removal & Installation: *See "Piston Pins" in Buick Special Data. CAUTION: Pistons may be damaged if special procedure and tools not used.*

Replacement Pins: Std. size only. Fitted pins furnished with new pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr	.077-.078"	.015-.025"	.003-.005"
Oil	.185-.186"	.015-.035"	.0035-.0095"

►*COMPRESSION RING INSTALLATION NOTE:* Install both compression rings with grooved or beveled side toward bottom of piston and dimple, Letter "T", or word "Top" upward.

Replacement Rings: Std., .010", .020", .030" Oversize, in individual rings or in sets.

CONNECTING RODS

Length - 6.1" (Center to center). **Weight** - 23.20 ozs.
Crankpin Journal Diameter - 2.249-2.250". Out of round limit .0015".
Bearings - Steel backed M400 Aluminum, full precision type. Both halves interchangeable.
Clearance - .0002-.0023". Wear limit .003".
Side Play - .005-.012" (Two rods).

Replacement Bearings: Standard and .001", .002", .020" and .021" Undersize.

Installing Rods: Install piston and rod assembly in engine with spurt notch in lower end of rod and valve depressions in pistons on the high side of cylinder bore. This will bring all spurt notches and valve depressions in pistons toward camshaft. Rib on edge of rod cap should be on same side as conical boss on web of rod and both marks should face toward adjacent connecting rod on same crankpin.

CRANKSHAFT

►*CRANKSHAFT & FLYWHEEL UNBALANCE OR VIBRATION (After replacement of parts - Synchro-mesh & Dynaflow Cars):* See *"Engine Balancing" in Buick Special Data.*

Journal Diameter - 2.498-2.499". Five bearings. Out-of-round limit .0015".
Bearings - Durex 100A (Rear Main), M400 Aluminum (All others), full precision type. Both halves interchangeable.

►*BEARING NOTE:* Bearing upper halves can be rotated out and in by using tool KMO-734 in oil hole.

Clearance - .0005-.0025".

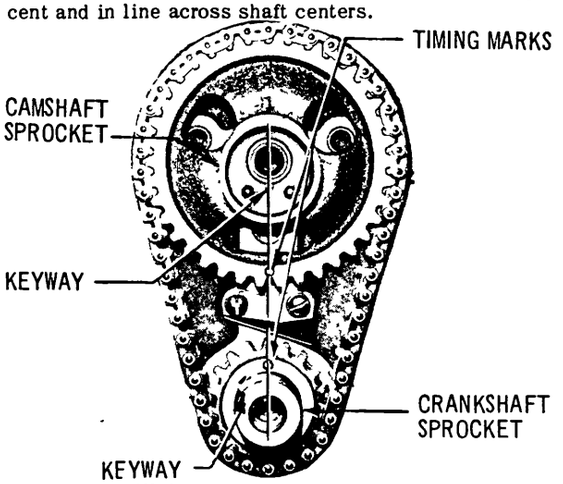
Replacement Bearings: Std. and .001", .002", .003" Undersize. *NOTE* - First four bearings identical and interchangeable. Rear bearing longer and flanged.

End Thrust: Taken by rear No. 5 flanged main bearing.
End Play - .004-.008".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Buick Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Buick Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Buick Special Data.*



CAMSHAFT

►*CAMSHAFT IDENTIFICATION:* **Series 40 Synchro-mesh** - Has plain land just forward of No. 3 bearing journal.
All Others - Above land has two grooves.
Journal Diameters - (1) 1.785-1.786", (2) 1.755-1.756", (3) 1.725-1.726", (4) 1.695-1.696", (5) 1.665-1.666".
Bearings - Steel-backed babbitt lined bushings.
Clearance - .0005-.0035". Service limit .0015-.004".

End Thrust: Taken by hub of camshaft sprocket. Distributor and oil pump drive force camshaft to rear at all times.

Timing Chain: Link belt. **Width** - .688". **Pitch** - .500". **Length** - 26" or 52 links.

Camshaft Setting: Valve timing is correct when "0" marks on camshaft and crankshaft sprockets are adjacent and in line across shaft centers.

BUICK VALVE TIMING MARKS

Engine Front Cover: *See "Engine Front Cover" in Buick Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Buick Special Data.*

VALVES

Tappet Clearance: None in service (hydraulic).

Valve	Head Diam.	Stem Diam.	Length
Intake	1.875"	.3720"	4.704"
Exhaust	1.437"	.371"	4.704"

Valve	Seat Angle	℄Lift	Stem Clearance
Intake	45°	.423"	.0015-.0035"
Exhaust	45°	.423"	.003-.005"

℄ - Auto. Trans., .378" Synchro-mesh.

Valve Seat Width—1/16" (3/64-5/64").

►*VALVE GRINDING CAUTION:* If height of valve stem end raised .075" by valve grinding, height must be reduced by grinding end of stem or replacing valve to insure correct operation of hydraulic lifter.

Valve Springs: Double springs used on all valves. Install springs with closed-coil end toward cylinder head.

Valve Spring Specifications

	Inner Spring		Outer Spring	
Valve	Lbs. Press.	Lgth.	Lbs. Press.	Lgth.
Intake	23-28	1.62"	39.5-44-5	1.53"
Exhaust	63-69	1.2"	93-99	1.11"

Valve Guides: Drive old guides out from combustion chamber side using Driver J-269. Install new guides from top of head using Valve Guide Aligner J-5240-2 over guide hole and installer J-5240-1 to drive guide down until installer shoulder contacts top of aligner which will position guide correctly in head. Finish ream guides with Valve Guide Reamer J-129-3.

Hydraulic Valve Lifters: Barrel type.
Diameter—.8425". **Clearance in Block**—.0015-.003".
Lifter Overhaul & Testing—*See "Valve System" in Buick Special Data.*

Rocker Arm Assembly: *See "Valve System" in Buick Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Synchro-mesh Models

Intake Valve - Opens 25° BTDC. Close 77° ALDC.
Exhaust Valve - Opens 65° BLDC. Close 37° ATDC.

Dynaflow Models

Intake Valve - Opens 34° BTDC. Close 83° ALDC.
Exhaust Valve - Opens 76° BLDC. Close 41° ATDC.
Valve Timing Check - Timing chain cover must be removed to check chain and sprocket marks. *See Camshaft Setting under CAMSHAFT above.*

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Buick Special Data.*

►*OIL LEVEL DIPSTICK PRODUCTION CHANGE & REPLACEMENT CAUTION:* A new dipstick having a baffle at lower end of bridge section is being used in production and is not interchangeable on earlier engines designed for the previous type dipstick. Leakage will occur and the felt seal and stop will not seat on engine block.

Crankcase Capacity: 5 quarts refill. 6 quarts, dry engine. Add 1 quart for dry filter.

Normal Oil Pressure: 40 lbs. at 1600 RPM or 35 MPH.
Pressure Regulator Valve - In oil pump body. Not adjustable.
Oil Pressure Gauge - **AC No. 1508725.** Not electric.

Oil Pump: New combination gear type oil pump and vane type vacuum pump. In crankcase at rear of engine.
Oil Pump Removal & Overhaul - *See "Oiling System" in Buick Special Data.*

Vacuum Pump: Part of oil pump assembly. *See "Vacuum Pump" in Buick Special Data.*

Oil Filter: Full-flow. On pad at right rear of engine. *NOTE* - Ball check in filter base bypasses oil directly to engine when pressure differential between inlet and outlet ports reaches 4½-5½ lbs.
Replacement Filter Element - AC No. PF-122.

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in rear end of valve lifter cover (air outlet) to which ventilator pipe is connected.

COOLING

►*CYLINDER BLOCK DRAIN NOTE:* Pipe plugs replaced drain cocks starting with Engine No. 476710. These plugs must be removed to properly drain cylinder blocks.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*RADIATOR REPLACEMENT NOTE:* Cars with Air Conditioning (installed at factory) have larger radiator cores and shroud assemblies.

Water Capacity: 19 qts., 16.5 qts. without heater.

Pressure Valve: Radiator filler cap. 15 lb. type. *NOTE* - Use of lower test filler cap will cause engine to heat with loss of coolant.

Thermostat: Pellet type in water manifold above pump.
(Std.) Buick No. 1391226, opens at 157-162°F.
(High Temp.) Buick No. 1391225, opens at 177-182°F.

Water Pump: Packless, sealed ball bearing type.
See "Water Pumps" in Buick Special Data.
Pump Removal - Drain cooling system, loosen fan belt, remove fan blades, spacer, and pulley from water pump hub, and remove belt. Remove hose from water pump inlet, then remove pump cover assembly and gasket.

Temperature Gauge: AC No. 1513545. *See "Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Long 11CF No. 266716. Single plate, semi-centrifugal type.
See "Long" Clutches in Clutch Section.
Clutch Disc - Long No. 286176.

Pedal Adjustment: Free play 1 1/8-1¼". For adjustment procedure *See "Clutch Notes" in Buick Special Data.*

Removal: Remove rear axle and transmission (See below), remove flywheel lower housing. Disconnect release rod from yoke, remove boot. Remove spring washer which retains release bearing support and remove support. Pull yoke outward to release it from ball stud, remove yoke and release bearing through bottom of housing. Remove clutch cover screws uniformly to release spring tension after marking cover and flywheel for reinstallation. *NOTE* - Metal spacers placed between release levers and inner edge of clutch will aid removal and installation. Remove cover assembly and driven plate.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.
See "Buick Synchro-mesh" Transmission in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Disconnect rear axle assembly *(CAUTION:* Use 3" torque tube guide pins to save damaging torque tube seal). Drain transmission, remove clutch linkage shield, insert ¼ X 2½" bolt and nut (finger tight) in clutch equalizer and bracket. Remove clevis pin and spring from outer end of clutch yoke and two bolts holding equalizer bracket to transmission. Disconnect speedometer cable, shift rod and selector rod from levers, rubber thrust pad from thrust bracket (leave attached to support). Disconnect rubber mounting pad from transmission support. Support engine at rear on jack, remove support from frame, noting number and location of shims. Loosen exhaust pipe so rear of engine can be lowered. Lower engine and transmission to clear X-member. Install guide pins and remove transmission.

DYNAFLOW DRIVE TRANSMISSION

"Variable Pitch" and new "Flight Pitch" types used:
Variable Pitch - Torque converter and hydraulically operated planetary transmission. A two-position (high and low) stator is used in the torque converter to multiply engine output torque when required (controlled by the accelerator pedal).
Flight Pitch - New five-unit torque converter (three turbines and variable pitch stator assembly) used with automatic non-shifting hydraulically controlled planetary transmission.

►*FLIGHT PITCH DYNAFLOW OPERATING CAUTION:* DO NOT use "G" range for pulling forward and DO NOT depress accelerator pedal when shifting from "D" to "G". "G" range is intended only for descending steep grades with accelerator pedal released.

►*1957 VARIABLE PITCH DYNAFLOW TRANSMISSION REPLACEMENT CAUTION:* If 1958 transmission assembly used to replace 1957 assembly, the 1957 Universal Joint must be used (remove 1958 joint from transmission assembly).

►*FLIGHT PITCH TRANSMISSION NOISE OR VIBRATION CORRECTION:* Correct filler pipe must be used (If Variable Pitch filler pipe used, pipe will not have sufficient clearance at transmission crossmember).

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Buick Variable Pitch" or "Flight Pitch Dynaflow Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Buick Variable Pitch" or "Flight Pitch Dynaflow Drive" in Transmission Section.*

Throttle Linkage Adjustment and Dash Pot Setting on Dynaflow Drive Cars. *See "TUNE-UP".*

Lubrication - Check fluid level every 1,000 miles, drain and refill every 25,000 miles. Use only Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type A bearing an AQ-ATF number embossed on can.

Checking Fluid Level - Check with engine idling in "P" (Variable Pitch) or "N" (Flight Pitch) and transmission at normal operating temperature. Maintain level at "Full" mark on dipstick.

Capacity - 12 quarts (Variable Pitch), 12.5 quarts (Flight Pitch). Add 1 1/3 pints for dry transmission. *Use only Special Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type "A" bearing an AQ-ATF number embossed on can.*

►*OTHER DYNAFLOW DRIVE SERVICE DATA: See "Buick Variable Pitch" or "Flight Pitch Dynaflow Drive" in Transmission Section.*

UNIVERSALS

Saginaw & Spicer. Saginaw (Front), Saginaw or Spicer (rear). Front joint enclosed in torque ball, rear joint enclosed in torque tube. Front joint lubricated by transmission. Rear joint requires no lubrication.

►*1957-58 U-JOINT NON-INTERCHANGEABILITY CAUTION:* 1957 and 1958 U-Joints must not be interchanged (use of incorrect type would result in drive line roughness and vibration) and joints can be identified as follows: **1957 Typ** - Marked by two notches in line with rear yoke of joint. **1958 Typ** - Not marked but rear yoke has omitted splines at two points (180° apart) which are 45° off centerline of yoke.

►*U-JOINT INSTALLATION CAUTION:* U-Joint omitted splines (two points 180° apart) must be aligned with blind splines on propeller shaft. This will provide correct relationship of front and rear universals and prevent drive line vibration.

►*REAR PROPELLER SHAFT LUBRICATION NOTE:* Lubricate propeller shaft coupling and splines (when assembling) with type "0" (non-fibrous) chassis lubrication and pack cavity beyond spline about 2/3 full of grease. *CAUTION* - DO NOT plug vent hole in propeller shaft welch plug when servicing as excess grease will accumulate in torque tube ahead of access hole. Limit power grease gun to one shot.

REAR AXLE

Own. Semi-floating hypoid gear type and torque tube drive.

►*REAR AXLE LUBRICANT LEVEL CAUTION:* Fill only to ¼-3/8" below filler plug opening. DO NOT FILL TO FILLER OPENING.
See "Buick Hypoid" in Rear Axle Section.

Axle Ratios

Series 40 (Synchro-mesh)	3.58-1 (43-12)
All Series (Dynaflow)	3.23-1 (42-13)

►*REAR AXLE RATIO NOTE:* Ratio is stamped on bottom of axle housing as follows: 3.58-1 (3/58), 3.23-1 (3/23).

Backlash - .007-.009".

Axle Shaft Removal: Place stands under rear axle so wheels clear floor, then remove wheel and drum. Remove wheel bearing retainer plate-to-backing plate nuts (leave bolts in place to support backing plate). Use puller J-6176 with Slide Hammer to pull axle assembly. Replace two backing plate nuts finger tight to hold plate in place.

Rear Axle Assembly Removal: 1) Raise car and place stands under frame, then place floor jack under center of rear axle housing. Disconnect lower end of rear springs.
2) On Air-Poise Cars, disconnect rear height control valve links at strut rods. Pull levers down carefully to exhaust all air pressure. Remove bolts mounting rear air spring bearing plate on rear axle housing, remove plunger and bearing plate assembly by disengaging plunger from diaphragm center plug.
3) Disconnect radius rod at axle end. *CAUTION* - On Air-Poise Cars DO NOT disconnect radius rod or torque tube until all air pressure is exhausted from air springs.
4) Disconnect shock absorber lower ends, and parking brake cable at rear sheave and at bracket on torque tube.
5) Disconnect brake hose from pipe at frame X member and remove yoke. *NOTE* - Cover hose and brake pipe openings to protect from dirt.
6) Remove two opposite torque tube flange bolts and replace with 3" guide pins, then remove other bolts and pull axle assembly from under car.

Wheel Bearing Adjustment: None required.

Torque Ball Adjustment: None required.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SHOCK ABSORBERS

Delco. Direct acting, hydraulic (front and rear). Front shock absorber mounted just back of front spring with upper stem attached to frame bracket and lower stem attached to an extension of spring seat.

►*SHOCK ABSORBER INTERCHANGEABILITY NOTE:* Front shock absorbers are interchangeable right and left and are the same on both coil spring and Air-Poise Cars. Rear shock absorbers are interchangeable right and left but the extended length of an Air-Poise shock absorber is 1" shorter than a coil spring shock absorber and they are NOT interchangeable for that reason.

Buick Shock Absorber Nos.

Model	Front	Rear
40,60 (Exc.49,49D,69)	5543704	5535589
49, 49D, 69	5543705	5535512

All (Exc. 49,49D,69) ℂ		5543706
49, 49D, 69 ℂ		5543712
40,60 (Exc. 49,49D, 69) ℂ	5543705	5535590
50,70,700 ℂ	5535588	5535512
All (Exc. 49,49D,69) ℂ℃		5543713

ℂ - Power Steering & Air-Poise Cars.
℃ - Export High Springs.

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted to rear of coil springs.
See "Buick" in Suspension & Wheel Alignment Section.

►*FRONT SPRING SHIM NOTE:* Power Steering equipped cars have one shim on left front spring and NO shims on right spring to compensate for added weight of hydraulic gear.

Steering Axis Inclination - 8° at 0° Camber.
Caster - Pos. ¾° to Neg. 1¾°.
Camber - Pos. 1° to Neg. ½°.
Toe-In - 1/16" to 1/8".
Toe-Out on Turns - Outer wheel 20°, Inner wheel should be 22½°±½°.

►*STEERING AXIS, CASTER, CAMBER NOTE:* ¾° variation limit on opposite sides.

REAR SUSPENSION

Rear Suspension: *See "Buick Rear Suspension" in Suspension and Wheel Alignment Section.*

AIR SUSPENSION

Air springs replace coil springs at all four wheels. *See "Front Suspension" above for alignment specifications and "Buick Air-Poise Suspension" in Suspension and Wheel Alignment Section.*

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut type.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: "Saginaw (In-Line) Hydraulic". Recirculating ball nut and worm type with the worm and ball nut, power piston and rack, and the power cylinder all on a single center line.
See "Saginaw (In-Line) Power Steering" in Steering Sect.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic (Single Anchor) - Conventional two shoe with short lining (primary), longer lining (Secondary). Aluminum FRONT brake drums used on Series 50, 60, 70, 700.
See "Bendix Hydraulic (Without Eccentric)" Brakes in Brake Section.

Drums - Aluminum brake drums with cast iron liner used on Series 50, 60, 70, 700 front wheels. All other drums are cast iron fused to pressed steel disc.

Drum Diameter - 12.017-12.023". Rebore limit 12.083".

►*ALUMINUM BRAKE DRUM NOTE:* Later type does not have aluminum plugs in the bonded iron liner. Drum turning procedures remain the same as for early type drums. The two types are not interchangeable and should NOT be used on same car.

Wheel Cylinder Diameters - Front 1 1/8". Rear 1".

Lining - Primary and secondary linings are of different material and different length and are not interchangeable. Molded linings are riveted to the shoes.

Replacement Linings - Lining and Shoes with Linings furnished Std. and .030" Oversize.

Lining Length & Width

	Front Wheels	Rear Wheels
Primary	10.040" x 2.50"	10.040" x 2.25"
Secondary	12.959" x 2.50"	12.959" x 2.25"

Thickness - .265" (Primary), .187" (Secondary).
Braking Power - 55.9% front, 44.1% rear.
Clearance - Adjusting screw backed off 13-15 notches from point where wheel can just be turned by hand.

Standard Master Cylinder: "Displacement" type. Located on engine side of cowl panel directly below brake pedal. *See "Buick Master Cylinder" in Brake Section.*

Checking Fluid - Maintain fluid level ¼" below lowest thread of filler opening.

Removal - Disconnect battery ground strap. Remove clevis pin from pushrod clevis, lift brake pedal to pull linkage out of way, then remove large nut holding master cylinder to cowl (Wrench 6618). Disconnect stop light wire connector from switch, brake pipe from master cylinder, tape end of pipe. Remove bolts holding master cylinder to air duct and remove master cylinder.

Power Brakes: Bendix or Moraine Power Brake Unit. Suspended type power unit (replaces conventional master cylinder).

►*NOTE:* Bendix unit is new type with "Hydraulic Reaction" control.
See "Bendix" & "Moraine" Power Units in Brake Section.

Checking Fluid Level - Maintain fluid level ¼" below lowest thread of filler opening.

Removal of Power Unit - Same as for standard master cylinder plus the removal of vacuum hoses from vacuum tee

MISC. MECHANICAL

Air Conditioning: Buick Air Conditioning with all components located ahead of the dash.
See "Buick Air Conditioning" in Miscellaneous Section.

Windshield Wipers: Cable operated vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators: Electric type with reversible motor in each window. *See "GM Electric Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters (Two Way): Electric type with single reversible type motor for horizontal adjustment. *See "GM Two-Way Seat Regulators" in Miscellaneous Section.*

Power Seat Adjusters (Six-Way): Electric type with single reversible motor. *See "GM Six-Way Seat Regulators" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor.
See "Power Top Controls" in Miscellaneous Section.

►*AIR SUSPENSION CAR CAUTION: B fore jacking or hoisting th car, clos air ride shutoff valv located on radiator tie bar. Before towing the car, see "Buick Air Suspension" in Suspension & Wheel Alignment Section.*

►*TRIPLE TURBINE CAR PUSH STARTING CAUTION: Car CANNOT be started by pushing because rear oil pump has been eliminated on 1959 Triple Turbine Transmission.*

MODEL IDENTIFICATION

Series	Series Designation
Le Sabre	4400
Invicta	4600
Electra	4700
Electra "225"	4800

ENGINE & SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar, and on top surface of crankcase forward of valve lifter cover on left side. Number (example below) includes identification data.

① ② ③ ④
4 F 1 001001

① - Series. **4** - 4400, **6** - 4600, **7** - 4700, **8** - 4800.

② - Year - 1959.

③ - Assembly Plant. **1** Flint, **2** South Gate, **3** Linden, **4** Kansas City, **5** Wilmington, **6** Atlanta, **7** Framingham, **8** Arlington.

④ - Beginning vehicle number.

Engine Production Code No - Stamped on same surface as Engine & Serial No but on **right** side When viewed from front of engine, number is upside down. **364" Engines** have prefix 3F, **401" Engines** have prefix 4F. *NOTE* - ¼" **dash** following code no indicates .010" oversize cylinder bore.

TUNE-UP

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel): See Note under Engine Specifications for recommended changes.*

►*364" ENGINE DETONATION AT LIGHT (TIP-IN) THROTTLE CORRECTION·* May be caused by slightly higher compression ratio due to production tolerances. To correct on cars when engine vacuum has **not dropped below 8 inches,** install new Vacuum Advance Unit Part No. 1116155 and recheck timing and fuel. Auto Trans. Cars require the use of 99 Octane (Premium) fuels, Synchro-mesh Trans. Cars operate satisfactorily on regular fuels. *See DISTRIBUTOR for Advance Performance.*

►*SPARK PLUG ROUTING (To Eliminate "Cross-Fire" "Engine Miss" or "Spark Plug Early Failure") NOTE:* Wires must pass through brackets in the following sequence from front to rear, Right bank 1-3-5-7, Left bank 2-4-6-8.

►*LACK OF THROTTLE RESPONSE (Cars with Carter AFB 2840S Carburetor)· Se CARBURETOR for recommend correction.*

COMPRESSION PRESSURE: (4400 Synchro-mesh) 150 lbs., (All Others) 185 lbs. at cranking speed (160 RPM) Cylinders must be equal within 15 lbs

VACUUM READING: 16-17" at idle speed.

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters.

MANIFOLD HEAT CONTROL: Automatic thermostatic type located in right exhaust manifold. Valve must operate freely. Check thermostat at 70°F (room temperature). There should be 180° wrap on spring

IGNITION

FIRING ORDER: 1-2-7-8-4-5-6-3.

Cylinders - RIGHT BANK 1-3-5-7, LEFT BANK 2-4-6-8.

SPARK PLUG GAP: 035". *Supersedes previous specification of .030-.035".*

Spark Plugs - AC No 44S (STD.), No. C-42 (HighSpeed Driving). 14 mm. Torque to 25-30 ft. lbs. This specification supersedes previous specification of 22-28 ft. lbs.

COIL: Delco-Remy 1115100.

Ignition Current - 2.5 amps idling, 4 5 amps stopped.

Resistor - Delco-Remy 1931614. 1.40-1.62 ohms.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch to coil. Bypassed during cranking by lead from starter solenoid to coil.

DISTRIBUTOR: Delco-Remy 1110949 (4400 Synchro-mesh), 1110936 (Others - early), 1110956 (Others - later except late 401" Eng.), 1110959 (Late 401" Eng.). *See "Delco-Remy Window Distributors" in Electrical Section.*

Condenser - Delco-Remy 1932004. **Capacity** .18-.23 mfd.

Contact Point Set - Delco-Remy 1931988.

Breaker Gap - Gap (.0125-.0175") will be correct when cam angle correctly set.

Cam Angle - 28-32°, Set to 30°.

Breaker Arm Spring Tension - 19-23 ozs.

Rotation - Clockwise viewed from above.

Automatic Advance - 1110949

Degrees	Distr.	RPM	Degrees	Eng.	RPM
.5-2.0		475	1-4		950
6-8		1150	12-16		2300
12-14.5		1875	24-29		3750

IGNITION TIMING

Setting - 5° BTDC (Synchro-mesh), 12° BTDC (Auto. Trans)

Timing Mark – Timing indicator on chain case cover marked "0" (TDC), "5" (5° BTDC), and "12" (12° BTDC). Align correct mark with yellow paint filled groove on harmonic balancer.

CARBURETOR

►*CARBURETOR APPLICATION· Carter WGD or Stromberg WW 2-Barrel carburetor used on 4400 Series. Carter AFB 4-Barrel carburetor used on 46, 47, 4800 Series and as Power Pack on 4400. Rochester 4GC 4-Barrel used also on 46, 47, 4800 Series.*

►*MANIFOLD FUEL DISTRIBUTION (All Cars): Carburetor RIGHT barrels feed Cyls. 1-4-6-7, LEFT barrels feed Cyls. 2-3-5-8*

►*LACK OF FUEL CORRECTION:* Can be caused by fuel line from tank to pump being kinked at No. 1 body mount. To correct, raise fuel line clip ½" approximately.

►*ENGINE ROAR CORRECTION (Cars With 4-Bbl. Carb.):* May be caused by air cleaner gasket improperly installed or wing nut not tightened to 30-35 in. lbs. Make necessary adjustments to correct.

THROTTLE LINKAGE ADJUSTMENT (AUTO. TRANS.): Make sure stator linkage is properly adjusted (see below). Then proceed as follows: Disconnect carburetor throttle rod from throttle operating lever. Hold accelerator pedal firmly against floor mat and throttle in wide open position. Now hold throttle rod at hole in lever. **Rod must be 1/16" short of ent ring h l in l v r.** Readjust rod as necessary Connect rod to lever and again check for wide open throttle with accelerator against floor mat. Check and adjust choke unloader if necessary. Check for smooth operation of linkage. Desired wide open throttle position should be when accelerator pedal strikes floor mat rather than stop on throttle lever striking hard against boss on throttle body.

Stator Linkage Adjustment - Hold throttle wide open. Adjust upper stator rod so ball joint at forward end will just slip freely in stator lever on carburetor with stator rod pulled forward and stator lever held rearward against pickup. **N w l ngth n upp r stat r r d 1 full turn** (provides slight clearance at stop in transmission to

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

insure carburetor reaching wide open throttle). Reconnect ball joint to stator lever. Tighten locknut. To check adjustment, move throttle lever to wide open position and move stator rod endwise. It should have a slight free movement or "shake".

Anti-Stall Dashp t Adjustm nt - After stator and throttle linkage properly adjusted, engine at normal operating temperature and idle speed correctly set, proceed as follows: Open throttle to clear fast idle cam and rotate cam to extreme fast idle position. Let throttle close against cam. Adjust dashpot until it just touches throttle lever. Tighten locknut. Put transmission in "D" with brakes applied and jab accelerator pedal and release quickly. If engine stalls, adjust dashpot toward throttle lever; if too much time necessary for return to idle, move dashpot away from throttle lever. *Always tighten locknut after ach adjustment*

Start r Switch (Car Start r) S tting: Synchro-mesh Cars - Remove carburetor, connect test light (12 volt) across switch terminals, block choke valve open so fast idle cam is at slow idle position. Lamp should light with ¼" (drill) clearance between wall of throttle body and lower edge of one primary throttle valve at center; but it should not light with 7/64" (drill) clearance at same position. To adjust, change number of shims between contact spring and plunger.

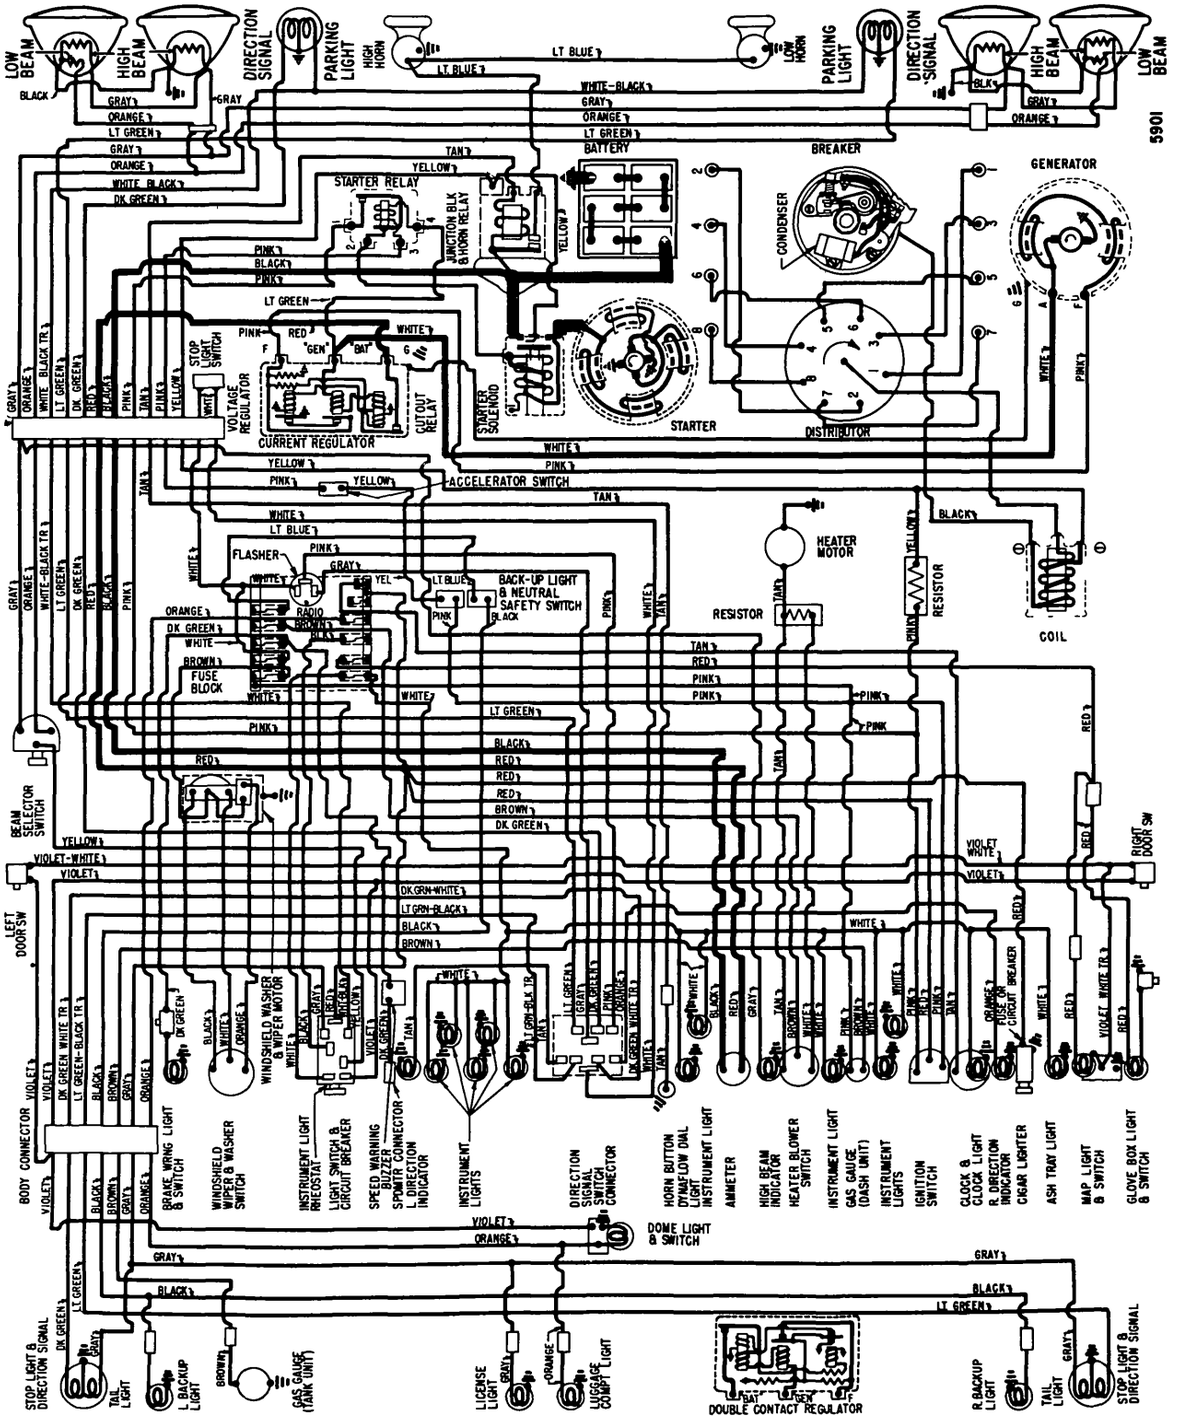
Dynafl w Cars - With carburetor on engine, transmission in "P" and brakes applied, back off throttle stop-screw, rotate fast idle cam to slow idle position **and fully cl se throttl valve.** Measure distance from diaphragm flange of dashpot to **near** edge of dashpot arm Turn ignition on and slowly open throttle while holding scale in position. When starter is energized, measure distance as before. Subtract the two measurements. Difference should be. **Cart r 2-Bbl.** 9/16-7/8", **Strom-b rg 2-Bbl.** 3/4-1 1/8", **Carter 4-Bbl.** 1/2-3/4", **Rochester 4-Bbl.** 1/2-13/16". To adjust, change number of shims between contact spring and plunger.

CARTER WGD 2-BARREL

Carter WGD No. 2837S (Synchro-mesh), 2838S (Dynaflow).

Idl Setting - ¾-2 turns open. Adjust both screws alike Turn screws out for richer mixture.

Idl Sp d - 485 RPM (550 RPM Air Cond. Cars) in "N" or "P"



Float L vel - ¼" (Gauge T109-31) between top of float (at center) and bowl cover To adjust, bend float lever

Chok L ver Setting - With slight clearance between tang on fast idle cam and stop on flange casting and inner choke shaft lever contacting lug on outer choke shaft lever, align index mark on cam with adjusting screw To adjust, bend lug on outer choke shaft lever.

Acc l rating Pump - Normal setting, long stroke hole.

Fast Idle Setting: 026" (Gauge T109-189) between lower edge of valve and bore with adjusting screw on high step of cam

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Automatic Choke Setting: 1 point lean (2837S), centered at index (2838S).

Throttle Linkage Adjustment: *See CARBURETOR above*

OTHER DATA: See "Carter WGD Carburetors" in Carburetion Section.

STROMBERG WW 2-BARREL

Stromberg WW, Code 7-112.

Idle Setting - 1 turn out Adjust both screws alike Turn screws out for richer mixture

Idle Speed - 485 RPM (550 RPM Air Cond Cars) in "N" or "P"

Float Level - 5/32" (Gauge J-7294) from top of float at center to top edge of float bowl (gasket removed) with needle seated To adjust, bend float arm tang

Accelerating Pump - Normal setting, medium stroke hole

Fast Idle & Start Aid Settings: Remove thermostat cover, throttle stopscrew and spring and replace stopscrew without spring Proceed as follows.

1) Hold throttle valves fully closed and turn throttle stopscrew in **exactly** 7 turns from point of contact with throttle lever. Choke positioning spring pickup lever should just contact choke positioning spring. Adjust by bending lever. Reinstall stopscrew and spring.

2) Hold choke valve closed and measure distance from upper thermostat cover hole to top of thermostat lever Distance should be 1 3/32". Adjust by bending choke rod with Tool J-5197

3) Partially close choke valve by applying light pressure upward on thermostat spring lever until choke positioning spring lever just contacts spring. Opening between upper edge of choke valve and wall of air horn should be 204" (No. 6 drill). To adjust bend choke positioning spring lever.

4) Install choke cover and gasket, set choke **1 notch lean** and tighten screws and retainers. Choke valve must close partially

5) Open throttle enough to clear fast idle cam so choke is in idle choke kick position. Then close throttle so fast idle screw rests on high step of fast idle cam. Side of screw should line up with drop-off to next lower step of cam. To adjust, bend unloader link with Tool J-5197.

6) Hold choke valve closed on a .061" (No. 53) drill Start aid spring should just clear start aid tang on fast idle cam as throttle valve is opened. To adjust, bend start aid tang

7) With choke closed with light pressure, fully open throttle so unloader arm on throttle lever kicks choke open partially Distance between upper edge of choke valve and wall of air horn should be 146" (No 27 drill). To adjust, bend unloader arm.

8) After carburetor installed on engine (engine at normal operating temperature), position fast idle cam so fast idle screw rests on high step of cam with side of screw lined up with drop-off to next lower step Adjust fast idle screw so engine is running at 1500 RPM

Automatic Choke Setting: 1 notch lean.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA See "Stromberg WW (Buick) Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL

Carter AFB, No. 2877S (4400 Power Pack), 2840S (46, 47, 4800 Std.).

►*EXCESS IDLE SPEED CORRECTION (2877S):* Use either special adjustment procedure or install new fast idle cam *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

►*LACK OF THROTTLE RESPONSE CORRECTION (2840S):* Install new metering rods and springs. Carburetors after Nov 1958 have these parts installed in production. *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

►*ROUGH ENGINE ON ¾ THROTTLE ACCELERATION CORRECTION: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

►*IDLE COMPENSATOR CAUTION·* Idle compensator (thermostatically controlled idle air bypass) must be in closed position when making Idle Setting and Idle Speed adjustments. Remove air cleaner and use pencil or suitable tool inserted in throttle bore to hold valve closed.

Idle Setting - ¼-1¾ turns open. Adjust both screws (primary side only) alike Turn screws out for richer mixture.

Idle Speed - 485 RPM (550 RPM Air Cond. Cars) in "N" or "P".

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA· See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

ROCHESTER 4GC 4-BARREL

Rochester 4GC, No. 7013044 (46, 47, 4800 Std.).

►*CARBURETOR PRODUCTION CHANGE NOTE:* Carburetors with "A" on identification tag are improved to correct a cutting out on sharp left turn condition *See "Rochester 4GC 4-Barrel Carburetors" in Carburetion Section.*

►*IDLE COMPENSATOR CAUTION:* Idle compensator (thermostatically controlled idle air bypass) must be in closed position when making Idle Setting and Idle Speed adjustments. Remove air cleaner and use pencil or suitable tool inserted in throttle bore to hold valve closed.

Idle Setting - 1½ turns open Adjust both screws (primary side only) alike. Turn screws out for richer mixture

Idle Speed - 485 RPM (550 RPM Air Cond Cars) in "N" or "P"

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4GC 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC type HE. No. 4706.

Pressure - 5¼-6½ lbs. (at carburetor height).

See "Fuel Pumps" in Carburetion Section.

Fuel Line Filter: Located in line between fuel pump and carburetor. *NOTE* - Some Air Cond. Cars have special filter with metering outlet in top and rubber hose for vapor fumes to return to gas tank.

Gasoline Gauge: AC Electric type.

Dash Unit - AC No. 5640303

Tank Unit - AC No 5640299 (Std), No 5640300 (A.C Cars)

See Fuel Gauges' in Carburetion Section.

Air Cleaner: Oil-wetted mesh type. Clean every 5,000 miles or sooner under severe operating conditions. DRY FILTER ELEMENT type optional for heavy duty operation.

►*DRY TYPE CLEANING CAUTION:* Clean every 1,000 miles. Clean by tapping and shaking to remove dirt particles. *DO NOT wash, air blast or oil element.*

BATTERY

Delco No. 562. 12 volt, 11 plate, 70 ampere hour capacity (20 hr. rate).

Battery Ground - Negative, to cylinder head.

Engine Ground - Engine mounting bracket to frame.

STARTER

Delco-Remy 1107724 (364" Eng.), 1107739 (401" Eng.).

Armature - Delco-Remy 1935851 (1107724 Starter), 1945688 (1107739 Starter).

Drive - Overrunning clutch (solenoid pinion shift).

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. minimum.

Performance Data - 1107724

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	3600-5100	10.6	65-100
	Lock	3.5	300-360

Performance Data - 1107739

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	4700-5400	10.6	80-120
	Lock	2.0	290-370

Ⓒ - Includes solenoid.

Starting Switch: Delco-Remy Solenoid No. 1118816 (364" Eng.), No. 1114252 (401" Eng.), controlled by separate relay, Delco-Remy No. 1116963, and Accelerator Vacuum Switch (on Carburetor). *See "Starter Controls" in Electrical Section.*

Accelerator Vacuum Switch: Carter No. 192-38U (Carter and Stromberg Carb.), Rochester No. 7011372 (Rochester Carb.).

Accelerator Vacuum Switch Setting - *See data on each carburetor type in Carburetion Section.*

Neutral Safety & Back-up Light Switch (Aut.-Trans.): Buick No. 1178138 (2 Turbine), 1118293 (3 Turbine). Mounted on steering column jacket under cowl. Connected in starter control circuit so that starter operative only when selector lever in "N" Neutral or "P" Parking position.

Adjustment - *See "Buick (Twin Turbine) Dynaflow" or "Buick (Triple Turbine) Dynaflow" in Transmission Section.*

GENERATOR

Delco-Remy 1102147 (Std. Early), 1102165 (Std. Later), 1102138 (Air Cond.).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Armatur - Delco-Remy 1932900 (1102147 Gen.), 1946719 (1102165 Gen.), 1939837 (1102138 Gen.).

►*GENERATOR RATTLE CORRECTION (Early Cars):* Caused by generator bracket bent in direction opposite to which belt tends to deflect it. To correct, insert a steel bar in front bracket hole and bend front mounting ear forward .030".

►*CHARGING CIRCUIT FUSE CAUTION·* Battery charging circuit protected by a fuse clipped to "BAT" terminal of generator regulator. 40 amp. fuse (Std. Regulator) has white ceramic insulator, 50 amp. fuse (Air Cond. Regulator) has white insulator and copper colored retaining screws (early cars), brown insulator (later cars). Check for blown fuse when diagnosing generator, battery or regulator failure.

►*GENERATOR SERVICE CAUTION·* Generator commutator end frame furnished for service is No. 1944265 (later type with ball bearing as used on No. 1102165 Generator). When this end frame used on first type Generator No. 1102147, it will be necessary to install later type Armature No. 1946719 and Bearing (commutator end) No. 904751.

P rf rmance Data

Generator	Amperes	Volts	RPM
1102147, 165	35	14.0	2630
1102138	45	14.0	2600

►*AIR CONDITIONED CAR GENERATOR NOTE:* Special 45 ampere generator used which has a special air duct leading from front of radiator to commutator end of generator supplying cold air for higher output at low speeds.

Fi ld Curr nt - 1.69-1.79 amps. (110147, 165), 2.66-2.86 amps. (1102138) at 12 volts and 80°F.

Brush Spring T nsi n - 26-32 ozs.

R tati n - Counterclockwise at commutator end.

B lt Adjustm nt: Check belt tension by using torque wrench on generator pulley. 15-20 ft. lbs. should slip pulley on belt.

REGULATOR

D lc -R my 1119242 (Std. Gen.), 1119617 (Air Cond. G n.). *NOTE - Regulator 1119617 is "Double Contact" typ .*

►*REPLACEMENT REGULATOR 1119168 CAUTION (Std. G n. Cars):* 1119168 Regulator (1957 Type) replaces 1119242 Regulator. This regulator does not have a Charging Circuit Fuse and when installed on car, fuse from original regulator must be transferred or new fuse installed.

►*SEE CHARGING CIRCUIT FUSE CAUTION IN "GENERATOR" ABOVE.*

NOTE - Specifications below are "Normal" settings.

Cut ut Relay

Cuts In - 11.8-13.5 volts (1119242 & 1119168), 11.8-13.0 volts (1119617).

C ntact Gap - .020".

Air Gap - .020" with contacts just closed.

V ltag Regulator

S tting (1119242 & 1119168) - 13.8-14.8 volts at 125°F ambient temperature.

Setting (1119617) - 13.8-14.6 volts at 125°F ambient temperature operating on upper contacts, 1-3 volts lower operating on lower contacts.

C ntact Gap (1119617) - .016".

Air Gap - .075" (1119242 & 1119168), .067" (1119617) with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

Current Regulator

Setting (1119242 & 1119168) - 32-37 amps. at 125°F.

Setting (1119617) - 42.5-47.0 amps. at 125°F.

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: 4-headlights std. *See "4-Headlights" in Electrical Section.*

Directional Signals - *See Electrical Section.*

Autronic Eye - *See Electrical Section.*

Lighting Switch Removal: Disconnect battery ground cable. Remove lower left instrument panel housing and remove multiple connector from lighting switch. Pull knob out to last notch. Depress spring loaded button on top of switch while pulling knob and rod assembly from switch. Remove mounting nut with Wrench J-7799 remove switch.

►*GLOVE COMPARTMENT LIGHT REMAINING ON CORRECTION* Caused by ground wire contacting instrument panel brace. To correct, reposition lamp assembly

Stop Light Switch Location: Mounted on left frame side rail at front brake pipe distributor.

LIGHT ING THERMOSTATIC CIRCUIT BREAKERS: Delco-Remy 15 amp. located in lighting switch, protects headlight and front parking light circuits only.

FUSES: On fuse block under cowl unless otherwise specified.

10 AGC. Back-up lights.
2 AGA. Clock.
10 AGC. Directional Signal & Stop Lights
20 SFE. Dome, Trunk Compt. & Rear Cigar Lighter
5 AGC. Glove Box & Map Light.
20 SFE. Heater, Defroster,
25 Ampere. Air Conditioner Blower & Compressor Clutch
5 AGC. Instrument Lights & Rheostat
4 AGW. Portable radio, 7.5 SFE Other Radio.
5 AGC. Speedometer Buzzer, Parking Brake Warning Light
10 AGC. Tail, License & Instrument Lights.
25 AGC. Wiper and Washer Motor.
15 AGC. Antenna Motor, located in connector near switch
Special. Cigar Lighter In back of Lighter

Horn Relay: Delco-Remy 1116965.

Closing Voltage - 5.0-9.5 volts Adjust to 6.5 volts.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Us extreme care when disconn cting any part of air conditioning or lines for acc ss to engine. See "Air Conditioning S rvic Cautions" in Misc llaneous S ction.*

ENGINE SPECIFICATIONS: Own. 90° V8, valve-in-head.

S ri s	B r	Str k	Displac m nt
4400	4.125"	3.4"	364 cu. in.
46,47,4800	4.1875"	3.64"	401 cu. in.

Engine	Compr. Ratio	Rated HP	Developed HP
364" Synchro-mesh	8.5-1	54.45	
364" Dynaflow	10.5-1	54.45	250 at 4400 RPM
364" PowerPack	10.5-1	54 45	300 at 4400 RPM
401"	10.5-1	56.11	325 at 4400 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

►*401" ENGINE 80-90 MPH PERFORMANCE IMPROVEMENT NOTE:* New distributor used on later cars (identified by the yellow metallic finish oiler cap). *See DISTRIBUTOR above*

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel)* Minimum fuel octane rating for satisfactory operation is 92 (Series 4400 Synchro-mesh). 99 (All Dynaflow Cars). If satisfactory fuel cannot be secured, compression ratio should be lowered by using export pistons and head gaskets as listed below. *NOTE - Compression ratio for Synchro-mesh cars, domestic and export, is 8.5-1. Compression ratio for export Dynaflow cars is 8.75-1.*

Series	Piston	Head Gasket
4400 Synchro-mesh	ℂ 1388536	ℭ 1185646 (.015")
4400 Dynaflow	1388541	ℭ 1185646 (.015")
46, 47, 4800	1388539	ℭ 1185646 (.015")

ℂ - Domestic & Export Pistons are the same.

ℭ - All head gaskets are the same.

ENGINE MOUNTINGS: *See "Engine Mountings" in Buick Special Data.*

CYLINDER HEAD AND GASKET: Cylinder heads are interchangeable between engines. All engines use a .015" cylinder head gasket and the lower compression ratio used on synchro-mesh engine is obtained by the use of lower dome height pistons. *See "Pistons" following and "Engine Operation in Low Octane Areas (Foreign Travel)" above.*

►*CYLINDER HEAD REMOVAL NOTE See "Cylinder Head & Manifolds" in Buick Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Buick Special Data*

PISTONS

Aluminum alloy, dome head (with shallow depressions for valve clearance), cam ground, full skirt with transverse slots in oil ring groove.

►*PISTON REPLACEMENT CAUTION* Same type piston must be used in all cylinders. Use of mixed (different compression ratio) pistons will cause very rough operating engine.

Model	Buick Std. Piston No.
Series 4400 Synchro-mesh	1388536
Series 4400 Auto Trans. ℂ	1388542
Series 4400 Auto Trans ℭ	1388541
Series 4600, 4700, 4800 ℂ	1388538
Series 4600, 4700, 4800 ℭ	1388539

ℂ - Not used on low compression export jobs.

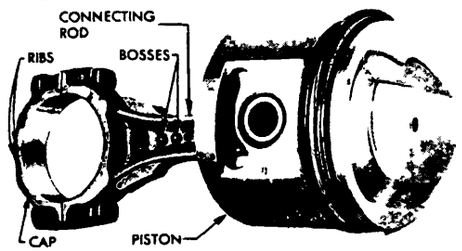
ℭ - Export low compression jobs.

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with ¼" long dash following Production Code Number (see

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Engine Number) have 010" oversize cylinder bore and pistons. Standard cylinder bore is 4.125"(4400), 4.1875" (Others).



R moval - Pistons and rods removed from above.

►*CAUTION* Mark pistons, rods, and bearing caps with cylinder number before removal to insure correct reinstallation. Use Rod Bolt Guides (short guide J-5239-1 on lower bolt, long guide J-5239-2 on upper bolt) to retain bearing shell and assist in pushing assemblies out.

Fitting New Pistons: Clearance .0008-.0014". If micrometer used on pistons, measure at top and bottom of skirt 90° from pin hole (top diameter slightly less than bottom in service) Use 003" x ½" x 12" feeler gauge to fit pistons with cylinder block in normal position. Insert feeler on lower side of bore 90° from piston pin hole. Pull to withdraw feeler should be 7-13 lbs. at 70°F (piston & bore clean and dry).

Replacement Pistons: Standard ("High Limit" or maximum diameter production size) and 001", .005", 010", 020" and .030" Oversize. *NOTE* - Pistons furnished only with fitted pins.

Installing Pistons: Assemble rod in piston with oil spurt notch on same side as valve depressions in piston dome. *See Rod Installation below.*

BUICK PISTON & ROD ASSEMBLY

PISTON PIN

Pins are press fit in connecting rod.

Diameter - .9994-.9997". **Length** - 3.520".

Clearance in Piston - .0004". Finger push fit

Cl arance in Rod - 0007- 0015". Press fit

Pist n Pin Removal & Installation: *See "Piston Pins" in Buick Special Data. CAUTION - Pistons may be damaged if special procedure and tools not used.*

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.	077- 078"	.015- 025"	.003- 005"
Oil	180- 186"	.015-.035"	0035- 0095"

►*COMPRESSION RING INSTALLATION NOTE* **364" Eng.** - Install both (identical) compression rings with inner bevel toward bottom of piston. **401" Eng.** - Install compression rings with side of ring up which is either marked with a dimple, a letter "T", a letter "O" or word "TOP". Top ring with inner bevel toward top of piston and second ring with inner bevel toward bottom of piston.

Replac m nt Rings: Std., .010", .020", .030" Oversize

CONNECTING ROD

L ngth - Center to center. (4400) 6.100",(Others) 6.220"

Crankpin J urnal Diam ter - 2.249-2.250". Out of round limit .0015".

B arings - Steel backed M400 Aluminum, full precision type. Both halves interchangeable.

Clearance - .0002-.0023". Wear limit 003".

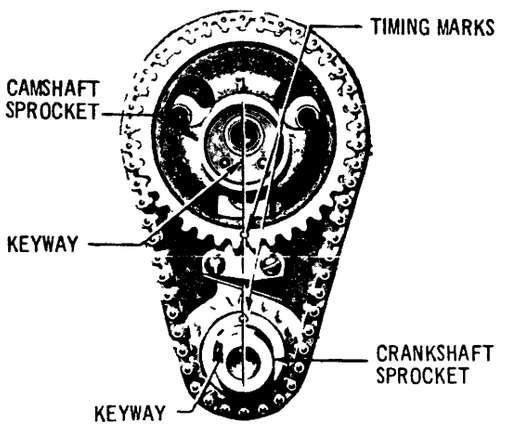
Side Play - .005-.012" (Two rods).

Replacement Bearings: Standard and .001", .002", .020" and .021" Undersize.

Installing Rods: Install piston and rod assembly in engine with spurt notch in lower end of rod and valve depressions in pistons on the high side of cylinder bore This will bring all spurt notches and valvedepressions in pistons toward camshaft. Rib on edge of rod cap should be on same side as conical boss on web of rod and both marks should face toward adjacent connecting rod on same crankpin.

CRANKSHAFT

►*FRONT MAIN BEARING CAP REMOVAL NOTE* To remove these cap bolts, front of engine must be raised sufficiently to provide clearance. Disconnect front engine mounts and exhaust pipe at manifolds.



►*CRANKSHAFT & FLYWHEEL UNBALANCE OR VIBRATION (After replacement of parts - Synchro-mesh & Dynaflow Cars) See "Engine Balancing" in Buick Special Data.*

Journal Diameter - 2.498-2 499". Five bearings. Out-of-round limit .0015".

Bearings - Durex 100A (Rear Main), M400 Aluminum (All others), full precision type. Both halves interchangeable.

►*BEARING NOTE* Bearing upper halves can be rotated out and in by using Tool KMO-734 in oil hole.

Clearance - .0005-.0021"

BUICK VALVE TIMING MARKS

Replacement Bearings: Std and 001", 002", 003" Undersize.

End Thrust: Taken by Rear No. 5 (364"), No. 3 (401") flanged main bearing.

End Play - .004-.008".

Crankshaft R ar Main B aring Oil S al: *See "Crankshaft & Main Bearings" in Buick Special Data.*

Crankshaft Fr nt Oil S al: *See "Engine Front Cover" in Buick Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywhe l" in Buick Special Data.*

CAMSHAFT

►*CAMSHAFT IDENTIFICATION NOTE* Various camshafts used in production and are identified by groove markings as follows *NOTE - All service replacement camshafts are later production type.*

Series	Early Producti n Part No.	Groov s	Lat r Pr duction Part N .	Gr v s
4400 S.M	1178587	2	1178587	0
4400 Auto Trans	1185378	0	1185378	4
46, 47, 4800	1185918	1	1185918	1

All Others - Above land has two grooves

Journal Diameters - **(1)** 1.785-1.786", **(2)** 1.755-1.756", **(3)** 1 725-1.726", **(4)** 1.695-1.696", **(5)** 1.665-1 666".

Bearings - Steel-backed babbitt lined bushings.

Clearance - 0005-.0035". Service limit .0015- 004".

End Thrust: Taken by hub of camshaft sprocket. Distributor and oil pump drive force camshaft to rear at all times.

Timing Chain: Link belt. **Width** - .688" **Pitch** - .500". **Length** - 26" or 52 links.

Camshaft Setting: Valve timing is correct when "0" marks on camshaft and crankshaft sprockets are adjacent and in line across shaft centers

Engine Front Cover: *See "Engine Front Cover" in Buick Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front S al): *See "Engine Front Cover" in Buick Special Data.*

VALVES

Tappet Clearance: None in service (hydraulic).

Valve	Head Diam.	St m Diam.	L ngth
Intake	1.875"	①	4 785"
Exhaust	1.500"	②	4 785"
Valve	**Seat Angle**	**Lift**	**Stem Clearanc**
Intake	45°	③	④
Exhaust	45°	⑤	003- 005"

① - Tapered from .3715"±.0005" to .3730"±.0005".

② - Tapered from 3705"±.0005" to 3720"± 0005"

③ - (4400) 403" Synchro-mesh, 443" Auto Trans , (Others) - 439"

④ - Top 001- 003", bottom 0025- 0045"

⑤ - (4400) 403" Synchro-mesh, 439" Auto Trans , (Others) 441"

Valve Seat Width - 1/16" average (3/64-5/64").

►*VALVE GRINDING CAUTION* Normal height of valve stem above rocker arm cover gasket is 1.540" When valve face or seat grinding raises valve stem height 075" above normal, grind off end of valve stem or replace part

Valve Springs: Inner and outer springs used on all valves Install with closed coils against cylinder head

Valve Spring Sp cificati ns

Valve	Inner Spring Lbs. Press.	Length	Out r Spring Lbs. Pr ss	L ngth
Intake	23-28	1 69"	39 5-44 5	1 60"
Exhaust	63-69	1 25"	93-99	1 16"

Valv Guides: Drive old guides out from combustion chamber side using Driver J-269 Install new guides from top of head using Valve Guide Aligner J-5240-2 over guide hole and installer J-5240-1 to drive guide

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

down until installer shoulder contacts top of aligner which will position guide correctly in head. Finish ream guides with Valve Guide Reamer J-129-3..

Hydraulic Valv Lift rs: Barrel type.

Diamet r - .8425". Cl arance in Block - .0015-.003".

Lift r Ov rhaul & T sting - *See "Valve System" in Buick Special Data.*

Rocker Arm Ass mbly: *See "Valve System" in Buick Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valv Timing Specifications

S ri s 4400 Synchr -mesh (Camshaft 1178587)

Intak Valv s - Open 25° BTDC. Close 77° ALDC.
Exhaust Valv s - Open 65° BLDC. Close 37° ATDC.

S ri s 4400 Dynaflow (Camshaft 1185378)

Intak Valv s - Open 35° BTDC. Close 73° ALDC.
Exhaust Valv s - Open 73° BLDC. Close 37° ATDC.

Oth r Seri s (Camshaft 1185918)

Intak Valv s - Open 33° BTDC. Close 77° ALDC.
Exhaust Valv s - Open 75° BLDC. Close 44° ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Buick Special Data.*

Crankcas Capacity: 5 qts. (refill), 6 qts. (dry engine). Add 1 qt. with filter change.

N rmal Oil Pr ssur : 40 lbs. at 1600 RPM.

Pr ssur R gulator Valv - In oil pump body. Not adjustable.

Oil Pr ssur Gaug - AC No. 1508866. Not electric.

Oil Pump: Spur-geared type oil pump mounted at rear end of crankcase and driven by distributor drive shaft.

Oil Pump R m val & Ov rhaul - *See "Oiling System" in Buick Special Data.*

Oil Filt r: AC full-flow type, mounted at right rear of engine. *NOTE* - Ball check in filter base bypasses oil directly to engine when pressure differential between inlet and outlet ports reaches 4½-5½ lbs.

R plac m nt Filt r El m nt - AC PF-5.

►*OIL FILTER INSTALLATION CAUTION:* DO NOT use a wrench to tighten filter. Tighten by hand until gasket contacts sealing face, then tighten an additional 2/3 turn of the element. This supersedes previous installation instruction.

Crankcas V ntilati n: Air enters through two ventilating type filter caps at top of each rocker arm cover. Air is drawn out through metal gauze filled filter located at rear end of valve lifter cover and ventilator pipe extending down from lifter cover.

COOLING

►*RADIATOR, FAN & SHROUD PRODUCTION CHANGE:* Later cars have radiator tie bar baffle replaced by a radiator mounting bracket (all cars); fan shroud eliminated and 21" fan and fan clutch installed instead (Air Cond. cars).

►*FAN SPACER CHANGE NOTE:* New fan spacer 3¾" long (5/8" shorter than previous type) used on later cars, eliminating need for shims used to locate radiator at 1¼" from fan to radiator core. Replace shims when using longer spacer. Use shorter bolts No. 1190830 with new shorter spacer.

Wat r Capacity: 16.5 qts. less heater, 19 qts. with heater.

Pr ssur Valv : Radiator filler cap. 15 lb. type. *NOTE* - Use of lower test filler cap will cause engine to heat with loss of coolant.

Thermostat: Pellet type in water manifold above pump. **(Std.)** Buick No. 1388789, opens at 167-172°F. **(High Temp.)** Buick No. 1391225, opens at 177-182°F.

Water Pump: Packless, sealed ball bearing type with aluminum housing and replaceable seal.

See "Water Pumps" in Buick Special Data.

Pump Removal - Drain radiator, loosen belts and remove fan blade, spacer and pulleys from water pump hub on pump shaft. Remove belts. Disconnect hose from pump inlet and heater hose from nipple. Remove bolts then remove pump assembly and gasket, from timing chain cover.

Temperature Gauge: AC No. 1513694. *See "Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Long 11CF. Single plate, semi-centrifugal type.

See "Long" clutches in Clutch Section.

Pedal Adjustment: Free play 1 1/8-1 1/4". For adjustment procedure see *"Clutch Notes" in Buick Special Data.*

Removal: Remove rear axle and transmission (see below), remove flywheel lower housing. Disconnect release rod from yoke, remove boot. Remove spring washer which retains release bearing support and remove support. Pull yoke outward to release it from ball stud, remove yoke and release bearing through bottom of housing. Remove clutch cover screws uniformly to release spring tension after marking cover and flywheel for reinstallation. *NOTE* - Metal spacers placed between release levers and inner edge of clutch will aid removal and installation. Remove cover assembly and driven plate.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.

See "Buick Synchro-mesh" Transmission in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Disconnect rear axle assembly. *CAUTION - Use torque tube guide pins to prevent damaging torque tube seal.* Drain transmission, remove torque ball retainers and torque ball. Disconnect speedometer cable and disconnect shift rod and selector rod from levers on transmission. Pull clutch release rod sideways and release yoke clip. Loosen dual exhaust system ball joints at both manifolds. Loosen single exhaust system front to rear exhaust pipe ball joint and rear exhaust to front muffler ball joint. Disconnect rubber thrust pad from thrust bracket leaving thrust pad attached to support. Disconnect rubber mounting pad from transmission support, leaving pad attached to transmission. Place jack under rear of engine pan to support engine. Raise engine and transmission just enough to relieve load on support and remove support from frame noting number and location of shims. Remove upper two transmission to flywheel housing bolts, install Guide Pins J-851-A and remove lower bolts. Lower engine and transmission as an assembly until rear bearing retainer will clear frame crossmember. Move transmission to rear to clear main drive gear from flywheel housing and lower transmission to floor. *S NOTE following.*

►*SYNCHRO-MESH TRANSMISSION REMOVAL NOTE:* Disconnect clutch equalizer at either the frame or the engine to prevent damaging idle lever-to-equalizer rod and causing bind in clutch control linkage.

DYNAFLOW DRIVE TRANSMISSION

"Twin Turbine" & "Triple Turbine" types used. Same as used previously.

►*TRIPLE TURBINE BUZZING NOISE CORRECTION:* Caused by lube pressure regulator ball vibrating on its seat. *To correct see "Buick Triple Turbine" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Buick Twin Turbine" or "Tripl Turbine" Dynaflow Drive in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Buick Twin Turbine" or "Triple Turbine" Dynaflow Drive in Transmission Section.*

Throttle Linkage Adjustment and Dashpot Setting on Dynaflow Drive Cars. *See TUNE-UP.*

Lubrication - Check fluid level every 1000 miles, drain and refill every 25,000 miles. Use only Automatic Transmission Fluid Type "A" bearing an "AQ-ATF" number embossed on container.

Checking Fluid Level - Check with engine idling, selector lever in "P" and transmission at normal operating temperature. Maintain level to within 1" of FULL mark on dipstick.

Capacity - Twin Turbine 12 qts., Triple Turbine 12½ qts. All dry transmissions 13¾ qts.

►*OTHER DYNAFLOW DRIVE SERVICE DATA: See Buick "Twin Turbine" or "Triple Turbine" Dynaflow Drive in Transmission Section.*

UNIVERSALS

Saginaw & Spicer. Saginaw (Front), Saginaw or Spicer (Rear). Front joint enclosed in torque ball, rear joint enclosed in torque tube. Front joint lubricated by transmission. Rear joint requires no lubrication in service.

►*U-JOINT INSTALLATION CAUTION:* U-Joint omitted splines (two points 180° apart) must be aligned with blind splines on propeller shaft. This will provide correct relationship of front and rear universals and prevent drive line vibration.

►*REAR PROPELLER SHAFT LUBRICATION NOTE:* Lubricate propeller shaft coupling and splines (when assembling) with type "O" (non-fibrous) chassis lubrication and pack cavity beyond spline about 2/3 full of grease. *CAUTION* - DO NOT plug vent hole in propeller shaft welch plug when servicing as excess grease will accumulate in torque tube ahead of access hole. Limit power grease gun to one shot.

REAR AXLE

Own. Semi-floating hypoid gear type and torque tube drive. "Power-Lock Differential (Plate Clutch Type)" optional.

►*REAR AXLE LUBRICANT NOTE:* Flushing & Seasonal changes not recommended for either type axle. Maintain

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

fluid level at filler opening. Use Factory Hypoid Gear Lubricant in standard axle. Use Buick Spec. No. 723-TL-1000 Lube in optional axle.
See "Buick Hypoid" or "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.

Axle Ratios

	S.M.	Twin Turbine	Triple Turbine
4400(2-Bbl.Carb.)	3.58-1	3.07-1	2.78-1
All Others		3.23-1	2.78-1

Export Ratios - Synchro-mesh 3.58-1, Auto. Trans. 3.36-1

►*REAR AXLE RATIO NOTE:* Gear ratios are indicated by numbers stamped on bottom of axle housing.

►*AXLE IDENTIFICATION* Stamped on bottom of housing. "X" next to number indicates "Positive Traction" axle. Lubrication caution tag on filler plug also indicates "Positive Traction" axle.

Backlash - .007-.009".

Axle Shaft Removal: Place stands under rear axle so wheels clear floor, then remove wheel and drum. Remove wheel bearing retainer plate-to-backing plate nuts (leave bolts in place to support backing plate). Use puller J-6176 with Slide Hammer to pull axle assembly. Replace two backing plate nuts finger tight to hold plate in place.

R ar Axle Assembly Removal: 1) Raise car and place stands under frame, then place floor jack under center of rear axle housing. Disconnect lower end of rear springs.

2) On Air-Poise Cars, disconnect rear height control valve links at strut rods. Pull levers down carefully to exhaust all air pressure. Remove bolts mounting rear air spring bearing plate on rear axle housing, remove plunger and bearing plate assembly by disengaging plunger from diaphragm center plug.

3) Disconnect radius rod at axle end. *CAUTION* - On Air-Poise Cars DO NOT disconnect radius rod or torque tube until all air pressure is exhausted from air springs.

4) Disconnect shock absorber lower ends, and parking brake cable at rear sheave and at bracket on torque tube.

5) Disconnect brake hose from pipe at frame X member and remove yoke. *NOTE* - Cover hose and brake pipe openings to protect from dirt.

6) Remove two opposite torque tube flange bolts and replace with 3" guide pins, then remove other bolts and pull axle assembly from under car.

Wheel Bearing Adjustment: None required.

T rque Ball Adjustment: None required.

SHOCK ABSORBERS

Delco. Direct acting, hydraulic (front and rear) Front shock absorbers mounted inside front spring with upper stem attached to frame The lower insulated bracket is bolted to spring seat Rear shock absorber mounted on an angle with upper end "in" and attached to frame bracket Lower end attached to bracket on rear axle housing.

►*SHOCK ABSORBER INTERCHANGEABILITY NOTE·* Front shock absorbers are interchangeable right and left. Rear shock absorbers are interchangeable right and left. *NOTE* - Air-Poise shock absorber is 1" shorter than a coil spring shock absorber.

Buick Shock Absorber Nos.

Ⓒ - Regular & Export. ② - Export only

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers within coil springs. Air Ride Cars have low rate coil springs to match rear air spring rate. A spring seat spacer is located between spring seat and lower control arm to accommodate the longer low rate spring. A spring steel stabilizer shaft used on Air Ride and Station Wagons to control side roll.
See "Buick" in Suspension & Wheel Alignment Section

►*FRONT SUSPENSION TIE ROD SLEEVE NUT NOTE·* Lockwasher used on early cars eliminated and special locknut only recommended for use at this point.

Steering Axis Inclination - 7° at 5/6° camber.

Caster (Manual Steering) - Neg. 2°±¾° Both sides equal within ¾°.

Caster (Power Steering) - Neg. ½°±¾° Both sides equal within ¾°.

Camber - Pos. 1° to Neg. ½°. Pos ½° preferred. Both sides equal within ¾°.

Toe-In - 1/16-5/32".

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be 23° (manual steering), 22° (power steering)

REAR SUSPENSION

Rear Suspension: *See "Buick Rear Suspension" in Suspension and Wheel Alignment Section*

►*ESTATE WAGON EXCESSIVE SWAY CORRECTION* Install new type Track Bar Bushing, *see "Buick Rear Suspension" in Suspension & Wheel Alignment Section*

AIR SUSPENSION

Air springs replace coil springs at rear wheels.
See "Front Suspension" above for alignment specifications and "Buick Air Suspension" in Suspension & Wheel Alignment Section.

►*CARS NOT RETURNING TO CORRECT TRIM HEIGHT WHEN LOAD REMOVED: See "Buick Air Suspension" in Suspension and Wheel Alignment Section, for recommended rework of Height Control Valve.*

STEERING

Manual: Saginaw Ball B aring W rm & Nut. Recirculating ball worm and nut type
See "Saginaw Ball Bearing Worm & Nut" in Steering Section

Pow r St ring: Saginaw (R tary Valv) Hydraulic. New hydraulically actuated unit combining a recirculating ball nut and a rack piston operating in a power cylinder. *NOTE* - Some early cars use "Saginaw (In-Line) Power Steering".
See "Saginaw (In-Line)" or "Saginaw (Rotary Valve)" Power Steering in Steering Section.

►*POWER STEERING BELT SQUEAL CORRECTION* Adjust belt so that pulley will slip at 40-45 ft. lbs.

►*POWER STEERING PUMP SHAFT BREAKAGE NOTE:* Install Kit No. 5688110, *see "Saginaw Power Steering Pumps" in Steering Section*

►*POWER STEERING PUMP NOISE AND LEAK CORRECTION·* Caused by loose expansion plug. *See "Saginaw Power Steering Pumps" in Steering Section*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Butt n R moval: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic (Single Anchor). Conventional two shoe with short lining (primary), longer lining (secondary) Aluminum brake drums with cast iron liner used on all series front brakes. Parking "Step-On" pedal applies rear service brakes.
See "Bendix Hydraulic (Without Eccentric)" Brakes in Brake Section.

►*PARKING BRAKE NOTE* For "Pedal Sticking" and for "Cable Rattle" Corrections, *see "Bendix Hydraulic (Without Eccentric)Brakes" in Brake Section.*

Drums - Aluminum brake drums with cast iron liner used on all front brakes. All rear brake drums are cast iron with steel disc.

Drum Diameter - 12.01-12.02" front and rear

►*BRAKE DRUM REBORING NOTE.* When a drum will not clean up when rebored to a diameter of 12.080" replace drum

Wheel Cylinder Diameters - Front 1 1/8" Rear 1"

Lining - Primary and secondary linings are of different material and different length and are not interchangeable. Molded linings are riveted to the shoes

Replacement Linings - Lining and Shoes with Linings furnished Std. and .030" Oversize.

Lining Length & Width

	Front Wh ls	Rear Wh ls
Primary	10.040"x2.50"	10 040"x2 25"
Secondary	12 959"x2.50"	12 959"x2 25"

Thickness - 265" front wheels, 187" rear wheels.

Braking Power - 55.9% front, 44 1% rear.

Cl aranc - Adjusting screw backed off 13-15 notches from point where wheel can just be turned by hand

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Checking Fluid - Maintain fluid level ½" to 1" below lip of filler opening.

R m val - Remove clevis pin from pushrod clevis. Disconnect brake pipe and tape end of pipe. Remove bolts securing master cylinder and dash reinforcement to dash panel and remove master cylinder from car.

►*MASTER CYLINDER REMOVAL NOTE:* To remove new clevis pin Part No. 1190267 for servicing master cylinder or linkage, insert a tube over small diameter end of pin, compress spring and push pin and tube through hole in clevis and brake pedal linkage. Tool dimensions are 1 7/8" long, .364" max. O.D., .308" min. I.D. *CAUTION* - DO NOT substitute cotter pin for Part No. 1189785 Pin Retainer used on early cars.

Pow r Brak s: Moraine Power Brake Unit. Suspended type power unit replaces conventional master cylinder. *See "Moraine Power Unit" in Brake Section.*

►*STICKING POWER BRAKE CORRECTION:* When pedal sticks in down position, remove fibre washer at brake pedal clevis and reduce its thickness or replace it with washer Part No. 1336539 (.060" thick) which is .020" thinner.

►*POWER BRAKE FADING CORRECTION:* This condition may be corrected by installation of Air Valve Repair Kit Part No. 5459133. For installation procedure, see *"Moraine Power Brake" in Brake Section.*

Checking Fluid Level - Maintain fluid level ½" to 1" below lip of filler opening.

Removal of Power Unit - See Master Cylinder Removal Note above, for clevis pin removal. Disconnect battery ground strap. Remove brake pipe and tape end to prevent entrance of dirt. Remove clevis pin at brake pushrod clevis and remove accelerating pedal and roll back floor mat. Remove bolts securing brake unit to toe plate and remove toe plate. Disconnect vacuum hoses from vacuum tee and remove brake unit from car.

MISC. MECHANICAL

Air C nditi ning: "Frigidaire & Harrison" with all components located in or ahead of dash.
See "Frigidaire & Harrison" in Miscellaneous Section.

Windshield Wipers: Single and two-speed electric link operated type.
See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric type with a single reversible type motor for each window.
See "GM Electric Window Regulators" in Miscellaneous Section.

Power Seat Control (2-Way): Electric type with single reversible type motor for horizontal adjustment.
See "GM 2-Way Seat Controls" in Miscellaneous Section.

Power Seat Control (6-Way): Electric type with a separate motor on each of the three basic seat movements. *S "GM 6-Way Controls" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor.
See "Power Top Controls" in Miscellaneous Section.

MODEL IDENTIFICATION

Series	Series Designation
LeSabre	4400
Invicta	4600
Electra	4700
Electra "225"	4800

ENGINE & SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar, and on top surface of crankcase forward of valve lifter cover on left side. Number (example below) includes identification data.

① ② ③ ④
4 G 1 001001

① - Series. 4 – 4400. 6 – 4600. 7 – 4700. 8 – 4800.
② - Year – 1960.
③ - Assembly Plant. 1 Flint, 2 South Gate, 3 Linden, 4 Kansas City, 5 Wilmington, 6 Atlanta, 7 Framingham, 8 Arlington.
④ - Begining vehicle number.

Engine Production Code No. – Stamped on same surface as Engine & Serial No., but on right side. When viewed from front of engine, number is upside down. **364" Engines (8.5–1 & 10.25–1 compr. ratio)** have prefix 3G. **364" Engines (9.0–1 compr. ratio)** have prefix L3G. **401" Engines** have prefix 4G. *NOTE* – **¼" dash** following code no. indicates .010" oversize cylinder bore.

►*ENGINE NOTE:* Basic engines used are as follows:

Series	Engine	Compr. Ratio	① Carb. & Trans.
4400	364"	8.5–1	2–Bbl. & S–M
4400	364"	② 9.0–1	2–Bbl. & A–T
4400	364"	③ 10.25–1	2–Bbl. & A–T
4400	364"	④ 10.25–1	4–Bbl. & A–T
46, 47, 4800	401"	10.25–1	4–Bbl. & A–T

① - S–M – Synchro-mesh; A–T – Auto. Trans.
② - Regular Gas Option. ③ - Std. Auto. Trans. Comb.
④ - Power Pack.

TUNE-UP

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel): See Note under Engine Specifications for recommended changes.*

COMPRESSION PRESSURE: 150 lbs. (8.5–1 ratio), 160 lbs. (9.0–1 ratio), 180 lbs. (10.25–1 ratio) at cranking speed of 160 RPM. Cylinders must be equal within 15 lbs.

VACUUM READING: 14" min. at 485 RPM.

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters.

MANIFOLD HEAT CONTROL: Automatic thermostatic type located in right exhaust manifold. Valve must operate freely. Check thermostat at 70°F (room temperature). There should be 180° wrap on spring.

►*LUBRICATION NOTE: Special Lubricant Part No. 980108 should be applied to valve bearings during periodic chassis lubrication.*

IGNITION

FIRING ORDER: 1–2–7–8–4–5–6–3.
Cylinders – RIGHT BANK 1–3–5–7, LEFT BANK 2–4–6–8.

SPARK PLUG GAP: .035".
Spark Plugs – AC No. 44S (Std.), No. C–42 (High Speed Driving). 14 mm. Torque to 25–30 ft. lbs.

COIL: Delco-Remy 1115100.
Ignition Current – 2.5 amps. idling, 4.5 amps. stopped.
Resistor – Resistance wire (1.75–1.85 ohms) connected in circuit from coil to wiring harness connector on dash. Bypassed during cranking by lead from starter solenoid to coil.

►*BURNED PRIMARY RESISTANCE WIRE NOTE (Early Cars):* Check for grounded wire at starter solenoid cap. Replace wiring harness as necessary Later cars have new type cap that eliminates possibility of this wiring grounding.

DISTRIBUTOR: Delco-Remy 1110963 (364" Eng. 8.50-1 Ratio), 1110962 (364" Eng. 9.0-1 Ratio), 1110961 (364" & 401" Eng. 10.25-1 Ratio). Window type with external adjustment. *See "Delco-Remy Window Distributors" in Electrical Section.*

►*DISTRIBUTOR IDENTIFICATION & LUBRICATION NOTE:* Distributors may be identified by color of oiler as follows: No. 1110963 - Black oiler. No. 1110962 - zinc color oiler. No. 1110961-Copper color oiler. *NOTE* - Later distributors have **short** type oilers positioned below base. All distributors should be lubricated regardless of type oiler used.

Condenser – Delco-Remy. **Capacity** .18–.23 mfd.
Breaker Gap – Gap (.0125–.0175") will be correct when cam angle correctly set.
Cam Angle – 28–32°. Set to 30°.
Breaker Arm Spring Tension – 19–23 ozs.
Rotation – Clockwise viewed from above.

Automatic Advance - 1110963

Degrees Distr.	RPM	Degrees Eng.	RPM
.5-2.0	475	1-4	950
6-8	1150	12-16	2300
12-14.5	1875	24-29	3750

Automatic Advance - 1110961 & 962

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	450	0-4	900
3-5	950	6-10	1900
6-8	1425	12-16	2850
9-11	1900	18-22	3800

Vacuum Spark Control: Delco-Remy 1116163 (1110961 Distr.), 1116164 (1110962 & 963 Distr.).

Vacuum Advance - 1116163

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	8-10
7-9	14-18	16.25-18

Vacuum Advance - 1116164

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	6.5-8.5
9-10.5	18-21	12-14

IGNITION TIMING

Setting – 5° BTDC (Synchro-mesh), 12° BTDC (Auto. Trans.).
Timing Mark – Timing indicator on chain case cover marked "O" (TDC), "5" (5° BTDC), and "12" (12° BTDC). Align correct mark with yellow paint filled groove on harmonic balancer.

CARBURETOR

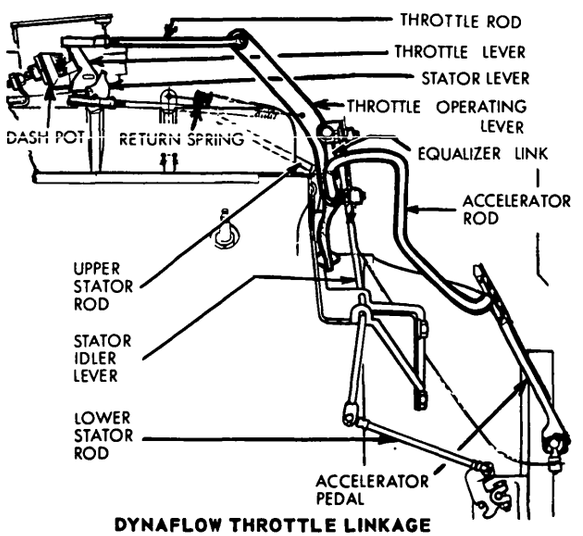
►*CARBURETOR APPLICATION: Stromberg, Carter & Rochester carburetors used as follows:*

Engine & Compr. Ratio	Carburetor
364" (8.5–1)	Carter WGD 2–Bbl.
364" (9.0–1)	Carter WGD or Stromberg WW 2–Bbl.
364" (10.25–1)	Carter WGD or Stromberg WW 2–Bbl.
364" (10.25–1 Power Pack)	Carter AFB 4–Bbl.
401" (10.25–1)	Carter AFB or Rochester 4GC 4–Bbl.

►*2–BARREL CARB. FLAT SPOT CORRECTION:* May be caused by improperly positioned air cleaner. Make sure air cleaner installed with inlet tube 44° to left of engine centerline (use "front" stamped in cleaner cover to locate tube properly.)

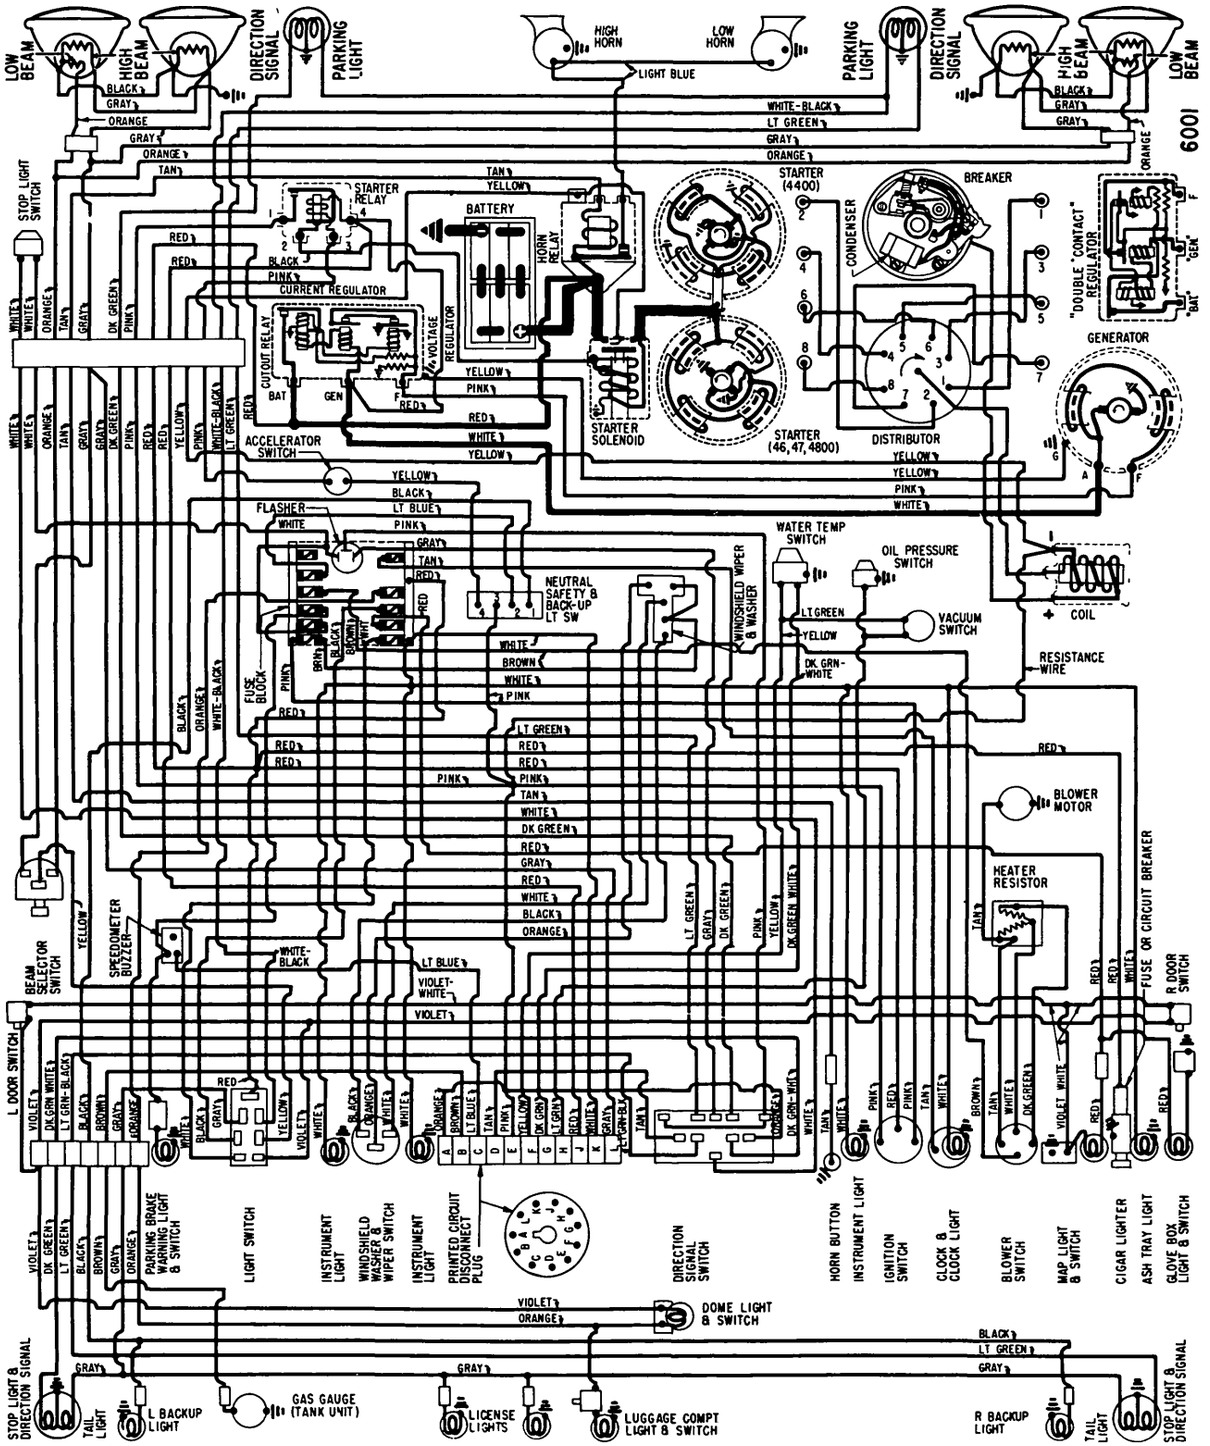
►*SLOW SHIFT TO STATOR HIGH ANGLE CORRECTION:* Make sure throttle and stator linkages are correctly adjusted (see below).

►*HIGH SPEED FUEL SHORTAGE CORRECTION:* May be caused by kink in gas tank vent hose at clip ahead of gas tank filler door. Relocate hose to insure uniform bend.



►*STROMBERG & CARTER 2 & 4-BARREL CARBURETOR CHANGES FOR IMPROVED WARM WEATHER OPERATION: See data on each carburetor model below.*

►*MANIFOLD FUEL DISTRIBUTION (All Cars): Carburetor RIGHT barrels feed Cyls. 1-4-6-7, LEFT barrels feed Cyls. 2-3-5-8.*



THROTTLE LINKAGE ADJUSTMENT (AUTO. TRANS.): Make sure stator linkage is properly adjusted (see below). Then proceed as follows: Disconnect carburetor throttle rod from throttle operating lever. Hold accelerator pedal firmly against floor mat and throttle in wide open position. Now hold throttle rod at hole in lever. **Rod must be 1/16" shorter than entering hole in lever.** Readjust rod as necessary. *NOTE – On 4–barrel carb. cars, if throttle rod cannot be shortened install later type rod which is .20" shorter, Part No. 1188324.* Connect rod to lever and again check for wide open throttle with accelerator against floor mat. Check and adjust choke unloader if necessary. Check for smooth operation of linkage. Desired wide open throttle position should be when accelerator pedal strikes floor mat rather than stop on throttle lever striking hard against boss on throttle body.

Stator Linkage Adjustment – Hold throttle wide open. Adjust upper stator rod so ball joint at forward end will just slip freely in stator lever on carburetor with stator rod pulled forward and stator lever held rearward against pickup. **Now length upper stator rod full turn** (provides slight clearance at stop in transmission to insure carburetor reaching wide open throttle). Reconnect ball joint to stator lever. Tighten locknut. To check adjustment, move throttle lever to wide open position and move stator rod endwise. It should have a slight free movement or "shake".

CONTINUED ON NEXT PAGE

DYNAFLOW THROTTLE LINKAGE

CONTINUED FROM PRECEDING PAGE

Anti-Stall Dashp t Adjustm nt – After stator and throttle linkage properly adjusted, engine at normal operating temperature and idle speed correctly set, proceed as follows: Open throttle to clear fast idle cam and rotate cam to extreme fast idle position. Let throttle close against cam. Adjust dashpot until it just touches throttle lever. Tighten locknut. Put transmission in "D" with brakes applied and jab accelerator pedal and release quickly. If engine stalls, adjust dashpot toward throttle lever; if too much time necessary for return to idle, move dashpot away from throttle lever. *Always tighten locknut after each adjustment.*

Starter Switch (Car Starter) Setting: Synchro-mesh Cars – Remove carburetor, connect test light (12 volt) across switch terminals, block choke valve open so fast idle cam is at slow idle position. Lamp should light with ¼" (drill) clearance between wall of throttle body and lower edge of one primary throttle valve at center; but it should not light with 7/64" (drill) clearance at same position. To adjust, change number of shims between contact spring and plunger.

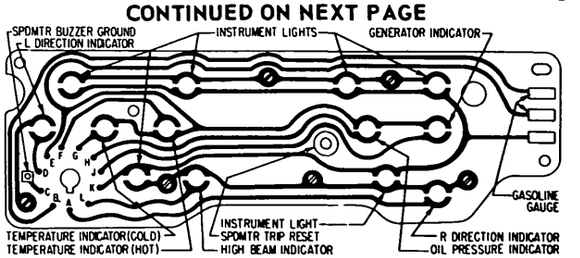
Auto. Trans. Cars – With carburetor on engine, transmission in "P" and brakes applied, back off throttle stop screw, rotate fast idle cam to slow idle position **and fully close throttle valve.** Measure distance from diaphragm flange of dashpot to **near** edge of dashpot arm. Turn ignition on and slowly open throttle while holding scale in position. When starter is energized, measure distance as before. Subtract the two measurements. Difference should be: **Carter 2–Bbl.** 9/16–7/8"; **Stromberg 2–Bbl.** ¾–1 1/8"; **Carter 4–Bbl.** ½–¾"; **Rochester 4–Bbl.** ½–13/16". To adjust, change number of shims between contact spring and plunger.

CARTER WGD 2–BARREL

Carter WGD No. 2979S, SA (Synchro-mesh), 2980S, SA (Automatic Trans.).

►*EXCESS IDLE SPEED DURING WARM-UP CORRECTION:* On early cars (dated coded before L-9), this may be caused by incorrect fast idle cam. *See "Carter WGD Carburetors" in Carburetion Section.*

►*CARBURETOR CHANGES FOR IMPROVED HOT WEATHER OPERATION (Carter 2979S & 80S): See "Carter WGD Carburetors" in Carburetion Section for recommended changes.*



Idle Setting – ¼–2 turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed – 485 RPM (550 RPM Air Cond. Cars) in "N" or "P".

Float Level – ¼" (Gauge T109–31) between top of float (at center) and bowl cover. To adjust, bend float lever.

Choke Lever Setting – With slight clearance between tang on fast idle cam and stop on flange casting and inner choke shaft lever contacting lug on outer choke shaft lever, align index mark on cam with adjusting

CONTINUED ON NEXT PAGE

BUICK INSTRUMENT CLUSTER PRINTED CIRCUIT

CONTINUED FROM PRECEDING PAGE

screw. To adjust, bend lug on outer choke shaft lever.

Accelerating Pump – Normal setting, long stroke hole.
Fast Idle: 1500 RPM on hot engine with fast idle screw on index mark of cam.
Automatic Choke Setting: Centered on index.
Throttle Linkage Adjustment: See *CARBURETOR above.*

►*OTHER DATA: See "Carter WGD Carburetors" in Carburetors" in Carburetion Section.*

STROMBERG WW 2-BARREL

Stromberg WW, Code 7-113 (Early), 7-113A (Later). Two barrel downdraft type.
►*CARBURETOR CHANGES FOR IMPROVED HOT WEATHER OPERATION (Code 7-113A):* This carburetor has baffle in float chamber and air horn gasket with solid section over float chamber. *See "Stromberg WW Carburetors" in Carburetion Section.*
Idle Setting – 1 turn out. Adjust both screws alike. Turn screws out for richer mixture.
Idle Speed – 485 RPM (550 RPM Air Cond. Cars) in "N" or "P".
Float Level – 5/32" (Gauge J–7294) from top of float at center to top edge of float bowl (gasket removed) with needle seated. To adjust, bend float arm tang.
Accelerating Pump – Normal setting, medium stroke hole.
Fast Idle Setting (On Car): With engine at normal operating temperature and idle speed and mixture adjustments correctly made, rotate fast idle cam to full up position so fast idle screw contacts high step of cam. Adjust fast idle screw so engine is running at 1500 RPM.
Automatic Choke Setting: Centered at index.
Throttle Linkage Adjustment: *See CARBURETOR above.*
►*OTHER DATA: See "Stromberg WW (Buick, Dodge, Plymouth) Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL

Carter AFB, No. 2981S (4400 Power Pack), No. 2982S (46, 47, 4800 Std.). 4-Barrel, downdraft type.
►*AUTOMATIC CHOKE SETTING CHANGE:* Carburetors date coded "K" or later are set 2 Points Rich (supersedes 1 Point Rich) for improved initial starting.
►*IDLE COMPENSATOR CAUTION:* Idle compensator (thermostatically controlled idle air bypass) must be in closed position when making idle setting and idle speed adjustments. Remove air cleaner and use pencil or suitable tool inserted in throttle bore to hold valve closed.
Idle Setting – ¼–1¾ turns open. Adjust both screws (primary side only) alike. Turn screws out for richer mixture.
Idle Speed – 485 RPM (550 RPM Air Cond. Cars) in "N" or "P".
Throttle Linkage Adjustment: *See CARBURETOR above.*
►*OTHER DATA: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

ROCHESTER 4GC 4-BARREL

Rochester 4GC, No. 7015040 (46, 47, 4800 Std.).
►*CHOKE BINDING CORRECTION:* May be caused by wiring from carburetor starter switch to temperature vacuum switch contacting choke operating rod. To correct, make sure wiring connector at carburetor switch installed from rear (installed from front on Carter 4–Bbl. Carb.).
►*IDLE COMPENSATOR CAUTION:* Idle compensator (thermostatically controlled idle air bypass) must be in closed position when making idle setting and idle speed adjustments. Remove air cleaner and use pencil or suitable tool inserted in throttle bore to hold valve closed.
Idle Setting – 1½ turns open. Adjust both screws (primary side only) alike. Turn screws out for richer mixture.

Idle Speed – 485 RPM (550 RPM Air Cond. Cars) in "N" or "P".
Throttle Linkage Adjustment: *See CARBURETOR above.*
►*OTHER DATA: See "Rochester 4GC 4-Barrel Carburetors" in Carburetor Section.*

CARB. EQUIPMENT

Fuel Pump. AC Type HE. No. 4706.
Pressure - 5¼-6½ lbs. (at carburetor height).
See "Fuel Pumps" in Carburetion Section.
Fuel Line Filter: Located in line between fuel pump and carburetor. *NOTE* - Some Air Cond. cars have special filter with metering outlet in top and rubber hose for vapor fume return to gas tank.
►*FUEL FILTER NOTE:* Inspect every 1,000 miles, clean if necessary. Drain, clean bowl and replace element every 5,000 miles.
Gasoline Gauge: AC Electric type.
Dash Unit - AC No. 5643079.
Tank Unit - AC No. 5640725 (Std.), No. 5640726 (A.C. Cars).
See "Fuel Gauges" in Carburetion Section.
►*FUEL GAUGE NOTE:* Fuel gauge will read accurately only when ignition switch is turned "ON".
►*FUEL TANK RATTLE CORRECTION:* Install three double thickness (Builders 45 lb. felt) pads, 9" x 18" between tank and trunk floor pan.
Air Cleaner: Oil wetted plastic foam type. Clean and reoil every 5,000 miles or sooner if needed.
►*PLASTIC ELEMENT CLEANING CAUTION:* Remove element carefully from mesh support and wash in non-flammable solvent. Kerosene or Oleum Spirits may be used if fire hazard precautions are observed. Squeeze element (do not wring) to remove all solvent and reoil with 10W-30 engine oil. Element should not drip oil.

BATTERY

Delco No. 562. 12 volt, 11 plate, 70 ampere capacity (20 hr. rate).
Battery Ground - Negative, to cylinder head.
Engine Ground - Left rear of engine to dash.

STARTER

Delco-Remy 1107724 (364" Eng. Early), 1107783 (364" Eng. Later); 1107773 (401" Eng. Early), 1107784 (401" Eng. Later). *NOTE* - Starters 1107773 & 1107784 are "Two Shunt" type.
Drive – Overrunning clutch (solenoid pinion shift).
Rotation – Counterclockwise at commutator end.
Brush Spring Tension – 35 ozs. minimum.

Performance Data - 1107724 & 783

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	3600–5100	10.6	65–100
	Lock	3.5	300–360

Performance Data - 1107773 & 784

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	3900–5400	10.6	80–120
	Lock	2.0	290–370

Ⓒ - Includes Solenoid.

Starting Switch: Delco-Remy Solenoid No. 1118816 (1107724), No. 1114256 (1107773), No. 1114262 (1107783), No. 1114263 (1107784), controlled by separate relay, Delco-Remy No. 1116963 and Accelerator Vacuum Switch (on Carburetor). *See "Starter Controls" in Electrical Section.*
Accelerator Vacuum Switch: Carter No. 192-38U (Carter and Stromberg Carb.), Rochester No. 7011372 (Rochester Carb.).
Accelerator Vacuum Switch Setting - *See data on each carburetor type in Carburetion Section.*
Neutral Safety & Back-up Light Switch (Aut. Trans.): Buick No. 1178138. Mounted on steering column under cowl. Connected in starter control circuit so that starter operates only when selector lever is in "N" or "P" Parking position.
Adjustment - *See "Buick (Twin Turbine) Dynaflow" in Transmission Section.*

GENERATOR

Delco-Remy 1102181 (Std.), 1102197 (Air Cond.).
►*CHARGING CIRCUIT FUSE CAUTION:* Battery charging circuit protected by a 40 amp. (Std. Regulator), 50 amp. (Air Cond. Regulator) fuse clipped to "BAT" terminal of generator regulator. Check for blown fuse when diagnosing battery, generator or regulator failure.

Performance Data

Generator	Amperes	Volts	RPM
1102181	35	14.0	2510
1102197	45	14.0	2600

Field Current – 1.69–1.79 amps. (1102181), 2.66–2.86 amps. (1102197) at 12 volts and 80°F.
Brush Spring Tension – 26–32 ozs.
Rotation – Counterclockwise at commutator end.
Belt Adjustment: Check belt tension by using torque wrench on generator pulley. 15–20 ft. lbs. should slip pulley on belt.

REGULATOR

Delco-Remy 1119242 (Std. Gen.), 1119617 (Air Cond. Gen.). *NOTE* - Regulator 1119617 is "Double Contact" type.
►*REGULATOR 1119242 ADJUSTMENT NOTE:* "Post Type" design with nylon adjusting nuts above Voltage & Current Regulator units for air gap adjustment.
►*SEE CHARGING CIRCUIT FUSE CAUTION ABOVE.*
NOTE – Specifications below are "Normal" settings.

Cutout Relay

Cuts In – 11.8–13.5 volts (1119242), 11.8–13.0 volts (1119617).
Contact Gap – .020".
Air Gap – .020" with contacts just closed.

Voltage Regulator

Setting (1119242) – 13.8–14.8 volts at 125°F ambient temperature.
Setting (1119617) – 13.8–14.6 volts at 125°F ambient temperature operating on upper contacts. .1–.3 volts lower operating on lower contacts.
Contact Gap (1119617) – .016".
Air Gap – .075" (1119242), .067" (1119617) with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Dubl Contact) Regulators" in Electrical Section.*

Current Regulator

Setting (1119242) – 32–37 amps. at 125°F.
Setting (1119617) – 42.5–47.0 amps. at 125°F.
Air Gap – .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

CONTINUED FROM PRECEDING PAGE

MISC. ELECTRICAL

►*INSTRUMENT CLUSTER ASSEMBLY NOTE:* It is necessary to remove Instrument Cluster Assembly to replace printed circuit and fuel gauge. Light bulb sockets are accessible by lowering either right or left lower control housings and are removed from printed circuit by turning bulb socket counterclockwise.

Instrument Cluster Assembly Removal: 1) Disconnect battery ground strap. Remove name plate (upper center instrument panel) and remove three screws along front edge of upper panel. Remove right lower control housing panel and nut located at right side of instrument cluster hood. From inside glove box, remove two nuts that attach upper panel to tie bar and disconnect radio speaker wire.

2) Remove left lower control housing panel and disconnect speedometer cable and instrument cluster disconnect plug. *CAUTION* - DO NOT damage connector pins. Unplug clock or ornament and terminal block. Remove three cluster panel-to-instrument panel screws and remove assembly. *NOTE - On cars with Safety Buzzer, buzzer ground wire is attached to connector pin located on underside of printed circuit. Wire must be disconnected from pin before removal of printed circuit.*

Speedometer Removal: Speedometer can be removed from cluster assembly after removal of cluster assembly.

►*LOCKING TYPE ELECTRICAL CONNECTORS CAUTION:* It will be necessary to straighten "Finger Clips", press in on "Thumb Release", remove "Wire Clip" or lift up on "Locking Tab" before attempting to separate connector.

"Guide-Matic" Headlight Control: *See Electrical Section.*

Directional Signals: *See Electrical Section.*

Lighting Switch Removal: Disconnect battery ground cable. Remove lower left instrument panel housing and remove multiple connector from lighting switch. Pull knob out to last notch. Depress spring loaded button on top of switch while pulling knob and rod assembly from switch. *NOTE - If latch button is depressed before knob is pulled out, knob and rod assembly will not rise as.* Remove mounting nut with wrench J-8563.

CIRCUIT BREAKERS: 15 Ampere - Headlights & Front Parking Lights. In headlight switch.
25 Amper - Twilight Sentinal. In lead near starter relay.
Special - Cigar lighter. On back of lighter.

FUSES: *NOTE - All fuses in fuse block mounted under instrument panel on left side.*

►*INSTRUMENT LIGHT FUSE CHANGE:* 3 Ampere fuse used on later cars for added protection of instrument light rheostat (supersedes 5 amp. type). *Use 3 amp. fuse for replacement on ALL cars. Disregard fuse block notation on earlier cars.*

30 Amper - Heater, Defroster, Air Conditioner Blower & Compressor Clutch. *Supersedes early production 25 amp. fuse.*
25 Amper - Windshield wiper & washer.
20 Amper - Dome light, Trunk light, Rear Cigar Lighter.
10 Amper - Back-up lights.
10 Amper - Direction Signals & Stop lights.
10 Amper - Tail, License & Instrument light rheostat.
7.5 Amper - Radio.
3 Amper - Instrument lights and rheostat (supersedes 5 ampere type - see Change note above).
5 Amper - Glove Box & Map light.
5 Amper - Speedometer Warning Buzzer, Parking Brake Warning Light & Twilight Sentinal Amplifier.
2 Amper - Clock.

Horn Relay: Delco-Remy 1116965.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. 90° V8, valve-in-head.

Series	Bore	Stroke	Displacement
4400	4.125"	3.4"	364 cu. ins.
46, 47, 4800	4.1875"	3.64"	401 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
364" Synchro-mesh	8.5—1	54.45	210 at 4000 RPM
364" Auto. Trans. ①	9.0—1	54.45	235 at 4400 RPM
364" Auto. Trans. ②	10.25—1	54.45	250 at 4400 RPM
364" Auto. Trans. ③	10.25—1	54.45	300 at 4400 RPM
401"	10.25—1	56.11	325 at 4400 RPM

① - Regular Gas Option (2—Bbl. Carb.).
② - Std. Auto. Trans. combination (2—Bbl. Carb.).
③ - Power Pack (4—Bbl. Carb.).

Compression & Vacuum Reading – *See TUNE-UP.*

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel):* Minimum fuel octane rating for satisfactory operation is: 92 (Series 4400 Synchro-mesh), 99 (All Auto. Trans. cars). If satisfactory fuel cannot be secured for 8.5—1 and 9.0—1 ratio engines, installation of .045" thick cylinder head gasket will improve performance. For 10.25—1 ratio engines, lower compression ratio to 8.75—1 by using export pistons and head gaskets as listed below. *NOTE – Compression ratio for Synchro-mesh cars, domestic and export, is 8.5–1. Compression ratio for export Auto. Trans. cars is 8.75–1.*

Series	Piston	Head Gasket
4400 Synchro-mesh	① 1388536	② 1185646 (.015")
4400 Auto. Trans.	1388541	② 1185646 (.015")
46, 47, 4800	1388539	② 1185646 (.015")

① - Domestic & Export pistons are the same.
② - All head gaskets are the same.

►*ENGINE VIBRATION AT 37-40 MPH:* May be caused by loose generator bracket brace-to-engine mounting pad bolt. Tighten bolt to 25-35 ft. lbs. torque.

ENGINE MOUNTINGS: *See "Engine Mountings" in Buick Special Data.*

CYLINDER HEAD AND GASKET: Cylinder heads are interchangeable between engines. All engines use a .015" cylinder head gasket and the lower compression ratio used on synchro-mesh engine is obtained by the use of lower dome height pistons. *See "Pistons" following and "Engine Operation in Low Octane Areas (Foreign Travel)" above.*

►*CYLINDER HEAD REMOVAL NOTE: See "Cylinder Head & Manifolds" in Buick Special Data.*

►*CYLINDER HEAD & GASKET CAUTION:* Later type cylinder heads have two 9/16" clean-out holes on push-rod side near edge of end combustion chamber. Holes line up with holes in block but head gasket not punched and gasket failure will reduce cooling efficiency. Buick furnished gaskets are aluminum coated and have sufficient sealing bead at holes to prevent corrosion.

TIGHTENING TORQUES: *See "Tightening Specifications" in Buick Special Data.*

PISTONS

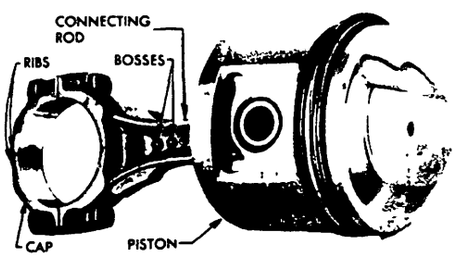
Aluminum alloy, dome head (with shallow depressions for valve clearance), cam ground, full skirt with transverse slots in oil ring groove.

►*PISTON REPLACEMENT CAUTION:* Same type piston must be used in all cylinders. Use of mixed (different compression ratio) pistons will cause very rough operating engine.

Model	Buick Std. Piston No.
Series 4400 Synchro-mesh	1388536
Series 4400 Auto. Trans. ①	1388542
Series 4400 Auto. Trans. ②	1388541
Series 4600, 4700, 4800 ①	1388538
Series 4600, 4700, 4800 ②	1388539

① - Not used on low compression export jobs.
② - Export low compression jobs.

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with ¼" long dash following Production Code Number (see Engine Number) have .010" oversize cylinder bore and pistons. Standard cylinder bore is 4.125" (4400), 4.1875" (Others).



Removal - Pistons and rods removed from above.

►*CAUTION:* Mark pistons, rods, and bearing caps with cylinder number before removal to insure correct reinstallation. Use Rod Bolt Guides (short guide J-5239-1 on lower bolt, long guide J-5239-2 on upper bolt) to retain bearing shell and assist in pushing assemblies out.

Fitting New Pistons: Clearance .0008-.0014" (4400), .001-.0016" (46,47,4800). Use accurate micrometer and and measure at right angles to piston pin 1/4" from top of skirt. Measure bore approximately 1½" below top of bore at right angles to pin. Block and piston must be at nearly the same temperature.

Replacement Pistons: Standard ("High Limit" or maximum diameter production size) and .001", .005", .010", .020" and .030" Oversize. *NOTE* - Pistons furnished only with fitted pins.

Installing Pistons: Assemble rod in piston with oil spurt notch on same side as valve depressions in piston dome. *See Rod Installation below.*

BUICK PISTON & ROD ASSEMBLY

PISTON PIN

Pins are press fit in connecting rod.
Diameter - .9994-.9997". **Length** - 3.520".
Clearance in Piston - .0002". Finger push fit.
Clearance in Rod - .0007-.0015". Press fit.
Piston Pin Removal & Installation: *See "Piston Pins" in Buick Special Data. CAUTION - Pistons may be damaged if special procedure and tools not used.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.	.077-.078"	.015-.025"	.003-.005"
Oil	.180-.186"	.015-.035"	.0035-.0095"

►*COMPRESSION RING INSTALLATION NOTE:* **364" Eng.** - Install both (identical) compression rings with inner bevel toward bottom of piston. **401" Eng.** - Install compression rings with side of ring up which is either marked with a dimple, a letter "T", a letter "O" or word "TOP". Top ring with inner bevel toward top of piston and second ring with inner bevel toward bottom of piston.

Replacement Rings: Std., .010", .020", .030" Oversize.

CONNECTING ROD

Length - Center to center. (4400) 6.100",(Others) 6.220"

Crankpin Journal Diameter - 2.249-2.250". Out of round limit .0015".

Bearings - Steel backed M400 Aluminum, full precision type. Both halves interchangeable.

Clearance - .0002-.0023". Wear limit .003".

Side Play - .005-.012" (Two rods).

Replacement Bearings: Standard and .001", .002", .020" and .021" Undersize.

Installing Rods: Install piston and rod assembly in engine with spurt notch in lower end of rod and valve depressions in pistons on the high side of cylinder bore. This will bring all spurt notches and valve depressions in pistons toward camshaft. Rib on edge of rod cap should be on same side as conical boss on web of rod and both marks should face toward adjacent connecting rod on same crankpin.

CRANKSHAFT

►*FRONT MAIN BEARING CAP REMOVAL NOTE:* To remove these cap bolts, front of engine must be raised sufficiently to provide clearance. Disconnect front engine mounts and exhaust pipe at manifolds.

►*CRANKSHAFT & FLYWHEEL UNBALANCE OR VIBRATION (After replacement of parts - Synchro-mesh & Dynaflow Cars): See "Engine Balancing" in Buick Special Data.*

Journal Diameter - 2.498-2.499". Five bearings. Out-of-round limit .0015".

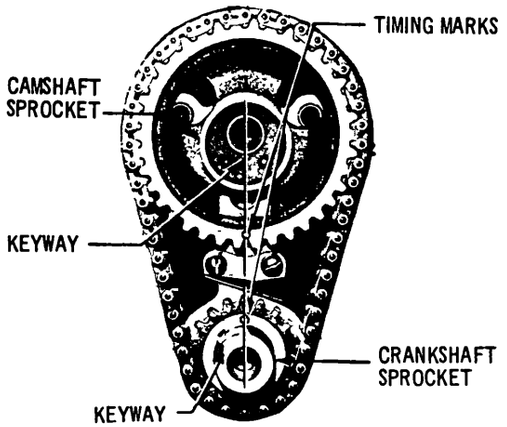
Bearings - Durex 100A (Rear Main), M400 Aluminum (All others), full precision type. Both halves interchangeable.

►*BEARING NOTE:* Bearing upper halves can be rotated out and in by using Tool KMO-734 in oil hole.

Clearance - .0005-.0021".

Replacement Bearings: Furnished Std. and .001", .002". .003" Undersize.

End Thrust: Taken by No. 5 (364"), No. 3 (401") main bearing.



Endplay - .004-.008".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Buick Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Buick Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Buick Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Buick Special Data.*

BUICK VALVE TIMING MARKS

CAMSHAFT

►*CAMSHAFT IDENTIFICATION NOTE:* Grooves cut into land forward of No. 3 bearing journal identify camshafts used as follows: **4400 S.M. (No. 1178587)** - None. **4400 Auto. Trans. (No. 1185378)** - 4 grooves. **46,47,4800 (No. 1185918)** - 1 groove.

Journal Diameters - (1) 1.785-1.786", (2) 1.755-1.756", (3) 1.725-1.726", (4) 1.695-1.696", (5) 1.665-1.666".

Bearings - Steel-backed babbitt lined bushings.

►*BEARING REPLACEMENT NOTE:* Camshaft Bearings must be reamed to size after being pressed into block.

Clearance - .0005-.0035". Service limit .0015-.004".

End Thrust: Taken by hub of camshaft sprocket. Distributor and oil pump drive force camshaft to rear at all times.

Timing Chain: Link belt. **Width** - .688". **Pitch** - .500". **Length** - 26" or 52 links.

Camshaft Setting: Valve timing is correct when "0" marks on camshaft and crankshaft sprockets are adjacent and in line across shaft centers.

Engine Front Cover: *See "Engine Front Cover" in Buick Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Buick Special Data.*

VALVES

Tappet Clearance: None in service (hydraulic).

Valve	Head Diam.	Stem Diam.	Length
Intake	1.875"	①	4.785"
Exhaust	1.500	②	4.785"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	③	⑤
Exhaust	45°	④	⑥

① - Top .373", Bottom .3715".
② - Top .372", Bottom .3705".
③ - 4400 Synchro-mesh - .403", All Others - .439".
④ - 4400 Synchro-mesh - .403", 4400 Auto Trans. .439", Others - .441".
⑤ - Top .001-.003", Bottom .0025-.0045".
⑥ - Top .002-.004", Bottom .0035-.0055".

Valve Seat Width - 1/16" average (3/64-5/64").

►*VALVE GRINDING CAUTION:* Normal height of valve stem above rocker arm gasket surface is 1.540". When valve facing or seat grinding raises valve stem height more than .050" above normal, grind off end of valve stem or replace valve.

Valve Springs: Inner and outer springs used on all valves. Install with closed coils against cylinder head.

	Inner Spring		Outer Spring	
Valve	Lbs. Press.	Length	Lbs. Press.	Length
Closed	23-28	1.69"	39.5-44.5	1.60"
Open	73-79	1.25"	93-99	1.16"

Valve Guides: Drive old guides out from combustion chamber side using Driver J-269. Install new guides from top of head using Valve Guide Aligner J-5240-2 over guide hole and installer J-5240-1 to drive guide down until installer shoulder contacts top of aligner which will position guide correctly in head. Finish ream guides with Valve Guide Reamer J-129-3..

Hydraulic Valve Lifters: Barrel type.

Diameter - .8425". **Clearance in Block** - .0015-.003".

Lifter Overhaul & Testing - *See "Valve System" in Buick Special Data.*

Rocker Arm Assembly: *See "Valve System" in Buick Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing Specifications

Series 4400 Synchro-mesh (Camshaft 1178587)

Intake Valves - Open 25° BTDC. Close 77° ALDC.
Exhaust Valves - Open 65° BLDC. Close 37° ATDC.

Series 4400 Dynaflow (Camshaft 1185378)

Intake Valves - Open 35° BTDC. Close 73° ALDC.
Exhaust Valves - Open 73° BLDC. Close 37° ATDC.

Other Series (Camshaft 1185918)

Intake Valves - Open 33° BTDC. Close 77° ALDC.
Exhaust Valves - Open 75° BLDC. Close 44° ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: "See "Engine Lubrication" under OILING SYSTEM in Buick Special Data.*

Crankcase Capacity: 5 qts. (refill), 6 qts. (dry engine). Add 1 qt. with filter change.

Normal Oil Pressure: 40 lbs. at 1600 RPM.

Pressure Regulator Valve - In oil pump body. Not adjustable.

Oil Pressure Indicator: Oil pressure warning light on instrument panel and oil pressure switch in oil gallery at right rear of engine. Lights when oil pressure drops below safe level. *NOTE* - Light comes on when ignition switch turned on, goes out after pressure builds up, and may come on at idle speed

Engine Unit - AC No. 1508753.

Oil Pump: Spur-geared type oil pump mounted at rear end of crankcase and driven by distributor drive shaft.

Oil Pump Removal & Overhaul - *See "Oiling System" in Buick Special Data.*

Oil Filter: AC full-flow type, mounted at right rear of engine. *NOTE* - Ball check in filter base bypasses oil directly to engine when pressure differential between inlet and outlet ports reaches 4½-5½ lbs.

Replacement Filter Element - AC PF-5.

►*OIL FILTER INSTALLATION CAUTION:* DO NOT use a wrench to tighten filter. Tighten by hand until gasket contacts sealing face, then tighten an additional 2/3 turn of the element. This supersedes previous installation instruction.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Crankcase Ventilation: Air enters through two ventilating type filter caps at top of each rocker arm cover. Air is drawn out through metal gauze filled filter located at rear end of valve lifter cover and ventilator pipe extending down from lifter cover.

COOLING

►*AIR CONDITIONED CAR FAN NOISE CORRECTION:* If objectionable noise occurs in moderate temperature seasons, rotate thermo-spring tab clockwise to right slot (viewed from front of car).

►*FAN DRIVE CLUTCH (AC CARS) PRODUCTION CHANGE:* New clutch with longer shaft and thicker coupling used on later cars. Eliminates need of fan spacer. New clutch with attaching bolts included in Kit No. 1389419 and Air Conditioner Package.

►*FAN VIBRATION (AC CARS) CORRECTION:* When vibration occurs at approximately 75 MPH (3000 RPM) check the following: 1) Bent fan, fan rib interference with housing, nicks or burrs on fan spacer, excessive paint or burrs on pulley mounting face, or any item that might cause fan runout.

2) Remove spacer. If vibration eliminated or improved, rotate spacer 90° or replace spacer.

3) Substitute fan or clutch to determine item causing vibration.

Temperature Control Fan Clutch (AC Cars): Air Cond. cars are equipped with 21" fan having a torque sensitive fan clutch. Flow of silicone (governing fan speed) controlled by temperature sensitive coil. When air through radiator is 80°F or below, fan speed is 800-1200 RPM. At higher temperatures speed of fan increases to a maximum of 2100 RPM.

Fan Clutch Adjustment - Normal position is in center slot of tab. For hotter fan cut-in, place spring end in right hand slot (facing engine). For colder fan cut-in, place spring end in left hand slot (facing engine). To reposition spring, bend retaining tab just enough to move spring.

Water Capacity: 16.5 qts. (Std.). Add 1½ qts. for heater.

Pressure Valve: Radiator filler cap. 15 lb. type. *NOTE* - Use of lower test filler cap will cause engine to heat with loss of coolant.

Thermostat: Poppet type (30,000 cars), pellet type (others). located in water manifold above pump. *NOTE* - If difficulty experienced with poppet type, replace it with either Part No. 1389275 (170°F), or 1391225 (180°F) as required.

Water Pump: Packless, sealed ball bearing type with aluminum housing and replaceable seal.

See "Water Pumps" in Buick Special Data.

Pump Removal - Drain cooling system, loosen belts and remove fan blade, spacer and pulleys from water pump hub on pump shaft. Remove belts. Disconnect hose from pump inlet and heater hose from nipple. Remove bolts, then remove pump assembly and gasket from timing chain cover.

Temperature Indicator: New TWO light system (Red & Green) with temperature switch in engine block. GREEN light is lighted when engine running cold and goes off when engine temperature reaches 110°F. RED light remains off during normal engine operation but comes on when engine temperature reaches 248°.

NOTE - Red light circuit is connected to Oil Pressure sender line through a vacuum switch so that the light will come on when the ignition switch is turned on (this checks bulb and circuit each time engine is started). As soon as engine starts and manifold vacuum builds up, vacuum switch opens this circuit and red light will go out. Temperature indicator then functions as above. *See "Temperature Gauges" in Miscellaneous Section.*

►*TEMPERATURE INDICATOR VACUUM SWITCH LOOSENING CORRECTION:* Correct by installing a 10-24 x ¼ round head slotted machine screw in switch mounting button fingers. DO NOT overtighten screw or switch will break.

CLUTCH

Long 11CF. Single plate, semi-centrifugal type.

See "Long" clutches in Clutch Section.

Pedal Adjustment: Free play 1 1/8-1 1/4". For adjustment procedure *see "Clutch Notes" in Buick Special Data.*

Removal: Remove rear axle and transmission (see below), remove flywheel lower housing. Disconnect release rod from yoke, remove boot. Remove spring washer which retains release bearing support and remove support. Pull yoke outward to release it from ball stud, remove yoke and release bearing through bottom of housing. Remove clutch cover screws uniformly to release spring tension after marking cover and flywheel for reinstallation. *NOTE* - Metal spacers placed between release levers and inner edge of clutch will aid removal and installation. Remove cover assembly and driven plate.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.

See "Buick Synchro-mesh" Transmission in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Disconnect rear axle assembly. *CAUTION - Use torque tube guide pins to prevent damaging torque tube seal.* Drain transmission, remove torque ball retainers and torque ball. Disconnect speedometer cable and disconnect shift rod and selector rod from levers on transmission. Pull clutch release rod sideways to release it from yoke clip. Loosen dual exhaust system ball joints at both manifolds. Disconnect single exhaust system front to rear exhaust pipe ball joint. Disconnect transmission mount at transmission support. Leave mount bolted to transmission. Place jack under rear of engine pan to support engine. Place another jack under transmission. Raise engine and transmission to relieve load on support and remove support from frame noting number and location of shims. Remove upper two transmission to flywheel housing bolts, install Guide Pins J-851-A and remove lower bolts. Lower engine and transmission as an assembly until rear bearing retainer will clear frame crossmember. Move transmission to rear to clear main drive gear from flywheel housing and lower transmission to floor. *See NOTE following.*

►*SYNCHRO-MESH TRANSMISSION REMOVAL NOTE:* Disconnect clutch equalizer at either the frame or the engine to prevent damaging idle lever-to-equalizer rod and causing bind in clutch control linkage.

DYNAFLOW DRIVE TRANSMISSION

"Twin Turbine" automatic drive of same design used previously.

►*SLOW SHIFT TO STATOR HIGH ANGLE CORRECTION:* Make sure throttle and stator linkages are correctly adjusted. *See "Throttl Linkag Adjustment" under CARBURETOR abov .*

►*FRONT PUMP SEAL DAMAGE NOTE:* Caused by burrs, sharp edges and corners on converter pump hubs. For corrective procedure, *see "Buick (Twin Turbin) Dynaflow Drive Transmission" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Buick (Twin Turbine) Dynaflow Drive Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Buick (Twin Turbine) Dynaflow Drive Transmission" in Transmission Section.*

Lubrication - Check fluid level every 1,000 miles, drain and refill every 25,000 miles. Use only Automatic Transmission Fluid Type A.

Checking Fluid Level - Check with engine idling, selector lever in "P" position and transmission at normal operating temperature. Maintain level at "FULL" mark on dipstick, add oil if level 1" below "FULL" mark on dipstick. Approximately 1 pint fluid required between "ADD" and "FULL" marks.

Capacity - 12 qts. All Dry transmission 13¾ qts.

Throttle Linkage Adjustment & Dashpot Setting: *See CARBURETOR above.*

►*OTHER DYNAFLOW DRIVE SERVICE DATA: See "Buick (Twin Turbine) Dynaflow Drive Transmission" in Transmission Section.*

UNIVERSALS

Saginaw & Spicer. Saginaw (Front), Saginaw or Spicer (Rear). Front joint enclosed in torque ball, rear joint enclosed in torque tube. Front joint lubricated by transmission. Rear joint requires no lubrication in service.

►*U-JOINT INSTALLATION CAUTION:* U-Joint omitted splines (two points 180° apart) must be aligned with blind splines on propeller shaft. This will provide correct relationship of front and rear universals and prevent drive line vibration.

►*REAR PROPELLER SHAFT LUBRICATION NOTE:* Lubricate propeller shaft coupling and splines (when assembling) with type "O" (non-fibrous) chassis lubrication and pack cavity beyond spline about 2/3 full of grease. *CAUTION* - DO NOT plug vent hole in propeller shaft welch plug when servicing as excess grease will accumulate in torque tube ahead of access hole. Limit power grease gun to one shot.

REAR AXLE

Own. Semi-floating hypoid gear type and torque tube drive. "Power-Lock Differential (Plate Clutch Type)" optional.

►*REAR AXLE LUBRICANT NOTE:* Flushing & Seasonal changes not recommended for either type axle. Maintain fluid level at filler opening. Use Factory Hypoid Gear Lubricant in standard axle. Use Buick Spec. No. 723-TL-1000 Lube in optional axle.

See "Buick Hypoid" or "Power-Lock Differential (Plat Clutch Type)" in Rear Axle Section.

Axle Ratios

Model	Synchro-mesh	Auto. Trans.
4400 (2-Bbl.)	3.91-1①	3.07-1
All Others		3.23-1
Export	3.91-1	3.36-1

① - Some early Series 4400 cars have 3.58-1 Ratio.

CONTINUED ON NEXT PAGE

Form 23 B

CONTINUED FROM PRECEDING PAGE

►*AXLE IDENTIFICATION NOTE:* Ratio stamped on bottom of axle housing. An "X" inside a circle next to number indicates "Positive Traction" type axle. This type also identified by lubrication caution tag next to filler plug opening.

Backlash - .007-.009".

Axle Shaft Removal: Place stands under rear axle so wheels clear floor, then remove wheel and drum. Remove wheel bearing retainer plate-to-backing plate nuts (leave bolts in place to support backing plate). Use Puller J-6176 with Slide Hammer to pull axle assembly. Replace two backing plate nuts finger tight to hold plate in place.

Rear Axle Assembly Removal: Raise car and place stands under frame, then place floor jack under center of rear axle housing. Disconnect lower end of rear springs. Disconnect track bar at axle end and lower ends of rear shock absorbers. Disconnect parking brake cable at rear cable sheave and at bracket on torque tube. Disconnect brake hose from pipe on torque tube bracket and remove yoke. Cover hose and brake pipe openings. Remove two opposite torque tube flange bolts and insert two 3" guide pins. Remove other flange bolts. Roll rear axle assembly from car

Wheel Bearing Adjustment: None required.

Torque Ball Adjustment: None required

SHOCK ABSORBERS

Delco. Direct acting, hydraulic (front and rear). Front shock absorbers mounted inside front spring with upper stem attached to frame The lower insulated bracket is bolted to spring seat Rear shock absorber mounted on an angle with upper end "in" and attached to frame bracket. Lower end attached to bracket on rear axle housing.

►*SHOCK ABSORBER INTERCHANGEABILITY NOTE:* Front shock absorbers are interchangeable right and left. Rear shock absorbers are interchangeable right and left

Buick Shock Absorber Nos.

Model	Front	Rear
Pass. 44,4600	①5552328	③5552329
Pass. 47,4800	②5552327	④5552330
Sta. Wgns.	5552327	5552332

① - 5552327 Export. ② - 5552331 Export.
③ - 5552330 Export. ④ - 5552332 Export.

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers within coil springs Side roll is controlled by spring steel stabilizer shaft.

See "Buick Front Suspension" in Suspension & Wheel Alignment Section.

►*SPECIFICATION NOTE·* All measurements except toe-in are taken with alignment pipe pins (3/4" pipe 4 15/16" long) placed between frame and lower control arm at each front wheel.

Steering Axis Inclination - 7° at ¾° camber.

Caster - Neg. 2°±¾°. Both sides equal within ¾°.

Camber - Pos. 1° to Neg. ½° Pos. ½° preferred. Both sides equal within ¾°.

Toe-In - 1/16-5/32".

Toe-Out on Turns - With outer wheel at 20° inner wheel should be 23° (Manual steering), 22° (power steering).

Wheel Bearing Adjustment: Tighten spindle nut to 30 ft lbs torque while rotating drum to seat bearings Back off nut and retorque to 12.5 ft lbs., then back off to nearest cotter pin hole if necessary.

REAR SUSPENSION

Coil type springs mounted between frame crossmember at top of kick-up and seats welded to axle housing. Side sway is prevented by transverse track bar. *See "Buick Rear Suspension" in Suspension & Wheel Alignment Section.*

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut type

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (Rotary Valve) Hydraulic. *See "Saginaw (Rotary Valve) Power Steering" in Steering Section.*

►*POWER STEERING GEAR PRODUCTION CHANGE:* New rack piston used on later cars *See "Saginaw (Rotary Valve) Power Steering" in Steering Section*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic (Single Anchor). Conventional two shoe with short lining (primary), longer lining (secondary). Aluminum brake drums with cast iron liner used on all series front brakes. Parking "Step-On" pedal applies rear service brakes.

See "Bendix Hydraulic (Without Eccentric)" Brakes in Brake Section

►*PARKING BRAKE NOTE·* For "Pedal Sticking" and for "Cable Rattle" Corrections, *see "Bendix Hydraulic (Without Eccentric) Brakes" in Brake Section.*

Drums - Aluminum brake drums with cast iron liner used on all front brakes. All rear brake drums are cast iron with steel disc.

Drum Diameter - 11 999-12.007".

►*BRAKE DRUM REBORING NOTE.* When a drum will not clean up when rebored to a diameter of 12.080" replace drum.

Wheel Cylinder Diameters - Front 1 1/8". Rear 1".

Lining - Primary and secondary linings are of different material and different length and are not interchangeable. Molded linings are riveted to the shoes.

Replacement Linings - Lining and Shoes with Linings furnished Std. and .030" Oversize.

Lining Length & Width

	Front Wheels	Rear Wheels
Primary	10.040"x2.50"	10.040"x2.25"
Secondary	12 959"x2.50"	12.959"x2.25"

Thickness - .265" front wheels, .220" rear wheels

Braking Power - 56% front 44% rear.

Clearance - Adjusting screw backed off 15 notches from point where wheel can just be turned by hand

Standard Master Cylinder: Located on engine side of firewall in line with brake pedal.

Checking Fluid - Maintain fluid level ½" to 1" below top of filler opening.

Removal - Remove stop light switch connector. Disconnect brake pipe at master cylinder and brake pedal pushrod by removing locknut, then remove shoulder bolt and spring washer. Remove four master cylinder-to-dash panel mounting nuts and remove master cylinder.

►*MASTER CYLINDER VENT HOLE LEAK CORRECTION·* Caused by loose deflector in filler plug. To replace deflector in plug, expand it by tapping it on the bottom and redriving it in plug.

►*PARKING BRAKE PEDAL STICKING CORRECTION:* May be caused by return spring too long. To correct, straighten each end of spring and cut ½" wire from each end (reducing spring length 1"). Reform ends. Also make sure front cable clevis does not bind on kick-pad screw. Remove screw to correct. Later production cars have these corrections.

►*PARKING BRAKE RELEASE HANDLE FAILURE TO RETURN TO "UP" POSITION CORRECTION:* Caused by improper return spring attachment. To correct, make a 180° bend on upper tang of spring so it points downward, and is parallel to spring coils.

Power Brakes: Moraine Power Brake Unit. Power unit replaces conventional master cylinder.

See "Moraine Hydraulic (Diaphragm) Reaction Type Power Unit" in Brake Section.

Removal of Power Unit - Remove stop light switch connector and brake pipe from master cylinder. Tape end of pipe. Remove retainer and washer from brake pedal pin and disengage pushrod eye Remove airsilencer from power cylinder air intake and remove nuts holding power brake unit to dash panel Disconnect vacuum hoses at vacuum tee and remove power unit from car

MISC. MECHANICAL

Windshield Wipers: Single and 2-speed electric, link operated type.

See "Windshield Wipers" in Miscellaneous Section.

►*WINDSHIELD WIPER CHATTER CORRECTION:* Caused by blade being set too low in parked position. For adjustment, *see "Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators: Electric type with a single reversible type motor for each window.

See "GM Electric Window Regulators" in Miscellaneous Section.

Power Seat Control (2-Way): Electric type with single reversible type motor for horizontal adjustment.

See "GM 2-Way Seat Controls" in Miscellaneous Section.

Power Seat Control (4-Way)· Electric type with single motor for vertical and horizontal adjustment.

See "GM 4-Way Seat Control" in Miscellaneous Section.

►*4-WAY SEAT CONTROL REVERSED OPERATION CORRECTION (Early Cars):* When pink and yellow wires in harness connector are reversed. switch will operate in opposite direction of seat movement. For correction, *see "GM 4-Way Seat Control" in Miscellaneous Section.*

Power Seat Control (6-Way): TWO types used· **1)** Three motor type (separate motor for each movement). **2)** One-motor type (with 3 solenoid clutches).

See "GM 6-Way Seat Control" in Miscellaneous Section

Power Top Control: Hydro-Lectric with reversible pump motor

See "Power Top Control" in Miscellaneous Section

Air Conditioning: "Frigidaire & Harrison" with all components located in or ahead of dash.

See "Frigidaire & Harrison" in Miscellaneous Section.

TIGHTENING SPECIFICATIONS

1954-60 MODELS

	Ft. Lbs.
Cylinder Head	65-70
Int & Exh. Manifold	25-30
Oil Pan Screws	10-12
Oil Pan Nuts	15-18
Main Bearing Caps	90-100
Con Rod Caps	40-45
Camshaft Sprocket	15-18
Water Pump Mounting	25-30
Oil Pump Mounting	25-30
Rocker Arm Cover (1954-Early 57)	20-25 inch lbs
Rocker Arm Cover (Late 1957-60)	35-40 inch lbs
Flywheel (1954-55)	80-85
Flywheel Drive (Flex) Plate (1956-60)	75-80
Flywheel Housing (Upper)	45-50
Flywheel Housing (Lower)	25-30
Vibration Dampener (1954-57)	60-65
Vibration Dampener (1958-60)	65-70

ENGINE

1954-56 MODELS

ENGINE REMOVAL (WITH TRANSMISSION IN CAR): *(CAUTION—If car is equipped with Air Conditioning, see Air Conditioning Section for precautions to take when removing equipment or disconnecting refrigerant lines)* Proceed as follows

1—Drain cooling system crankcase and transmission Remove hood top panel (see Hood Removal above) Disconnect battery and wires from generator Remove upper and lower radiator hoses and remove radiator core

2—Disconnect power steering pump to valve body hoses at pump and install caps on fittings to prevent oil leakage Disconnect refrigerant lines (See Air Conditioning Section) Disconnect all heater hoses at water pump and remove right heater hose from thermostatic valve

3—If car is equipped with power brakes, disconnect vacuum line at intake manifold Remove carburetor air cleaner, disconnect throttle linkage and fittings and remove carburetor Disconnect flexible fuel line at fuel pump and remove line from clips Disconnect ground straps, primary wire at distributor, oil pressure and cooling system temperature switch wires Disconnect wires at porcelain resistor

4—Disconnect windshield wiper vacuum hoses at manifold line and vacuum pump line Raise front of car and install stands

5—Disconnect propeller shaft at rear axle and remove assembly from car by sliding yoke out of transmission extension housing Remove transmission linkage slush deflector, and disconnect speedometer cable and shift linkage at transmission Remove starter from car

6—Disconnect front engine supports at frame Disconnect exhaust pipes from exhaust manifold Remove idler arm support screws from frame and lower idler arm and steering connector link Loosen hand brake cable at relay Remove stands from front of car and lower car to floor

7—Install a chain or rope around intake manifold and attach chain hoist above engine Take up all slack and then remove rear engine support bracket from frame and extension housing Lift engine, with transmission out of car

1957-60 MODELS

ENGINE REMOVAL (WITH TRANSMISSION): *CAUTION - Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section* Proceed as follows

1) Drain cooling system crankcase and transmission Remove hood top panel disconnect battery and wires from generator Remove upper and lower radiator hoses and remove radiator core

2) Disconnect power steering pump to valve body hoses at pump and install caps on fittings to prevent oil leakage Disconnect refrigerant lines see Caution above Disconnect all heater hoses at water pump, power brake vacuum line at intake manifold Remove carburetor air cleaner disconnect carburetor linkage and fittings and remove carburetor

3) Remove transmission linkage slush deflector flexible fuel line at steel fuel line engine to cowl ground straps primary wire at coil oil pressure and cooling system temperature switch wires Remove coil and disconnect black wire to porcelain resistor Disconnect windshield wiper vacuum hoses at manifold and vacuum pump line

4) Remove two center-bearing-support to frame bolts (Nuts are tack welded and should remain fastened to support) "U" bolts and locks at rear axle pinion slide propeller shaft and front yoke off transmission main shaft and through frame tunnel section DO NOT nick yoke Remove intermediate support

5) Remove wires from starter and disconnect exhaust pipe at exhaust manifolds Disconnect front motor support screws at frame idler arm support screws from frame and lower idler arm and steering connecting link

6) Install rope or chain around intake manifold attach hoist and take weight off engine Disconnect and remove rear engine support bracket from frame and extension housing, lift engine with transmission out of car

ENGINE BALANCING

ENGINE BALANCE CHECK & UNBALANCE CORRECTION: 1) – Connect a tachometer to engine and run engine at progressively higher speeds (with transmission in neutral). Note degree of vibration at various speeds.

2) – If greatest vibration is noted at approximately 2800 RPM, either the torus cover, flywheel, or flex plate may be out of balance. To correct, add a washer under one of the four flex plate-to-flywheel attaching nuts. Recheck for vibration. If the addition of the washer increases vibration, remove washer and place it under one of the other three attaching nuts until the best over-all balance is obtained. In order to perfect the balance, it may be necessary to add additional washers under other flywheel-to-torus cover attaching nuts in the area of the first washer.

3) – If greatest vibration is noticed at 3500 RPM, the flywheel or flex plate may have excessive lateral runout. Check runout as follows: Remove transmission and inspect flywheel for weld spots which may hold flex plate away from the flywheel.

4) – Mount a dial indicator on rear of engine. Rotate flex plate to check each leg for runout on the surface that contacts the flywheel. The total runout at this point should not exceed .010". If the runout is in excess of .010", use the flex plate leg which is the most rearward as a standard. Then bend back the legs that are too far forward until they are within .005" of standard leg. *NOTE* – Be sure to bend the complete leg, 5) – Install transmission. Tighten flex plate-to-wheel nuts alternately to 5 ft. lbs. Then, tighten to 15-20 ft. lbs. Recheck engine for vibration. If vibration continues to exist at 3800 RPM, the flywheel and torus assembly have excessive runout and should be replaced.

***NOTE:* The flex plate checking procedure should be followed whenever transmission is removed**

1959-60 ENGINE VIBRATION CORRECTION: When engine vibration occurs between 1200-1500 RPM (with cruising loads) at speeds of 30-40 MPH (Dr-4), and 20-25 MPH (Dr-3), first prove that vibration is in engine as follows

1) Check that car speed, for peak vibration, changes when selector lever moved from Dr-4 to Dr-3.

2) Remove belts (one at a time) to isolate possibility that a belt may be affecting the vibration.

3) Produce the vibrations (with car standing still) by either stalling in drive range or fast idling in Neutral.

4) Tighten all mounting bracket screws for all belt driven units (generator, steering pump or air compressor).

If engine vibration definitely present, proceed as follows:

1) Raise car on hoist and install a softer rubber Rear Engine Mount Part No. 3631552 (with cushion production number 1473590). Also use late type Retainer No. 1473638. Above items used in production beginning with Engine No. 032750.

2) Remove front mounting nut and washer and use mirror to check for stud binding or mount deflection. *NOTE* - Upper and lower grooves on underside of mount should be of equal width and stud should not bind against edge of hole in frame crossmember. Use one or more 1/16" body shims, Part No. 1431879, to elevate engine when bind is indicated by shiny spot on stud.

3) When above procedures do not eliminate the vibration, loosen, all exhaust pipe clamps, run engine until all pipes are hot and normalize alignment. Insert a thin shim between underside of each pipe at No. 4 frame outrigger and lower edge of hole in rectangular tire carcass support to eliminate any load from tire carcass after clamps are tightened.

OIL PAN

1954-55 MODELS

OIL PAN REMOVAL: Remove oil level indicator, exhaust cross-under pipe nuts, pipe, gaskets, and manifold heat control valve. Take off starter and lay on frame side rail. Remove two oil pan nuts and eighteen screws, take off oil pan

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Pan Installation: Cement new pan gaskets to pan, install new cork seals in rear main bearing cap and engine front cover with ends of seals seated in grooves. Coat each end of pan gaskets with chassis grease so that ends will slip over front and rear seals. Position pan over two studs on left side of crankcase, then raise right side and insert two pan screws opposite the two studs, put on washers and nuts on two studs. Tighten remaining screws, tightening two screws and nuts originally installed last.

1956-58 MODELS

OIL PAN REMOVAL: Drain engine oil, and remove oil level indicator. Disconnect battery ground strap and wires from starter solenoid. Remove starter motor assembly. Remove idler arm support screws and lower support from frame side bar. Remove water hose and clip from center of crossmember. Remove oil pan screws and nuts and remove oil pan.

Oil Pan Installation: Install new cork seals in rear main bearing cap and in front cover, being sure ends of gaskets are in recess provided for them. Cement pan gaskets to both sides of pan, being sure holes in gasket line up with holes in pan. Place a small amount of chassis grease on each of the four corners of gasket which hang over front and rear cutouts, which will permit pan to slide over corks and insure a good seal. Place pan in position on bottom surface of cylinder block over the four studs, and install nuts and lockwashers loosely. Install remaining screws and tighten screws and nuts in rotation to torque specifications. Complete installation by reversing removal procedure.

CYLINDER HEAD & MANIFOLD

1954-56 MODELS

CYLINDER HEAD INSTALLATION: Use a Torque Wrench and tighten cylinder head capscrews starting from the center row of bolts and working outward and toward each end.

►*CYLINDER HEAD TIGHTENING CAUTION—Loosen intake manifold before checking the cylinder head capscrew torque. This will prevent the upper row of screws from being under-torqued due to the bridging effect of the manifold.*

Cylinder Head Gasket. Install with side stamped "Top" UP

Cylinder Head Capscrews. 8 short screws in outside row, 5 medium length screws in center row, 4 long screws at rocker arm shaft.

Tightening Torque. See Tightening (Torque Wrench) Specifications.

1957-60 MODELS

CYLINDER HEAD REMOVAL: There are six lengths of cylinder head screws used. Carefully note length and position of each cylinder head screw for correct reinstallation.

CYLINDER HEAD INSTALLATION: Use a Torque Wrench and tighten cylinder head capscrews starting from the center row of bolts and working outward and toward each end.

Cylinder Head Gasket - Install with side stamped "Top" UP.

Tightening Torque - See Tightening (Torque Wrench) Specifications.

ORIGINAL BORE & PISTONS

1954-55 MODELS

ORIGINAL PRODUCTION ENGINE BORE & PISTON SIZES: Piston and cylinder size variation indicated by letter ("A" through "M") stamped on top of block at outer edge of cylinder bore. Each letter indicates two sizes ("—" if letter to left of bore, "+" if to right of bore center). These letters used in production for selective fitting of pistons.

►*1954-55 OVERSIZE BORE NOTE:* An asterisk, placed before the engine unit number, indicates that cylinders bored .010" Oversize. Cylinder size variation is stamped to right and left of cylinder bore with a double letter "AA," "BB," etc., as indicated for standard size bore above.

1956-60 MODELS

ORIGINAL PRODUCTION ENGINE BORE & PISTON SIZES: Piston and cylinder bore size indicated by a letter ("A" through "M", 10 sizes), stamped on top face of block either to right or left of each cylinder bore. Sizes range from 4.0000-4.0002" to 4.0018-4.0020" (Cylinder Size), 3.9985-3.9987" to 4.0003-4.0005" (Piston Size). Only "L" and "M" piston sizes available for service. *NOTE* - An "AA" indicates .010" oversize over letter "A" for example: 4.0100-4.0102" (Cylinder Size), 4.0085-4.0087" (Piston Size).

PISTONS

ALL MODELS

REPLACEMENT PISTONS (WITH FITTED PIN): Furnished in Standard size, .010", .020", .030" Oversizes.

ALL MODELS

FITTING NEW PISTONS: Pistons should be fitted by Micrometer Gauge Method or Feeler Gauge Method as described below. Measure piston for clearance ⅛" below horizontal slot of "T" slot.

Piston Skirt Clearance

Engine	Side Clearance
1954	.0015"
1955	.0009"
1956-60	.0015"

Micrometer Gauge Method:—Measure cylinder bore with micrometer gauge at point 1¼" below top edge and at right angles to crankshaft. Set inside micrometer at cylinder bore size, **then measure this gauge length with same outside micrometer used to measure piston.** This method will eliminate any error introduced by using different gauges to measure cylinder and piston. Use outside micrometer to measure piston diameter at upper corner of 'T' slot (adjacent to 'T' slot and ⅛" below horizontal slot).

►*TEMPERATURE VARIATION NOTE:* Skirt clearance shown above is for block and piston at 70°F. Subtract .0001" (or add 2/5 Lb. pull on feeler gauge) for each 6° increase in piston temperature above 70°F. Add .0001" clearance (or subtract 2/5 Lb. pull) for each 6° decrease in piston temperature below 70°F.

Feeler Gauge Method:—Use ½" feeler stock .002", .0025", or .003" thick (see Feeler Gauge Note and table below) on side of piston directly over 'T' slot (center feeler on slot) with lower rounded end of feeler extending ½" down on piston skirt past horizontal slot (feeler must not extend further down on piston skirt because skirt is tapered with greater diameter at bottom). Install piston and feeler in cylinder with piston right side up and feeler toward side, measure pull required to withdraw feeler. Pull will vary in accordance with thickness of feeler gauge used and with piston temperature. See table below for correct pull for each feeler gauge thickness to obtain proper skirt clearance listed above.

Feeler Pull (In lbs.)	.002" Feeler	.0025" Feeler	Piston Clearance (70°F) .003" Feeler
1	.00225"	.00275"	.00326"
2	.002"	.00252"	.00304"
3	.00175"	.00228"	.0028"
4	.0015"	.00205"	.00258"
5	.00125"	.00182"	.00235"
6	.001"	.00157"	.00213"
7	.00075"	.00133"	.0019"
8	.0005"	.00125"	.00175"
9	.00025"	.000875"	.0015"

Feeler Gauge Note—Feeler gauges used for piston clearance measurement should be clean and smooth with lower end rounded. Rusted or wrinkled feelers should be discarded and rough edges should be honed to prevent scratching cylinder wall.

PISTON PINS

1954-59 MODELS

PISTON PIN FITTING: *(NOTE—Special tool J-3848 is required to fit pins to connecting rods).* See following for Removal and Installation:

Removal—Install pilot of tool J-3848 on puller screw and insert this assembly through piston and pin from side of piston stamped "REAR." Install support (part of tool J-3848) over puller screw with small end of support against front side of piston (side opposite to that stamped "REAR"). Install nut loosely on puller screw and place assembly in arbor press with support positioned over slot in press table to allow screw to extend down. Press piston pin out of piston and rod assembly. Remove tool from piston and rod.

Installation—Lubricate pin holes and install pilot (part of tool J-3848) through piston and rod, lubricate pin and insert it in piston pin hole on "REAR" side of piston. Install puller screw through pin and pilot from "REAR" side of piston. Insert spacer (part of tool J-3848) between connecting rod and front side of piston until it is seated on the pilot. Install support over puller screw with smaller end toward front of piston (opposite to side stamped "REAR"). Mount piston and tool assembly in vise with side of piston stamped "REAR" down and flats of puller screw gripped in vise. Install nut on threaded end of puller and tighten with torque wrench to start piston pin into connecting rod.

(CAUTION—If pin can be started into rod with less than 15 ft.lbs. minimum torque, the clearance between piston pin and rod is excessive and either the piston and pin assembly or connecting rod must be replaced). Remove assembly from vise and install in arbor press with large side of support down. Install collar (part of tool J-3848) over piston pin and

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

press puller screw down until top of pin is level with top of collar *REMOVE COLLAR and SPACER* Pin will be projecting slightly from rod, and must be guided into pin boss next to support to assure correct alignment When aligned, press pin in until pilot bottoms in support This properly positions pin in rod

1960 MODELS

PISTON PIN FITTING: *NOTE* - Special Tool J-8390 is required to fit pins to connecting rods. See following for removal & installation:

Removal - Place Piston Pin Support J-8390-3 on arbor press and place piston assembly on support with "REAR" mark resting on support. Insert pilot end of Remover J-8390-1 into piston pin and press pin out of piston. *NOTE* - Keep pins in order for reinstallation.

Installation - Lubricate piston pin and holes in piston, place Support J-8390-3 on press with Spring J-8390-4 and Spacer J-8390-2 in position on support. Place connecting rod on its respective piston with "REAR" mark on piston toward rear of engine with number on lower end of rod down. *NOTE* - Nos. 1,3,5,7 are in left bank, 2,4,6,8 in right bank. Place assembly on Support and place pin in piston. Place Pin Remover & Installer J-8390-1 on piston pin and press pin in until it bottoms on spacer in Support.

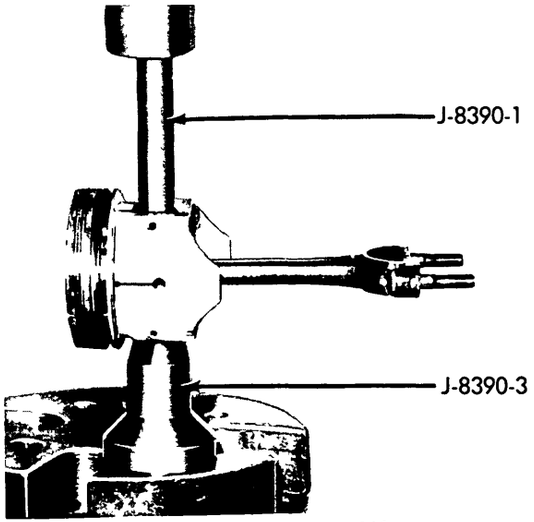
PISTON RINGS

ALL MODELS

REPLACEMENT PISTON RINGS: Rings are furnished separately and in complete sets as follows: Standard size, .010", .020", .030" Oversize.

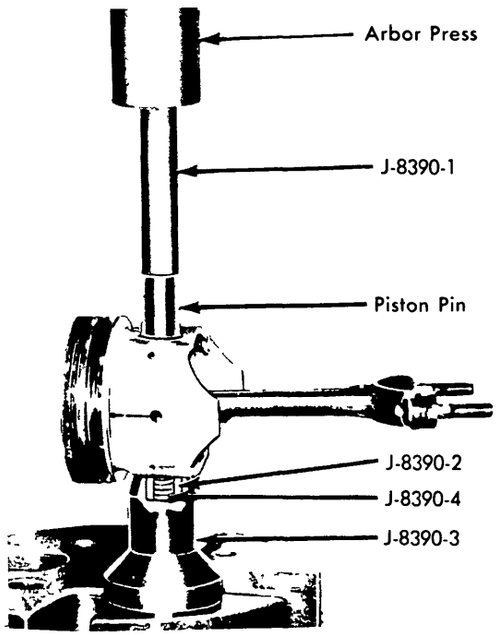
CRANKSHAFT & MAIN BEARINGS

1954-56 MODELS



CRANKSHAFT REMOVAL (Engine in Car): Jack up all four wheels and install a stand at each wheel. Drain crankcase and cooling system. Remove oil pan (see Oil Pan Removal), oil pump (see Oil Pump Removal), timing chain (see Timing Chain Removal), and flywheel (see Flywheel Removal). Take off steering idler at right frame side bar and lower linkage to floor. Remove spark plugs. Take off rod caps and push rod and piston assemblies up into bores to clear shaft. Remove front and rear main bearing caps, support shaft at front and rear and remove three remaining caps, lower shaft out of engine.

1957-60 MODELS



CRANKSHAFT REMOVAL (Engine in Car): Place stands under car at all four wheels Remove timing chain and sprockets Remove transmission and flywheel flex plate Remove steering gear idler arm from right frame side bar and lower steering linkage to floor Remove oil pan, oil pan baffle and oil pump Remove spark plugs disconnect connecting rods and push piston assemblies up into cylinder bores Remove front and rear main bearing caps support crankshaft at front and rear and remove three remaining bearing caps Lower crankshaft

1954-60 MODELS

MAIN BEARING REMOVAL: Upper bearing halves can be rotated out with flattened cotter pin inserted in oil hole in crankshaft and turning shaft

PISTON PIN REMOVAL

PISTON PIN INSTALLATION

clockwise. Crankshaft does not have to be taken out. Installation—Reverse removal instructions given above. *CAUTION*—Do not interchange caps. Install caps with marking numbers (not casting nos.) on left side and in order from front-to-rear of engine.

1954-60 MODELS

REAR MAIN BEARING OIL SEAL: Wiper seal installed in rear groove in bearing cap and block (oil slinger operates in front groove).

Oil Seal Installation (1954-Early 1958) - With crankshaft out of engine (See Crankshaft Removal), and bearing cap off, install length of new packing in groove in block. Use Tool J-3048 (1954-55), J-6349 (1956-Early 1958) and drive seal in place. With tool in place, cut off each end of packing **flush (1956), 1/64" above bearing edge (1957-Early 1958).** Repeat operation for bearing cap. Use arbor press or vise to press packing into place.

Oil Seal Installation (Late(1958-60) - *NOTE - Late type uses rubber seal which can be replaced without removing crankshaft and both halves are identical.*

1) Rotate new seal into position in block, then apply pressure at both ends of seal to insure that it is protruding uniformly on each side.

2) Install lower half of seal in bearing cap with lip of seal facing forward, and with one end of seal over ridge and flush with split line. Hold this end from slipping, and push seal into seated position by applying pressure at other end. Press seal down firmly so that it protrudes uniformly on each side. *CAUTION* - Do not damage sealing edge by applying pressure to seal lip.

3) Apply .010" thick coat of rubber cement to cap and block at ends of seal but do not permit cement to adhere to lip of seal. Lubricate lip of seal with thin film of engine oil.

4) Install bearing cap with bolts finger tight, then adjust cap. *See "REAR MAIN BEARING INSTALLATION CAUTION" below.* Turn crankshaft to assure that there is no bind.

►*REAR MAIN BEARING INSTALLATION CAUTION:* For proper alignment of thrust surfaces of rear main bearing proceed as follows: Install upper and lower inserts in block and bearing cap. With rear oil seal in place and mating surfaces clean, install bearing cap and tighten screws to 1-2 ft. lbs. torque. Using a plastic hammer, drive crankshaft forward, then rearward, then forward again (*CAUTION* - Pound on counterweights, not on connecting rods). Tighten bolts evenly to specifications. Check to make sure crankshaft is not binding.

CAMSHAFT & BEARINGS

1954-60 MODELS

CAMSHAFT REMOVAL: Remove Air Conditioner Condenser, *see "Air Conditioning" in Miscellaneous Section.* Remove radiator, timing chain and sprockets and remove valve lifters. Remove fuel pump and fuel pump pushrod. Slide camshaft forward carefully out of engine. *CAUTION* - DO NOT scratch camshaft bearings with camshaft lobes.

►*CAUTION*—Camshaft is cast iron and must be handled carefully to prevent damage DO NOT pry shaft out of engine and use extreme care not to drop or spring shaft

Camshaft Alignment Check: Check camshaft for proper alignment whenever it is removed from the engine *See "Camshaft Alignment Check" below.*

Camshaft Bushing Removal & Installation: Use Bearing Remover & Installer Tool J-3063 to pull old bushings out Install new bushings with same tool and see that oil holes in bushing line up with oil holes in block (check oil leads with piece of wire after tool removed)

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Camshaft Installation: Re-install camshaft by reversing removal procedure as given above. Install distributor drive gear as follows:

►**Distributor Drive Gear Installation**—Turn crankshaft so that #1 piston on top dead center entering power stroke (mark "C" on dampener in line with pointer on timing case cover)

CAMSHAFT ALIGNMENT CHECK: Put shaft on surface plate and support at front and rear bearing journals on "V" blocks, or on centers. Mount dial indicator on surface plate over centerline of camshaft with pointer touching shaft. Check heel of each cam through 180° rotation with dial set at zero. Replace camshaft if dial reading greater than .0015".

TIMING CHAIN

1954-60 MODELS

TIMING CHAIN REMOVAL: Set engine in firing position for No. 6 cylinder. Remove water pump (see Cooling on car page), oil pan (see Oil Pan Removal), crankshaft pulley and engine front cover. Take out the two camshaft sprocket screws and lockwashers. Remove sprocket with chain from camshaft, remove crankshaft sprocket.

Timing Chain Installation: Reverse removal instructions given above. Timing marks on sprocket must be together and aligned with straightedge across shaft centers.

VALVE SYSTEM

1954-60 MODELS

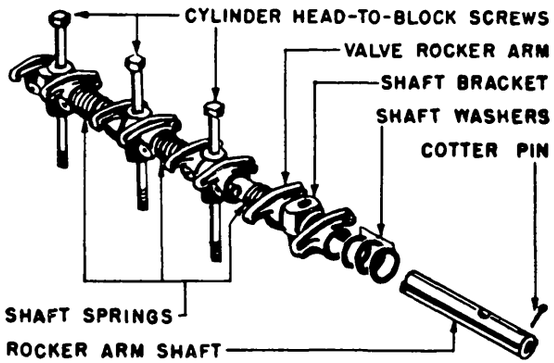
VALVE REMOVAL: With cylinder head removed, take out spark plugs Install head upside down on Cylinder Head Holding Stand J-3064 Install Holding Strap J-3046-6 over heads of valves Turn head right side up, compress valve springs with compressor bar and stirrup of Head Holding Tool, remove valve keepers Release bar and remove valve spring retainer, also rubber seal from lower groove on valve stem Turn head over, remove Holding Strap, take out valves *CAUTION*—Note location of each valve, must be re-installed in same location

Installation: Reverse removal procedure

VALVE STEM SEALS

1954-60 MODELS

VALVE STEM OIL SEAL CHECK & INSTALLATION: Place 1" diameter suction cup on valve spring retainer Cup will not stick to retainer (when pumped up and down) if seal leaks. To install new seal without removing valve, proceed as follows: Remove spark plug at affected cylinder, insert Valve Holder J-3213-1 in plug port to hold valve up and seated. Reinstall nearest rocker arm bolt and position Valve Spring Compressor J-5892-1 under bolt head and depress valve spring. Remove valve lock and seal. Release spring tension to replace spring.



ROCKER ARMS

1954-60 MODELS

ROCKER ARM ASSEMBLY: Remove rocker arm covers Remove secondary wiring and distributor cap as an assembly Remove four cylinder head cap screws which hold rocker arm assembly to cylinder head and remove rocker arm assembly

Disassembly & Reassembly: See illustration for correct order of parts Parts can be removed from shaft by removing cotter pin at end

Installation: Install rocker arm assembly in position on cylinder head with notches on each end of rocker shaft pointing downward and toward center of engine, and rocker arm brackets with larger machined surface next to head Install four cylinder head screws and tighten to specifications Install rocker arm covers and secondary wiring with distributor cap assembly. Tighten cover screws to specifications.

CADILLAC ROCKER ARM ASSY.

HYDRAULIC LIFTERS

►*CADILLAC HYDRAULIC VALVE LIFTER REPLACEMENT CAUTION:* TWO different lifters furnished for service which are not interchangeable and must be used on correct models as listed below with correct type pushrod (different pushrod for each lifter) *CAUTION - Correct lifter and pushrod must be used together due to difference in pushrod lengths*

1954-57 CARS (To Engine No. 042804) - Original replacement lifter (one-piece body) superseded by new lifter with two-piece body Lifters and pushrods may be identified as follows **Hydraulic Lifter** - Part No 5231806 (supersedes 5231375) may be identified by bottom of pushrod seat being 7/16" below top of lifter body This lifter has wide oil groove in body (same as later type lifter) and oil groove width cannot be used to identify lifter. **Pushr d** - Part Nos. 1455420 (1954 and 1956-57), 1463423 (1955) Can be identified by two grooves near one end of rod (1455420) or one groove and daub of white paint (1463423)

1957-60 CARS (B ginning Engin N .042804) - Serviced by original production type units as follows **Hydraulic Lift r** - Part No 5231740 May be identified by bottom of pushrod seat being 1/4" below top of lifter body **Pushrod** - Part No 1468453 May be identified by absence of grooves at end This pushrod is 187" shorter than previous type and may be installed with either end up

1954-55 MODELS

VALVE LIFTERS: Hydraulic, Barrel Type. Consisting of plunger and valve assembly operating within a cylinder formed by valve lifter tappet or body (See illustration). Oil is introduced to this unit from main oil gallery through hole in side of lifter plunger and body.

Removal: Remove rocker arm covers (hang on cowl), intake manifold, three valve compartment cover screws. Loosen crankcase ventilator pipe screw at flywheel housing, move pipe to permit removal of valve cover. Remove rocker arm assemblies and push rods. Take out lifters (use Tool J-3049), turn lifter while removing to remove any carbon or varnish deposit from lifter base.

***CAUTION*—Keep lifters in order—must be re-assembled in same holes.**

Partial Removal Note—If one or two lifters only to be removed, rocker arm assembly need not be removed, proceed as follows: Compress valve spring, slide rocker arm over, withdraw pushrod.

Disassembly: Press down on center of valve lifter push rod cup, and with a pointed tool, remove lockwire from groove. Invert lifter and slide out push rod cup, plunger, ball retainer and spring. ***NOTE*—** If plunger is stuck in body, place lifter push rod end down, in Valve Lifter Plunger Remover Tool J-4160. Holding tool firmly in hand with thumb over lifter body, strike tool sharply on block of wood until plunger falls out of body.

Cleaning & Inspection: Wash all parts in a suitable carbon solvent and remove all trace of carbon and varnish. Inspect plunger and lifter body for scoring or other damage that would prevent free movement. Inspect lower end of lifter body for nicks or indentations. If any exist, replace complete lifter assembly. Dry lifter parts with air, then install plunger in lifter body without other parts and check for free movement. Plunger should drop of own weight into body bore.

Reassembly: Place ball on its seat in lower end of plunger while holding plunger upside down. Position ball retainer and spring over ball and end of plunger. Lower lifter body over plunger assembly then turn assembly right side up and fill plunger with clean oil. Jiggle ball with small piece of wire until oil drains into body and trapped air is released from body. Refill plunger with oil, place push rod cup on plunger, and position lock wire over cup. Press lock wire into groove with Lock Wire Installer Tool J-2730.

Testing (Leak Down Rate)—Remove distributor cap, coil and rocker arm covers as an assembly. Set timing mark "C" on harmonic balancer to the pointer and observe position of distributor rotor. Check each lifter as outlined in following table, using Valve Lifter Leakdown Tool J-3074:

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

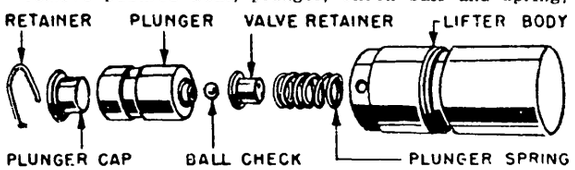
With rotor at No. 1 firing position (pointing toward rear of engine), check:

No. 1 Intake	No. 3 Exhaust	No. 6 Exhaust
No. 1 Exhaust	No. 4 Exhaust	No. 7 Intake
No. 2 Intake	No. 5 Intake	No. 8 Intake
No. 2 Exhaust	No. 6 Intake	No. 8 Exhaust

With rotor at No. 6 firing position (pointing toward front of engine) check:

No. 3 Intake	No. 5 Exhaust
No. 4 Intake	No. 7 Exhaust

Insert feeler gauge of tool between valve stem and rocker arm, at the same time compressing the tool "pop-out" spring against valve spring *(NOTE*—Tool should be installed as quickly as possible to avoid any unnecessary leakdown of lifter). Note the interval of time during which the tool is held in place by valve spring pressure. It will be found through this test that bad lifters or lifter will have the shortest leakdown time.



1955-60 MODELS

VALVE LIFTERS: Hydraulic. Barrel type Consist of of plunger and valve assembly operating within a cylinder formed by the lifter body (see illustration). Oil is introduced into this unit from an oil gallery through hole in relieved section of lifter body

R moval (1955-57): Disconnect brake vacuum line at intake manifold. Remove heater hoses from clips on rocker arm covers and remove covers. Remove intake manifold. Remove valve compartment cover screws. Loosen engine ventilator pipe clampscrew at flywheel housing, remove long ventilator pipe screw at valve compartment and remove cover. Remove rocker arm assemblies *(NOTE* -- When only one or two lifters are to be removed, do not remove rocker arm assembly. Compress valve spring, slide rocker arm over and remove the push rod.) Remove push rods, keeping them in order so they may be replaced in the same location. Using Valve Lifter Remover Tool J-3049, remove lifters from engine. Keep lifters in order so they may be replaced in the same location.

R m val (1958): Pushrod holes in cylinder block have been enlarged to permit removal of lifters without removing intake manifold Remove rocker arm cover and gasket, remove rocker arm assembly, remove pushrods *(CAUTION* - Keep pushrods in order and reinstall in same positions). Use mechanical finger or magnet attached to long rod to withdraw lifters

Disassembly: Press down on center of valve lifter pushrod seat, remove lockwire from groove Invert lifter and remove pushrod seat, plunger, check ball and spring,

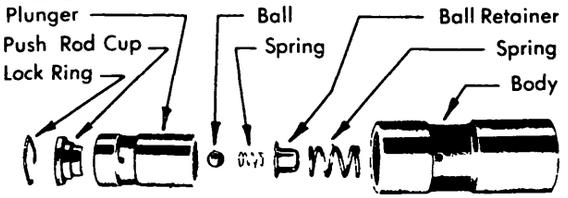
CADILLAC 1954-55 HYDRAULIC VALVE LIFTER

ball retainer, and plunger spring. *NOTE* - If plunger sticks in lifter body, place lifter in Plunger Remover Tool J-4160 (pushrod end down), hold tool firmly in hand with thumb over lifter body, strike tool firmly on block of wood to dislodge plunger

Cleaning & Inspection: Wash all parts in a suitable carbon solvent and remove all trace of carbon and varnish. Inspect plunger and lifter body for scoring or other damage that would prevent free movement. Inspect lower end of lifter body for nicks or indentations. If any exist, replace complete lifter assembly. Dry lifter parts with air, then install plunger in lifter body without other parts and check for free movement. Plunger should drop of own weight into body bore.

Reassembly: Hold plunger upside down, place check ball and spring on plunger Position ball retainer and plunger spring on assembly, check by moving retainer up and down to make certain spring is in working order Lower lifter body over plunger assembly at an angle to seat spring (if necessary, probe through oil hole with a small wire to allow assembly to be seated) Turn assembly right side up and fill with clean engine oil Jiggle check ball with a small wire until oil fills lifter body and all trapped air is released Refill plunger with oil, install pushrod seat on plunger, position lockwire over seat, press lockwire into groove using Lockwire Installer Tool J-2730

Testing Leak Down Rate (On Engine): 1) On Air Cond. Cars, remove rear bracket and loosen generator. Remove resistor wire from porcelain resistor at coil. Remove distributor cap, coil, and rocker arm covers. Set timing at "C" mark and observe position of distributor rotor. Check each lifter as outlined in the following table:



With rotor at No. 1 firing position (pointing toward rear of engine), check each lifter as shown in (2) below.

No. 1 Intake	No. 3 Exhaust	No. 6 Exhaust
No. 1 Exhaust	No. 4 Exhaust	No. 7 Intake
No. 2 Intake	No. 5 Intake	No. 8 Intake
No. 2 Exhaust	No. 6 Intake	No. 8 Exhaust

Rotate crankshaft one complete turn and with rotor at No. 6 firing position (pointing toward front of engine) check:

No. 3 Intake	No 5 Exhaust
No. 4 Intake	No. 7 Exhaust

2) Insert feeler gauge of tool between valve stem and rocker arm, at the same time compress the tool "pop-out" spring against the valve spring retainer. *NOTE* - Tool should be installed as quickly as possible to avoid any unnecessary leak down of lifter. Note the interval of time during which tool is held in place by valve spring pressure. It will be found through this test that noisy lifter or lifters will have the shortest leak down time.

CADILLAC 1955-60 HYDRAULIC VALVE LIFTER

OILING SYSTEM

ENGINE LUBRICATION

ENGINE LUBRICATION: Force feed type of lubrication with oil supplied under pressure to crankshaft, connecting rod, and camshaft bearings, valve lifters, rocker arm bearings and metered to upper rocker arms for pushrod surface and valve lubrication. Oil is supplied from rear main bearing for lubrication of oil pump drive shaft. All other moving parts of engine are lubricated by gravity flow or splash. See "Engine Oil Flow" diagram.

OPERATION: Gear type oil pump mounted on rear main bearing cap (driven by distributor drive shaft) draws oil through a screened intake floating on oil in crankcase and delivers it through rear main bearing cap to a Vertical Header in the block (through a Full Flow Filter on 1960 models). This header delivers oil to an intersecting Right Longitudinal Header and, through a connecting header, to the Left Longitudinal Header. Upper end of vertical header is plugged. Rear end of right longitudinal header supplies oil through cylinder block and head to right rocker arm shaft, left longitudinal header supplies oil at front end through cylinder block to left rocker arm shaft and to partial flow oil filter on 1959 & earlier models. Oil from cylinder heads drains back directly to crankcase through left front and both rear holes in each cylinder head. The hole in front end of right cylinder head drains oil back through head and matching hole in block to engine front cover for lubrication of timing chain and sprockets. A drilled hole at rear of valve lifter compartment returns lifter compartment excess oil to crankcase.

Crankshaft, Connecting Rods & Pistons - Vertical header at rear main bearing supplies oil to rear main bearing. The right longitudinal header supplies oil to the front and center main bearings. The left longitudinal header supplies oil to the two intermediate main bearings. Drilled passages in crankshaft supply oil from main bearing journal to connecting rod journal for connecting rod bearing lubrication. Oil is forced out groove in connecting rod bearing cap against cylinder walls for piston lubrication. Piston pins receive oil through drilled passage in piston.

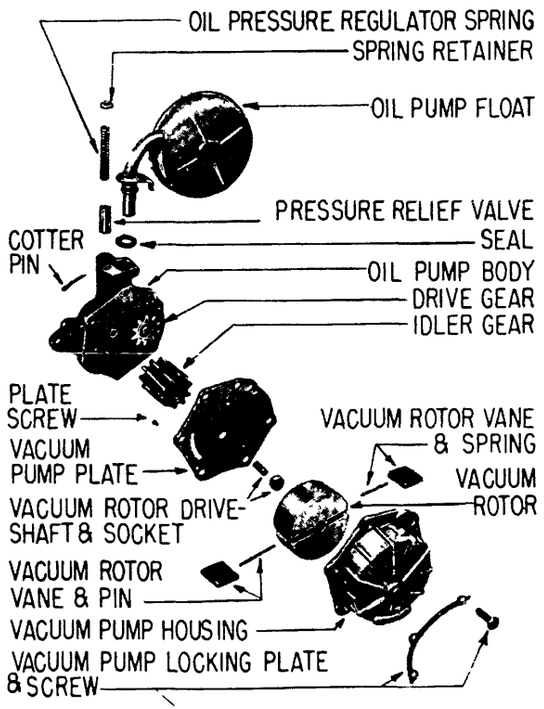
Camshaft, Sprockets and Lifters - Rear camshaft bearing is supplied oil from the connecting header. All other camshaft bearings receive oil from drilled passages in block from respective main bearing. Oil pressure switch is screwed into upper end of connecting header. Drain back hole in front end of right cylinder head returns surplus oil to engine front cover for timing chain and sprocket lubrication. Each longitudinal header supplies oil through drilled passages in block to its respective bank of valve lifters.

Rocker Arms, Valves & Pushrods - Oil is supplied to rocker arm shaft on right bank from rear end of right longitudinal header through a vertical branch in cylinder block and head. The left rocker arm shaft is supplied through a vertical branch in cylinder block and head at front end of left longitudinal header. Rocker arm shafts are plugged at each end. One hole in bottom of rocker arm shaft intersects a 45° groove and supplies oil evenly under loaded area of each rocker arm. The other

CONTINUED ON NEXT PAGE

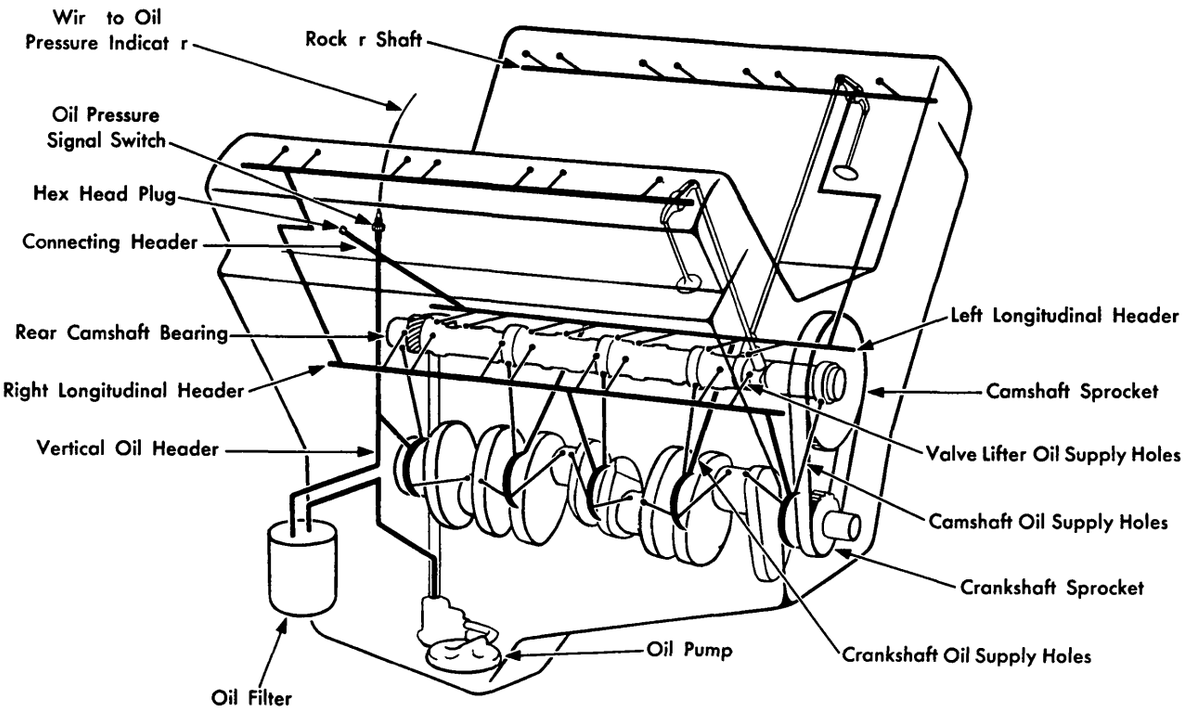
CONTINUED FROM PRECEDING PAGE

hole is mismatched with an angular passage in the arm and meters oil to the pushrod end of the arm for lubrication of the pushrod surface in the arm. From this point oil flows down to the opposite end of the arm for valve tip lubrication.



OIL FILTER: Different types used as follows:

1954-59 Partial Flow Type - Mounted on bracket on left front corner of engine. Inlet line is connected to fitting at end of channel feeding from left longitudinal header. Outlet line is connected at left front of engine to return oil to crankcase.



1960 Full Flow Type - Mounted on pad on right rear side of crankcase. Oil inlet (from pump) and outlet (to engine oiling system) channels are located in mounting pad and filter mounting bracket.

OIL PUMP
1954-60 MODELS

►*1954-56 PUMP CORRECTION FOR AIR IN OILING SYSTEM (Before Engine No. 001148):* Check pump float tube and tube bore in pump body for burrs (remove burrs with fine sandpaper). Install "O" ring seal, Part No. 5665829, on float tube against shoulder 1 1/16" from end of tube, insert float tube in body and secure with cotter pin. Check float for free movement. When installing pump, make certain that oil pan baffles clear sides of pan by at least ¼" on each side to insure proper return of oil to sump on hills or during sudden stops. *NOTE* - On 1956 cars after Engine No. 001148, a felt

CADILLAC 1954-58 OIL & VACUUM PUMP

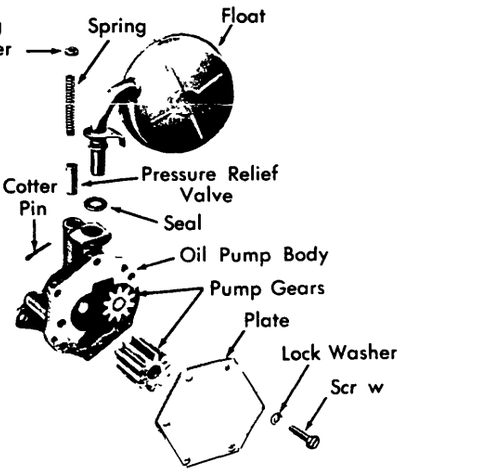
CADILLAC ENGINE OILING SYSTEM

washer is installed in oil pump intake to insure correct sealing of pump intake and prevent air entering system.

OIL PUMP REMOVAL: Drain engine and remove oil pan (see Oil Pan Removal). Remove oil pan baffle. On early models, disconnect vacuum line from engine block. Remove two nuts securing oil pump to rear main bearing cap, and remove oil pump (plus vacuum pump early models), oil float and screen assembly. *NOTE* - Oil pump drive shaft is now loose and should be removed.

Disassembly: Remove float and felt seal Remove pressure regulator valve, spring and spring retainer. *NOTE* - DO NOT lose retainer when removing cotter pin. On early models, remove six screws holding vacuum pump to oil pump and remove vacuum pump and line. On later models, unlock and remove six cover plate to housing screws and remove plate. Slide gear off idler shaft, remove pin from collar on end of drive shaft and press collar off shaft. Slide oil pump drive gear out of pump body.

Inspection: Inspect strainer screen for dirt, float for leaks and check condition of seal. Inspect oil pressure regulator valve for nicks and burrs, drive gear for nicks and burrs, vacuum pump plate for wear by pressing it down on surface plate.



Oil Pump Specifications-Backlash between drive gears - .008-.012". Clearance drive shaft to pump body - 0010-.0025", wear limit .005". Clearance pump body to gears - .003-.005", wear limits .006". End play in pump gears-.001-.004", wear limit .006".

Pressure Regulator Specificati ns - Valve plunger clearance in housing .0025-.0035" (wear limit .005"). Valve spring specifications are as follows:

1951-56 - Free length 2 27/64". Pressure 4.3-4.8 lbs. at 1 7/16".

1957-60 - Free length 2 21/32". Pressure 5¼-5¾ lbs. at 1 7/16".

CONTINUED ON NEXT PAGE

CADILLAC 1959-60 OIL PUMP

CONTINUED FROM PRECEDING PAGE

R ass mbly: Install drive gear in pump body, press collar on shaft and install lock pin. Slide idler gear into pump body. On earlier models, place vacuum pump assembly with hexagonal drive shaft under oil pump and install six screws and locks. On later models, install oil pump cover plate and secure screws with locks. Slide oil pump strainer into opening in pump body and install lock pin. Check felt seal to be sure it is located correctly. *CAUTION* - Screen must face cover of oil pump.

Installati n: Install oil pump drive shaft, oil pump assembly over studs, guiding vacuum fitting into block.

VACUUM PUMP

VACUUM PUMP (Removal): Drain engine oil and remove oil pan. Remove oil pan baffle and disconnect vacuum line at engine block. Remove six screws holding vacuum pump to oil pump, and remove vacuum pump with the oil pump idler gear. Remove hexagonal drive shaft. *CAUTION*—Oil pump idler gear may fall when pump removed.

Dissass mbly - Remove two cap screws holding plate to vacuum pump and remove plate from dowels. Turn pump upside down and shake out rotor assembly. Remove vanes, pin and spring from rotor.

Vacuum Pump Clearances—Vane to cover plate .002-.005". Rotor to cover plate .004-.007". Socket to cover plate .0144-.0324". Socket to rotor face .0104-.0254". Rotor to shaft .0010-.0023". Rotor to depression in body cavity .0005-.0034"

Installation—Install vacuum lines to pump and replace hexagonal shaft. Install idler gear in oil pump and install vacuum pump below oil pump with six screws. Connect vacuum line to engine block. Install oil pan baffle, then install oil pan.

Reassembly—Inspect inside of body for scores or wear. Inspect plate for wear and dress down on surface plate. (CAUTION—Make sure that all parts are clean and that no foreign material is in housing). Install vanes and spring in rotor. Compress vanes and install rotor in pump body. Position plate on doweled pump body so that hole in plate lines up with hexagonal hole in rotor. Install cover plate.

COOLING SYSTEM

WATER PUMP

WATER PUMP REMOVAL: Drain cooling system. **On Air C nd. Cars,** remove fan shroud. Remove drive belts. Disconnect radiator hoses and heater hose from pump. Remove power steering pump and bracket (swing out of way without disconnecting hoses). Disconnect throttle return spring and remove oil filter unit (lines at filter). **On Std. Cars,** remove 6 water pump screws and remove pump, gaskets and pulley. **On Air Cond. Cars,** remove 4 fan retaining screws and remove fan and pulley, then remove 4 water pump screws, pump and gasket. *NOTE* - **On Air Susp nsi n Cars,** removal is the same except that it is necessary to disconnect air lines from air compressor and to move power steering pump and air compressor out of way.

Disass mbly - Remove thermostat housing, thermostat, fan blade assembly, pulley, cover plate and gasket. Use Puller Tool J-3249 to remove plastic impeller. Remove seal, dampener, and seal washer.

Inspecti n - Check impeller blades for improper clearance or excessive wear and spring-loaded seal for wear and cracks. Check shaft bearing in pump body for roughness or excessive endplay. If defective, remove hub, shaft, slinger, and bearing assembly by pressing out through front of body. Refinish seal surface with Refinisher Tool No. J-2999 to remove scratches or nicks.

Reassembly - Press new bearing, shaft, and slinger assembly in body with Shaft Installer & Hub Spacer Tool No. J-3249, supporting housing on Fixture J-6855-1. Install washer and seal assembly over driving lugs of slinger (washer should slide freely). Press impeller on shaft until outer face is .005-.010" below face of pump (use straightedge and feeler). Place .080" Hub Spacer Shim, Tool J-3249-2 on bottom of Spacer Tool J-3249 and press hub on shaft until tool bottoms on shaft. *NOTE* - On Air Cond. Cars, insert a .094" Hub Spacer Shim, Tool J-6855-2 inside Tool J-3249 and also use .080" Shim, Tool J-3249-2. Assemble cover gasket and cover on pump. Check shaft for impeller clearance. Install pulley and fan assembly and tighten screws to 10-12 ft. lbs. Install thermostat.

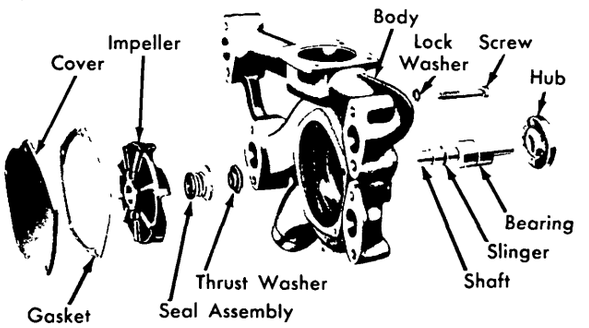
Installation - Reverse removal procedure. Run engine and check for leaks.

PROPELLER SHAFT NOTES

1954-55 MODELS

►*1954-55 SERIES 60S, 61, 62 UNIVERSAL JOINT FRONT YOKE REPLACEMENT TO CORRECT DRIVE LINE "THUMP":* New front yoke (as used in later 1955 production has increased spline line (no counterbore) and will prevent axial movement of the output shaft and yoke. This yoke furnished under same part number as previous type.

1) Remove propeller shaft. Inspect output shaft and remove all sharp edges from shaft splines, using a small stone. Inspect new yoke and remove all sharp edges from splines similarly.



2) Coat yoke splines with E.P. 90 hypoid rear axle lubricant, install yoke on propeller shaft, install shaft.

1957-58 MODELS

PROPELLER SHAFT CENTER BEARING ASSEMBLY: Remove two center-bearing-support-to-support frame bolts (nuts are tack welded, DO NOT REMOVE). Remove "U" bolts and lock at rear axle pinion, slide propeller shaft and front yoke off transmission mainshaft and through frame tunnel section. *NOTE* - Be careful not to nick yoke. Disassemble propeller shafts, remove center bearing support assembly from propeller shaft by tapping on center bearing bracket with soft head hammer. Remove spacer if so equipped. Remove center bearing support bolts and separate bushings, washers, center bearing bracket and center bearing support. To reassemble, reverse disassembly procedure.

1959-60 MODELS

PROPELLER SHAFT CENTER BEARING ASSEMBLY: Pull out "Air Lift" handle and raise car on hoist. Remove two center bearing support to frame bolts. *NOTE* - The nuts for these bolts are tack welded to center bearing support and bracket assembly and remain fastened to bracket. Remove U-bolts and locks at rear axle pinion. Slide propeller shaft and front yoke off transmission mainshaft and through frame tunnel section removing it at rear. DO NOT nick yoke. Pry up center bearing nut locking washer. *NOTE* - Always use new washer for reinstallation. Back off center bearing

CADILLAC 1954-60 WATER PUMP

retaining nut using Tool No. J-7411 and separate front and rear propeller shafts by sliding front propeller shaft off the center slip yoke. Remove center bearing retaining washer, slide center slip yoke seal off slip yoke and remove center bearing retaining nut. Remove center bearing support and bracket assembly from front propeller shaft by tapping on center of assembly with soft hammer. Remove slingers from sides of center bearing, pry out snap ring from front of bearing and remove bearing from support bracket by tapping lightly from rear with soft hammer. To reassemble, reverse disassembly procedure.

BRAKE NOTES

1954-55 MODELS

►*1954-55 SERIES BRAKE PEDAL BIND CAUSING EXCESSIVE PEDAL EFFORT (1955 Cars before Eng. No. 22750):* Check for misalignment at the following points.

1) Brake pedal moving out on shaft over lock ring in groove at end of shaft resulting in binding of pedal and misalignment with master cylinder. Correct by installing later type shaft No. 3510310 with rectangular groove, and later type lock ring No. 1463434 with larger outer diameter. *NOTE*—These parts used in 1955 production beginning Engine No 22750.

2) Binding at brake pedal clevis and bellcrank linkage caused by misalignment in linkage. Correct by installing 1/8" flat washers between master cylinder attaching bosses and frame. Check entire linkage for binding and shim as required. NOTE—These master cylinder washers used in production beginning Engine No. 12725.

1956 MODELS

►*BRAKE PEDAL BINDING CORRECTION:* Check clearance between brake pedal to relay rod and opening in toe board. Correct by moving the pedal attaching bracket at support mount, or enlarge hole in toe board. Check metal retainer over felt seal on inside of toe board and centralize hole in retainer as necessary by rotating seal and retainer. Punch or drill new holes as necessary. Check relay-to-brake rod clevis for interference at relay connecting point. Clevis pin should fit easily into clevis hole. Remove stock from relay as necessary to provide free entry of clevis in hole. Check brake pedal for correct horizontal position as viewed from seat. Level pedal by shimming between attaching bracket and steering column support.

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

ENGINE & SERIAL NUMBER: Stamped on upper right corner on front face of right hand block, on right frame side member just to rear of engine support bracket, and on the plate on front side of left body pillar.

Series	1954	1955
60S	546000001	556000001
62	546200001	556200001
75	547500001	557500001
86 Commercial	548600001	558600001

Identification—First two figures indicate year, third and fourth indicate model (last five figures are numbered consecutively regardless of series).

Engine Unit Number Note: Use for identification Stamped on top of crankcase to rear of left hand block with prefix indicating model:

1954 Models

60S, 62, 75 (Standard)	4-T-1 Up
60S, 62, 75 (Air Conditioning)	4-TK-1 Up
86 (Standard)	7-T-1 Up
86 (Air Conditioning)	7-TK-1 Up
86 (Power Steering)	5-T-1 Up
86 (Power Strg. & Air Cond.)	5-TK-1 Up

1955 Models

60S, 62, 75 (Standard)	4-V-00001 up
60S, 62, 75 (Air-Conditioning)	4-VK-00001 up
86 (Standard)	5-V-00001 up
86 (Air-Conditioning)	5-VK-00001 up
60S, 62 (Eldorado Engine) ①	7-V-00001 up
60S, 62 (Eldorado Engine) ②	7-VK-00001 up

①—Without Air-Conditioning. ②—With Air-Conditioning.

►*ENGINE NUMBER NOTE:* "L C." will be added as a suffix to engine unit number on all engines built to low compression specifications

►*NOTE:* Mark * preceding Engine Unit Number indicates cylinder bore and pistons are .010" oversize.

TUNE-UP

►*1954 CADILLAC STALLING (AFTER COLD START) CORRECTION: Fast idle throttle clearance between plate and bore increased from .023" to .026". See "Rochester 4GC 4-Barrel Carburetor" in Carburetor Section for complete data.*

►*1955 ROUGH IDLE & DETONATION:* May be caused by excessive advance due to vacuum ports in carburetor being too low *See "Cadillac (Carter & Rochester) Carburetors" in Carburetion Section*

COMPRESSION PRESSURE: 150 lbs (1954), 165-185 lbs (1955) at cranking speed, 212-230 lbs (1955) at 1000 RPM

VACUUM READING: Not specified (varies with altitude and barometric pressure).

VALVE TAPPET CLEARANCE: None in service (Hydraulic Lifters).

MANIFOLD HEAT CONTROL: Automatic thermostatic type Valve diverts exhaust gases of left hand cylinder bank through carburetor heating passages in intake manifold to right hand exhaust system

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders—RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035"

Spark Plugs - AC No 46-5 (1954), 44 (1954 Cooler Plugs & All Engines 1955) 14 mm Torque to 20-25 ft lbs

►*SPARKPLUG CAUTION: AC No. 46-5 should not be used under any circumstances on 1955 engines.*

COIL: Delco-Remy 1115082. 12 Volt.

Ignition Current—1.25 amperes idling. 3 amperes stopped.

Resistor—Delco-Remy 1927809. On coil bracket.

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by lead from starter solenoid-to-coil.*

DISTRIBUTOR: Delco-Remy 1110844 (1954), 1110852 (1955).

Condenser—Delco-Remy 1869704.

Contact Point Set—Delco-Remy 1918148.

Breaker Gap—.016" (new & used points).

Cam Angle—26°-33°.

►*BREAKER GAP CAUTION: Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance - 1110844

Distributor Degrees	RPM	Engine Degrees	RPM
0-1.5	500	0-3	1000
7-9	950	14-18	1900
9-11	1450	18-22	2900
11-13	1950	22-26	3900

Automatic Advance - 1110852

Degrees	Distr. RPM	Degrees	Eng. RPM
0-1.5	500	0-3	1000
9-11	1550	18-22	3100
11-13	2075	22-26	4150

Vacuum Spark Control: Delco-Remy 1116074 (1954), 1116091 (1955)

Plunger Travel - 19/64-5/16"

Vacuum Advance - 1116074

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	6 5-9
13-14 5	26-29	16-17

Vacuum Advance - 1116091

Distr Degrees	Eng Degrees	Vacuum (" of HG)
Start	0	6-8 5
13-14 5	26-29	15-16

IGNITION TIMING

Setting—2½° BTDC. *CAUTION—Ignition timing mark "A" is 5° BTDC and does not indicate timing point.*

Timing—Disconnect vacuum line to distributor and and with engine idling at 400 RPM, set timing at point HALF-WAY BETWEEN "A" &"C/" marks on vibration dampener in line with pointer on chain case cover

►*1954 CAUTION:* If fuel used in less than 80 Octane Rating and detonation ping noted, timing may be retarded to "C/" mark on dampener (top dead center)

►*1955 TIMING NOTE:* The timing should be checked *for both No. 1 and No. 6 cylinders. First set timing for No. 1 cylinder (at point halfway between "A" and "C/" marks), then check timing on No. 6 cylinder. If light flashes before or after the No. 1 cylind r firing point, set distributor to divide the variance.*

►*1955 ROUGH IDLE OR DETONATION:* May be caused by *excessive advance due to vacuum ports in carburetor being too low. See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section.*

CARBURETOR

►*IDLE SPEED (AIR-CONDITIONED CARS): Summer and Winter Idle Speed Adjustment is different as follows.*

Summer Setting (Air-Conditioner in Operation)—With transmission selector lever in either "Dr" range, and with Air-Conditioner "ON" set idle speed at 400 RPM (Cars with Std Engine), 480 RPM (Cars with Eldorado Engine)

Winter Setting (Air-Conditioner not in Operation)—With transmission selector lever in either "Dr" range, and with air-conditioner "OFF", set idle speed at 400 RPM (Cars with Std Engine), 480 RPM (Cars with Eldorado Engine)

Idle Speed-Up Control Adjustment (Cars with Air-Conditioning): With engine at normal operating temperature and slow idle adjustment completed, turn air-conditioner "ON", and place transmission selector lever in "N" neutral position. Adjust engine idle speed to 900 RPM by loosening locknut on diaphragm shaft and turning knurled nut to obtain specified RPM Tighten locknut

1954 Models

Throttle Linkage Adjustment: 1) Disconnect throttle rod at throttle lever on transmission case. Check lever position by installing checking gauge J-3065-A on rear face of transmission case with long leg of tool extending forward along left side of case. Move throttle lever to extreme rear position. Insert clevis pin through hole in lever and hole in checking gauge. If pin does not enter hole in gauge freely, bend lever as required using bending tool J-2029. Remove gauge, connect throttle rod to lever.

2) Disconnect carburetor throttle rod at dash relay lever by removing spring clip and freeing trunnion from lever Install ¼" drill rod through hole in relay lever and hole in bracket to position lever See that throttle lever in correct hot or slow idle position and set for correct idling speed of 400 RPM (maximum) all models Adjust trunnion on rear end of throttle rod until it enters relay lever freely, connect trunnion and install spring clip Back off both nuts on throttle rod at carburetor throttle lever, push on end of rod so that transmission throttle lever and valve is against stop (in transmission), turn rear nut on throttle rod up against the throttle lever trunnion, then back the nut off **3 complete turns,** finally tighten the front nut on the rod securely against trunnion Check to see that linkage moves freely Remove drill rod from relay lever Check and adjust accelerator pedal position

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

3) Depress pedal fully and see that it touches floor mat with slight pressure when carburetor throttle valve wide open (*NOTE*—If floor mat removed, allow ½" clearance between pedal and floor in wide open position). Adjust pedal position as required by changing length of pedal to relay lever rod (adjust trunnion located at pedal end of rod).

1955 Models

Throttl Linkag Adjustm nt: *CAUTION—On cars with Air-C nditi ning and Roch ster Carburetors, the engine must b running when throttle linkage is adjusted.*

1) Remove transmission throttle control lever clevis pin at transmission and check lever position with Tool J-3065-C. Fit tool on rear face of transmission case and insert clevis pin through lever and hole in gauge marked '49E '50, while lever is in its rearward position. If throttle lever is misaligned, correct by bending lever with Tool J-2029. Assemble linkage to transmission throttle lever and install new cotter pin.

2) Disconnect spring between carburetor and relay rod at trunnion and remove trunnion from dash relay lever. Place a ¼" drill shank through gauging hole in dash relay lever and into dash relay bracket. Set Carburetor throttle in hot idle position with transmission in "Dr" range (400 RPM-Std. Engine. 480 RPM-Eldorado Engine).

3) Adjust carburetor-to-dash relay rod trunnion to allow free entry into dash relay lever. Connect spring.

4) **On Cars With Singl Carburetor:** Back off both jam nuts on throttle valve rod at carburetor to allow free movement of rod in trunnion. Push end of throttle valve rod to position transmission throttle valve against its stops. Bring rear jam nut up against trunnion and back off **8 flats** (1 1/3 turns). (NOTE—This adjustment may be changed to improve shift characteristics after road test). Tighten front jam nut, check to be sure there is no bind in linkage.

5) **On Cars With Tw Carburetors:** Remove lock nut, adjusting nut and spring from forward end of throttle valve control rod. Back off rear lock nut and adjusting nut and throttle valve rod to permit free movement of rod in trunnion. Push on end of throttle valve rod to position transmission throttle valve against its stop. Bring rear adjusting nut up against trunnion and back off **3 c mpl t turns.** Tighten rear lock nut. Install spring and adjusting nut on front end of throttle valve rod. Adjust nut until the distance between the front face of the trunnion and the rear face of the adjusting nut is 1 13/32". Hold adjusting nut in this position and install lock nut. Recheck above dimension.

6) Remove ¼" drill rod from dash relay and check position of accelerator pedal with wide open throttle. Pedal should touch floor mat with slight pressure (allow ½" clearance if mat has been removed) when throttle is wide open. Adjust accelerator pedal position at pedal end of dash relay-to-accelerator pedal rod. Road test car to insure proper shifting characteristics.

CARTER WCFB
(Standard Engin)

Carter M del WCFB. Four-barrel downdraft type with automatic choke control. *NOTE - Idl Sp d-up control us d with Air Conditioning.*

Carter Carbur ti n Applicati n

Car Model	Carter N .
1954 (Exc. Air Cond.)	2109S
1954 (Air Cond.)	2110S
1954 (Replacement) ℂ	2043S
1955 (Early Less Air Cond.)	2185S
1955 (Later Less Air Cond.) ②	2266S
1955 (Latest Less Air Cond.) ②	2354S
1955 (Early With Air Cond.)	2186S
1955 (Later With Air Cond.) ②	2267S
1955 (Latest With Air Cond.)	2355S

℃ - No. 2043S is service replacement for 1954 carburetors, 2355S for 1955 Carburetors. Unitized Package No. 202-44U (Containing Speed-up Control) must be used on Air Cond. Cars.

② - 1955 Later and Latest carburetors have larger secondary system (Throttle Bore, Main Venturi & Metering Jets).

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel 1-4-6-7.

►*1955 FLAT SPOT OR SHUDDER AT 20-40 MPH ON PART THROTTLE ACCELERATION:* May be caused by over-rich Idle Mixture Setting (below).

►*1955 ROUGH IDLE & DETONATION OR HIGH IDLE SPEED:* May be caused by excessive advance due to vacuum ports in carburetor being too low, or by loose or improperly positioned throttle valves. *See "Cadillac (Carter & Rochester) Carburetors" in Carburetion Section.*

►*1955 CARBURETOR "ICING" CORRECTION: See "Cadillac (Carter & Rochester) Carburetors" in Carburetion Section.*

Idle Mixture & Idle Speed Setting - *See "Carter WCFB (1954) Carburetors" and "Cadillac (Carter & Rochester 1955) Carburetors" in Carburetion Section.*

►*1955 IDLE SPEED ADJUSTMENT NOTE:* Idle Air By-Pass screw on throttle body is used to adjust idle speed. The throttle adjusting screw used on previous carburetors has been eliminated and the throttle valves are normally closed on slow idle.

►*OTHER DATA: See "Carter WCFB (1954) Carburetors" and "Cadillac (Carter & Rochester 1955) Carburetors" in Carburetion Section.*

Idle Speed-Up Control (Air Conditioned Cars): *See "Carburetor" above.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

ROCHESTER 4GC
(Standard Engine)

Rochester 4GC. Four-barrel downdraft type with automatic choke control. *NOTE - Idle Speed-Up Control used with Air Conditioned Cars.*

Rochester Carburetor Application

Car Model	Rochester No.
1954 (Exc Air Cond.) Early	7006220
1954 (Air Cond.) Early	7006221
1954 (Exc. Air Cond.) Later	7006962
1954 (Air Cond.) Later	7006963
1955 (Exc. Air Cond.) Early	7006655
1955 (Air Cond.) Early	7006656
1955 (Exc. Air Cond) Later ℂ	7007970
1955 (Air Cond.) Later ℂ	7007971

℃ - Later carburetors have larger secondary system (Throttle Bore, Main Venturi & Metering Jets).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

►*1954 CADILLAC STALLING (AFTER COLD START) CORRECTION: Fast idle throttl clearanc , unload r s tting and chok s tting chang d to pr vent stalling. S e "Roch st r 4GC-4-Barrel Carburetor" in Carburetor Section.*

►*1955 OFF-IDLE LEANNESS CORRECTION (Carburetors with brass tag stamped "A5" have had the correction made in production):* This condition noted between 20-30 MPH, and is sometimes accompanied by a slight vibration. *See "Cadillac (Carter & Rochester) 1955 Carburetors" in Carburetion Section.*

►*1955 FLAT SPOT OR SHUDDER AT 20-40 MPH ON PART THROTTLE ACCELERATION:* May be caused by over-rich Mixture Setting (below).

►*1955 ROUGH IDLE & DETONATION OR HIGH IDLE SPEED:* May be caused by excessive advance due to vacuum ports in carburetor being too low, or by loose or improperly positioned throttle valves. *See "Cadillac (Carter & Rochester) 1955 Carburetors" in Carburetion Section.*

►*1955 CARBURETOR "ICING" CORRECTION: See "Cadillac (Carter & Rochester) 1955 Carburetors" in Carburetion Section.*

Idle Mixture & Idle Speed Setting - *See "Rochester 4GC (1954) Carburetors" and "Cadillac (Carter & Rochester) 4GC (1955) Carburetors" in Carburetion Section.*

►*1955 IDLE SPEED ADJUSTMENT NOTE:* Idle Air By-Pass screw on throttle body is used to adjust idle speed. The throttle adjusting screw used on previous carburetors has been eliminated and the throttle valves are normally closed at slow idle.

►*OTHER DATA: See "Rochester 4GC (1954) Carburetors" and "Cadillac (Carter & Rochester) 4GC (1955) Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC (Fuel only). Vacuum pump is part of engine oil pump

Replacement Fuel Pump - AC No. 4075 (1954), 4269 (1955).

Pressure - 4-5½ lbs. (1954, Early 1955), 4½-6½ lbs. (1955 later).

Gasoline Gauge: AC Electric.

Dash Unit–AC No 1517953

Tank Unit–AC No 1517215

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco–3EM60 (Exc. Comm'l). *12 Volt*, 9 plate, 60 ampere hour capacity (20 Hr rate)

Delco–3EM70 (Comm'l). *12 Volt*, 11 plate, 70 ampere hour capacity (20 Hr rate)

Battery Ground–Negative

Engine Ground–Connected between engine and cowl.

STARTER

Delco-Remy No. 1107622 (1954), 1107629 (1955).

Armature - Delco-Remy No. 1926626.

Drive–Overrunning clutch (solenoid pinion shift).

Rotation–Counter-clockwise at commutator end

Brush Spring Tension–35 ozs minimum

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs	3500	10 1	95
10 5 ft lbs	Lock	5 4	470

Starting Switch: Delco-Remy Solenoid Switch No 1119760 mounted on starter and controlled by Ignition & Starter Switch No. 1116470 Turn key full RIGHT against spring tension to start.

See El ctrical Equipm nt S ction for compl te data.

N utral Saf ty & Back-up Light Switch (Hydra-Matic Driv Cars nly): Delco-Remy No. 1998054 (1954), 1998108 (1955).

Adjustment–*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy 1102002 (Std.), 1102011 (Air Conditioned Cars). Armature No. 1923535 (All).

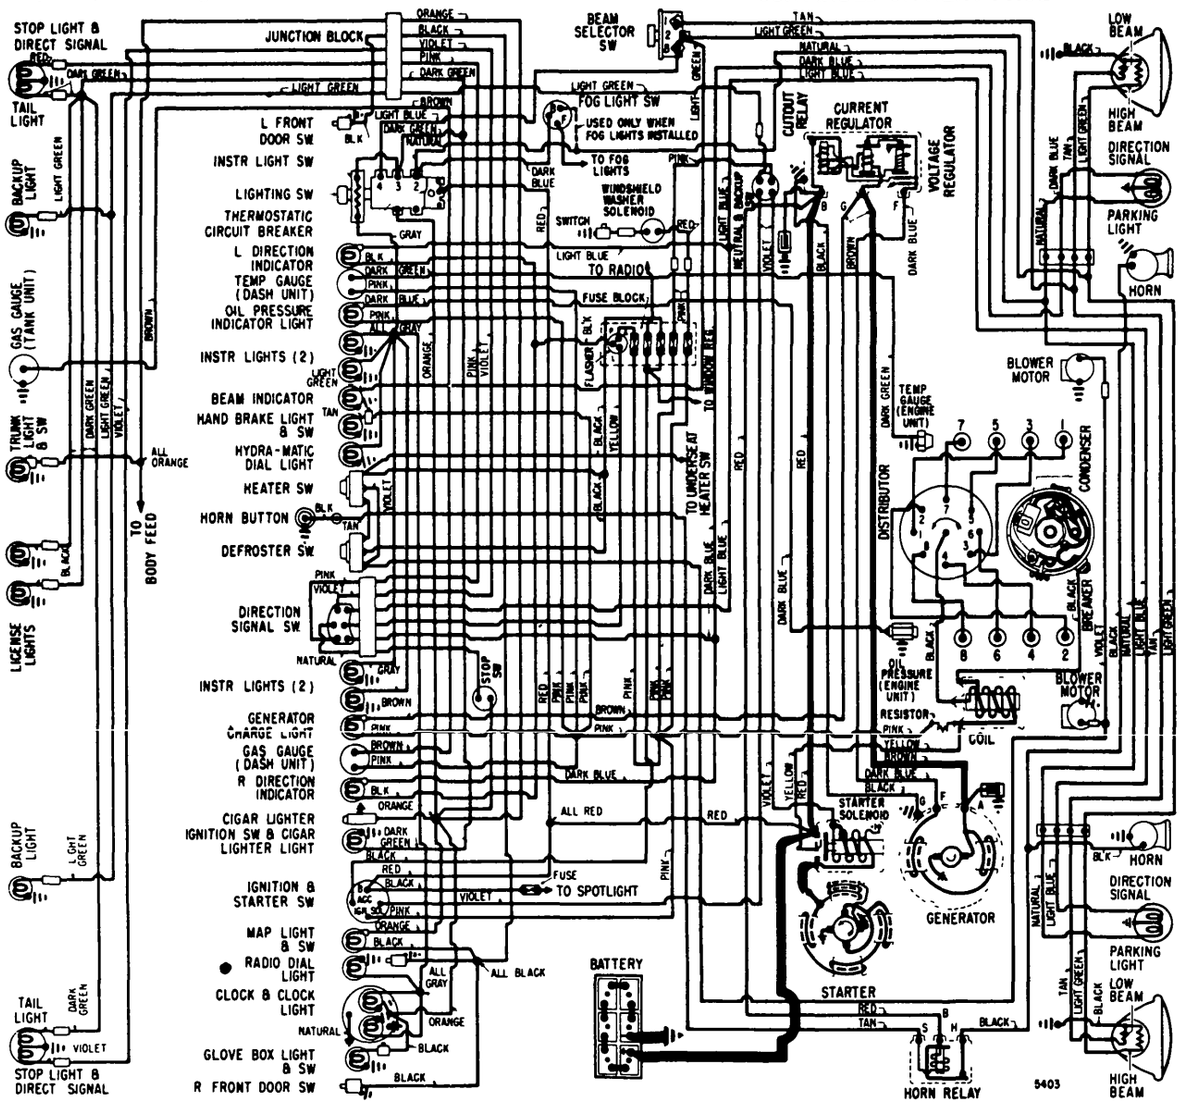
►*GENERATOR ARMATURE REPLACEMENT CAUTION:* Std Generator No 1102002 with "N" stamped on frame next to name plate have new type armature with nylon insulated windings. If replacement of this armature required, install regular No 1923535 armature

►*REPLACEMENT GENERATOR:* Delco-Remy 1102005 (Less Fan & Pulley).

Maximum Charging Rat –See Current Regulator.

Performanc Data

	Amperes	Volts	RPM
Cold	30	14	2150



Rotation–Counter-clockwise at commutator end.

Brush Spring Tension–28 ozs. each.

Field Current–1.48-1.62 amperes at 12 volts.

Generator Charge Indicator: Red light on instrument panel. *See Diagram.*

1954 MODELS

CONTINUED FROM PRECEDING PAGE

B lt Adjustment: Loosen both pivot bolts and adjusting strap screw pull generator out until belt just tight enough to drive generator without slip.

REGULATOR

D lc -R my 1118826. S rvice Replacement–Delco-R my 1118825.

►*REGULATOR NOTE: Checking procedure is different than for previous models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment section. Specifications b low are "Normal" settings.*

Cut ut Relay

Cuts In–12.8 volts (hot).
C ntact Gap–.020"
Air Gap–.020" (with contacts just closed).

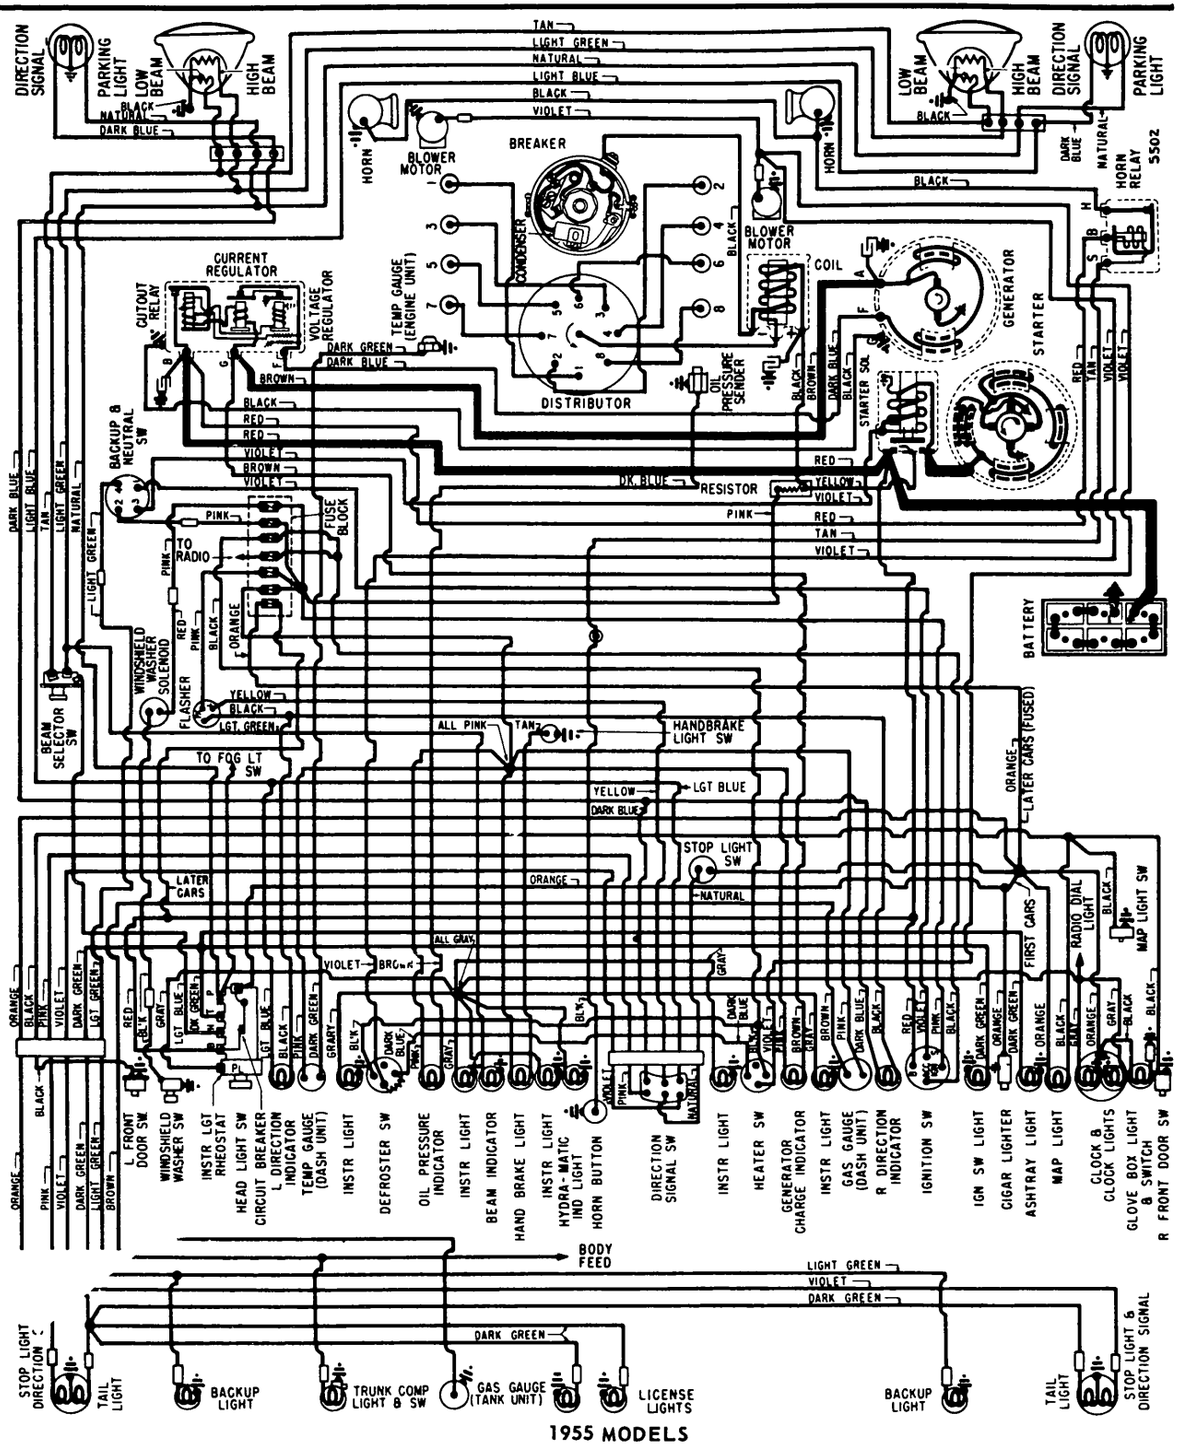
Voltag Regulator

S tting–14.5 volts (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*S e Electrical Equip. Section.*

Curr nt Regulator

S tting–30 amperes (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Ch cking & Adjusting–*S Electrical Equip. Section.*

MISC. ELECTRICAL



H adlamps: Sealed Beam. *See Electrical Equipment Section.*
Autr nic Ey : *S "Autronic Eye" in Electrical Equipment Section.*
Dir cti n Signal: *S "Direction Signals" in Electrical Equipm nt S ction.*
St p Light Switch: (Locati n) –Mechanical type mounted on underside of toe board and operated by brake pedal.
FUSES: Located on fuse panel under instrument panel on cowl insulating board just to left of car centerline except as noted below

►*1955 WIRING & FUSE PRODUCTION CHANGES:* On later cars, Courtesy & Map Light, Truck Light, Clock Light, Glove Box Light, and Stop Lights are protected by a 14 amp. fuse (see diagram). Ash tray light added.

Windshi ld Washer - 6 Amps.
Back-Up Light - 9 Amps.
Automatic Heating Syst m - 7.5 Amps. (1954), 20 Amp. (1955).
Autr nic Ey - 14 Amps. Located in Autronic Eye Amplifier.
Radi - 7.5 Amps.
Dir cti n Signal - 6 Amps.
Sp t Light - 9 Amps. Under hood at Defroster mounting screw.
Air Conditi n r - Two fuses, 2 Amps. & 20 Amps. (1954), 6 Amps. & 20 Amps. (1955) located under instrument panel near side of glove box (1954), above air conditioner control (1955).
1955 Map, Trunk, Cl ck, Glove Box, & Stop Light (Lat r Cars - Se Pr ducti n Chang ab v): 14 ampere. On block located under instrument panel.

CIRCUIT BREAKERS: (Lighting) 22 Amps., located in main lighting switch. Protects all lighting circuits.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

Bore	Stroke	Displacement	Rated HP
3 13/16".	...3 5/8"	. 331 cu. ins.	.. . . 46.5

Engine	Compr. Ratio	Developed HP
1954	8 25-1	230 at 4400 RPM
1955 Std Eng	9 0-1	250 at 4600 RPM
1955 Eldorado Eng	9.0-1	270 at 4800 RPM

►*OVERSIZE CYLINDER BORE CAUTION: Engines with mark * preceding Engine Unit No. (on left rear of crankcase) have a .010" oversize cylinder bore and pistons.*

►*1954 ENGINE "CLICKING" NOISE CORRECTION (Sounds like loose spark plug wire):* This condition may be caused by oil trapped in vacuum pump. Corrected by installing Divider Plate, Part No 5593537 between vacuum and oil pump.

ENGINE REMOVAL: *See "Engine" in Cadillac Special Data.*

OIL PAN REMOVAL: *See "Oil Pan" in Cadillac Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Cadillac Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifi cations" in Cadillac Special Data.*

PISTONS

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with mark * preceding Engine Unit No. (on left rear of crankcase) have .010" oversize pistons and cylinder bore. Standard cylinder bore size: 3.8125-3.8145".
Original Bore & Pistons–*See "Original Bore & Pistons" in Cadillac Special Data.*
Pistons–Aluminum alloy, T-T slot, tin plated, "Slipper Skirt" (skirt cutaway at pin bosses).
Weight–19.68 ozs.
Removal–Piston and rod assemblies removed from above. Install connecting rod Guide Studs J-3224, on connecting rod bolts to guide rod out through bore without nicking or scratching. *CAUTION–Do not nick lower edge of bore when pushing rod up.*
Fitting N w Pist ns: Use micrometer or feeler gauge. S *"Pistons" in Cadillac Sp cial Data.*
R plac m nt Pist ns: Standard "High Limit" or maximum production size, and .010", .020", .030" oversize. Pistons furnished only with fitted pins.
Installing Pist ns: Install in cylinder with piston pin boss marked "Rear" toward rear of engine. *See "Con n cting Rods" (b low) for installation of pistons on rods.*

PISTON PINS

Pin is pressed in connecting rod.
Diameter–1.000". **Length**–3 3/32".
Pin Fit in Piston–.00005"-.0001" clearance at 70°F. Not fitted in field (replace piston & pin assembly).
Pin Fit in Rod–(NOTE–Special tools required). *See "Piston Pins" in Cadillac Special Data.*

PISTON RINGS

Top compression ring is chrome plated rolled steel and the other two rings are cast iron. An expander is not used behind the oil ring in production.

Ring	Width	End Gap	Side Clearance
Compr (#1 & 2)	5/64"	010- 020'	0017- 0035"
Oil (#3)	3/16"	010- 020"	0008- 0026"

Replacement Rings: Standard, .010", .020", .030" oversize.

►*REPLACEMENT RING NOTE–If re-ring set is to be installed in new or low mileage bores, it is not necessary to install oil ring expander.*

Installing Rings: Chamfered face of both compression rings must be installed toward top of piston

CONNECTING RODS

Length–6 5/8" (center-to-center).
Weight–23.49 ozs.
Crankpin Journal Diameter–2.2488-2.2493".
Out-of-Round Limits–.00025".
Bearings–Moraine-Durex, bearing shell is steel backed aluminum. Bearing halves interchangeable. No shims
Clearance– 0002-.0020" (Service limit .0045").
Sideplay– 008-.014" (total both rods).
Replacement Bearings: Furnished in standard size only
Installing Rods (In Pistons): On pistons Nos. 2-4-6-8, install rod so mark 'REAR' on piston pin boss is to **left** side of rod (with stamped number on rod facing operator). On pistons Nos. 1-3-5-7, install rod so mark 'REAR' on piston pin boss to to **right** side of rod (with stamped number on rod facing operator).

CRANKSHAFT

►*1955 MAIN BEARING CAP PRODUCTION CHANGE & INSTALLATION CAUTION:* Heavier bearing caps used on later cars These caps used WITHOUT lockwashers on retaining screws *CAUTION–Use of lockwashers on these caps will result in insufficient thread engagement of retaining screws.*

Journal Diameters–2.4985-2 4995" Five bearings
Out-of-Round Limits– 00025".
Clearance–.0008-.0015" (service limit .005" max.).
End Thrust–Taken by flanged rear bearing.
End Play–.001- 005" (service limit .010" max.)
Bearings–Moraine Durex. Bearing shell is steel backed aluminum. Bearing halves interchangeable. No shims
Replacement Bearings: Furnished in standard size only
Main Bearing Removal & Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*

►*MAIN BEARING CAP INSTALLATION CAUTION:* Bearing caps must not be interchanged Install caps with marking number (not casting number) on left side and in order from front to rear DO NOT use lockwashers on LATER HEAVIER bearing caps (see Production Change above).
Crankshaft R moval & Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*
Rear Main Bearing Oil Seal Installati n: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*

CAMSHAFT

►*CAUTION:* Handle shaft with care to avoid damage or mis-alignment. Check whenever removed
Removal, Alignment & Installati n–*See "Camshaft & Bearings" in Cadillac Sp cial Data.*
Bearings–Steel backed babbitt bushings.
Clearance–.001-.0022' (service limit .004" max.).
Bearing Cut-of-Round Limit–.002" max.
Timing Chain: Link-Belt side guide type. Width 11/16", Pitch 500", Length 23" or 46 links.
Installation & Removal–*See "Timing Chain" in Cadillac Special Data.*
Camshaft Setting: Both sprockets marked '0'. Mesh chain with sprockets turned so that marks adjacent and in line with straightedge across shaft.
►*CAUTION:* Install chain as a unit with camshaft sprocket (sprocket press fit on shaft with locating dowel and two retaining capscrews).

VALVES

Tappet Clearance: None in service (hydraulic).

Valves	Head Diam.	St m Diam.	Length
Intake	1 750"	3415- 3425"	①4 628-4 648'
Exhaust	1 562"	3415-.3420"	4 21/32"

Valve	Seat Angle	Lift	St m Clearance
Intake	②44°	③	0005-.0025'
Exhaust	②44°	④	001- 0025"

①–"Rich" Valves "Eaton" Valves 4 628-4 653".
②–New valves (Valves in service can be refaced to 45° if seat width recommendation not exceeded).
③–New valves and guides. Worn limit 005" max.
④ - **.365" (1954), .411" (1955).**

►*VALVE SEATING CAUTION:* Do not lap or grind so that seat width is more than 1/64" (1° difference between valve and seat angle designed to provide "hairline" contact.
►**Valve Seat Recommendations:** 3/64-1/16" (moderate speed or city driving), 1/16-3/32" (high speed driving). Cut seat so that distance from outer edge to edge of flange on valve head not more than 1/32".
Valve Stem Oil Seal–Rubber oil seal installed in lower groove on valve stem (below valve keeper).
Oil Seal Installation: *See "Valve System" in Cadillac Special Data.*
Valve Removal & Installati n: *See "Valve System" in Cadillac Special Data.*
Valve Guides: Pressed in cylinder head with counterbored end down toward valve head. Use Remover Tool J-3062 to drive old guides out toward top of head, Installer Tool J-3066 to drive new guides in (tool plate serves as stop for driver)
Valve Springs: (Free Length) 1 980"

1954 Valv Spring Sp cificati ns

	Pressure	Length
Valve Closed	61 lbs.	1.696"
Valve Open	140 lbs	1.326"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1955 Valve Spring Specifications

	Pressure	Length
Valve Closed	62-68 lbs.	1.696"
Valve Open	152-162 lbs.	1.285"

►*SPRING INSTALLATION CAUTION: Lower end of valve spring must be seated in recess in cylinder head.*

Valve Lifters: Hydraulic.
See "Valve System" in Cadillac Special Data.

Valve Lifter Removal—*See "Valve System" in Cadillac Special Data.*

►*LIFTER NOISE CORRECTION:* If noise noted when engine hot, oil level low, after sudden stops, or when descending steep grades, see OILING SYSTEM below for correction to prevent air entering pump.

Rocker Arms: Rocker arm end shaft assemblies are mounted on each cylinder head. *NOTE*—No adjustment screws provided on rocker arms.

Rocker Arm Installation—*See "Valve System" in Cadillac Special Data.*

►*VALVE PUSH ROD CAUTION: 1955 Push Rods are shorter (identified by single groove at upper end), and are not interchangable with previous models.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

1954 Valve Timing

Intake Valves - Open 22° BTDC. Close 67° ALDC.
Exhaust Valves - Open 63° BLDC. Close 27° ATDC.

1955 Valve Timing

Intake Valves—Open 19° BTDC. Close 70° ALDC.

Exhaust Valves—Open 60° BLDC. Close 30° ATDC.

Valve Timing Check—Not practical to check in field. Manufacturer recommends removing timing chain cover and checking timing marks.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Cadillac Special Data.*

►*AIR IN OILING SYSTEM (Causing oil foaming or noisy hydraulic lifter operation): See Oil Pump Installation under "Oiling System" in Cadillac Special Data for installation of "O" ring seal on float tube and inspection of oil pan baffle for clearance.*

Crankcase Capacity: 5 qts. One quart additional for dry filter.

Normal Oil Pressure : 30-35 lbs. min. at 30 MPH. 15 lbs. at idle speed.

Pressure Regulator Valve—On oil pump. Not adjustable.

Oil Pressure Indicator—Light on instrument panel controlled by pressure switch AC No. 1998113 (1954), 1997884 (1955) mounted on engine.

Oil Pump: Helical gear. In crankcase at rear of engine.

Oil Pump Removal & Overhaul: *See "Oiling System" in Cadillac Special Data.*

Vacuum Pump: Part of Oil Pump assy. *See "Vacuum Pump" in Cadillac Special Data.*

Oil Filter: Partial flow. Replace element every 6000 miles or more frequently in dusty areas.

Replacement Filter Element—AC No. 1P-115

Crankcase Ventilation: Air intake in oil filler cap (oil wetted type) with outlet connection at rear of valve compartment cover, and outlet pipe extending down below engine at right corner.

COOLING

►*THERMOSTAT INSTALLATION CAUTION: Install with spring strap parallel to car center line otherwise right engine bank will operate at higher temperature.*

Water Capacity: (Exc. Ser. 75) - 22 qts. (1954), 20¼ qts. (1955), with heater. 19¾ qts. (1954), 18 qts. (1955) without heater.
(Series 75) - 24½ qts. (1954), 22¾ qts. (1955) with heater. 19¾ qts. (1954), 18 qts. (1955) without heater.

Pressure Valve: AC No. 850559. Radiator filler cap. Opens at 12-15 lbs.

Thermostat: Dole type. In water outlet at top of pump body.
Standard Setting—Starts to open at 163° to 168°F.
High Temp.—Starts to open at 177° to 182°F.

Water Pump: Packless, sealed ball bearing type.
See "Water Pumps" in Cadillac Special Data.
Pump Removal—Remove upper and lower radiator hoses after draining cooling system. Remove generator drive belt and take out capscrew mounting pump and water manifold assembly on front of engine, lift out pump and fan. NOTE—Water manifold and thermostat housing are part of pump casting.

Temperature Gauges: AC Electric.
Dash Unit—AC No. 1512789.
Tank Unit—AC No. 1512678.
See "Temperature Gauges" in Miscellaneous Section.

HYDRA-MATIC DRIVE

Dual-Range four speed automatic transmission and fluid coupling.

►*1954 CADILLAC HARD DOWN-SHIFT CORRECTION—May be caused by excessive thickness of jute under floor mat. Adjust accelerator pedal (see Linkage Adjustment in Hydra-Matic Section) and make sure that thickness of jute under floor mat is less than ½". Check wiring harness bracket, throttle relay, and speedometer cable for possible interference with throttle rod.*

►*1954 HYDRA-MATIC OIL LEAK (At Vent on Front of Transmission Case) CORRECTION: May be caused by out-of-round or undersize pressure regulator valve. See "Hydra-Matic Drive" in Transmission Section.*

►*1955 HYDRA-MATIC CLUTCH PRODUCTION CHANGE (270 HP Eng.):* Thinner clutch discs used in front and rear units and an extra driving disc has been installed in both units. *CAUTION—This type clutch disc is to be used only on the 270 HP Engine equipped cars.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level every 2000 miles at time of car lubrication. Drain and refill after 6000 miles and every 25,000 miles thereafter. Use only Cadillac Hydra-Matic Fluid.

Capacity—Approximately 10 qts. (refill).

Checking Fluid Level—With selector lever in "N" (neutral) position, run engine at speed of 20 MPH for about 2½ minutes. Reduce engine speed to slow idle (375-400 RPM). Raise engine hood and remove transmission dipstick (located at right rear side of engine) wipe it clean and check fluid level. With engine still idling, add fluid to bring level to "F" (full) mark on dipstick. *CAUTION*—Do not fill above "F" mark on dipstick, foaming will result.

►*OTHER HYDRA-MATIC SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics. Needle bearing type. Two used (three on commercial cars with center bearing).
See Universals Section for complete data.

►***1955 UNIVERSAL JOINT YOKE PRODUCTION CHANGE & REPLACEMENT CAUTION:* New yokes used in production and furnished for replacement as follows:**

Front Joint (Slip) Yoke—New yoke (same part number as previous type) has longer yoke splines (counterbore eliminated) which provide more contact area between output shaft and yoke splines which eliminates possibility of drive line thump developing in service. *See "Propeller Shaft Notes" in Cadillac Special Data for installation of this yoke on early cars.*

Rear Joint (Pinion Shaft) Yoke—Stronger yoke (thicker flange and without body taper) used on later cars (beginning approx. Eng. No. 27403). *When installing this yoke, longer mounting screws, No. 1463229, MUST be used (shorter screws used with previous type yoke will not have sufficient thread engagement).*

►*REAR UNIVERSAL YOKE CAUTION: Do not disturb nut on end of pinion shaft retaining rear universal joint yoke unless yoke or oil seal should be replaced. Pinion bearing preload must be adjusted whenever this nut disturbed.*

REAR AXLE

Own Make. Hypoid gear, semi-floating with Hotchkiss Drive.
See "Cadillac Hypoid" in Rear Axle Section.

►**1955 DRIVE LINE THUMP CORRECTION: See Front Joint Yoke date under "Universal Joint Yoke Production Changes & Replacement Caution" above.**

►*OVERHAUL CAUTION:* Manufacturer recommends that Carrier Assembly be serviced by replacement. Do not disassemble this unit or attempt service work other than oil seal and universal joint replacement.

Axle Identification—Axles marked by number stamped bottom of differential case below center of pinion shaft (First Cars) or on oil return hole boss at front end of differential case (beginning Engine No. 94850). Ratios and marks are as follows:

Car Model	Ratio	Mark
1954 - 60S,62 Air Cond.	3.36-1	"6"
1954 - 60S,62 Std. ①	3.07-1	"3"
1954 - 60S,62 Opt. ②	3.36-1	"6"
1955 - 60S,62 Std.	3.36-1	"6"
1955 - 60S, 62 Opt.	3.07-1	"3"
1954-55 - 75	3.77-1	"7"
1954-55 - 86	4.27-1	"4"

① - Exc. Air Cond. Cars. ② - Air Cond. Cars.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►**Pinion Bearing Preload Adjustment:** Must be adjusted each time pinion shaft nut loosened. *See "Cadillac Hypoid" in Rear Axle Section.*

Backlash—.003-.010" Screw adjustment.

Axle Shaft Removal: Remove wheel and take out screws holding brake drum on axle shaft flange and remove drum. Remove nuts and lockwashers from bolts holding bearing retainer and backing plate on axle housing, use Puller J-942-1 and Slide Hammer J-2619 to remove axle shaft.

►*CAUTION:* Use care not to damage axle shaft oil seal when sliding axle shaft out and do not disturb position of backing plate on housing.

Commercial Cars—Remove wheel, remove nut and washer on end of shaft. Use Puller (Snap-On No. S4567 or similar five jaw type) to remove wheel hub and brake drum. Disconnect brake line. Take out retaining screws and remove dust shield (bearing retainer) and backing plate. Use Puller J-838 to pull axle shaft and bearing assembly out, using care not to damage oil seal in housing.

Differential Carrier Removal: Disconnect rear universal joint and remove lubricant from rear axle housing. Remove axle shafts (see above). Remove nuts and washers holding carrier to axle housing and remove entire assembly with gasket. *See "Overhaul Caution" above.*

Wheel Bearings: Sealed ball-bearing type.

CAUTION—Check bearings for loss of lubricant when shaft removed. If bearings spin freely indicating loss of lubricant, replace bearings.

Pinion Bearing Preload Adjustment: Pinion should be adjusted whenever nut on end of pinion shaft disturbed (for universal joint yoke or oil seal replacement).

See "Cadillac Hypoid" in Rear Axle Section.

SHOCK ABSORBERS

Delco. Direct acting permanently sealed, airplane type located within coil springs (front), "Sea-Leg" type installation (rear), as follows:

Car Model	Front - Part No. - Rear
1954 All Series	5531303 5531306
1955 All Series	5531303 5531309

FRONT SUSPENSION

Independent type with direct acting shock absorbers within coil springs.

►*1955 FRONT SPRING PRODUCTION CHANGE & REPLACEMENT CAUTION:* **Longer coil springs WITHOUT** lower insulators used on later cars. When installing this late type spring on early cars, lower insulator should be removed and discarded.

Kingpin Inclination—5°51' with 0° camber.

Caster—0° to Neg. 1°. Adjustment must be equal within ½° or less on both sides of car.

Camber—Neg. 3/8° to Pos. 3/8° with ¼-½° more positive camber on left side.

►***1954 CAMBER NOTE:* Set Left wheel Pos. 3/16°, Right wheel Neg. 3/16° for preferred setting.**

Toe-In—3/16-¼" (at rest). Loosen clamp bolts, turn adjusters at outer end of each rod equally.

Toe-Out on Turns—With outer wheel turned 20°, inner wheel should be 22°40'.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut type.

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic power cylinder.

See "Saginaw (GM)" in Steering Section.

►*1954 POWER STEERING GEAR CHATTER (NOT CHUCKLE) CORRECTION (Cars prior to Eng. No. 01688):* This chatter, particularly noticeable after reversing direction of steering wheel rotation when backing into parking space, correct by replacing valve body assembly.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix (Hydraulic) Single Anchor. Conventional two-shoe. Parking lever applies rear wheel service brakes.

Drums—Diameter 12" (all Series). Regrinding limits .060".

See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.

►*BRAKE PEDAL BIND & EXCESSIVE PEDAL EFFORT (Cars for Engine No. 22750):* *See "Brakes" in Cadillac Special Data.*

1954 Brake Lining

	Length	Width	Thickness
Primary	11.45"	2¼"	¼"
Secondary	12.92"	2¼"	¼"

1955 Brake Lining

	Length	Width	Thickness
Primary	11.52" ①	2½"	¼"
Secondary	12.98"	2½"	¼"

①—(60S & 62). 12.98" (75 & 86 Series).

Braking Power—(Exc. 86 Series) 55.8% (front), 44.2% (rear). (86 Series) 52.8% (front), 47.2% (rear).

Clearance—.010" (top), .015" (bottom). Adjusting screw backed off 14 notches from point where wheel can just be turned by hand.

Master Cylinder: On left frame member directly forward of brake pedal.

Checking Fluid Level Not—Remote fluid reservoir above master cylinder on firewall. Maintain level to within ¾' of top of container.

Master Cylinder Removal—Remove splash shield from flywheel housing and remove master cylinder in usual manner.

Power Brakes: Bendix "Hydrovac" Power Unit connected in hydraulic line between master cylinder and wheel cylinders (no mechanical connection).

See "Hydrovac Power Unit" in Brake Section.

Removal of Power Unit—Disconnect brake lines at power cylinder end plate. Loosen vacuum line hose clamp at check valve and slide hose off check valve. Remove three nuts and lock washers from cylinder mounting bracket and remove assembly from car.

MISC. MECHANICAL

Windshield Wipers: Cable operated—Vacuum type.

See "Windshield Wipers" in Miscellaneous Section.

Windshield Washer: Connected with windshield wiper so that when windshield washer is operated, wiper motor automatically operates to clean windshield.

►***1955 WINDSHIELD WASHER PRODUCTION CHANGE:* Solenoid Switch (for wiper control when washer operated) discontinued on cars beginning Engine No. 97096.** *See "Windshield Washers" in Miscellaneous Section.*

Power Window Regulators (1955): Electric, with reversible motor in each window.

See "Electric Window Regulators" in Miscellaneous Section for data.

Power Top Control: Hydro-Lectric with "sealed" system which does not require periodic draining and refilling. *See "Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: Electric reversible motors for vertical and horizontal adjustment.

►***1955 POWER SEAT CHUCK & NOISE CORRECTION:* May be corrected by adjustment and by installation of** Tension Springs (used in production beginning Engine No. 57610). *See "Power Seat Adjusters" in Miscellaneous Section.*

Air Conditioning: *See "Frigidaire (GM) Air Conditioning in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION: B fore disc nn cting any part of air c nditi ning quipment r lin s f r access t ngin , see "Air C nditi ning S rvice Cauti ns" in Miscellaneous Section.*

MODEL IDENTIFICATION

ENGINE & SERIAL NUMBER: Stamped on upper right corner on front face of right hand block, on right frame side member just to rear of engine support bracket, and on lubrication plate on front side of left body pillar (Exc. Coupe), on left door lock pillar (Coupe).

S ri s	First 1956 Nos.
60S	566000001
62	566200001
75	567500001
86	568600001

Id ntification—First two figures indicate year, third and fourth indicate model (last five figures are numbered consecutively regardless of series).

Engin Unit Number Not : Use for identification. Stamped on top of crankcase to rear of left hand block with prefix indicating model:

S ri s	Engine Unit Prefix
60S, 62, 75 (Standard)	4X-1 and up.
60S, 62, 75 (Air Conditioned)	4XK-1 and up.
86 (Standard)	5X-1 and up.
86 (Air Conditioned)	5XK-1 and up.
60S, 62(Dual Carburetors)	7X-1 and up.
60S, 62 (Dual Carbs. & Air Conditioned)	7XK-1 and up.

►*ENGINE NUMBER NOTE:* "L.C." will be added as a suffix to engine unit number on all engines built to low compression specifications.

►*NOTE:* Mark * preceding Engine Unit Number indicates cylinder bore and pistons are .010" oversize.

TUNE-UP

►*1956 DETONATION CORRECTION (Early Cars in Low Octan Ar as): See "Ignition Timing" below.*

►*POWER LOSS OR "STUMBLE" AFTER HARD LEFT TURN CORRECTION (CARS WITH CARTER CARBURETOR):* May be caused by fuel leakage from bowl into choke vacuum passage. *See "Cadillac (Carter & R ch st r) Carbur t rs" in Carburetion Section.*

►*FLAT SPOT & "SHUDDER" CORRECTION (ELDORADO ENGINE): S "Cadillac (Carter & Rochester Carburet rs" in Carbur ti n Section.*

►*SURGE UNDER FULL THROTTLE OR LEANNESS AT HIGH SPEED CORRECTION (CARTER CARBURETORS): See "Cadillac (Carter & Rochester) Carburetors" in Carbureti n S cti n.*

►*PART THROTTLE DETONATION CORRECTION:* Install Vacuum Advance Unit, Delco-Remy Part No. 1116103 on early cars which were equipped with Part No. 1116097.

COMPRESSION PRESSURE: 165 to 185 lbs., (at cranking speed) 212 to 230 lbs., (at 1000 RPM)

VACUUM READING: Not specified. *NOTE*—Beginning with Eng. No. 033849, new Camshaft used which results in decrease in manifold vacuum (normal vacuum at sea level with new camshaft is 13-15" idling)

►*VACUUM CHECKING CAUTION: When checking engine vacuum, shut off engine before removing vacuum hose. The plunger in the vacuum operated throttle check will increase engine speed to approximately 900 RPM if hose is removed with engine running. Set hand brake firmly before checking engine vacuum.*

VALVE TAPPET CLEARANCE: None in service (Hydraulic Lifters).

MANIFOLD HEAT CONTROL: Automatic thermostatic type. Valve diverts exhaust gases of left hand cylinder bank through carburetor heating passages in intake manifold to right hand exhaust system during warm-up period.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders—RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: 035"

Spark Plugs—AC No 44 (All Engines), 14mm

COIL: Delco-Remy 1115082. *12 Volt.*

Ignition Current—1.25 amps. idling. 3 amps. stopped.

Resistor—Delco-Remy 1927809. On coil bracket.

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil.*

DISTRIBUTOR: Delco-Remy 1110858 (Except Eldorado), 1110859 (Eldorado Engine). *12 Volt.* New "Window type" with external adjustment. *See "Delco-Remy (Window type) Distributor" in Electrical Section.*

Condenser—Delco-Remy 1932004. **Capacity** .18-.23 mfd.

Contact Point Set—Delco-Remy 1931988.

Breaker Gap—.016" (new & used points).

Cam Angle—26-33°.

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	575	0-4	1150
6-8	1275	12-16	2550
9-11	1950	18-22	3900

Vacuum Spark Control: Delco-Remy 1116097 (Early); 1116103 (Later). *See "Part Throttle Detonation Correction" above.*

Vacuum Advance - 1116097

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7
18	36	15.5-17.25

Plunger Travel - 3/8-13/32"

Vacuum Advance - 1116103

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6.5-8.5
15.5	31	13.5-16

Plunger Travel - 5/16-11/32".

IGNITION TIMING

►*1956 ENGINE DETONATION (Low Octane Areas):* If octane rating of available fuel results in detonation complaints, this condition can be corrected as follows.

1) Ignition Timing—Check timing. Timing can be retarded to 2½° BTDC (midway between "A" and "C" on harmonic balancer), or in extreme cases to TDC ("C" mark on balancer), without noticeable decrease in performance.

2) Distribut r Vacuum Advance—If detonation not corrected by timing change, original Vacuum Advance Unit, Delco-Remy No. 1116097, can be replaced with late type unit No. 1116103.

3) Low ring C mpression Ratio—On engines before Eng. No. 033849, compression ratio can be lowered by installing shim., Part No. 1466224, under each cylinder head. After installing shim, torque head bolts to 65-70 ft. lbs. and retorque after 500 miles to 75-80 ft. lbs. *NOTE*—Beginning Eng. No. 033849, engines have extra head gasket, shim, or modified cylinder head installed in production and it should not be necessary to lower compression ratio.

4) Low Compression Pistons—For travel in foreign countries where octane rating of fuel is not equivalent to average U.S. fuel, a set of low compression pistons, Part No. 3630680, can be installed.

►*SETTING CAUTION: Settings below are latest recommendations and should be followed exactly to avoid detonation and possible damage to engine. THESE SETTINGS ARE CORRECT FOR FUEL OF 97 OCTANE RATING AND TIMING MUST BE RETARDED IF FUEL OF LOWER OCTANE RATING USED.*

Car Model	Ignition Setting
First Cars (To Eng. No. 033849)	2½° BTDC
Later Cars (Beginning No. 033849)	5° BTDC

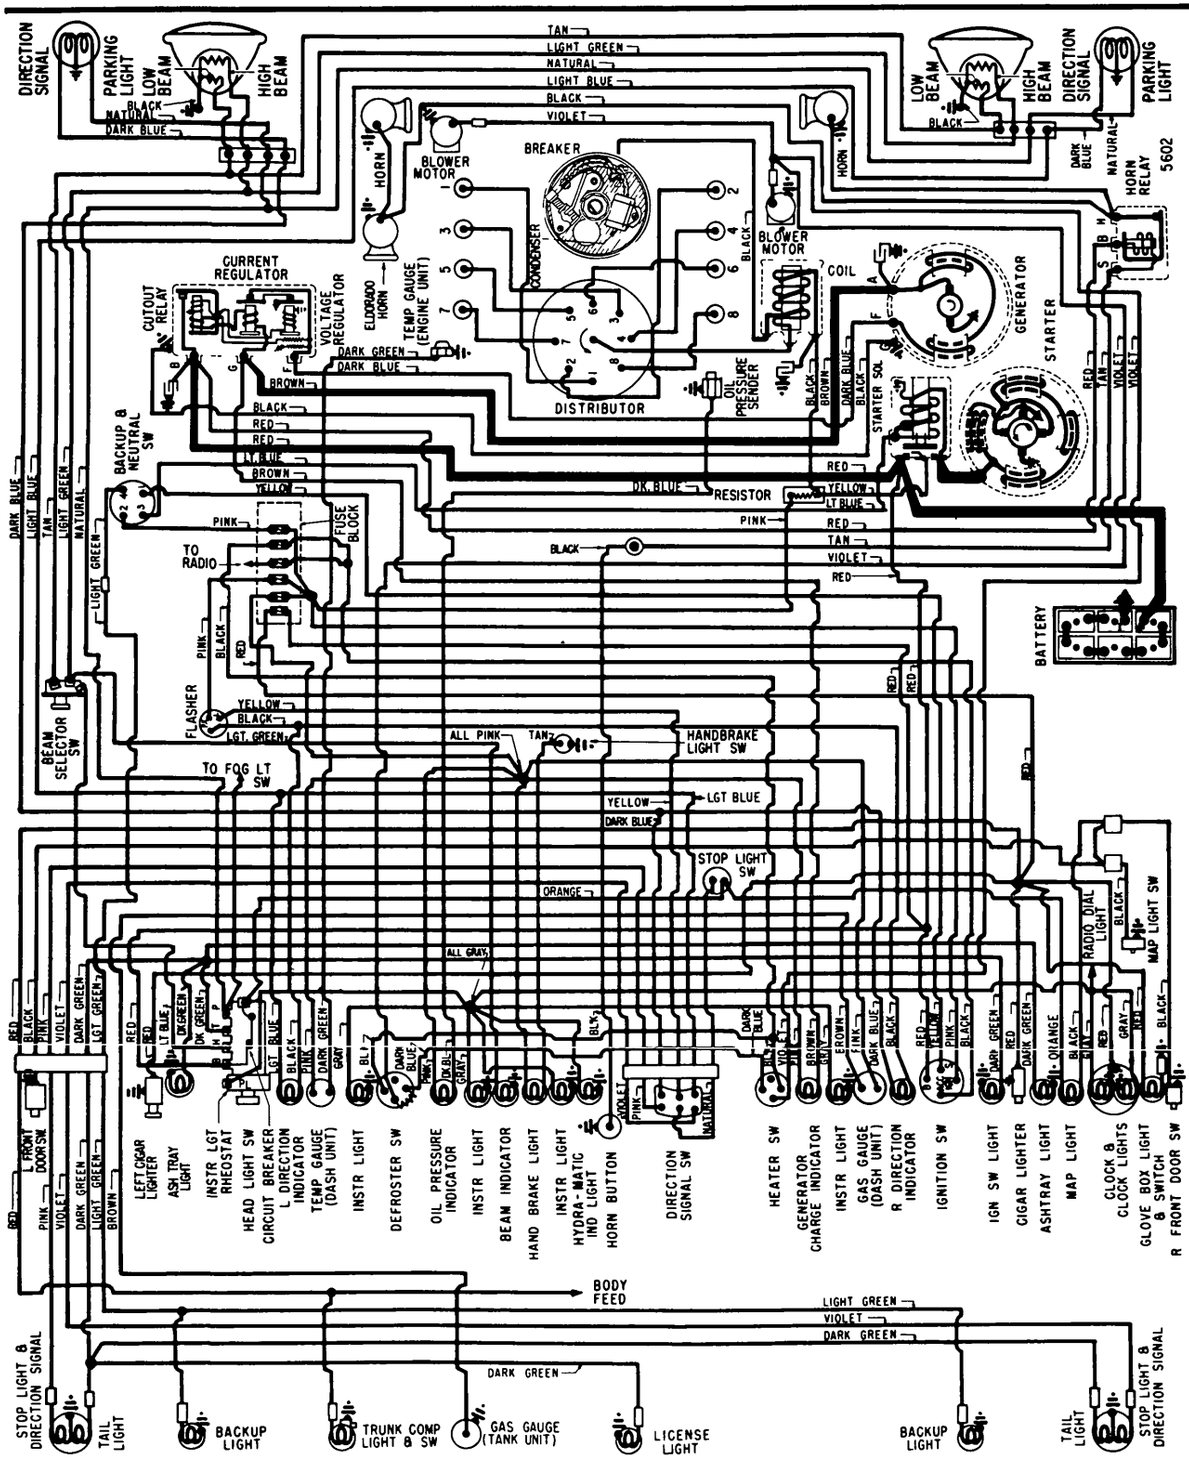
Timing—Disconnect vacuum line to distributor and tape end of line. Idle engine at 400 RPM, set timing midway between "A" and "C" line on balancer (First Cars—2½° BTDC setting), or at "A" line on balancer (Later Cars - 5° BTDC setting).

Timing Mark—Two lines on vibration balancer at front of engine marked "A" (5° BTDC) and "C" (TDC) and pointer on right side of chain case cover.

CARBURETOR

►*CARBURETOR APPLICATION: One 4-Barrel Carter or Rochester 4-Barrel Carburetor used on all models except Eldorado. Two Carter 4-Barrel Carburetors used on Eldorado.*

►*1956 DETONATION CORRECTION: (Early Cars in Low Octane Areas): See "Ignition Timing" below.*



►*CARBURETOR PRODUCTION CHANGES & RECOMMENDED CORRECTIONS: See "Cadillac (Carter & Rochester) Carburetors" in Carburetion Section.*

►*FAILURE TO OBTAIN WIDE OPEN THROTTLE POSITION (Due to improper accelerator pedal adjustment):* Adjust accelerator pedal arm-to-trunnion, on the accelerator pedal linkage, up or down to obtain 4¼" clearance from underside of top of pedal to floor pan. With carpet installed, this dimension should be 3¼" to top of carpet.

►*IMPROPER CARBURETOR CHOKE OPERATION CORRECTION:* This condition may be caused by oil leaking from the right rocker arm cover and draining down to the hot air stove on the right exhaust manifold where it is then drawn up into the choke housing. Check for indications of oil in choke assembly and clean if necessary. Replace right rocker arm cover gasket.

►*IDLE SPEED (AIR CONDITIONED CARS): Summer and Winter Idle Speed Adjustment is different as follows:* **Summ r S tting (Air Conditi n r in Op rati n)**—With transmission selector lever in either "Dr" range, and

CONTINUED ON NEXT PAGE

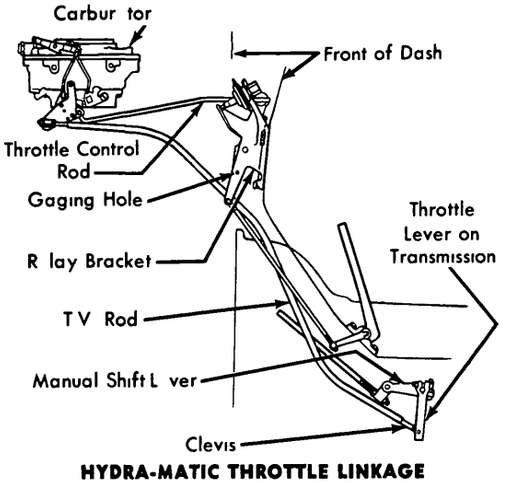
CONTINUED FROM PRECEDING PAGE

with air conditioner "ON" set idle speed at 420 RPM (Cars with Standard Engine). 490-510 RPM (Cars with Eldorado Engine).

Winter Setting (Air Condition r Not in Operati n)– With transmission selector lever in either "Dr" range, and with air conditioner "OFF" set idle speed at 420 RPM (Cars with Standard Engine), 490-510 RPM (Cars with Eldorado Engine).

Idle Speed-Up Control Adjustment (Cars with Air Conditioning): With engine at normal operating temperature and slow idle adjustment completed, turn air conditioner "ON", and place transmission selector lever in "N" position. Adjust engine idle speed to 900 RPM by loosening locknut on diaphragm shaft and turning knurled nut ot obtain specified RPM. Tighten locknut.

►***THROTTLE CHECK ADJUSTMENT CAUTION (CARS BETWEEN ENGINE NOS. 033849 & 053286):*** **S t plunger gap at .185" to prevent return check opening throttle when vacuum is low (the camshaft change at Engine No. 003849 resulted in lower manifold vacuum).** ***See Production Change b low f r later typ Throttle Check Assembly.***



►***THROTTLE CHECK ASSEMBLY PRCDUCTION CHANGE:*** **Starting at Engine No. 053286, a new Throttle Check Assembly entered production to prevent return check opening throttle during low vacuum periods. This later assembly is furnished in kit, Part No. 7009892 (identified by black check valve nipple, and tin plated throttle plunger) and can be used for service replacement on cars after Engine No. 033849.**

Throttle Check Adjustment (Standard Method): With engine at normal operating temperature, allow engine to idle and make sure that check plunger is not in contact with throttle relay lever. Open throttle wide momentarily to allow engine manifold vacuum to drop and throttle check plunger to come out. Let throttle snap shut and observe delay caused by throttle check. If engine races, throttle check plunger is too long. If engine stalls, plunger is too short. Adjust plunger screw as necessary for correct operation. *NOTE* – On cars between Engine No. 033849 & 053286, plunger gap must be set at .185". *Se "Thr ttl Ch ck Adjustment Caution" above.*

Throttle Check Adjustment (Alt rnat Method): With engine running at operating temperature and selector lever in "Park" position, remove hose from throttle return check assembly and place a piece of masking tape over end of hose to prevent vacuum leak. Hold plunger with a wrench and turn hex-head stem to obtain an engine speed of approximately 1100 RPM. Connect vacuum hose, making certain that engine speed returns to 420 RPM in "DR" (single carburetor engines); 500 RPM (dual carburetor engines). With foot brake fully applied, check adjustment by momentarily speeding up engine to full throttle with transmission in "DR" range, then quickly release accelerator. When properly adjusted, the engine will barely keep from stalling when foot is released from accelerator. *CAUTION* – Make sure that excessive overrun of throttle check is not present.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

HYDRA-MATIC THROTTLE LINKAGE

THROTTLE LINKAGE ADJUSTMENT: Remove clip from carburetor throttle rod trunnion and remove trunnion from relay bracket lever (at front of dash) Place a ¼" drill shank through gauging hole in relay lever and dash relay bracket With engine running, set throttle lever in hot idle position (Air Conditioner turned "OFF") Adjust carburetor throttle rod trunnion to allow free entry into dash relay lever and install trunnion and spring clip Push end of throttle valve rod (rod from carburetor to transmission throttle lever) toward rear of car to position transmission throttle lever against its stop Turn front jam nut on throttle valve rod against trunnion until all slack is taken up **Th n tight n nut th number of turns as indicated b l w** (due to engine throttle adapter plate and transmission changes). Tighten rear jam nut being careful not to put binding force on carburetor plate. *NOTE – B caus of differences in carburetion and hydraulic characteristics in th transmission, throttle valve rod adjustments may be varied 1½ turns in either direction to provid corr ct shift points.*

Throttl Valv Rod Adjustment

⑩-Remove throttle plate #1 and install kit, Part No. 3630753 which includes a #3 throttle plate. Adjust throttle valve 3 turns.

CARTER WCFB
(Standard Engine)

Carter WCFB 2333S, SA (Early), 2543S (Late) Cars without Air Conditioning. Carter WCFB 2334S, SA (Early), 2544S (Late) Cars with Air Conditioning.

►*CARBURETOR REPLACEMENT NOTE: Carter WCFB 2370SA can be used to replace WCFB 2333S, SA, & 2334S, SA. Carter WCFB 2545S can be used to replace WCFB 2543S, & 2544S. On cars with Air Conditioning, Unitized Package 202-44U must also be used.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels 1-4-6-7.*

►*NOTE: Carburetors No. 2334S, SA & 2544S have Idle Speed-up Control for use with Air Conditioning.*

►*IDLE SPEED ADJUSTMENT NOTE: Idle Air By-Pass screw on throttle body is used to adjust idle speed. Throttle valves are normally closed at slow idle.*

Idle Speed – 420 RPM in "DR" range. (Cars with Air-Conditioning should have the same idle speed, with Air Conditioner turned on). *NOTE – This idle speed setting supersedes the previous setting of 400 RPM.*

Idle Mixture & Idle Speed Setting – Special procedure required to insure correct mixture and speed (idle air) screw settings. *See "Cadillac (Carter & Rochester) Carburetors" in Carburetion Section.*

►*IDLE SPEED ADJUSTING STOP SCREW NOTE:* An idle speed stop screw has been added to some Carter carburetors to improve idle characteristics during the break-in period. The idle stop screw is not necessary after the break-in period and should be removed at the 1000 mile point.

►*OTHER DATA: See "Cadillac (Carter & Rochester) Carburetors" in Carburetion Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "CARBURETOR" above.*

Fuel Pump Pressure: 5¼ - 6½ lbs. at 4800 RPM.

ROCHESTER 4GC
(Standard Engine)

ROCHESTER 4GC No, 7008750 (Early - Without Air Conditioning); No. 7009750 (Late - Without Air Conditioning); 7008751 (Early - With Air Conditioning); 7009751 (Late - With Air Conditioning).

►*CARBURETOR REPLACEMENT NOTE: Rochester 4GC No. 7009901 can be used to replace 7008750 & 7009750. Rochester 4GC can be used to replace 7008751 & 7009751.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feel Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

►*NOTE: Carburetors No. 7008751 & 7009751 have Idle Speed-up Control for use with Air Conditioning.*

►*IDLE SPEED ADJUSTMENT NOTE: Idle Air By-pass screw on throttle body is used to adjust idle speed. Throttle valves are normally closed at slow idle.*

►*ROCHESTER CHOKE SETTING CHANGE (To eliminate hard starting after engine stalls while choke is on):* Adjust choke to index mark instead of one point rich mark as previously used.

►*FLAT SPOT CORRECTION (ROCHESTER CARBS.):* Install primary main metering jet No. 7002651. Carburetors with the new jet are identified by a black or red carburetor tag.

Idl Spe d – 420 RPM in "DR" range. (Cars with Air-Conditioning should have the same idle speed, with Air Conditioner turned on). *NOTE – This idl sp ed s tting sup rs d s th previous s tting of 400 RPM.*

Idl Mixture & Idl Sp d Setting – Special procedure required to insure correct mixture and speed (idle air) screw settings. *See "Cadillac (Carter & Rochester) Carburetor" in Carburetion Section.*

►*OTHER DATA: See "Cadillac (Carter & Rochester) Carburetor" in Carburetion Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "CARBURETOR" above.*

Fuel Pump Pressure: 5¼ - 6½ lbs. at 4800 RPM.

CARTER WCFB (2)
(Eldorado Engine)

Carter WCFB 2371S (Front-Without Air Conditioning). 2373S (Front-With Air Conditioning) 2372S (Rear-All Models).

►*FLAT SPOT CORRECTION (Before Engine No. 044963, Cars without Air Conditioning, 044986, Cars with Air Conditioning): See "Cadillac (Carter & Rochester Carburetors)" in Carburetion Section.*

►*IMPROVED IDLE STABILITY NOTE: Wind the torsion closing spring one additional turn around the secondary throttle shaft.*

►*CARBURETOR REPLACEMENT NOTE· Carter WCFB 2371S can be used for service replacement of 2372S & 2373S Unitized Package 202-100U must be used when replacing 2373S (Air Conditioned Cars)*

►*CARBURETOR INSTALLATION NOTE Front & Rear Carburetors operate together as follows*

►*MANIFOLD FUEL DISTRIBUTION (FRONT CARB)* Right PRIMARY & Left SECONDARY barrels feed Cyl 2-3-5-8 Left PRIMARY & Right SECONDARY barrels feed 1-4-6-7

►*MANIFOLD FUEL DISTRIBUTION (REAR CARB):* Left PRIMARY & Right SECONDARY barrels feed Cyl 2-3-5-8 Right PRIMARY & Left SECONDARY barrels feed 1-4-6-7

►*NOTE: 2373S has Idle Speed-Up Control for use with Air Conditioning*

►*IDLE SPEED ADJUSTMENT NOTE Idle Air By-Pass screw on throttle body is used to adjust idle speed. Throttle valves are normally closed at slow idle*

Idle Speed – 490-510 RPM in "DR" range.

Idle Mixture & Idle Speed Setting – Special procedure required to insure correct mixture and speed (idle air) screw settings. *See "Cadillac (Carter & Rochester Carburetors)" in Carburetion Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "CARBURETOR" above.*

Fuel Pump Pressure: 4¼ - 6½ lbs. at 1800 RPM.

CARB. EQUIPMENT

Fuel Pump: AC (Fuel only). Vacuum pump is part of engine oil pump.
R placement Fuel Pump – AC No. 4269.
Pr ssure – 5¼ - 6½ lbs. at 4800 RPM.
See "Fu l Pumps" in Carbur tion Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Gasoline Gauge: AC Electric.
Dash Unit – AC No. 1518488.
Tank Unit – AC No. 1517215.
See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco 3EMR70-W. *12 Volt,* 11 plate, 70 ampere hour capacity (20 hr. rate).
Battery Ground – Negative.
Engine Ground – Connected between engine and cowl.

STARTER

►*STARTER MOTOR HARNESS CHAFING CORRECTION (Before Eng. No. 036253): Reroute harness above breather pipe so it will not rub against corner of engine block.*

Delco-Remy 1107642 (Early); 1107657 (Late). *12 Volt.*
Armature – Delco-Remy 1926626 (1107642); 1932185 (1107657).
Drive–Overrunning clutch (solenoid pinion shift)
Rotation–Counter-clockwise at commutator end
Brush Spring Tension–35 ozs minimum

Performance Data

Torque	RPM	Volts	Amperes
0 ft lbs	3500	10 1	95
10 5 ft lbs	Lock	5 4	470

►*STARTER PINION ADJUSTMENT NOTE:* The later type starter, Delco-Remy No. 1107657 has an extended nose casting that covers all exterior linkage. The starter pinion adjustment is pre-set at the factory and field adjustment is not required.

Starting Switch: Delco-Remy Solenoid Switch No. 1119777 (Starter No. 1107642); No. 1119910 (Starter No. 1107657), mounted on starter and controlled by Ignition & Starter Switch, Delco-Remy No. 1116470. Turn key full RIGHT against spring tension to start.
See "Starter Controls" in Electrical Section.

Neutral Safety & Back-up Light Switch: Delco-Remy 1998137.
Adjustment – *See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy 1102002 (Std.), 1102011 (Air Conditioned Cars). Armature No. 1923535 (All). *12 Volt.*

►*REPLACEMENT GENERATOR:* Delco-Remy 1102005 (Less Fan & Pulley).
Maximum Charging Rate–See Current Regulator.

Performance Data

	Amperes	Volts	RPM
Cold	30	14	2150

Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–28 ozs. each.
Field Current–1.48-1.62 amperes at 12 volts.

G nerator Charg Indicator: Red light on instrument panel. *Se Diagram.*

B lt Adjustment· Loosen both pivot bolts and adjusting strap screw pull generator out until belt just tight enough to drive generator without slip.

REGULATOR

Delco-Remy 1119001. *12 Volt.*

►*REGULATOR NOTE: Specifications below are for "Normal" setting. See "Delco-Remy 1119000 Series Regulator" in Electrical Section.*

Cutout Relay
Cuts In – 11.8-13.5 volts (hot).
Contact Gap – .020".
Air Gap – .020" (with contacts just closed).

Voltage Regulator
Setting – 13.8-14.8 volts (hot).
Air Gap – .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See Electric l Section.*

Current Regulator
Setting – 27-33 amperes (hot).
Air Gap – .075" with armature pressed down to point where contacts just touch.
Checking & Adjustment – *See Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Section.*
Direction Signal: *See "Direction Signals" in Electrical Section.*

Stop Light Switch (Location): Mechanical type located to left of steering column adjacent to pedal retaining bar.

FUSES: Located on fuse panel under instrument panel on cowl insulating board just to left of car centerline except as noted below.
Air Conditioner & Heater – 25 amps.
Antenna – 14 amps.
Back-up Lights – 9 amps.
Cigar Lighters, Clock, Dome or Bow Light, Glove Box, & Trunk Light – 25 amps. Body Feed fuse on panel protects these circuits.
Instruments – 9 amps.
Radio – 7½ amps.
Turn Signals – 6 amps.
Spotlight – 9 amps. On steering column support.

CIRCUIT BREAKERS: (Lighting) – 20 amps. Located in headlamp switch. Protects the following circuits: Headlights, Fog Lights, Ash Tray Lights, Instrument Lights, Map Light, Parking Lights, & Stop Lights.
Hydro-Lectric System (When Used) – 15 amps., in feed circuit.
Power Seats & Windows – 40 amps. Located on left inner cowl panel.
Electric Trunk Lock – 5 amps. Located on left inner cowl panel.

HORNS: (Exc. Eldorado)–Delco-Remy 1999765 (Low Note), 1999766 (High Note). *12 Volt.*
Eldorado–Delco-Remy 1999585 (Trumpet type), *12 Volt.*

Horn Relay: Delco-Remy 1116908. *12 Volt.*
Contacts Close–5.0-9.5 volts.
Contact Gap–.027". **Air Gap–**.014".

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellan ous Section.*

►*"BOOMING" NOISE ON AIR CONDITIONED CARS CORRECTION (Appar nt at 25 MPH or at off-idl speeds):* Noise can be eliminated or reduced by installing an oil filter-to-hydraulic pump support brace, Part No. 1463022.

►*ENGINE BALANCE CHECK & UNBALANCE CORRECTION: See "Engine Balancing" in Cadillac Special Data.*

Bore	Stroke	Displac m nt	Rated H P
4"	3 5/8"	365 cu. ins.	51.2

Engine	Compr. Rati	D v l p d HP
Standard	9.75-1	285 at 4600 RPM
Eldorado	9.75-1	305 at 4700 RPM

►*OVERSIZE CYLINDER BORE CAUTION: Engines with mark * preceding Engine Unit No. (on l ft r ar of crankcase) have a .010" oversize cylind r bore and pistons.*

ENGINE REMOVAL: *See "Engine" in Cadillac Special Data.*

OIL PAN REMOVAL: *See "Oil Pan" in Cadillac Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Cadillac Special Data.*

►***CYLINDER HEAD PRODUCTION CHANGE** (At Engine No. 033849):* **A new cylinder head, Part No. 3630695 (Right hand); No. 3630696 (Left hand) with improved combustion chamber design are used on all models after above engine number.**

TIGHTENING TORQUES: *See "Tightening Specifications" in Cadillac Special Data.*

PISTONS

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with mark * preceding Engine Unit No. (on left rear of crankcase) have .010" oversize pistons and cylinder bore. Standard cylinder bore size: 4.0000-4 0020"
Original Bore & Pistons–*See "Original Bore & Pistons" in Cadillac Special Data.*
Pistons – Aluminum alloy, T-slot, cam ground, "stannate" coated.
Weight – 22.72 ozs. (less pin).
Removal–Piston and rod assemblies removed from above. Install connecting rod Guide Studs J-3224, on connecting rod bolts to guide rod out through bore without nicking or scratching. *CAUTION–Do not nick lower edge of bore when pushing rod up.*
Fitting New Pistons: Use micrometer or feeler gauge. *See "Pistons" in Cadillac Special Data.*
Replacement Pistons: Standard "High Limit" or maximum production size , and .010", .020", .030" oversize. Pistons furnished only with fitted pins.
Installing Pistons: Ins'all in cylinder with piston pin boss marked "Rear" toward rear of engine. *See "Connecting Rods" (below) for installation of pistons on rods.*

PISTON PINS

Pin is pressed in connecting rod.
Diameter–1.000". **Length–**3 3/32".
Pin Fit in Piston–.00005"-.0001" clearance at 70°F. Not fitted in field (replace piston & pin assembly).
Pin Fit in Rod–(NOTE–Special tools required). *See "Piston Pins" in Cadillac Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

PISTON RINGS

Top compression ring is chrome plated rolled steel and the other two rings are cast iron. An expander is not used behind the oil ring in production.

Ring	Width	End Gap ①	Side Clearance
Compr. (#1 & 2)	5/64"	.013-.023"	.0017-.0035"
Oil (#3)	3/16"	.013-.023"	.0008-.0026"

①- With Standard 4.0000" cylinder.

Replacement Rings: Standard, 010", .020", 030" oversize.

►*REPLACEMENT RING NOTE–If re-ring set is to be installed in new or low mileage bores, it is not necessary to install oil ring expander.*

Installing Rings: Chamfered face of both compression rings must be installed toward top of piston.

CONNECTING RODS

Length–6 5/8" (center-to-center).
Weight–23.49 ozs.
Crankpin Journal Diameter–2.2488-2.2493".
Out-of-Round Limits–.00025".
Bearings–Moraine-Durex, bearing shell is steel backed aluminum. Bearing halves interchangeable. No shims.
Clearance – .0005-.0020" (Service limit .0045").
Side play– 008-.014" (total both rods)

Replacement Bearings: Furnished in standard size only.

Installing Rods (In Pistons): On pistons Nos. 2-4-6-8, install rod so mark 'REAR' on piston pin boss is to left side of rod (with stamped number on rod facing operator). On pistons Nos. 1-3-5-7, install rod so mark 'REAR' on piston pin boss to to **right** side of rod (with stamped number on rod facing operator). **After piston and rod assembly installed in engine, re-check to see that the numbered side of connecting rod on No. 1, 3, 5, 7 rods are on LEFT side of engine and No. 2, 4, 6, 8 are on RIGHT side of engine and that rods are on the proper crank pins.**

CRANKSHAFT

Journal Diameters – 2 5/8".
Out-of-Round Limits – .0025".
Clearance – .0008-.0025" (service limits .005" max.).
End Thrust– Taken by flanged rear main bearing.
End Play – .001-.005" (service limit .010" max.).
Bearings – Rear main bearing is a steel backed babbit, shell type insert. Other bearings are aluminum inserts.

►*REAR MAIN BEARING INSERT PRODUCTION CHANGE (To reduce leaks):* The later type inserts, Part No. 3630741 do not have a chamfer across full width of bearing ends.

Replacement Bearings: Furnished in standard size only.

Crankshaft Removal: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*

Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*

CAMSHAFT

►*CAMSHAFT PRODUCTION CHANGE:* A new camshaft was used in production beginning Engine No. 033849. Later camshaft has slight increase in valve overlap, which results in a decrease in intake manifold vacuum.

►*CAUTION:* Handle shaft with care to avoid damage or mis-alignment. Check whenever removed.
Removal, Alignment & Installation–*See "Camshaft & Bearings" in Cadillac Special Data.*
Bearings–Steel backed babbitt bushings.
Clearance–.001-.0022' (service limit .004" max.).
Bearing Out-of-Round Limit–.002" max.

Timing Chain: Link-Belt side guide type. Width 11/16", Pitch .500', Length 23" or 46 links.
Installation & Removal–*See "Timing Chain" in Cadillac Special Data.*

Camshaft Setting: Both sprockets marked '0'. Mesh chain with sprockets turned so that marks adjacent and in line with a straightedge across the shaft centers

►*CAUTION:* Install chain as a unit with camshaft sprocket (sprocket press fit on shaft with locating dowel and two retaining capscrews).

VALVES

Tappet Clearance: None in service (hydraulic).

Valves	Head Diam.	Stem Diam.	Length
Intake	1 750"	3415-.3425"	① 4 628-4 648"
Exhaust	1 562"	3415-.3420"	4 21/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	②44°	411"	③ 0005-.0025"
Exhaust	②44°	411"	③ .001-.0025"

①–"Rich" Valves "Eaton" Valves 4 628-4 653"

②–New valves (Valves in service can be refaced to 45° if seat width recommendation not exceeded).

③–New valves and guides. Worn limit .005" max.

►*VALVE SEATING CAUTION:* Do not lap or grind so that seat width is more than 1/64" (1° difference between valve and seat angle designed to provide "hairline" contact.

►**Valve Seat Recommendations:** 3/64-1/16" (moderate speed or city driving), 1/16-3/32" (high speed driving). Cut seat so that distance from outer edge to edge of flange on valve head not more than 1/32".
Valve Stem Oil Seal–Rubber oil seal installed in lower groove on valve stem (below valve keeper).

Oil Seal Installation: *See "Valve System" in Cadillac Special Data.*

Valve Removal & Installation: *See "Valve System" in Cadillac Special Data.*

Valve Guides: Pressed in cylinder head with counterbored end down toward valve head. Use Remover Tool J-3062 to drive old guides out toward top of head, Installer Tool J-3066 to drive new guides in (tool plate serves as stop for driver).

Valve Springs: (Free Length) 1.980".

Valve Spring Specifications

	Pressure	Length
Valve Closed	62-68 lbs	1 696"
Valve Open	152-162 lbs	1 285"

►*SPRING INSTALLATION CAUTION: Lower end of valve spring must be seated in recess in cylinder head.*

Valve Lifters: Hydraulic.
See "Valve System" in Cadillac Special Data.
Valve Lift Removal–*See "Valve System" in Cadillac Special Data.*

Rocker Arms: Rocker arm assemblies are mounted on each cylinder head. *NOTE* - Adjustment screws are not provided on rocker arms

Rocker Arm Installation–*See "Valve System" in Cadillac Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

(Before Eng. No. 033849).
Intake Valves – Open 22° BTDC. Close 67° ALDC.
Exhaust Valves – Open 63° BLDC. Close 27° ATDC.

(After Eng. No. 033849).
Intake Valves – Open 25° BTDC. Close 78° ALDC.
Exhaust Valves – Open 70° BLDC. Close 28° ATDC.

Valve Timing Check – Not practical to check in field. Manufacturer recommends removing timing chain cover and checking timing gears.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Cadillac Special Data.*

Crankcase Capacity: 5 qts. One quart additional for dry filter.

Normal Oil Pressure: 30-35 lbs. min. at 30 MPH. 15 lbs at idle speed.

Pressure Regulator Valve–On oil pump Not adjustable.

Oil Pressure Indicator – Light on instrument panel controlled by pressure switch, Cadillac No. 1508434 mounted on engine.

Oil Pump: Helical gear. In crankcase at rear of engine.

Oil Pump Removal & Overhaul: *See "Oiling System" in Cadillac Special Data.*

Vacuum Pump: Part of Oil Pump assy. *See "Vacuum Pump" in Cadillac Special Data.*

Oil Filter: Partial flow. Replace element every 6000 miles or more frequently in dusty areas.
Replacement Filter Element–AC No. 1P-115

Crankcase Ventilation: Air intake in oil filler cap (oil wetted type) with outlet connection at rear of valve compartment cover, and outlet pipe extending down below engine at right corner.

COOLING

►*THERMOSTAT INSTALLATION CAUTION: Install with spring strap parallel to car center line otherwise right engine bank will operate at higher temperature*

►*ELDORADO ENGINE COOLING LOSS CORRECTION:* Improper positioning of right hand ignition wire bracket may permit bracket to rub against heater hose. Loosen bracket nut on carburetor and swing bracket as close to firewall as possible. Tighten nut.

►*ALUMINUM RADIATOR CORE CAUTION & IDENTIFICATION NOTE:* Aluminum radiator cores have been used in partial production. The letters "ALC" following the serial number on the plate attached to radiator upper tank identify these radiators. When cleaning these radiators, only clear water should be used. Caustic cleaning solutions will corrode and damage the radiator.

Water Capacity: (Exc. Series 75) 19¼ qts., with heater; 17¼ qts., without heater. (Series 75) 21¾ qts., with heater; 17¼ qts., without heater.

Pressure Valve: AC No. 850800. Radiator filler cap. Opens at 12-15 lbs.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Therm stat· Dole type In water outlet at top of pump body

Standard Setting—Starts to open at 163° to 168°F

High Temp.—Starts to open at 177° to 182°F

Water Pump: Packless, sealed ball bearing type

See "Water Pumps" in Cadillac Special Data.

Pump Removal—Remove upper and lower radiator hoses after draining cooling system Remove generator drive belt and take out capscrew mounting pump and water manifold assembly on front of engine, lift out pump and fan NOTE—Water manifold and thermostat housing are part of pump casting

T mperature Gauges· AC Electric

Dash Unit - AC No. 1513158.

Engine Unit – AC No. 1513130.

See "Temperature Gauges" in Miscellaneous Section.

HYDRA-MATIC DRIVE

"Jetaway". A new four speed hydraulically controlled automatic transmission having two fluid couplings.

►*HYDRA-MATIC "SQUEAK" CORRECTION:* This squeak may occur in first and reverse gears, and in "Dr3" under full throttle. *See "Dual-Coupling Hydra-Matic" in Transmission Section.*

►*1-2 OR 2-3 LATE SHIFT CORRECTION:* May be caused by improper throttle valve rod adjustment, dirt in control valve assembly, or interchanged valve springs. *See "Dual-Coupling Hydra-Matic" in Transmission Section.*

►*ROUGH SHIFT CORRECTION:* May be caused by bent throttle valve rod striking the accelerator pedal arm which would prevent the throttle valve rod from returning to its stop for proper adjustment. Check rod for straightness and adjust for correct shift pattern.

►*ERRATIC SHIFT CORRECTION: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

►*FILLER PIPE LEAK CORRECTION:* A new service package, Part No. 8616956 is available to correct oil leakage originating at point where filler pipe fits into sleeve in transmission case.

►*TRANSMISSION OIL FOAMING CORRECTION:* This condition may be caused by leakage in oil cooler. *See "Dual-Coupling Hydra-Matic" in Transmission Section.*

►*SLIPPING 2-3 SHIFT CORRECTION (EXC. ELDORADO ENGINE):* If this condition cannot be corrected by throttle valve rod adjustment, and is not caused by sticking valves, install an inner accumulator spring, Part No. 8617469. *See "Dual-Coupling Hydra-Matic" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

Lubrication – Check fluid level every 2000 miles along with regular car lubrication. Drain and refill every 25,000 miles. Use only Cadillac Hydra-Matic Fluid.

Capacity – 12 qts. (approximately). *NOTE – Th c rrect l v l is d t rmin d by th "Full" mark n gaug , with transmission hot.*

Ch cking Fluid L v l – With selector lever in "N" or "P" position, run engine at speed of 20 MPH for about 1½ minutes (to be sure fluid coupling is full). With engine idling, add fluid to bring level to within ¼" of the "F" mark on dipstick *(NOTE – Fluid level should be ¼" below "F" mark when cold, and at the "F" mark when hot). CAUTION – Do not fill above "F" mark on dipstick as this will cause foaming when oil is hot.*

►*OTHER HYDRA-MATIC SERVICE DATA: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

UNIVERSALS

Mechanics. Needle bearing type Two used (three on commercial cars with center bearing)

►*DRIVE LINE "THUMP" CORRECTION (Cars between Engine No. 017541 and 046805. Or cars prior to engine No. 017541 which have the late type replacement transmission):* Install the late type front universal joint yoke, Part No. 5670522, which must be lubricated with one ounce of special lubricant, Part No. 1098652. Th e later type yoke must be lubricated every 25,000 miles by removing the yoke and applying lubricant to the splines.

►*TRANSMISSION REPLACEMENT CAUTION:* If a transmission is replaced on cars with a late type yoke, the extension housing and output shaft of the transmission must be of the late design. Check the output shaft and measure depth of bore in extension housing to make sure it is machined to clear the longer yoke. If the transmission has the early extension housing, use the early type yoke, Part No. 1456508, or special service yoke, Part No. 1465331.

►*REAR UNIVERSAL YOKE CAUTION Do not disturb nut on end of pinion shaft retaining rear universal joint yoke unless yoke or oil seal should be replaced. Pinion bearing preload must be adjusted whenever this nut disturbed*

REAR AXLE

Own Make. Hypoid gear, semi-floating with Hotchkiss Drive

See "Cadillac Hypoid" in Rear Axle Section.

►*OVERHAUL CAUTION* Manufacturer recommends that Carrier Assembly be serviced by replacement Do not disassemble this unit or attempt service work other than oil seal and universal joint replacement

Axle Identification—Axles marked by number stamped bottom of differential case below center of pinion shaft (First Cars) or on oil return hole boss at front end of differential case (beginning Engine No 94850) Ratios and marks are as follows

Series	Ratio	Mark
60S, 62 (Std.)	3.07-1	"3"
60S, 62 (Optl.) Ⓒ	3.36-1	"6"
75	3.36-1	"6"
86	3.77-1	"7"

Ⓒ—Standard on cars with Dual 4-Bbl. Carburetors.

►**Pinion Bearing Pre-Load Caution·** Must be adjusted each time pinion shaft nut loosened *See "Cadillac Hypoid" in Rear Axle Section.*

Backlash– 003- 010' Screw adjustment

Axl Shaft R m val· Remove wheel and take out screws holding brake drum on axle shaft flange and remove drum Remove nuts and lockwashers from bolts holding bearing retainer and backing plate on axle housing, use Puller J-942-1 and Slide Hammer J-2619 to remove axle shaft

►*CAUTION* Use care not to damage axle shaft oil seal when sliding axle shaft out and do not disturb position of backing plate on housing

Commercial Cars—Remove wheel, remove nut and washer on end of shaft Use Puller (Snap-On No S4567 or similar five jaw type) to remove wheel hub and brake drum Disconnect brake line Take out retaining screws and remove dust shield (bearing retainer) and backing plate Use Puller J-838 to pull axle shaft and bearing assembly out, using care not to damage oil seal in housing

Differential Carrier Pemoval Disconnect rear universal joint and remove lubricant from rear axle housing Remove axle shafts (see above) Remove nuts and washers holding carrier to axle housing and remove entire assembly with gasket *See "Overhaul Caution" above*

Wheel Bearings Sealed ball-bearing type

CAUTION—Check bearings for loss of lubricant when shaft removed If bearings spin freely indicating loss of lubricant, replace bearings

Pinion Bearing Preload Adjustm nt Pinion should be adjusted whenever nut on end of pinion shaft disturbed (for universal joint yoke or oil seal replacement)

See "Cadillac Hypoid" in Rear Axle Section

SHOCK ABSORBERS

Delco. Direct acting permanently sealed, airplane type located within coil springs (front), "Sea-Leg" type installation (rear), as follows

Series	Ⓒ Front	Ⓒ R ar
60S, 62	5352611	5352612
75, 86	5352613	5513719

Ⓒ - Cadillac part numbers.

FRONT SUSPENSION

Independent type with direct acting shock absorbers within coil springs

See "Cadillac" in Suspension & Wheel Alignm nt Section

Kingpin Inclination—5°51' with 0° camber

Caster—0° to Neg 1° Adjustment must be equal within ½° or less on both sides of car

Camber—Neg 3/8° to Pos 3/8° with ¼-½° more positive camber on left side

Toe-In – 5/32-7/32" (standing). Loosen clamp bolts, turn adjusters at outer end of each tie rod equally.

Toe-Out n Turns – With outer wheel turned 20°, inner wheel should be 22°40'.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

STEERING

Power Steering: Saginaw (In-Line) Hydraulic. Hydraulically operated in-line power steering gear which combines the recirculating ball type gear with a concentric hydraulic booster.

See "Saginaw (In-Line) Power Steering" in Steering Sect.

►*POWER STEERING GEAR PUMP "SQUEAL" CORRECTION (Pump pressures reduced): See "Saginaw (In-Line) Power Steering" in Steering Section.*

►*POWER STEERING "CLUNKING" NOISE CORRECTION (Can be heard on hard turns and when steering wheel turned with car standing and engine running): See "Saginaw (In-Line) Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Sect.*

Steering Wheel & Horn Button Removal: *See "Saginaw (In-Line) Power Steering" in Steering Section.*

Steering Gear Removal: *See "Saginaw (In-Line) Power Steering" in Steering Sect.*

BRAKES

Bendix (Hydraulic) Single Anchor. Conventional two-shoe Parking lever applies rear wheel service brakes. Bendix or Moraine Power Brakes are standard equipment.

►*BRAKE PEDAL BINDING CORRECTION: See "Brake Notes" in Cadillac Special Data.*

Drums—Diameter 12" (all Series). Regrinding limits .060".

See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.

	Brake Lining Length	Width	Thickness
Primary.	11.52" ①	2½"	¼'
Secondary	12 98"	2½"	¼"

①—(60S & 62) 12.98" (75 & 86 Series)

►*1956 BRAKE LINING PRODUCTION CHANGE:* To reduce possibility of brake squeal, brake lining on all cars beginning Engine No. 000519 has a .004 - .008" crown. *NOTE* - This crowned lining furnished for service replacement on all 1953-56 cars.

Braking Power—(Exc. 86 Series) 55.8% (front), 44.2% (rear). (86 Series) 52.8% (front), 47.2% (rear).

Clearance—.010" (top), 015" (bottom). Adjusting screw backed off 14 notches from point where wheel can just be turned by hand.

Power Brakes: Bendix or Moraine Power Brake units integral with master cylinder and fluid reservoir located on left front frame member.

Master Cylinder – Integral with power brake unit.

Checking Fluid Level – Maintain fluid level to within ¾" of top of filler cap boss.

Removal of Power Unit – Disconnect relay to unit rod at clevis and disconnect relay rod from push rod. Disconnect both vacuum hoses from power brake unit, and disconnect hydraulic line at outlet fitting. Remove four screws and lockwashers and nuts from cylinder mounting bracket and remove power brake assembly.

MISC. MECHANICAL

Windshield Wipers: Cable operated—Vacuum type.

See "Windshield Wipers" in Miscellaneous Section.

Windshield Washer: Connected with windshield wiper so that when windshield washer is operated, wiper motor automatically operates to clean windshield.

Power Window Regulators: Electric, with reversible motor in each window

See "Electric Window Regulators" in Miscellaneous Section for data.

Power Top Control: Hydro-Lectric with "sealed" system which does not require periodic draining and refilling. *See "Top Controls" in Miscellaneous Section.*

Power Seat Adjusters (Two-Way): Electric type with single reversible type motor for horizontal adjustment. *See "GM Two-Way Seat Regulators" in Miscellaneous Section.*

Power Seat Adjusters (Six-Way): Electric type with single adjustable motor. *See "GM Six-Way Seat Regulators" in Miscellaneous Section.*

►*SIX-WAY POWER SEAT "CHUCKING" CORRECTION: See "GM Six-Way Seat Regulators" in Miscellaneous Section.*

Trunk Lid Lock: Reversible electric motor operating a jack screw and limit switches which control opening and closing of the trunk lid. *See "GM Electric Trunk Lid Lock" in Miscellaneous Section.*

Air Conditioning: Frigidaire with magnetic compressor clutch (compressor operates only with switch "on"). *See "Frigidaire (GM) Air Conditioning" in Miscellaneous Section.*

MODEL IDENTIFICATION

ENGINE & SERIAL NUMBER: Stamped on upper right corner at front face of right hand block, on right frame side member just to rear of front engine support, and on lubrication plate attached to front face of left door lock pillar.

Series	First 1957 Nos.
60S	5760000001
62	5762000001
75	5775000001
86	5786000001
70	5770000001

Identification - First two figures indicate year, third and fourth indicate series (last six figures are numbered consecutively regardless of series).

Engine Unit Number Note: Use for identification. Stamped on top of crankcase to rear of left hand block with a prefix (see below) indicating model.

Series	Engine Unit Prefix
60S, 62 (Standard)	76X-1 and up
60S, 62 (Air Conditioning)	76K-1 and up
75, 86 (Standard)	77X-1 and up
75, 86 (Air Conditioning)	77K-1 and up
62 (Dual Carbs.)	70QX-1 and up
62 (Dual Carbs. & Air Cond.)	70QK-1 and up

► *ENGINE NUMBER NOTE "L.C." will be added as a suffix to engine unit number on all engines built to low compression specifications.*

► *NOTE* Mark * preceding Engine Unit Number indicates cylinder bore and pistons are .010" oversize.

TUNE-UP

COMPRESSION PRESSURE: 165 to 185 lbs. (at cranking speed). 212 to 230 lbs. (at 1000 RPM).

VACUUM READING: Not specified.

► *VACUUM CHECKING CAUTION When checking engine vacuum, shut off engine before removing vacuum hose. Plunger in vacuum operated throttle check will increase engine speed to approximately 900 RPM if hose is removed with engine running. Set hand brake firmly before checking engine vacuum.*

VALVE TAPPET CLEARANCE: None in service (hydraulic lifters).

MANIFOLD HEAT CONTROL: Automatic thermostatic type. This valve diverts exhaust gases of left hand cylinder bank through carburetor heating passages in intake manifold to right hand exhaust system, during warm-up period.

► *MANIFOLD HEAT CONTROL VALVE CAUTION:* Some cars after Engine No 090000 had "B" type valve which adversely affects engine performance. "B" type should be replaced with "A" type, Part No 3510508, which has larger bore diameter and 180° counterweight

► *ENGINE DETONATION (OPERATION IN LOW OCTANE AREAS): See Note under Engine Specifications for recommended changes for foreign travel*

IGNITION

FIRING ORDER: 1–8–4–3–6–5–7–2.

Cylinders - RIGHT BANK 2–4–6–8. LEFT BANK 1–3–5–7.

SPARK PLUG GAP: .035".

Spark Plugs - AC No. 44 (All Engines), 14 mm. Torque to 20-25 ft. lbs.

► *SPARK PLUG NOTE:* If car consistently operated at above normal speeds cooler spark plugs, AC No 43, may be installed

COIL: Delco-Remy 1115082.

Ignition Current - 1.25 amps. idling. 3 amps. stopped.

Resistor - Delco-Remy No 1927809 1 40-1 65 ohms On coil bracket

► *COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil, and is by-passed during cranking.*

DISTRIBUTOR: Delco-Remy 1110876 (Standard), 1110877 (Eldorado Eng. early), 1110898 (Eldorado Eng. later). *See "Delco-Remy Window Distributors" in Electrical Section*

Condenser - Delco-Remy 1932004. **Capacity** .18-.23 mfd.

Contact Point Set - Delco-Remy 1931988.

Breaker Gap - .016" (new & used points).

Cam Angle - 26-33°.

► *BREAKER GAP AND CAM ANGLE NOTE:* Setting cam angle at 30° will provide 016" breaker gap

Breaker Arm Spring Tension—19-23 ozs

Rotation - Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	450	1-4	900
6-7.75	1300	12-15	2600
11-13	2075	22-26	4150

Vacuum Spark Control: 1116103 or 1116122 (1110876 & 1110877 Distr.) 1116124 (1110898 Distr.)

Vacuum Advance - 1116103

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	6.8-8.5
15.5	31	13.5-16

Vacuum Advance – 1116122

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	8-10
12	24	13.5-15.5

Vacuum Advance - 1116124

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	6 25-8 25
12	24	12 75-14 50

IGNITION TIMING

Setting - 5° BTDC.

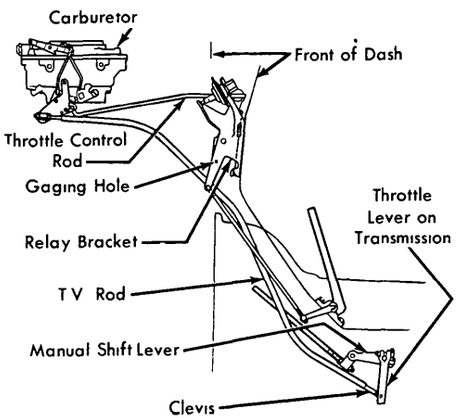
Timing - Disconnect vacuum line to distributor, and with engine idling at 400 RPM, set timing at point "A" on harmonic balancer in line with pointer on cover.

Timing Mark - Timing indicator marked on harmonic balancer with two lines "A" (5° BTDC), "C" (TDC).

CARBURETOR

► *CARBURETOR APPLICATION One 4-Barrel Carter or Rochester carburetor used on all models except Eldorado. Two Carter 4-Barrel carburetors used on Eldorado.*

► *POOR PERFORMANCE DURING WARM-UP CORRECTION: See MANIFOLD HEAT CONTROL above*

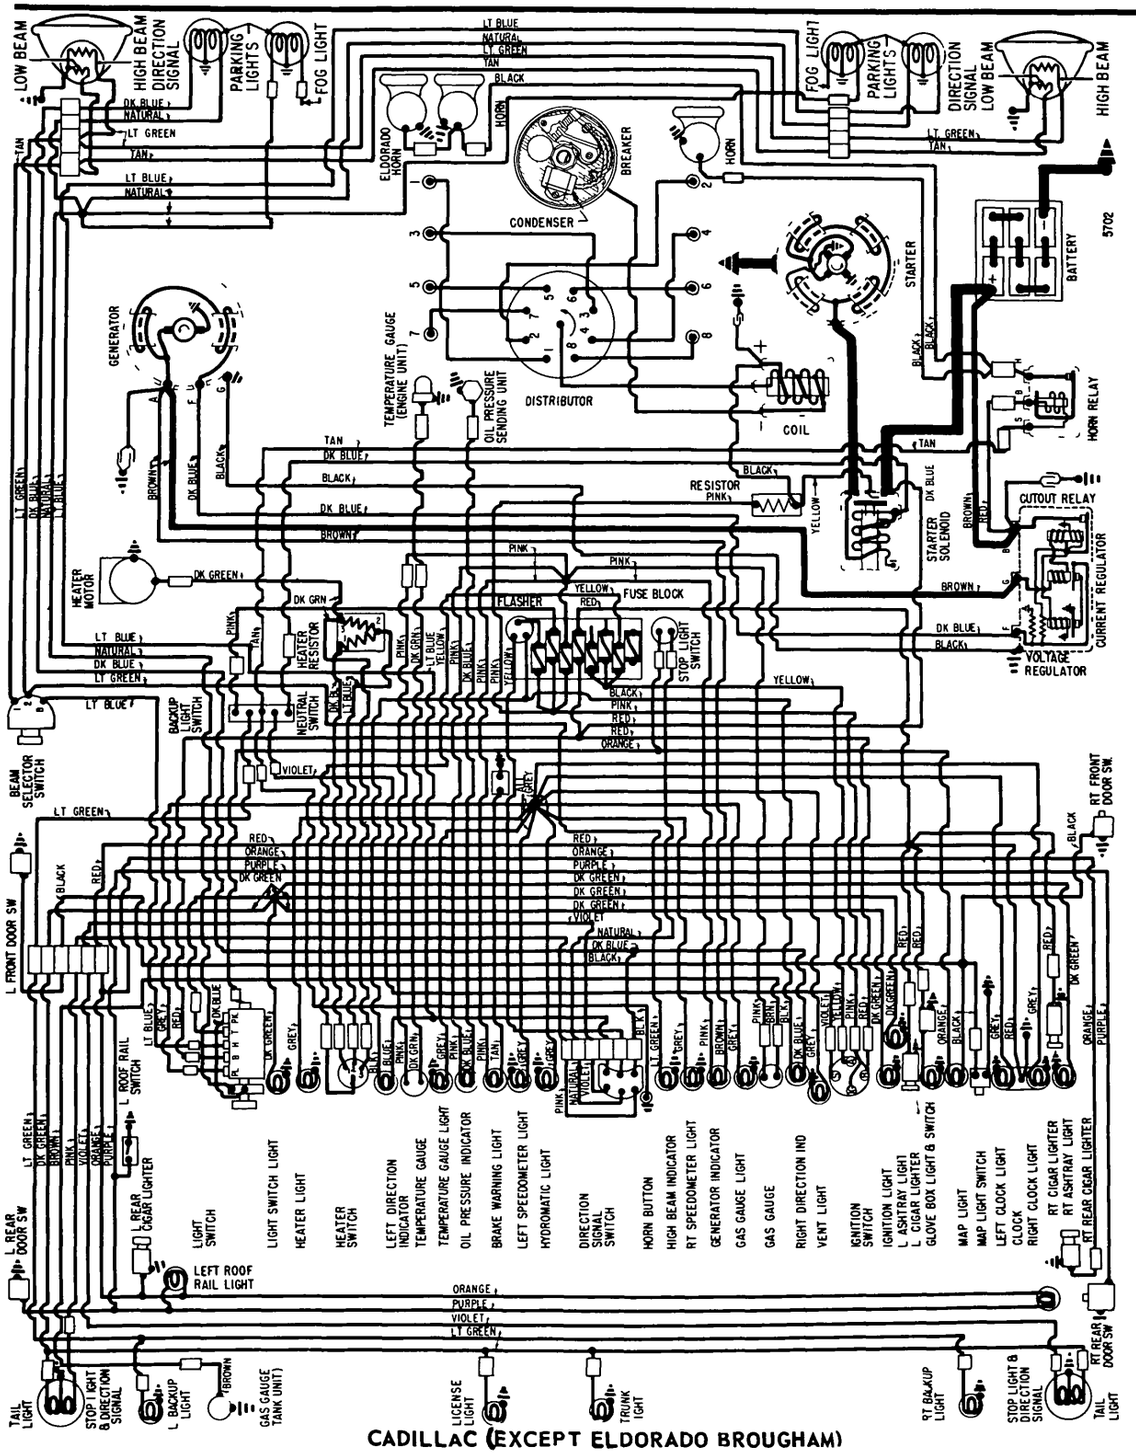


► *IDLE SPEED (AIR CONDITIONED CARS) Summer and Winter Idle Speed Adjustment is different as follows*

Summer Setting (Air Conditioner in Operation) - With transmission selector lever in either "Dr" range, and with air conditioner "ON" set idle speed at 420 RPM (Cars with Standard Engine). 490-510 RPM (Cars with Eldorado Engine).

Winter Setting (Air Conditioner Not in Operation) - With transmission selector lever in either "Dr" range, and with air conditioner "OFF" set idle speed at 420 RPM (Cars with Standard Engine), 490-510 RPM (Cars with Eldorado Engine).

Idle Speed-Up Control Adjustment (Cars with Air Conditioning): With engine at normal operating temperature and slow idle adjustment completed, turn air conditioner "ON" and place transmission selector lever in "N" position. Adjust engine idle speed to 900 RPM by loosening locknut on diaphragm shaft and turning knurled nut to obtain specified RPM. Tighten locknut.



Throttle Check Adjustment: Allow engine to idle and make sure that throttle check plunger is not in contact with throttle relay lever. Open throttle wide momentarily to allow engine manifold vacuum to drop and throttle check plunger to come out. Let throttle snap shut and observe delay caused by throttle check. If engine races throttle check plunger is too long. If engine stalls, plunger is too short. Adjust plunger screw as necessary for correct operation.

CADILLAC HYDRA-MATIC THROTTLE LINKAGE

THROTTLE LINKAGE ADJUSTMENT: Remove clip from carburetor throttle rod trunnion and remove trunnion from relay bracket lever (at front of dash). Place a ¼" drill shank through gauging hole in relay lever and dash relay bracket. With engine running, set throttle lever to hot idle position (Air Conditioner turned "OFF"). Adjust carburetor throttle rod trunnion to allow free entry into dash relay lever and install trunnion and spring clip. Push end of throttle valve rod (rod from carburetor to transmission throttle lever) toward rear of car to position transmission throttle lever against its stop. Bring rear jam nut up against trunnion with throttle in hot idle position. **Back off jam nut three complete turns.** Tighten front jam nut, making certain linkage does not bind in any position. *NOTE* It will be necessary to check and adjust throttle valve jam nut slightly to obtain smooth shifting. This should be done after completion of all other carburetor adjustments.

CONTINUED ON NEXT PAGE

CADILLAC (EXCEPT ELDORADO BROUGHAM)

CONTINUED FROM PRECEDING PAGE

► *THROTTLE LINKAGE ADJUSTMENT NOTE:* Throttle valve adjustment is set at 1½ turns (instead of 3 turns) at the factory. This setting should be changed to 3 turns after 500 to 2000 miles of operation.

ROCHESTER 4GC
(Standard Engine)

Rochester 4GC. Early - No. 7010100 (without Air Conditioning), No. 7010101 (with Air Conditioning). Later - 7012000 (without Air Conditioning), 7012001 (with Air Conditioning).

► *CARBURETOR PRODUCTION CHANGES AND RECOMMENDED PARTS AND SETTING CHANGES FOR IMPROVED PERFORMANCE: See "Cadillac (Carter & Rochester) Carburetors" in Carburetion Section*

► *MANIFOLD FUEL DISTRIBUTION· Carburetor RIGHT barrels feed Cyls. 2-3-5-8. LEFT barrels 1-4-6-7.*

► *IDLE SPEED ADJUSTMENT NOTE Idle Air By-Pass screw on throttle body is used to adjust idle speed. Throttle valves are normally closed at slow idle.*

Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw settings. *See "Cadillac (Carter & Rochester) Carburetors" in Carburetion Section*

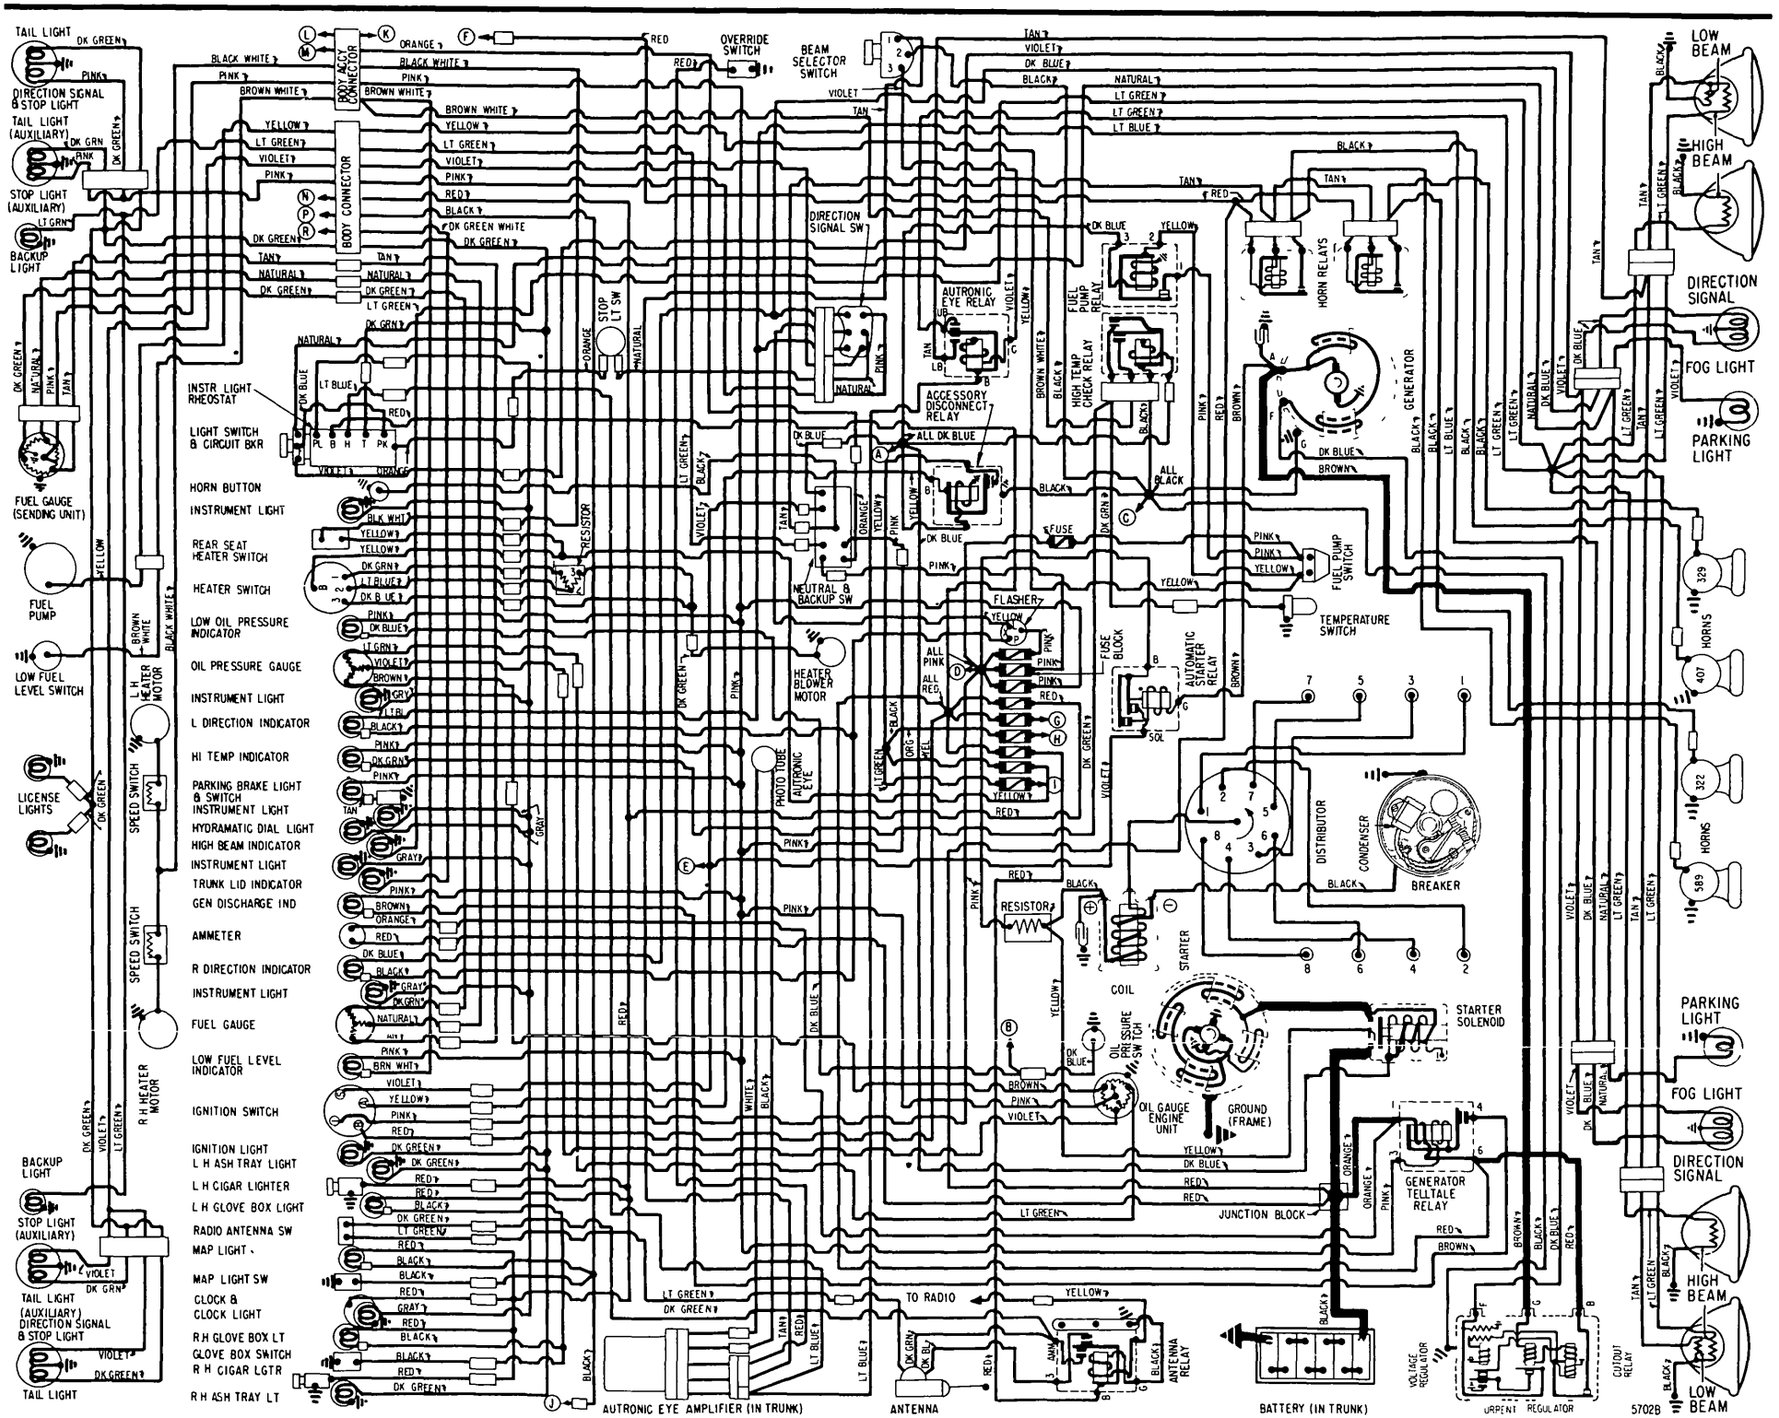
► *OTHER DATA See "Cadillac (Carter & Rochester) Carburetors" in Carburetion Section*

Hydra-Matic Throttle Linkage Adjustment: *See "CARBURETOR" above.*

Fuel Pump Pressure: 5¼-6½ lbs. at idle speed.

CARTER AFB
(Standard Engine)

Carter AFB 2479S (Without Air Conditioning), No. 2480S (With Air Conditioning).



► *CARBURETOR REPLACEMENT NOTE·* Use Carburetor No 2479S with Idle Speed-Up Control, Carter No 202-114U to replace Carburetor No 2480S on air conditioned cars

► *PRODUCTION CHANGE AND APPLICATION NOTE: This carburetor used on some cars after Engine No 101833*

Hydra-Matic Throttle Linkage Adjustm nt *See "CARBURETOR" above*

Fuel Pump Pressure· 5¼-6½ lbs. at idle speed.

CARB. EQUIPMENT

Fu l Pump: AC mechanical type (Exc Brougham) Electrical type mounted in gas tank (Brougham) Vacuum pump is part of engine oil pump

Replacement Fuel Pump (Exc. Brougham) - AC No 4362

Pressure - 5¼-6½ lbs at 1800 RPM

See "Fuel Pumps" in Carburetion Section

Gasoline Gauge: AC Electric

	Brougham	Others
Dash Unit (AC No)	1518655	1518739
Tank Unit (AC No)	1518565	1518588

See "Fuel Gauges" in Carburetion Section

Low Fuel Level Indicator (Brougham): Light on instrument panel comes on when fuel level in tank drops to 3 gallons (2 gals usable) *See Wiring Diagram*

BATTERY

Delco 3 FMR70-W (Exc. Brougham). 12 Volt, 11 plate, 70 ampere hour capacity (20 hr rate)

(Brougham) 12 volt 11 plate 72 ampere hour capacity (20 hr rate)

Battery Location - Separate compartment in right rear quarter panel accessible from trunk (Brougham) under hood on tray attached to radiator cradle (Others)

Battery Ground - Negative

Engine Ground - Engine to cowl

STARTER

Delco-Remy No 1107668 (Brougham), No. 1107657 (Others).

Armature - Delco-Remy No 1932185 (1107657 Str)

Drive - Overrunning clutch (solenoid pinion shift)

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 35 ozs min

Performance Data - 1107668

Torque	RPM	Volts	ℭ Amperes
0 ft lbs	3600-5100	10 6	65-100
ℭ	Lock	3 5	300-360

Performance Data - 1107657

Torque	RPM	Volts	ℭ Amperes
0 ft lbs	3240	10 6	91
ℭ	Lock	3 5	395

ℭ - Armature locked ℭ - Includes solenoid

Starting Switch (Exc. Brougham)· Delco-Remy Solenoid Switch 1119910 mounted on starter and controlled by Ignition & Starter Switch Delco-Remy 1116536 Turn key full RIGHT against spring tension to start

Starting Switch (Brougham): Delco-Remy Solenoid Switch 1119910 mounted under starter and controlled by Ignition & Starter Switch Delco-Remy 1116536 (turn ignition "ON") and Automatic Starter Relay Delco-Remy 1119924 (Vacuum and Electric controlled) *NOTE* - Should Automatic Starter fail turn Ignition & Starter Switch to full RIGHT against spring tension to start

►*ACCESSORY DISCONNECT RELAY (Brougham) NOTE·* Delco-Remy No 1116927 Relay limits battery load by opening circuits to Air Conditioning Heater and Radio while starter is cranking engine

N utral Safety & Back-up Light Switch Delco-Remy 1998170 (Brougham) 1998137 (Others) Located on steering column

CONTINUED FROM PRECEDING PAGE

MISC. ELECTRICAL

H adlamps: Sealed Beam Two headlamps standard on all models except Brougham Four headlamps standard on Brougham *See "4-Headlight" in Electrical Section*

Autronic Eye: *See "Autronic Eye" in Electrical Section*

Dir ction Signal: *See "Direction Signals" in Electrical Section*

Stop Light Switch (Location): Mechanical type, mounted on brake pedal retaining bar flange

Adjustment - Rotate cam on pedal bar until stoplights are off, when pedal is in fully released position Adjust cam until stoplights come on at slightest movement of pedal

FUSES: Located on fuse panel under instrument panel, except as noted below

Air Conditioner - 25 amps (Brougham), 20 amps (Other)

Air Ride - 6 amps (Brougham)

Back-up Lights - 9 amps

B dy Feed (Brougham) - 25 amps , protects Cigar Lighter, Clock Glove Box-Map-Roof Rail lights

B dy Feed (Others) - 25 amps , protects Cigar Lighters, Clock, Dome or Bow light Glove Box & Trunk Light

Fuel Pump - 6 amps (Brougham) Left side front speaker housing

H ater - 20 amps

Instruments - 9 amps Protects Instruments and all Tell-Tale lights Instrument lights are protected by Lighting Circuit Breaker

Direction Signals - 9 amps *NOTE* - Cut four coils off early 6 amp fuse holder spring for 9 amp fuse

CIRCUIT BREAKERS: (Lighting) - 25 amps (Brougham), 20 amps (Other) Located in lighting switch Protects the following circuits: Ash Tray, Fog Head, Instrument Parking and Stop Lights *NOTE* - Map light protected by circuit breaker on all except Brougham

Hydro-Lectric System (When used) - 40 amps , located on left inner cowl panel

Seats & Windows - 40 amps , located on left inner cowl panel *NOTE* - Protects Brougham Trunk Lid Power Circuit

Trunk Lock (Electric) - 5 amps located on left inner cowl panel Protects Trunk Lid locking circuit

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section*

ENGINE SPECIFICATIONS: V8 Overhead valves Two engines used Standard engine has Single 4-barrel Carburetor, Eldorado engine has Two 4-barrel carburetors with special intake manifold

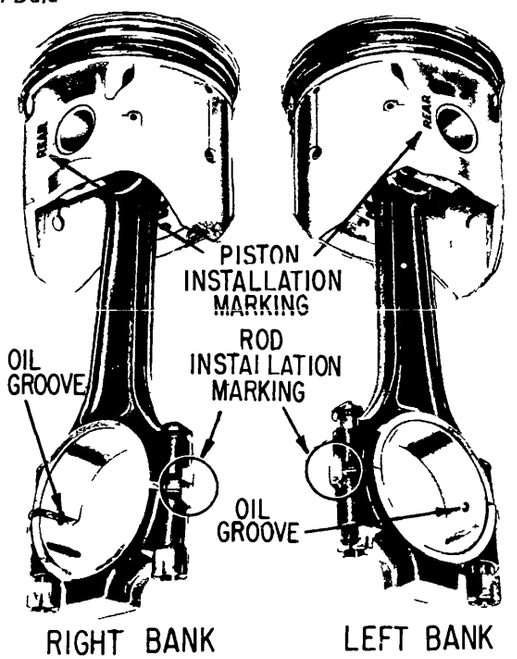
Bore	Stroke	Displacement	Rated HP
4"	3 5/8"	365 cu ins	51 2

Engine	Compr. Ratio	Developed HP
Standard	10 0-1	300 at 4800 RPM
Eldorado	10 0-1	325 at 4800 RPM

C mpr ssi n Pr ssur - *See TUNE-UP*

►*OVERSIZE CYLINDER BORE CAUTION:* Engines with mark * preceding Engine Unit No (on rear of crankcase) have 010" Oversize cylinder bore and pistons *See "Original Bore & Pistons" in Cadillac Special Data*

►*ENGINE OPERATION IN LOW OCTANE FUEL AREAS (Foreign Travel):* Standard 1957 engine requires 97 (Research Method), 87 (Motor Method) Octane rating gasoline to prevent detonation When only lower Octane rating gasoline is available compression ratio should be lowered Install special low compression pistons Part No (Std) 3630787 or (010") No 3630788 , (020") No 3630789, (030") No 3630790 Oversize *NOTE* - No changes in Distributor, Carburetor or Timing required



►*LOUD CLICKING NOISE CORRECTION & PISTON PRODUCTION CHANGE:* To correct loud clicking noise (under light load conditions) which stops when spark plug wire is disconnected from noisy cylinder, replace early type cam ground scuff band piston with later round head type New design pistons entered production with Engine No 091632 (Air Cond Cars), No 091594 (less Air Cond Cars), No 094206 (Brougham)

►*CLICKING OR RATTLING NOISE CORRECTION:* To correct, rebend oil filter line where it contacts front engine cover due to vibration This noise is similar to noise produced by pressure regulator valve

►*ENGINE BALANCE CHECK & UNBALANCE CORRECTION. See "Engine Balancing" in Cadillac Special Data*

ENGINE REMOVAL: *See "Engine" in Cadillac Special Data*

OIL PAN REMOVAL: *See "Oil Pan" in Cadillac Special Data*

CADILLAC PISTON & R D ASSY.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Cadillac Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Cadillac Special Data*

PISTONS

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with mark * preceding Engine Unit No (on left rear of crankcase) have 010" oversize pistons and cylinder bore Standard cylinder bore size 4 0000-4 0020"

Original Bore & Pistons - *See "Original Bore & Pistons" in Cadillac Special Data*

Pistons - Two types used Early type had cam ground scuff bands on top and second lands, later type had round top pistons without scuff bands *See "Clicking Noise Correction" early type piston cars above*

Weight - 22 72 ozs (less pin)

Removal - Piston and rod assemblies removed from above Install connecting rod Guide studs J-3224, on connecting rod bolts to guide rod out through bore without nicking or scratching *CAUTION - Do not nick lower edge of bore when pushing rod up*

Fitting New Pistons: Use micrometer or feeler gauge *See "Pistons" in Cadillac Special Data*

Replacement Pistons: Standard (Code "L" or "M") and 010", 020", 030" Oversize with rings and pin

Installing Pistons: Install in cylinder with piston pin boss marked "Rear" toward rear of engine *See "Connecting Rods" (below) for installation of pistons on rods*

PISTON PIN

Pin is pressed in connecting rod

Diameter - 1 000" **Length** - 3 3/32"

Pin Fit in Piston - 00005- 0001" clearance at 70°F Not fitted in field (replace piston & pin assembly)

Pin Fit in Rod - (NOTE - Special tools required) *See "Piston Pins" in Cadillac Special Data*

PISTON RINGS

Top compression ring is chrome plated, second compression ring is lubrited An expander is located behind oil ring

Ring	Width	End Gap ①	Side Clearance
Compr (#1&2)	5/64"	013- 023"	0017- 0035"
Oil (#3)	3/16"	013- 023"	0008- 0026"

① - With Standard 4 0000" cylinder

Replacement Rings Standard, 010", 020", 030" oversize

►*REPLACEMENT RING NOTE* Use re-ring sets with chrome top compression ring and expander behind oil ring or multi-piece oil rings

Installing Rings: Chamfered face of both compression rings must be installed toward top of piston

CONNECTING RODS

Length - 6 625" (center to center)

Weight - 23 49 ozs

Crankpin Journal Diameter - 2 2488-2 2493"

Out-of-Round Limits - 00025"

Bearings - Durex 400 bearing shell is steel backed aluminum Bearing halves interchangeable No shims

Clearanc - 0005- 0021" (Service limit 0035")

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Replacement Bearings: Furnished in standard size only.
Installing Rods: Install piston and rod in cylinder bore with "REAR" on piston toward rear of engine and numbers on lower end of rod down. Numbers 1,3,5,7 are in left bank, 2,4,6,8 are in right bank.

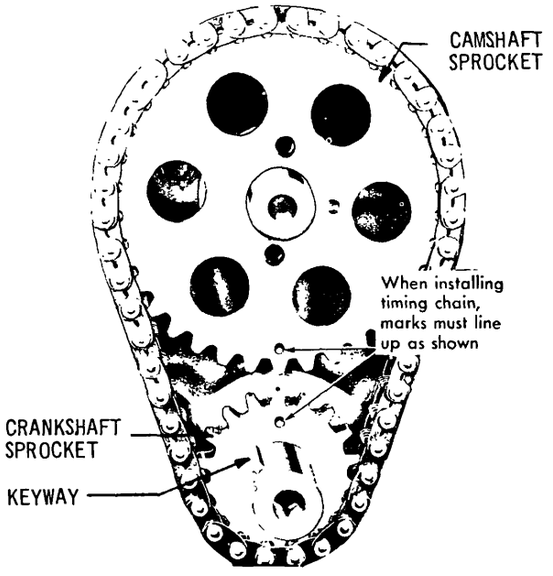
CRANKSHAFT

Journal Diameters - 2.625".
Out-of-Round Limits - .0025".
Bearings - Rear, steel backed babbitt, shell type insert. All other bearings are Moraine 400 Aluminum.

►*REAR MAIN BEARING INSTALLATION CAUTION:* For proper alignment of thrust surfaces of rear main bearing proceed as follows: Install upper and lower inserts in block and bearing cap. With rear oil seal in place and mating surfaces clean, install bearing cap and tighten screws to 1-2 ft. lbs. torque. Using a plastic hammer, drive crankshaft forward, then rearward, then forward again (*CAUTION* - Pound on counterweights, not on connecting rods). Tighten bolts evenly to specifications. Check to make sure crankshaft is not binding.

►*MAIN BEARING CAPSCREW NOTE: Lockwashers not used under heads of bearing cap retaining screws.*
Clearance - .0008-.0025" (service limit .002" front, .003" others).
Replacement Bearings: Furnished in standard size only.
End Thrust: Taken by flanged rear main bearing.
End Play - .001-.005" (service limit .010").

►*HARMONIC BALANCER TO CRANKSHAFT SCREW PRODUCTION CHANGE & CAUTION:* Use only new type screw Part No. 1468651 with smaller diameter shank between threaded portion and head of screw and install without lockwasher, but include flatwasher. This replaces old screw Part No. 455012. Tighten screw to specifications.



Crankshaft Removal: See *"Crankshaft & Bearings" in Cadillac Special Data.*
Rear Main Bearing Oil Seal Installation: See *"Crankshaft & Bearings" in Cadillac Special Data.*

CAMSHAFT

►*CAUTION:* Handle shaft with care to avoid damage or mis-alignment. Check whenever removed.
Removal, Alignment & Installation - See *"Camshaft & Bearings" in Cadillac Special Data.*
Bearings - Steel backed babbitt bushings.
Clearance - .001-.0022" (service limit .004" max.).
Bearing Out-of-Round Limit - .002" max.
Timing Chain: Link-Belt side guide type. **Width** 11/16", **Pitch** .500", **Length** 23" or 46 links.
Installation & Removal - See *"Timing Chain" in Cadillac Special Data.*

Camshaft Setting: Both sprockets marked "0". Mesh chain with sprockets turned so that marks adjacent and in line with straightedge across shaft.

►*CAUTION:* Install chain as a unit with camshaft sprocket (sprocket press fit on shaft with locating dowel and two retaining capscrews).

CADILLAC VALVE TIMING MARKS

VALVES

Tappet Clearance: None in service, hydraulic.

Valve	Head Diam.	Stem Diam.	Length
Intake	1.875"	.3415-.3425"	4.688"
Exhaust	1.437"	.3415-.3420"	4.694"

Valve	Seat Angle	Lift	Stem Clearance
Intake	ℂ 44°	.451"	ℂ .0010-.0025"
Exhaust	ℂ 44°	.451"	ℂ .0010-.0025"

ℂ - New Valves (Valves in service can be refaced to 45° if seat width recommendation not exceeded).
ℂ - New valves and guides. Worn limit .005" maximum.

►*NEW VALVE SEAT CAUTION:* Do not lap or grind so that valve contact is more than 1/64" (1° difference between valve and seat angle designed to provide "hairline" contact.

Valve Seat Recommendations - 3/64-1/16" (moderate speed or city driving), 1/16-3/32" (high speed driving). Cut seat so that distance from outer edge to edge of flange on valve head not more than 1/32".
Valve Stem Oil Seal - Rubber oil seal installed in lower groove on valve stem (below valve keeper).
Oil Seal Installation - See *"Valve System" in Cadillac Special Data.*
Valve Guides: Pressed in cylinder head from combustion chamber side with longest chamfer end pointing toward rocker arm side of head. Use Remover Tool J-3062 to drive out old guides (toward top of head), and Installer Tool J-3066 to drive new guides in (tool plate serves as stop for driver).
Valve Springs: Free Length 2.25" (Approx.).

Valve Spring Specifications	Pressure	Length
Valve Closed	60-65 lbs.	1.946"
Valve Open	155-165 lbs.	1.496"

►*SPRING INSTALLATION CAUTION:* Lower end of valve spring must be seated in recess in cylinder head.
Valve Lifters: Hydraulic.
See *"Valve System" in Cadillac Special Data.*
Valve Lifter Removal - See *"Valve System" in Cadillac Special Data.*

►*HYDRAULIC LIFTER PRODUCTION CHANGE & CAUTION:* Beginning with Engine No. 042804, new type Hydraulic Lifter Assembly & Pushrod entered production. DO NOT mix new type Hydraulic Lifter Assembly or Pushrod with earlier type. New type Hydraulic Lifter Part No. 5231740 requires the usage of New Type Pushrod Part No. 1468453. New lifter has wider relieved section with only one oil feed hole. New Pushrod does not have grooves at ends and is .187" shorter than early type.

Rocker Arm Assembly: See *"Valve System" in Cadillac Special Data.*

►*ROCKER ARM COVER PRODUCTION CHANGE:* Gasket contact flange increased to 1 '8" width approx. Engine No. 007149. Gasket increased in same manner. Cover with gasket is interchangeable with earlier type when used together. When installing New Type Cover & Gasket, tighten cover attaching screws to new specifications.

VALVE TIMING

See *"Camshaft Setting" under CAMSHAFT above.*

►*VALVE TIMING NOTE: Specifications are "Without Ramp"*
Intake Valves - Open 25° BTDC Close 78° ALDC.
Exhaust Valves - Open 75° BLDC. Close 28° ATDC.
Valve Timing Check - Not practical to check in field. Manufacturer recommends removing timing chain cover and checking timing gears.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Cadillac Special Data.*

Crankcase Capacity: 5 qts. Add one qt. when changing filter.
Normal Oil Pressure: 30-35 lbs. min. at 30 MPH. 15 lbs. at idle speed.
Pressure Regulator Valve - On oil pump. Not adjustable.
Oil Pressure Indicator (Exc. Brougham) - Light on instrument panel controlled by pressure switch AC No. 1508648, mounted on engine.
Oil Pressure Indicator (Brougham) - Light on instrument panel controlled by pressure switch AC No. 1508624, mounted on engine.
Oil Pressure Gauge (Brougham) - AC electric in addition to Indicator.
Dash Unit - AC No. 1518655.
Engine Unit - AC No. 1508566.
See *"Oil Pressure Gauges" in Miscellaneous Section.*
Oil Pump: Helical gear. Mounted on rear main bearing cap.
Oil Pump Removal & Overhaul - See *"Oiling System" in Cadillac Special Data.*
Vacuum Pump: Part of Oil Pump Assembly. See *"Vacuum Pump" in Cadillac Special Data.*
Oil Filter: Full flow (Brougham), Partial flow (Others). Replace element every 6,000 miles or more frequently in dusty areas.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Crankcase Ventilation: Air intake in oil filler cap (oil wetted type) with outlet connection at rear of valve compartment cover, and outlet pipe extending down below engine at right corner.

COOLING

►*BELT TENSIONER GAUGE NOTE:* Belt Tensioner Gauge Tool No. J-6733 released for field service for more accurate belt adjustments. Place Gauge on belt, loosen belt tension adjusting nuts, and tighten or loosen belt until red line on barrel is in line with shoulder.

Water Capacity: (With Heater) Models 62, 60S, 86-20 qts.; Model 75-21 qts.; Brougham 22½ qts.

(Without Heater) Except Brougham 19 qts.

Pressure Valve: AC No. 850800. Radiator filler cap. Opens at 12-15 lbs.

Thermostat: Dole type. In water outlet at top of pump body.

Standard Setting - Starts to open at 163° to 168°F.

High Temp. - Starts to open at 177° to 182°F.

Water Pump: Packless, sealed ball bearing type. *See "Water Pumps" in Cadillac Special Data.*

Pump Removal - Drain cooling system. Remove all belts. Disconnect throttle spring. Detach Power Steering pump and bracket assembly and secure to one side. Remove two remaining thermostat housing screws housing and thermostat. Disconnect lower radiator hose and upper and lower heater hoses. Loosen clamp on transmission Oil Cooler hose. Remove remaining pump flange to cyl. block screws and remove Oil Cooler hose. On Air Cond. cars, remove two compressor mounting bracket screws from water pump flange. Loosen compressor support screw and move support away. Remove water pump and gaskets.

Temperature Gauges (Exc. Brougham): AC electric.

Dash Unit - AC No. 1513326.

Engine Unit - AC No. 1513130.

Temperature Gauge (Brougham): AC No. 1513301. Mechanical.

High Temperature Indicator (Brougham): Light on instrument panel controlled by thermal switch in left cylinder head. Light comes on when engine temperature reaches approx. 239°F.

HYDRA-MATIC DRIVE

"Jetaway". Four speed hydraulically controlled automatic transmission of same design as used on previous models.

►*WHISTLING AND/OR BUZZING NOISE CORRECTION:* *See "Dual-Coupling Hydra-Matic" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

Lubrication - Check fluid level avery 2,000 miles, drain and refill every 12,000 miles or once a year. Use only Cadillac Hydra-Matic Fluid.

►*LUBRICATION CHANGE NOTE:* When vehicle is driven under heavy duty conditions (heavy city traffic, continuous mountain driving, prolonged driving during hot weather) it is advisable to drain and refill transmission at 6,000 mile intervals.

Capacity - 12 qts. (approximately). *NOTE* - The correct level is ¼" below the "Full" mark with transmission hot and engine running.

Checking Fluid Level - Run engine with selector lever in "N" (Neutral) or "P" (Park) position at 800 RPM for 1½ minutes to normalize temperature and to be sure coupling is full. Reduce engine speed to slow idle, clean dipstick and check fluid level. With engine running, add fluid through dipstick tube to bring fluid level to ¼" of "FULL" mark on dipstick. *NOTE* - From "LOW" to "FULL" mark on dipstick requires 1 qt. of fluid.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER HYDRA-MATIC SERVICE DATA: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

UNIVERSALS

Mechanics. Needle bearing type. Three used with two piece propellor shaft and center bearing.

Propeller Shaft Center Bearing: *See "Propeller Shaft" in Cadillac Special Data*

REAR AXLE

Own Make. Hypoid gear, semi-floating with Hotchkiss Drive. *See "Cadillac Hypoid" in Rear Axle Section.*

►*REAR WHEEL BEARING OIL LEAK CORRECTION:* Check for rubber flashing or nick indicating defective "O" ring located between bearing and housing, and replace if found defective.

►*OVERHAUL CAUTION:* Manufacturer recommends that Carrier Assembly be serviced by replacement. DO NOT disassemble this unit or attempt service work other than oil seal and universal joint replacement

Axle Identification - Gear ratio identified by number stamped on front face of carrier assembly at end of oil return passage. *NOTE* - Brougham rear axle assemblies further identified by letter "B" preceeding axle ratio number

Series	Ratio	Mark
60,62 Exc.Eldorado & AC Cars	3 07-1	3
75,62?S,62?7S,60&62 With AC ©	3 36-1	6
86 ©	3 77-1	7
Brougham	3 36-1	B6

© - Optl. on 60 & 62 without AC. © - Optl. on 75.

►**Pinion Bearing Pre-Load Caution:** Must be adjusted each time pinion shaft nut loosened. *See "Cadillac Hypoid" in Rear Axle Section*

Axle Shaft Removal: Remove wheel and take out screws holding brake drum on axle shaft flange and remove drum. Remove nuts and lockwashers from bolts holding bearing retainer and backing plate on axle housing, use Puller J-942-1 and Slide Hammer J-2619 to remove axle shaft.

►*CAUTION:* Use care not to damage axle shaft oil seal when sliding axle shaft out and do not disturb position of backing plate on housing.

Commercial Cars - Remove wheel, remove nut and washer on end of shaft. Use Puller (Snap-On No. S4567 or similar five jaw type) to remove wheel hub and brake drum. Disconnect brake line. Take out retaining screws and remove dust shield (bearing retainer) and backing plate. Use Puller J-838 to pull axle shaft and bearing assembly out, using care not to damage oil seal in housing

Differential Carrier Removal: Disconnect rear universal joint and remove lubricant from rear axle housing. Remove axle shafts (see above). Remove nuts and washers holding carrier to axle housing and remove entire assembly with gasket. *See "Overhaul Caution" above.*

Wheel Bearings: Sealed ball-bearing type.

►*CAUTION:* Check bearings for loss of lubricant when shaft removed. If bearings spin freely indicating loss of lubricant, replace bearings.

Pinion Bearing Preload Adjustment: Pinion should be adjusted whenever nut on end of pinion shaft disturbed (for universal joint yoke or oil seal replacement). *See "Cadillac Hypoid" in Rear Axle Section.*

SHOCK ABSORBERS

Delco. Direct acting permanently sealed airplane type.

(Brougham) - Mounted in tower on frame crossmember (front), lower end attached to bracket at rear edge of lower suspension arm (rear).

(Others) - Located within coil springs (front), "Sea-Leg" type installation (rear)

	Shock Absorbers	
Series	© Front	© Rear
60S, 62	5535529	5535530
75, 86	5535531	5535532

© - Cadillac part numbers.

FRONT SUSPENSION
(Exc. Brougham)

Independent type with direct acting shock absorbers within coil springs. *See "Cadillac" in Suspension & Wheel Alignment Section*

Steering Axis Inclination - 4°

Caster - 0° to Neg. 1°. Adjustment must be equal within ½° or less on both sides of car.

Camber - Neg. 3/8° to Pos. 3/8° with ¼-½° more positive camber on left side.

Toe-In - 3/16-1/4" (standing) Loosen clamp bolts, turn adjusters at outer end of each tie rod equally.

►*TIE ROD PRODUCTION CHANGE & CAUTION:* New tie rod entered production with Engine No. 023831 requires accurate positioning of sleeve clamps to eliminate interference with frame. All cars after Engine 023830 should have openings in clamps **down** and clamp bolts parallel with ground.

Toe-Out on Turns - With outer wheel turned 20°, inner wheel should be 22°40'.

FRONT SUSPENSION
(Brougham)

Independent type with direct acting shock aborbers with "Air Suspension" in place of coil springs. *See "Cadillac" in Suspension & Wheel Alignment Section*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Steering Axis Inclination - 4°.
Caster - 0° to Neg. 1°. Adjustment must be equal within ½° or less on both sides of car.
Camber - Neg. 3/8° to Pos. 3/8° with ¼-½° more positive camber on left side.
Toe-In - 1/8" ± 1/32" (standing). Loosen clamp bolts, turn adjusters at outer end of each tie rod equally.

►*TIE ROD PRODUCTION CHANGE & CAUTION:* New tie rod entered production with Engine No. 023831 and requires accurate positioning of sleeve clamps to eliminate interference with frame. All cars after Engine 023830 should have openings in clamps down and clamp bolts parallel with ground.

STEERING

Power Steering: Saginaw (In-Line) Hydraulic. Hydraulically operated in-line power steering gear which combines the recirculating ball type gear with a concentric hydraulic booster.
See "Saginaw (In-Line) Power Steering" in Steering Sect.

►*FRONT TIRE RUB CORRECTION:* Reposition stabilizer bar to center it. If tires still rub stabilizer bar, install new type Steering Knuckle Stop Part No. 1468700 on each side. The stop is "U" shaped metal stamping attached to lower suspension bar by the rear outer spherical joint attaching bolt.

Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Saginaw (In-Line) Power Steering" in Steering Section.*
Steering Gear Removal: *See "Saginaw (In-Line) Power Steering" in Steering Section.*

BRAKES

Bendix (Hydraulic) Single Anchor (Without Eccentric). Conventional two shoe. Parking brake applies rear wheel service brakes.
See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.

►*BRAKE SPRING SILENCER NOTE:* Brake Drum Silencer Spring discontinued with Engine No. 012025 as unnecessary with improvements in brake assemblies.

►*BRAKE SQUEAK CORRECTION:* 1) Replace Washer Part No. 5456106 (if perfectly flat). This washer must flex into face of star wheel as brakes are applied. 2) Increase clearance (for adjuster in brake shoe web to eliminate bind) by filing the brake shoe web.

Drums - Diameter 11.995-12.005". **Out-of-Round Limit (I.D.)** - (62,60S) .007" (front & rear), (75,86) .007" front, .006" rear. Regrinding limits 12.060".
Wheel Cylinder Diameter - 1 1/8" front, 1" rear.
Lining: Molded type riveted to shoes. Primary shoe lining has ½" wide circumferential groove 1/8" deep full length.
Replacement Linings - Furnished in Standard size only.

Lining Length & Width

Model	Primary	Secondary
62,60S (front & rear)	10.12" x 2½"	12.98" x 2½"
75,86 (front & rear)	12.98" x 2½"	12.98" x 2½"

Thickness - ¼" All.
Braking Power - (62,60S,75) 55.8% front, 44.2% rear. (86) 52.8% front, 47.2% rear.
Clearance - .010" (top), .015" (bottom). Adjusting screw backed off 14 notches from point where wheel can just be turned by hand.
Standard Master Cylinder: Located on left frame side member.
Checking Fluid - Master cylinder reservoir located on left front fender apron adjacent to Hydrovac Power Unit. Fill to within ¾" of top.
Removal - Remove heat guard. Disconnect outlet fitting and brake filler tube fitting. Disconnect pedal to relay rod from relay by removing snap ring and retainer. Remove screw securing master cylinder to frame and disconnect pedal from actuating arm and remove master cylinder.
Power Brakes: Hydrovac Power Unit. Used with standard master cylinder.
See "Hydrovac Power Unit" in Brake Section.

►*HYDROVAC BRAKE CONTROL VALVE AIR SEAL PRODUCTION CHANGE & CAUTION:* Effective with engine No. 025800 Hydraulic Control Valve Air Seal reversed to assist hydraulic seal in prohibiting brake fluid from being drawn into vacuum side of system and into intake manifold. If above difficulty experienced on early cars, reverse Air Seal as described above.

►*POWER BRAKE BUZZING NOISE CORRECTION:* Air in fluid at control valve assembly causes valve vibration when brakes are released or applied, causing buzzing noise. To correct bleed system, especially at fitting above control valve assembly. Repeat if necessary. If correction NOT permanent, check for air leaks into fluid at master cylinder, wheel cylinders or within power unit itself.

►*HYDROVAC POWER BRAKE HYDRAULIC CYLINDER SEAL NOTE:* Hydraulic cylinder secondary seal Part No. 2248162 (In late repair Kit No. 1467730 or order separately) incorporated in power brake unit on late production cars to eliminate possibility of brake fluid leakage between cylinder and end plate. Seal is located under hydraulic cylinder lock nut. Install this seal on early production cars for correction of leaks in this area.
Removal of Power Unit - Disconnect filler tube, vacuum inlet, hydraulic inlet and outlet fittings and cap lines. Remove four bolts securing unit to cowl and remove unit.

MISC. MECHANICAL

Windshield Wipers: Cable operated - Vacuum type.
See "Windshield Wipers" in Miscellaneous Section.
Trunk Lid Lock: Trunk lid electric lock operated by switch in glove compartment.
See "Cadillac Rear Comprtment Lid Lock" in Misc. Sect
Trunk Lid Control (Brougham): Reversible electric motor operating a jack screw and limit switches which control opening and closing of the trunk lid.
See "Eldorado Brougham Lid Lock" in Miscellaneous Section.
Power Window Regulators: Electric, with reversible motor in each window.
See "Electric Window Regulators" in Miscellaneous Section.
Power Top Control: Hydro-Lectric with "sealed" system which does not require periodic draining and refilling.
See "Top Controls" in Miscellaneous Section.
Door Lock (Eldorado Brougham): Front door lock solenoid controlled by switch in each door. Rear door lock solenoid controlled by neutral switch (that causes inside handle to free wheel), plus a safety interlock switch which controls interlock solenoid which prohibits transmission selector lever from moving into drive position with either rear door open.
See "Eldorado Brougham Door Locks" in Miscellaneous Section.
Power Seat Adjusters (2-Way): Electric type with single reversible type motor for horizontal adjustment.
See "GM 2-Way Seat Regulators" in Miscellaneous Section.
Power Seat Adjusters (6-Way): Electric type with single adjustable motor. *See "GM 6-Way Seat Regulators" or "Eldorado Brougham Seat Regulators" in Misc. Sect.*
Air Conditioning: Frigidaire & Harrison, with magnetic compressor clutch (compressor operates only with switch "ON").
See "Frigidaire & Harrison (GM) Air Conditioning" in Miscellaneous Section.

►*JACKING & HOISTING CAUTION (ALL MODELS): Before jacking or hoisting, s "Jacking & Hoisting Precautions" in Susp nsion & Wh l Alignm nt S ction.*

MODEL IDENTIFICATION

ENGINE & SERIAL NUMBER: Stamped on machined boss cast on upper right hand corner of front face of right hand cylinder block, and top flange of right hand frame just forward and adjacent to No. 1 body bracket, and on lubrication plate attached to front face of left door lock pillar. *NOTE* - Number (example below) includes identification data.

① ② ③
58 E 000001

① - Year '58 (1958).
② - Body Style, see below.
③ - Beginning Engine Serial Number.

Body Style

E - 62 Eldorado Biarritz Conv.
F - 62 Convertible.
G - 62 Coupe.
H - 62 Eldorado Seville.
J - 62 Coupe de Ville.
K - 4 Dr. Sedan.
L - 62 Sedan de Ville.
M - 60S (Fleetwood)
N - 62 4 Dr. Sedan
P - 70 Brougham
R - 75 4 Dr. Sedan
S - 75 4 Dr. Imp. Sedan
Z - 86 Comm. Chassis

Engine Unit Number Note: Stamped on top of crankcase behind left hand cylinder block with a prefix (see below) indicating model.

S ries (1958)	Engine Unit Prefix
60,62,75,86	86X
60,62,75,86 With Air Cond.	86K
60,62,75 With three Carburetors	8QX
62 With three Carburetors & Air Cond.	8QK

►*ENGINE UNIT NUMBER NOTE:* "L.C." will be added as a suffix to engine unit number on all engines built to low compression specifications.

NOTE- Mark * preceding Engine Unit Number indicates cylinder bore and pistons are .010" oversize.

TUNE-UP

COMPRESSION PRESSURE: 165-185 lbs. (at cranking speed), 212 to 230 lbs. (at 1000 RPM).

VACUUM READING: Not specified.

►*VACUUM CHECKING CAUTION: When checking engine vacuum, shut off engine before removing vacuum hose. Plunger in vacuum operated throttle check will increase ngine speed to approximately 900 RPM if hose is removed with engine running. Set hand brake firmly before checking engine vacuum.*

VALVE TAPPET CLEARANCE: None in service (hydraulic lifters).

MANIFOLD HEAT CONTROL: Automatic thermostatic type. This valve diverts exhaust gasses of left hand cylinder bank through carburetor heating passages in intake manifold to right hand exhaust system, during warm-up period.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG: .035"

Spark Plugs - AC no. 44 (All engines). .14 mm. Torque to 20-25 ft. lbs.

COIL: Delc -Remy 1115082.

Igniti n Curr nt - 1.25 amps. idling, 2.4 amps. stopped.

R sist r - Delco-Remy 1927809. On coil bracket.

►*COIL RESISTOR NOTE: R sistor is connected in lead from ignition switch-to-coil, and is by-passed during cranking.*

DISTRIBUTOR: Delco-Remy 1110909 (Std. Eng.). 1110926 (Eldorado Eng.). *See "Delco-Remy Window Distributors" in Electrical Section.*

Condenser - Delco-Remy 1932004. **Capacity** .18-.23 mfd.

Contact Point Set - Delco-Remy 1931988.

Breaker Gap - .016-.021". Set at .016".

Cam Angle - 28-32°. Set at 30°.

Breaker Arm Spring Tension - 19-23 ozs.

Rotation - Counterclockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0-1½	400	0-3	800
2.5-4	600	5-8	1200
5-7	1400	10-14	2800
7-9	2000	14-18	4000

Vacuum Spark Control: Delco-Remy 1116122.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	8
1.75-5.25	3.5-10.5	11
5.25-11.2	10.5-22.5	13
10.5-12.7	21-25.5	15

IGNITION TIMING

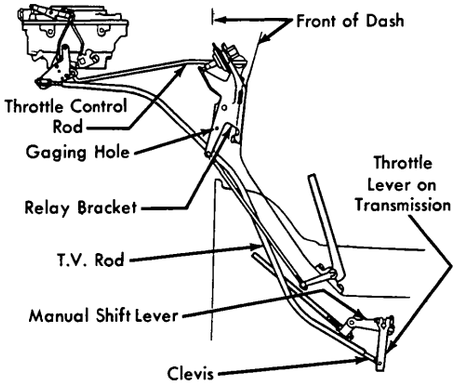
Setting - (99 Octane Fuel). 5° BTDC (Single Carb.),10° BTDC (Triple Carb.).

►*SINGLE CARB. DETONATION NOTE:* When detonation occurs with Std. Setting and lower Octane fuels, reduce timing to 2½° BTDC.

►*TRIPLE CARB. NOTE:* If 98 Octane fuel used, set timing at 7½° BTDC.

Timing - Disconnect vacuum line at distributor, idle engine to 450 RPM and rotate distributor to set timing at correct degree mark on balancer as shown in "Setting" and "NOTES" above.

Timing Mark - Timing indicator marked on harmonic balancer with three lines - "C" (TDC), "5" (5° BTDC), "10" (10° BTDC).



CARBURETOR

►*CARBURETOR APPLICATION: One 4-Barrel Carter or Rochester carburetor used on Standard Engine, three Rochester 2GC 2-Barrel carburetors used on Eldorado Engine.*

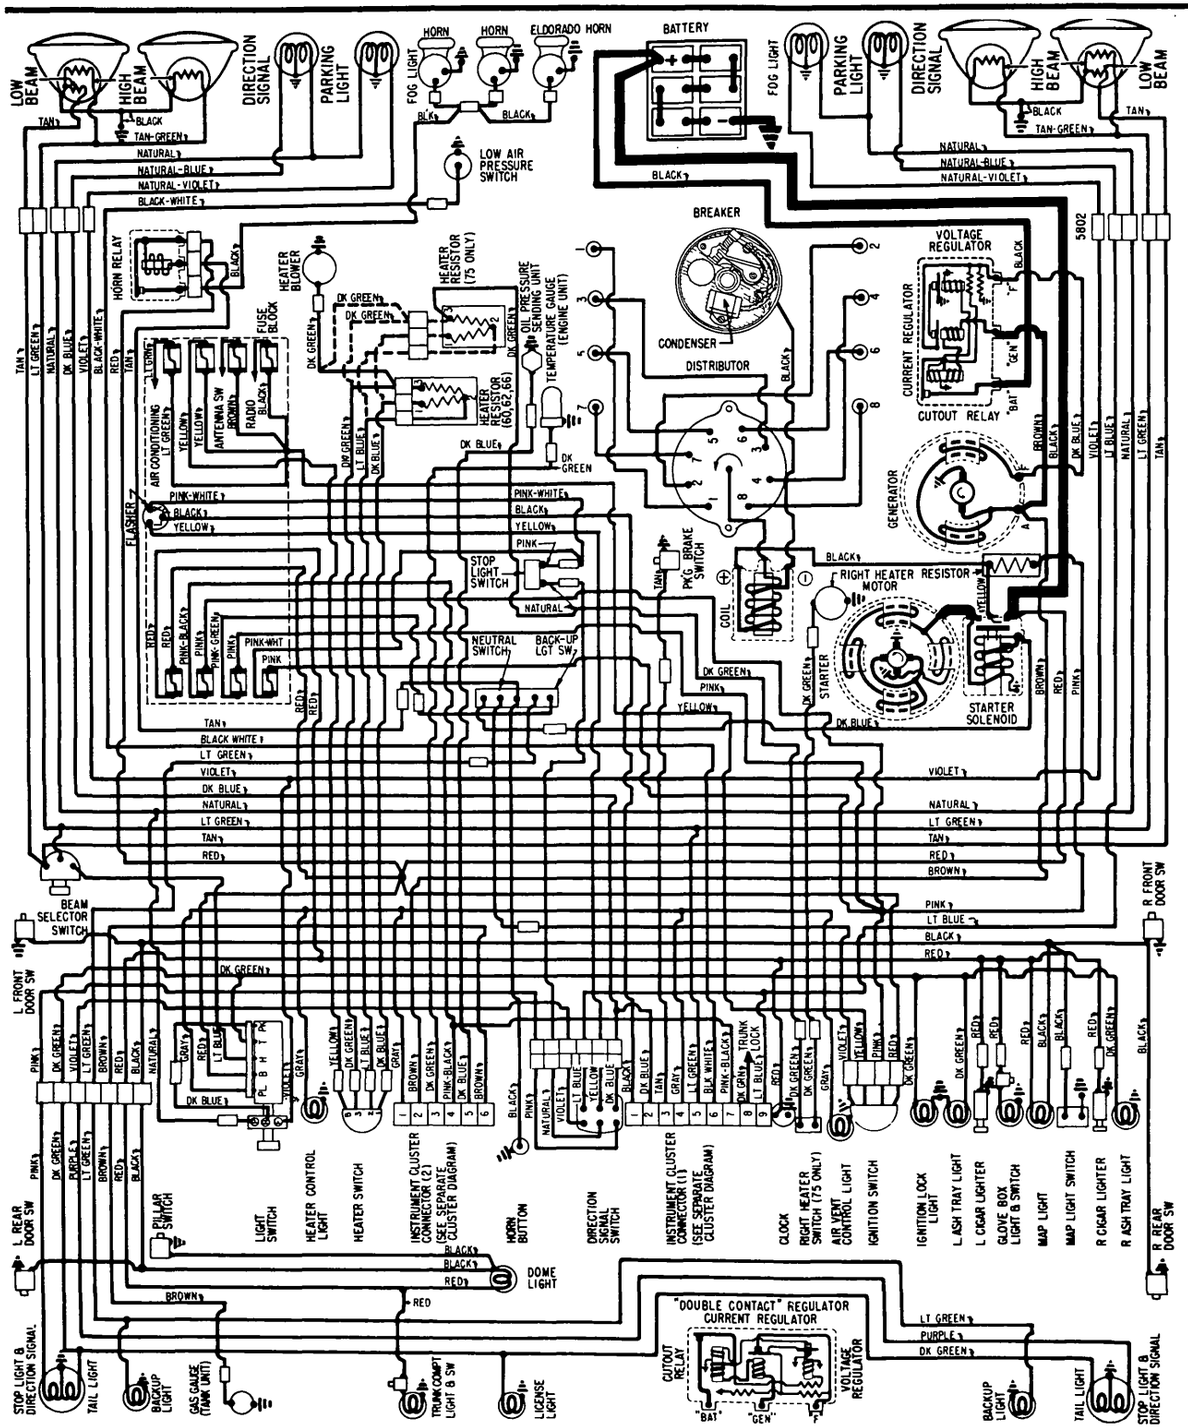
Idle Speed-Up Control Adjustment (Cars with Air Conditioner):

1) Remove air cleaner, turn OFF Air Conditioner.
2) Disconnect Freon compressor clutch feed wire from connector at outboard side of compressor.
3) Adjust carburetor so engine will idle at 450 RPM (Normal adjustment).
4) Turn Air Conditioner ON and adjust idle speed-up control to raise engine speed to 525 RPM. *CAUTION* - DO NOT readjust carburetor to obtain this increased speed.

Throttl Ch ck Adjustment: Allow engine to idle and make sure that throttle check plunger is not in contact with throttle relay lever. Open throttle wide momentarily to allow engine manifold vacuum to drop and throttle check plunger to come out. Let throttle snap shut and observe delay caused by throttle check. If engine races, throttle check plunger is too long. If engine stalls, plunger is too short. Adjust plunger screw as necessary for correct operation.

CADILLAC HYDRA-MATIC THROTTLE LINKAGE

THROTTLE LINKAGE ADJUSTMENT: Remove clip from carburetor throttle rod trunnion and remove trunnion from relay bracket lever (at front of dash). Place a ¼" drill shank through gauging hole in relay lever and dash relay bracket. With engine running, set throttle lever to hot idle position (Air Conditioner turned "OFF"). Adjust carburetor throttle rod trunnion to allow free entry into dash relay lever and install trunnion and spring clip. Push end of throttle valve rod (rod from carburetor to transmission throttle lever) toward rear of car to position transmission throttle lever against its stop. Bring rear jam nut up against trunnion with throttle in hot idle position. **Back off jam nut thre c mpl te turns.** Tighten front jam nut, making certain linkage does not bind in any position. *NOTE:* It will be necessary to check and adjust throttle valve jam nut slightly to obtain smooth shifting. This should be done after completion of all other carburetor adjustments.



ROCHESTER 4GC 4-BARREL

Rochester 4GC 7012010 (Std. Early); 7012011 (Air C nd. Early). 7012910 (Std. Late), 7012^11 (Air C nd. Lat). 7015801 (Service Replacement, arly carbs.).

►*ROCHESTER 4GC CARBURETOR PRODUCTION CHANGE:* A vacuum assisted primary float system incorporated beginning with Engine No. 045250 approximately, to eliminate a cut-out on heavy acceleration during a turn. Carburetors with the new type float system carry Part No. 7012910 (Std. Cars), 7012811 (Air Cond. Cars). For adjustment procedures on new type carburetors *see "Rochest r 4GC Carbur tors" in Carburetion Section.*

►*4GC CARBURETOR PRODUCTION CHANGES (To Eliminate "OFF IDLE STUMBLE"):* In addition to installation of vacuum assisted float system, a new primary cluster and new metering jets were installed and a change made in power valve restriction to eliminate this condition.

CADILLAC (EXC. ELDORADO BROUGHAM) WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

►*MANIFOLD FUEL DISTRIBUTION: Carbur tor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels 1-4-6-7.*

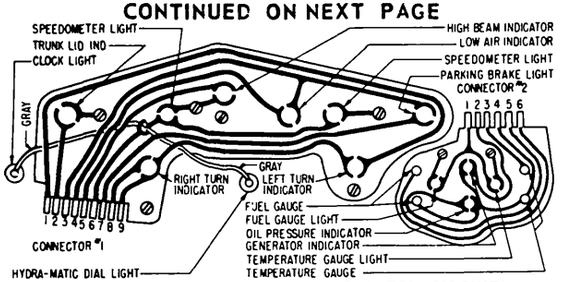
►*IDLE SPEED ADJUSTMENT NOTE:* Idle Air By-Pass screw on throttle body used to adjust idle speed. Throttle valves are normally closed at slow idle.

Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw settings. *See "Rochester 4GC 4-Barrel Carburetor" in Carburetion Section.*

►*OTHER DATA: See "Rochester 4GC 4-Barrel Carburetors" in Carburetion Section.*

Hydra-Matic Throttle Linkage Adjustment: *See CARBURETOR above.*

CARTER AFB 4-BARREL



Carter AFB 2696S Early, 2862S Later (Std.), 2697S Early, 2802S Late, 2863S Later (Air Cond.).

►*CARTER AFB CARBURETOR PARTS CHANGE TO IMPROVE OPERATION NOTE:* New fast idle cam and choke coil used starting with Engine No. 057758 (Air Cond. Cars), No. 058491 (Other Cars). For fast idle cam usage on earlier cars and for choke coil setting and choke restriction change, *see "Carter AFB Carburetor" in Carburetion Section.*

►*IDLE SPEED ADJUSTMENT NOTE: Idle Air By-Pass screw on throttle body is used to adjust idle speed. Throttle valves are normally closed on slow idle.*

Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw settings. *See "Carter AFB Carburetor" in Carburetion Section.*

CADILLAC ELDORADO BROUGHAM WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

►*OTHER DATA: S e "Carter AFB 4-Barrel Carbur tor" in Carbur tion Section.*

Hydra-Matic Throttle Linkage Adjustment: *See CARBURETOR above.*

ROCHESTER 2GC 2-BARREL

Rochest r 2G 7012201 (Fr nt - All Models); 2G 7012203 (R ar - All Models); 2GC 7012202 (Early, Center - Exc. Air Cond.); 2GC 7012902 (Later, Center - Exc. Air Cond.); 2GC 7012205 (Early, Center - Air Cond.); 2GC 7012905 (Later, Cent r - Air Cond.).

For complete adjustment procedure on these carburetors (including linkage adjustment to insure correct synchronization) see "Rochester Triple Carburetors" in Carburetion Section.

►*SLOW OPENING THROTTLE VALVE CORRECTION (Secondary Carbs.):* Caused by over-restricted vacuum switch. *See "Rochest r Triple Carburetors" in Carb. Sect.*

►*INABILITY TO OBTAIN FULL THROTTLE CENTER CARBURETOR (Cars prior to Engine No. 012600):* File approximately ¼" from outer edge of throttle lever where lever strikes throttle rod when at wide open position.

►*AIR CLEANER SPACER CAUTION (Front Carburetor of Triple Carburetor Installation):* Check position of spacer between front carburetor and air cleaner on cars prior to Engine No. 014373. After this number, spacer vas discontinued. *NOTE* - Should stud come out with the release of air cleaner wing nut when removing air cleaner, spacer can drop into carburetor.

►*TRIPLE CARBURETOR PRODUCTION CHANGES TO IMPROVE CHOKE OPERATION:* A Kit Part No. 7012817 is available for installation on cars equipped with Triple Carburetors to eliminate an "Over-Rich & Sag or Stumble" condition. These Production Changes were included on cars starting with Engine No. 031647 (Air Cond. Cars), and approximately with Engine No. 032943 (Std. Cars). *For Kit Installation (early cars), see "Cadillac Triple Carburetors" in Carburetion Section.*

►*IDLE SPEED-UP WIRE PRODUCTION CHANGE:* Ground wire for fast idle speed-up control (Air Cond. Cars) rerouted, starting with Engine No. 031028 and concurrent with Engines listed with "Choke Production Change". This rerouting eliminates the wire to neutral switch as this circuit is grounded at the fast idle speed-up control bracket on carburetor with an "I" terminal. Chassis wiring harness changed at the same time.

►*THROTTLE RETURN SPRING PRODUCTION CHANGE (To Correct Poor Idle):* Installation of New Throttle Retracting Spring Part No. 1471929 and New Vacuum Control Bracket Part No. 7012832 starting with Engine No. 067140 provides more positive closing of center carburetor throttle valve. Install New Type Spring and Bracket to correct poor idle condition on early cars.

CARB. EQUIPMENT

Air Cleaner: DRY FILTER ELEMENT type. Clean every 6,000 miles, replace every 12,000 miles.

►*CLEANING CAUTION: Clean filter element by tapping gently to remove dirt particles, DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

►*AIR CLEANER REPLACEMENT NOTE:* Only two types of Air Cleaners now available, one for 4-Bbl. Carb. and one for 2-Bbl. Triple Carb. Both types have Air Suspension Exhaust Tube attached. When replacing air cleaner on a car not having air suspension, remove new air cleaner top and drill out exhaust tube crimping with 5/16" drill, remove tube and plug hole with rubber insert bumper, Part No. 1466995.

Fuel Pump: AC mechanical type (Exc. Brougham), Electric type mounted in gas tank (Brougham). Vacuum pump is part of engine oil pump.

►*FUEL PUMP LEAKAGE CORRECTION (Early Cars):* Larger diameter pulsator diaphragm used starting with Engine No. 020139 (Std.) and No. 020156 (Air Cond.) with lubrited cover screws to eliminate possibility of diaphragm being pulled into pump by fuel pressure.

Replacement Fuel Pump (Exc. Brougham) - AC No. 4362. **Pressure** - 5¼-6½ lbs. at 1800 RPM.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: AC Electric.

►*ELDORADO BROUGHAM FUEL GAUGE FUSE NOTE:* An AGC ¼ ampere fuse located in pink circuit (under cover of Auto. Trunk Lid Motor Assembly) to protect fuel gauge, starting with Eng. No. 012118.

	Brougham	Others
Dash Unit (AC No.)	1518655	1518739
Tank Unit (AC No.)	1518565	1518588

See "Fuel Gauges" in Carburetion Section.

Low Fuel Level Indicator (Brougham): Light on instrument panel comes on when fuel in tank drops to 3 gallons (2 gals. usable). *See Wiring Diagram.*

BATTERY

Delco No. 562 (Exc. Brougham); 3SMR72 (Brougham). 12 Volts, 11 plate, 70 ampere hour (No. 562), 72 ampere hour (3SMR72) capacity (20 hr. rate).

Battery Location - Separate compartment in right rear quarter panel, accessible from trunk (Brougham), under hood on tray attached to radiator cradle (Others).

Battery Ground - Negative

Engine Ground - Engine to dash.

STARTER

Delco-Remy 1107668 (Brougham), No. 1107657 (Others).

Armature - Delco-Remy No. 1932185 (1107657 Starter).

►*STARTER FAILURE CORRECTION:* When end coil of override spring is looped over second coil, the shaft lever collar will be cocked on clutch shaft and starter will not operate correctly. To correct, replace Clutch Assembly with New Part No. 1932188 (Check new assembly for same difficulty before installing).

Drive - Overrunning clutch (solenoid pinion shift).

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. min.

Performance Data - All

Torque	RPM	Volts	② Amperes
0 Ft. Lbs.	3600-5100	10.6	65-100
①	Lock	3.5	300-600

① - Armature locked. ② - Includes solenoid.

Starting Switch (Exc. Br ugham): Delco-Remy Solenoid Switch 1119910 mounted on starter and controlled by Ignition & Starter Switch, Delco-Remy 1116536. Turn key full RIGHT against spring tension to start.

Starting Switch (Brougham): Delco-Remy Solenoid Switch 1119910 mounted under starter and controlled by Ignition & Starter Switch Delco-Remy 1116536 (turn ignition "ON") and Automatic Starter Relay Delco-Remy 1119924 (Vacuum and Electric controlled). *NOTE* - Should Automatic Starter fail, turn Ignition & Starter Switch to full RIGHT against spring tension to start.

►*ACCESSORY DISCONNECT RELAY (Brougham) NOTE:* Delco-Remy No. 1116927 Relay limits battery load by opening circuits to Air Conditioning, Heater, and Radio while starter is cranking engine.

Neutral Safety & Back-up Light Switch: Delco-Remy 1998170 (Brougham), 1998137 (Others). Located on steering column.

Adjustment - *See "Hydra-Matic Drive" in Trans. Sect.*

GENERATOR

Delco-Remy. Used as follows:

Model	Generator	Armatur
60,62 (Less Air Cond.)	1102109	1932900
60,62, (With Air Cond.)	1102103	1939837
75,86 (All)	1102103	1939837
Brougham	1106989	1936778

Performance Data

Generator	Amperes	Volts	RPM
1102109	35	14	2400
1102103	45	14	2320
1106989	55	13.0	1580

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 20 ozs. (1106989), 28 ozs. (others).

Field Current - 1.62-1.82 Amps. (1102190), 2.66-2.86 Amps. (1102103), 2.14-2.28 Amps. (1106989) at 12 volts and 80°F.

Generator Charge Indicator: Red light on instrument panel *See Diagram.*

Belt Adjustment: Use Belt Tensioner Gauge J-6733. Loosen or tighten belt tension adjusting nuts so Red line on Gauge is even with the shoulder.

REGULATOR

Delco-Remy. Used as follows:

Model	Regulator	Generat r
60,62 (Less Air Cond.)	1119002	1102109
60,62 (With Air Cond.)	1119601	1102103
75,86 (All)	1119601	1102103
Brougham	1119605	1106989

►*DOUBLE CONTACT REGULATOR NOTE: Regulators 1119601 & 1119605 have double contact type voltage Regulators.*

►*NOTE - Specifications below are "Normal" settings.*

Cutout Relay

Cuts In - (1119002) 11.8-13.5 Volts, (1119601 & 1119605) 11.8-13.0 Volts.

Contact Gap - .020".

Air Gap - .020".

Voltage Regulator

Setting - (1119002) 13.8-14.8 Volts at 125°F ambient temp.

Setting - (1119601 & 1119605) 13.8-14.6 Volts at 125°F ambient temperature when operating on upper contacts. .1-.3 Volts lower when operating on lower contacts.

Contact Gap - (1119601 & 1119605) .016".

Air Gap - (1119002) .075". (1119601 & 1119605) .067" with armature pressed down to points where contacts just touch.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" and "Delco-Remy (Doubl Contact)Regulators" in Electrical Section.*

Current Regulator

Setting - (1119002) 32-37 Amps.
Setting - (1119601) 42.5-47.0 Amps.
Setting - (1119605) 53-57 Amps.
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL

►*INSTRUMENT PANEL PRINTED CIRCUIT NOTE:* Two Printed-Circuit Instrument Cluster Components are used as described below. Connections are made to each printed circuit component by means of a multiple connector which engages circuit tabs on the rear of the cluster. Remove and install these cluster components as follows:

1) Gauge & Indicator Printed Circuit (Left Side) - To remove this component, carefully disconnect multiple connector from circuit tabs, remove four gauge terminal retaining nuts and washers, take out two retaining screws and washers, remove printed circuit and bulb sockets as an assembly. Install printed circuit by reversing above procedure

2) Instrument & Indicator Light Printed Circuit (Center) - To remove this component, disconnect Clock and Hydra-Matic Indicator Light Wire Connector (these lights mounted independently but wired in printed circuit), carefully disconnect multiple connector from circuit tabs, remove five printed circuit retaining screws, remove printed circuit assembly. Remove bulb sockets by twisting them counterclockwise. Install printed circuit by reversing above procedure.

Headlamps: Dual Headlights (4-Headlight System) *See "4-Headlight System" in Electrical Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Section.*
Directional Signal: *See "Directional Signals" in Electrical Section.*
Stop Light Switch (Location): Mechanical type, mounted on brake pedal retaining bar flange.
Adjustment - Rotate cam on pedal bar until stoplights are off when pedal in fully released position. Adjust cam until stoplights come on at slightest movement of pedal.
CIRCUIT BREAKER: (Lighting) - 20 Amp. (Exc. Brougham), 25 Amp. (Brougham). In light switch, protects Headlights, Ash Tray. Beam Indicator, Parking, Fog, Tail, License Plate, Instrument, Ignition and Clock lights.
FUSES: Located on fuse panel under instrument panel to left center of car.
6 Ampere - (Brougham Air Ride) in fuse panel.
6 Ampere - Protects Brougham electric Fuel Pump. Located to left side of front speaker housing.
SFE 9 Ampere - Protects Stop Light, Gas Gauge, Temperature Gauge, Oil, Generator, Parking Brake, Turn Signal and LO-Air Tell Tale Lights.
SFE 9 Ampere - Protects Back-up Light.
AGC 25 Ampere - Protects Dome, Map, Air Cond., Clock, Cigar Lighters, and Body Feed.
AGC 9 Ampere - Protects Radio.
25 Ampere - Protects Glove Compartment Light.
SFE 20 Ampere - Protects Heater.
SFE 14 Ampere - Protects Antenna.

ENGINE

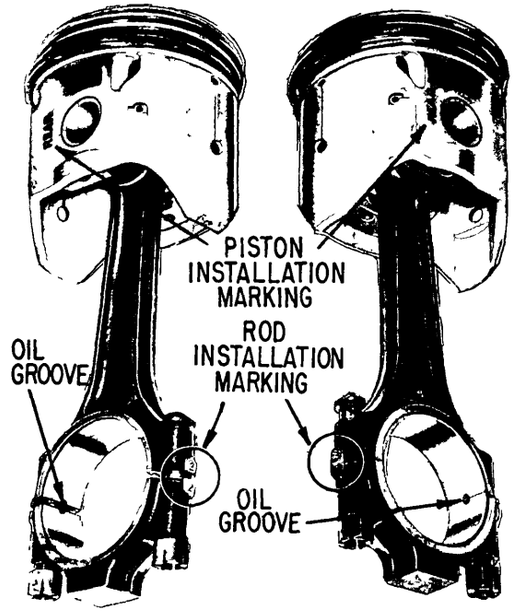
►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: V8 Overhead valves. Two engines used. Standard engine has 4-barrel carburetor, three 2-barrel carburetors used on all Eldorado Series cars, with special intake manifold.

Bore	Stroke	Displacement	Rated HP
4"	3 5/8"	365 cu. in.	51.2

Engine	Compr. Ratio	Developed HP
Standard	10.25-1	310 at 4800 RPM
Eldorado	10.25-1	335 at 4800 RPM

Compression Pressure - *See TUNE-UP.*



►*OVERSIZE CYLINDER BORE CAUTION:* Engine with mark * preceding Engine Unit No. (on left rear crankcase) have .010" Oversize cylinder bore and pistons.

►*ENGINE BALANCE CHECK & UNBALANCE CORRECTION: See "Engine Balancing" in Cadillac Special Data.*

ENGINE REMOVAL: *See "Engine" in Cadillac Special Data.*
OIL PAN REMOVAL: *See "Oil Pan" in Cadillac Special Data.*
CYLINDER HEAD: *See "Cylinder Head & Manifold" in Cadillac Special Data.*
TIGHTENING TORQUES: *See "Tightening Specifications" in Cadillac Special Data.*

PISTONS

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with mark * preceding Engine Unit No. (on left rear of crankcase) have .010" oversize pistons and cylinder bore. Standard cylinder bore size: 4.0000-4.0020".
Original Bore & Pistons - *See "Original Bore & Pistons" in Cadillac Special Data.*
Pistons - New type with trough in head to provide improved fuel turbulence and increased clearance for valves at high RPM.
Clearance - .0015" (Top of skirt), .000" (Bottom of skirt).
Weight - 22.72 ozs. (less pin).
Removal - Piston and rod assemblies removed from above. Install connecting rod Guide studs J-3224, on connecting rod bolts to guide rod out through bore without nicking or scratching. *CAUTION - Do not nick lower edge of bore when pushing rod up.*
Fitting New Pistons: Use micrometer or feeler gauge. *See "Pistons" in Cadillac Special Data.*
Replacement Pistons: Standard (Code "L" or "M") and .010", .020", .030" Oversize with rings and pin.
Installing Pistons: Install in cylinder with piston pin boss marked "Rear" toward rear of engine. *See "Connecting Rods" (below) for installation of pistons*

CADILLAC PISTON & ROD ASSY.

PISTON PINS

Pin is pressed in connecting rod.
Diameter - 1.000". **Length** - 3 3/32".
Pin Fit in Piston - .00005-.0001" clearance at 70°F. Not fitted in field (replace piston & pin assembly).
Pin Fit in Rod - (NOTE - Special tools required). *See "Piston Pins" in Cadillac Special Data.*

PISTON RINGS

Top compression ring is chrome plated, second compression ring is lubrited. An expander is located behind oil ring.

Ring	Width	End Gap ①	Side Clearance
Compr.(#1&2)	5/64"	.013-.023"	.0017-.0035"
Oil (#3)	3/16"	.013-.023"	.0008-.0026"

① - With Standard 4.0000" cylinder.

Replacement Rings: Standard, .010", .020", .030", oversize.

►*REPLACEMENT RING NOTE:* Use re-ring sets with chrome top compression ring and expander behind oil ring or multi-piece oil rings.

Installing Rings: Chamfered face of both compression rings must be installed toward top of piston

CONNECTING RODS

Length - 6.625" (center to center).
Weight - 23.49 ozs.
Crankpin Journal Diameter - 2.2488-2.2493".
Out-of-Round Limits - .00025".
Bearings - Durex 400, bearing shell is steel backed aluminum. Bearing halves interchangeable. No shims.
Clearance - .0005-.0021" (Service limit .0035").
Replacement Bearings: Furnished in standard size only.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Installing Rods: Install piston and rod in cylinder bore with "REAR" on piston toward rear of engine and numbers on lower end of rod down. Numbers 1,3,5,7 are in left bank, 2,4,6,8 are in right bank.

CRANKSHAFT

J urnal Diam t rs - 2 625".
Out- f-R und Limits - 0025".
B arings - Rear, steel backed babbitt, shell type insert. All other bearings are Moraine 400 Aluminum.

►*REAR MAIN BEARING INSTALLATION CAUTION:* For proper alignment of thrust surfaces of rear main bearing proceed as follows: Install upper and lower inserts in block and bearing cap. With rear oil seal in place and mating surfaces clean, install bearing cap and tighten screws to 1-2 ft. lbs. torque. Using a plastic hammer, drive crankshaft forward, then rearward, then forward again (*CAUTION* - Pound on counterweights, not on connecting rods). Tighten bolts evenly to specifications. Check to make sure crankshaft is not binding.

►*MAIN BEARING CAPSCREW NOTE: Lockwashers not used under heads of bearing cap retaining screws.*

Cl aranc - .0008-.0025" (service limit 002" front, .003" others).

R plac m nt B arings: Furnished in standard size only.

End Thrust: Taken by flanged rear main bearing.

End Play - 001- 005" (service limit .010")

►*REAR MAIN BEARING O IL SEAL PRODUCTION CHANGE:* A lip type seal used starting with Engine No. 050909 and is not interchangeable with earlier type seal. Replacement of new type seal can be made without removing crankshaft. For removal and installation procedures, see *"Crankshaft & Ma in Bearings" in Cadillac Special Data.*

Crankshaft R moval: See *"Crankshaft & Bearings" in Cadillac Special Data.*

R ar Main B aring Oil S al Installation: See *"Crankshaft & Bearings" in Cadillac Special Data*

CAMSHAFT

►*CAUTION:* Handle shaft with care to avoid damage or mis-alignment. Check whenever removed.

Rem val, Alignment & Installation - See *"Camshaft & Bearings" in Cadillac Special Data.*

Bearings - Steel backed babbitt bushings.

Clearance - .001- 0022" (service limit 004" max.)

Bearing Out-of-Round Limit - 002" max.

Timing Chain: Link-Belt side guide type. **Width** 11/16", **Pitch** .500", **Length** 23" or 46 links.

Installation & Rem val - See *"Timing Chain" in Cadillac Special Data.*

Camshaft Setting: Both sprockets marked "0". Mesh chain with sprockets turned so that marks adjacent and in line with straightedge across shaft.

►*CAUTION:* Install chain as a unit with camshaft sprocket (sprocket press fit on shaft with locating dowel and two retaining capscrews)

VALVES

Tapp t Cl arance: None in service, hydraulic.

Valve	H ad Diam.	Stem Diam.	Length
Intake	1 875"	.3415-.3425"	4 688"
Exhaust	1.500"	.3415-.3420"	4 694"

Valv	S at Angle	Lift	St m Cl aranc
Intake	ℂ 44°	.451"	ℂ 0010-.0025"
Exhaust	ℂ 44°	451"	ℂ .0010-.0025"

ℂ - New Valves (Valves in service can be refaced to 45° if seat width recommendation not exceeded).

ℂ - New valves and guides. Worn limit 005" maximum.

►*VALVE GRINDING CAUTION:* DO NOT lap or grind a valve so it has more than 1/64" contact with seat in head. (1° difference between valve and seat angle designed to provide "hairline" contact).

Valve Seat Recommendations - 3 64-1/16" (moderate speed or city driving), 1/16-3/32" (high speed driving) Cut seat so that distance from outer edge to edge of flange on valve head not more than 1/32".

Valve Stem Oil Seal - Rubber oil seal installed in lower groove on valve stem (below valve keeper).

Oil Seal Installation - See *"Valve System" in Cadillac Special Data.*

Valve Guides: Pressed in cylinder head from combustion chamber side with longest chamfer end pointing toward rocker arm side of head. Use Remover Tool J-3062 to drive out old guides (toward top of head), and Installer Tool J-3066 to drive new guides in (tool plate serves as stop for driver)

Valve Springs: Free Length 2.25" (Approx.)

Valve Spring Specifications

	Pressure	Length
Valve Closed	60-65 lbs.	1 946"
Valve Open	155-165 lbs.	1 496"

►*SPRING INSTALLATION CAUTION:* Lower end of valve spring must be seated in recess in cylinder head.

Valve Lifters: Hydraulic.
See *"Valve System" in Cadillac Special Data*

Valve Lifter Removal - See *"Valve System" in Cadillac Special Data.*

Rocker Arm Assembly: See *"Valve System" in Cadillac Special Data.*

CADILLAC VALVE TIMING MARKS

VALVE TIMING

See *"Camshaft Setting" under CAMSHAFT above.*

►*VALVE TIMING NOTE: Specifications are "Without Ramp".*

Intake Valves - Open 27° BTDC. Close 75° ALDC.

Exhaust Valves - Open 73° BLDC. Close 29° ATDC.

Valve Timing Check - Not practical to check in field Manufacturer recommends removing timing chain cover and checking timing gears.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Cadillac Special Data.*

Crankcase Capacity: 5 qts. refill, 6 qts. filter change.

Normal Oil Pressure: 30-35 lbs. min. at 30 MPH. 15 lbs. at idle speed.

Pressure Regulator Valve - On oil pump. Not adjustable.

Oil Pressure Indicator (Exc. Brougham) - Light on instrument panel controlled by pressure switch AC No. 1508767 mounted on engine.

Oil Pressure Indicator (Brougham) - Light on instrument panel controlled by pressure switch AC No. 1508624, mounted on engine.

Oil Pressure Gauge (Brougham) - AC electric in addition to Indicator.

Dash Unit - AC No. 1518655 **Engine Unit** - AC 1508566. See *"Oil Pressure Gauges" in Miscellaneous Section.*

Oil Pump: Helical gear. Mounted on rear main bearing cap.

Oil Pump Removal & Overhaul - See *"Oiling Syst m" in Cadillac Special Data.*

Vacuum Pump: Part of Oil Pump Assembly. See *"Vacuum Pump" in Cadillac Special Data.*

Oil Filter: Full flow (Brougham), Partial flow (Others). Replace element every 6,000 miles or more frequently

►*OIL FILTER INSTALLATION CAUTION:* Do not tighten cover bolt more than 25 ft. lbs. Cover may be crushed and a leak result.

Crankcase Ventilation: Air intake in oil filler cap (oil wetted type) with outlet connection at rear of valve compartment cover, and outlet pipe extending down below engine at right corner.

COOLING

►*BELT TENSIONER GAUGE NOTE:* Belt Tensioner Gauge Tool No J-6733 released for field service for more accurate belt adjustments. Place Gauge on belt, loosen belt tension adjusting nuts, and tighten or loosen belt until red line on barrel is in line with shoulder.

►*RADIATOR LOWER HOSE PRODUCTION CHANGE (To Provide More Clearance for Power Steering or Compressor Drive Belt):* New hose is more flexible and has wire insert. Use only new type hose on Air Suspension Cars.

Water Capacity: (Without Heater) - Models 62, 60S, 86 - 20½ qts; Model 75 - 22 qts.; Brougham 19½ qts.

Pressure Valve: AC No. 850800. Radiator filler cap. Opens at 12-15 lbs.

Thermostat: Dole type. In water outlet at top of pump body

Standard Setting - Starts to open at 163° to 168°F.

High Temp. - Starts to open at 177° to 182°F.

Water Pump: Packless, sealed ball bearing type.
See *"Water Pumps" in Cadillac Special Data.*

Pump R m val - Drain cooling system. Remove all

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

belts Disconnect throttle spring Detach Power Steering pump and bracket assembly and secure to one side Remove two remaining thermostat housing screws, housing and thermostat Disconnect lower radiator hose and upper and lower heater hoses Loosen clamp on transmission Oil Cooler hose Remove remaining pump flange to cyl block screws and remove Oil Cooler hose On Air Cond cars remove two compressor mounting bracket screws from water pump flange Loosen compressor support screw and move support away Remove water pump and gaskets

Temperature Gauges: AC electric.

Dash Unit - AC No. 1513301 (Brougham), 1513514 (Others).

Engine Unit - AC No. 1513402 (Brougham), 1513130 (Others).

HYDRA-MATIC DRIVE

Dual-Coupling, four speed hydraulically controlled automatic transmission of same design as previous models.

►*DUAL-COUPLING HYDRA-MATIC FLUID CAUTION:* Use only improved type transmission fluid Part No. 1471380 (5 qt. cans), No. 1471381 (55 gal. drum). Former type fluid is to be used in Dual-Range Hydra-Matic only.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION. See "Dual-Coupling Hydra-Matic" in Transmission Section*

►*TESTING & TROUBLE SHOOTING: See "Dual-Coupling Hydra-Matic" in Transmission Section*

Lubrication - Check fluid level avery 2 000 miles drain and refill every 12 000 miles or once a year Use only Cadillac Hydra-Matic Fluid

►*LUBRICATION CHANGE NOTE·* When vehicle is driven under heavy duty conditions (heavy city traffic continuous mountain driving prolonged driving during hot weather) it is advisable to drain and refill transmission at 6 000 mile intervals

Capacity - 12 qts (approximately) *NOTE* - The correct level is ¼" below the "Full" mark with transmission hot and engine running

Checking Fluid Level - Run engine with selector lever in "N" (Neutral) or "P" (Park) position at 800 RPM for 1½ minutes to normalize temperature and to be sure coupling is full Reduce engine speed to slow idle, clean dipstick and check fluid level With engine running add fluid through dipstick tube to bring fluid level to ¼" of "FULL" mark on dipstick *NOTE* - From "LOW" to "FULL" mark on dipstick requires 1 qt of fluid

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER HYDRA-MATIC SERVICE DATA: See "Dual-Coupling Hydra-Matic" in Transmission Section*

UNIVERSALS

Mechanics. Needle bearing type Three used with two piece propeller shaft and center bearing

Propeller Shaft Center Bearing: *See "Propeller Shaft" in Cadillac Special Data*

Rear Axl Pinion Angle: Must be correct to prevent propeller shaft vibration. For checking and adjusting, *see "Cadillac Rear Suspension" in Susp nsi n & Whe l Alignment Section.*

REAR AXLE

Own Make. Hypoid gear, semi-floating with Hotchkiss Drive.

See "Cadillac Hypoid" in Rear Axle Section.

►*DIFFERENTIAL LUBRICANT & PINION SEAL PRODUCTION CHANGE & CAUTION:* Improved type of differential lubricant and pinion seal used in cars starting with Engine No. 067125. New type seal can be used with old type lubricant but DO NOT use new type lubricant with old type seal as seal will harden and fail *See "Pinion Oil Seal or Universal Yoke Replacement" in Cadillac Hypoid in Rear Axle Section.*

►*OVERHAUL CAUTION:* Manufacturer recommends that Carrier Assembly be serviced by replacement DO NOT disassemble this unit or attempt service work other than oil seal and universal joint replacement

Axle Identification - Gear ratio identified by number stamped on front face of carrier assembly at end of oil return passage *NOTE* - Brougham rear axle assemblies further identified by letter "B" preceeding axle ratio number

Series	Ratio	Mark

Brougham	3 36-1	B6

Ⓒ - Optl on 60 & 62 without AC Ⓒ - Optl on 75

Rear Axle Pinion Angle: Must be correct to prevent propeller shaft vibration. For checking and adjusting, *see "Cadillac Rear Suspension" in Suspension & Wheel Alignment Section.*

Axle Shaft Removal: Remove wheel and take out screws holding brake drum on axle shaft flange and remove drum Remove nuts and lockwashers from bolts holding bearing retainer and backing plate on axle housing use Puller J-942-1 and Slide Hammer J-2619 to remove axle shaft

►*CAUTION* Use care not to damage axle shaft oil seal when sliding axle shaft out and do not disturb position of backing plate on housing

Commercial Cars -Remove wheel, remove nut and washer on end of shaft Use Puller (Snap-On No S4567 or similar five jaw type) to remove wheel hub and brake drum Disconnect brake line Take out retaining screws and remove dust shield (bearing retainer) and backing plate Use Puller J-838 to pull axle shaft and bearing assembly out, using care not to damage oil seal in housing

Differential Carrier Removal: Disconnect rear universal joint and remove lubricant from rear axle housing Remove axle shafts (see above) Remove nuts and washers holding carrier to axle housing and remove entire assembly with gasket *See "Overhaul Caution" above*

Wheel Bearings: Sealed ball-bearing type

►*CAUTION:* Check bearings for loss of lubricant when shaft removed If bearings spin freely indicating loss of lubricant, replace bearings

Pini n B aring Pr l ad Adjustm nt: Pinion should be adjusted whenever nut on end of pinion shaft disturbed (for universal joint yoke or oil seal replacement) *S e "Cadillac Hyp id" in R ar Axl Section*

SHOCK ABSORBERS

D lc . Direct acting permanently sealed airplane type.

Coil Spring Cars - Mounted inside of coil springs (Front), between frame bracket at upper end and lower control link mounting bracket at lower end (Rear).

Air Spring Cars - Mounted between brackets located behind Air Springs (Front) and same as for Coil Springs above (Rear).

Shock Absorbers

Model	Front	Rear
60S,62,75 (Air Sprgs.)	5543716	5543717
60S,62 (Less Air Sprgs.)	5543714	5543715
75 (Less Air Sprgs.)	5543720	5543721

FRONT SUSPENSION

Independent type with direct acting shock absorbers and "Spherical" joints.

►*FRONT SUSPENSION NOTE:* Coil springs standard, Air Springs Optional on all models.

Steering Axis Inclination - 4° at 0° camber.

Caster - 0° to Neg. 1°. Adjustment must be equal within ½° or less on both sides of car.

Camber - Neg. 3/8° to Pos. 3/8°. ¼-½° more positive camber on left wheel to correct crowned road pull.

Toe-In - (Coil Springs) 3/16"-1/4", (Air Springs) 1/16-1/8" Tie rod clamp screw must be down

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be 22°40'.

REAR SUSPENSION

Rear Suspension: *See "Cadillac Rear Suspension" in Suspension & Wheel Alignment Section.*

AIR SUSPENSION

Air springs replace coil springs on all four wheels. *See "Front Suspension" above for alignment specifications and "Cadillac Air-Suspension" in Susp nsion & Wheel Alignment Section.*

STEERING

Power Steering: Saginaw (In-Lin) Hydraulic. Hydraulically operated in-line power steering gear which combines the recirculating ball type gear with a concentric hydraulic booster

See "Saginaw (In-Line) Power Steering" in Steering Sect

Steering Linkage: *See "Steering Linkage" in Steering Section*

Steering Wheel & Horn Button R m val: *See "Saginaw (In-Line) Power Steering" in Steering Section*

Steering Gear Removal: *See "Saginaw (In-Line) Power Steering" in Steering Section*

BRAKES

Bendix (Hydraulic) Single Anchor (Without Ecc ntric). Conventional two-shoe with Bendix or Moraine Power Unit. Parking brake applies rear wheel service brakes. *See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.*

►*BRAKE ANCHOR PIN PRODUCTION & TORQUE SPECIFICATION CHANGE·* Heat treated anchor pin nut No. 225857 (identified by three grooves on face of nut) replaced Nut No. 120371 beginning with Engine

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

No. 038946. All three backing plate nuts and new anchor pin nut should be tightened to 80-100 ft. lbs.

►*BRAKE SHOE RETRACTING SPRING PRODUCTION CHANGE & CAUTION:* Larger diameter (7/8") brake shoe retracting spring No. 5456495 replaced No.497834 (½") on all Series FRONT wheel brakes starting with Engine No. 017126. All four front wheel retracting springs must be of the same type. All four rear wheel retracting springs (½") must be the same type (two types - Tile Red and Dark Maroon). DO NOT USE large retracting springs on rear wheels.

►*PARKING BRAKE ADJUSTMENT CHANGE TO CORRECT PEDAL RETURN TRAVEL:* For correct adjustment, interference correction and parts changes, *see "Cadillac Brake Adjustment" in Bendix Hydraulic Single Anchor (Without Eccentric) in Brake Section.*

►*MORAINE POWER BRAKE WELCH PLUG SEALING PROCEDURE:* New sealing Kit Part No. 5456601 available and eliminates need for Power Brake Removal, *See "Moraine Power Unit" in Brake Section.*

►*EXCESSIVE BRAKE PEDAL PRESSURE CORRECTION:* Remove lubrication plug from top of Power Brake Vacuum Cylinder and insert one ounce of shock absorber fluid to lubricate vacuum piston leather and if 1957 contour mat is installed cut adequate clearance from mat to provide free movement of brake pedal push-rod.

Drum - Diam ter 11.995-12.005". **Out-of-Round Limit** (I.D.) - (60S,62) .007" (front & rear), (75,86) .007" front, .006" rear.
R grinding Limit - 12.060".

Whe l Cylind r Diameter - 1 1/8" front, 1" rear (Exc.86). (86) 1 1/8" front, 1 1/16" rear.

Lining: Molded type riveted to shoes. Primary shoe lining has ½" wide circumferential groove 1/8" deep full length.
Replacement Linings - Furnished in Standard size only.

Lining Length & Width

Model	Primary	Secondary
60S,62 (front & rear)	10.12"x2½"	12.98"x2½"
75,86 (front & rear)	12.98"x2½"	12.98"x2½"

Thickness - ¼" All.
Braking Power - (60S,62.75) 55.8% front, 44.2% rear. (86) 52.8% front, 47.2% rear.
Clearance - .010" (top), .015" (bottom). Adjusting screw backed off 14 notches from point where wheel can just be turned by hand.

Master Cylinder: Integral with end of Power Unit (engine side of firewall).
Checking Fluid - Remove plug from top of master cylinder and maintain fluid to within ¼" of filler opening.
Removal - *See Power Unit below.*

Power Unit: Bendix or Moraine Power Unit. *See "Bendix" and "Moraine Power Unit" in Brake Section.*
Removal of Power Unit - Disconnect hydraulic line from master cylinder, vacuum hose and reservoir hose from power unit. Remove power unit pushrod to brake pedal relay lever clevis pin. Remove power unit to mounting bracket screws and remove power unit.

MISC. MECHANICAL

Windshield Wipers: Cable operated - vacuum type.
Trunk Lid Lock (Exc. Brougham): Trunk lid electric lock operated by switch in glove compartment.
See "Cadillac Rear Compartment Lid Lock" in Misc. Section.

Trunk Lid Contr l (Brougham): Reversible electric motor operating a jack screw and limit switches which control opening and closing of the trunk lid.
See "Eldorado Brougham Lid Lock" in Miscellaneous Section.

Power Window Regulators: Electric. With reversible motor in each window, operating vent and door windows.
See "Electric Window Regulators" in Miscellaneous Section.

Power Top Control: Hydro-Lectric with "sealed" system which does not require periodic draining and refilling.
See "Top Controls" in Miscellaneous Section.

Door Lock (Eldorado Brougham): Front door lock solenoid controlled by switch in each door. Rear door lock solenoid controlled by neutral switch (that causes inside handle to free wheel), plus a safety interlock switch which controls interlock solenoid which prohibits transmission selector lever from moving into drive position with either rear door open.
See "Eldorado Brougham Door Locks" in Miscellaneous Section.

Power Seat Adjusters (2-Way): Electric type with single reversible type motor for horizontal adjustment.
See "GM 2-Way Seat Regulators" in Miscellaneous Section.

Power Seat Adjusters (6-Way): Electric type with single adjustable motor. *See "GM 6-Way Seat Regulators" or "Eldorado Brougham Seat Regulators" in Misc. Sect.*

Air Conditioning: Frigidaire & Harrison, with magnetic compressor clutch (compressor operates only with switch "ON").
See "Frigidaire & Harrison (GM) Air Conditioning" in Miscellaneous Section.

►*JACKING & HOISTING (ALL MODELS): Before jacking, hoisting, towing or working under car, se "Jacking & Hoisting Pr cautions" and "Cadillac Air Suspension" in Suspension & Wheel Alignment Section. NOTE - DO NOT raise Series 67 & 68 Cars with a frame contact hoist.*

►*STARTING CAR BY PUSHING: Car CANNOT be started by pushing because rear oil pump has been eliminated.*

►*1960 PARKING BRAKE VACUUM RELEASE CAUTION:* Before working on the engine (engine running), car *in gear, disconnect vacuum supply hose from right hand connector of vacuum switch on neutral safety switch and tape switch opening closed.*

MODEL IDENTIFICATION

ENGINE OR SERIAL NUMBER: Stamped on lower left hand side of cylinder block between two welch plugs just above edge of oil pan; on top of frame on left hand side bar just behind radiator; on lubrication plate attached to front face of left door lock pillar. *NOTE* - Number (example below) includes identification data as follows:

① ② ③

60 A 000001

① - Year Model. **59** (1959), **60** (1960).
② - Body Code. *See Series Designation Table below.*
③ - Beginning Engine Serial Number.

Series Designation

Series	Body Style	Body Code
60	6029 Fleetwood Sixty Special	M
62	6229 Sixty-Two 4-Dr. Sedan	K
62	6237 Sixty-Two Coupe	G
62	6239 Sixty-Two 2-Dr. Sedan	A
62	6267 Convertible	F
62	6329 Sedan DeVille 4-Dr	L
62	6337 Coupe DeVille	J
62	6339 Sedan Deville 2-Dr.	B
62	6437 Eldorado Seville	H
62	6467 Eldorado Biarritz Convertible	E
75	6723 Fleetwood Seventy-Five Sedan	R
75	6733 Fleetwood Seventy-Five Limousine	S
68	6890 Commercial Chassis	Z
69	6929 Eldorado Brougham	P

Engine Unit Number: Stamped on bell housing portion of crankcase behind left hand cylinder block directly above cast rib. *NOTE* - "L.C." after unit number indicates low compression engine. Mark * before unit number indicates .010" oversize cylinder bore and pistons.

1959 Models

Series	Engine Unit Prefix
60,62,63,64,67,68 (Std.)	96X
60,62,63,64,67,68 (Air Cond.)	96K
60,62,63,64,67 (3 Carburetors)	9QX
60, 62, 63, 64, 69 (3 Carbs. & Air Cond.)	9QK

1960 Models

Body Style	Engine Unit Prefix
6029; 6229,37,39,67; 6329,37,39 (Less AC)	06X
6029; 6229,37,39,67; 6329,37,39 (With AC)	06K
6437,67 (With 3-Carbs.)	0QX
6437,67; 6929 (With 3-Carbs. & AC)	0QK
6723,33; 6890 (Less AC)	07X
6723,33; 6890 (With AC)	07K

TUNE-UP

COMPRESSION PRESSURE: 165-185 lbs. (cranking speed), 212-230 lbs. (1000 RPM) with throttle wide open. Maximum variation between highest and lowest cylinders should be no more than 20 lbs.

VACUUM READING: Not specified.

VALVE TAPPET CLEARANCE: None, Hydr. lifters.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. Valve diverts exhaust gases of left hand cylinder bank through carburetor heating passages in intake manifold to right hand exhaust system during warm-up period.

IGNITION

►*1959 EARLY BREAKER POINT OXIDATION CAUSING INTERMITTENT MISS ON LIGHT ACCELERATION:* Burning of breaker points at low mileage may be caused by either of the two conditions listed below. *NOTE* - Cars beginning with Engine No. 062545 have new 6' (1.8 ohms) resistance wire and this trouble should not occur. This longer resistance wire can be identified by red & black cross tracers visible through white insulation.

(1) Engines before No. 024940 - May be caused by non-resistance type wire between coil and ignition switch. Resistance and non-resistance wires similar in appearance. Check wire and correct as follows. *NOTE - If condition persists after this correction, see (2) following.*

Testing For Resistance Wire - Take a voltage reading from Pos. terminal of coil to ground with engine running at 1700 RPM and all accessories OFF. Resistance type wire will have reading of 10.5 volts. Non-resistance type will read 14.5 volts.

Replacing Non-Resistance Wire - Install a 1958 resistor, Part No. 1927809, between coil and feed wire. Mount resistor on cowl at inboard end of heater base, then cut coil wire at suitable location so two ends will *fit resistor. CAUTION - Yellow wire parallel to coil wire must be left in place.*

(2) Engines before 062545 - Correct by installing 12" resistor wire (Part 2974440) in series with original coil primary ignition wires. Jumper has resistance of 0.3 ohms and will reduce coil voltage approximately ½ volt to value of 3½ volts below generator output voltage at 1500 RPM. Install this jumper wire by disconnecting spade terminal of ignition harness at coil + terminal, attach one end of jumper to this harness terminal (bolt or solder terminals together), tape connection securely, connect other end of jumper to coil + terminal.

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035".
Spark Plugs - AC No. 44. 14 mm. Torque to 20-25 ft. lbs.

COIL: Delco-Remy 1115087 (1959), 1115134 (1960).
Ignition Current - 1.25 amps. idling, 2.4 amps. stopped.
Resistor - Resistance type cable used between coil and ignition switch. Bypassed during cranking by lead from solenoid to coil.

►*1960 IGNITION COIL NOTE:* Early ignition coil identified by 1" white tape, later coil by Brown Bakelite Insulator. DO NOT use these higher inductance coils on past model cars (this type coil must be used only with 1960 resistance type harness).

DISTRIBUTOR: Delc -R my "Window" type used as follows:

Car Model	Distr. N .
1959 Earlv	1110932
1959 Later 1-Carb	1110955
19593-Carbs(Before Eng. 007064)	1110933
1959 3-Carbs.(Eng.007064 & later)	1110952
1960 1-Carb.	1110932
1960 3-Carbs.	1110952

See "Delco-Remy Window Distributors" in El ctrical Section.

Condenser - Delco-Remy 1932004. **Capacity**. 18-.23 mfd.
Contact Point Set - Delco-Remy 1931988.
Breaker Gap - Breaker gap will be correct (.016") when cam angle correctly set.
Cam Angle - 28-32°. Set at 30°.
Breaker Arm Spring Tensi n - 19-23 ozs.
Rotation - Counterclockwise viewed from above.

Automatic Advanc (1110932 & 33)

Degrees Distr.	RPM	Degrees Eng.	RPM
0-1½	400	0-3	800
2½-4	600	5-8	1200
3¾-5½	1000	7½-11	2000
5¾-7¾	1600	11½-15½	3200
7-9	2000	14-18	4000

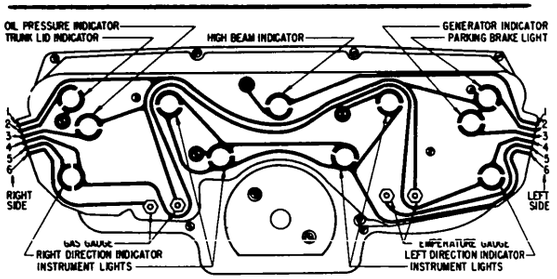
IGNITION TIMING

S tting 5° BTDC

►*SETTING NOTE* When fuel of 100 octane rating or better is not available, retard setting toward "C" mark to eliminate detonation

Timing - Disconnect vacuum line to distributor (tape pipe) and with engine idling at 480 RPM (All engines) rotate distributor so light flashes when pointer is on "A" mark

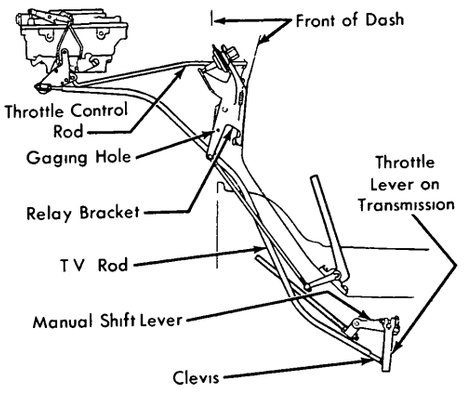


Timing Marks - Timing indicator on chain case cover and harmonic balancer marked "A" & "C" When "C" mark is in line with pointer, No 1 Cyl is at TDC The "A" mark is 5° ahead of "C" mark

CARBURETOR

►*CARBURETOR APPLICATION· One 4-Barrel Carter or Rochester carburetor used on Standard Engine, three Rochester 2GC 2-Barrel carburetors used on Eldorado Engine*

Idle Speed-Up Control Adjustment (Cars With Air Conditioning): With engine at normal operating temperature and slow idle adjustment completed, turn air conditioner "ON" and place transmission selector lever in "N" position Adjust engine idle speed to 900-950 RPM by loosening locknut on diaphragm shaft and turning nut to obtain specified RPM Tighten locknut



Throttle Return Check Adjustment: Allow engine to idle and make sure that throttle check plunger is not in contact with throttle relay lever Open throttle wide momentarily to allow engine manifold vacuum to drop and throttle check plunger to come out Let throttle snap shut and observe delay caused by throttle check If engine races, throttle check plunger is too long If engine stalls, plunger is too short Adjust plunger screw as necessary for correct operation

CADILLAC HYDRA-MATIC THROTTLE LINKAGE

►*1959 THROTTLE RETURN CHECK RATTLE CORRECTION (Eng. prior to No 001180)* Rattling of vacuum check due to manifold pulsations during normal engine operation may be prevented by installing new vacuum hose connector, No 1473520, at manifold end This connector has restricted opening at hose fitting end *NOTE* - Cars after above number have restrictor in manifold end of hose (Up to Eng No 019281) or the above restricted fitting (later cars)

THROTTLE LINKAGE ADJUSTMENT. Remove clip from carburetor throttle rod trunnion and remove trunnion from relay bracket lever (at front of dash) Place a ¼" drill shank through gauging hole in relay lever and dash relay bracket With engine running, set throttle lever to hot idle position (Air Conditioner turned "OFF") Adjust carburetor throttle rod trunnion to allow free entry into dash relay lever and install trunnion and spring clip Push end of throttle valve rod (rod from carburetor to transmission throttle lever) toward rear of car to position transmission throttle lever against its stop Bring front jam nut on throttle valve rod against trunnion until all slack is taken up **Then tighten nut 3 full turns.** Tighten rear jam nut

Accelerator Pedal Height Adjustment - With ¼" drill shank installed in dash relay bracket and lever, measure clearance between underside of upper end of accelerator pedal and carpet Distance should be 3 5/8" (pedal-to-carpet), 4½" (pedal-to-floor pan) To adjust, remove cotter pin from trunnion on inner side of accelerator pedal arm and remove trunnion Adjust trunnion up or down for proper clearance Assemble linkage

►*1959 THROTTLE LINKAGE INTERFERENCE AT OPEN THROTTLE (Eng prior to No. 012100):* If primary throttle stop lever interferes with upper edge of manifold insulator at open-throttle position, remove insulator and file or grind it at an angle at point of interference to provide clearance *NOTE* - Later cars have new insulator, No 1473021, which has molded taper in raised section on side

ROCHESTER 4GC 4-BARREL

Rochester 4GC No. 7013030 (Std.), 7013031 (Air Cond.), 7015901 (Service Replac m nt).

►*1959 STALLING OR STUMBLING ON COLD START CORRECTION·* Install choke baffle, Part No 7010598 Carburetors marked "B" on identification tag have baffle installed in production *Se "Roch ster 4GC Carburetors" in Carburetion Section*

►*MANIFOLD FUEL DISTRIBUTION· Carbur tor RIGHT barrels feed Cyls 2-3-5-8, LEFT barr ls 1-4-6-7*

►*IDLE ADJUSTMENT NOTE· See "Parking Brak Vacuum Release Caution" abov* Disconnecting hose and taping opening prevents air leak which would affect idle adjustment

►*IDLE SPEED ADJUSTMENT NOTE:* Idle Air Bypass screw on throttle body is used to adjust idle speed Throttle valves are normally closed at slow idle

Idle Mixture & Speed S tting - Special procedure required to insure correct mixture and speed (idle air) screw settings *See "Rochester 4GC Carbur tors" in Carburetion Section*

Throttle Linkage Adjustment: *S e CARBURETOR abov*

►*OTHER DATA· See "Roch st r 4GC Carbur tors" in Carburetion Section.*

CARTER AFB 4-BARREL

Carter AFB. Used as follows·

Model	Standard	Air C nd.
1959	2814S	2815S
1960 (To Eng 22700)	2814S	2915S
1960 (Eng 22700 on)	2951S	2952S

►*1959 LEANNESS AT WIDE OPEN THROTTLE CORRECTION:* Install new metering rod and secondary metering jets Later carburetors identified by letter "A" stamped next to part No have rod and jets installed in production *See "Carter AFB 4-Barr l Carbur tors" in Carburetion Section*

►*1960 CARTER AFB LOW SPEED, LIGHT THROTTLE PERFORMANCE CORRECTION: Se "Cart r AFB 4-Barrel Carburetors" in Carburetion Section*

►*MANIFOLD FUEL DISTRIBUTION. Carbur tor RIGHT barrels feed Cyls 2-3-5-8, LEFT Barr ls 1-4-6-7*

►*IDLE ADJUSTMENT NOTE: S "Parking Brak Vacuum Release Caution" abov* Disconnecting hose at this location eliminates vacuum leakage at neutral switch while making idle mixture calibration

►*IDLE SPEED ADJUSTMENT NOTE:* Idle Air Bypass screw on throttle body is used to adjust idle speed Throttle valves are normally closed at slow idle

Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw settings *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section*

Throttle Linkage Adjustm nt: *S CARBURETOP above.*

For complet adjustm nt data n th s carburetors (including linkage adjustment t insure corr ct synchronization), see "Rochester Triple Carburetors" in Carburetion Section.

Throttle Linkage Adjustment: See *CARBURETOR* above.

CRUISE CONTROL: Automatic speed control and Warning device See *"Cadillac Cruise Control" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC No. 713 or 4622 Fuel only.
Pressure - 5¼-6½ lbs. at idling speed.
See *"Fuel Pumps" in Carburetion Section.*

Fuel Line Filter: Located in line between fuel pump and carburetor. *NOTE* - Air Conditioned Cars have special filter and orificed passages for returning fuel vapors to fuel tank

Gasoline Gauge: AC Electric.
Dash Unit - AC No 5640221 (1959), 5643115 (1960)
Tank Unit - AC No. 5640177 (Std), 5640325 (Air Cond.), 1518929 (Comm.)
See *"Fuel Gauges" in Carburetion Section.*

AIR CLEANER: Dry filter element type. Inspect for proper seating and dust leaks every 8,000 miles, replace element every 24,000 miles (12,000 miles on cars with 3-Carbs.)

►*CAUTION Do not attempt to clean element by washing, oiling, tapping or blowing out with air*

BATTERY

Delco No. 562. 12 volt, 11 plate, 70 ampere hour capacity (20 hr. rate)
Battery Location - Separate compartment in right rear quarter panel, accessible from trunk (Brougham), under hood on tray attached to radiator cradle (Others).
Battery Ground - Negative
Engine Ground - Engine to dash.

STARTER

Delco-Remy 1107657. Armature - 1932185.
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	② Amperes
0 ft lbs	3600-5100	10.6	65-100
①	Lock	3.5	300-360

① - Armature locked ② - Includes solenoid.

WIRING DIAGRAM LEGEND

Ⓐ - To Air Conditioning Circuit.
Ⓑ - To Electric Window Circuit.
Ⓓ - To Radio (Switch Lead).
Ⓔ - Radio Antenna Switch (Feed)
Ⓕ - Radio Antenna Switch (Up).
Ⓖ - Radio Antenna Motor (Down).
Ⓗ - Radio Antenna Switch (Down).
Ⓙ - Radio Antenna Motor (Up).
Ⓚ - Radio Dial Light.
Ⓛ - Instr. Panel R Dir. Ind. (when used).
Ⓜ - Instr. Panel L. Dir. Ind. (when used).

Starting Switch: Delco-Remy Solenoid Switch 1119910 mounted on starter and controlled by Ignition & Starter Switch Delco-Remy 1116536.

Neutral Safety & Back-Up Switch: Delco-Remy 1998137 (Exc Cruise Control), 1995697 (Cruise Control) (1959), 1998724 (1960) Located on steering column
Adjustment - *See "Hydra-Matic Drive" in Trans. Section.*

GENERATOR

Delco-Remy. Used as follows

Car Model	Generator	Armature
1959 Ser. 60,62, 63, 64 (Std.)	① 1102140	1932900
1959 Ser 60,62,63,64,(Air Cond)	② 1102141	1939837
1959 Ser 68, 75	② 1102141	1939837
1960 Ser 60,62 (Std)	③ 1102170	1946719
1960 Ser 68,69,75	② 1102141	1939837
1960 Ser 60,62 (Air Cond)	② 1102141	1939837

Replacement Generator (Less Fan & Pulley)
① - 1102087 ② - 1102091 ③ - 1102168

►*1959 GENERATOR PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION (Std. Gen.):* Beginning Engine No 035305 a new 35 amp generator with a ball bearing in the commutator end frame is used This generator has a new End Frame Assembly No 1946720, Ball Bearing No 904751, and Armature No 1946719 *NOTE* - These parts can be used on first type generator but **must all be installed as a unit.**

Performance Data

Generator	Amperes	Volts	RPM
1102140	35	14 0	2630
1102170	35	14 0	2520
1102141	45	14 0	2600

Rotation - Counterclockwise at commutator end
Brush Spring Tension - 28 ozs
Field Current - 1 69-1 79 amps (1102140,171) 2 66 - 2 86 amps (1102141)

Generator Charge Indicator: Red light on instrument panel *See Diagram*

Belt Adjustment: Use Belt Tensioner J-6733 Loosen or tighten adjusting nuts so red line on gauge is even with shoulder

REGULATOR

Delco-Remy 1119168 or 1119002 (1959), 1119002 (1960) Std. Gen.; 1119601 Std. (68,69,75 & 1959-60 Air Conditioning Generator).
NOTE - Regulator 1119601 is "Double Contact" type
►*NOTE: Specifications below are "Normal Settings"*

Cutout Relay

Cuts In - 11 8-13 5 volts (1119002 & 1119168), 11 8-13 0 volts (1119601)
Contact Gap - 020"
Air Gap - 020" with contacts just closed.

Voltage Regulator

Setting - (1119002) & 1119168) 13 8-14 7 volts at 125°F ambient temperature
Setting (1119601) - 13 8-14 6 volts at 125°F ambient temperature when operating on upper contacts 1-3 volts lower when operating on lower contacts
Contact Gap (1119601) - 016"
Air Gap - .075" (1119002 & 1119168), .067" (1119601) with armature pressed down to point where contacts just touch
Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" or "Delco-Remy (Double Contact) Regulators" in Electrical Section*

Current Regulator

Setting (1119002 & 1119168) - 32-37 amps at 125°F.
Setting (1119601) - 42 5-47 amps at 125°F
Air Gap - 075" with armature pressed down to point where contacts just touch
Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" or "Delco-Remy (Double Contact) Regulators" in Electrical Section*

MISC. ELECTRICAL

►*1960 LOCKING TYPE ELECTRICAL CONNECTOR NOTE:* It is necessary to straighten "Finger Clips", press in on "Thumb Release", remove "Wire Clip" or lift up on "Locking Tab" before attempting to separate connector

►*1959 INSTRUMENT PANEL COVER & CLUSTER NOTE:* Instrument Panel Cluster contains Cluster Printed Circuit and Fuel and Temperature Gauge

Instrument Panel Cover & Cluster Removal - Disconnect battery cable at battery Remove lower steering column "U" clamp stud nuts and lower steering column Remove speedometer reset stem, knob, and retaining nut, and disconnect speedometer cable at speedometer head Remove six upper instrument cover to lower panel retaining screws Raise upper panel and disconnect multiple connectors linking cover to lower panel and unhook cover hooks from cowl retainers Remove cover and cluster assembly from car Remove four retaining nuts and remove cluster

Cluster Printed Circuit Removal - With upper cover and cluster removed, remove printed circuit retaining nuts and remove printed circuit Remove bulb sockets from printed circuit by twisting counterclockwise

Fuel & Temperature Gauge Removal - With upper cover and cluster removed, remove two nuts retaining each gauge to back plate Remove eight screws-retaining back plate to cluster casting and remove back plate Remove either gauge as required

Headlamps: Dual Headlights (4-Headlight System) *See 4-Headlight System in Electrical Section*

►*1960 INSTRUMENT PANEL COVER & CLUSTER NOTE:* A separate wiring harness (in Cluster) must he removed with cluster by disconnecting three connectors beneath instrument panel top cover.

Instrument Panel Cover & Cluster Removal - Disconnect negative cable at battery. Remove lower steering column cover and Hydra-Matic pointer. Remove panel cover-to-lower instrument panel screws. Raise front edge of cover and insert wood block. *NOTE - Above procedure provides access to components.* Disconnect 2 harness connectors at firewall, headlight feed connector, ignition switch connector, shift indicator light, speedometer cable, and trip mileage cable. Disconnect Guide-Matic & Cruise Control, if so equipped. Unhook panel cover hooks from cowl retainers and remove cover. To install, reverse above procedure after connecting wires and battery cable temporarily so operation of gauges and lights can be checked before lowering panel.

Instrument Cluster Removal - With upper cover and cluster removed, mark bulbs and cluster for reassembly, then remove cluster retaining nuts and cluster.

Speedometer Removal - Speedometer can be removed after removal of upper cover and cluster assembly

Fuel & Temperature Gauge Removal - Disconnect gauge wire connectors and bulb, remove two screws and gauge

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fuel & Temperatur Gaug R m val On Car - Raise instrument panel cover, see above, then loosen instrument cluster harness from retaining clip and move aside to gain access to gauge. Disconnect gauge wire connectors and bulb. Remove two screws and remove gauge.

►*1959 HEADLIGHT FAILURE CORRECTION:* Caused by corrosion of Autronic Eye Aluminum Terminals. To correct, clean Aluminum terminals and coat them with DC-4 Silicone Compound. After Engine No. 069542, terminals are of brass and are coated in production.

Autr nic Ey : *S "Autronic Eye" in Electrical Section.*

Guide-Matic P w r H adlight Control: *See "Guide-Matic Pow r H adlight Control" in Electrical Section.*

Dir cti nal Signal: *Se "Dir ctional Signals" in Electrical S ction.*

Stop Light Switch L cati n: Early 1959 type mounted on a flange protruding from brake pedal support bracket below instrument panel and operated by pin on brake pedal arm. Later 1959 and 1960 type, mounted above brake pedal arm attached to bracket welded to left side of brake pedal support bracket.

Adjustment - Adjust switch action so stop light is on when pedal is depressed 1" (Early type) or ½" (later type). *NOTE* - Conversion Kit Part No. 361525 available for use on early 1959 cars.

CIRCUIT BREAKER (Lighting): 20 Ampere. Protects Headlamps, Fog, Instrument, Parking, Tail and Rear License lights. Located on headlight switch.

FUSES: *NOTE* - Fuse block located under left end of instrument panel.

25 Amp r - Body Feed fuse. Protects Cigar Lighters, Clock, Interior and Glove Box Lights. On fuse block.

25 Amp r - Windshield Wipers. On Fuse block.

9 Amp r - Instrument Gauges & Indicators (Exc. Generator Telltale) and Back-up Lights. On fuse block.

15 Amp r - Turn Signals and Stop Lights. On fuse block.

6 Amp re - Generator Telltale light. In wire from "A" terminal of generator, behind battery.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extr me car when disconnecting any part of air conditioning quipm nt or lin s for access to engine. See "Air Conditioning Servic Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own V8, overhead valves.

B r	Str k	Displacement	Rated HP
4"	3 7/8"	390 cu. in.	51.2

Engin	C mpr. Ratio	Developed HP
Std. (1 Carb.)	10.5-1	325 at 4800 RPM
Eldorado (3 Carb.)	10.5-1	345 at 4800 RPM

Compression Pressur - *S TUNE-UP.*

►*1959 ENGINE DETONATION CORRECTION:* Install new Cylinder Head Shim Part No. 1473962 as follows: Coat both sides of shim and a cylinder head gasket No. 1473154 with gasket cement (One shim and one gasket on each block with shim against block). Set timing to 5° BTDC.

►*1959 PULSATING ENGINE VIBRATION CORRECTION:* Caused by vibration of Air Compressor & Power Steering Pump Assembly. To correct, on cars prior to Engine No. 067300, install an additional brace (Kit Part No. 3631500) between cylinder head and steering pump.

►*1959 EXCESSIVE OIL CONSUMPTION NOTE:* Caused by leak at valve stem oil seals. To check and replace seals without removing valves, *see "Valve Syst m" in Cadillac Special Data.*

►*1959 ENGINE VIBRATION UNDER LIGHT LOAD CORRECTION (Air Conditioned Cars):* Correct by installing Compressor Rear Support Braces. *See "Frigidaire & Harrison (GM) Air Conditioning" in Miscellaneous Section.*

►*1959 ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel):* Minimum fuel octane rating for satisfactory engine operation is 100 Research Method or 89 Motor Method. *NOTE* - These requirements can be reduced two octane numbers by resetting timing to TDC. When above fuel of correct rating is not available, install low compression Pistons No. 3631344 (Std.), 3631345 (.010"), 3631346 (.020"), 3631347 (.030")Oversize. DO NOT replace distributor or carburetor. Set timing on single and triple carburetor engines at 5° BTDC.

►*1960 CAMSHAFT & FUEL PUMP PUSHROD REPLACEMENT CAUTION:* Use plain end fuel pump pushrod, Part No. 145383, when replacing camshaft. Use No. 3508895, with cast iron tip, when replacing fuel pump pushrod only.

►*OVERSIZE CYLINDER BORE CAUTION:* Engines with mark * preceding Engine Unit No. have .010" oversize cylinder bore and pistons.

►*ENGINE VIBRATION CORRECTION: See "Engine" in Cadillac Special Data.*

ENGINE REMOVAL: *See "Engine" in Cadillac Special Data.*

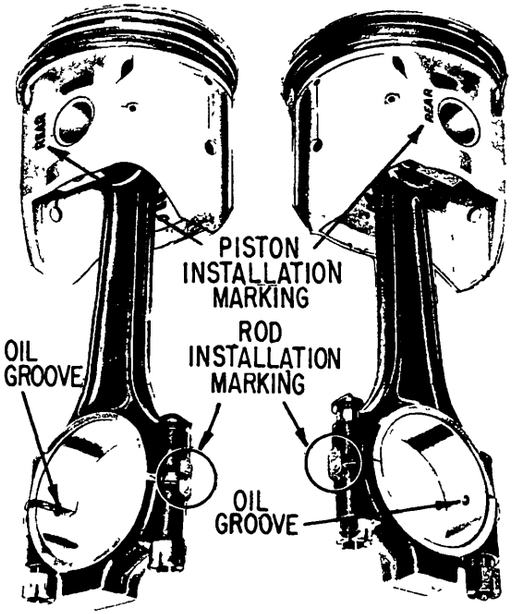
OIL PAN REMOVAL: Drain crankcase, remove dipstick, disconnect battery ground strap. Disconnect starter solenoid wires, remove starter. Remove right hand exhaust pipe bracket. Remove screws and lower the idler arm support to frame side rail. Remove oil pan screws and oil pan.

CYLINDER HEAD & MANIFOLDS: *See "Cylinder Head & Manifolds" in Cadillac Special Data.*

►*1959 CYLINDER HEAD & GASKET PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION:* Beginning with Engine No. 010700, coolant distribution passage at upper center of each head enlarged and head gaskets were changed to incorporate this larger hole. NEW Cylinder Head and Gaskets can be used on earlier cars, however old type gaskets **cannot** be used on New type head.

TIGHTENING TORQUES: *See "Tightening Specifications" in Cadillac Special Data.*

PISTONS



►*ORIGINAL CYLINDER BORE CAUTION:* Engines with mark * preceding Engine Unit No. (on left rear of crankcase) have .010" oversize pistons and cylinder bore. Standard cylinder bore size 4.000-4.0020".

Original Bore & Pistons - *See "Original Bore& Pistons" in Cadillac Special Data.*

Pistons - Pistons have trough in head to provide fuel turbulance and clearance for valves at high speed.

Clearance - .0015" (Top of skirt), .000" (Bottom of skirt).

R moval - Piston and rod assemblies removed from above. Install connecting rod Guide Studs J-3224 on connecting rod bolts to guide rod out through bore without nicking or damaging it.

CADILLAC PISTON & ROD ASSY.

Fitting New Pistons: Use micrometer or feeler gauge. *See "Pistons" in Cadillac Special Data.*

Replacement Pistons: Standard (Code "L" or "M") and .010", .020", .030" Oversize with rings and pins.

Installing Pistons: Install in cylinder with piston pin boss marked "Rear" toward rear of engine. *See "Connecting Rods" (below) for installation on rods.*

PISTON PIN

Pin is pressed fit in connecting rod.

Diameter - .9994-.9997". **Length** - 3 3/32".

Pin Fit in Piston - .00005-.0001" clearance at 70°F. Not fitted in field (replace piston & pin assembly).

Pin Fit in Rod - *(NOTE* - Special tools required). *S "Piston Pins" in Cadillac Special Data.*

Replacement Pins: Furnished with new pistons only.

►*PISTON PIN TOOL MODIFICATION FOR USE ON 1959 CARS:* To prevent damage to 1959 type pistons, when removing or installing pins, Piston Pin Support, Tool No. J-3848-9 must be modified by grinding new chamfer on end leaving a flat surface 1/8" wide at inner diameter.

PISTON RINGS

Piston rings are 2-in-1 chrome set with side sealing type oil ring.

Ring	Width	End Gap	Side Clearanc
Compr. 1 & 2	5/64"	.013-.023"	.0025-.0035"
Oil	3/16"		①

① - Three-piece type, side sealing.

R plac m nt Rings: Standard, .010", .020", .030" Oversize.

Installing Rings: Chamfered inner edge of both compression rings must be installed toward top of piston.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CONNECTING ROD

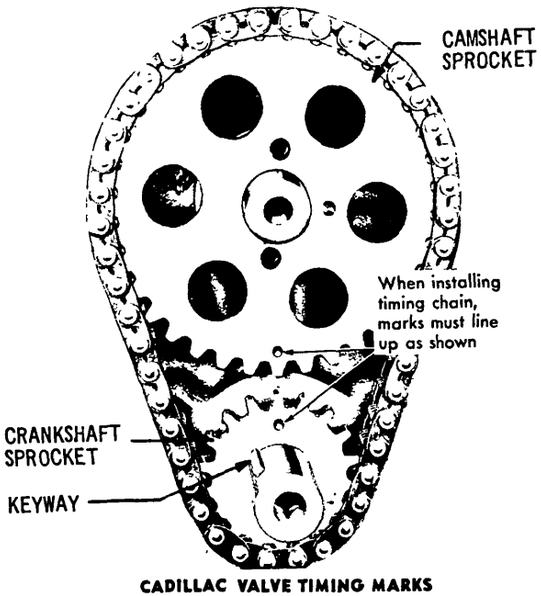
L ngth - 6.5" (center-to-center).
Crankpin Journal Diameter - 2.2488-2.2493". Wear limit .0045".
Out-of-Round Limits - .00025" maximum.
Bearings - Moraine 400. Bearing shell is steel backed aluminum. Bearing halves are interchangeable. No shims.
Clearance - .0005-.0020" (Service limit .0045").
Replacement Bearings: Furnished in standard size only.
Installing Rods: Install piston and rod in cylinder bore with REAR on piston toward rear of engine and numbers on lower end of rod down. Numbers 1, 3, 5, 7 are in left bank; 2, 4, 6, 8 are in right bank.

CRANKSHAFT

Journal Diameter - 2.625".
Out-of-Round Limits - .00025".
Bearings - Rear, Moraine Durex 100A. All other bearings are Moraine 400 Aluminum
Clearance - .0008-.0025". Wear limit .005".
►*REAR MAIN BEARING ALIGNMENT NOTE:* For thrust bearing surface alignment see *"Crankshaft & Main Bearings" in Cadillac Special Data.*
Replacement Bearings: Furnished in standard size only.
End Thrust: Taken by flanged rear main bearing.
Endplay - .001-.007". Wear limit .010".
Crankshaft Removal: See *"Crankshaft & Main Bearings" in Cadillac Special Data.*
Rear Main Bearing Oil Seal Installation: See *"Crankshaft & Main Bearings" in Cadillac Special Data.*

CAMSHAFT

►*CAUTION:* Handle shaft with care to avoid damage or mis-alignment. Check whenever removed.
Removal, Alignment & Installation - See *"Camshaft & Bearings" in Cadillac Special Data.*
Bearings - Steel backed babbitt bushings.
Clearance - .001-.0022" (service limit .004" max.).
Bearing Out-of-Round Limit - .002" max.
Timing Chain: Link-Belt side guide type. **Width** - 11/16", **Pitch** .500", **Length** 23" or 46 links.
Camshaft Setting: Both sprockets marked "0". Mesh chain with sprockets turned so that marks adjacent and in line with straightedge across shaft.



VALVES

Tappet Clearance: None in service, hydraulic.

Valve	Head Diam.	Stem Diam.	Length
Intake	1.875"	.3415-.3425"	4.717-4.688"
Exhaust	1.500"	.3415-.3420"	4.727-4.694"

Valve	Seat Angle	③Lift	Stem Clearance
Intake	①44°	.45"	②.0005-.0025"
Exhaust	①44°	.45"	②.0010-.0025"

① - New valve. Valve may be refaced to 45°.
② - New valves & guides. Wear limit .005" max.
③ - Cam lobe lift .273".
►*NEW VALVE SEAT CAUTION: DO NOT lap or grind so that seat width is mor than 1/64" (du to diff renc of 1° b twe n valve s at and valv which is designed to provide "hairlin " contact.*

CADILLAC VALVE TIMING MARKS

Valve Seat Recommendations - 3/64-1/16" (moderate speed or city driving), 1/16-3/32" (high speed driving). Cut seat so that distance from outer edge to edge of flange on valve head is no more than 1/32".
Valve Stem Oil Seal - Rubber oil seal installed in lower groove on valve stem (below valve keeper).
Oil Seal Installation - See *"Valve System" in Cadillac Special Data.*
Valve Guides: Pressed in cylinder head from combustion chamber side with longest chamfer end pointing toward rocker arm side of head. Use Remover Tool J-3062 to drive out old guide (toward top of head) and installer Tool J-3066 to drive new guide in (tool serves as stop for driver).
Valve Springs: Free length 2.25" approximately.

Valve Spring Specifications

	Pressure	Length
Valve Closed	60-65 lbs.	1.946"
Valve Open	155-165 lbs.	1.496"

►*SPRING INSTALLATION CAUTION:* Lower end of valve spring must be seated in cylinder head.
Valve Lifters: Hydraulic.
See *"Valve System" in Cadillac Special Data.*
Valve Lifter Removal - See *"Valve System" in Cadillac Special Data.*
Rocker Arm Assembly: See *"Valve System" in Cadillac Special Data.*

VALVE TIMING

See *"Camshaft Setting" under CAMSHAFT above.*
►*VALVE TIMING NOTE: Specifications are "Without Ramp".*
Intake Valves - Open 27° BTDC. Close 75° ALDC.
Exhaust Valv s - Open 73° BLDC. Close 29° ATDC.
Valv Timing Ch ck - Not practical to check in field. Manufacturer recommends removing timing chain cover and checking timing gears.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engin Lubricati n" under OILING SYSTEM in Cadillac Sp cial Data.*
Crankcase Capacity: 5 qts. refill, 6 qts. with filter change.
Normal Oil Pressure: 30-35 lbs. min. at 30 MPH. 15 lbs. at idling speed.
Pressure Regulator Valve - On oil pump. Not adjustable.
Oil Pressure Indicator - Light on instrument panel controlled by pressure switch AC No. 1508767.
Oil Pump: Helical gear, mounted on rear bearing cap.
Oil Pump Removal & Ov rhaul - S *"Oiling Syst m" in Cadillac Special Data.*
Oil Filter: **(1959)** Partial flow. Replace element every 6,000 miles or more frequently in dusty areas. **(1960)** New full flow throw-away type filter located on right side of engine block just ahead of flywheel housing. Replace filter every other recommended oil change (normal operation) or more frequently under severe driving conditions.
►*1959 OIL FILTER INSTALLATION CAUTION:* DO NOT tighten cover bolt to more than 25 ft. lbs. Cover will be crushed and a leak will result.
►*1960 OIL FILTER INSTALLATION CAUTION:* Screw new filter onto stud by hand until gasket touches filter base, then tighten bolt head an additional 2/3 turn. *DO NOT OVERTIGHTEN FILTER.*
Crankcase Ventilation: Air intake in oil filler cap (oil wetted type) with outlet connection at rear of valve compartment cover and outlet pipe extending down below engine at right rear corner.

COOLING

►*OPERATING TEMPERATURE NOTE:* Standard engine thermostat is fully open at 198°F. When Methonol base anti-freeze boils at prolonged idling speeds, refill cooling system with ethylene glycol base anti-freeze or install lower operating thermostat Part No. 1468828. Engine efficiency and heater output will be affected by this change.
►*1959 LOWER RADIATOR HOSE & OIL COOLER LINE INSTALLATION CAUTION:* To prevent damage to Power Steering or Generator belt, the lower hose must be 1¼" away from lower radiator tank with 1" clearance between hose and steering belt. Grommets around oil cooler line should be centered in retaining clips and clips tightened firmly to properly position cooler line.
Water Capacity: 18.5 qts., (without heater); 19.25 qts., Series 62, 68, 20.75 qts. Series 75 (with heater). Add 0.5 qts. with Air Conditioning.
Pressure Valve: (Std.) AC No. RC-6, 12-15 lb., (Air Cond.) AC NO. RC-15, 13½-16½ lb. Radiator filler cap.
Thermostat: Dole type. In water outlet at top of pump body. Starts to open at 173-178°F. Fully open at 198°F.
Temperature Controlled Fan Clutch (Air C nd. Cars) Thermostatically controlled fan clutch used on these cars. When ambient temperature around clutch coil is 130-140°F or more, clutch is engaged (fan speed is 3200-3500 RPM). When coil is 115-125°F or outside temperature is approx. 70°F or below, clutch will disengage (fan speed is limited to 1000-1500 RPM). Thermostatically controlled clutch is serviced only as an assembly.
►*THERMOSTATICALLY CONTROLLED FAN CLUTCH NOTE:* Use ethylene glycol base anti-freeze in cooling

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

system (for cold weather protection) to protect engine from overheating with slow-warm-up before thermostat opens.

Water Pump: Packless type, with sealed ball bearing.

Removal & Overhaul - *See "Water Pumps" in Cadillac Special Data.*

Temperature Gauge: AC electric.

Dash Unit - AC No. 1513649 (1959), 1513993 (1960).

Engine Unit - AC No. 1513130.

See "Temperature Gauges" in Miscellaneous Section.

HYDRA-MATIC DRIVE

Dual-Coupling, four-speed hydraulically controlled automatic transmission of same design as used on previous models, except that rear oil pump was discontinued beginning 1959 and the 1960 transmission is smaller in overall size.

►*1959 HYDRA-MATIC BUZZING NOISE OR ERRATIC SHIFT CORRECTION (Early Cars):* To correct, install new Governor No. 8619903. *See "Dual-Coupling Hydra-Matic Transmission" in Transmission Section.*

►*1959 HYDRA-MATIC LOW SPEED THUMP CORRECTION:* Install Service Kit 8619905 (with new Coupling Valve & Coupling Signal Valve). *See "Dual-Coupling Hydra-Matic Transmission" in Transmission Section.*

►*LATE 1960 HYDRA-MATIC TRANSMISSION REMAINING IN 3RD GEAR WHEN CAR IS STOPPED: See "Cadillac Dual-Coupling Hydra-Matic" in Transmission Section.*

►*1959 HYDRA-MATIC TORUS COVER RATTLE CORRECTION (At 9-15 MPH in 3rd Speed; 19-23 MPH in 4th Speed):* Install Torus cover dampener spring (red) Part No. 8619099. *See "Dual-Coupling Hydra-Matic Transmission" in Transmission Section.*

►*1959 CLOSED THROTTLE 3-2 DOWNSHIFT NOISE CORRECTION: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

►*1960 GROWL OR BUZZING NOISE CORRECTION (Early Cars):* On cars before Eng. No. 020775, install new soft rubber insulator, Part No. 1475806, in place of old insulator at cooler pipe bracing location below generator at front of frame crossmember. Later cars have new insulator.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual-Coupling Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Dual-Coupling Hydra-Matic Drive" in Transmission Section.*

1959 Lubrication - Check fluid every 2,000 miles, drain and refill every 12,000 miles or one year whichever occurs first. *NOTE* - When driven under severe conditions, such as heavy city traffic during hot weather or when engine is idled for long periods of time, change oil at 6,000 miles.

Capacity - 11 qts. refill, 11½ qts. dry. *NOTE* - Correct level is within ¼" of FULL mark on dipstick.

Checking Fluid Level - Run engine for 1½ minutes at 800 RPM with selector lever in "N" or "P". Add or remove fluid (with engine running) to bring level to within ¼" of FULL mark on dipstick. Use only Automatic Transmission Fluid Type "A", Suffix "A".

1960 Lubrication - Check fluid level every chassis lubrication (oil change). Drain original oil at 24,000 miles or 1 year whichever occurs first, then at 12,000 miles or 1 year intervals. For commercial use, heavy driving during hot weather, or prolonged idling, change original oil and make subsequent changes at not to exceed 12,000 mile intervals.

Capacity - 9 qts. refill, 10 qts. dry. *NOTE* - Correct level is at "Full" mark on dipstick.

Checking Fluid Level - Check only with transmission at operating temperature. Run engine for 1½ minutes at 800 RPM with selector lever in "N" or "P" position. Add or remove fluid (with engine running) to bring fluid level to "Full" mark. *NOTE* - Only one pint of fluid is required to raise level from "Add 1 pint" mark to "F" full mark on dipstick. DO NOT OVERFILL transmission and use only Automatic Transmission Fluid Type "A" Suffix "A".

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Dual-Coupling Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics. Needle bearing type. Three used with two piece propeller shaft and center bearing.

PROPELLER SHAFT

Propeller Shaft Center Bearing: *See "Propeller Shaft" in Cadillac Special Data.*

►*PROPELLER SHAFT "THUNK" NOISE CORRECTION:* Condition noticeable when stopping car or when brakes are released. May be caused by binding in sliding fit or propeller shaft center splines. Apply Lubricant Part No- 1476968 to spline area.

►*1960 PROPELLER SHAFT "SHUDDER" OR "VIBRATION" CORRECTION (15-20 MPH):* Caused by incorrectly positioned (sideways) center bearing support. Dampen shuddering effect by elongating mounting holes 1/8", shimming evenly and aligning and tightening support. *NOTE* - DO NOT tilt bracket by using more shims on one side to correct relocation.

Rear Axle Pinion Angle: Must be correct to prevent propeller shaft vibration. For checking and adjusting, see "Cadillac Rear Suspension" in Suspension & Wheel Alignment Section.

REAR AXLE

Own. Hypoid gear, semi-floating with Hotchkiss Drive. *See "Cadillac Hypoid" in Rear Axle Section.*

►*1959 REAR AXLE UPPER CONTROL YOKE ASSEMBLY PRODUCTION CHANGE & CAUTION:* This change in design to improve ride and handling includes a new ball joint, bracket, control yoke, and rear axle housing which are not interchangeable with earlier cars.

►*1960 PINION SEAL NOTE:* Smaller diameter pinion seal used. Requires use of Oil Seal Installer No. J-8436 for installation.

►*1960 WHEEL MOUNTING STUD NOTE:* Right hand threads are used for both right and left side of car.

►***OVERHAUL CAUTION:* Manufacturer recommends that Carrier Assembly be serviced by replacement. DO NOT disassemble this unit or attempt service work other than oil seal and universal joint replacement.**

1959 Axle Identification - Gear ratio identified by number stamped on front face of carrier assembly at end of oil return passage. See table following.

Series	Ratio	Mark
60, 62, 63①	2.94-1	2
64②	3.21-1	1
75	3.36-1	6
68 Comm	3.77-1	7

①- Exc. Air Cond. Cars and/or three 2-barrel Carb.
②- And 60, 62, 63 Series with Air Cond. and/or three 2-barrel Carbs. Optl. on all 60, 62, 63 Series Cars.
③- Optl. on 67 Series.

1960 Axle Identification - Gear ratio identified by letter stamped on bottom side of carrier on flange adjacent to rear axle housing. Year and serial number of differential stamped in same manner. See table following.

Series	Ratio	Mark
62①	③2.94-1	T
62②	3.21-1	W
Eldorado Models	③3.21-1	W
75⑤	3.36-1	X
75②	3.36 or 3.77-1	X or Y
68	3.77-1	Y

①- Exc. AC, 3-Carbs. & Eldorado Models.
②- AC & 3-Carbs.
③- 3.21-1 Optional.
④- 2.94-1 Optional on 6437,67 without AC.
⑤- Exc. AC & 3-Carbs.

►*1959 REAR AXLE LUBRICANT CHANGE AND CAUTION:* Later cars use multiple viscosity lubricant which has a light yellowish color. DO NOT confuse with SAE-30 or 40 engine oil.

Rear Axle Pinion Angle: Must be correct to prevent propeller shaft vibration. For checking and adjusting *see "Cadillac Rear Suspension" in Suspension & Wheel Alignment Section.*

Axle Shaft Removal: Remove wheel and take out screws holding brake drum on axle shaft flange and remove drum. Remove nuts and lockwashers from bolts holding bearing retainer and backing plate on axle housing. Use Puller J-8131 (J-942-1) and Slide Hammer J-2619 (2619-A) to remove axle shaft.

►*CAUTION:* Use care not to damage axle shaft oil seal when sliding axle shaft out and do not disturb position of backing plate on housing.

Commercial Cars - Remove wheel, then remove nut and washer on end of shaft. Pull wheel hub and brake drum assembly off shaft using a five-jaw puller to save warping or distorting brake drum. Disconnect brake line at wheel cylinder. Remove seven screws and lockwashers holding bearing retainer and backing plate to housing flange and remove bearing retainer. Pull axle shaft, bearing assembly and static ring as a complete assembly. DO NOT damage oil seal next to inner side of wheel bearing.

Differential Carrier Removal: Disconnect rear universal joint and remove lubricant from rear axle housing. Remove axle shafts (see above). Remove nuts and washers holding carrier to axle housing and remove entire assembly with gasket. *See "Overhaul Caution" above.*

Wheel Bearings: Sealed ball-bearing type.

►*CAUTION:* Check bearings for loss of lubricant when shaft removed. If bearings spin freely indicating loss of lubricant, replace bearings.

Pinion Bearing Preload Adjustment: Pinion should be adjusted whenever nut on end of pinion shaft disturbed (for universal joint yoke or oil seal replacement).

See "Cadillac Hypoid" in Rear Axle Section.

CONTINUED FROM PRECEDING PAGE

SHOCK ABSORBERS

Delco. Direct acting permanently sealed airplane type.
Coil Spring Cars - Mounted inside of coil springs. (Front); between frame bracket at upper end and lower control link mounting bracket at lower end (Rear).

Air Spring Cars - Mounted between brackets located behind Air Springs (Front) and same as for Coil Springs above (Rear).

1959 Shock Absorber Part Nos.

Model	Front	Rear
All Series ①	5543763	5543764
All Series Exc. 6437,67 ②	5543765	5543766
75 ②	5543759	5543760

① - Air Springs. ② - Less Air Springs.

1960 Shock Absorber Part Nos.

Series	Front	Rear
62 Exc. Eldorado	5552333	5552334
All Air Springs	5552339	5552340
75	5552335	5552336
68	5552337	5552338

FRONT SUSPENSION

Independent type with direct acting shock absorbers and Spherical Joints. *1960 NOTE* - Both steering knuckles (right & left) have right hand threads and are interchangeable. *See "Cadillac Front Suspension" in Suspension & Wheel Alignment Section.*

►*FRONT SUSPENSION NOTE:* Air Suspension standard on all Eldorado Models. Optional on all other models.

Steering Axis Inclination - 4° at 0° camber.

Caster - 0°-Neg 1° (Series 60,62); Neg. ¾°-Neg. 1¾° (Series 75,68). Both sides equal within ½°.

Camber - Neg. 3/8°-Pos. 3/8°. With 1/4-1/2° more Pos. camber on left wheel for crowned road pull when necessary.

Toe-In (Coil Spring) - 3/16-1/4".

Toe-In (Air Susp.) -1/16"±1/32".

Toe-Out on Turns - Inside wheel 20°, outside wheel 17°20'.

Wheel Bearing (Ball) Adjustment: Install wheel and adjust nut to 25 ft. lbs. torque then rotate drum to properly seat parts and be sure threads are free. Back off nut and retighten it to 2 ft. lbs. torque. When necessary to align cotter pin hole nut may be tightened but never to exceed 10 ft. lbs.

Wheel Bearing (Roller) Adjustment: Tighten adjusting nut to 30 ft. lbs. torque. All parts must be seated and threads are free. Back off nut ¼ turn (90°) or more to nearest cotter pin hole. Wheel should spin freely. *CAUTION* - Roller type wheel bearings require slight clearance in contrast to preload required with former ball type wheel bearings.

REAR SUSPENSION

R ar Suspension: *See "Cadillac Rear Suspension" in Suspensi n & Whe l Alignment Secti n.*

AIR SUSPENSION

Air Springs replace coil springs on all four wheels. *See "Front Suspension" above f r alignment specifications and "Cadillac Air-Suspension" in Suspension & Wheel Alignment Section.*

►*1959 AIR SUSPENSION ACCUMULATOR VALVE NOISE CORRECTION:* Install new Check Valve and Muffler Assembly Part No. 1474293. *See "Cadillac Air Suspension" in Suspension & Wheel Alignment Section.*

STEERING

Power Steering: Saginaw (Rotary Valve) Hydraulic. Hydraulically operated rotary valve power steering combined with recirculating ball type gear.
See "Saginaw (Rotary Valve) Power Steering" in Steering Section.

►*1960 HIGH PUMP PRESSURE CORRECTION (Cars with Air Susp.):* See *"Saginaw (Vane Type) Power Steering Pump" in Steering Section.*

►*1960 POWER STEERING PUMP "SQUEAL" CORRECTION:* See *"Saginaw (Vane Type) Power Steering Pump" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Ring Removal: *See "Saginaw (Rotary Valve) Power Steering" in Steering Section.*

Steering Gear Removal: *See "Saginaw (Rotary Valve) Power Steering" in Steering Section.*

BRAKES

1959 Bendix (Hydraulic) Single Anchor (Without Eccentric). Conventional two-shoe with Bendix Power Unit. Parking brake supplies rear wheel service brakes. *See "Bendix Hydraulic Single Anchor (Without Eccentric) Brakes" in Brake Section.*

1960 Bendix (Hydraulic) Single Anchor with new Moraine design self-adjusting feature. Parking brake has automatic vacuum release and applies rear service brakes. *See "Cadillac-Bendix (Moraine Automatic Adjuster)" Brake in Brake Section.*

►*1960 BRAKE EQUALIZER NOTE:* Cars with Engine Nos. between 037160 and 042814 should have a 5/16"-18 x 2" bolt installed in each round portion of keyhole slots in equalizer bar to retain cable.

►*1960 SLOW VACUUM PARKING BRAKE RELEASE CORRECTION:* Install late type vacuum hose (50" long) to eliminate pinched hose(42")used on early cars.

►*1960 PARKING BRAKE BUZZING NOISE CORRECTION (Single Carb. Cars):* When placing hand on release lever minimizes noise, place restrictor Part No. 1475267 in vacuum hose connector at intake manifold.

Drum Diameter - 11.995-12.005" All. *NOTE* - 1960 rear drums are finned cast iron for improved cooling.

Regrinding Limit - 12.060".

Wheel Cylinder Diameter - 1 1/8" (Front) All, 1" (Rear 1959 Exc. Ser. 68), 1 1/16" (Rear 1959 Ser. 68 and All Ser. 1960).

Lining: Molded type riveted to shoes. Primary shoe lining has ½" wide circumferential groove 1/8" deep full length.

Replacem nt Linings - Furnished in Std. size only.

Lining L ngth & Width

S ries	Primary	Sec ndary
60,62 Front & Rear	10.05" x 2½"	12.98" x 2½"
68, 75 Front & Rear	12.98" x 2½"	12.98" x 2½"

Thickness - ¼" (All shoes All Series).

Braking Power - **(1959)** 55.8% (Exc. 68), 52.8% (68), Front. **(1960)** 52.8% Front All Series.

Clearance - .010" (top), .015"(bottom) All Series 1959-60. **(1959)** Adjusting screw backed off 14 notches from point where wheel can just be turned by hand. **(1960)** No service adjustment required. For initial adjustment, *see "Cadillac (Bendix-M rain) Aut matic Adjust r" Brakes in Brake Section.*

Master Cylinde r: Integral with Power Unit (Engine side of firewall).

Checking Fluid - Remove plug from top of master cylinder and maintain fluid to within ¾" of filler opening.

Removal - *See Power Unit below.*

POWER UNIT: Bendix or Moraine Power Unit. Se *"Bendix Power Unit Hydraulic (Disc) R acti n Typ " or "Moraine Power Unit Hydraulic (Diaphragm) R acti n Type" in Brake Section.*

►*1959 BENDIX POWER BRAKE LOSS OF POWER ASSIST:* Caused by disengagement of felt retaining ring on vacuum piston. To correct, install ring, then put crimp in ring with needle nose pliers to decrease diameter of ring.

Removal - Disconnect hydraulic line from master cylinder, vacuum hose and reservoir hose from power unit. Remove power unit pushrod-to-brake pedal relay clevis pin and remove power unit mounting nuts. Remove power unit.

MISC. MECHANICAL

Windshield Wipers: New electric windshield wiper with washer pump. Wiper has link arm drive to wiper transmission.
See "Windshield Wipers" in Miscellan us S cti n.

Trunk Lid Lock: Trunk lid electric lock operated by switch in glove compartment.
See "Cadillac Rear Compartment Lid L ck" in Misc l-laneous Section.

Power Window Regulators: Electric, with reversible motor in each window operating vent and door windows. *See "Electric Window R gulat rs" in Miscellan us Section.*

Power Top Control: Hydro-Lectric with "Sealed" system which does not require periodic draining and refilling. *See "Top Controls" in Misc llane us S cti n.*

Door Lock (1959): Switch in each front door controls door locks on each side of car. *See "Electric Door Locks" in Miscellaneous Section.*

Door Lock (1960): Vacuum locking type with master control. *See "Vacuum Door Locks" in Miscellaneous Section.*

Power Seat Control (Two-Way): Electric type with single reversible type motor for horizontal adjustment. *See "GM 2-Way Seat Contr l" in Miscellane us S ction.*

Power Seat Control (Six-Way): (1959) Electric type with a separate motor on each of the three basic seat movements. **(1960)** Two types used. 1) Same as 1959. 2) One-motor type with three solenoid clutches. S e *"GM 6-Way Seat Control" in Miscellaneous Section.*

Air Conditioning: Frigidaire & Harrison, with magnetic compressor clutch (compressor operates only with switch turned "ON").
See "Frigidair & Harrison (GM) Air C nditi ning" in Misc llan ous S cti n.

TIGHTENING SPECIFICATIONS

1954 MODELS

	Ft. Lbs.	In. Lbs.
Cylinder Head Capscrews	75-80	900-960
Main Bearing Bolts	100-110	1200-1320
Con. Rod Nuts	40-50	480-600
Rocker Arm Support Bolts	25-30	300-360
Crankcase Frt. End Plate	15-20	180-240
Timing Gear Cover Screws	6-7½	72-90
Manifold Clamp Bolts	15-20	180-240
Manifold Stud Nuts	25-30	300-360
Clutch Mounting Bolts	25-30	300-360
Clutch Housing Bolts	45-55	540-660
Flywheel Bolts	50-65	600-780
Oil Pan Flange Bolts	6-7½	72-90
Oil Pan Corner Bolts	12½-15	150-180
Oil Distr. Cover Screws	6-7½	72-90
Water Pump Mtg. Bolts	25-30	300-360
Fuel Pump Mtg. Bolts	15-20	180-240
Spark Plugs (14 mm.)	20-25	240-300
Spark Plugs (10 mm.)	10-12	120-144
Pitman Arm Bushing Nuts	30-40	360-480
Prop. Shaft Flange Nut	160-280	1920-3360
Axle Flange Bolts (Trucks)	85-95	1020-1140

1955-60 MODELS

	6 Cyl. Ft. Lbs.	V8 Ft. Lbs.
Cylinder Head	90-95	60-70
Intake Manifold	① 15-20	25-35
Exhaust Manifold	① 15-20	⑤
Oil Pan	② 10½-15	⑥
Main Bearing Caps	100-110	③
Flywheel	50-65	55-65
Con Rod Caps	35-45	④
Rocker Arm Support Bracket	25-30	
Rocker Arm Cover (Inch Lbs.)	20-25	20-25
Engine Front Cover	6-7½	6-8
Clutch Housing	45-55	25-35

① - Tighten two **center** bolts to 25-30 ft. lbs.

② - Corner bolts. Tighten other flange bolts to 6-7½ lbs. (6 Cyl.).

③ - (283") 60-70 Ft. lbs. (348") 95 100 Ft. lbs.

④ - (283") 30-35 Ft. lbs. . (348") 35-45 Ft. lbs.

⑤ - 25-35 ft. lbs. (1955-57), 25-30 ft. lbs. Center and 15-20 ft. lbs. End Bolts (1958-60).

⑥ - 12-15 ft. lbs. (5/16" Front & Rear) and 6-9 ft. lbs. (¼" Intermediate) (1955-57); 12-15 ft. lbs. (283"), 10-15 ft. lbs. (348") (1958-60).

ENGINE

1954 6 CYL. PASS. CARS

ENGINE REMOVAL: Engine, clutch, and transmission can be removed as an assembly as follows: Drain radiator, block, oil pan, and transmission. Take off hood by disconnecting hood springs (use Tool J-3181) and removing two hinge support arm-to-hood bolts at each side (hold hood to prevent dropping down when bolts removed). Remove radiator (see Radiator Removal), battery with ground strap attached, and air cleaner. Disconnect wire harness at right junction block and pull harness through header bar. Remove header bar. Disconnect starter and generator wires, coil lead, windshield wiper vacuum line, gas line at pump, choke and throttle cables at carburetor, line at temperature gauge and oil pressure gauge, exhaust pipe flange at manifold, accelerator pedal from rod, transmission control rods from levers on side of case (work through opening in floor), speedometer cable at transmission, and clutch link to pedal arm. (On Powerglide models, disconnect transmission oil cooler lines and vacuum line). Split the universal joint retainer, sliding the ball back, taking out bearing capscrews and removing trunnion bearings. Remove transmission-to-support bolts, engine side mounting-to-frame bracket bolts, and front engine mounting bolts. Take off rocker arm cover. Remove 4th cylinder head bolt from the rear on left side, 3rd from rear on right side and install engine lifting tool No. J-2967. Use a hoist and lift engine, clutch, and transmission assembly from car.

NOTE—On all models (except Powerglide with Automatic Transmission) after engine has been installed and torque tube connected, fill universal housing through speedometer connection (remove driven gear) with ½ pint of SAE 90 transmission lubricant.

1955-56 6 CYL. PASS. CARS

ENGINE REMOVAL: Drain cooling system, crankcase and transmission and proceed as follows:

1) Scribe alignment marks on hood around hood hinges and remove hood. Remove radiator hoses and heater hoses (on models so equipped). On Powerglide models, remove and plug oil cooler lines.

2) Remove radiator core support to fender bolts and remove radiator core. Remove battery cables and battery,

3) Disconnect starter and generator wires, engine to body group strap, oil pressure indicator wire at switch on block and coil primary lead at coil. Remove temperature indicator element wire. Remove air cleaner and oil filter.

4) Disconnect gasoline feed pipe from fuel pump and disconnect vacuum lines at intake manifold. Remove exhaust pipe to manifold bolts. Disconnect carburetor control rod from dash panel bellcrank. Remove transmission control rods. Remove clutch control bellcrank and control rods on conventional transmission models. On overdrive models, disconnect overdrive wires and cables. On Powerglide models, remove oil filler tube and plug opening.

5) Disconnect speedometer cable at transmission. Remove propeller shaft, overdrive solenoid (if so equipped). Remove rocker arm cover and install lifting hooks (Kit J-4536), in cylinder head bolt holes. Disconnect clutch idler shaft bracket. Raise engine slightly and remove all engine and transmisssion mount bolts and remove engine and transmission.

1957-60 6 CYL. PASS. CARS

ENGINE REMOVAL: Drain cooling system, crankcase and transmission and proceed as follows:

1) Scribe alignment marks on hood around hood hinges and remove hood. Remove radiator hoses and heater hoses (on models so equipped) On Powerglide models, remove and plug oil cooler lines.

2) Remove radiator core support to fender bolts and remove radiator core. Remove battery cables and battery,

3) Disconnect starter and generator wires, engine to body group strap, oil pressure indicator wire at switch on block and coil primary lead at coil. Remove temperature indicator element wire. Remove air cleaner and oil filter.

4) Disconnect gasoline feed pipe from fuel pump and disconnect vacuum lines at intake manifold. Remove exhaust pipe to manifold bolts. Disconnect carburetor control rod from dash panel bellcrank. Remove transmission control rods. Remove clutch control bellcrank and control rods on conventional transmission models. On overdrive models, disconnect overdrive wires and cables. On Powerglide models, remove oil filler tube and plug opening.

5) Disconnect speedometer cable at transmission. Remove propeller shaft, overdrive solenoid (if so equipped). Remove rocker arm cover and install lifting hooks (Kit J-4536), in cylinder head bolt holes. Disconnect clutch idler shaft bracket. Raise engine slightly and remove all engine and transmisssion mount bolts and remove engine and transmission.

1955-56 V8 PASS CARS

ENGINE REMOVAL: Drain cooling system, crankcase and transmission, and proceed as follows:

1) Scribe marks on hood at hood hinges and remove hood. Remove radiator and heater hoses, battery and battery cables. Remove fan shroud and radiator core bolts. On Auto. Trans. models, remove and plug oil cooler lines. Remove radiator core and fan shroud.

2) Disconnect starter and generator wires, engine to body ground strap, oil pressure indicator wire at sending unit on block, and primary wire at coil. Remove air cleaner. Remove Air Conditioning (if so equipped). Disconnect gasoline and vacuum lines at fuel pump and remove distributor cap. Remove Power Steering and Air Suspension lines (if so equipped). Disconnect carburetor control rod from bellcrank and throttle valve lever on transmission (if equipped with Auto. Trans.)

3) Remove exhaust pipe flange nuts and lower exhaust pipes and muffler. Remove road draft tube, exhaust crossover pipe and manifold heat valve from right hand exhaust manifold.

4) Remove transmission control rods. On overdrive models disconnect overdrive wires and cables. Remove clutch control bellcrank and control rods (Synchro-mesh Trans.). On Auto. Trans. Cars, remove oil filler tube and plug opening Disconnect speedometer cable at transmission Remove propeller shaft

5) Install two eye bolts and spacers, Kit J-4536-A, in cylinder head bolt holes, raise engine slightly and remove front mounting bolts. Remove transmission mounting block to frame crossmember bolts. Remove engine and transmission as a unit, tilting engine to clear core support.

1957-60 V8 PASS. CARS

ENGINE REMOVAL: Drain cooling system, crankcase and transmission, and proceed as follows:

1) Scribe marks on hood at hood hinges and remove hood. Remove radiator and heater hoses, battery and battery cables Remove fan shroud and radiator core

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

bolts On Auto Trans models remove and plug oil cooler lines Remove radiator core and fan shroud

2) Disconnect starter and generator wires engine to body ground strap, oil pressure indicator wire at send ing unit on block, and primary wire at coil Remove air cleaner Remove Air Conditioning (if so equipped) Disconnect gasoline and vacuum lines at fuel pump and remove distributor cap Remove Power Steering and Air Suspension lines (if so equipped) Disconnect carburetor control rod from bellcrank and throttle valve lever on transmission (if equipped with Auto Trans)

3) Remove exhaust pipe flange nuts and lower exhaust pipes and muffler Remove road draft tube, exhaust crossover pipe and manifold heat valve from right hand exhaust manifold

4) Remove transmission control rods On overdrive models disconnect overdrive wires and cables Remove clutch control bellcrank and control rods (Synchro-mesh Trans) On Auto, Trans Cars remove oil filler tube and plug opening Disconnect speedometer cable at transmission Remove propeller shaft

5) Install two eye bolts and spacers Kit J-4536-A, in cylinder head bolt holes raise engine slightly and remove front mounting bolts Remove transmission mounting block to frame crossmember bolts Remove engine and transmission as a unit, tilting engine to clear core support

1954 TRUCKS

ENGINE REMOVAL (TRUCKS): Drain cylinder block, and oil pan Remove hood assembly, radiator support bracket and radiator Disconnect starter switch cables, coil leads and engine ground strap Disconnect generator leads at generator and disconnect horn wire Disconnect fuel lines at pump, choke and throttle controls at carburetor and remove air cleaner Disconnect oil gauge line at engine, remove temperature gauge engine unit and disconnect vacuum lines at manifold Remove exhaust manifold bolts remove starter pedal and disconnect accelerator pedal from rod Remove floor pan cover in cab and disconnect transmission controls (models with steering column shift), or remove transmission cover and gearshift assembly and install temporary cardboard cover on case Remove hand brake lever, disconnect speedometer cable and clutch link to pedal arm Drain transmission, disconnect propeller shaft Take out bolts in rear engine mounting, remove front engine mounting Remove third cylinder head bolt from rear on left side Install engine lifting eye bolt in this position, attach hoist Remove engine clutch and transmission from chassis as a unit When re-installing engine, see Engine Mounting instructions (following)

1955-56 6 CYL. TRUCKS

ENGINE REMOVAL (6 CYL. TRUCKS): Drain cooling system, crankcase, and transmission, then proceed as follows

1) Disconnect hood springs and hinges, remove hood. Remove radiator support bracket-to-fender bolts, support-to-frame crossmember bolts, then remove radiator and support.

2) Remove battery cable and ammeter wire from starter switch terminal. On vehicles with push-button starter, remove battery cable and ammeter wire from large terminal on solenoid and starter switch wire from small terminal (tape end of battery cable to prevent shorting).

3) Disconnect coil lead from distributor terminal and pull coil high tension wire from center of distributor cap. Remove two coil mounting screws and lay coil with wires attached on dash. Disconnect engine ground strap from frame, gasoline line from fuel pump, generator and field wires from generator.

4) Remove air cleaner and disconnect choke and throttle control cables from carburetor (when used). Remove temperature indicator element from cylinder head and disconnect oil pressure line at cylinder block.

5) Disconnect windshield wiper and Hydrovac vacuum lines (if so equipped). Remove exhaust pipe flange-to-manifold bolts. Remove starter pedal, then remove accelerator pedal from accelerator rod (if so equipped).

6) One ½ and ¾ Ton with conventional transmission, remove control rods from bellcrank on left side of clutch housing. On automatic transmission models, disconnect transmission control and throttle linkage rods from transmission. On 1 Ton models, remove coolant line clips from dash and frame panels. On other models, remove floor mat and transmission floor pan cover

7) On 1 Ton models, remove cotter key and pin attaching parking brake pull rod assembly to parking lever On 1½ and 2 Ton models, disconnect parking brake lever return spring from brake operating lever and remove cotter key and pin attaching inner and outer levers to parking brake operating lever.

8) On 1, 1½, and 2 Ton models, remove transmission cover with parking and gearshift lever. Place piece of cardboard on top of transmission to prevent dirt falling in during removal.

9) Disconnect speedometer cable from transmission and clutch link-to-pedal arm (if so equipped). Remove propeller shaft.

10) Remove rocker arm cover, rocker arm attaching bolts, rocker arm, shaft assembly and pushrods.

11) With Lift Kit J-4536-A, raise engine slightly, remove all four engine mounts and raise engine and transmission from chassis as a unit. Remove crankcase ventilator pipe, then remove starting motor, generator and fan belt.

1957-60 6 CYL. TRUCKS

ENGINE REMOVAL: *NOTE - On 1960 Low Cab Forward Models, see "Front Sheet Metal Assembly Removal" below* On all other models, drain cooling system, crankcase, and transmission, then proceed as follows

1) Disconnect hood springs and hinges, remove hood. Remove radiator support bracket-to-fender bolts, support-to-frame crossmember bolts, then remove radiator and support.

2) Remove battery cable and ammeter wire from starter switch terminal. On vehicles with push-button starter, remove battery cable and ammeter wire from large terminal on solenoid and starter switch wire from small terminal (tape end of battery cable to prevent shorting).

3) Disconnect coil lead from distributor terminal and pull coil high tension wire from center of distributor cap. Remove two coil mounting screws and lay coil with wires attached on dash. Disconnect engine ground strap from frame, gasoline line from fuel pump, generator and field wires from generator.

4) Remove air cleaner and disconnect choke and throttle control cables from carburetor (when used). Remove temperature indicator element from cylinder head and disconnect oil pressure line at cylinder block.

5) Disconnect windshield wiper and Hydrovac vacuum lines (if so equipped). Remove exhaust pipe flange-to-manifold bolts Remove starter pedal, then remove accelerator pedal from accelerator rod (if so equipped).

6) One ½ and ¾ Ton with conventional transmission, remove control rods from bellcrank on left side of clutch housing. On automatic transmission models, disconnect transmission control and throttle linkage rods from transmission. On 1 Ton models, remove coolant line clips from dash and frame panels. On other models, remove floor mat and transmission floor pan cover.

7) On 1 Ton models, remove cotter key and pin attaching parking brake pull rod assembly to parking lever On 1½ and 2 Ton models, disconnect parking brake lever return spring from brake operating lever and remove cotter key and pin attaching inner and outer levers to parking brake operating lever.

8) On 1, 1½, and 2 Ton models, remove transmission cover with parking and gearshift lever. Place piece of cardboard on top of transmission to prevent dirt falling in during removal.

9) Disconnect speedometer cable from transmission and clutch link-to-pedal arm (if so equipped). Remove propeller shaft.

10) Remove rocker arm cover, rocker arm attaching bolts, rocker arm, shaft assembly and pushrods.

11) With Lift Kit J-4536-A, raise engine slightly, remove all four engine mounts and raise engine and transmission from chassis as a unit. Remove crankcase ventilator pipe, then remove starting motor, generator and fan belt.

1955-57 V8 TRUCKS

ENGINE REMOVAL: 1) Drain cooling system, crankcase, and transmission Scribe marks and remove hood Remove radiator hoses, radiator core, and battery with support and cables

2) Disconnect starter and generator wires, engine ground strap, oil pressure switch wire and primary coil lead

3) Remove windshield wiper, temperature gauge element, oil filter, ventilator parts, air cleaner and fan blade and pulley

4) Disconnect fuel line at pump, vacuum lines from manifold, and remove distributor and coil

5) Disconnect carburetor control rod from bellcrank, choke rod from carburetor, crossover pipe and muffler assembly Remove transmission control rods

6) Remove clutch bell crank and control rods, overdrive wires and cables and oil cooler lines Plug openings

7) Disconnect speedometer cable at transmission and remove propeller shaft

8) Remove choke heat tube and rocker arm covers Use two eye bolts from Tool Kit J-4536-A in cylinder bolt holes to raise engine slightly and remove four engine mounts Remove engine and transmission as a unit

1958-59 V8 TRUCKS

ENGINE REMOVAL: 1) Drain cooling system, crankcase, and transmission Remove hood, radiator, and radiator support

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

2) Remove battery cable and ammeter wire from solenoid terminal On push button starter trucks, remove battery cable and wires from solenoid and tape battery cable
3) Disconnect coil wire at distributor and spark plug cables from distributor cap Remove screws and lay coil and wiring on dash Disconnect ground strap at frame and disconnect fuel line at pump
4) Remove wires from generator Remove air cleaner and disconnect choke and throttle cables from carburetor Disconnect temperature wire and oil pressure line
5) Disconnect vacuum lines and remove exhaust pipe to manifold bolts Remove starter pedal and remove accelerator pedal from rod
6) On ½ & ¾-ton (S M Trans), remove control rods from bellcrank On Auto Trans , disconnect transmission lines and throttle rod at transmission On 1-ton, remove coolant line clips from dash and frame panels On all models, remove floor mat and transmission floor pan cover
7) On 1-ton, remove parking brake pullrod to lever pin On 1½ & 2-ton, disconnect parking brake spring and remove inner and outer lever-to-parking brake operating lever pin
8) On 1, 1½ & 2-ton, remove transmission cover with parking brake and gearshift lever *NOTE* - Cover transmission to keep out dirt
9) Disconnect speedometer cable at transmission, and clutch link-to-clutch pedal arm Remove propeller shaft, rocker arm cover, rocker arm and shaft assembly, and pushrods
10) Raise engine with Kit, Tool J-4536-A, and remove four engine mounts Remove engine

1958-60 TRUCKS

ENGINE REMOVAL: 1) Drain radiator, crankcase, and transmission Disconnect parking light wire harness connector from dash Remove hood, battery cables and air cleaner
2) Remove hoses, fan blade, spacer, pulley, fan shroud and radiator core Disconnect overdrive lines at manifold, power steering return line, and pump pressure lines
3) Disconnect starter and generator wires, engine ground strap, oil pressure and temperature unit wires at units, and primary coil wire at coil
4) Disconnect choke and throttle cables from carburetor and place on dash Remove accelerator pull-back spring and remove accelerator rod from carburetor and dash bellcrank
5) Remove crankcase ventilation tube and disconnect exhaust pipes and muffler assembly at manifolds
6) Remove transmission control rods, clutch slave cylinder line, and shift control rods (S M Trans) Disconnect oil cooler lines and plug openings Disconnect speedometer cable at transmission and remove propeller shaft
7) Remove floor pan and front sheet metal on Low Cab Forward models, see below
8) Remove engine front mount to crossmember bracket nut and washer Remove rocker arm covers and install two bolts and spacers from Kit J-4536-A Raise engine slightly and remove crossmember Remove engine and transmission as a unit

FRONT SHEET METAL ASSEMBLY REMOVAL (L w Cab Forward): Drain radiator and remove radiator hoses On Air Cond trucks remove compressor lines Disconnect air cleaner intake hose at fender skirt (if so equipped) wire connectors at dash and toe panel battery generator and regulator leads Disconnect Power Steering Reservoir hose at pump Remove hood assembly at hinges and remove front bumper Remove fender extension bolts (note number and location of shims for reinstallation) Remove fender upper edge-to-plenum and hinge pillar bolts Work from under rear of fender to remove two bolts and spacers at fender extension mounting bracket Remove bolt, locking tab, and flat washer from radiator support to crossmember Remove fender skirt mounting bolts and remove bolt, washer, spacer and grommet from fender skirt bracket Remove steering joint cover bolts and cover from fender skirt and remove snap in clip from seal to skirt. Spread seal from steering column and remove cover Remove sheet metal assembly with radiator battery, horn and voltage regulator

ENGINE MOUNTINGS

1954 PASS. CARS

ENGINE MOUNTING REPLACEMENT: Front Mounting. Remove engine front mount bolts from engine mounting plate and frame cross-member. Raise front end of engine until front mounts can be moved out from between plate and frame. With front support mounting surfaces clean (no oil, etc.), bolt new supports to frame, lower engine, install mounting plate, bolt support to engine.

Side Mountings. Unbolt mounting from clutch housing and frame brackets and remove mounting. Install new mounting with serrated face toward frame bracket. Bolt mounting to clutch housing bracket first, then tighten mounting to frame bracket bolts (bolt hole in frame bracket slotted and serrated face of frame bracket and mounting permit proper positioning without use of shims).

Transmission Mounting (except Powerglide Cars). Remove mounting attaching bolts (tangs of lock plate must be bent back from bolt heads). Raise rear of engine until mounting can be moved out from between transmission and frame cross-member. Use new bolt lock plate and bolt new mounting to frame, lower engine, use new bolt lock plate and bolt mounting to transmission (transmission attaching bolt holes slotted permitting alignment between transmission and support).

1955-60 PASS. CARS & TRUCKS

ENGINE MOUNTING REPLACEMENT (Front Mounts)– Remove top and bottom stud nuts and remove washer and cushion between each nut and the cross member or engine bracket Raise front of engine (On V8 models remove the distributor cap before raising engine) *CAUTION–Raise engine only far enough for clearance.* Replace necessary cushions

Rear Mounts Support engine weight to relieve rear mounts Remove mount attaching bolts from frame outrigger and flywheel housing (or Powerglide Transmission) and remove support Install new support and bolts and tighten securely with engine weight resting on mounts

1954 TRUCKS

ENGINE MOUNTINGS (Trucks): Consist of insulated type front and rear mountings as follows.
Front Mounting—Engine mounting bushings are imbedded in rubber insulator assembled between lower retainer and upper plate with a shield on top of the assembly. This mounting should be checked for clearance when installed and periodically in service.

Rear Mounting—Two insulated units. Bolted to bracket on clutch housing and bracket on frame. No adjustment required (keep mounting bolts tight).

Adjustment of Truck Engine Mountings: Check new front engine mounting, and remove and check mounting in service, as follows: With mounting removed from engine, fit insulator into lower retainer and place upper plate on top. Hold parts firmly together and make certain that rubber insulator fits tightly between retainer and plate and that engine mounting bushings project above upper plate (necessary to prevent oil shield contacting upper plate). Replace insulators which do not pass this test. Check clearance between upper edge of lower retainer and lower face of upper plate. If clearance more than 5/64", replace lower retainer. If clearance less than 3/64", grind off top edge of lower retainer. (CAUTION—do not attempt to shim the support). When installing mounting, tighten engine-to-mounting bolts tightly, mounting-to-frame bolts securely but not excessively tight (self-locking type nuts). Rear engine mountings do not require adjustment and mounting bolts should be kept tight.

OIL PAN

1959-60 V8 PASS CARS

OIL PAN REMOVAL· *NOTE - On Turboglide transmission cars, remove transmission control lever cross shaft at transmission shifter lever and shaft assembly in addition to following procedure* Raise car, drain crankcase and radiator Disconnect radiator hoses at radiator Disconnect battery ground strap at engine Disconnect clutch pushrod at pedal control and disconnect intermediate lever and shaft Remove clutch pedal control intermediate lever and shaft assembly from frame mounting bracket, but leave shaft assembly attached to engine. Remove carburetor fuel feed pipe at fuel pump and remove fuel pump On air suspension cars, disconnect hose to alcohol vaporizer jar and hose from air compressor to accumulator tank Remove accelerator control rod from its lever On 348" engine, remove oil level gauge tube Remove power brake vacuum hose at check valve on manifold On 283" engine, remove power steering pump at generator and lay on upper control arm (unnecessary to disconnect hoses) On 348" engines, disconnect generator brace and rotate away from engine so power steering pump will clear brake master cylinder Remove transmission lower control rods at shift levers Disconnect exhaust pipes from manifolds and lower pipe and muffler assembly Remove oil filter Loosen transmission mounting bolts Remove long bolts from each front engine mount *NOTE - Turn crankshaft so harmonic balancer keyway slot is at bottom of engin to enable crankshaft counterweights to clear oil pan baffle* Raise engine at harmon-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ic balancer approximately 3" (283"), 2¾" (348") until transmission housing contacts underbody toe pan *CAUTION - While raising engine watch clearance at fan blades and shroud* Remove oil pan bolts and remove pan with a tilting motion

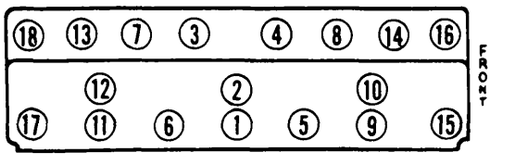
TORQUE TUBE & BALL ADJUSTMENT

1954 POWERGLIDE MODELS

UNIVERSAL JOINT BALL ADJUSTMENT (POWERGLIDE MODELS): ***Due to the fact the universal joint is lubricated under pressure (fed by automatic transmission line pressure through channel in output shaft) leakage will develop if the ball joint is not properly adjusted.***
To adjust, remove universal joint ball from torque tube. Clean thoroughly, and inspect for roughness, and clean up with fine emery paper if necessary before making adjustment. Use 4 new universal ball collar shims as a starting point, install joint ball and collar to transmission case and tighten bolts to 8-12 ft. lbs. torque. **NOTE**—Do not install the ball joint collar oil seal (cork) at this time. With bolts tight grasp the ball at the sliding seal (to tube) end with both hands, and test for tightness of ball, up and down If ball assembly can be moved and is a snug fit, the ball is properly adjusted If it cannot be moved by hand or is too loose add or remove shims until proper adjustment is secured. After correct adjustment is made disassemble joint and install cork seal after first lubricating it with a graphite grease, and reassemble to transmission tightening bolts to 8-12 ft. lbs. torque.

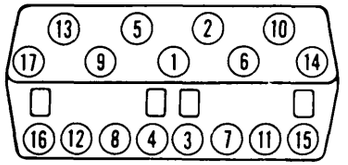
CYLINDER HEAD & MANIFOLD

ALL 6 CYL. MODELS



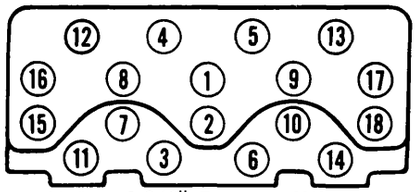
CYLINDER HEAD INSTALLATION (6 CYL. ENGINES) Use torque indicating wrench to tighten cylinder head cap crews in correct sequence as shown in diagram

►*6 CYL EXHAUST MANIFOLD TORQUE CHANGE (To Eliminate Cracking) Two center bolts should be tightened to new specification See "TIGHTENING SPECIFICATIONS" above*

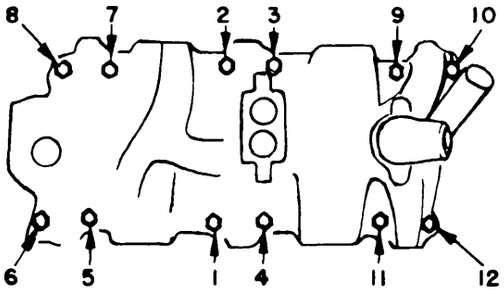


1955-60 V8 MODELS

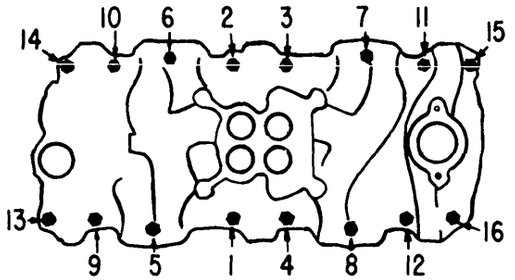
►*REPLACEMENT CYLINDER HEAD NOTE (348" Eng)* Service cylinder heads have increased water passages cast around spark plug openings but are not drilled for water passages from block When this service cylinder head is to be used on a 1959-60 348" engine drill ¼" (at drill spot near each spark plug) into water passage to match water hole in block DO NOT drill holes when using this service head on a 1958 engine and DO NOT use a cylinder head gasket (without these holes) on 1959-60 engine Long reach spark plugs must be used with this type head



CYLINDER HEAD INSTALLATION (V8 ENGINES): Coat steel head gasket with a good head gasket paste and install gaskets in position on cylinder block Install heads over dowels in block Coat all head bolts with a suitable oil and water thread sealing compound Use a torque indicating wrench and tighten bolts a little at a time to 60-70 ft lbs , in the sequence shown in diagram.



CHEVROLET 6 CYL. CYLINDER HEAD
235" & 261" ENGINE



CHEVROLET V8 265" & 283" ENGINE CYLINDER HEAD

CHEVROLET V8 348" ENGINE CYLINDER HEAD

CHEVROLET V8 265" & 283" ENGINE INTAKE MANIFOLD

CHEVROLET V8 348" ENGINE INTAKE MANIFOLD

INTAKE MANIFOLD INSTALLATION (V8 ENGINES) Install manifold end gaskets on cylinder block Coat ends of intake manifold side gaskets around water passages with a good sealing compound and install heads Tighten bolts a little at a time to 25-35 ft lbs torque in sequence shown in diagram

PISTON PINS

ALL V8 MODELS

PISTON PINS (265" & 283" Engin s): Pins are press fit in connecting rod and must be removed and installed with correct tool set to avoid damaging piston
CAUTION - See tool change and modification data below

►*283" ENGINE TOOL J-5538 ALTERATION NOTE* Tapered end of support must be cut back at smaller angle to centerline of support to avoid breakage of bottom piston ring land

►*1957 265" ENGINE TOOL NOTE* Adaptor Set J-5538-9 must be used for pin removal and installation.

Removal: Install pilot of Tool J-5538 (see Tool Notes above) on puller screw and insert assembly through piston and pin, install support over threaded end of puller screw with small end of support against piston, install nut loosely on puller screw Place assembly in arbor press, press pin out toward support

Installation Lubricate pin holes and position connecting rod in its respective piston so that flange or heavy side of rod at bearing end will be toward **fr nt** of piston (cast depression in head of piston and "F" marks on piston struts) on #1-#3-#5-#7 pistons and rod flange to **rear** of piston on #2-#4-#6-#8 pistons Install piston pin on puller screw and pilot on screw Install puller screw through piston and rod, indexing pilot through piston and rod Install support over threaded end of puller screw with small diameter toward piston Install nut on puller screw and tighten with a torque wrench to start piston pin into connecting rod *(CAUTION—If pin can be start d into connecting rod with less than 10 ft. lbs. torque, clearance is excessive).*

PISTON PINS (348" Engin): R m val - Install pilot of piston pin Tool J-6994 on piston pin Place piston and rod assembly on support and place assembly in arbor press Press pin out of connecting rod
Installation - Lubricate piston pin holes in piston and rod position rod in respective piston, so flange or heavy side of rod (at bearing end) will be towards **front** of piston (cast depression in piston head and "F" mark on strut) on No 1-3-5-7pistons,and rod flange or heavy side of rod to **rear** on No 2-4-6-8 pistons Place piston pin on installer and pilot spring and pilot in support Place piston and rod on support indexing pilot through piston and rod Place support on arbor press start pin into piston and press pin into piston until pilot bottoms

CRANKSHAFT & MAIN BEARINGS

1954 MODELS

MAIN BEARING INSTALLATION (Without Removing Engine or Crankshaft from Chassis): Upper bearing halves can be replaced by following procedure (bearings doweled in place and cannot be "rotated" out):

Main Bearing Replacement (Pass. Cars): Remove radiator (see Radiator removal), remove fan belt and vibration dampener (see Vibration Dampener removal). Loosen all rocker arm screws to relieve

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

tension on camshaft. Remove spark plugs. Raise car and support securely on stands so car is level and approximately 8" off floor. Remove transmission floor pan cover. Remove clutch housing underpan. Remove transmission rear support-to-crossmember bolts. Disconnect shift rods from transmission levers. Raise rear of engine, place 1" square bar behind flywheel and under clutch housing with ends resting on second cross-member brace (this will support engine weight). Release clutch fork from ball. Remove transmission mounting bolts, slide transmission back approximately ¾". Remove oil pan and timing gear cover. Remove oil pump and screen cover assembly. Rotate crankshaft to position allowing removal of all bearing caps. **Mark timing gears to insur re-meshing gears in same relative position.** Then install new bearings as follows:

Bearing Installation—Loosen but do not remove all main bearing cap bolts sufficiently to allow crankshaft to drop down approximately ⅜". Remove front intermediate and rear main bearing caps (other bearing caps will support crankshaft), remove old bearings from bearing cap and crankcase (if old bearings do not drop down with crankshaft, tap bearings lightly to free dowel). Install new bearings, locating dowel on back of bearing shell in hole in crankcase, and pressing bearing up in place (bearing should snap into place and hold if it has correct spread). Re-install bearing cap, using .006" shim thickness (three .002" shims) on each side of cap, tighten bearing caps just enough to support crankshaft. Repeat above procedure at front and rear intermediate bearings (NOTE—Rear intermediate bearing is close fit in crankcase and may not go up into place until crankshaft lifted up). After all bearings replaced, place a jack under rear intermediate bearing cap and carefully raise crankshaft into position. Keep crankshaft horizontal during this operation (CAUTION—Make certain that timing gears meshed in accordance with marks made before crankshaft dropped). Tighten all bearing caps snugly, then adjust main bearings as directed on car model page.

Main Bearing Replacement (Trucks): Remove radiator (see Radiator removal), remove fan belt and vibration dampener (see Vibration Dampener removal). Loosen all rocker arm screws to relieve tension on camshaft. Remove spark plugs. Take off transmission floor pan cover and clutch housing underpan and extension. Disconnect transmission control rods on side of transmission case (½ & ¾ Ton), remove hand brake lever from transmission mounting stud (Other Trucks). Remove transmission (see Transmission removal instructions for each model on car model page). Remove oil pan and timing gear cover. Romove oil pump and screen cover assembly. Rotate crankshaft to position allowing removal of all bearing caps. Mark timing gears to insure remeshing of gears in sam relative position. Then install new bearings as directed for Pass. Cars.

1955 6 CYL. MODELS

6 CYL. ENGINE MAIN BEARING REPLACEMENT (With Engin in Car)· Upper bearing halves are doweled in position Proceed as follows

1) Remove radiator, harmonic balancer, and timing gear cover Remove rocker arm cover and loosen all rocker arm screws to relieve tension on camshaft Remove spark plugs

2) Remove transmission (see Transmission Removal on Car Page) Drain oil, remove oil pan and oil pump Rotate crankshaft to best possible position for removal of all bearing caps and mark the meshing teeth of timing gears for remeshing in same position

3) Loosen all four main bearing caps evenly until crankshaft is lowered approximately 3/8" Remove front intermediate and rear bearing caps and remove upper and lower bearing shells (If upper shells do not come out with crankshaft, tap lightly to loosen)

4) *NOTE–Always replace bearings in pairs.* Install new upper half bearing shells in rear and front intermediate bearing bores by rolling into position, centering and pressing up into place *(CAUTION–* Be sure to install upper halves so smaller of the two holes will be toward camshaft when rolled into place). Install new lower half bearing shells in caps, and replace caps, using three 002" shims on each side of bearing as a starting point for adjustment Tighten bearing cap bolts until caps are snug to journals

5) Repeat this procedure with other main bearings *NOTE–*Due to close fit the upper half of rear intermediate bearing may not go all the way into place Start it evenly and it will go all the way when crankshaft is raised into place

6) After all bearings have been replaced, raise crankshaft by tightening bearing cap bolts evenly and alternately *(NOTE–*At the same time, check meshing of timing gears with marks made at disassembly) With the crankshaft up in place, force it all the way fore and aft and check end clearance at rear intermediate bearing. Adjust main bearings.

7) Reassemble engine by reversing above procedure

1956-60 6 CYL. MODELS
1955-60 V8 MODELS

6 CYL. & V8 MAIN BEARING REPLACEMENT (With Engine in Car): Upper bearing halves can be "rolled" out for replacement. Proceed as follows

1) Remove spark plugs and remove engine oil pan Remove bearing cap and bearing shell

2) Install main bearing shell removing and installing tool (or use a cotter pin bent as required) Rotate crankshaft in direction of usual rotation and roll upper bearing shell out of engine

3) Oil new bearing shell and insert plain (un-notched) end of shell between crankshaft and block on the indented or notched side Rotate bearing into place Install new bearing shell in bearing cap

1954 MODELS

CRANKSHAFT OIL SEALS: Rear Seal. Special rear main bearing cap (mounted on four bolts with two locating dowels) with wick type oil seal installed in groove in cap and crankcase used. Seal bears on outer rim of crankshaft flange (oil slinger and check valve in oil return hole in bearing cap have been discontinued). To install new seal in bearing cap, insert packing in groove and roll firmly in place with rounded tool (roll from both ends toward center). Use round block of wood (same diameter as crankshaft flange) to hold packing in place, cut both ends off evenly and flush with bearing cap face. Install upper half of seal in crankcase in same manner with engine out of car.

Front (Timing Gear Cover) Oil Seal—Spring-loaded leather type installed in pocket in timing gear cover. To install new seal, place seal on special Oil Seal Replacer J-995 with free end of leather toward end of tool, seat seal in cover with few light hammer blows on tool. NOTE—Timing gear cover must be centered on crankshaft when installed on engine to prevent balancer damaging oil seal. To install cover, coat seal with grease, install centering guide J-966 on crankshaft, install cover and tighten cover screws.

1955-57 6 CYL. MODELS

REAR MAIN BEARING OIL SEAL (6 CYLINDER ENGINE)· Remove rear main bearing cap and remove old seal from groove Insert new packing in bearing cap and roll firmly into place with a rounded tool (roll from both ends toward center) Use a round block of wood, same diameter as crankshaft flange, to hold packing in place Cut off both ends of packing evenly and flush with bearing cap face Install upper half of seal in crankcase in same manner, with engine out of car

1955-57 V8 MODELS

REAR MAIN BEARING OIL SEAL (V8 ENGINE) Remove rear main bearing cap and remove old seal from groove Insert new seal in groove with fingers, and then with Tool J-5788 (Oil Seal Installer), and a hammer, pound seal firmly into groove Cut the small portion of the seal that protrudes from groove flush with surface of bearing cap Replace upper half of seal in crankcase in same manner with engine out of car

1958-60 6 CYL. & 1958 V8 MODELS

REAR MAIN BEARING OIL SEAL (All Engines): To replace rear bearing oil seal without removing engine proceed as follows

1) Remove oil pan oil pump assembly, rear main bearing cap (discard old seal) Loosen all bearing caps (to allow crankshaft to drop a slight amount) *NOTE* - Pry between crankshaft and block to force crankshaft down as necessary

2) Use screwdriver or similar tool to force old seal out of upper bearing so it can be removed with a pair of pliers (rotate shaft to aid in removal of seal)

3) Pre form new upper seal in cap

4) Insert soft wire (tag wire) through new upper seal 1 4" from end and wrap wire around end of seal to keep seal from spreading Lubricate entire surface of upper seal with lubricant and reform seal in lower cap

5) Insert wire through seal opening in crankcase and around crankshaft Use screwdriver or similar tool to start seal accurately, then pull seal into position (working seal into position with tool and rotating crankshaft as necessary) With seal centered, cut off ends 1/64" below bearing edge

6) Install new lower seal in bearing cap (force it into position with Tool J-5788) and cut ends off flush with surface of bearing cap Tighten all bearing caps to specifications

1959-60 V8 MODELS

REAR MAIN BEARING OIL SEAL (V8 Eng) To replace rear main bearing seal without removing engine first remove oil pan (see above for Pass Cars or car model page for Trucks) then proceed as follows

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Cap Seal - Remove bearing cap and pry out old seal with screwdriver Lubricate new seal (exc parting surface) and roll seal into place without damaging bead of seal with seal tangs

Block Seal - Use small drift to start seal out until it can be removed with pliers Lubricate new seal (exc parting surface) and gradually push seal in with hammer handle until seal rolls into place DO NOT cut seal with seal retainer tang

VIBRATION DAMPENER

1954 MODELS

HARMONIC BALANCER: Balancer furnished as a complete assembly only. Separate parts not available for service replacement

Removal (Passenger Cars)—Remove radiator (see Radiator Removal), and Radiator Grille and Filler Panel Baffle as an assembly Take off fan belt Remove engine front mounting bolts, raise front end of engine approx ½' (to permit balancer puller head to clear radiator support cross-member) Use puller J-1287, attach puller body to balancer by means of two capscrews screwed in tapped holes in balancer, pull balancer by turning puller screw

Removal (Trucks)—Remove Front End Sheet Metal Assembly (see Front End Sheet Metal Assembly removal preceding) Then remove balancer with puller tool as described for Passenger Cars (above)

Installation—Place drive adapter of puller tool J-1287 in starting crank jaws of balancer, install puller body (as above), line up keyway in balancer and key in crankshaft, turn puller screw down to contact driver, then use puller screw as driver and drive balancer in place until it bottoms against crankshaft gear

1955-60 6 CYL. MODELS

VIBRATION DAMPENER (6 CYL ENGINE): Removal - Drain radiator disconnect hoses On Automatic Transmission models, remove oil cooler lines Remove radiator (note number of shims) Remove fan belt Install Tool J 6978 or J-1287 and remove vibration dampener and pulley assembly

Installation: Remove puller and install two 3/8"-16 x 1" (16 thread) capscrews in dampener to support wheel portion during installation Position dampener on crankshaft with key and keyway on alignment and drive dampener on shaft until it bottoms against crankshaft gear Use a heavy hammer and bar through the grille, taking care that a straight installation is made. Remove the two capscrews previously installed. Install radiator.

1955-57 V8 MODELS

VIBRATION DAMPENER (V8 ENGINE) Removal—Remove radiator On Powerglide models remove oil cooler lines and plug outlets Remove fan belt fan, and pulley and install Puller J-1287-B and pull dampener assembly from crankshaft

Installation Install two 3/16 —16 x 1½ capscrews to hold hub and flywheel portion of dampener together during assembly Coat cover seal contact on dampener with engine oil and position dampener on crankshaft Use Transmission Front Bearing Installer J-5590 and drive dampener on shaft until hub bottoms on timing sprocket Remove the two screws installed previously and install pulley, fan, and fan belt Install radiator

1958-60 MODELS

VIBRATION DAMPENER (8 CYL. ENGINE): Removal - Remove radiator hoses On Automatic Transmission models, disconnect cooler lines from radiator core Remove battery, fan belt, fan and pulley Remove fan shroud bolts and remove radiator and fan shroud Remove vibration dampener pulley bolts and remove pulley Use Tool J-6978 to remove vibration dampener

Installation: Coat vibration dampener front cover seal contact with engine oil align vibration dampener with crankshaft key and use Tool J-5590 to drive vibration dampener on crankshaft until dampener hub bottoms on crankshaft timing gear Install vibration dampener pulley, fan pulley, and fan Place fan shroud over fan blade and lower radiator into place Install bolts Install fan belt

ENGINE FRONT COVER

1955-60 MODELS

FRONT OIL SEAL INSTALLATION Pry old seal out of front cover Install new seal so that open end of seal is toward inside of cover and drive it into position with Oil Seal Driver J-0995 *CAUTION - Support cover at sealing area while installing seal.*

CAMSHAFT & BEARINGS

1960 MODELS

CAMSHAFT LOBE LIFT (All Eng): Remove rocker arm shaft and support assembly (6 Cyl) rocker arms and balls (V8) On 6 Cyl Eng install 3/8" 24 16 Stud Adapter from Tool J-8520 in rocker shaft support hole On all engines attach Tool J-8520 to adapter or stud and adjust dial indicator to seal in pushrod cup *NOTE - Be sure pushrod is seated in lifter socket* Rotate crankshaft slowly (clockwise) until lifter is on heel of cam lobe (pushrod will be in its lowest position) Set dial indicator to Zero and slowly "BUMP" engine over until pushrod is in **FULLY** raised position Compare total lift on dial indicator with Specifications in "CAMSHAFT-WEAR LIMIT" table below *NOTE Continue to rotate engine until indicator reads Zero for accuracy check on dial indicator*

Camshaft Lobe Lift & Wear Limit

	Intake Lift		Exhaust Lift	
Engine	① New	② Worn	① New	② Worn
235" Pass	.222"	.217"	.222"	.217"
235" Trk	210"	.203"	.225"	.218"
261" Trk.	.274"	.269"	.280"	.273"
283" ③⑤	222"	217"	.222"	.217"
283" ④⑤	.266"	261"	266"	.261"
283" ⑥	263"	258"	267"	.262"

348" ⑥	232"	227"	.235"	230"

① - Plus or Minus 002" ② - Plus 003", Minus .002"
③ - Pass Cars with 2-Bbl. Carb.
④ - Pass Cars (Exc 2-Bbl Carb.), Corvette & Trucks
⑤ - With Hyd. Lifters. ⑥ - With Mech. Lifters

1955-60 6 CYL. MODELS

CAMSHAFT REMOVAL & INSTALLATION: Remove rocker arm and pushrod covers. Remove rocker shaft assembly, pushrods and valve lifters. Remove timing gear cover attaching screws and two bolts that are installed from back through front main bearing cap, remove cover and gasket. Pull crankshaft gear with Puller T-126-R. Remove two camshaft thrust plate screws by working through holes in camshaft gear. Remove camshaft and gear assembly by pulling it through front of block *(CAUTION* - Support shaft carefully to avoid damage to camshaft bearings). To install camshaft, reverse removal procedures.

6 CYL. CAMSHAFT BEARING REPLACEMENT: Use Bearing Remover & Replacer J-6356. Install No. 1 and No. 2 bearings first, then rear two bearings. *(CAUTION* —Align oil holes in bearings with oil holes in block before pulling into place), Install plug flush to 1/32" deep from clutch housing face of case.

1955-58 V8 MODELS

CAMSHAFT REMOVAL & INSTALLATION: Remove rocker arm covers and intake manifold. Back off rocker arm nuts until arms may be pivoted away from pushrods. Remove pushrods and valve lifters *(NOTE* - Place or mark lifters and rods so that they may be reinstalled in their original positions). Remove fuel pump. Remove two adapter mounting bolts and lockwashers and remove fuel pump adapter and gasket from block. Remove pushrod. Remove grille assembly. Drain radiator, disconnect hoses. With Powerglide, disconnect oil cooler radiator lines from core. Remove radiator core-to-core support bolts and remove radiator core. Note spacer shims removed, if any. Remove fan belt, fan and pulley. Remove harmonic balancer with Puller J-1287-B. Remove oil pan and heater hose from water pump if so equipped. Remove water pump, then remove front end cover and gaskets. Crank engine until "O" marks on camshaft and crankshaft sprockets are in alignment. Remove three camshaft sprocket-to-camshaft bolts. Remove camshaft sprocket and timing chain together *(NOTE* - Sprocket is a light press fit on camshaft for approximately 1/8". If sprocket does not come off easily, a light blow with a plastic-faced hammer on lower edge should dislodge the sprocket). Install two 5/16"-18 x 4" bolts in two of camshaft bolt holes. Remove camshaft from engine. *(CAUTION* - Camshaft journals are of same diameter and care must be exercised to avoid damage to bearings). To install camshaft, reverse removal procedures.

1959-60 V8 MODELS

CAMSHAFT REMOVAL & INSTALLATION: 1) Drain radiator, remove outlet and inlet hoses On Auto Trans models, remove oil cooler lines from radiator and plug lines and fittings Remove attaching bolts and lift radiator straight up to remove

2) Remove air cleaner, disconnect throttle rod at carburetor (On Auto Trans models, disconnect lower transmission throttle lever rod) Disconnect fuel, vacuum, and choke lines at carburetor coil primary wires, and coil to distributor secondary wires Remove distributor

3) On overdrive models, disconnect kickdown switch wires at switch

4) Remove spark plugs, water and heater hoses, and temperature indicator unit from intake manifold Remove intake manifold

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

5) Remove fan belt, exhaust manifold to exhaust crossover pipe stud nuts and lower crossover pipe. Remove exhaust manifold heat control valve from right exhaust manifold.

6) Disconnect generator wires, remove exhaust manifolds, choke heat tube and remove rocker arm covers.

7) Loosen rocker arm nuts, pivot rocker arms and remove pushrods and valve lifters. *NOTE* **- Pushrod seats on solid lifters should remain with lifters.**

8) Remove fuel pump lines at fuel pump, pump mounting bolts, fuel pump, fuel pump pushrod adapter bolts. adapter and pushrod.

9) Remove bumper, grille-to-fender tie bar screws, grille-to-fender screw and screw and bolt at front end of grille. From under fender, remove grille bracket to fender filler panel screw and fender and filler panel to grille screw.

10) Remove grille filler panel-to-grille clips, hood lock plate-to-grille support assembly, and fender tie bar bolts.

11) From under fender, remove tie bar-to-fender skirt bolts and front bolts at tie bar, then loosen rear bolt at each side. Rack tie bar backward to clear top of grille. Lift grille assembly to clear tabs at fillerpanel, unplug electrical connections and remove grille.

12) Remove vibration dampener (see *"Vibration Dampner Removal"***), timing chain cover, timing chain and sprocket. Install two bolts, 5/16"-18 x 4", in camshaft bolt holes and remove camshaft.** *NOTE* **- All camshaft bearings are the same diameter. Use care to avoid damage to bearings.**

V8 CAMSHAFT BEARING REPLACEMENT: Use Bearing Remover & Replacer J-6356. Remove bearing nearest center of block first, then No. 2 and No. 4 bearings, and finally front and rear bearings (with this sequence minimum number of turns are required to locate Remover & Replacer for removal of next bearing). When installing, install No. 1 or front bearing first. This bearing will act as guide for tool and center the No. 2 and No. 3 bearings being pulled into place. (*CAUTION*–Use care when installing rear bearing due to smaller size of oil pressure holes in rear bearing. When installing end plug, install flush to 1/32" deep to maintain level surface on rear of cylinder block).

TIMING GEARS

1955-60 6 CYL. MODELS

REPLACEMENT TIMING GEARS: Fibre type camshaft gear and steel crankshaft gear used on passenger cars. Aluminum camshaft gear and steel crankshaft gear used on some trucks.

1955-60 6 CYL. MODELS

TIMING GEAR INSTALLATION: Gears are press fit on crankshaft and camshaft and must be removed and installed as follows:

Crankshaft Gear - To remove gear, use Puller T-126-R or J-8105 and pull gear off. When installing gear, make certain that two woodruff keys are installed in crankshaft keyways, drive gear on shaft until it seats against shaft shoulder.

Camshaft Gear–To remove gear, install Gear Remover J-971 on shaft in back of gear (remover consists of support sleeve), place camshaft assembly in arbor press (*CAUTION*–Thrust plate must be positioned so that it will not be damaged by woodruff key in shaft as shaft pressed out), press shaft out of gear. To install gear, place shaft in arbor press (support shaft securely directly back of front bearing journal), install gear spacer ring and thrust plate over end of shaft, and install woodruff key in shaft keyway. Install camshaft gear and press it on shaft until it bottoms against the gear spacer ring. End clearance of thrust plate should be .001" to .005". Install camshaft assembly in engine block, being careful not to damage bearings or cams. With crankshaft installed turn camshaft and crankshaft so that valve timing marks on gear teeth will line up, then push camshaft into position. Install camshaft thrust plate-to-block screws and tighten securely. Camshaft and crankshaft gear runout should not exceed .004" for camshaft and .003" for crankshaft. Backlash between timing gear teeth should not be less than .004" nor more than .006". *CAUTION*–Press on hub only when installing camshaft gear.

TIMING CHAIN

V8 MODELS

TIMING CHAIN: Removal–Remove vibration dampener, timing chain cover, and oil slinger. Rotate engine until timing marks on sprockets are in alignment and adjacent. Remove three camshaft sprocket screws and remove camshaft sprocket and chain together.

Installation: Install chain on camshaft sprocket. Hold sprocket vertical with chain hanging below, and line up 'O' timing marks on both sprockets so they are adjacent and in line with a straight edge across shaft centers. Align dowel in camshaft with dowel hole in sprocket and install sprocket on camshaft. Draw camshaft sprocket onto shaft using the three mounting bolts. Tighten to 15-20 ft. lbs. *CAUTION–Do not attempt to drive sprocket onto shaft as welch plug at rear of engine can be dislodged.*

VALVE SYSTEM

1954 6 CYL. MODELS

►*FIRST 1954 POWERGLIDE ENGINE VALVE "SQUAWK" CORRECTION:* To provide additional lubrication of valve stems at rocker arm and in guide, drill additional holes in rocker arms as follows. *CAUTION*–Other methods of correcting this squawk (grooving arms, revolving seals, reaming guides, etc.) should not be used as they cause other adverse conditions and excessive oil consumption.

Drilling Intake Rocker Arms–Drill additional 7/64" hole in rib on top of rocker arm at point 5/16" toward valve end of arm from present oil hole. Drill this hole **directly into oil groove** in rocker arm bore.

Drilling Exhaust Rocker Arms–Drill additional 7/64" hole in wide side of rocker arm bearing boss 13/16" toward valve end from present oil hole and 5/16" in from edge of wide side of bearing boss. Drill this hole at an angle so that it enters rocker arm bore on valve side of bore center line. *CAUTION*–This hole **must not break into oil groove** in rocker arm bore.

NOTE–Remove all burrs from rocker arm bore. **Do not** plug original oil holes in rocker arms.

1954-55 TRUCKS

VALVE ROTATORS: Standard on all 1955 - 5000 & 6000 Series Trucks. Rotators can be installed on present valves. *CAUTION - Valve Spring Height should be checked when rotators installed.*

VALVE TAPPET ADJUSTMENT

ALL MODELS
WITH MECHANICAL LIFTERS

ENGINE NORMALIZING PROCEDURE (For Valve Tappet Clearance Adjustment): Clearance changes while engine is warming up. Adjust only after engine has been 'normalized' as follows: Run engine at 600 RPM and check oil temperature with thermometer at overflow pipe on valve rocker arm shaft connector until no change noted in oil temperature for a period of five minutes (oil temperature will become stabilized at some point between 150° and 225°F). This normalizing period will be from 5 to 30 minutes depending on engine temperature when started.

ALL MODELS
WITH HYDRAULIC LIFTERS

INITIAL ADJUSTMENT HYDRAULIC VALVE LIFTERS: ***(Required when cylinder head has been removed or rocker arm or valve assemblies have been replaced).***

6 Cylinder Engines: The hydraulic lifters must be at the lowest point of travel when adjusted (piston in firing position). Remove distributor cap and turn engine until rotor is in firing position (points just breaking) for cylinder being set. Starting with #1 cylinder, turn valve adjusting screw down until rocker arm just contacts valve. This can be determined by checking push rod side play at adjusting screw end while turning the adjusting screw. At the point where no side play can be felt, continue turning the adjusting screw down 1-1/2 turns and tighten lock nut securely. Adjust each cylinder following the same sequence as the firing order (1-5-3-6-2-4).

V8 Engines: With No. 1 Cyl. at TDC firing position, adjust Exhaust valves 1-3-4-8, intake valves 1-2-5-7 by backing off the adjusting nut on rocker arm until there is play in valve push rod, then tighten adjusting nut to just remove all push rod-to-rocker arm clearance, **then tighten adjusting nut an additional 3/4 turn** to place hydraulic lifter in center of its travel. Crank engine one revolution so that #6 cylinder is in firing position, and then proceeding as above, adjust Exhaust valves 2-5-6-7, and Intake valves 3-4-6-8.

VALVE STEM SEALS
6 CYL. ENGINES

VALVE STEM OIL SEAL INSTALLATION: Seal consists of synthetic rubber ring installed in second groove of valve stem directly under valve locks on all valves. When assembling valves, install seal as follows: Install valve spring and spring retainer on valve stem, compress spring until lower groove on valve stem is exposed, install seal in this groove (*CAUTION* - Seal must seat flat in groove and not be twisted). Install valve locks in upper groove in valve stem, relieve spring tension, check to see that seal is properly retained in spring retainer and that locks are engaged.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

V8 ENGINES

VALVE STEM OIL SEAL INSTALLATION (Exc. 1959 283" Eng.): Seal consists of "O" ring installed in second groove of valve stem directly under valve locks on all valves, and a cup shaped metal shield placed over outer end of valve spring under valve cap Install valve spring and damper, with closed coiled end against cylinder head and place shield over spring On trucks, place rotator in position (if used) Install cap, compress spring and install seal in lower groove on stem *NOTE*- Be sure seal is flat and not twisted in groove Install valve locks and release spring tension

VALVE STEM OIL SEAL INSTALLATION (1959 283" Eng.): *NOTE - Following procedure supersedes previous recommendations* Make a special tool of steel, brass of plastic bar stock 2 5" long with a 23/64" drill hole through center At one end of bar, enlarge hole to 705"± 003" diameter for a depth of 53"± 010" from end Enlarge this hole to 745"± 003" diameter for a depth of 15" from end Dip seal in engine oil, insert in installer and push onto valve guide until seal bottoms on top surface of guide Lower snap ring retains seal on guide

VALVE STEM GUIDES

ALL 6 CYL ENGINES

VALVE GUIDE REPLACEMENT Guides are press fit in head New guides should be finished reamed to inside diameter of 343" (Hand Reamer Tool J 4822)

Guide Removal - Press old guides out toward bottom of head using Tool J-267 or J 0267

Guide Installation - Use correct driver tool for each model as listed below and drive guides in from top of head until guide height above head is correct as shown Drivers have stop collars which correctly position guide Guide height can be checked with scale placed on cylinder head *CAUTION* On some models it will be necessary to use a shim under the driver or to press guide in further after driver is removed

Valve Guide Tools & Installed Height

	Intake Guide		Exhaust Guide	
Engine	Driver	Height	Driver	Height
235"(1954-55)	J-5599	15/16"	①	7/8"
261"(1954 55)	J 5598	1"	J 5599	15/16"
All(1956)	J-5598	1"	J-5599	15/16"
All (1957-60) ②	J-5599	1"	② J-5734	15/16"

① - Use either J-5598 or J-6599 to start guide, then press to indicated height (check with scale)

② - Use 1/16" shim under driver to secure correct guide height

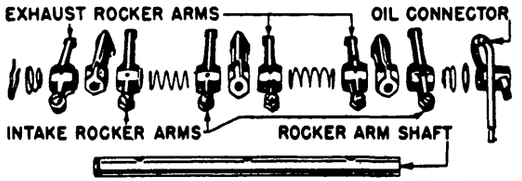
ROCKER ARMS

1955-60 MODELS

ROCKER ARMS (6 CYL. ENGINES): Diamond bored and "granodized" (no bushings) and fit directly on rocker arm shafts. Different rocker arms used as follows:

Rocker Arm Identification (1959-60 6 Cyl. Rocker Arms)

Oil grooves 015" deep and offset from center with daub of light blue paint on top of web



Position	Casting No.	Part No.
L H Intake	3764485	3764489
L H Exhaust	3764487	3764481
R H Intake	3764486	3764490
R H Exhaust	3764488	3764482

(1950-58 6 Cyl. Rocker Arms)

Oil grooves are 030" deep and are located at hub center Spot of light blue paint at vertical surface of rocker web (Casting prior to 1959) at top surface of web (1959 Casting)

Position	Casting No.	Part No.
L H Intake	3837025 or 3764485	3837029
L H Exhaust	3837027 or 3764487	3837031
R H Intake	3837026 or 3764486	3837030
R H Exhaust	3837028 or 3764488	3837032

NOTE - Castings prior to 1959 have last digit of casting number raised on web All 1959 castings have last two digits raised on web

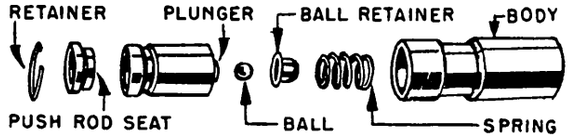
CHEVROLET 6 CYL ROCKER ARM ASSEMBLY
(REAR ASSY. SHOWN—FRONT ASSY. SIMILAR)

Installation. Assemble rocker arms as indicated in illustration with open end of shaft toward center, and baffle in rear shaft open end in vertical position.

V8 MODELS

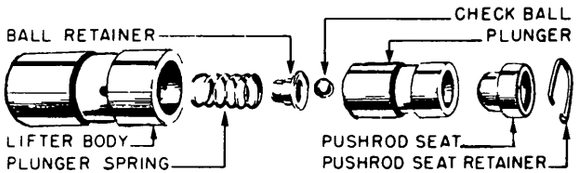
►*1957 ROCKER STUD REPLACEMENT NOTE* Replacement Rocker Studs now furnished for service are 2 50" long (shorter than 1956 studs which were 2.70" long) and must be installed with NEW Tool 6880 *CAUTION* - DO NOT attempt to install 1956 type stud (2 70" long) with Tool 6880 as stud will break through cylinder head.

ROCKER ARM STUD REPLACEMENT (V8 ENGINES): Oversize rocker arm studs available in 003" & 013" oversizes for service replacement Remove old stud by placing Spacer J-5802 on stud, installing nut and washer, and removing stud by turning nut Ream hole for oversize stud with Reamer J-5715 (003"), J-6036 (013") Coat press-fit area of stud with hypoid lubricant and install stud to correct height as follows On 1955-56 engines, 1¾" (Early Production "Low Boss" head), 1 41/64" (Later Production "High Boss" head) *See "Head Identification" & "Tool Rework" below* On 1957-60 engines, use NEW Tool 6880 to drive stud in head (tool will position stud to correct height of 1 36") *CAUTION - Use Tool 6880 only on 1957 and later type 2 50" long studs*



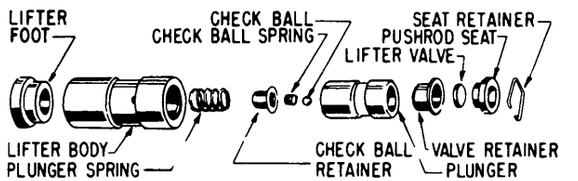
►*V8 CYLINDER HEAD IDENTIFICATION NOTE* "Low Boss" & "High Boss" heads may be identified by placing a straight edge across rocker cover gasket surfaces The low stud boss (early head) will be approximately flush with lower edge of scale while the high stud boss (later head) will be approximately 1/4" above lower edge of scale

►*STUD INSTALLER TOOL J-5801 REWORK (For installing Stud to 1-¾ "Height)* Grind 3/32" off bottom of tool When installing studs in "High Boss" (later type head) use Installer Tool J-5801 to drive stud in to the 1-3/4" height, after which studs will have to be pressed in further to the 1-41/64" height



HYDRAULIC LIFTERS

ALL MODELS



HYDRAULIC VALVE LIFTERS Barrel type, consisting of plunger and valve assembly operating within a cylinder formed by valve lifter tappet or body (see illustration) Oil is introduced to this unit through oil gallery in block

CHEVROLET 6 CYL HYDRAULIC VALVE LIFTER

1955-56 CHEVROLET V8 HYDRAULIC VALVE LIFTER

1957-60 CHEVROLET V8 HYDRAULIC VALVE LIFTER

Disassembly: Hold plunger down with a pushrod and using a small screwdriver or pointed awl, remove plunger retainer Remove pushrod seat (on 1957-60 V8 Lifters, remove inertia valve and inertia valve retainer) Remove plunger ball check valve ball retainer and retainer spring from lifter body On 1957-60 lifters, invert body inspect each part carefully for nicks, burrs, or wear Replace complete assembly if any parts are damaged

Reassembly: Invert plunger and set check valve ball into hole in plunger and place ball spring in ball retainer Locate spring and retainer on ball and press into position in plunger Place plunger spring over ball retainer and slide lifter body over spring and plunger Turn assembly over and install pushrod seat (and inertia valve assembly 1957-60 V8 lifters), in open end of plunger, then push plunger into body and install retainer Compress plunger to open holes and fill with SAE 10 oil Work plunger up and down and again refill

Installation: Reverse removal procedure

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

OILING SYSTEM

235" ENGINE

ENGINE LUBRICATION: Force feed type with oil supplied under pressure to all crankshaft, connecting rod and camshaft bearings, lifters and rocker arms. Restricted oil pressure supplied to valve stems and pushrod sockets and timing gears. All other parts oiled by spray or mist from engine crankcase.

OPERATION: Gear type oil pump, mounted on crankcase (at right side) and driven by distributor drive shaft, draws oil from oil pan through a floating oil screen and delivers it by pipe to fitting on lower end of passage, leading to a horizontal oil gallery at left side of crankcase. Pressure regulator valve located in oil pump body. Oil is distributed from main oil gallery as follows:

Crankshaft & Camshaft B arings - An oil channel from main oil gallery through each crankcase web delivers oil to each crankshaft main bearing. A similar channel in opposite side of each web delivers oil from each crankshaft bearing to each camshaft bearing.

Conn cting R d Bearings - Crankshaft is drilled so that each connecting rod bearing is lubricated through passages from adjacent main bearing. Main bearings provide continuous flow of oil to connecting rod bearings.

Pistons & Pins - Oil spray is thrown on cylinder walls from an oil hole on left side of connecting rod when this hole registers with hole or passage in connecting rod journal.

Timing Chain & Sprockets - Oil from front camshaft bearing passes through a milled slot in rear surface of front engine plate and is directed by a nozzle at timing gears.

Lifter Oil Gallery - A horizontal lifter oil gallery, located directly above camshaft, receives oil from rear camshaft bearing (early cars) from both front and rear camshaft bearings (later cars). This gallery lubricates both mechanical and hydraulic valve lifters.

Rocker Arms, Pushrods, and Valve Stems - Oil from horizontal lifter gallery is delivered to rocker arms as follows:

1st Type - Prior to 1958, rear camshaft bearing delivered oil through passage in block to a pushrod chamber fitting directly above rear camshaft bearing. A formed pipe connected this fitting and a fitting at upper center of pushrod chamber and delivered oil through passage in upper cylinder block to a matching passage through cylinder head to a fitting on cylinder head.

2nd Type - In 1958, both front and rear camshaft bearings delivered oil through passage in block to lifter oil gallery. A vertical oil gallery from center of lifter gallery, with a 1/16" orifice restriction, delivered oil through a matching passage in cylinder head to fitting on cylinder head.

3rd Type - Same as 2nd type except orifice diameter increased to 11/32" for increased oil pressure.

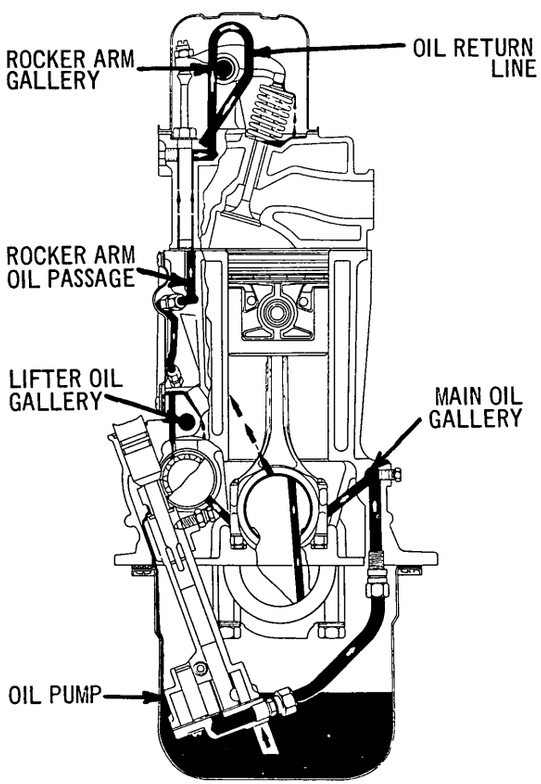
All Types - Oil is delivered from fitting on cylinder head through a pipe to a connector between hollow rocker arm shafts, then to return passage in cylinder head and block to crankcase. Oil passes through holes in hollow rocker arm shafts to rocker arms where bleeder holes supply oil for valve stem and pushrod socket lubrication.

OIL FILTER: 235" Eng. - Optional partial flow type mounted on engine bracket.

261" Eng. (1959-60) - Full flow type mounted on intake manifold. Receives oil directly from passage in crankcase leading to main oil gallery and delivers it to main oil gallery. *NOTE* - When filter removed, connect inlet and outlet openings in crankcase with pipe and DO NOT plug openings at any time.

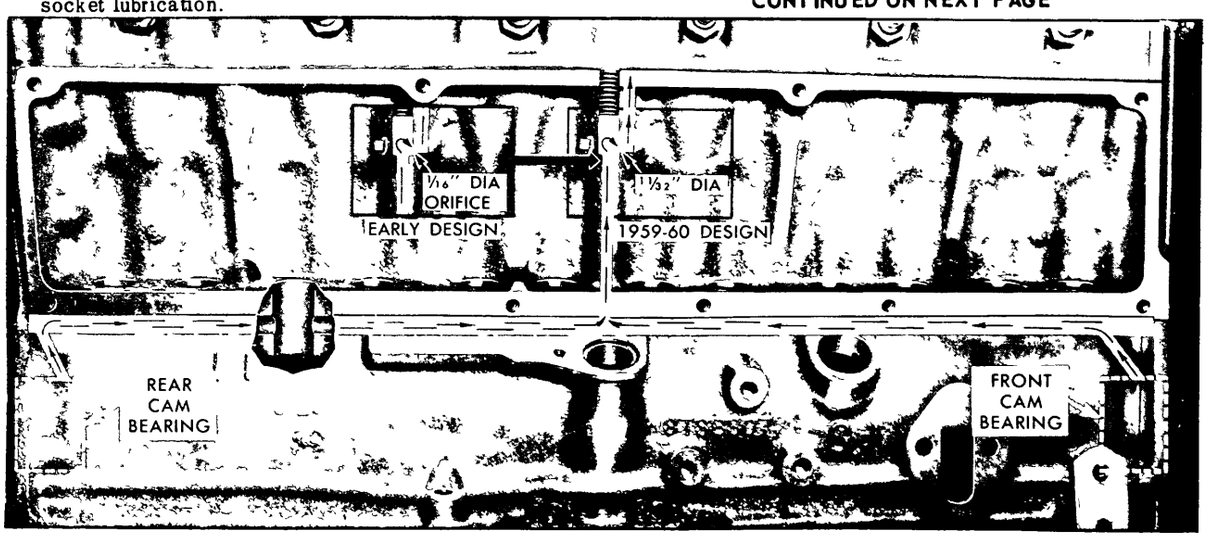
265" & 283" ENGINES

DESCRIPTION: Positive pressure lubrication is provided to all main, camshaft and connecting rod bearings and to all valve lifters and rocker arms. Three horizontal oil galleries are located in "V" at center of engine and distribute oil under pressure to all parts of engine.



OPERATION: Gear type oil pump mounted on rear main bearing cap draws oil from engine oil pan sump through a meshed screen intake (with bypass valve at center of screen) and delivers it through rear main bearing cap to a vertical passage leading to main oil gallery. On 1956 and later engines, this vertical oil passage is rerouted through a full flow filter mounting pad at left side of crankcase. Bypass valve is located between filter and mounting pad. Oil distribution from main oil gallery is as follows:

Crankshaft & Camshaft Bearings - An oil passage from vertical oil passage supplies oil to rear main bearing. Oil passages from main oil gallery supply oil to each camshaft bearing and to all except the rear main bearing.



Connecting Rods & Pistons - Oil is delivered from each main bearing to adjacent connecting rod bearing through drilled passages in crankshaft. A hole in connecting rod sprays oil onto cylinder walls, for piston and piston pin lubrication, when hole in rod matches hole in connecting rod journal.

Valve Lifters - Oil passage from rear camshaft bearing supplies oil to lifter oil galleries. Both mechanical and hydraulic valve lifters intersect the gallery. A

CONTINUED ON NEXT PAGE

6 CYL. ENGINE OILING SYSTEM

6 CYL. LIFTER OIL GALLERY & ROCKER ARM OIL PASSAGE

CONTINUED FROM PRECEDING PAGE

recess in mechanical lifter permits oil to pass into lower end of pushrod A larger passage in rear camshaft bearing permits more oil pressure for lubrication of hydraulic lifters Hydraulic lifters contain an inertia valve which opens permitting oil to pass to hollow pushrods

Rocker Arms & Valve Stems - Oil passes up through hollow pushrods to a hole in upper end that matches hole in rocker arm Oil sprayed out this hole and across rocker arm lubricates valve stem tip

OIL FILTER: Two types used as follows

1955 265" Engine - Optional partial flow type mounted on bracket adjacent to water outlet

1956, 57 265"; 1957-60 283" Eng. - Full flow type mounted on left side of crankcase Receives oil direct from oil passage from oil pump and delivers it back to vertical oil passage Bypass valve located between filter and mounting pad

348" ENGINE

DESCRIPTION: 348" engine lubrication system is the same as for the 265" & 283" engine except for the following The oil pump delivers oil through passage in rear main bearing cap to a filter mounting pad at left side of engine A passage from filter pad leads to a horizontal main oil gallery running full length of engine Oil from this main gallery is delivered through diagonal passages to vertical passages leading up to camshaft and down to crankshaft bearings

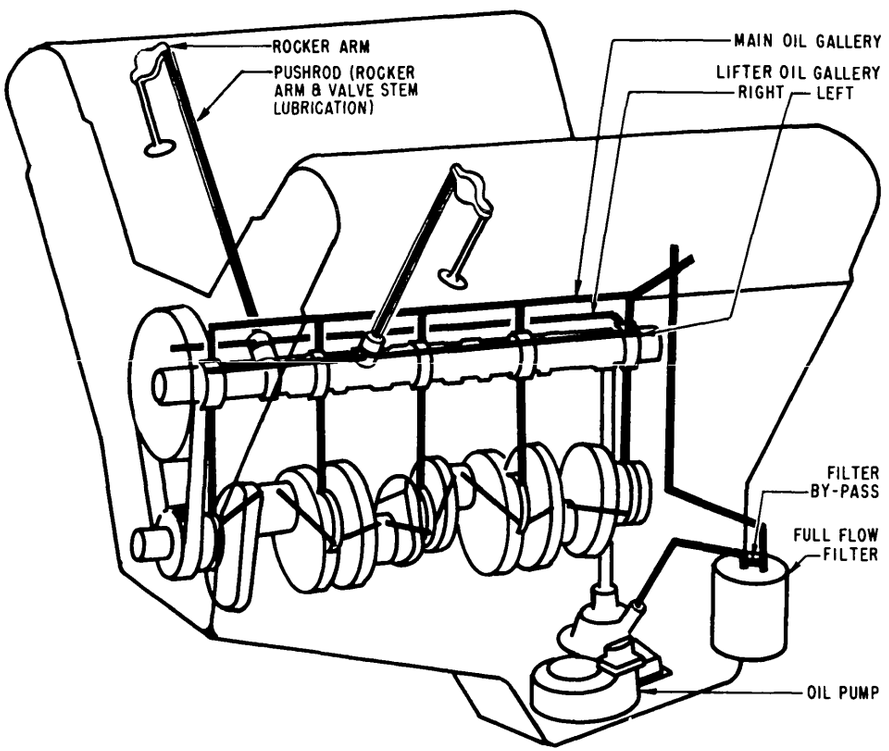
OIL FILTER: Full flow type mounted in recess on left lower side of crankcase with bypass valve located in recess Receives oil through direct passage in bearing cap and crankcase and delivers it through passage to main oil gallery

OIL PUMP

6 CYL. MODELS

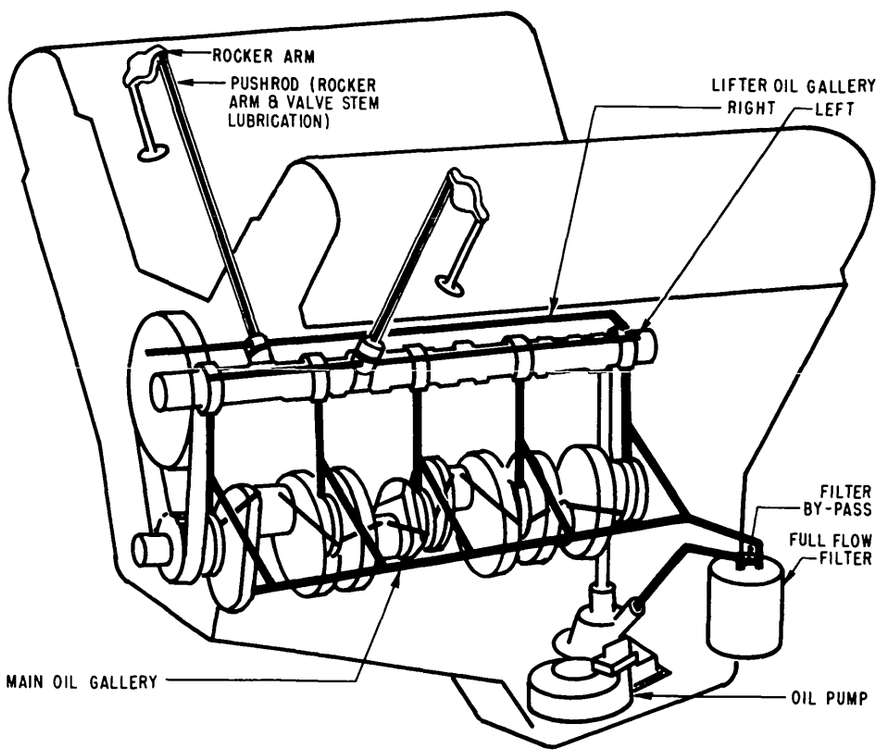
►*1955 6 CYLINDER ENGINE OIL PUMP SUCTION PIPE PRODUCTION CHANGE & REPLACEMENT ON EARLIER MODELS (To prevent loss of oil pump prime at oil change)·* The new pipe Part No 3836768 is bent in such a manner as to trap oil and prevent draining oil pump Pipe can be installed on earlier engines Tighten pipe in pump cover until lower end of pipe is 7 1/8" below pan gasket surface on block Check pipe for clearance at side of oil pan

6 CYL. OIL PUMP (Removal & Installation): Drain oil, remove oil pan and disconnect oil pump-to-block oil line Remove oil pump retaining sleeve lock screw and remove oil pump and oil pump-to-block oil line Remove pressure oil line from pump and remove pump cover attaching screws, cover, gasket, idler gear and drive gear and shaft Remove regulator valve pin and valve parts On 1954-55 models, remove floating intake screen from pipe by bending tang on float travel control and sliding assembly off pipe *CAUTION - Do not disturb pick-up pipe as this pipe is located at assembly* and controls float level travel On 1956-60 models, remove intake pipe and fixed screen as an assembly. Wash all parts in solvent and inspect pump body for cracks or excessive wear Check shaft for looseness in housing and gear and cover for wear



Assembly: Install drive gear and shaft in body Install idler gear with smooth side toward cover Install cover and new gasket Tighten screws securely and check to see that shaft turns freely Install regulator valve plunger, spring, retainer and pin Install oil line to pump body loosely

Installation Install pump in block and align oil lines and install retaining sleeve lock screw and tighten securely *(CAUTION*–Make sure tapered end of lock screw draws down into hole in oil pump body) Tighten oil pump-to-block oil line and pump-to-screen oil line connector nuts securely Replace pump screen



V8 MODELS

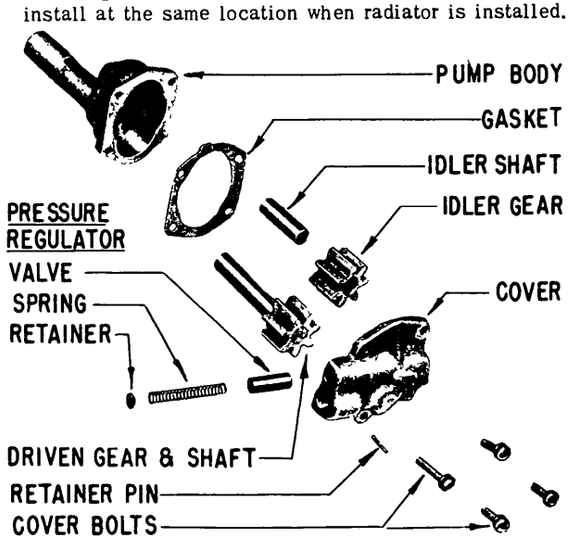
V8 OIL PUMP (Removal & Disassembly): Drain oil, remove oil pan, pump-to-rear main bearing cap bolt and remove pump Remove extension shaft clip and extension shaft collar On 1955-56 models, remove floating intake screen from pipe by bending tang on float

CONTINUED ON NEXT PAGE

265" & 283" V8 ENGINE OILING SYSTEM

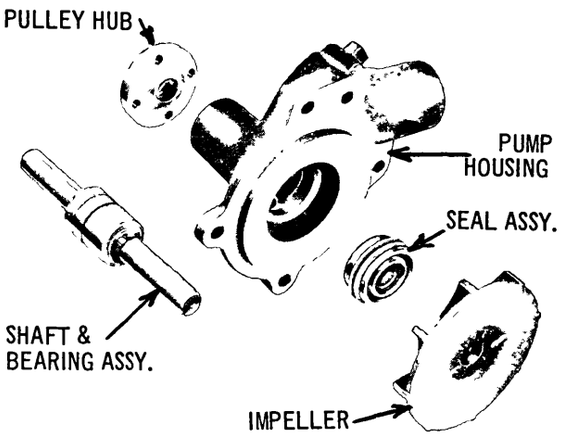
348" V8 ENGINE OILING SYSTEM

CONTINUED FROM PRECEDING PAGE



control and sliding float assembly off pipe. On 1957 and later models do not disturb pick-up pipe as this pipe is located at assembly and controls float level travel. If removed, pick-up pipe should be installed with pick-up screen horizontal and toward bottom of oil pan. Remove pump cover attaching screws, cover, idler gear, and drive gear and shaftl Wash all parts in solvent and inspect all parts for cracks, burrs or excessive wear.

Ass mbly: Place drive gear and shaft in pump body and install idler gear so that smooth side of gear will be toward cover. Install cover and attaching screws. Tighten screws to 6-9 ft. lbs. and check to see that shaft turns freely. On 1955-56 models, install pick-up screen on pipe and bend float travel control tang back in place. Assemble collar end of extension shaft assembly over pump drive shaft aligning tang on extension shaft with slot in end of pump drive shaft. Install retaining clip with flat end of clip in groove of pump drive shaft.

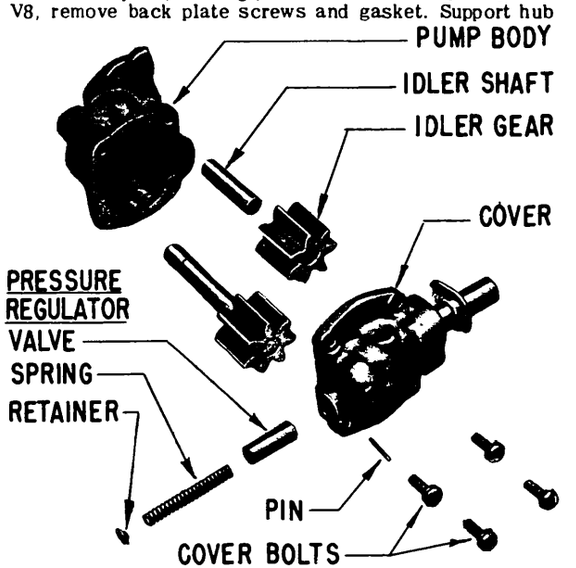


Installation; Assemble pump and extension shaft to rear main bearing cap, aligning slot at top end of extension shaft with drive tang on lower end of distributor drive shaft. Install pump to rear main bearing cap bolt and tighten to 45-50 ft. lbs. Install oil pan.

COOLING SYSTEM
1955-56 PASS. CARS

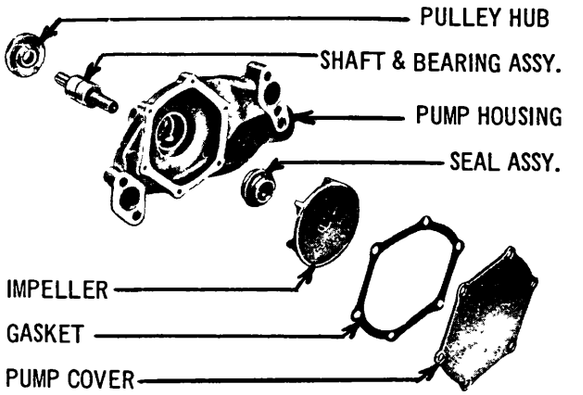
RADIATOR REMOVAL (Passenger Cars): Drain radiator and remove radiator hoses. On models equipped with Powerglide transmission, remove oil cooler lines from radiator and plug lines and radiator fittings. Remove radiator core to radiator support bolts and lift radiator core straight up to remove. *NOTE*–When removing radiator note the shims at support bolts and install at the same location when radiator is installed.

CHEVROLET 6 CYL. OIL PUMP



CHEVROLET 6 CYL. WATER PUMP

►*POWERGLIDE OIL COOLER CAUTION:* If foreign matter of any kind is allowed to enter cooler, the core should be cleaned with an air stream and flushed thoroughly with automatic transmission oil. Serious damage will be done to transmission if dirt or foreign matter remains in cooler.



WATER PUMP

WATER PUMP REMOVAL: (All Eng.) Drain radiator, remove water inlet hose and heater hose from pump housing. Remove water pump to cylinder block bolts and remove pump from engine. *NOTE* - On 6 Cyl. engine, pull pump straight out of block to avoid damage to impeller and shaft.

Disassembly - (All Eng.) Remove fan and pulley. On V8, remove back plate screws and gasket. Support hub

CHEVROLET V8 OIL PUMP

CHEVROLET V8 WATER PUMP

in press and force shaft out of hub (use ½" x 2" pin). Support pump in press (use blocks under housing) and press shaft and impeller out of pump. *NOTE - Apply pressure on outer race of bearing only.* Place Tool J-5855 in press, support impeller on seal surface and press shaft out of impeller with ½" x 2" pin. Discard old seal.

Reassembly - 1) On 235", 261", 283" Eng., install shaft and bearing assembly into pump body (from front side) until bearing is flush with front of pump body. **On 348" Eng.,** install shaft and bearing assembly into pump body (from rear side) until bearing is flush with front of pump body. *CAUTION - Apply pressure to out r race of bearing only.*

2) Coat outer diameter of seal with sealing compound and press on outer flange with Tool J-5590 until seal bottoms with outer flange against pump body.

3) Press hub on shaft using Tool J-5775 (235", 261" and 283"), Tool J-7034 (348") to locate hub on shaft to insure proper belt alignment.

4) To check position of hub, place straightedge across front face of hub and insert correct tool (from rear) into one bolt hole. Straightedge should lightly contact short step on Tool J-5775(6 Cyl.), end of Tool J-5775 (283"), short step on Tool J-7034 (348") plus or minus .005".

5) Support pump on hub and install impeller. *NOTE - Clearance between vanes and pump body should be .010-.035". Bend feeler gauge to check 348".* Install cover and gasket, tightening screws diagonally. Install pulley and fan.

Installation - Reverse removal procedure using new gasket between pump and cylinder block. Adjust fan belt and radiator core. Core or shroud minimum clearance with fan should be 5/8-3/4".

CLUTCH NOTES
1959-60 MODELS

CORVETTE FAST CLUTCH RELEASE ACTION (Lo Pedal) CONVERSION: 1) Wedge a wood block between cross shaft levers and toe pan at lower end of pushrod to prevent return spring from rotating levers while linkage disengaged.

2) Disconnect pushrod at both ends and rotate rod 180° on its axis (bend will be reversed when reassembled).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

3) Loosen pushrod bracket bolt at lower slotted position and remove upper bolt.

4) Rotate bracket rearward until unused bracket hole aligns with upper hole in pedal arm and install bracket bolt, lockwasher and nut then tighten both pedal arm bolts.

5) Place special thick washer on short pushrod shaft of bracket, install pushrod (previously rotated). Bushing must be installed at rod lower attachment. Secure upper end of pushrod with clip and lower end with bolt, washer and nut

6) Loosen bumper pad bolt, rotate bumper to align pad with contacting edge of pushrod bracket. Tighten bumper bolt. Check linkage operation, adjust return spring tension to 6-9 lbs. Relieve any bind at dash seal.

PROPELLER SHAFT NOTES

1958-60 PASSENGER CARS

PROPELLER SHAFT: New double tubular propellor shaft with three exposed universal joints (lubricated at assembly). A center bearing support attached to frame X member just forward of center universal joint. Remove propeller shaft assembly by removing two bolts attaching center bearing support to X member, splitting rear universal joint and withdrawing assembly by movingit rearward and to the left under axle housing.

UNIVERSAL JOINT ANGLE CHECK & ADJUSTMENT: Front Shaft Angle "A", Rear Shaft Angle "B", Pinion Shaft Angle "C" and Axle Height "D" must be within limits as shown in tables below. *NOTE* - Angles in tables are for maximum load conditions. If necessary for satisfactory results, Angles "A" and "C" may be increased ¼°. Angle "B" may be increased (Negative direction) ¼°.

Front Shaft Angle - Is relation of Engine Angle to Front Propeller Shaft Angle. Use Protractor on rocker arm cover and up against Front Propeller Shaft.

Rear Shaft Angle - Is relation of Front Propeller Shaft Angle to Rear Propeller Shaft Angle. Use Protractor up against both Propeller Shafts.

Pinion Shaft Angle - Is relation of Rear Propeller Shaft Angle to Pinion Shaft Angle. Use Protractor up against Rear Propeller Shaft and up against bottom machined surface of rear universal joint (Turn surface parallel to floor), for Pinion Shaft Angle.

Axle Height - Is vertical distance from axle housing to frame kick-up.

Checking Procedure - 1) Support car on tires, ramp or twin post hoist, not on frame hoist.

2) Measure Axle Height, place wood block (use length nearest to sizes shown in tables below), between axle housing and frame kick-up and secure frame down on blocks. On Air Suspension Cars (4¼" block), exhaust air from rear air springs by opening manual valve and repeatedly lifting rear of car so frame will settle down on blocks.

CAR LEVEL CAUTION - Do not disturb car level by leaning on fenders when taking engine angle or use different block heights on the two sides at rear axle housing.

3) Record reading of Front Shaft, Rear Shaft, and Pinion Shaft Angles.

4) Determine Angles "A", "B" and "C" by deducting second reading from first when both angles are up at front (may result in minus answer), or add first reading to second reading when first reading angle is up at front and second reading is up at **rear** (In case of Pinion Shaft Angle).

Corrections - 1) If front angle too large, insert shim under transmission support.

2) If rear angle is too small, remove shim from rear suspension upper control arm front attachment. *NOTE* - Alternate shim removal, never remove two shims from one side.

Optional Procedure - For correcting angles "A" and "C", loosen or remove frame center bearing support bolts (under center section) and insert transmission shims between frame section and the support inside driveshaft tunnel. *CAUTION* - Always recheck angles "A" and "B".

Vibration Note - If objectional vibration exists when joint angles are within specifications, readjust angle toward opposite limit (high toward low or low toward high limit).

1958 Coil Spring Suspension

Angle "A"	Angle "B"	Angle "C"	Height "D"

REAR AXLE NOTES

1954 MODELS

AXLE SHAFT (PASSENGER CARS): Installation. Assemble new oil deflector, gasket (with shellac or paint on both sides), line up extra hole (center of three closest together) with notch in hub flange in axle shaft (also oil pocket in oil deflector with this notch), insert six new bolts and peen into place in countersink around bolt holes in flange using special Peening Tool and Anvil so that these parts are riveted together. NOTE—Axle shafts are of unequal length, longer shaft used on right side.

Axle Shaft Note—Shafts unequal in length (right shaft longer). Part numbers are as follows:

1954 Passenger Cars

	Part No.	Length	Diam. ①
Left Shaft	3694755	28 1/2"	2 13/16"
Right Shaft	3694756	29 1/2"	2 13/16"

①—Diameter of flange pilot.

Endplay Adjustment—When installing shaft, select correct spacer block (see below) so that when installed on pinion shaft between inner ends of axle shafts, shaft endplay will be from a Free Fit to .014" maximum clearance.

Passenger Car Spacer Blocks

Part No.	Type & Size
597251	Narrow (1.012"
597254	Medium (1.0195" & 1.0295")
473603 ①	Wide (1.0345")

①—Marked by blue paint on rough side.

Above dimensions are measured across the ground surfaces and spacers should be installed with ground surface toward the axle shaft end. Medium spacer ground on all four sides and may be installed either way to secure the two different sizes.

1954 HALF-TON TRUCK

AXLE SHAFT (HALF-TON TRUCK): Shafts are heavier construction than Passenger Car type.

Installation—Assemble new oil deflector, gasket (coat both sides with heavy shellac or paint), line up extra hole (center hole of closely grouped three holes) with notch in hub flange on axle shaft (oil pocket in oil deflector should also be aligned with this notch), install six special bolts, forcing heads down to deflector, and peen shoulder on bolts into countersink around bolt holes in flange using Special Peening Tool and Anvil so that these parts are riveted together. Check endplay (below).

Axle Shaft Note—Shafts unequal in length (right shaft longer). Part numbers are as follows:

1954 Half-Ton Trucks

	Part No.	Length	Marking
Left Shaft	3694769	29 9/16"	"GM-769"
Right Shaft	3694770	30 9/16"	"GM-770"

Endplay Adjustment—When installing shaft, select correct spacer block (see below) so that with spacer installed on pinion shaft between inner ends of axle shafts, shaft endplay will be from a Free fit to .014" maximum clearance.

Axle Spacer (Trucks)—Two spacer blocks furnished which provide three sizes as follows:
Part No. 370217—Narrow (1.1485").
Part No. 372515—Wide (1.1575" & 1.1675").

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

These dimensions are taken across ground surfaces. NOTE—Spacers should be installed with ground surface toward axle shaft end. Wide Spacers are ground on all four sides (giving two sizes listed).

1954 TRUCKS

Axle Shaft Removal (¾ & 1 Ton): Remove 8 capscrews and lockwashers in axle shaft flange, install two ½" x 13 screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket. *Use new gasket when installing shaft.*

CAUTION—Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft. Grease at this point **will cause loosening of axle shaft flange capscrews.**

Axle Shaft Removal (1½ & 2 Ton): Shaft flange is splined in wheel hub (tight fit) and requires special puller for removal. Remove five capscrews and lockwashers in hub cap, remove hub cap and gasket. Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. NOTE—When re-installing shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket.

Axle Shaft Note—Shafts unequal length (right shaft longer) and may be identified by part number stamped on shaft or lengths as follows:

¾ & 1 Ton Truck

	Part No.	Length
Left Shaft	3680977	31 3/16"
Right Shaft	3680978	37 1/16"

1½ Ton Truck (Splined Shaft)

Left Shaft	3685191	34 3/32"
Right Shaft	3685192	40 15/32"

2 Ton & C-O-E (Splined Shaft)

Left Shaft (stamped 01)	3702201	36½"
Right Shaft (stamped 02)	3702202	41"

Wheel Bearing Adjustment: Remove wheels and axle shaft (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight, using special wrench J-2222 (¾ & 1 Ton), J-870 (1½ & 2 Ton) while turning hub by hand, then back nut off 45°, check for free turning, install adjusting nut lock (with lock tangs aligned with slots in adjusting nut), bend tang down into notch in adjusting nut, install locknut and tighten securely, bend tang of lock down into notch of locknut.

IGNITION NOTES

1955-57 265" V8 ENGINE

►*DISTRIBUTOR INSTALLATION CAUTION (TO INSURE VALVE SYSTEM LUBRICATION)* On this engine, a semi-circular groove in a boss at the lower end of the distributor housing channels engine oil from the main oil gallery to the right and left valve lifter oil galleries (this oil fills hydraulic lifters, lubricates lifters, and also lubricates rocker arm through hollow pushrods). To insure correct register of oil gallery holes and distributor groove, distributor must be installed as directed below. *CAUTION - INCORRECT DISTRIBUTOR INSTALLATION MAY CUT OFF OIL TO EITHER RIGHT OR LEFT LIFTER OIL GALLERY CAUSING NOISY LIFTER OPERATION AND LIFTER AND ROCKER ARM WEAR AND FAILURE*

Distributor Removal: Mark position of rotor arm on distributor housing and note position of distributor on block (see below) before removing distributor from engine

Distributor Installation: If crankshaft has not been turned while distributor out, rotate distributor shaft and rotor about 1/8 turn counterclockwise past mark previously made on housing, push distributor down in place in correct position on block (see below). Rotor should line up with mark on housing when gears are meshed **If crankshaft has been turned** while distributor out, turn crankshaft to firing position for No. 1 cylinder (front cylinder, left bank), then proceed with distributor installation as above.

►*DISTRIBUTOR INSTALLED POSITION:* With distributor correctly installed, distributor cap clips should be approximately at right angles to centerline of engine with vacuum spark control unit on right side and pointing forward. Alignment of oil holes in block and distributor groove can be checked by sighting down distributor mounting bore in block. Rear end of groove should register with hole at rear of mounting bore and with hole at front of mounting bore. **These holes must register with semi-circular groove in boss at lower end of distributor housing when distributor installed.** The hole on rear side of distributor mounting bore is the lead from main oil gallery (through rear camshaft bearing). *NOTE - If there is no oil supply to BOTH cylinder banks, check rear camshaft bearing as it may be burned out or turned in bearing bore.*

BRAKE NOTES

1955-56 PASS. CAR MODELS

SLOW POWER BRAKE PEDAL RETURN CORRECTION: When this condition is encountered, check the following points and correct as necessary.

Push Rod Lever Assembly—Power brake unit pushrod has been installed on the outboard side of lever assembly at pedal linkage. Correct by assembling on inboard side. Lubricate all linkage pivot points.

Power Brake Rubber Boot—Bellows or rubber boot may be gathered at front side of dash panel causing a bind on pushrod. Correct by pulling bellows through smaller hole in dash panel and mounting plate at same time power unit is being assembled to mounting plate.

Power Unit Valve Sleeve—Remove power unit from dash. Remove rubber boot from end plate of unit and squirt rubber lubricant (Ru-Glyde) between valve sleeve into which pushrod is assembled and the sleeve bore in valve assembly to lubricate "O" ring seal on valve sleeve.

MODEL IDENTIFICATION

Seri s	Serial Pr fix	Mdl
1500 ①	A	②ONE-FIFTY
2100	B	②③TWO-TEN
2400	C	②③BEL-AIR
1508	D	②SEDAN DELIVERY

①—Except Sedan Delivery.
②—CONVENTIONAL ENGINE (115 H.P.) Standard.
③—POWERGLIDE ENGINE (125 H.P.). Used when Powerglide option added.

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post.

Starting Serial Number—001001 (at each plant), for all models except the Corvette.

►*SERIAL NUMBER NOTE—Serial Number (example B54F 001025) includes following identification data in sequence.*

Series ①	Year	Assy. Plant②	Serial No.
B	54	F	001025

①—See Model Designation above.
②—See Assembly Plant Designation below.

Assembly Plant Designation

A—Atlanta	**J**—Janesville	**O**—Oakland
B—Baltimore	**K**—Kansas City	**S**—St. Louis
F—Flint	**L**—Los Angeles	**T**—Tarrytown
		N—Norwood

ENGINE NUMBER: Stamped on right side of engine block to rear of distributor.

Starting Engine Number—0001001 (at each plant). Suffix letters and numerals indicate plant at which engine built ("F" for Flint, and "T" for Tonawanda), Model Year, and Model Type. See following for model type designation.

Engine	Suffix
Regular "235"	Z
Regular "235" (With H.D. Clutch)	ZC
Regular "235" (with aluminum cam gear)	ZH
Powerglide "235"	Y

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. minimum with all cylinders equal within 5-10 lbs. at cranking speed.

VACUUM READING: *CAUTION—Vacuum reading on Standard transmission Cars and Powerglide Cars is different as follows:*

Standard Transmission Cars—17-21" at idling speed.

Powerglide Cars—At 500 RPM.—14.4" (with transmission in Drive Range). 16.7" (with transmission in Neutral). **At 450 RPM.** 14.5" (with transmission in Drive Range). 16.3" (with transmission in Neutral). *NOTE—Manifold vacuum reading at idle speed is lower than previous models because of "high lift" cam used.*

VALVE TAPPET CLEARANCE: (Pass. Cars & 3000 Series Trucks with Conv. Valve Lifters)—.006" Intake. .016" Exhaust.

Other Trucks—.006" Intake. .020" Exhaust.

►*POWERGLIDE ENGINE NOTE—Hydraulic valve lifters used in these models and adjustment required only when cylinder head removed or valve lifters replaced. See "Tappet Clearance Adjustment" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position. *Distorted springs should be r placed.*

IGNITION

FIRING ORDER: 1-5-3-6-2-4. See Diagram.

SPARK PLUG GAP: .035".

Spark Plug—AC No. 44-5. 14mm.

COIL: Delco-Remy 1115380.

Ignition Current—2.5 amperes idling. 4.5 stopped.

DISTRIBUTOR: Delco-Remy 1112388 (With Std. Trans.); Delco-Remy 1112396 (With Powerglide).

Condenser—Delco-Remy 1869704 (first type), Delco-Remy 1928111 (Second type with spade terminal).

Capacity—.18-.23 microfarad.

Contact Point Set—Delco-Remy 1924571.

Breaker Gap—.016-.021" (New points), .0125-.0175" (Used points).

Cam Angle—38-45° with .016" gap.

►*BREAKER GAP CAUTION—Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension—17-21 ozs.

Rotation—Clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center 'O' position.

Vacuum Spark Control: Delco-Remy 1116076

Plunger Travel—11/64"-15/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6"
7.5	15	7.5-10"

IGNITION TIMING

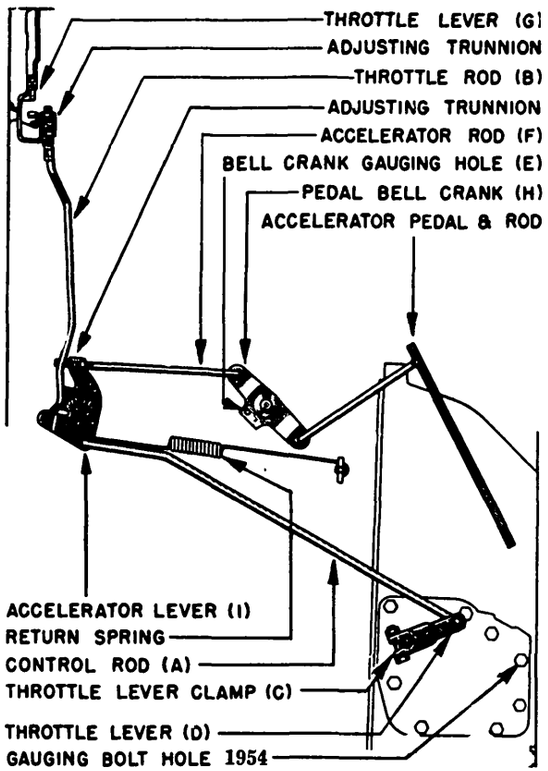
Setting—2° ATDC.

Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on 'O'. Then adjust Octane Selector as follows:

Octane Selector Setting—Set for slight ping when accelerating with wide open throttle.

CARBURETOR

Model	Rochester No.
Standard Transmission	7005921
Powerglide	7005922



Downdraft types with automatic choke. Throttle Return Check used on Powerglide Models.

Idle Setting—1-2½ turns open.

Idle Speed (Synchro-mesh)—475 RPM.

Idle Speed (Powerglide)—425 RPM with Powerglide selector lever in 'D' position.

Float Level—Use Gauge No. 3696192. Invert bowl cover and float assembly **but do not remove gasket.** Place gauge in position over floats with gauge tang in discharge nozzle. Adjust each float vertically so they just touch top portion of gauge and bend float arms horizontally to center each float in gauge cut-out. Tilt assembly 90° to each side and see that floats do not

touch gauge. Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¾". Adjust by bending tang at rear of float assembly.

►*CAUTION—Both floats must be set alike and must not be twisted out of alignment.*

Choke Adjustment: Index mark on cover aligned with long cast mark on top of choke housing casting.

Fast Idle: With idle adjusting screw on next to highest step of fast idle cam, Gauge J-5150 (.073") should just slide between lower edge of choke valve and carburetor bore. To adjust, bend connector rod.

Throttle Linkage Adjustment: *CAUTION - Engine must be at normal operating temperatur and transmission warm (choke valve wide open and fast idle inoperative with throttle stopscrew against low step of fast idl cam) when adjustments are made. Proceed as follows:*

1) Adjust engine speed to 425 RPM. with selector lever in "D" range (set hand brake firmly to hold car while making this adjustment).

2) Disconnect control rod (A) from transmission throttle lever (D). Remove the right side cover bolt from transmission (marked "Gauging Bolt Hole" in illustration). Hold clamp (C) back lightly against stop in transmission, install Throttle Lever Positioning Gauge J-5588 on lever with one gauge pin in hole on lever. If second gauge pin does not enter bolt hole in

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAG

cover *(s "Gauging Bolt Hol " in Throttl Linkag illustration)*, loosen lever-to-clamp attaching bolt and position lever so that gauge pin enters hole freely. *(CAUTION* - Hold adjustment clamp (C) back against its stop while making this adjustment). Tighten lever-to-clamp bolt securely, remove gauge, replace cover bolt. Connect throttle rod (A) to lever.

3) Rotate engine bellcrank clockwise to set transmission lever (D) in full detent (this is wise open throttle position), and adjust trunnion on upper end of rod (B) to length required for free entry of swivel pin into throttle lever when throttle lever is held at wide open (upper position), tighten lower check nut securely and connect rod to throttle lever.

4) Install 3/16" gauge pin through gauging hole (E) in pedal bell crank (H) and through hole in bracket to lock bell crank. With throttle rod (B) held up so that throttle lever is against idle stop in carburetor, adjust trunnion on forward end of rod (F) until trunnion pin freely enters hole in accelerator lever (I) tighten trunnion check nuts securely and connect rod. Remove gauge pin from bell crank (H).

Thr ttl R turn Ch ck Adjustment (235" Powerglide Engin): Have engine at full operating temperature. Align throttle return check adjusting screw with contact arm on throttle lever by bending return check bracket. With parking brake set tight, place selector lever in 'D' range and adjust throttle stop screw and idle adjusting screw in combination with each other to obtain a smooth idle at 425 RPM, this adjustment should be made with choke valve in wide open position with throttle stop screw resting on low step of fast idle cam. Shut off engine. Close choke valve and position throttle stop screw on highest step of fast idle cam. Using a 9/32" wrench on the flat section of throttle return check shaft, hold shaft from turning, and with a 3/8" wrench turn the adjusting screw until it just contacts the throttle lever contact arm.

►*NOTE–If scr w projects more than ½" from shaft when head of screw just touch s lever contact arm, reposition throttle ch ck on manifold stud.*

►*OTHER DATA: See "Rochester B & BC" Carburetors in Carburetor Section.*

Fu l Pump Pr ssur –4 lbs. maximum.

CARB. EQUIPMENT

Fu l Pump: AC Diaphragm type.
R plac m nt Fu l Pump–AC No. 9798 (Fuel only), AC No. 9797 (Fuel & Vacuum).
Pr ssure–4 lbs. maximum.
See "Fuel Pumps" in Carburetion Equipment Section.
Gas lin Gauge: AC Electric.
Dash Unit–AC No. 1517598.
Tank Unit–AC No. 1517761.
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delc –15AA6-W. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Batt ry Ground–Negative terminal.
Engin Ground–Engine to cowl at rear head bolt.

STARTER

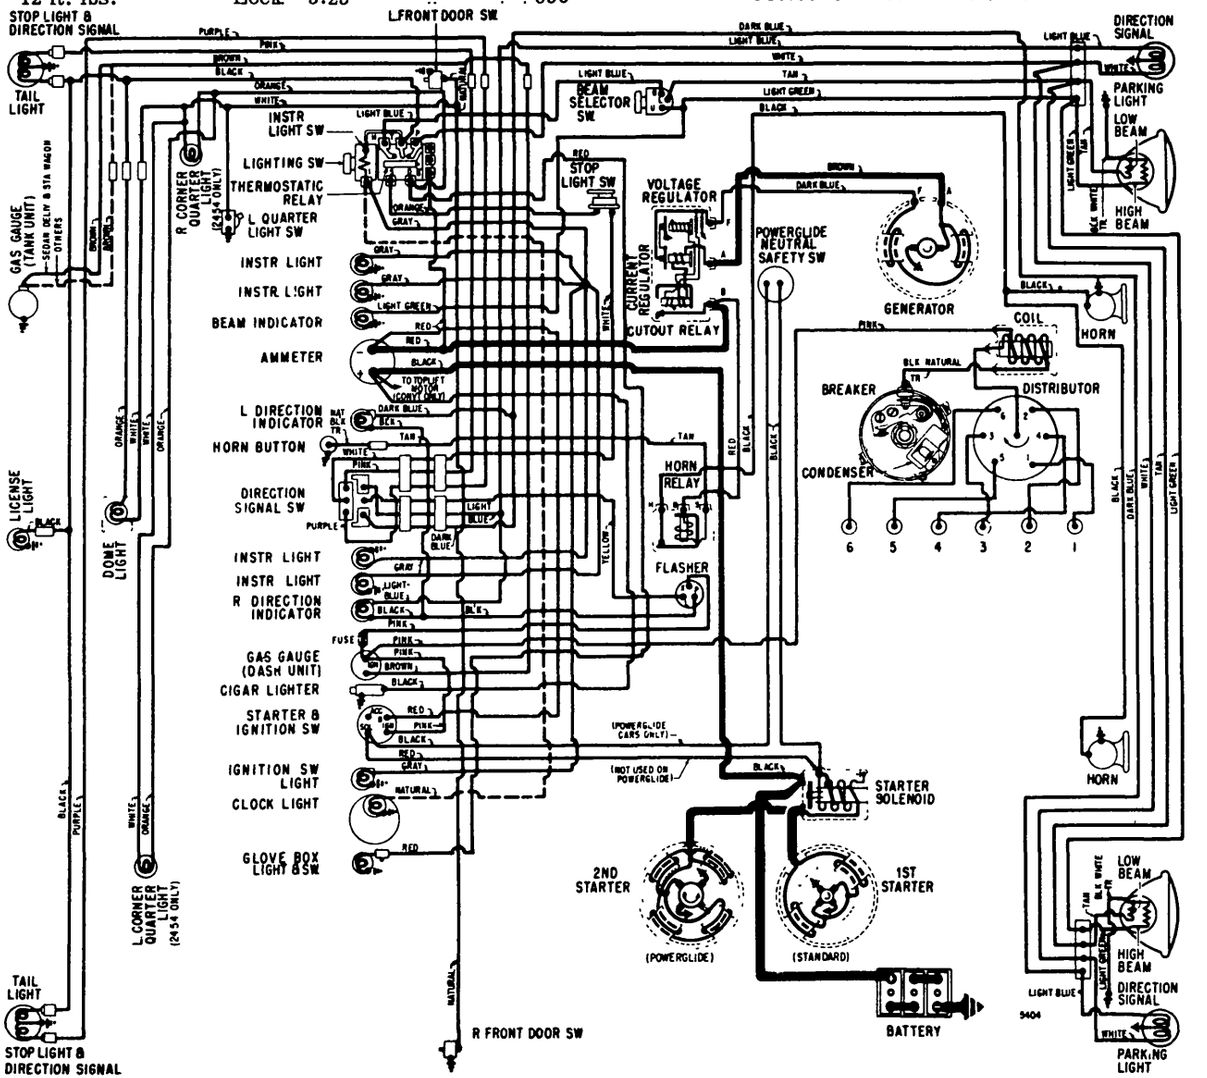
►*POWERGLIDE CAR STARTER PRODUCTION CHANGE: In later 1954 production, a four coil starter motor replaced the two coil starter. See following for starter motor application.*

Model	Delco-Remy No.
All Std. Trans. & Early Powerglide	1107109
Later Powerglide Cars	1108035

Armature–Delco-Remy 1917855 (1107109, 1108035).
Drive–Overrunning clutch (solenoid pinion shift).
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–24-28 ozs.

Performance Data–1107109

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
12 ft. lbs.	Lock	3.25	550



P rf rmanc Data–1108035

Torque	RPM	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 ft. lbs.	Lock	3.0	600

Starting Switch: Delco-Remy Solenoid Switch No. 1118135 mounted on starter and controlled by Ignition & Starter Switch No. 1116478. Turn key full RIGHT against spring tension to start.
See "Delco-Remy Starter Solenoid (Without Relay)" in Electrical Equipment Section.

Neutral Safety Switch: (Powerglide Cars only), Delco-Remy 1997845 (without Back-Up Light & Power Steering). Delco-Remy 1998040 (with Back-Up Light & Power Steering).

Adjustm nt—*Se "Ch vrolet P w rglide" in Transmissi n S ction.*

GENERATOR

Delco-Remy. *CAUTION—Alternate wound (3½ turn) armature used on late production passenger cars. Correct regulator must be used with each model generator as indicated below.*

Model	Generator No.	Armature No.
Standard (Early)	1100018	1925348
Standard (Late)	1100028	①1929558
Taxi	1102793	1924893
State Police	1105008	1925556
City Police	1105009	1925630

①—Alternate wound (3½ turn) armature.

Performance Data

Generator	Amperes ①	Volts	RPM
1100018	45	8.0	3000
1100028	40	8.0	2850
1102793	45	8.0	2450
1105008	50	7.0	2100
1105009	40	7.0	1700

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—28 ozs.

Field Current—1.87-2.0 amperes (1100018, 1100028, 1102793). 1.77-1.93 amperes (1105008, 1105009). All at 6.0 volts.

Belt Adjustment: 7/16-½" deflection with light pressure midway between generator and pump pulleys.

REGULATOR

Delco-Remy. *"1118825 SERIES" REGULATORS.*

Regulator No.	For Generator No.
1118827	1100018, 1102793
1118843	1100028
1118835	1105008
1118831	1105009

►*REGULATOR NOTE: Checking procedure for "1118825 Series" is different than for previous models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section. All specifications below are "Normal" settings.*

Cutout Relay (All Regulators)

Cuts In—6.4 volts (hot).

Contact Gap—.020".

Air Gap—.020" (with contacts just closed).

Voltage Regulator (All Regulators)

Setting—7.3 volts (hot).

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Regulator No.	Setting (hot)
1118827	27 amps.
1118843	42 amps.
1118835	52 amps.
1118831	42 amps.

Air Gap—.075" (with armature pressed down to point where contacts just touching).

Checking & Adjusting—*See El ctrical Equip. Secti n.*

MISC. ELECTRICAL

H adlamps: Sealed Beam. *See El ctrical Equip. Section.*

Autr nic Eye: *S "Autronic Ey " in El ctrical Equipment Section.*

Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*

Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel) and pull shaft and knob out. Remove switch retaining nut and switch assembly.

Stop Light Switch Location (Manual Brakes): Mechanical type mounted on underside of toeboard and operated by brake pedal.

Stop Light Switch Location (Power Brakes): Pressure switch located in fitting at forward end of master cylinder.

FUSES: Located as indicated below.

Direction Signal—Fuse located on front side of instrument panel adjacent to gasoline gauge terminal.

Autronic Eye—14 amps. Located in Autronic Eye amplifier.

CIRCUIT BREAKER: 30 amperes. Located in lighting switch.

HORNS: Delco-Remy 1999681 (Low Note), 1999682 (High Note).

Horn Relay: Delco-Remy 1116775.

Contacts Close—2.75-4.0 volts (set to 3.5 volts).

Contact Gap—.027". **Air Gap**—.014" (closed).

ENGINE

►*TWO ENGINES USED ON PASSENGER CARS. Conventional 235" & Powerglide 235". See Passenger Car & Truck Model Identification for engine application.*

►*1954 235" (POWERGLIDE) & 261" (JOBMASTER) ENGINE ROCKER ARM PRODUCTION CHANGE: See "VALVES" (below) for rocker arm identification.*

►*NOTE—The following repair data applies to all Pass. Car & Truck Engines.*

ENGINE SPECIFICATIONS: Own 6 cylinder valve-in-head.

Bore—3 9/16". **Stroke**—3 15/16".

Displacement—235.5 cu. in. **Rated H.P.** 30.4.

Developed Horsepower—115 at 3700 RPM (Conventional). 125 at 4000 RPM (Powerglide).

Compression Ratio—7.4-1

Compression & Vacuum Reading—*See Tune-Up.*

ENGINE REMOVAL: *See Chevrolet Special Data.*

OIL PAN REMOVAL: Remove bolts attaching steering idler and third arm and bracket assembly to frame cross member and drop down. *CAUTION— Note number of shims between bracket and cross arm and replace this same amount at reassembly.*

ENGINE MOUNTINGS: *See Chevrolet Special Data.*

CYLINDER HEAD: *See Chevrolet Special Data.*

TIGHTENING TORQUES: *See Chevrolet Special Data.*

PISTONS

Aluminum alloy, cam ground, tin plated, with piston pin offset 5/64".

W ight—1.18 lbs. (235" Engine), 1.36 lbs. (261" Engine).

R moval—Pistons and rods removed from above.

Cl arance—.0005-.0011" at bottom of skirt, .0115-.0135" at top land. Selective fit.

R plac m nt Pistons: Furnished Std. Size & .020", .030", .040" oversize. *STANDARD SIZE PISTON NOTE*—Std. pistons furnished in four sizes with size stamp and size range as follows: **S4** (3.5625"-3.5630"), **S5** (3.5630"-3.5635"), **S6** (3.5635"-3.5640"), **S7** (3.5640"-3.5645").

Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.

Installing Pistons: Install piston with notch in piston and mark "Front" toward front of engine.

PISTON PINS

Locked in rod. No bushing used in piston.

Di ameter—.8660-.8665" (exc. Jobmaster), .9270-.9275" (Jobmaster). **L ength**—3.198-3.228" (All).

Pin Fit in Piston—Thumb push fit (at room temp.). To check fit, with piston and pin at 70°F, apply light oil film to pin, insert pin vertically in n piston boss (one end of pin in either piston boss). Pin should hold own weight but should install easily with thumb pressure.

Replacement Pins: Furnished Std. .0015", .003", .005 oversize.

PISTON RINGS

Passeng r Cars

Ring	Width	End Gap	Sid Cl aranc
Compr. ①	3/32"	.007-.020"	.002-.0035"
Oil ②	3/16"		④

Trucks

Compr. ①	3/32"	007-.020"	002-.0035"
Oil ③	3/16"	⑤	.0015-.003"

①—Deep section, twist type. Top Ring on Loadmaster & Jobmaster engines is Chrome plated.

②—4-Piece type (Upper & Lower Rails, Steel Spacer, & Expander Spring behind rails and spacer)

③—Wide slot expander type Expander is flat spring (Thriftmaster), coil spring type (Loadmaster & Jobmaster—ring has semi-circular seat for spring).

④—Free fit to .010" maximum

⑤—.005-.015" (Thriftmaster), .010-.018" (Loadmaster & Jobmaster).

►*RING INSTALLATION CAUTION—Install compression rings with side marked "TOP" upward.*

Replacement Rings: Furnished Std. .005", .010", .020", .030", .040" oversize.

CONNECTING RODS

►*CONNECTING ROD REPLACEMENT CAUTION— Rods for 261" Jobmaster engine not int rchangeable with other engines. Casting No. 3701491 (Exc. 261" Engin), No. 3702448 (261" Engine).*

Length—6 13/16". **Weight**—31.76 ozs. (Exc. 261").

Crankpin Journal Diameter—2.311"-2.312", all engines.

Lower Bearing—Replaceable precision type.

Clearance—.0007-.0028". Not adjustable.

Sideplay—.005-.012" at lower end.

Replacement Bearings: Std. .001", .002", .010", .020" undersize.

Installing R ds: Numbers on rods and caps must be together and installed in same numbered cylinders with numbers and pin clamp bolt toward camshaft side.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CRANKSHAFT

►*CAUTION–No. 1 (front) and No. 2 (front intermediate) bearings similar in appearance but must not be interchanged. No. 2 bearing marked by "T" in oil groove.*

Journal Diameters–(1) 2.6835" 2.6845" (2) 2.7145"-2.7155", (3) 2.7455"–2.7465", (4) 2.7765"-2.7775"

NOTE–Journal taper or out-of-round limits .001". Run-out Limits for Nos. 2 & 3 journals is .002"

Clearance– 0005" minimum .003"maximum (new bearings), Service limits 0005" min. 0045" maximum Adjustment below.

NOTE–Precision type bearings can be replaced singly.

Bearings–Steel backed thin wall babbitt.

Bearing Adjustment: Solid shims. Remove shims until light drag secured when shaft turned by hand, then replace .002" shim on one side for clearance (if unequal number of shims used, place extra shim on same side of all bearings).

Replacement Bearings: Furnished Std. .002", .010", .020", .030" undersize.

Bearing Installation: Not necessary to remove crankshaft or engine from car *See "Crankshaft & Main Bearings" in Chevrolet Special Data*

Bearing Cap Installation–No. 2 & No. 3 bearing caps marked for identification. Install No 2 cap with mark "FRONT" toward front of engine, No 3 cap with mark "REAR" toward rear of engine.

Crankshaft Oil Seal Servicing: *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

End Thrust: Taken by No. 3 (rear intermediate) bearing To check endplay, force crankshaft to rear, check clearance at rear of No 3 bearing Adjust by replacing bearing. **Endplay**–.0035"- 0095"

Vibration Damper: *See "Vibration Dampener" in Chevrolet Special Data.*

CAMSHAFT

►*CAMSHAFT CAUTION–Different camshafts used in Conventional and Powerglide engines (261" Truck engine uses same camshaft as used on Corvette). Early type Conventional engine camshaft is forged steel. Later Conventional engines and all Powerglide engines have a cast iron alloy camshaft and a cast iron alloy distributor drive gear*

Camshaft Part Numbers	Camshaft	Dist. Gear
235"Pass (Powerglide)	①3836045	②1929578
235"Pass. (Powerglide)	③3836386	②1929578
235"(Exc P.G.&Corvette)	④3836489	⑤1865180
235"(Exc. P.G.&Corvette)	⑥3713919	②1929578
235"Corvette	⑦3836484	②1929578
261"Truck	⑦3836484	②1929578
235"Truck (Early)	⑧3836490	⑤1865180

①–**Used on First 10,000 cars.** Identified by 7/16"wide cam lobes. NOTE–This camshaft not furnished for service replacement. See *"Camshaft No 3836045 Replacement Caution" below*

②–Cast Iron distributor gear identified by circular groove between teeth and rivet hole.

③–**Used after First 10,000 cars.** Identified by 9/16" wide cam lobes and **two large raised dots** between #5 & #6 inlet cams

④–**Used before 3-1-54 on Pass. Cars & Trucks** *(See "Early 1954 Truck Camshaft Caution" below)* Forged steel Identified by large journal, and No 3836366 forged on shaft. ⑤–Steel distributor gear

⑥–**Used after 3-1-54 on Pass. Cars & Trucks** *(See "Early 1954 Truck Camshaft Caution" below)* Cast iron. Identified by 9/16' wide cam lobes and **one large raised dot** between #5 & #6 inlet cams.

⑦–Cast iron. Identified by 9/16"cam lobes and **three large raised dots** between #5 & #6 inlet cams.

⑧–**Used on 15,000 Early 235" Truck engines.** Forged steel. Identified by 1/8"smaller journal than Camshaft No. 3836489. *See "Early 1954 Truck Camshaft Caution"*

►*CAMSHAFT NO. 3836045 REPLACEMENT CAUTION:* When replacing this camshaft with No. 3836386, connecting rods must be relieved approximately 1/16" by grinding rear side of lower end of connecting rod adjacent to bolt on camshaft side. This will allow connecting rod to clear larger (9/16") cam lobes.

►*EARLY 1954 TRUCK CAMSHAFT CAUTION:* Approximately 15,000 235" Truck engines were equipped in production with Camshaft No. 3836490, which have a smaller journal than later production.

Journal Diameters (Camshaft No. 3836490)–(1) 2.0282"-2.0292", (2) 1.9657-1.9667", (3) 1.9032-1.9042", (4) 1.8407-1.8417".

Journal Diameters (All Others)–(1) 2.1537-2.1547", (2) 2.0912-2.0922", (3) 2.0287-2.0297" (4) 1.9662-1.9672".

NOTE–Journal out-of-round limits .001". Run-out limits .002" (straighten if run-out excessive).

Bearing Type–Steel backed babbitt lined bushing.

Clearance– .002-.004" (Camshaft No. 3836490), .0015-.0035" (All Others)

End Thrust: Taken by thrust plate behind camshaft gear.

Endplay Adjustment–*See "Timing Gears" in Chevrolet Special Data.*

Endplay–Free fit to .003" maximum

Timing Gears: Fibre (Pass Cars. Exc. Corvette), Aluminum (Corvette and Trucks). Steel crankshaft gear.

Replacement Timing Gears & Installation: *See "Timing Gears" in Chevrolet Special Data.*

Timing Gear Backlash–.003-.004".

Camshaft Setting: Gears punch marked. Punch marks on both gears must line up directly opposite each other.

VALVES

Tappet Clearance: (Pass Cars & 3000 Series Trucks with Conv. Valve Lifters)– .006" Intake. .016" Exhaust

Other Trucks: .006" Intake. .020" Exhaust.

►*EARLY POWERGLIDE ENGINE VALVE "SQUAWK" See "Valve System" in Chevrolet Special Data.*

►*NOTE "XCL" exhaust valves used in 235" Powerglide, H.D. Trk. & 261" Engine (stamped "XCL").*

Valve	Head Diam.	Stem Diam.	Length
Intake	1 7/8"	3410-.3417"	6.364-6.394"
Exhaust	1 1/2"	①	4.902-4.932"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°②	④	.001-.0027"
Exhaust	45°③	⑤	⑥

①– .3400-.3407" (Pass Cars), .339-.3397" (Trucks)

②–Valve seat (Seat Angle in Block 31°)

③–Valve Seat (Seat Angle in Block 46°)

④– .294" (Conv. 235"), .400" (Powerglide 235"), .405" (Corvette & 261" Jobmaster).

⑤– .312" (Conv. 235"), .400" (Powerglide 235"), .414" (Corvette & 261" Jobmaster).

⑥– .002-.0037" (Pass. Cars), .003-.0047" (Trucks).

Valve Seat Width–3/64-1/16" (Intake), 1/16-3/32" (Exhaust).

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Precision type. Pressed in head.

Valve Guide Installation–*See "Valve System" in Chevrolet Special Data.*

Valve Springs: Install springs with closed coil end down.

Free Length–2 5/32" (Conv. 235"), 2 9/32" (Powerglide 235" & Jobmaster 261").

Spring Specifications (235" Conventional Engine)

	Pressure	Length
Valve Closed	62-68 lbs.	1.821"
Valve Open	155-165 lbs.	1.505"

Spring Specifications (235" Powerglide & 261" Jobmaster Engine)

	Pressure	Length
Valve Closed	62-68 lbs.	1.908"
Valve Open	177-187 lbs.	1.518"

Valve Lifters (Conventional 235" Engine): Plain barrel type. Identified by plain barrel and spot of yellow paint below push rod seat. *NOTE*–Valve Lifters used on Corvette has shallow groove around barrel.

Valve Lifters Powerglide 235" Engine): Hydraulic type. 1954 lifter is different than previous lifters and is identified by two raised rings below oil holes in barrel.

Hydraulic Lifter Adjustment–Required only when installing cylinder head or when adjusting screw setting has been disturbed. *See "Tappet Clearance Adjustment" in Chevrolet Special Data.*

Hydraulic Lifter Overhaul & Testing–*See "Hydraulic Valve Lifters" in Chevrolet Special Data.*

►*REMOVING HYDRAULIC VALVE LIFTERS: When removing lifters and push rods use a rack to keep them in proper sequence. Install in their original location when reassembling.*

Rocker Arm Assembly: *See "Rocker Arms" in Chevrolet Special Data.*

►*235" POWERGLIDE ENGINE & 261" JOBMASTER ENGINE ROCKER ARM PRODUCTION CHANGE: See "Rocker Arms" in Chevrolet Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

235" Conventional Engine

Intake Valves–Open 1° ATDC Close 39° ALDC.

Exhaust Valves–Open 42° BLDC Close 9° ATDC.

235" Powerglide Engine

Intake Valves–Open 10° 30' BTDC Close 53° 30' ALDC

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Exhaust Valv s—Open 49° BLDC. Close 15° ATDC.
Valve Timing Check—(*CAUTION*—On 235" Powerglide engine with hydraulic valve lifters, it will be necessary to replace the hydraulic valve lifter and pushrod operating #1 exhaust valve, with a conventional lifter and pushrod). Remove all tappet clearance from #1 exhaust valve. Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer on right face of flywheel housing. Mount dial indicator on rocker arm shaft with stem of indicator contacting #1 exhaust valve adjusting screw and set dial indicator to **.044"** (235" Conventional Engine), **.058"** (235" Powerglide Engine). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset tappet to correct running clearance.

OILING SYSTEM

►ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.

Crankcase Capacity: 5½ qts. (dry), 5 qts. (refill).
N rmal Oil Pressure: 45 lbs. maximum. Full pressure system of all engines.
Pressure Regulator Valve—In oil pump body. Not adjustable.
Oil Pressure Gauge—AC No. 1507960. Not electric.
Oil Pump: Gear type. Located in crankcase, driven by distributor gear.
Oil Pump Overhaul—*See "Oil Pump" in Chevrolet Special Data.*
Oil Pump Installation—Assemble ground side of idler gear towards cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered screw. See that tapered screw seated firmly in tapered hole in pump housing before tightening locknut.
R cker Arm Oil Lead & Overflow Pipe: *See "Oiling Sys- in Chevrolet Special Data.*
Crankcase Ventilation: Air intake through valve rocker arm cover (air cleaner on some models), outlet through pipe on right side of engine.

COOLING

Water Capacity: 16 qts. (17 qts. with heater).
Pressure Valve: AC No. 850549. Radiator filler cap. 7 lb. type.

Thermostat: Harrison. In cylinder head water outlet.
Standard—No. 3123993 (stamped 151), 151°. Can be used for alcohol anti-freeze.
Optional—No. 3123994 (stamped 160) 160°, or No. 3123995 (stamped 180) 180°. Use for permanent anti-freeze.

T mperature Gauge: AC No. 1512818. Not electric.
See "Temperature Gauges" in Miscellaneous Section.

Wat r Pump: Double outlet, packless type with sealed ball-bearing shaft.
S "Water Pumps" in Ch vrol t Special Data.
B lt Adjustm nt—*S e G nerat r B lt Adjustm nt.*

CLUTCH

Own (Exc. P w rglid Cars). Diaphragm spring type.
S "Ch vrol t (Own)" in Clutch S ction.
Clutch Disc—Chevrolet No. 3835216 (moulded), No. 3835343 (woven), No. 3835454 (heavy duty).
Pedal Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch fork. *NOTE*—Use finger pressure only when checking pedal free travel.
Removal: Remove transmission (see Transmission Removal below). Remove throwout bearing. Remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove cover assembly from below. *CAUTION*—Do not allow pressure plate to hang from retracting springs, (support by hand). When installing clutch, align 'X' mark on cover with 'X' mark on flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.
See "Chevrolet 3-Speed" in Transmission Section.
Transmission Control: *See "Transmission Controls" in Transmission Section.*
Removal: Remove floor mat and floor cover over transmission. Disconnect speedometer cable, and shifter rods from levers on transmission. Drain lubricant. Disconnect hand brake pull back spring, and hand brake cable clevis from idler lever, remove idler lever. Remove universal joint dollar-to-support capscrews and slide ball back on propeller shaft housing. Place jack under propeller shaft, remove four capscrews securing front trunnion bearings to front yoke, split joint and lower front end of propeller shaft. Remove rear transmission support-to-frame cross member bolts. Remove two upper transmission-to-clutch housing capscrews. Slide transmission back and lift out through opening in floor.

POWERGLIDE TRANSMISSION

Powerglide Transmission (Used with 235" Powerglide Engine)—Torque converter and hydraulically operated planetary gear unit with manual controls.

►PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS—See "Chevrolet Powerglide" in Transmission Section.

►TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.
Lubrication—Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing an "AQ-ATF" marking on container.
Capacity—5 qts. (refill), 11 qts. (after overhaul).

►POWERGLIDE DRAINING CAUTION—There is no drain plug on converter. Drain transmission case only, add 5 qts. of fluid initially, recheck after idling engine.
Ch cking Fluid L v l—Engine must be idling with the parking brake set, transmission warm, and the control lever in "N" range when taking dipstick readings. Dipstick is located under hood on right side just opposite starter.

►OTHER DATA: See "Chevrolet Powerglide" in Transmission Section.

UNIVERSALS

Own. One used (in torque ball at rear of transmission).

TORQUE TUBE BUSHING INSTALLATION: See "Chevrolet Rear Axle" in Rear Axle Section.

►UNIVERSAL BALL JOINT ADJUSTMENT (POWERGLIDE MODELS): Improp r adjustments will cause leakage. See "Torque Tube & Ball" in Chevrolet Special Data.

REAR AXLE

Own. Semi-floating, hypoid gear type with Torque Tube drive.
See "Chevrolet Hypoid" in Rear Axle Section.

Axle Rati s

Car Model	Axl Rati	S rial Prefix
Without Powerglide	3.70-1	ML or MM
With Powerglide	3.55-1	MS or MT
Optional Without Powerglide	4.11-1	ME or MF

Axle Identification—Prefix of axle serial number (stamped on front face of carrier flange on right side) indicates ratios (see Ratio table above).
Backlash—.005-.007". Screw adjustment.

Removal: Raise rear of car and remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamp on frame. Disconnect brake line at axle housing and shock absorbers from rear spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly.

Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove 'C' washer on inner end, pull shaft out.

Axl Shaft Installati n & Endplay Adjustm nt: *See "Rear Axle Notes" in Chevrolet Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SHOCK ABSORBERS

Delco. Direct acting non-adjustable. Serviced by replacement.

Model	Front	Rear
All	5519443 ①	5519444 ①

①—Chevrolet Part No.

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs.

See "Chevrolet" in Front Suspension Section.

Kingpin Inclination—4° plus or minus ½° crosswise.

Caster—Pos. ½ ±½°. Adjustable.

Camber—Pos. ½° ± ½°. Adjustable.

Toe-In—0-1/8". Loosen clamp bolts at each end of left hand tie rod and turn rod, tighten clamp bolts.

►*CAUTION—Align tie rods before tightening clamp bolts (ball studs will bind if not aligned).*

Toe-Out On Turns—With inner wheel turned 20°, outer wheel should be 17°40'.

STEERING

Manual; Saginaw Worm & Roller. With push-pull adjustment. *See "Saginaw Worm & Roller" in Steering Section.*

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic power cylinder.

See "Saginaw (GM) Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic. Hand lever applies rear wheel service brakes.

See "Chevrolet Bendix Hydraulic" in Brake Section.

Drums—Diameter 11".

Wheel Cylinder Diameter—Front 1 1/8", Rear 1".

	Brake Lining Width	Thickness
Front Whl	2"	.202"-.222"
Rear Whl	1¾"	.202"-.222"

Length Per Shoe—9.3125" (Primary), 11.6875" (Secondary).

Braking Power—55.9% (front wheels), 44.1% (rear wheels).

Clearance—Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag after adjustment.

Std. Master Cylinder: On bracket at left side of frame below front floor boards. Master cylinder supports clutch and brake pedal levers.

Checking Fluid—Access hole in front floor board directly under steering wheel. Maintain level in master cylinder to lower edge of filler hole.

Removal—Disconnect hydraulic line and remove eccentric bolt from brake pedal extension and main cylinder push rod. Remove clutch link from clutch pedal extension. Remove plug from forward end of master cylinder and insert a stiff wire into shaft lock pin and remove lock pin. Remove clutch and brake pedal extension pivot shafts from master cylinder body. Remove master cylinder to frame mounting bolts and remove cylinder from below.

Brake Pedal Clearance: Toe board clearance is 7/16" obtained by turning eccentric bolt at forward end of master cylinder. *NOTE*—If proper clearance cannot be obtained by turning eccentric bolt, place shims under front or rear master cylinder mounting bolts as necessary.

Power Brakes: Bendix vacuum type power brake cylinder (replaces conventional Master Cylinder).

See "Bendix Power Unit" in Brake Section.

MISC. MECHANICAL

Windshield Wipers: Cable operated vacuum type.

See "Windshield Wipers" in Miscellaneous Section.

Window Regulators: (Front Door Windows)—Electric with reversible motor in each front door. Not used on rear doors.

See Miscellaneous Section for type and Model application.

Power Top Control: Hydro-Lectric with reversible pump motor.

See "Power Top Controls" in Miscellaneous Section.

Power Seat Adjuster: Reversible electric motor controls horizontal front seat movement.

See "Electric Seat Controls" in Miscellaneous Section.

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post.
Starting Serial Number—001001 up.
Serial Number Prefix—'E',designating Series 2934.

►*SERIAL NUMBER NOTE—Serial Number example (E54F 001025) includes following identification data in sequence.*

Series ①	Year	Assy Plant ②	Serial No.
E	54	F	001025

①—See Serial Number Prefix above.
②—Assembled only at the Flint Plant.

ENGINE NUMBER: Stamped on boss on right side of cylinder block to rear of distributor.
Starting Engine Number—0001001 (at each plant). Suffix letters and numerals indicate plant at which engine built ('F' for Flint, and 'T' for Tonawanda), Model Year, and Model Type.
Model Type Designation—'YG', Corvette 235" engine.

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. minimum with all cylinders equal within 5-10 lbs., at cranking speed.

VACUUM READING: At 500 RPM.—14.4" (with transmission in Drive Range). 16.7" (with transmission in Neutral). At 450 RPM. 14.5" (with transmission in Drive Range), 16.3" (with transmission in Neutral).
NOTE—Manifold vacuum reading at idle speed is lower than for 235" Conventional engine because of "high lift" cam used.

VALVE TAPPET CLEARANCE: .008" Intake. .020" Exhaust.

MANIFOLD HEAT CONTROL: Located in forward half of divided exhaust manifold.

►*MANIFOLD HEAT CONTROL NOTE*—Under normal operating conditions the heat control is not used and manifold is shielded by a plate installed between exhaust and intake manifolds to divert gases away from intake manifold. Manifold heat control valve spring has been reversed to hold valve in "off" position. If operation of manifold heat control valve is desired, it will be necessary to remove manifold shield and install heat control valve spring in correct position.

IGNITION

FIRING ORDER: 1-5-3-6-2-4. See Diagram.

SPARK PLUG GAP: .035".
Spark Plug—AC 44-5 (Use AC COM for continuous high speed driving).

COIL: Delco-Remy 1115394.
Ignition Current—3.0 amperes (idling),. 5.4 amperes (stopped).

DISTRIBUTOR: Delco-Remy 1112314.
Condenser—Delco-Remy 1869704. **Capacity** .18-.23 mfd.
Contact Point Set—Delco-Remy 1925852.
Breaker Gap—..019" (new points), .016" (used points).
Cam Angle—40.5-47.5° with .016" gap.

►*BREAKER GAP CAUTION—Manufacturers recommends final check with feeler gauge or dial indicator if dwell meters used to set points.*

Breaker Arm Spring Tension—19-23 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	2500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center 'O' position.
Vacuum Spark Control: Delco-Remy 1116076
Plunger Travel—11/64-15/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6
7.5	15.0	7.5-10

IGNITION TIMING

Setting—2° ATDC.
Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing, with Octane Selector set on '0'. Then set Octane Selector as follows:
Octane Selector Setting—Set for slight ping when accelerating with wide open throttle.

CARBURETOR

Carter No. YH 2066S (Early 1954), & YH 2066SA (Late 1954 & 1955). Horizontal type with manual choke control. *Three Carburetors Used per Engine.*

Idle Setting—½-1½ turns open. Turn screws out for richer mixture. *See Throttle Valve Synchronization below.*
Idle Speed—450 RPM with selector lever in "D" (Drive) position. *See Throttle Valve Synchronization below.*
Float Level—3/8" from bowl cover to top of float with bowl cover inverted and gasket removed.
Float Drop—With bowl cover in upright position, distance between float seam (at free end) and bowl cover should be 2". Adjust by bending stop tab on float arm.

Throttle Valve Synchronizing: (Preliminary)—With engine turned off and all three choke valves in wide open position, remove the throttle lever stop screw from each carburetor. Loosen the fillister head screws on carburetor shaft universal which secures couplings to throttle shaft at forward end of both center and rear carburetors. Snap accelerator pedal several times to allow couplings to find their normal position so there is no end pressure on throttle valves. Then tighten fillister head screws. Loosen the two Allen head screws at front end of rear carburetor (*NOTE*—Clearance provided for throttle valve adjustment by holes in flexible couplings being larger than Allen head screws). Manually close throttle valve in rear carburetor, hold it tightly closed and then tighten the two Allen head screws on rear carburetor flexible coupling. Loosen the two Allen head screws at front end of center carburetor and manually close throttle valve in FRONT carburetor. Hold valve tightly closed and tighten the two Allen head screws on flexible coupling on front of center carburetor.

Checking Throttle Valve Synchronization: Throttle valves must be checked separately and in the following sequence and manner.

Rear Carburetor—Check closing of rear throttle valve by twisting (in closing direction) the rear lever of rear carburetor. *There should not be any noticeable signs of rotating on front and of REAR carburetor throttle shaft.* If rotation is noticeable, loosen Allen screws on rear of **center** carburetor and hold throttle valve in rear carburetor closed and tighten Allen screws. If rotation is still noticeable, loosen Allen screws at front of **rear** carburetor and hold rear carburetor throttle valve closed and tighten Allen screws.

Front Carburetor—Check closing off of front carburetor throttle valve by twisting (in closing direction) front lever of **front** carburetor. *There should not be any noticeable signs of rotating near and of FRONT carburetor throttle shaft.* If rotation is noticeable, loosen Allen screws at rear of **front** carburetor and hold throttle valve in **front** carburetor closed and tighten Allen screws. If rotation is still noticeable, loosen Allen screws on front of **center** carburetor and hold throttle valve in **front** carburetor closed and tighten Allen screws.

Center Carburetor—Check center carburetor throttle valve as follows: Disconnect accelerator rod at **center** carburetor. Close throttle valve in rear carburetor manually at rear end of **rear** carburetor. Hold closed and press throttle lever on **center** carburetor and check for rotation of **center** throttle shaft at front end. *There should not be any noticeable signs of rotating on front end of CENTER carburetor throttle shaft.* If rotation noticeable, correct by the Allen screws between **center** and **rear** carburetors. Close throttle valve in **front** carburetor manually at front end of front carburetor and check as outlined above. Correct by the four Allen screws between **center** and **front** carburetors.

Idle Speed & Mixture Adjustment: Assemble throttle lever stop screw and spring on center carburetor only, and adjust so throttle valves are slightly open. Set Idle Adjustment (mixture) screws ¾ turns open. Start engine and run until warm. Pull hand brake lever on and move transmission selector lever to "P" (Park) position. Adjust throttle lever stop screw on center carburetor for 500 engine RPM. Turn idle mixture screw on rear carburetor **1/8 turn - no more**, in either direction to increase engine RPM or manifold vacuum. If there is no change, leave adjustment at ¾ turn. Repeat same with center and front carburetors. If RPM changed, correct speed adjustment on center carburetor. Repeat this adjustment more than once to make sure engine RPM or manifold vacuum remain at their highest point. Assemble throttle lever stop screws and springs in front and rear carburetors. Turn front and rear throttle lever stop screws until engine speeds up slightly, then back off screw at least one turn. **The center throttle lever stop screw is the only one which should control engine idle speed.**

Accelerating Pump—No seasonal adjustment required.

Fast Idle: With choke valve held tightly closed, there should be .020" (Gauge T109-29) clearance between throttle lever and bore of carburetor (side opposite idle port). Adjust by bending offset portion of choke connector link (use bending tool T109-213).

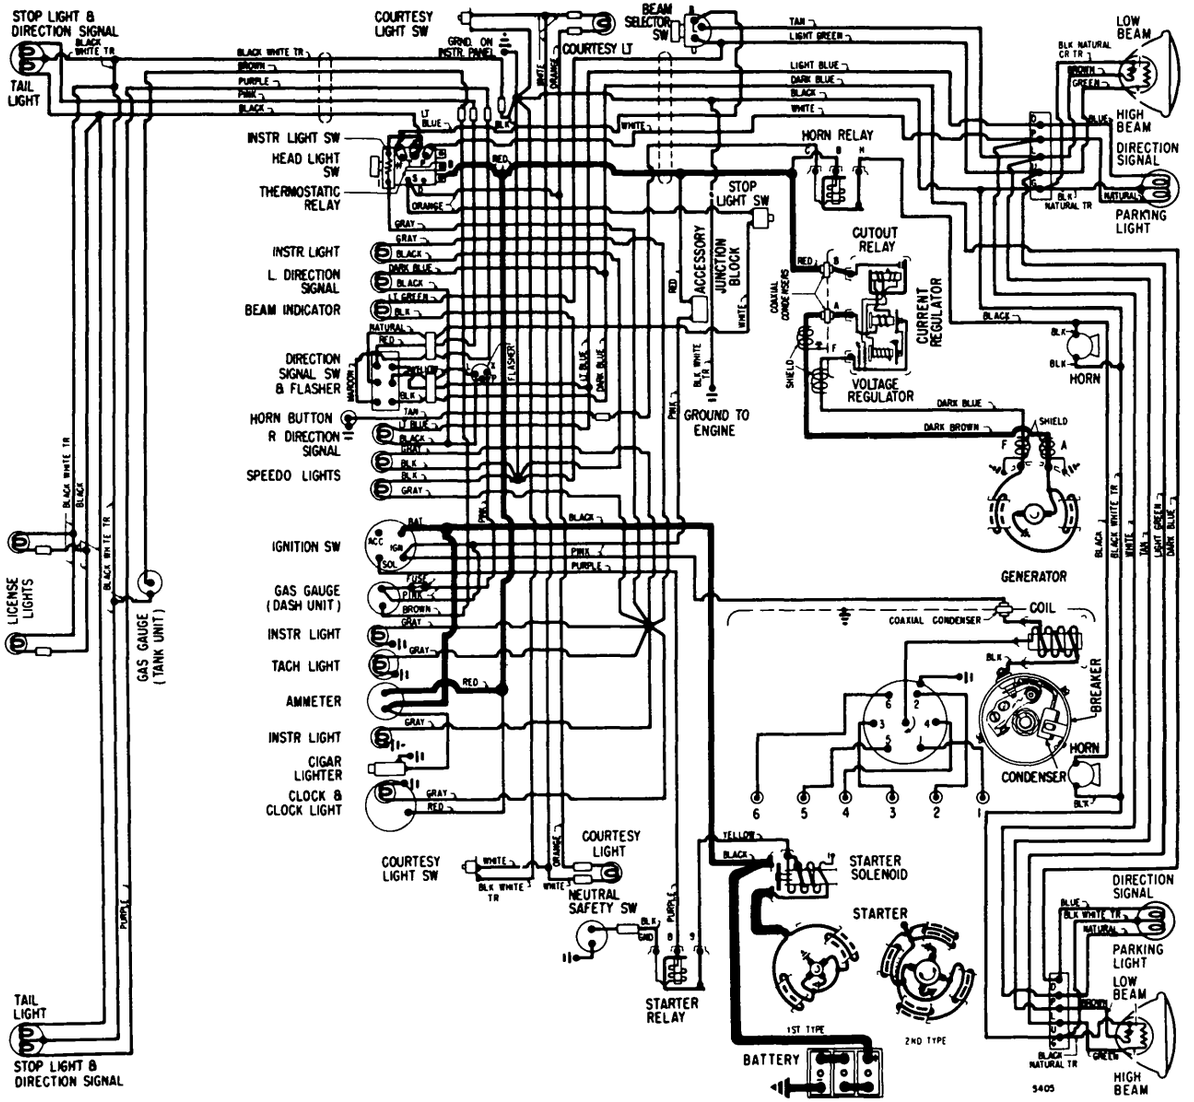
►*OTHER DATA: See "Carter YH Carburetor" in Carburetor Section*

Powerglide Throttle Linkage Adjustment: *See "Chevrolet Powerglide" in Transmission Section.*

Fuel Pump Pressure: 3½-5 lbs.

CARB. EQUIPMENT

Fuel Pump: AC (Fuel & Vacuum).
Replacement Pump—AC No. 4132.
Pressure—3½-5 lbs.
See "Fuel Pumps" in Carburetion Equipment Section.
Gas Gauge: AC Electric.
Dash Unit—AC No. 1517901.
Tank Unit—AC No. 1517911.
See "Fuel Gauges" in Carburetion Equipment Section.



BATTERY

Delco 15AA6. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate)
Battery Ground—Negative terminal

STARTER

Delco-Remy 1107109 (First Cars), 1108035 (Later Cars).

►*STARTER NOTE. First 1107109 (two-coil) starter was superseded by later 1108035 (four-coil) starter*

Armature No.—Delco-Remy 1917855 (All).
Drive—Overrunning clutch (solenoid pinion shift).
Brush Spring Tension—24-28 ozs.
Rotation—Counter-clockwise at commutator end.

Performance Data—1108035

Torque	RPM	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 ft. lbs.	Lock	3.0	600

Performance Data—1107109

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
12 ft. lbs.	Lock	3.25	550

Starting Switch: Delco-Remy Solenoid Switch 1118135 mounted on starter with separate relay, Delco-Remy 1116886 Controlled by Starter & Ignition Switch, Delco-Remy 1116478. Turn key full RIGHT against spring tension to start
See "Starter Controls" in Electrical Equipment Section.
Neutral Safety Switch: Delco-Remy 1998053.
Adjustment—*See "Chevrolet Powerglide" in Transmission Section.*

GENERATOR

Delco-Remy 1100018 (Early), 1100028 (Later).
Armature—Delco-Remy 1925348 (Gen No 1100018), 1929558 (Gen No 1100028)

Performance Data

Gen No	Ⓘ Amperes	Volts	RPM
1100018	45	8 0	3000
1100028	40	8 0	3000

Ⓘ—Not maximum output See Regulator
Brush Spring Tension—28 ozs.
Field Current—1 87-2 0 at 6 0 volts
Rotation—Counter-clockwise at commutator end
Belt Adjustment: 7/16-1/2" belt deflection at point midway between pulleys with 15 lbs pressure

REGULATOR

Delco-Remy 1118827 (Use with Gen. No. 1100018), No. 1118843 (Use with Gen. No. 1100028).

►*REGULATOR NOTE—Checking procedure is different than for previous regulators. See "Delco-Remy 1118825 Series Regulators" in Electrical Equipment Section. Following Specifications are for "Normal" settings.*

Cutout Relay

Cuts In—5 9-6 7 volts (hot)
Contact Gap—.020".
Air Gap—020" (with contacts just closed)

Voltage Regulator

Setting—6 9-7 4 volts (hot)
Air Gap—075" with armature pressed down to point where contacts just touching
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting (1118827)—42-47 amperes (hot)
Setting (1118843)—37-42 amperes (hot)
Air Gap—075" with armature pressed down to point where contacts just touching
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section*
Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*
Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification) Depress switch shaft retainer on top side of switch assembly (rear of instrument panel) Remove switch retaining nut and switch assembly
Stop Light Switch Location: Mechanical type mounted on underside of toeboard and operated by brake pedal.
FUSES: Located as indicated below
Direction Signal—14 amperes Located at end of lead at gasoline gauge terminal
Radio—14 amperes Located at end of lead at accessory junction block
Heater—14 amperes Located at end of lead at gasoline gauge terminal
Parking Brake Alarm—14 amperes Located at end of lead at accessory junction block
CIRCUIT BREAKER: Located in main lighting switch. Protects all lighting circuits not protected by fuses.
HORNS: Delco-Remy 1999681 (Low Note) 1999682 (High Note)
Horn Relay. Delco-Remy 1116775
Contacts Close—2.75-4 0 volts (set to 3 5 volts)
Contact Gap— 027". **Air Gap**— 014 " (closed)

ENGINE

ENGINE SPECIFICATIONS: Own 6 cylinder valve-in-head.
Bore—3 9/16". **Stroke**—3 15/16".
Displacement—235 5 cu ins **Rated H.P.** 30.4
Developed Horsepower—150 at 4200 RPM
Compression Ratio—8 0-1
Compression & Vacuum Reading—*See Tune-Up.*
TIGHTENING TORQUES: *See Chevrolet Special Data.*
OTHER ENGINE DATA: *See 1954-55 Chevrolet 6 Cyl Pass Car Pages and note the following:*
CAMSHAFT: *NOTE - The Early 1954 Camshafts are different than later 1954 and 1955 camshafts Later type camshafts are identified by 3 large raised dots located between No 5 and No 6 inlet cams*
Camshaft Setting—Timing gears are punch marked, and punch marks on both gears must be lined up and directly opposite each other

VALVES:	Head Diam.	Stem Diam	Length
Intake	1 7/8"	.3410- 3417"	6 364-6 394"
Exhaust	1 1/2"	3400- 3407"	4 902-4.932"
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	30°	405"	001- 003"
Exhaust	45°	414"	002- 004"

Valve Springs: Two springs used per valve. Install springs with closed coil end down

Outer Spring Specifications ①		
	Spring Pressure	Length
Valve Closed	55.0 lbs.	1.880"
Valve Open	150.0 lbs.	1.490"
Inner Spring Specifications ①		
	Spring Pressure	Length
Valve Closed	25 0 lbs.	1.810"
Valve Open	57.0 lbs.	1.420"

①—Intake and exhaust valve springs
Valve Lifters: Barrel type identified by shallow groove around lifter Not hydraulic

VALVE TIMING

►*VALVE TIMING CAUTION Timing is different with early and late type camshaft See "Camshaft Setting" under CAMSHAFT above.*

First Type Camshaft

Intake—Opens 19°30' BTDC Close 44°30' ALDC.
Exhaust—Opens 59° BLDC Close 5° ATDC

Later Type Camshaft

Intake—Opens 11°30' BTDC. Close 52°30' ALDC
Exhaust—Opens 51° BLDC Close 13° ATDC.
Valve Timing Check—Remove all tappet clearance from #1 exhaust valve Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer on right face of flywheel housing Mount dial indicator on rocker arm shaft with stem of indicator contacting #1 exhaust valve adjusting screw and set dial indicator to 090". Turn crankshaft until indicator reading is ZERO plus or minus 004" Reset tappet clearance to correct running clearance

OILING SYSTEM

►*ENGINE OILING SYSTEM See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*
Crankcase Capacity: 5½ qts (dry), 5 qts (refill)
Normal Oil Pressure: 45 lbs maximum
Pressure Regulator Valve—In oil pump body Not adjustable
Oil Pressure Indicator—AC No 1508063. Not electric
Oil Pump: Gear type Located in crankcase, driven by distributor gear
Oil Pump Overhaul—*See "Oil Pump" in Chevrolet Special Data.*
Rocker Arm Lead & Overflow Pipe: *See "Oiling System" in Chevrolet Special Data.*
Crankcase Ventilation: Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

COOLING

Water Capacity: 17 8 qts (without heater), 18 3 qts (with heater)
Pressure Valve: AC No. 850778 (Chrome) Radiator filler cap 4 lb type
Thermostat: Harrison. Cylinder head water outlet
Standard—No. 3123993 (stamped 151), 151°.
Temperature Gauge: AC No 1512756. Not electric
See "Temperature Gauges" in Miscellaneous Section.
Water Pump: Double outlet, packless type with sealed ball-bearing shaft.
See "Water Pumps" in Chevrolet Special Data.
Belt Adjustment—See Generator Belt Adjustment

POWERGLIDE TRANSMISSION

Torque converter and hydraulically operated planetary gear unit with manual controls Selector lever is mounted directly on transmission
For all data see 1954 Chevrolet Six Car Pages

UNIVERSALS

Own. Two used, with open propeller shaft

REAR AXLE

Own. Semi-floating hypoid gear type with Hotchkiss Drive
See "Chevrolet Hypoid" in Rear Axle Section.
Ratio—3.55-1. **Serial Prefix**—NW.
Axle Identification—Prefix of axle serial number (stamped on front face of carrier flange on right side) indicates ratio See Serial Prefix (above)
Backlash—.005- 007" Screw adjustment
Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft Shaft retained by 'C' washers on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove brake drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove 'C' washer on inner end, pull shaft out
Axle Shaft Installation & Endplay Adjustment *See "Rear Axle Notes" in Chevrolet Special Data.*

SHOCK ABSORBERS

Delco, Direct acting non-adjustable Serviced by replacement.
Front—Delco No. 538F. **Rear**—Delco No 561P

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil spring
See "Chevrolet" in Front Suspension Section.
Kingpin Inclination—3½-4½° plus or minus ½° crosswise
Caster—Pos ½°±½°. Adjustable
Camber—Pos ½°±½° Adjustable
Toe-In—0-1/8".
►*CAUTION—Align tie rods before tightening clamp bolts (ball studs will bind if not aligned)*

STEERING

Manual Steering: Saginaw Worm & Roller. With push-pull adjustment.
See "Saginaw Worm & Roller" in Steering Section.

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic. Hand lever applies rear wheel service brakes.
See "Chevrolet-Bendix Hydraulic" in Brake Section.
Drums—Diameter 11".
Wheel Cylinder Diameter—Front 1 1/8". Rear 1".

	Brake Lining Width	Thickness
Front Wheels	2'	.202-222"
Rear Wheels	1¾	202-222"

Length Per Shoe—9.3125" (Primary), 11.6875" (Secondary)
Braking Power—55 9% (front wheels), 44 1% (rear wheels)
Clearance—Single adjusting screw located at bottom of backing plate Back off adjusting screw 7 notches from slight drag position Brakes must be free of any drag after adjustment

MISC. MECHANICAL

Windshield Wipers: Vacuum, cable operated
See "Windshield Wipers" in Miscellaneous Section

MODEL IDENTIFICATION

M d l D signati n

S ri s	Serial Pr fix	Wh lbas	Typ
3100	H	116'	Half Ton
3600	J	125¼"	¾ Ton
3700	K	125¼"	①¾ Ton
3800	L	137"	One Ton

6500S	SX	179"	④1½ Ton

①—Forward Control. ②—School Bus Chassis. ③—C.O.E. Special. ④—Special. ⑤—C O E

SERIAL NUMBER: Stamped on plate on cab left hinge pillar post (Flat Face Cowl models have number on left hand cowl inner panel).

Starting Serial Numb r: 001001 (each plant—all models).

►*SERIAL NUMBER NOTE: Serial number (example V54K 001083) includ s following identification data in sequ nc .*

S ri s①	Y ar②	Assy. Plant③	Serial No.
V	54	K	001083

①—Serial Prefix (see Model Designation above).
②—Year (1954) 54, (Early 1955) 55.
③—Assembly Plant Designation (see below).

Ass mbly Plant Designation

A—Atlanta	**K**—Kansas City	**S**—St. Louis
B—Baltimore	**L**—Los Angeles	**T**—Tarrytown
F—Flint	**N**—Norwood	**O**—Oakland
J—Janesville		

ENGINE NUMBER: Stamped on right side of engine block to rear of distributor.

Starting Engin Numb r: 0001001 (at each plant). Suffix letters and numerals indicate plant at which engine built ("F" for Flint, and "T" for Tonawanda), Model Year, and Model Type. See following for Model Type Designation:

S ri s	Engine	Type Designation
3100-3600-3800	Thriftmaster 235"	①X
3100-3600-3800	Thriftmaster 235"②	①U
3100-3600-3800	Thriftmaster 235"③	①M
3700-3900	Loadmaster 235"④	⑤T
3700-3900	Loadmaster 235"③④	⑤L
4000	Thriftmaster 235"⑥	S
5000	Loadmaster 235"	R
5000	Jobmaster 261"	Q
6000	Loadmaster 235"	P
6000	Jobmaster 261"	N

①—"A" stamped following suffix when this engine used in 3600 Series, and "B" when used in 3800 Series.
②—With Heavy Duty Disc Clutch.
③—With Hydra-Matic Transmission.
④—With Updraft Carburetor.
⑤—"A" stamped following suffix when this engine in 3900 Series.
⑥—"A" stamped following suffix when "P" engine in 4000 Series.

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. minimum with all cylinders equal within 5-10 lbs., at cranking speed.

VACUUM READING: *CAUTION—Vacuum reading on 235" Thriftmaster & Loadmaster engines is different than on 261" Jobmaster engine.*

235" Thriftmaster & Jobmaster—17-21" at idling speed. **261" Jobmaster—At 500 RPM.** 16.7" (in Neutral), **At 450 RPM.** 16.3" (in Neutral). *NOTE—Manifold vacuum reading at idle speed is lower than other models because of the "high lift" cam used.*

VALVE TAPPET CLEARANCE: (3000 Series Trucks)—Intake .006", Exhaust .016" **(All Others)**—Intake .006", Exhaust 020"

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position Distorted springs should be replaced

IGNITION

FIRING ORDER: 1-5-3-6-2-4 See Diagram
SPARK PLUG GAP: .035".

Spark Plug—AC No. 44-5 (Exc. 2-Ton) AC No. 43-5 (2-Ton). 14mm types.

►*CAUTION: Tighten plugs to 20-25 ft. lbs. torque or finger tight plus one-half turn.*

COIL: Delco-Remy 1115380.
Ignition Current—2.5 amperes idling 4.5 stopped.

DISTRIBUTOR: Delco-Remy 1112388 (Exc. 261" Engine), Delco-Remy 1112392 (261" Engine).
Condenser—Delco-Remy 1869704 (First type), Delco-Remy 1928111 (Second type with spade terminal).
Capacity—.18-.23 microfarad.
Contact Point Set—Delco-Remy 1924571
Breaker Gap— 016- 021" (New Points), 0125-.0175" (Used points).
Cam Angle—38-45° with .016" gap

►*BREAKER GAP CAUTION—Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—1112388

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		375	0-4		750
4-6		700	8-12		1400
9-11		1350	18-22		2700
12-14		1750	24-28		3500

Aut matic Advanc —1112392

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		350	0-4		700
7-9		750	14-18		1500
11-13		1200	22-26		2400
16-18		1800	32-36		3600

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center 'O' position.

VacuumSpark Control: Delco-Remy 1116043. Used with all truck distributors.
Plunger Travel—17/64".

Vacuum Advance

Distr Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-8.5"
10°	20°	18 5"

IGNITION TIMING

Setting (235" Engines)—2° ATDC. **261" Engines**—5° BTDC.
Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on 'O'. Then adjust Octane Selector as follows
Octane Selector Setting—Set for slight ping when accelerating with wide open throttle.

CARBURETOR
ROCHESTER

Downdraft types with automatic or manual choke

Models	Rochester N .
235" Engine ①	②7004468
235" Engine ③	④7005921
261" Engine ⑤	②7005140

①—Except Forward Control, C.O.E. & Automatic Transmission models.

②—With Manual Choke.

③—With Automatic Transmission (Except Forward Control models)

④—With Automatic Choke.

⑤—Except C.O.E models

Idle Setting (Exc. 7005140)—1 to 2½ turns open, (turn screw out for richer mixture).
Idle Setting (7005140)—1 to 1½ turns open, (turn screw out for richer mixture)
Idle Speed—400-450 RPM (Exc Automatic Trans models), 425 RPM. with Selector Lever in "N" position (Automatic Transmission models).
Float Level (All Models)—1 5/16" from bottom of each float to cover gasket (do not remove gasket) with cover inverted so that needle closed. Use No 3696192 gauge to set float level and align floats (twisted floats may hang up or rub on bowl). Check float drop or travel by turning cover right side up so floats drop down. Distance from gasket on cover to bottom of each float should be 1¾". Adjust by bending tang at rear of float assembly.

►*CAUTION: Both floats must be set alike and must n t be twisted out of alignment.*

Accelerating Pump—No seasonal adjustment.

Fast Idl (7005921): To check setting, hold throttle in wide open position, check choke valve opening or clearance between lower edge of valve and air horn

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

wall. This clearance should be .073" (Gauge BT-64 or Chevrolet Gauge J-5120). If clearance not correct, adjust by bending connector rod using tool BT-18 (Chevrolet Tool J-4552).

Throttle Kicker (Not used on 7005921)—Operated by cam on choke lever. Opens throttle when choke closed. No adjustment.

►*OTHER DATA—See "Rochester 'B' & 'BC' Carburetors" in Carburetor Section.*

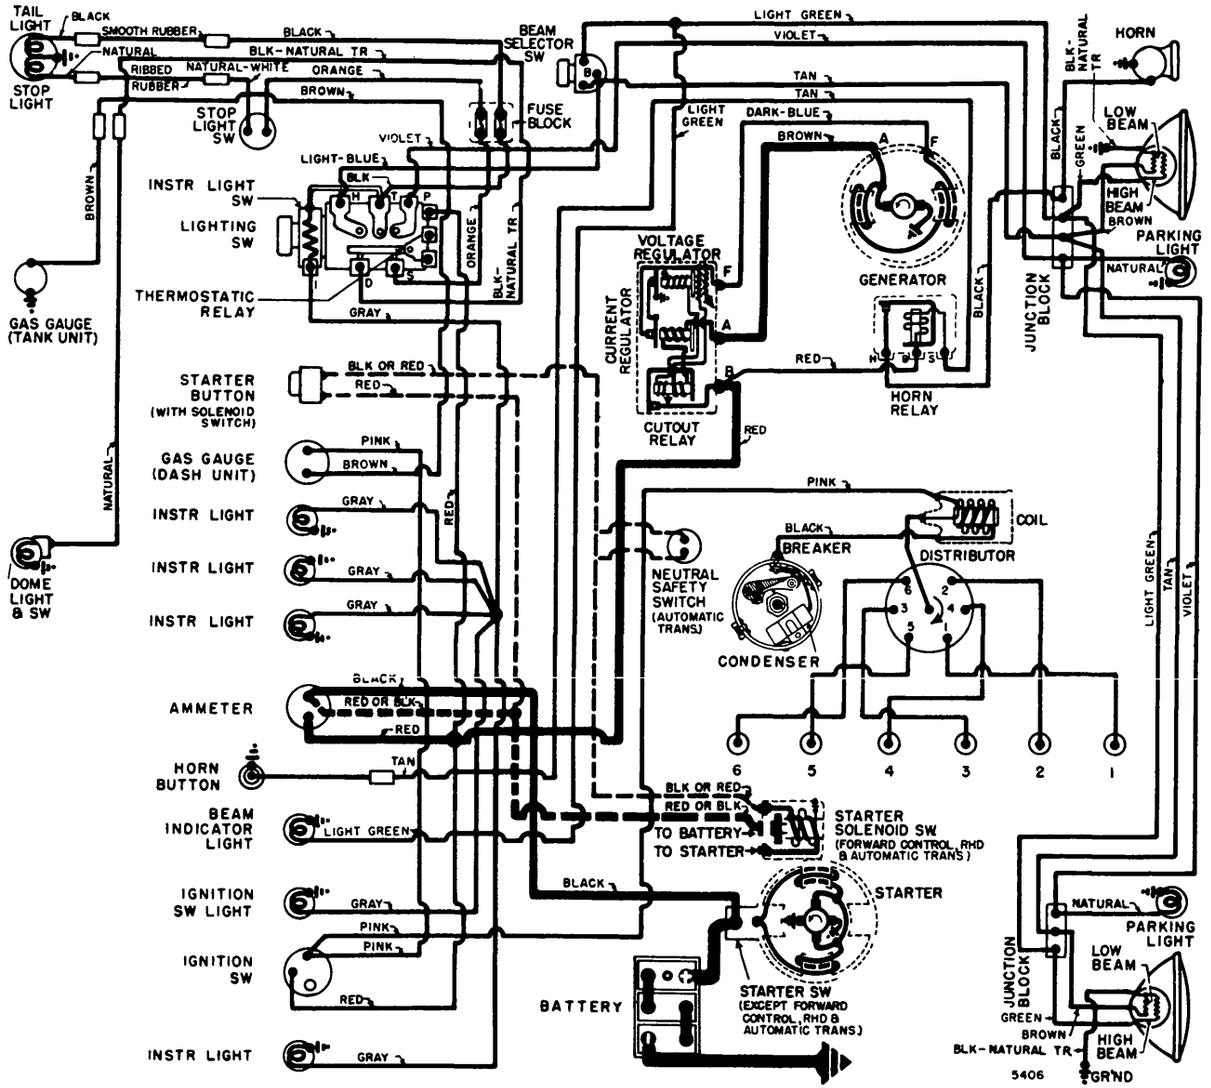
Fuel Pump Pressure: 4 lbs. maximum

Throttle Linkage Adjustment (Hydra-Matic): *See "Hydra-Matic Drive" in Transmission Section.*

CARTER

Carter (BB) 2075S (C.O.E), 871SB (Forward Control). Single barrel updraft type with manual choke control.

Idle Setting—½-1½ turns open (turn screw out for richer mixture).



Idle Speed—450-500 RPM.

Float Level—Top of float (not seam) 0" to 1/32" below top of bowl with needle valve seated. Use Gauge J-818-13A on top edge of bowl (gasket removed), press float lever lip firmly against needle.

Accelerating Pump—Inner holes (in plunger shaft and throttle lever) Summer, Outer hole Winter.

►*OTHER DATA—See "Carter (BB) Carburetors" in Carburetor Section.*

Fuel Pump Pressure: 4 lbs. maximum.

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type.

Replacement Pump—AC No. 9798 (Fuel only), AC No. 9797 (Fuel & Vacuum).

Pressure—4 lbs. maximum.

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: AC Electric.

Dash Unit—AC No. 1517880 (Exc. Flat Face Cowl). No. 1517168 (Flat Face Cowl).

Tank Unit—AC No. 1517951 (Exc. Forward Control, and Flat Face Cowl). No. 1517952 (Forward Control), No. 1517950 (Flat Face Cowl).

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco-15AA6 (Std. Exc. School Bus). 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).

Delco-19Q6 (School Bus). 6 volt, 19 plate.

Battery Ground—Negative terminal.

Engine Ground— Engine to cowl.

STARTER

Model	Delco-Remy No.
All (Exc. F.C., Hydra-Matic & R.H.D),	1107108
Forward Control & R.H.D	1107109
Hydra-Matic Trucks	1107135

Armature—Delco-Remy 1917855 (All Starters).

Drive—(Exc. Forward Control & Hydra-Matic Mdls)—Overrunning clutch and pedal operated manual pinion shift.

Drive—(Forward Control & Hydra-Matic Mdls)—Overrunning clutch with solenoid pinion shift.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ozs

Performance Data			
Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
12 ft. lbs	Lock	3.25	550

Starting Switch: 1107108 Starter—Delco-Remy 820052. On starter, operated by starting pedal.

1107109 & 1107135 Starter—Delco-Remy Solenoid 1118135 (no relay) mounted on starter and controlled by Pushbutton Switch 1996055 on instrument panel.

Hydra-Matic Neutral Safety Switch: Delco-Remy 1997845. Connected to starter control circuit prevents starter operating unless selector lever in "N" position.

Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy. Different generators used as follows:

Model	Generator No.	Armature No.
½, ¾, 1-Ton (Early)	1100018	1925348
½, ¾, 1-Ton (Late)	1100028	①1929558
2-Ton	1102793	1924893
Optl	1105008	1925556
Optl	1105009	1925630
Optl	1106757	1910073

①—Alternate wound (3½ turn) armature.

Maximum Charging Rate—Controlled by regulator and dependent on battery condition.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Performance Data—Cold

Generator	Amperes ①	Volts	RPM
1100018	45	8.0	3000
1100028	40	8.0	2850
1102793	45	8.0	2450
1105008	50	7.0	2100
1105009	40	7.0	1700
1106757	50	7.5	1410

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—(Exc. 1106757)—28 ozs. (1106757) —20 ozs.

Field Current—(1100018, 1100028, 1102793) 1.87-2.0 amps.; (1105008, 1105009) 1.77-1.93 amps.; (1106757) 1.70-1.95 amps. All at 6.0 volts.

Belt Adjustment (½, ¾, 1-Ton Models)—7.16-½" deflection with thumb pressure midway between generator and fan pulleys. Recheck new belt after 1000 miles service, and readjust if deflection (as above) more than ½" with 15 lbs. pressure.

1½ & 2-Ton Models—Adjust to ¾" deflection midway between generator and fan pulleys.

REGULATOR

Delco-Remy Regulator No.	Generator No.
1118827	1100018
1118843	1100028
1118827	1102793
1118835	1105008
1118831	1105009
1118833	1106757

►*REGULATOR NOTE—Checking procedure is different than for previous models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section. All Specifications are "Normal" settings.*

Regulator "Normal" Settings

Regulator Number	Cut out Relay Closing Volts	Voltage Regulator Volts	Current Regulator Amperes
1118827	6.4	7.3	47
1118843	6.4	7.3	42
1118835	6.4	7.3	52
1118831	6.4	7.3	42
1118833	6.4	7.3	55

Cut out Relay Air Gap—.020". (with contacts just closed).

Cut out Relay Contact Gap—.020".

Voltage & Current Regulator Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—See *Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. See *Electrical Equip. Section.*

Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel). Remove switch retaining nut and switch assembly.

Stop Light Switch Location: Mechanical type mounted on underside of toeboard and operated by brake pedal.

FUSES: Fuse block (with snap on cover) located on engine side of dash (exc. Forward Control), under instrument panel (Forward Control). *NOTE*—Spare fuse located in fuse block cover.

Stop Light—20 amps. (in fuse box).

Tail Light—20 amps. (in fuse box).

CIRCUIT BREAKER: 42 amps. Located in Lighting Switch (part of switch assembly). Protects lighting circuits together with fuses listed above.

HORNS: Delco-Remy 1999639 (Low Note), 1999640 (High Note).

Horn Relay: Delco-Remy 1116774.

Contacts Close—2.75-4.0 volts (set to 3.5 volts).

Contact Gap—.027". **Air Gap**—.014" (closed).

ENGINE

►*THREE ENGINES USED ON TRUCKS: 235" Thriftmaster, 235" Loadmaster, & 261" Jobmaster. See Truck Model Identification for engine application.*

►*1954 THRIFT MASTER & LOADMASTER ENGINE CAMSHAFT PRODUCTION CHANGE: See "Camshaft" in Engine Section of 1954 Passenger Car pages.*

►*1954 261" JOBMASTER ENGINE ROCKER ARM PRODUCTION CHANGE: See "Rocker Arms" in Chevrolet Special Data.*

ENGINE SPECIFICATIONS: Own 6 cylinder valve-in-head.

Engine	Bore	Stroke	Displacement
235" Thriftmaster	3 9/16"	3 15/16"	235.5"
235" Powermaster	3 9/16"	3 15/16"	235.5"
261" Jobmaster	3 3/4"	3 15/16"	261.0"

Engine	Compr. Ratio	Developed H.P.
235" Thriftmaster	7.5-1	① 112 at 3700
235" Powermaster	7.5-1	① 112 at 3700
261" Jobmaster	7.17-1	② 135 at 4000

①—107 at 3600 RPM., on Fwd. Control & C.O.E. models.

②—125 at 4000 RPM., on C.O.E. models.

Compression & Vacuum Reading—See *Tune-Up.*

ENGINE REMOVAL: See *Chevrolet Special Data.*

ENGINE MOUNTINGS: See *Chevrolet Special Data.*

CYLINDER HEAD: See *Chevrolet Special Data.*

TIGHTENING TORQUES: See *Chevrolet Special Data.*

OTHER ENGINE DATA: See *1954 Chevrolet Passenger Car pages for all engine data and note the following:*

►*LOADMASTER 235" ENGINE PISTON RING NOTE*—Upper compression ring is chrome plated, and oil control ring is new design with spiral piano wire expander.

VALVES: *NOTE*—Valve Rotators used on 235" Loadmaster, 261" Jobmaster engines, and on all Forward Control models. See *"Valve System" in Chevrolet Special Data.*

VALVE TIMING: Camshaft Setting—Timing gears are punchmarked. Marks on both gears must be lined up and adjacent to each other.

Valve Timing

Thriftmaster & Loadmaster

Intake Valves—Open 1° ATDC. Close 39° ALDC.

Exhaust Valves—Open 42° BLDC. Close 9° ATDC.

Jobmaster

Intake Valves—Open 11°30' BTDC. Close 52°30' ALDC.

Exhaust Valves—Opens 51° BLDC. Close 13° ATDC.

Valve Timing Check—Remove all tappet clearance from #1 exhaust valve. Turn engine over until this valve opens and just starts to close and until triangular mark on flywheel lines up with pointer in flywheel housing opening. Mount dial indicator on rocker arm shaft support with stem contacting #1 exhaust valve adjusting screw, set dial indicator to .044" (Thriftmaster & Loadmaster); .063" (Jobmaster). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset #1 exhaust valve to correct running clearance.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul—*See "Oil Pump" in Chevrolet Special Data.*

Oil Pump Installation—Assemble ground side of idler gear towards cover (use Chevrolet cover gasket only - controls pump clearance). Oil pump assembly mounted in crankcase by tapered screw. See that tapered screw seated firmly in tapered hole in pump housing before tightening locknut.

Crankcase Capacity—5 qts. (refill), 5½ qts. (dry).

Normal Oil Pressure—45 lbs. maximum.

Pressure Regulator—In pump body. Not adjustable.

Oil Pressure Indicator—AC No. 1508014 (Exc. Flat Face Cowl Models). AC No. 1507953 (Flat Face Cowl Models). Not electric.

Crankcase Ventilation (Except Forward Control Models): Regular velocity type with air intake pipe through valve rocker cover, (air cleaner on some models), outlet pipe on right side of engine.

Servicing—On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

Positive Crankcase Ventilation (Std. on all Fwd. Control Models, Optional on others): Vacuum operated ventilator consisting of vacuum pipe from oil filler pipe to a ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**

Servicing—Every 5000 miles (or oftener if required), clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly. Test vacuum as follows:

Vacuum Valve—With valve disassembled, check spring tension (must be 7.5 ozs., with spring compressed to .418-.432"). If defective, replace with new valve assembly.

►*CAUTION*—When assembling valve, make certain end of spring engages groove under valve head.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

COOLING

Water Capacity: (½, ¾-Ton, & Fwd. Control) 16 qts. **(1, 1½-Ton)** 17 qts. **(2-Ton & C.O.E.)** 18 qts.

Pressure Valve: AC No. 850501. Opens at 4 lbs.

Thermostat: Harrison. In water outlet of cylinder head.

Standard—No. 3123993 (stamped 151) 151° type. Can be used for alcohol anti-freeze.

Optional—No. 3123994 (stamped 160) 160° type or No. 3123995 (stamped 180) 180° type. Use for permanent anti-freeze.

Temperature Gauge: AC No. 1512692 (Exc. Fwd. Control, C.O.E. & Flat Face Cowl). AC No. 1512750 (Fwd. Control, & C.O.E.L. AC No. 1512701 (Flat Face Cowl). Not electric.

See "Temperature Gauges" in Miscellaneous Section.

Water Pump: Double outlet, packless type with sealed ball-bearing shaft.

See "Water Pumps" in Chevrolet Special Data.

Belt Adjustment: See Generator Belt Adjustment.

CLUTCH

Own. Diaphragm spring, single plate, dry disc type.

See "Chevrolet (Own)" in Clutch Section.

Clutch Disc No. 3836097 (10" molded—Exc. Hvy. Duty, and Forward Control Models). Identified by No. 3836097 stamped on metal part of disc. No. 3836021 (11" woven —Fwd. Control and Hvy. Duty). Identified by pink paint on hub.

Pedal Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking clutch free travel.

Removal: Remove transmission (see Transmission Removal) Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

TRANSMISSION

3-SPEED (LIGHT DUTY)

Own. Three speed, all helical gear type. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).

See "Chevrolet 3-Speed (Light Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever. *See "Transmission Controls" in Transmission Section.*

Removal (Half-Ton): Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Remove battery. Remove four capscrews holding universal joint collar on rear bearing retainer, remove bolts holding transmission support on frame cross-member. Support propeller shaft with jack, slide universal joint ball and collar back on shaft, split front universal by removing capscrews retaining front trunnion bearings on front yoke. Raise propeller shaft as far as possible with jack to provide clearance. Remove two top transmission mounting screws, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove two lower transmission mounting screws, slide transmission straight back on guide pin until main drive shaft is free from clutch driven member, lift transmission up and remove through floor opening.

Removal (¾-Ton): Remove accelerator pedal, floor mat and transmission cover from floor. Disconnect speedometer cable from driven gear on transmission housing. Disconnect shift control rods from shifter levers at transmission. Disconnect front universal joint. Remove propeller shaft intermediate bearing support and lower propeller shaft to floor. Remove the two top transmission to clutch housing capscrews and insert two J-1116 guide pins. Remove flywheel underpan and remove two lower transmission to clutch housing capscrews. Slide transmission straight back on guide pins until clutch gear shaft is free of splines in clutch disc. Remove transmission through opening in floor.

3-SPEED (HEAVY DUTY)

Own. Three speed, constant mesh (second & high), sliding gear (low & reverse).

See "Chevrolet (3-Speed Heavy Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever.

See "Transmission Controls" in Transmission Section.

Removal: Same as for "3-Speed (Light Duty)" above.

4-SPEED

Own. Four-speed, constant mesh, synchro-mesh, helical gear (2nd, 3rd, & 4th), sliding spur gear (low & reverse). Floor mounted gearshift.

See "Chevrolet 4-Speed" in Transmission Section.

Transmission Control: (All Models exc. Forward Control) —Floor mounted gearshift lever.

Removal (½ & ¾-Ton): See "3-Speed (Light Duty)" above.

Removal (Other Trucks): Remove screws fastening steering jacket grommet and slide grommet up out of way. Remove accelerator pedal and floor mat. Remove sheet metal screws attaching transmission cover to body floor and remove cover. On Forward Control models remove both front and rear floor pans. Remove speedometer cable from transmission rear bearing retainer. On 1-Ton, remove cotter key and pin attaching parking brake pull rod to parking lever. On 1½ & 2-Ton, disconnect parking brake lever return spring from parking brake operating lever and remove cotter key and pin attaching inner and outer levers to parking brake operating lever. Remove parking brake lever lock, flat washer and spring and remove parking brake lever. Drain lubricant from transmission. On 1-Ton, break universal joint at transmission joint flange and tape trunnions and bearings together. On 1½ & 2-Ton, disconnect intermediate universal joint by removing two trunnion bearing "U" clamps, split joint and lower front end of rear propeller shaft to floor. Remove the four universal joint flange nuts. Remove nuts attaching propeller shaft bearing support bracket to frame cross member and remove front propeller shaft and bearing assembly. On all models, remove the two capscrews attaching transmission to clutch housing and insert two Guide Pins J-1126 in these holes. Remove flywheel underpan and remove two lower transmission to clutch housing capscrews. Slide transmission straight back on guide pins until transmission free of splines in clutch disc. Remove transmission.

HYDRA-MATIC DRIVE

"Dual-Range" four speed automatic transmission and fluid coupling.

►*HYDRA-MATIC OIL LEAK AT UNIVERSAL JOINT (¾ & 1-TON TRUCKS): S "Hydra-Matic Drive" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level in transmission every day. Drain & refill every 25,000 miles. Use only "Automatic Transmission Fluid" Type A.

Checking Fluid Level—With selector lever in "N" position, parking brake set, and transmission at normal operating temperature, remove access hole cover plate in floor pan, and **check fluid l v l with ngin at idling speed.** Add sufficient fluid to bring level in transmission up to "F" mark on dipstick (with engine at idling speed). *CAUTION—Do not ov rfill transmission.*

Capacity—8½ qts. (refill), 9 qts. (after overhaul). *NOTE—Add 1 quart extra on trucks quipped with oil cooler.*

►*OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission S ction.*

UNIVERSALS

Half-Ton: Own. Bushing type.

►*TORQUE TUBE BUSHING INSTALLATION (Half-Ton Truck): See "Chevrolet Pass. Cars & Half-Ton Truck Rear Axle" in Rear Axle Section.*

¾, 1, 1½, 2-Ton Trucks: Spicer needle bearing types.

See "Spicer" in Universals Section.

REAR AXLE

SEMI-FLOATING (HALF-T N).

Own. Semi-floating, hypoid gear with Torque Tube drive.

NOTE—Axle is same design as passenger car.

See "Chevrolet Hypoid Semi-Floating" in R ar Axl Section.

Ratio—3.90-1 (37:9) (Synchro-mesh & Hydra-Matic).

►*IDENTIFICATION NOTE*—Axle is identified by Serial No. Prefix stamped on front face of carrier flange on right side: **MU, MV** (Synchro-mesh), **MA, MB** (Hydra-Matic).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*AXLE SHAFT NOTE: Shafts unequal length (right shaft longer) and may be identified by mark stamped on shaft, or by length as follows:*

Axle	Part No.	Length
Left	3694769 ①	29 5/8"
Right	3694770 ①	30 5/8"

①—Part No. Stamped on axle for identification.
Backlash—.005-.007". Screw adjustment.

Removal: Raise rear of car, remove rear wheels and brake drums, install clamps on wheel cylinders, disconnect hand brake cable from idler levers and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber from rear spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly from beneath car.

Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of axle in differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, install clamp on wheel cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove 'C' washer on inner end, pull shaft out.

Axle Shaft Endplay—Free fit to .014" maximum.

FULL-FLOATING (EXC. HALF-TON)

Own. Full-floating hypoid gear (straddle mounted pinion) with Hotchkiss drive.

►**1½ & 2-Ton Note**—Axle shaft splined to wheel hubs. *See "Chevrolet Truck Hypoid Full-Floating" in Rear Axle Section.*

►*IDENTIFICATION NOTE:* Axles are identified by Axle Serial Number prefix letters stamped on top of carrier housing between reinforcing ribs. The letter indicates model year "M" or "X" (1954); "N" or "Y" (1955). The second letter indicates axle model. See Axle Ratio table following:

Axle Ratios & Identification

Truck Model	Ratio	①Ident. Prefix
¾-Ton (Std.) ②	4.57-1	G or H
¾-Ton (Dual)	4.57-1	D
¾-Ton (Dual)	5.14-1	C
¾-Ton (Optl.)	5.14-1	Q
¾-Ton (Fwd. Cont.)	5.14-1	Q
1-Ton ②	5.14-1	J or Q
1-Ton (Fwd. Cont.)	5.14-1	C or A
1½-Ton (Std.)	6.17-1	L
1½-Ton (Optl.)	5.43-1	E
2-Ton	6.17-1	G or K

①—See Identification above.
②—Except Forward Control Models.

Backlash—.005-.008". Screw adjustment.

Removal: Remove differential cover and axle shafts (see below). Disconnect rear universal by removing two U-bolts from rear yoke (wire trunnions to retain bearings). Slide shaft forward and lower to floor. Remove differential carrier mounting bolts.

Axle Shaft Removal (¾ & 1-Ton): Remove eight capscrews and lockwashers in axle shaft flange, install two ½X13 screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket. *Use new gasket when installing shaft.*

CAUTION—Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft. *Grease at this point will cause loosening of axle shaft flange capscrews.*

Axle Shaft Removal (1½ & 2-Ton): Shaft flange is splined in wheel hub (tight fit) and requires special puller for removal. Remove five capscrews and lockwashers in hub cap, remove hub cap and gasket. Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. *NOTE*—When reinstalling axle shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket.

Axle Shaft Note—Shafts unequal length (right shaft longer) and may be identified by part number stamped on shaft, or by length as follows:

¾ & 1-Ton Trucks

Axle Shaft	Part No.	Length
Left	3680977	31¼"
Right	3680978	37"

1½-Ton Truck (Splined Shaft)

Axle Shaft	Part No.	Length
Left	3685191	34¼"
Right	3685192	40 5/8"

2-Ton Truck (29 Splines)

Axle Shaft	Part No.	Length
Left	3702295	36¾"
Right	3702296	41¼"

Wheel Bearing Adjustment: Remove wheels and axle shaft (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight, using special wrench J-2222 (¾ & 1-Ton), J-870 (1½ & 2-Ton) while turning hub by hand, then back nut off 45°, check for free turning, install adjusting nut lock (with lock tangs aligned with slots in adjusting nut), bend tang down into notch in adjusting nut, install locknut and tighten securely, bend tang of lock down into notch of locknut.

TWO-SPEED

Own. Full-floating, two-speed double reduction with hypoid gears (first reduction), helical gears (second reduction). Vacuum shift control.

See "Chevrolet Two-Speed Hypoid Gear" in Rear Axle Section.

►*IDENTIFICATION NOTE*—Axle identified by Serial Number stamped on flat top of carrier on right side.

NOTE—Two ratios available as follows:

Ratio	①Ident. Prefix
6.13-1 (High), 8.10-1 (Low)	N or R
6.7-1 (High), 8.86-1 (Low)	S or D

Two-Speed Shift Control: Vacuum power type with selector valve on instrument panel.

Carrier Assembly Removal: Remove axle shaft flange mounting bolts, pull both axle shafts out of housing approximately 8" (to clear differential). Drain axle lubricant and remove inspection plate. Loosen hose clamps and slip hoses off vacuum cylinder hose connections. Disconnect rear universal joint by removing trunnion bearing "U" bolts from rear flange, slide propeller shaft assembly forward, tape universal bearing trunnions in place to prevent loss of needle bearings, swing propeller shaft out of the way (tie up to frame side rail). Remove capscrews mounting carrier on axle housing (support carrier with a punch inserted through one upper mounting screw hole in housing before removing last mounting screw). Place support jack under carrier assembly, roll assembly straight forward until differential clears housing, remove carrier assembly from beneath truck.

Axle Shaft Removal & Wheel Bearing Adjustment: Same as for regular rear axle (see above).

SHOCK ABSORBERS

Delco. Direct Acting (Airplane Type), or Double Acting (Piston Type) hydraulic shock absorbers as follows:

Direct Acting

Location & Model	Delco No.
Front (½, ¾, 1-Ton)	808M
Front (1½, 2-Ton Exc. C.O.E.)	682P
Front (C.O.E.)	682K
Rear (½-Ton)	843V
Rear (¾-Ton)	843T
Rear (1-Ton Utility)	660V

Double Acting

Location & Model	Delco No.
Left Rear (1-Ton Fwd. Control)	1722 F
Right Rear (1-Ton Fwd. Control)	1722 E

FRONT SUSPENSION

Conventional "I" Beam Section, with Reverse Elliot ends and semi-elliptic springs.

Kingpin Inclination—7°10'±1° crosswise (all).

Camber—1°±½° (all). Bend axle for correction (when kingpin inclination is likewise off).

Caster—See Table below. All specifications ±½°.

Toe-In—See Table below. Adjust by turning tie rod.

CAUTION—Tie rod ends must be aligned with studs.

Model	Caster	Toe-In
½-Ton	1°±½°	1/16-3/16"
¾-Ton (Exc. Fwd. Cont.)	¾°±½°	1/16-3/16"
¾-Ton Fwd. Control	2¼°±½°	1/16-1/4"
1-Ton (Exc. Fwd. Cont.)	1¾°±½°	1/16-1/4"
1-Ton Forward Control	1¼°±½°	1/16-1/4"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Model	Caster	Toe-In
1½-Ton	1¾°±½°	1/16-1/4"
2-Ton (Exc. C.O.E.)	¾°±½°	1/16-1/4"
2-Ton C.O.E.	2¾°±½°	1/16-1/4"

Toe Out on Turns—Outer wheel turned 20°, inner wheel turned 23°±2°.

STEERING GEARS

Saginaw. Ball Bearing Worm & Nut. (re.circulating ball). *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

NOTE—Two different type brakes used as indicated below:

Chevrolet-Bendix (Except Rear Wheels of 1½ & 2-Ton Models)—Duo-servo, single anchor, hydraulic (without eccentric adjustment).

See "Chevrolet-Bendix Hydraulic" in Brake Section.

Chevrolet Twinplex (Rear Wheels 1½ & 2-Ton Models)—Two-cylinder, four anchor type hydraulic. Shoes are self-centering and self-energizing.

See "Chevrolet Twinplex" in Brake Section.

Wheel Cylinders—Size stamped on housing under adjusting cup lock spring.

Drums—Cast iron with steel web.

Model	Front - Diameter - Rear
½-Ton	11" 11"
¾-Ton	12" 12"
1-Ton	12" 14"
1½ & 2-Ton	14" 15"

Lining—Molded type. Riveted on 1½ & 2-Ton Models and bonded on all others.

Thickness—.202-.222" (11"Drum); .264-.284" (12" Drum); .267-.287" (14" Drum); .392-.412" (15" Drum).

Clearance—Adjust for clearance as follows:

All (Exc. 1½ & 2-Ton Rear Brakes)—Remove adjusting hole cover and turn brake adjusting screw until light drag is felt, then back off adjusting screw 7 notches (½-Ton), just enough to eliminate drag (Other models) but not more than 7 notches.

Rear Wheels 1½ & 2-Ton Models—Remove adjusting covers from flange plate and turn rear adjusting screw until slight drag is felt, then back off 3 notches. Repeat on front adjusting screw (2 adjustments on each wheel).

Hand Brake: Step-on pedal applies rear wheel service brakes on ½, ¾, 1-Ton Models. Hand lever applies independent brake on propeller shaft on all other models.

Adjustment: Adjust each type as follows:

½-Ton—With parking brake pedal released, adjust pedal pull rod clevis for 1/8" clearance between cross shaft and frame cross member at center. Depress foot pedal 1½", adjust clevis on forward end of each wheel cable to remove all slack (pull cable out of conduit by hand until positive stop is felt, adjust clevis and reconnect cable). Release rod handle under instrument panel must have ½" minimum clearance at support bracket.

¾ & 1-Ton—With parking brake pedal released, adjust brake pedal pull rod clevis until hole in end of cross shaft outer lever is correct distance to rear of center of cross shaft: 29/32" (¾-Ton), ¾" (¾-Ton Fwd. Control), 11/32" (1-Ton), 19/32" (1-Ton Fwd. Control). Then adjust each wheel cable clevis at cross shaft lever end in same manner as ½-Ton above.

1½ & 2-Ton—.010-.015" clearance between each shoe and brake drum (adjust the adjusting bolt for outer shoe clearance, nut on link for inner shoe).

Power Brakes: *See "Hydrovac Power Unit" in Brake Section.*

MODEL IDENTIFICATION

Series	Serial Prefix	Model
1500①	A	ONE-FIFTY
2100	B	TWO-TEN
2400	C	BEL-AIR
1508	D	SEDAN DELIVERY

①—Except Sedan Delivery.

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post.

Starting Serial Number—001001 (at each plant)

►*SERIAL NUMBER NOTE: Serial Number (example B55F001025) includes following identification data in sequence.*

Series①	Year	Assy. Plant②	Serial No.
B	55	F	.001025

①—See Model Designation above.

②—See Assembly Plant Designation below.

Assembly Plant Designation

A—Atlanta	**J**—Janesville	**O**—Oakland
B—Baltimore	**K**—Kansas City	**S**—St. Louis
F—Flint	**L**—Los Angeles	**T**—Tarrytown
	N—Norwood	

ENGINE NUMBER: Stamped on right side of engine block to rear of distributor

Starting Engine Number—0001001 (at each plant) Suffix letters and numerals indicate plant at which engine built ("F" for Flint, and "T" for Tonawanda), Model Year and Model Type as follows.

Engine	Suffix
Regular "235"	Z
Regular "235" (With H.D. Clutch)	ZC
Regular "235" (With aluminum cam gear)	ZH
Regular "235" (With H.D. Clutch & Alum. gear)	ZJ
Powerglide "235"	Y

TUNE-UP

COMPRESSION PRESSURE: 130 lbs minimum with all cylinders equal within 5-10 lbs at cranking speed

VACUUM READING: *CAUTION—Vacuum reading on Standard transmission Cars and Powerglide Cars is different as follows*

Standard Transmission Cars—At 500 RPM.—14.4" (with transmission in Drive Range). 16.7" (with transmission in Neutral) **At 450 RPM.**—14.5" (with transmission in Drive Range). 16.3" (with transmission in Neutral). *NOTE—Manifold vacuum reading at idle speed is lower than previous models because of "high lift" cam used.*

VALVE TAPPET CLEARANCE: (Pass. Cars With Conv. Valve Lifters) - .006" Intake, .013" Exhaust, with engine "normalized" *See "Valve System" in Chevrolet Special Data*

(Powerglide Cars with Hydraulic Lifters)—Adjustment required only when cylinder head removed or lifters replaced. *See Tappet Clearance Adjustment under "Valve System" in Chevrolet Special Data*

Initial Tappet Clearance (Engs. with Hydraulic Lifters). *See "Valve System" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position *Distorted springs should be replaced.*

IGNITION

FIRING ORDER: 1-5-3-6-2-4

SPARK PLUG GAP: .035".

Spark Plug—AC No. 44-5. 14mm. **Torque to 20-25 ft. lbs.**

COIL: Delco-Remy 1115087. *12 Volt.*

Ignition Current—2.5 amperes idling. 4.5 stopped.

Resistor—Delco-Remy 1927809. On firewall.

►*COIL RESISTOR NOTE:* Resistor connected to ignition switch by two leads and is by-passed during cranking (second lead provides direct connection to coil when **key turned to "Start Engine" position).**

DISTRIBUTOR: Delco-Remy 1112403. *12 Volt.*

Condenser: Delco-Remy 1928111. **Capacity**—.18-.23 mfd.

Contact Point Set—Delco-Remy 1924571

Breaker Gap— 016-.021" (New points), .0125-.0175" (Used points)

Cam Angle—28-35° with .016" gap.

►*BREAKER GAP CAUTION: Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension—19-23 ozs

Rotation—Clockwise viewed from above

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center 'O' position

Vacuum Spark Control: Delco-Remy 1116089

Vacuum Advance

Distr. Degrees	Eng Degrees	Vacuum (" of HG)
Start	0	4-6
7.5	15	7.5-10

Setting—TDC.

IGNITION TIMING

Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on 'O'.

CARBURETOR

THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE CARS): Engine must be at normal operating temperature and transmission warm (choke valve wide open and fast idle inoperative with throttle stopscrew against low step of fast idle cam) when adjustments are made.

►*POWERGLIDE LINKAGE ADJUSTMENT PRODUCTION CHANGE:* On later cars the part throttle upshift has been lowered to 12-18 MPH by changing the angle of the transmission throttle control outer lever, and shortening the throttle valve control rod. **Throttle Linkage Adjustment differs from early cars** as indicated in the procedure following To identify early and late type cars it will be necessary to check the part throttle upshift speed Early cars will be 26-28 MPH. **Later cars will be 12-18 MPH.**

►*DECREASING PART THROTTLE UPSHIFT ON EARLY CARS:* If it is desired to decrease part throttle upshift from 26-28 MPH to 12-18 MPH, replace the early type Throttle Valve Outer Lever, Part No 3710634, with later type Part No 3720323 Replace early type Throttle Valve Control Rod, Part No. 3710632 with later type Part No. 3715711. Adjust throttle linkage as indicated below for "1955 Later Cars" when this change is made.

1) Adjust idle speed to 425 RPM with selector lever in "D" range (set hand brake firmly to hold car).

2) Disconnect control rod from throttle lever on transmission case. On ALL cars, remove extreme **lower rear** bolt on left side cover and install Transmission Outer Lever Positioning Gauge J-5906 (see Gauge rework note below). Rotate throttle valve control outer lever assembly counterclockwise to open throttle position.

3) Hold lever in this position, measure distance between bolt hole in side cover and hole in throttle lever with gauge. Pins on gauge should enter holes. Adjust by loosening lever-to-clamp attaching bolt and adjusting lever position on throttle shaft as follows:

1955 Early Cars (With first type Throttle Valve Control Outer Lever No. 3720634 & longer Throttle Valve Control Rod No. 3710631) - 6 3/8" to lower rear bolt hole (changed from 7 3/32").

1955 Later Cars (With later type Throttle Valve Control Outer Lever No. 3720323 & shorter Throttle Valve Control Rod No. 3715711) - 7 3/32" to lower rear bolt hole (no change).

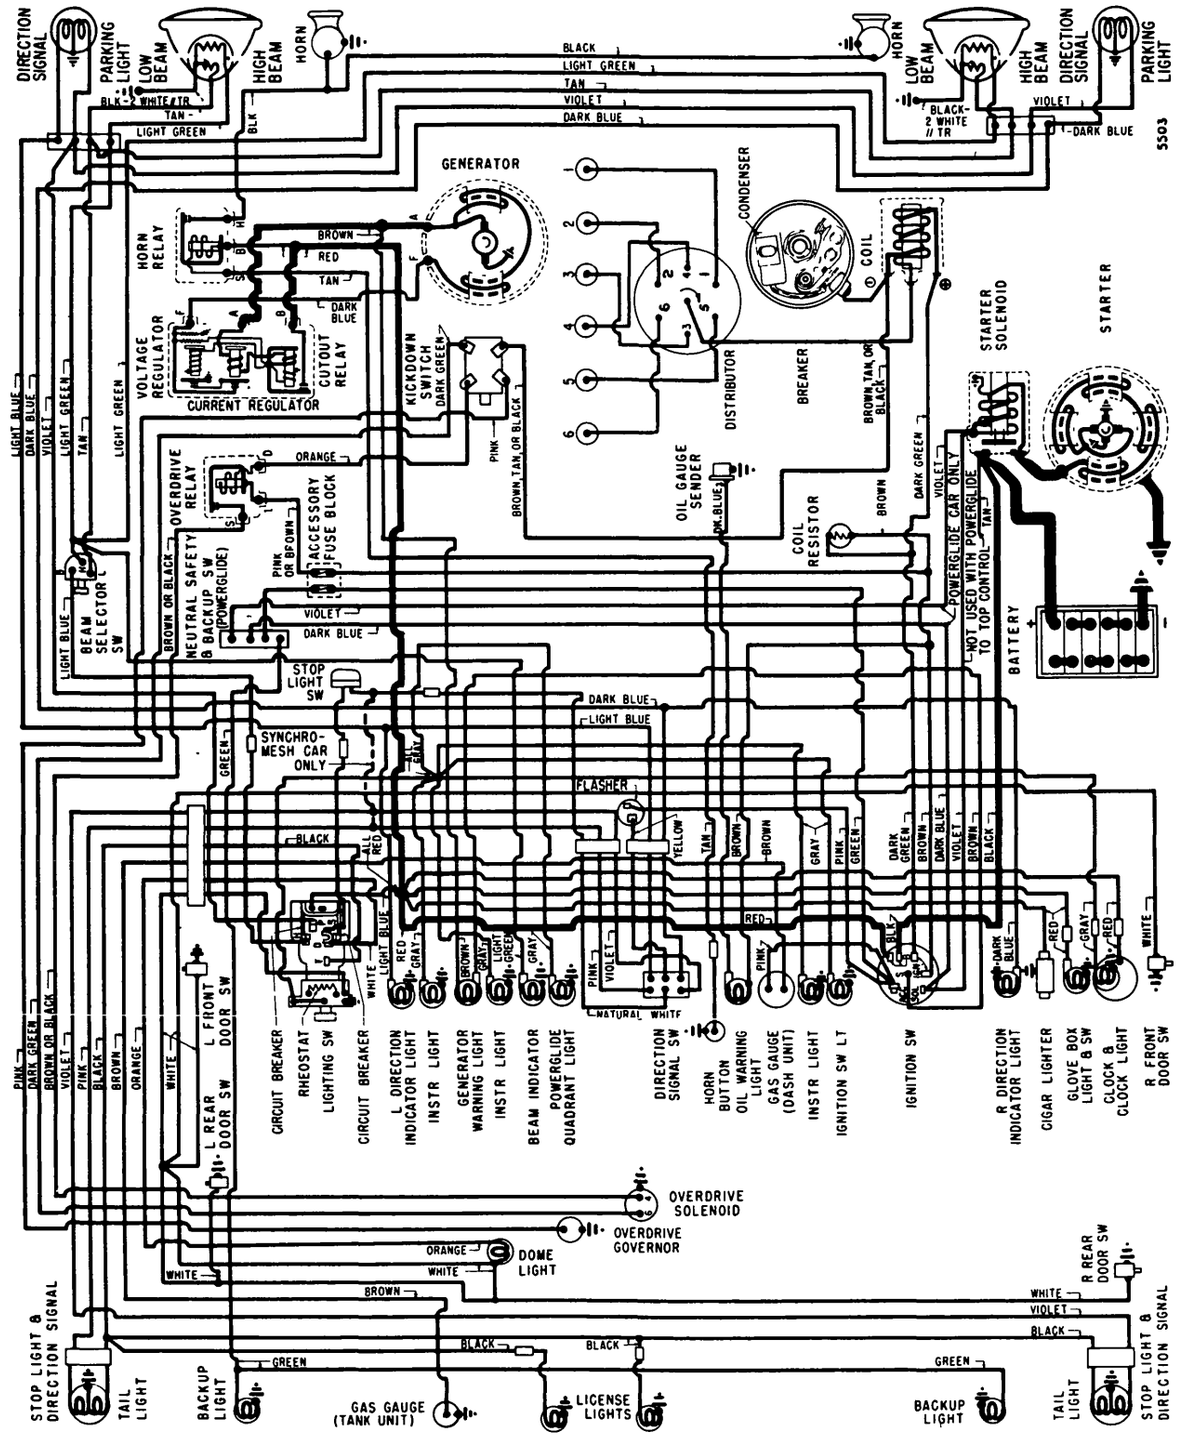
4) Disconnect bellcrank-to-carburetor throttle rod at throttle valve lever. Disconnect accelerator-to-bellcrank rod at bellcrank.

5) Force bellcrank-to-transmission throttle lever rod forward against stop in transmission (open throttle position) and adjust bellcrank-to-carburetor throttle rod for free entry of swivel pin in throttle valve lever, with carburetor throttle valve in wide open position.

6) With carburetor throttle valve held in wide open position and accelerator fully depressed, adjust accelerator-to-bellcrank rod for free entry of swivel pin into hole in bellcrank.

►*REWORK OF TRANSMISSION OUTER LEVER POSITIONING GAUGE J-5906 (For use on both 6 Cyl. & V8 Cars):* Remove bolt hole locating pin (larger pin) from gauge, pressing pin from back of lever leg to remove. Cut 5/16" from pin and replace pin in lever leg, pressing it into place to allow apex of pin to project ¾" above lever leg surface Stake pin in place securely Separate lever leg and place a 3/16" spacer between legs Reassemble lever gauge. *NOTE—In some cases it may be necessary to grind a beveled radius on the outer end of bolt lever leg as required. It will also be necessary to elongate the pivot hole slightly to provide the recommended 7 3/32" setting on earlier cars with first type lever and rod (this 7 3/32" setting supersedes previous 6 3/8" setting).*

ROCHESTER BC



Rochester BC, No. 7007181 (Synchro-mesh), 7007180 (Powerglide). Single barrel, downdraft type.

Idle Setting - 1-2½ turns open. Turn screw out for richer mixture

Idle Speed - 475 RPM (Synchro-mesh), 425 RPM with selector lever in "D" position (Powerglide).

Float Level - Use Gauge No. 3696192. Invert bowl cover and float assembly **but do not remove gasket.** Place gauge in position over floats with gauge tang in discharge nozzle. Adjust each float vertically so they just touch top portion of gauge and bend float arms horizontally to center each float in gauge cutout.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Tilt assembly 90° to each side to see that floats do not touch gauge. Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¾". Adjust by bending tang at rear of float assembly.

Choke Adjustment: Index mark on cover aligned with long cast mark on top of choke housing casting.

Fast Idle: With idle adjusting screw on next to highest step of fast idle cam, Gauge J-5120 (.073") should just slide between lower edge of choke valve and carburetor bore. To adjust, bend connector rod.

Throttle Return Check Adjustment (235" P w rglid Engine): With the engine idle speed set at 425 RPM, shut off engine, close choke valve and position throttle stop screw on highest step of fast idle cam. Using a 9/32" wrench on the flat section of throttle return check shaft, hold shaft from turning, and with a 3/8" wrench turn the adjusting screw until it just contacts the throttle lever contact arm.

►*OTHER DATA: See "Rochester B & BC Carbur t rs" in Carburetor Section.*

Powerglide Throttle Linkag Adjustm nt: *See "CARBURETOR" above.*

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type.
Replacement Fuel Pump–AC No. 4149 (Fuel only), No. 4138 (Fuel & Vacuum).
Pressure–3½-4½ lbs.
See "Fuel Pumps" in Carbur tion Equipm nt S ction.

Gasoline Gauge: AC Electric.
Dash Unit–AC No. 1518407.
Tank Unit–AC No. 1518158 (Exc. Sed. Del. & Sta. Wgn.). AC No. 1518180 (Sed. Del. & Sta. Wgn.).
See "Fuel Gauges" in Carbur tion Equipm nt S ction.

BATTERY

Delco 2SM50. *12 Volt.* 9 Plate, 50 ampere hour capacity (20 hr. rate).
Battery Ground–Negative terminal.
Engine Ground–Engine to cowl at rear head bolt.

STARTER

Delco-Remy 1107626. *12 Volt.* **Armatur**–1926626.
Drive–Overrunning clutch (solenoid pinion shift).
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–35 ozs. minimum.

Performanc Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Starting Switch: Delco-Remy Solenoid Switch 1119767 mounted on starter and controlled by Ignition & Starter Switch 1116512.
See "Delco-Remy Starter Sol noid (Without R lay)" in Electrical Equipment S ction.

N utral Safety & Back-Up Light Switch: Delco-Remy 1998105 (Powerglide Cars only).
Adjustment–*S "Ch vr l t P werglid " in Transmission S ction.*

CONTINUED FROM PRECEDING PAGE

GENERATOR

Delco-Remy 1100310 (Std.), 1102020 (Power Steering).
Armature—Delco-Remy 1928952 (Gen. 1100310), Delco-Remy 1929640 (Gen. 1102020).
Maximum Charging Rate—*See Voltage Regulator.*

Performance Data

Generator	Amps	Volts	RPM
1100310	25	14.0	2780
1102020	30	14.0	2150

Rotation—Counter-clockwise at commutator end
Brush Spring Tension—28 ozs
Field Current—(1100310) 1.5-1.62 amps (1102020) 1.48-1.62 amps. at 12 volts.
Belt Adjustment: 5/16" belt deflection with light thumb pressure midway between generator and pump pulleys

REGULATOR

Delco-Remy 1118945 (Us with Gen. 1100310), Delco-Remy 1118826 (Us with Gen. 1102020). *NOTE*—**Regulator is "1118825 Series".** *Specifications below are for "Normal" settings.*

Cut-Out Relay

Cuts In—11.8-13.5 volts (hot).
Contact Gap—.020".
Air Gap—.020" (with contacts just closed)

Voltage Regulator

Setting—13.8-14.8 volts (hot)
Air Gap—.075" with armature pressed down to point where contacts just touching
Checking & Adjusting—*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section*

Current Regulator

Setting (1118945)—23-27 amperes (hot)
Setting (1118826)—27-33 amperes (hot)
Air Gap—.075" with armature pressed down to point where contacts just touching
Checking & Adjusting—*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*
Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*
Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel) and pull shaft and knob out. Remove switch retaining nut and switch assembly
Stop Light Switch Location: Mechanical type mounted under instrument panel adjacent to brake pedal lever
Adjustment—Adjust position of switch so that stop light goes on when brake pedal is depressed 5/8" from fully released position.

FUSES: All accessory fuses except as indicated below are contained on the accessory fuse and junction block located on upper inside of dash panel to left of steering column.

Overdrive—14 amps. Located in Lucite cartridge in overdrive relay feed line on engine side of dash to left of steering column
Radio—In feed line adjacent to radio
Back-up Light—On accessory fuse block

CIRCUIT BREAKER Two 13 amp. circuit breakers located on main light switch, protects all lighting circuits.

HORNS: Delco-Remy 1999759 (Low Note), 1999760 (High Note).
Horn Relay: Delco-Remy 1116781
Contacts Close—5.0-9.5 volts **Contact Gap**—.027"

ENGINE

►*TWO ENGINE USED ON PASSENGER CARS: Conventional 235" & Powerglide 235". See Passenger Car & Truck Model Identification for engine application.*

►*NOTE The following repair data applies to all Pass. Car & Truck Engines.*

Bore	Stroke	Displacement	Rated HP
3 9/16"	3 15/16"	235.5 cu. ins.	30.4

Engine	Compr. Ratio	Developed HP
Standard	7.5-1	123 at 3800 RPM
Powerglide	7.5-1	136 at 4200 RPM

Compression & Vacuum Reading—*See Tune-Up.*

ENGINE REMOVAL: *See Chevrolet Special Data.*

OIL PAN REMOVAL: Remove bolts attaching steering idler arm bracket to frame side rail and drop for clearance. Remove pan retaining bolts and remove pan.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Chevrolet Special Data*

ENGINE MOUNTINGS: *See Chevrolet Special Data.*

TIGHTENING TORQUES: *See Chevrolet Special Data.*

PISTONS

Aluminum alloy, cam ground, tin plated, with pin offset 5/64"
Weight—1.18 lbs. (235" Engine), 1.36 lbs (261" Engine),
Removal—Pistons and rods removed from above.
Clearance—.0005-.0011" at bottom of skirt, .0115-.0135" at top land. Selective fit.
Replacement Pistons: Furnished Std. Size & .020", .030", .040" oversize. *STANDARD SIZE PISTON NOTE*—Std. pistons furnished in four sizes with size stamp and size range as follows: **S4**(3.5625"-3.5630"), **S5** (3.5630"-3.5635"), **S6**(3.5635"-3.5640"), **S7**(3.5640"-3.5645").
Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513) With piston and cylinder clean and dry insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.
Installing Pistons: Install piston with notch in piston mark "Front" toward front of engine.

PISTON PINS

Locked in rod. No bushing used in piston.
Diameter—.8660"-.8665". **Length** 3.198"-3.228".
Pin Fit in Piston—Thumb push fit (at room temp.). To check fit, with piston and pin at 70°F, apply light oil film to pin, insert pin vertically in one piston boss (one end of pin in either piston boss). Pin should hold own weight but should install easily with thumb pressure.
Replacement Pins: Furnished Std. .0015", .003", .005" oversize.

PISTON RINGS

Passenger Cars

Ring	Width	End Gap	Side Clearance
Compr. ①	.0930-.0935"	.007-.020"	.001-.003"
Oil ②	.180-.185"	.015"-.035" ③	④

Trucks

Ring	Width	End Gap	Side Clearance
Compr. ①	.0930-.0935"	.007-.020"	.002-.0035"
Oil ⑤	.181-.188"	.015-.055" ③	.000-.008"

①—Deep section "Twist" type. Top ring on Loadmaster & Jobmaster Engines is chrome-plated.
②—4-piece type (two steel rails, spacer, and expander).
③—Gap on rails.
④—Free fit to .010" clearance.
⑤—3-piece type (two chrome-plated steel rails and spacer).

►*RING INSTALLATION CAUTION—Install compression rings with side marked "TOP" upward.*

Replacement Rings: Furnished Std .005", .010", .020", .030", .040" oversize.

CONNECTING RODS

►*CONNECTING ROD REPLACEMENT CAUTION—Rods for 261" Jobmaster engine not interchangeable with other engines. Casting No. 3701491 (Exc. 261" Engine), No. 3702448 (261" Engine).*
Length—6 13/16". **Weight**—31.76 ozs. (Exc. 261" Engine).
Crankpin Journal Diameter—2.311"-2.312", all engines.
Lower Bearing—Replaceable precision type
Clearance—.001-.003" (new), .001-.004" (used). No adjustment. Replace bearings.
Sideplay—.005-.012" at lower end.
Replacement Bearings: Std. .001", .002", .010", .020" undersize.

Installing Rods: Numbers on rods and caps must be together and installed in same numbered cylinders with numbers and pin clamp bolt toward camshaft side.

CRANKSHAFT

►*CAUTION: No. 1 (front) and No. 2 (front intermediat) bearings similar in appearance but must not be interchanged. No. 2 bearing marked by "T" in oil groov .*
Journal Diameters—(1) 2.6835"—2.6845", (2) 2.7145"—2.7155", (3) 2.7455"—2.7465", (4) 2.7765"—2.7775". *NOTE*—Journal taper or out-of-round limits .001". Run-out Limits for Nos. 2 & 3 journals is .002".
Clearance—.0005" minimum,. .003" maximum (new bearings), Service limits .0005" min. .0045" maximum. See Adjustment below.
NOTE—Precision type bearings can be replaced singly.
Bearings—Steel backed thin wall babbitt. *Boring or reaming not required*
Bearing Adjustment: Solid shims. Remove shims until light drag secured when shaft turned by hand, then replace .002" shim on one side for clearance (if unequal number of shims used, place extra shim on same side of all bearings).
Replacement Bearings: Furnished Std. .002", .010", .020", .030" undersize.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

B aring Installati n: Not necessary to remove crankshaft or engine from car. *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Bearing Cap Installation—No. 2 & No. 3 bearing caps marked for identification. Install No 2 cap with mark "FRONT" toward front of engine, No. 3 cap with mark "REAR" toward rear of engine

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chevrolet Special Data*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data*

End Thrust: Taken by No. 3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of No. 3 bearing. Adjust by replacing bearing. **Endplay**—.0035"-.0095".

Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data.*

CAMSHAFT

►*CAMSHAFT REPLACEMENT CAUTION. Different camshafts used in Conventional and Powerglide Engines. The 261" Truck Engine uses same camshaft as used in Corvette (6 Cyl.).*

Camshaft Identification

Model	Camshaft No.	Cast No. ①
235" Pass. (Powerglide) ②	3836483	3836386
235" All (Exc. Powerglide) ②	3836489 ③	3836366
235" Corvette	3636484	3836390
261" Truck	3636484	3836390

①—Number forged or cast on camshaft.

②—Except Corvette.

③—When replacing cast iron camshaft (Identified by **one** large raised dot between No. 5 & No. 6 inlet cams), Steel Distributor Drive Gear, Part No. 1865180 MUST BE USED.

Journal Diameters—**(1)** 2.1537—2.1547". **(2)** 2.0912—2.0922". **(3)** 2.0287—2.0297". **(4)** 1.9662-1.9672".

►*NOTE:* Journal out-of-round limits .001". Run-out limits .002".

Bearing Type—Steel backed babbitt lined bushing.

See "Camshaft & Bearings" in Chevrolet Special Data

Clearance—.0015-.0035".

End Thrust: Taken by thrust plate behind camshaft gear.

Endplay Adjustment—*See "Timing Gears" in Chevrolet Special Data.*

Endplay—Free fit to .003" maximum.

Timing Gears: Fibre (Pass. Cars. Exc. Corvette), Aluminum (Corvette and Trucks). Steel crankshaft gear.

Replacement Timing Gears & Installation: *See "Timing Gears" in Chevrolet Special Data.*

Timing Gear Backlash—.003-.004".

Camshaft S tting: Gears punch marked. Punch marks on both gears must line up directly opposite each other.

Engin Fr nt C v r Oil Seal (Crankshaft Fr nt S al): *Se "Engin Front Cov r" in Ch vrolet Sp cial Data*

VALVES

Tapp t Clearanc (Pass. Cars with Conv ntional Valv Lifters): 006" Intake, 016" Exhaust, with engine "normalized" *See "Valve System" in Chevrolet Special Data*

(Powerglide Cars with Hydraulic Lifters)—Adjustment required only when cylinder head removed or lifters replaced. *See Tappet Clearance Adjustment under "Valve System" in Chevrolet Special Data*

►*NOTE. "XCR" exhaust valves used in 235" Powerglide, H.D. Trk. & 261" Engine (stamped "XCR").*

Valve	Head Diam.	Stem Diam.	Length
Intake	1 7/8"	.3410-.3417"	6.364-6.394"
Exhaust	1 1/2"	.3410-.3417	4.905-4 930"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30° ③	①	001- 0027'
Exhaust	45° ③	②	.001-.0027'

①—.294" (Conventional 235"), .400" (Powerglide 235"), .405" (Corvette & 261" Jobmaster Engine)

②—.312" (Conventional 235"), .400' (Powerglide 235"), .414" (Corvette & 261" Jobmaster Engine).

③—Seat angle in block 1° additional

Valve Seat Width—.035-.060" (Intake), .062-.093" (Exhaust).

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Precision type. Pressed in head.

Valve Guide Installation—*See "Valve System" in Chevrolet Special Data.*

Valve Springs: Install springs with closed coil end down. Check with spring tester and replace if not within limits shown below. *NOTE—Conventional Engine and Powerglide Engine valve springs are different.*

Spring Specifications (235" Conventional Engine)

	Pressure	Length
Valve Closed	62-68 lbs.	1.821"
Valve Open	155-165 lbs.	1.505"

Free Length—2 5/32".

Spring Specifications (235" Powerglide Engine)

	Pressure	Length
Valve Open	194-210 lbs.	1.462"

Free Length—2 15/64".

Spring Specifications (261" Truck Engine)

	Pressure	Length
Valve Closed	74-82 lbs.	1.858"
Valve Open	177-187 lbs	1 518"

Free Length—2 281".

Valve Lifters (Conventional 235" Engine): Plain barrel type. Identified by plain barrel and spot of yellow paint below push rod seat. *NOTE*—Valve Lifters used on Corvette has shallow groove around barrel.

Valve Lifters (Powerglide 235" Engine): Hydraulic type. Identified by rib around oil groove.

Hydraulic Lift r Adjustment—Required only when installing cylinder head or when adjusting screw setting has been disturbed. S *"Valve System" in Chevrolet Special Data*

Hydraulic Lift r Overhaul & T sting—*See "Valve System" in Chevrolet Special Data*

►*REMOVING HYDRAULIC VALVE LIFTERS When removing lifters and push rods use a rack to keep them in proper sequence. Install in their original location when reassembling.*

Valve Lifters (261" Truck Engine): Conventional type lifter identified by single groove around body.

Rocker Arm Assembly: *See "Valve System" in Chevrol t Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

235" Conventi nal Engine

Intake Valves—Open 1° ATDC. Close 39° ALDC

Exhaust Valves—Open 42° BLDC Close 9° ATDC

235" Powerglid Engine

Intake Valves—Open 10° 30' BTDC. Close 53° 30' ALDC

Exhaust Valves—Open 49° BLDC Close 15° ATDC.

Valve Timing Check—*(CAUTION*—On 235" Powerglide engine with hydraulic valve lifters, it will be necessary to replace the hydraulic valve lifter and pushrod operating No 1 exhaust valve, with a conventional lifter and pushrod). Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer on right face of flywheel housing.

Mount dial indicator on rocker arm shaft with stem of indicator contacting No 1 exhaust valve adjusting screw and set dial indicator to .044" (235' Conventional Engine), 058" (235' Powerglide Engine) Turn crankshaft until indicator hand just stops moving Timing is correct if indicator reading is ZERO plus or minus 004 . Reset tappet to correct running clearance

OILING SYSTEM

►***ENGINE OILING SYSTEM: Se "Engin Lubricati n" under OILING SYSTEM in Ch vrol t Special Data.***

►*ENGINE OIL PUMP SUCTION PIPE PRODUCTION CHANGE (To Prevent Oil Pump Losing Prime at Oil Change): See "Oiling System" in Chevrolet Sp cial Data.*

Crankcase Capacity: 5½ qts (dry), 5 qts (refill)

Normal Oil Pressure: 35 lbs. (approx.)

Pressure Regulator Valv —In oil pump body Not adjustable

Oil Pressure Indicator—Light located at right side of instrument cluster, controlled by a pressure operated switch AC No. 1508245, located in main oil gallery on left side of engine. Switch closes at 4-6 lbs.pressure

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul—*See "Oiling System" in Chevrolet Special Data.*

Oil Filter Element: AC P-115

Rocker Arm Oil Lead & Overflow Pip · *See "Oiling System" in Chevrolet Special Data.*

Crankcase Ventilation—Air intake through valve rocker arm cover (air cleaner on some models), outlet through pipe on right side of engine

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

COOLING

►*RADIATOR REMOVAL CAUTION (POWERGLIDE CARS): Transmission oil cooler is part of radiator lower tank, and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.*

Water Capacity: 16 qts. (17 qts. with heater).

Pressure Valve: AC No. 850549. Radiator filler cap. 7 lb. type.

Thermostat: Harrison. In cylinder head water outlet.
Standard—No. 3123993 (stamped 151) 151°. Can be used for alcohol anti-freeze.
Optional—No. 3123994 (stamped 160) 160°, No. 3133597 (stamped 170) 170°, No. 3123995 (stamped 180) 180°. *NOTE*—Do not use a 180° thermostat with 7 lb. radiator cap.

Temperature Gauge: AC No. 1512931. Not electric.

Water Pump: Double outlet, packless type with sealed ball-bearing shaft.
See "Water Pumps" in Chevrolet Special Data.

►*WATER PUMP & FAN PULLEY REINFORCEMENT:* Part No. 3720616 has been released for installation on engines where greater pulley durability is required. Later type pumps have this reinforcement. On early type pumps when the reinforcement is installed a slight fan belt misalignment will result, in any case clearance between pulley and pump body should not be less than .065".

Radiator Removal & Installation: *See "Radiator" in Chevrolet Special Data.*

CLUTCH

Own (Exc. Powerglide Cars)—Diaphragm spring type. *See "Chevrolet (Own)" in Clutch Section.*

Clutch Disc—Chevrolet No. 3836103 (Molded). 3836121 (Woven), 3836119 (Hvy. Duty).

Pedal Adjustment: Pedal free travel ¾-1". Loosen check nut at connecting link at clutch fork. Turn adjusting nut to remove all lash at fork, **then back off two turns.** Tighten check nut.

Removal: Remove transmission (see Transmission Removal below). Remove throwout bearing. Remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove cover assembly from below. *CAUTION*—Do not allow plate to hang from retracting springs, (support by hand). When installing clutch, align 'X' mark on cover with 'X' mark on flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh
See "Chevrolet 3-Speed" in Transmission Section.

►*HARD SHIFTING CORRECTION: See "Chevrolet Transmission Control" and "Chevrolet 3-Speed" in Transmission Section for shift linkage rework and installation of new transmission parts.*

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Drain Transmission and disconnect speedometer cable and shift rods. Disconnect propeller shaft at rear universal and slide shaft toward rear to disengage from transmission. Remove two top transmission to clutch housing screws and install Guide Pins J-1126. Remove the two lower screws and slide transmission back until clutch spines are disengaged. Remove transmission from below car.

OVERDRIVE

Warner M d l AS1-R10H. Solenoid operated type with governor control and throttle operated kickdown. Lockout Switch not used.
See "Chevrolet R10 Overdrive" in Transmission Section.

Overdrive Control: *See "Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh transmission (above) after disconnecting control cable and wiring.

POWERGLIDE TRANSMISSION

Powerglide Transmission (Used with 235" Powerglide Engine)—Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS: See "Chevrolet Powerglide" in Trans. Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication: Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing an "AQ-ATF" marking on container.

Capacity—5 qts. (refill), 11 qts. (after overhaul).

►*POWERGLIDE DRAINING CAUTION—There is no drain plug on converter. Drain transmission case only, add 5 qts. of fluid initially, recheck after idling engine.*

Checking Fluid Level—Engine must be idling with the parking brake set, transmission warm, and the control lever in "N" range when taking dipstick readings. Dipstick is located under hood on right side just opposite starter.

►*OTHER DATA: See "Chevrolet Powerglide" in Transmission Section.*

UNIVERSALS

Own. Needle Bearing type.

►*CAUTION:* Rear bearing companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever companion flange nut loosened. *See "Chevrolet Pass. Car (Hotchkiss Drive) in Rear Axle Section.*

REAR AXLE

Own. Semi-floating, hypoid gear type, with Hotchkiss Drive. Pinion bearing adjustment is different than on previous models.

See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section.

►*PINION BEARING PRELOAD CAUTION:* Rear universal joint companion flange controls rear axle pinion bearing preload. Bearing preload must be adjusted whenever companion flange nut is loosened.

Car Model	Axle Ratio	Serial Prefix
Std. Transmission	3.70-1	AA or BA
Overdrive	4.11-1	AC or BC
Powerglide	3.55-1	AB or BB

Backlash—.005-.008".

Removal: Raise car and support with jack stands under frame side rails. Remove rear wheels and remove two trunnion bearing "U" bolts from rear universal yoke and separate the joint (tape bearings to trunnion). Disconnect hand brake cable and equalizer and remove cables from clamps at frame. Disconnect hydraulic brake lines at rear axle housing. Disconnect shocks. Support axle assembly on hydraulic jack and remove spring "U" bolts, nuts and anchor plate, and lower axle to floor.

Axle Shaft Removal: Raise car and place jack stands under axle housing. Remove tire, wheel and brake drum assembly. Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange). Attach axle Puller J-5748, with slide hammer, to flange and remove axle shaft and bearing assembly. Be careful not to disturb backing plate. *NOTE*—If bearing retainer and parking brake strut interfere, raise strut slightly with screw driver to obtain clearance.

SHOCK ABSORBERS

Delco. Direct acting non-adjustable. Serviced by replacement.

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs and new spherical type joints connecting control arms and steering knuckles.

See "Chevrolet (Spherical Joint)" in Front Suspension Section.

Kingpin Inclination—3½°±½°.
Caster—0°±½°.
Camber—Pos. ½°±½°.

►*CAMBER & CASTER ADJUSTMENT NOTE: Adjusted by shims located between upper control arm inner support shaft and support bracket.*

Toe-In—1/8-3/16".
Toe-Out on Turns—With outer wheel turned 20°, inner wheel should be 22½°±2".

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Own (Linkage Type). *See "Chevrolet Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

►*SEE CHEVROLET V8 PAGES (FOLLOWING) FOR ALL BRAKE DATA.*

MISC. MECHANICAL

►*SEE CHEVROLET V8 PAGES (FOLLOWING) FOR ALL MISC. MECHANICAL DATA.*

►*AIR CONDITIONED CAR SERVICE CAUTION B for disconn cting any part of air conditioning equipm nt or lines for acc ss to ngine, s "Air Conditioning Service Cautions" in Miscellaneous Section*

MODEL IDENTIFICATION

Series	Serial Prefix	Model
1500	VA	ONE-FIFTY
2100	VB	TWO-TEN
2400	VC	BEL-AIR
2934	VE	CORVETTE

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post

Starting Serial Number–001001 (at each plant) for all models except Corvette

►*SERIAL NUMBER NOTE Serial Number (example VB55F001025) includes following identification information in sequence.*

Series ①	Year	Assy Plant ②	Serial No
VB	55	F	001025

① –See Model Designation above
② –See Assembly Plant Designation below

Assembly Plant Designation

A–Atlanta	**J**–Janesville	**O**–Oakland
B–Baltimore	**K**–Kansas City	**S**–St Louis
F–Flint	**L**–Los Angeles	**T**–Tarrytown
	N–Norwood	

ENGINE NUMBER Stamped on pad at front right hand side of cylinder block behind water pump

Starting Engine Number–001001 (at each plant) Suffix letters and numerals indicate plant at which engine built ("F" for Flint), Model Year and Model Type

Type	Suffix
V8 with 3-Speed Trans	G
V8 with Overdrive	GC
V8 with 4-Barrel Carburetor	GD
V8 with 4-Barrel Carburetor & Overdrive	GE
V8 with 3-Spd Trans & Air Cond	GF
V8 with 3-Spd Trans, Air Cond & 4-Bbl Carb	GG
V8 with Hvy Duty Clutch	GJ
V8 with H D Clutch & Air Cond	GK
V8 with H D Clutch & 4 Bbl Carb	GL
V8 with H D Clutch, Air Cond & 4 Bbl Carb	GM
V8 with Powerglide	F
V8 with Powerglide & 4-Bbl Carb	FB
V8 with Powerglide & Air Cond	FC
V8 with Powerglide, Air Cond & 4-Bbl Carb	FD
V8 Corvette Engine	FG

TUNE-UP

COMPRESSION PRESSURE 130 lbs, minimum with all cylinders within 10 lbs, at cranking speed

VACUUM READING: 17-21" at idling speed

VALVE TAPPET CLEARANCE *(NOTE–Conventional lifters used on first Synchro mesh cars, Hydraulic lifters used on later Synchro-mesh and all Powerglide cars*

Cars With Conventional Lifters - Intake 008" (Std & Corvette) **Exhaust** 016" (Std), 018" (Corvette)

Cars with Hydraulic Lifters–No adjustment required unless cylinder head removed or lifters replaced *See "Valve Tappet Adjustment" under VALVE SYSTEM in Chevrolet Special Data*

MANIFOLD HEAT CONTROL· Thermostatic type Check for free operation when tuning engine

IGNITION

FIRING ORDER 1-8-4-3-6-5-7-2

Cylinders–RIGHT BANK 2-4-6-8 LEFT BANK 1-3-5-7

SPARK PLUG GAP 035"

Spark Plug–AC 44-5 (Std), AC 46-5 (Use for continuous city driving), AC 43-5 (Heavy Duty & Corvette) 14 mm Torque to 20-25 ft lbs

COIL: Delco-Remy 1115087 (Std.), 1115086 (Corvette). 12 Volt At Distributor

Ignition Current–1 8 amps idling 4 0 amps stopped

Resistor–Delco-Remy 1927809 (1 40-1 65 ohms)

►*COIL RESISTOR NOTE* Resistor is connected to ignition switch by two leads and is by-passed during cranking (2nd lead provides direct connection to coil when key turned to "Start Engine" position)

DISTRIBUTOR: Delco-Remy 1110847 (Std.), 1110855 (Corvette).

Condenser–Delco-Remy 1869704, **Capacity** 18 - 23 mfd

Contact Point Set–Delco-Remy 1924499

Breaker Gap– 019" (new points), 016" (used points)

Cam Angle–26-33° with 016" gap

Breaker Arm Spring Tension–19-23 ozs

Rotation–Clockwise viewed from above

Automatic Advance

14	28	13 5-15 5

Vacuum Advance–No 1116100

Start	0	5-7
11 75	23 5	12-20 5

►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION (265' V8 ENGINE)* Incorrect installation may cut off oil to RIGHT or LEFT valve lifter gallery (valve lifters, pushrods, and rocker arms) *See Ignition Notes in Chevrolet Special Data*

IGNITION TIMING

Setting - 4° BTDC *Set timing at IDLE SPEED with vacuum line connected*

►*IGNITION TIMING PROCEDURE CHANGE Previous recommendation of setting timing at 1000 RPM with vacuum line disconnected has been discontinued*

Timing Mark–Mark on vibration dampener and an indicator on left side of valve chain cover Indicator marked with 5-2° lines each side of "O" TDC mark

CARBURETOR

►*CARBURETOR APPLICATION NOTE: Rochester 2GC Dual Carburetor is Std. on all Pass. Cars & Carter WCFB 4-Barrel Carburetor is Std on Corvette and Optl. n all Pass. Cars as "Pow r Packag ".*

THROTTLE LINKAGE ADJUSTMENT *(POWERGLIDE NOTE–Adjust Transmission Throttle Control Linkage BEFORE adjusting carburetor throttle linkage)*

Carbur t r Throttl Linkage (All Mod ls)–With accelerator pedal depressed full and with throttle valve wide open adjust accelerator-to-throttle lever rod (upper throttle rod) swivel for free entry into throttle lever Then lengthen throttle rod by turning swivel **two full turns.** Connect rod to throttle lever

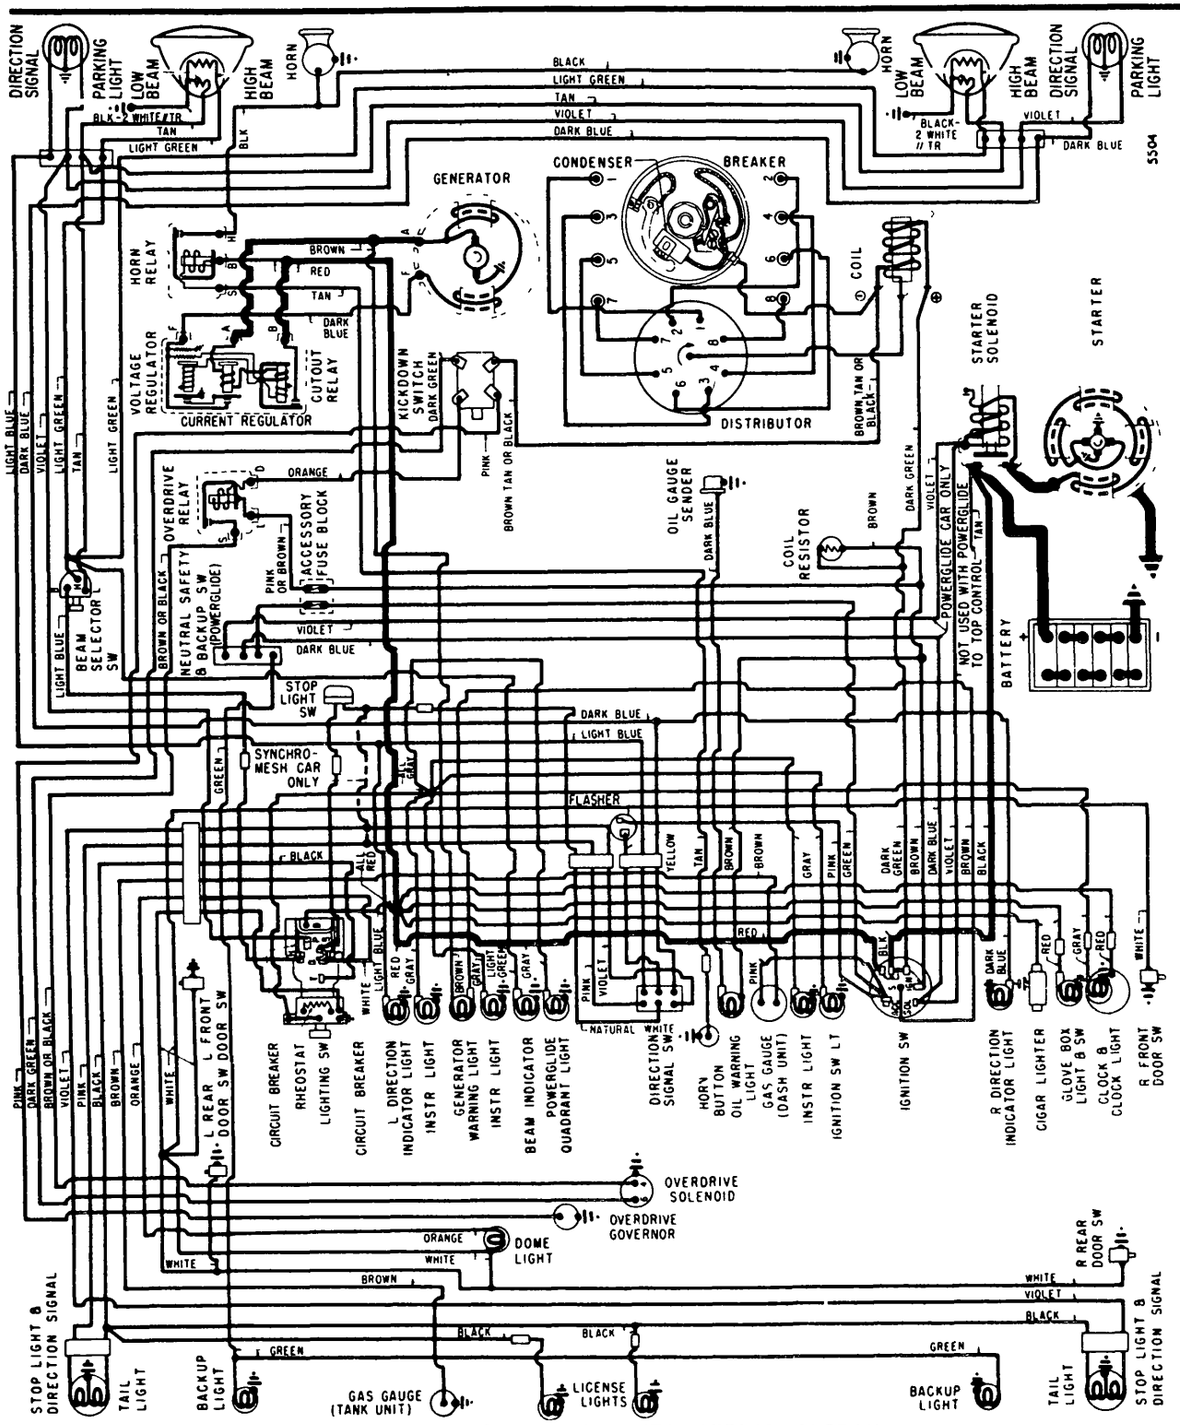
Transmission Throttle Lev r Adjustm nt (P w rglid Models)–With selector lever in "D" (Drive) range and with hand brake applied, adjust engine idle speed to 425 RPM (engine and transmission at normal operating temperature) Turn engine off and check choke valve to make sure it is fully open and that throttle stop screw is against low step of fast idle cam Disconnect transmission throttle rod at lever on transmission. Remove extreme lower rear bolt in side cover on transmission Rotate transmission throttle valve outer lever counter-clockwise to the open throttle position (against stop) Hold in this position and with throttle valve outer lever positioning gauge J-5906 set to 2-7/8", measure the distance between the bolt hole in side cover and hole in throttle lever If pin of gauge enters hole, adjustment of lever is correct If necessary to adjust, loosen lever to clamp attaching screw and adjust outer lever to obtain correct adjustment Install bolt in side cover and attach throttle rod to transmission lever Disconnect upper and lower rods from carburetor throttle lever Force transmission throttle control rod forward against stop in transmission (open throttle) and adjust lower rod on carburetor throttle lever until swivel pin freely enters hole in lever with throttle valves wide open Adjust upper throttle rod (see Carburetor Throttle Linkage above)

THROTTLE RETURN CHECK ADJUSTMENT (POWERGLIDE CARS) Have engine at full operating temperature Align throttle return check adjusting screw with contact arm on throttle lever by bending return check bracket With parking brake set tight, place selector lever in 'D' range and adjust throttle stop screw and idle adjusting screw in combination with each other for smooth idle at 425 RPM with stopscrew on low step of fast idle cam Shut off engine, close choke valve so that stopscrew on high step of fast idle cam adjust throttle check screw until it contacts throttle lever arm (use wrench to hold shaft)

ROCHESTER 2GC 2-BARREL

Rochester Model 2GC No 7005810 (Early–Pow r-glide), 7008004 (Late–Pow rglid), 7006825 (Early–Synchro-mesh), 7008005 (Late–Synchr -mesh).

►*LEAN SURGE CONDITION AT 55-75 MPH (First Cars with No 7006825 & 7005810 Carburetors) See "Rochester 2GC" Carburetor in Carburetor S ction*



►*MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting–After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smooth idle with highest vacuum reading and engine RPM

Idle Speed–450-500 RPM (Synchro-mesh), 400-450 RPM (Powerglide–with Selector lever in "D" range).

Fl at L v l–1 5/32 from air-horn gasket to top of float with assembly inverted Use Gauge BT-107

CONTINUED ON NEXT PAGE

PASS. CARS & SEDAN DELIVERY WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

so it rests against power piston shaft with outer leg in line with center of float.

Float Drop—1 29/32" between air horn gasket and lowest point on bottom of float with air horn held upright (Gauge BT-107). Adjust by bending float tang.

Fast Idle: No adjustment of fast idle speed is provided. It is necessary however, to have correct relationship between fast idle cam position and choke valve position. Check & adjust as follows: Place end of idle adjusting screw on next to highest step of fast idle cam. Using Gauge J-5921, small end of gauge must slide easily between upper edge of choke valve and bore of carburetor, with gauge held vertically. If necessary, bend choke rod until correct clearance is obtained.

Unloader Adjustment—With throttle in wide open position, wide end of Gauge J-5921 must slide freely between upper edge of choke valve and carburetor bore. Bend tang of throttle lever to obtain necessary clearance.

Automatic Choke Setting: Centered (at index).

►*OTHER DATA: See "Rochester 2GC Carburetor" in Carburetor Section.*

Powerglide Throttle Linkage Adjustment: *See "Carburetor" above.*

Throttle Return Check Adjustment (Powerglide Cars): *See "Carburetor" above.*

CARTER 4-BARREL WCFB 2218S & 2351S

►*HARD STARTING (AFTER FLOODING): See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section.*

►*LOADING (WHEN STARTING PARTIALLY WARM ENGINE): See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section.*

►*AIR CLEANER INSTALLATION CAUTION (CARS WITH 4-BARREL CARBURETORS):* Before installing air cleaner, the cutouts in the gasket should be matched up with the vent pipes to prevent blocking off vent

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7*

Idle Setting—1/4—1-1/4 turns open. Adjust both screws alike Turn screws out for richer mixture

Idle Speed—450-500 RPM (Synchro-mesh), 400-450 RPM (Powerglide—with Selector lever in "D" range).

►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section*

Powerglide Throttle Linkage Adjustment: *See "Carburetor" above.*

Throttle Return Check Adjustment (Powerglide Cars): *See "Carburetor" above*

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type

Replacement Fuel Pump—AC No. 4150 (Fuel only), No 4141 (Fuel & Vacuum)

Pressure—4-5¼ lbs

See "Fuel Pumps" in Carburetion Equipment Section

Gasoline Gauge: AC Electric

Dash Unit - AC 1519407 (Std.), 1517901 (Corvette).

Tank Unit - AC 1518158 (Exc. Sed. Del., Sta. Wgn,, & Corvette), 1518180 (Sed. Del. & Sta. Wgn.), 1517011 (Corvette). *See "Fuel Gauges" in Carburetion Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BATTERY

Delco 2SM50. *12 Volt.* 9 plate, 50 ampere hour capacity (20 hr. rate).
Battery Ground–Negative terminal.
Engine Ground–Engine to cowl at rear head bolt.

STARTER

Delco-Remy 1107627, 1107640 & 1107645. 12 Volt.
Armature–Delco-Remy 1926626.
Drive–Overrunning clutch (solenoid pinion shift).
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Starting Switch: Delco-Remy Solenoid Switch 1119767 mounted on starter and controlled by Ignition & Starter Switch 1116512. Turn key full RIGHT against spring tension to start.
See "Delco-Remy Starter Solenoid (Without Relay)" in Electrical Equipment Section.

Neutral Safety & Back-up Light Switch: Delco-Remy 1998105 (Std.), 1998112 (Corvette).
Adjustment - *See "Chevrolet Powerglide" in Transmission Section.*

GENERATOR

Pass. Cars - Delco-Remy 1100310 (Std.), 1102020 (Power Steering). 12 Volt.
Corvette - Delco-Remy 1102025. 12 Volt.
Armature - Delco-Remy 1928952 (Gen. 1100310), 1929640 (Gen. 1102020), 1926640 (Gen. 1102025).
Maximum Charging Rate - *See Voltage Regulator.*

Performance Data - Cold

Generator	Amperes	Volts	RPM
1100310	25	14	2780
1102020 & 1102025	30	14	2150

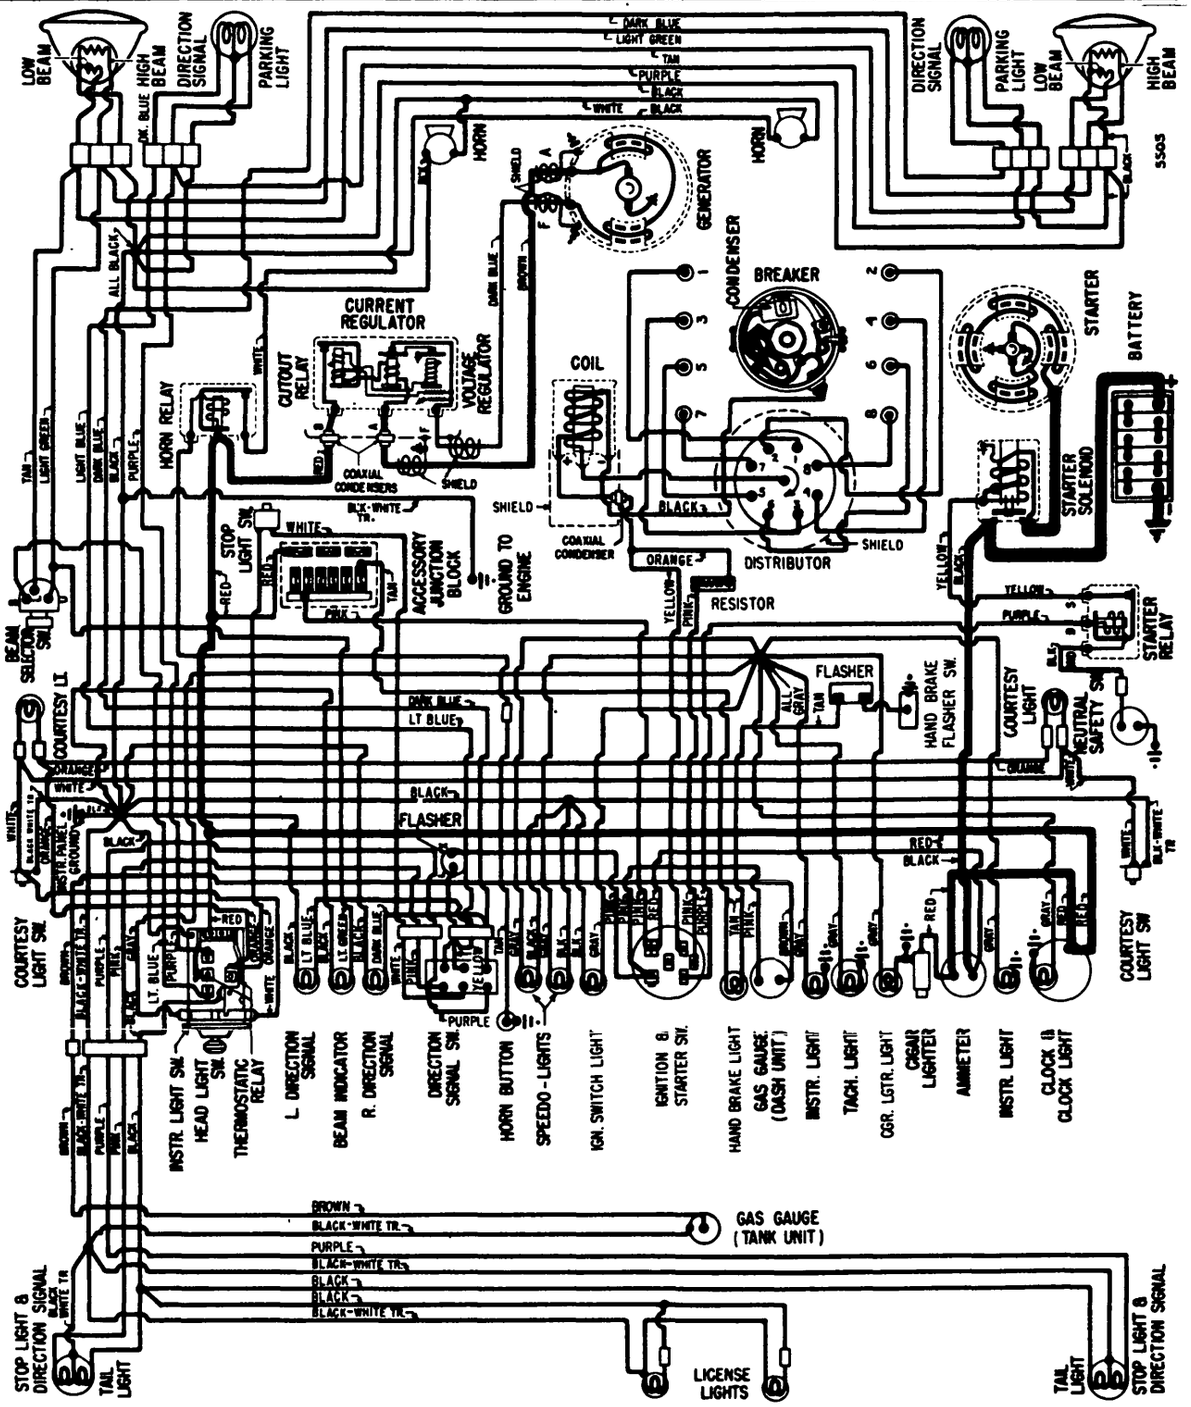
Rotation - Counter-clockwise at commutator end.
Brush Spring Tension - 28 ozs.
Field Current - (1100310) 1.5-1.62 amps. (1102020 & 1102025) 1.48-1.62 amps. at 12 volts.
Belt Adjustment: 13/16" belt deflection midway between fan and generator pulleys with a light pressure applied.

REGULATOR

Delco-Remy 1118945 (Use with Gen. 1100310), Delco-Remy 1118826 (Use with Gen. 1102020). *NOTE–Regulator is "1118825 Series". Specifications below are for "Normal" settings.*

Cut-Out Relay

Cuts In–11.8-13.5 volts (hot).
Contact Gap–.020".
Air Gap–.020" (with contacts just closed).



Voltage Regulator

Setting–13.8-14.8 volts (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section.*

Current Regulator

Setting (1118945)–23-27 amperes (hot).
Setting (1118826)–27-33 amperes (hot).

CONTINUED ON NEXT PAGE

CORVETTE WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—See *"Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equipment Section.*

Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*

Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*

Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel) and pull shaft and knob out. Remove switch retaining nut and switch assembly.

Stop Light Switch Location: Mechanical type mounted under instrument panel adjacent to brake pedal lever. **Adjustment**—Adjust position of switch so that stop light goes out when brake pedal depressed 5/8" from fully released position.

FUSES: All accessory fuses except as indicated below are contained on the accessory fuse and junction block located on upper inside of dash panel to left of steering column.

Overdrive—14 amps Located in Lucite cartridge in overdrive relay feed wire on engine side of dash panel to left of steering column

CIRCUIT BREAKER: Two 13 amp, circuit breakers located on main lighting switch, protects all lighting circuits

HORNS: Delco-Remy 1999759 (Low Note), 1999760 (High Note).

Horn Relay: Delco-Remy 1116781.

ENGINE

PASSENGER CARS

►*TWO ENGINES ON PASSENGER CARS "Conventional V8" (Early Synchro-mesh Cars—with "solid" valve lifters), and "Powerglide V8" (All Powerglide & Later Synchro-mesh Cars—hydraulic valve lifters)*

ENGINE SPECIFICATIONS· Own "V8" Valve-in-head.

Bore	Stroke	Displacement	Rated H.P.
3¾"	3"	265 cu. ins.	45

Engine	Compr. Ratio	Developed H.P.
Standard	8.0-1	162 at 4400 RPM
With Power-Pack	8.0-1	180 at 4600 RPM

Compression & Vacuum Reading—See *Tune-Up.*

►*NOISY VALVE OPERATION & LACK OF OIL IN VALVE SYSTEM (265" V8 ENGINE)* Lack of oil in valve system of RIGHT or LEFT cylinder banks may be caused by incorrect distributor installation *See "Ignition Notes" in Chevrolet Special Data*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data*

OIL PAN REMOVAL: Disconnect steering idler arm bracket from frame side rail and drop for clearance.

ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data*

CYLINDER HEAD & MANIFOLDS: *See Chevrolet Special Data.*

TIGHTENING TORQUES: *See Chevrolet Special Data.*

PISTONS

Cast aluminum, slipper skirt, with piston pin offset 5/64".

Weight—18.77 ozs.

Removal—Pistons and rods removed from above.

Replacement Pistons: Furnished Std. Size & .020", .030", .040" oversize.

►*STANDARD SIZE PISTON NOTE:* Standard pistons furnished in four sizes with size code stamped on piston. The sizes and codes are· **S4** (3.7500-3.7505"), **S5** (3.7505-3.7510"), **S6** (3.7510-3.7515"), **S7** (3.7515-3.7520")

Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole) Pull required to withdraw feeler must be 7-18 lbs.

Installing Pistons: Install pistons with cast depression in head and "F" mark cast in side of piston toward front of block. *See Rod Installation.*

PISTON PINS

Piston pin is pressed into connecting rod and retainers are not used.

Diameters—.9270-.9273". **Length**—3.1200".

Pin Fit in Piston—.00015-.00025". Pins should be capable of supporting own weight in either pin boss at 60°F.

Pin Fit in Connecting Rod—*NOTE—Special tools required for removal & installation. See "Piston Pins" in Chevrolet Special Data.*

Replacement Pins: Furnished only in assembly with piston. Oversizes not available.

PISTON RINGS

Upper compression ring is chrome plated and oil control ring is the four piece type (two steel rails, separator, and expander).

Ring	Width	End Gap	Side Clearance
Compr	077- 078"	007- 020"	001- 003"
Oil	181- 188"	015- 055" ①	000- 008"

①—Gap on rails

►*RING INSTALLATION CAUTION. Install compression rings with side marked "TOP" upward.*

Replacement Rings: Furnished in Standard size, .020", .030", 040" oversize

CONNECTING RODS

Length—5 700" (center-to-center).

Crankpin Journal Diameter—1 999-2.000".

Lower Bearing—Replaceable precision type.

Clearance— 001- 003" (new), 001-.004" (used).

Sideplay— 008- 014" (both rods).

Replacement Bearings Furnished Standard size, .001", 002", 010", 020" Undersize

Installing Rods: Install rod in piston so that flange or heavy side of rod at bearing end will be toward front of piston (cast depression in head of piston and "F" mark on piston strut) on Nos. 1, 3, 5, and 7 pistons, and rod flange to rear of piston on Nos. 2, 4, 6, and 8 pistons. Install rod and piston assembly in cylinder with cast depression in piston head and "F" mark on strut toward front of cylinder block.

CRANKSHAFT

Journal Diameter—2 2978-2 2988"

►*NOTE Journal runout at intermediate bearing .002" max*

Clearance— 001- 003' (new bearings), 001- 004 (used)

End Thrust—Taken at No 5 (rear) main bearing

Endplay— 002- 006 Check at front of rear bearing

Replacement Bearings Furnished Standard size, 001', 002', 010', 020' Undersize

Bearing Installation Not necessary to remove crankshaft or engine from car *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Crankshaft Rear Main Bearing Oil Seal· *See "Crankshaft & Main Bearings" in Chevrolet Special Data*

Crankshaft Front Oil Seal· *See "Engine Front Cover" in Chevrolet Special Data*

Vibration Dampener· *See "Vibration Dampener" in Chevrolet Special Data*

CAMSHAFT

►*CAMSHAFT CAUTION TWO camshafts used as follows* **No 3713453 (Cast No 3713103)**—Cars with solid (conventional mechanical) valve lifters

No 3704212 (Cast No 3703906)—Cars with hydraulic valve lifters

Journal Diameters—1 8682-1 8692' (all journals)

Clearance— 0015- 0035

Bearings—Steel backed babbitt lined bushing

Replacement Bearings· "Precision" type (do not require reaming) Use Tool Set J-6098 to remove and install bearings

Camshaft Setting Both sprockets marked '0' Install chain with sprocket marks adjacent and in line with straight edge across shaft centers

►*CAUTION When installing sprocket on camshaft, line up dowel holes in sprocket and shaft DO NOT DRIVE SPROCKET ON SHAFT, use three mounting bolts and DRAW sprocket into place*

Timing Chain Silent Link Type

Removal & Installation—*See "TIMING CHAIN" in Chevrolet Special Data*

Engine Front Cover Oil Seal (Crankshaft Front Seal) *See "Engine Front Cover" in Chevrolet Special Data*

VALVES

Tappet Clearance *NOTE—"Solid" (conventional) lifters used on Early Synchro mesh Cars, Hydraulic lifters used on all Powerglide and Later Synchro mesh Cars*

Cars with Conventional Lifters— 008 Intake 016' Exhaust with engine "normalized" *See "Valve System" in Chevrolet Special Data*

Cars with Hydraulic Lifters—No adjustment required unless cylinder head removed or valve lifters replaced *See "Valve System" in Chevrolet Special Data*

Valve	Head Diam.	Stem Diam.	Length
Intake	1 720"	3415- 3422"	4 902-4 922'
Exhaust	1½'	3410- 3417"	4 913-4 933'

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°③	①	001- 0027'
Exhaust	45°③	②	0015- 0032'

①— 336" (Solid lifters) 324" (Hydraulic lifters)

②— 343" (Solid lifters) 324" (Hydraulic lifters)

③—Seat angle in block is 46°

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valv Seat Width–3/64"-1/16" (Intake), 1/16"-3/32" (Exhaust).

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance is excessive. Valves are furnished with .003", .015", .030" oversize stems. Use Reamer Set J-5830 for reaming guide holes.

Valve Springs: Install springs with closed coil end of spring toward cylinder head. On intake valve springs a baffle is used inside spring.

Valve Spring Specifications: 71-79 lbs. pressure when spring compressed to 1 45/64".

Free Length–2.03" **Installed Height**–1 11/16-1 47/64".

►*VALVE SPRING INSTALLED HEIGHT CAUTION.* Check installed height of valve spring after grinding valves by measuring the distance from spring seat in cylinder head to top of valve spring. If this dimension exceeds 1 47/64" install a valve spring seat shim approximately 1/16' thick.

Valve Lifters (Conventional "Solid" Type): Plain barrel type. Remove in same manner as hydraulic lifters. *See "Valve System" in Chevrolet Special Data.*

Valve Lifters (Hydraulic Type): Identified by rib in center of oil feed relief at center of body. *See "Valve System" in Chevrolet Special Data.*

Rocker Arms: Mounted individually on studs pressed into cylinder head.

Rocker Arm Stud Replacement–*See "Valve System" in Chevrolet Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Cars with Conventional Lifters

Intake Valves–Open 12° BTDC Close 54° ALDC.
Exhaust Valves–Open 52° BLDC Close 14° ATDC

Cars with Hydraulic Lifters

Intake Valves–Open 18° BTDC Close 54° ALDC
Exhaust Valves–Open 52° BLDC Close 14° ATDC

ENGINE
CORVETTE

ENGINE SPECIFICATIONS: Own. "V8" Valve-in-head.

Bore	Stroke	Displacement
3¾"	3"	265 cu. ins.
Compr. Ratio	**Rated HP**	**Developed HP**
8.0-1	45	195 at 5000 RPM

►*NOISY VALVE OPERATION & LACK OF OIL IN VALVE SYSTEM (265" V8 ENGINE):* Lack of oil in valve system of RIGHT or LEFT cylinder banks may be caused by incorrect distributor installation. *See "Ignition Notes" in Chevrolet Special Data.*

TIGHTENING TORQUES: *See Chevrolet Special Data.*

OTHER ENGINE DATA: *See 1955 Chevrolet V8 Pass. Car Engine Data and note the following:*

CAMSHAFT: *CAUTION–The Corvette camshaft is different than the camshaft used in V8 Pass. Cars, and is identified by No. 3711354 cast into shaft.*

Valves:	Head Diam.	Stem Diam.	Length
Intake	1.720"	.3415-.3422"	4.902-4.922"
Exhaust	1½"	.3410-.3417"	4.913-4.933"

Valv	Seat Angl ①	Lift	Stem Clearanc
Intake	45°	.4043"	.001-.0027"
Exhaust	45°	.4136"	.0015-.0032"

①–Angle in head is 46°.

Valve Springs: Install springs with closed coil end down.

	Spring Pressure	Length
Valve Closed	.65-72 lbs.	1.696"
Valve Open	151-161 lbs.	1.306"

Valve Lifters: Barrel type. Not hydraulic

VALVE TIMING: *NOTE–Valve timing is different than on the V8 Passenger Car.*

Intake Valves–Open 21°30' BTDC. Close 63°30' ALDC.

Exhaust Valves–Open 62°30' BLDC. Close 23°30' ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: 4 qts. (refill), 5 qts (Dry)

Normal Oil Pressure: 35 lbs (approx.)

Pressure Regulator Valve–In oil pump body. Not adjustable.

Oil Pressure Indicator–Light located at right side of instrument cluster, controlled by a pressure operated **switch AC No. 1508245 (Std.), 1508063(Corvette), located in main oil gallery on engine left side. Switch closes at 4-6 lbs.**

Oil Filter Element: AC P-115

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul–*See "Oiling System" in Chevrolet Special Data.*

Crankcase Ventilation–Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

COOLING

►*RADIATOR REMOVAL CAUTION (POWERGLIDE CARS): Transmission oil cooler is part of radiator lower tank, and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.*

Water Capacity: 16 qts. (17 qts. with heater).

Pressure Valve: AC No. 850549. In radiator cap. 7 lb. type.

Thermostat: Harrison. In water outlet in intake manifold.

Standard–No. 3123993 (stamped 151), 151° Can be used for alcohol anti-freeze.

Optional–No. 3123994 (stamped 160) 160°, No. 3133597 (stamped 170) 170°, No. 3123995 (stamped 180) 180°.

NOTE–Do not use a 180° thermostat with 7 lb. radiator cap.

Temperatur Gaug: AC No. 1512931 (Std.), 1512756 (Corvette). No Electric.

Water Pump: Packless type with sealed ball bearing shaft.

See "Water Pumps" in Chevrolet Special Data.

Radiator Removal & Installation: *See "Cooling System" in Chevrolet Special Data.*

CLUTCH

Own (Exc. Powerglide Cars)–Diaphragm spring type. *See "Chevrolet (Own)" in Clutch Section.*

Model	Clutch Disc No.
Standard (Exc. O.D., Hvy. Duty)	3836708
Standard (Exc. O.D., H.D. & 4-Bbl. Carb.)	3836534
Overdrive (Exc. Hvy. Duty & 4-Bbl. Carb.)	3720227
Heavy Duty	3836119

Pedal Adjustment: Pedal free travel ¾-1'. Loosen check nut at connecting link at clutch fork. Turn adjusting nut to remove all lash at fork, **then back off two turns.**

Removal: Remove transmission (see Transmission Removal below). Remove throw-out bearing. Remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove cover assembly from below. *CAUTION*–Do not allow pressure plate to hang from retracting springs (support by hand). When installing clutch, align 'X' marks on cover and on flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.
See "Chevrolet 3-Speed" in Transmission Section.

►*HARD SHIFTING CORRECTION. See "Chevrolet Transmission Control" and "Chevrolet 3-Speed" in Transmission Section for shift linkage rework and installation of new transmission parts.*

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission and disconnect speedometer cable and shift rods. Disconnect propeller shaft at rear universal and slide shaft toward rear to disengage from transmission. Remove two top transmission to clutch housing screws and install Guide Pins J-1126. Remove the two lower screws and slide transmission back until clutch splines disengage. Remove transmission from below car.

OVERDRIVE

Warner Model AS1-R10H. Solenoid operated type with with governor control and throttle operated kickdown.

See "Chevrolet R10 Overdrive" in Transmission Section.

Overdrive Control: *See "Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

POWERGLIDE TRANSMISSION

Powerglide Transmission—Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Chevrolet Powerglide" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication—Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing an "AQ-ATF" marking on container.

Capacity—5 qts. (refill), 11 qts. (after overhaul).

►*POWERGLIDE DRAINING CAUTION: There is no drain plug on converter. Drain transmission case only, add 5 qts, of fluid initially, recheck after idling engine.*

►*CHECKING FLUID LEVEL & FILLING TRANSMISSION NOTE:* A filler plug has been added to transmission side cover for use in checking fluid level and adding fluid to transmission. This change made necessary because filler tube and dipstick is not accessible from under hood on air conditioned cars.

Checking Fluid Level—Engine must be idling with parking brake set, transmission warm, and the selector lever in "N" position when taking dipstick readings (on cars without air conditioning), or checking level at filler plug on side of transmission (cars with air conditioning). Maintain fluid level to "F" mark on dipstick (cars without air conditioning), or to bottom of filler plug hole on side of transmission (cars with air conditioning).

►*OTHER DATA: See "Chevrolet Powerglide" in Transmission Section.*

UNIVERSALS

Own. Needle bearing type.

►*CAUTION:* Rear bearing companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever companion flange nut loosened. *See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section.*

REAR AXLE

Own. Semi-floating, hypoid gear type, with Hotchkiss Drive. Pinion bearing adjustment is different than on previous models.

See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section.

►*PINION BEARING PRELOAD CAUTION:* Rear universal joint companion flange controls rear axle pinion bearing preload. Bearing preload must be adjusted whenever companion flange nut is loosened.

Car Model	Axle Ratio	Serial Prefix
Std. Transmission	3.70-1	AA or BA
Overdrive	4.11-1	AC or BC
Powerglide	3.55-1	AB or BB

Backlash—.005-.008".

Removal: Raise car and support with jack stands under frame side rails. Remove rear wheels and remove two trunnion bearing "U" bolts from rear universal yoke and separate the joint (tape bearings to trunnion). Disconnect hand brake cable and equalizer and remove cable from clamps at frame. Disconnect hydraulic brake lines at rear axle housing Disconnect shocks. Support axle assembly on hydraulic jack and remove spring "U" bolts, nuts and anchor plate, and lower axle to floor.

Axle Shaft Removal: Raise car and place jack stands under axle housing. Remove tire, wheel and brake drum assembly. Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange). Attach Axle Puller J-5748, with slide hammer, to flange and remove axle shaft and bearing assembly. Be careful not to disturb backing plate. *NOTE*—If bearing retainer and parking brake strut interfere, raise strut slightly with screwdriver to obtain clearance.

SHOCK ABSORBERS

Delco. Direct acting non-adjustable. Serviced by replacement.

FRONT SUSPENSION

Independent with direct acting shock absorbers within front coil springs. Different types used as follows:

Corvette—"Threaded Bushing" type pivot points on upper and lower control arms.

Others—"Spherical Joint" type pivot points between control arms and steering knuckle support.

See "Chevrolet" in Suspension & Wheel Alignment Sect.

See "Chevrolet (Spherical Joint)" in Front Suspension Section.

Kingpin Inclination - 3½°±½° (Std.), 3½°-4½° (Corvette).
Caster - 0°±½° (Std.), 0°-Pos. 1° (Corvette).
Camber - 0°-Pos. 1°.
Toe-In - 1/8-3/16" (Std.), 0-1/8" (Corvette).
Toe-Out on Turns - **(Std.)** Outer wheel 20°, inner should be 22½°±2°.
(Corvette) Outer wheel 17°, inner should be 20°.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut.

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Own (Linkage Type). *See "Chevrolet Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic, without anchor pin adjustment. Hand lever applies rear wheel service brakes.

See "Chevrolet-Bendix Hydraulic" in Brake Section.

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION:* To compensate for lack of brake anchor adjustment, brake shoes are ground to a .057-.087" smaller diameter than the drum diameter. Grinding to the true diameter on a bench grinder will cause heel and toe contact, resulting in faulty brake action. *NOTE—If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter.*

►*SLOW BRAKE PEDAL RETURN CORRECTION: See "Brake Notes" in Chevrolet Special Data.*

Drums—Diameter 11".

Wheel Cylinder Diameter—Front 1 1/8", Rear 1".

Lining	Width	Thickness
Front Whl.	2"	.187-.194"
Rear Whl.	1¾"	.187-.194"

Length Per Shoe—9.3125" (Primary), 11.6875" (Secondary).

Braking Power—55.9% (Front Wheels), 44.1% (Rear Wheels).

Clearance—Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag after adjustment.

Standard Master Cylinder: Located on engine side of firewall in line with brake pedal.

Checking Fluid—Reservoir is integral with master cylinder. Maintain level in cylinder to lower edge of filler hole.

Removal—Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove four retaining nuts and lock washers holding master cylinder to firewall and remove cylinder.

Installation—Reverse removal procedure making sure that push rod clevis is straddling the brake pedal. Refill master cylinder and bleed all brake lines. Adjust push rod-to-main cylinder clearance as follows: Make sure brake pedal returns to fully released position with no binding, and that pedal retracting spring has not lost its tension, then adjust brake pedal clevis to give a barely perceptible end play between main cylinder piston and brake push rod (approximately 1/16" pedal clearance).

Power Brakes: Bendix Vacuum Type Power Unit replaces conventional master cylinder.

See "Bendix Power Unit" in Brake Section.

MISC. MECHANICAL

Air Conditioning: *See "Chevrolet Air Conditioning" in Miscellaneous Section.*

Windshield Wipers: Cable operated type (Std.). Electric type (Optional).

See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric type with reversible motor operating each door window assembly.

See "Power Window Regulators" in Miscellaneous Section.

Power Top Controls: Hydro-Lectric. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjuster: Reversible electric motor controls horizontal front seat movement. *See "Power Seat Adjusters" in Miscellaneous Section.*

MODEL IDENTIFICATION

Series	Serial Prefix	Wheelbase	Type
3100	H	114"	Half Ton
3200	M	123 1/4"	Half Ton
3400	F	104"	① 3/4 Ton
3500	G	125"	① 3/4 Ton
3600	J	123 1/4"	3/4 Ton
3700	K	137"	① 3/4 Ton
3800	L	135"	1 Ton

6400S	SW	154"	⑤ 1 1/2 Ton
6500S	SX	172"	⑤ 1 1/2 Ton

①—Forward Control. ②—School Bus Chassis.
③—Low Cab Forward. ④—Low Cab Forward Special.
⑤—Special.

SERIAL NUMBER: Stamped on a metal plate and attached to the body as follows: **Forward Control Models**—On instrument panel support. **Flat Face Cowl Models**—On cowl inner panel. **All Other Models**—Left front door hinge pillar.

Starting Serial Number: 001001 at each assembly plant regardless of series.

►*SERIAL NUMBER NOTE: Serial number (example V255K 001083) includes following identification data in sequence.*

Series ①	Year	Assy. Plant ③	Serial No.
V	255②	K	001083

①—Serial Prefix for each model.
②—Second Series 1955
③—See Assembly Plant Designation (below).

Assembly Plant Designation

A—Atlanta	K-Kansas City	S—St. Louis
B—Baltimore	L—Los Angeles	T—Tarrytown
F—Flint	N—Norwood	O—Oakland
J—Janesville		

ENGINE NUMBER (V8): Stamped on pad at front right hand side of cylinder block behind water pump.

ENGINE NUMBER (6 CYL.): Stamped on right side of block to rear of distributor.

Starting Engine Number: 0001001 (at each plant). Engine numbers will run concurrently with 1st Series Trucks. Suffix letters and numerals indicate plant at which engine built ("F" for Flint, "T" for Tonawanda, "C" for Canadian), Model Year, and Model Type. *Series following for Series Type Designation.*

►*ENGINE NUMBER NOTE: Engine number (example 0001025 F 255 T) includes following identification data in sequence.*

Serial No.	Engine Plant ①	Year	Series ②
0001025	F	255③	T

①—See Starting Engine Number (above).
②—See Series Type Designation (below).
③—Second Series 1955.

Series Type Designation

Series	Engine	Designation
3100, 3200, 3600, 3800	Thriftmaster 235"	① X
3100, 3200, 3600, 3800	Thriftmaster 235" ②	① M
3400, 3500, 3700	Thriftmaster 235" ③	T
3400, 3500, 3700	Thriftmaster 235" ④	L
4000	Thriftmaster 235" ⑤	⑥ S
5000	Taskmaster V8	E
6000	Loadmaster 235"	P
6000	Jobmaster 261"	⑦ N

①—"A" stamped following suffix when this engine used in 3600 Series, and "B" when used in 3800 Series.
②—With Hydra-Matic Transmission.
③—With Updraft carburetor.
④—With Updraft carburetor and Hydra-Matic.
⑤—With Heavy Duty Clutch
⑥—"A" stamped following suffix when this engine used in 3600 Series, "B" if used in 3800 Series, and "C" if used in 3100 & 3200 Series.
⑦—"A" stamped following suffix when this engine used in 4000 Series.

TUNE-UP

COMPRESSION PRESSURE: 6 Cyl. Engine—130 lbs. minimum with all cylinders equal within 5-10 lbs. at cranking speed.
V8 Engine—160 lbs. minimum with all cylinders equal within 10 lbs. at cranking speed.

VACUUM READING: 6 Cyl. Engine—17-21" at idling speed.
V8 Engine—Adjust to highest steady vacuum reading

VALVE TAPPET CLEARANCE: *(NOTE—Conventional type lifters used on 6 Cyl. engines. Hydraulic valve lifters used on V8 Engines. See Production Change*

►*V8 ENGINE VALVE LIFTER PRODUCTION CHANGE:* Conventional type lifters used in Early V8 Trucks without Automatic Transmissions All later trucks were equipped with hydraulic valve lifters
Initial Tappet Clearance (Engs. with Hydraulic Lifters) *See "Valve System" in Chevrolet Special Data.*
6 Cyl. Engines—(3000 Series)—Intake 006". Exhaust .016". **(Other Series)**—Intake .006". Exhaust .020". with engine "normalized" *See "Valve System" in Chevrolet Special Data*
V8 Engines (With Conventional Lifters)— 008" Intake, 016" Exhaust, with engine "normalized". *See "Valve System" in Chevrolet Special Data.*
V8 Engines (With Hydraulic Lifters)—No adjustment required unless cylinder head removed or valve lifters replaced *See "Valve System" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. On 6 Cyl. engines, ½ turn from unhooked position should be required to place spring in hooked position. Distorted springs should be replaced.

IGNITION

FIRING ORDER: 6 Cyl. Engines—1-5-3-6-2-4.
V8 Engines—1-8-4-3-6-5-7-2. See diagram.

SPARK PLUG GAP: .035".
Spark Plug—AC No 44-5 (Std.). AC 46-5 (Continuous operation). AC 43-5 (Use for heavy duty operation). 14mm. Torque to 20-25 ft. lbs.

COIL: Delco-Remy 1115087. *12 Volt.*
Ignition Current—1 8 amps. idling, 4.0 stopped
Resistor—Delco-Remy 1931614 On firewall.

►*COIL RESISTOR NOTE:* Resistor is connected to ignition switch by two leads and is by-passed during cranking as follows: **(Trucks with Key Starting)**—2nd lead provides direct connection to coil when key turned to "Start Engine" position **(Trucks with Pedal Starting)**—2nd. lead provides direct connection to coil while starter cranking (feed through lead from starter switch to ignition switch—see diagram)

DISTRIBUTOR: Delco-Remy. (235" Eng.) 1112403, (261" Eng.) 1112407, (V8 Eng.) 1110847. *12 Volt.*
Condenser—Delco-Remy 1928111 (6 Cyl Distr.), 1869704 (V8 Distr.) **Capacity**—.18- 23 *mfd.*
Contact Point Set—Delco-Remy 1924571 (6 Cyl. Distr.), 1924499 (V8 Distr.)
Breaker Gap— 019" (new points), 016" (used points).
Cam Angle—28-35° (6 Cyl. Distr.), 26-33° (V8 Distr.), all at 016" gap.
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—1110847

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	400	0-4	800
8-10	1150	16-20	2300
15-17	1800	30-34	3600

Automatic Advance—1112403

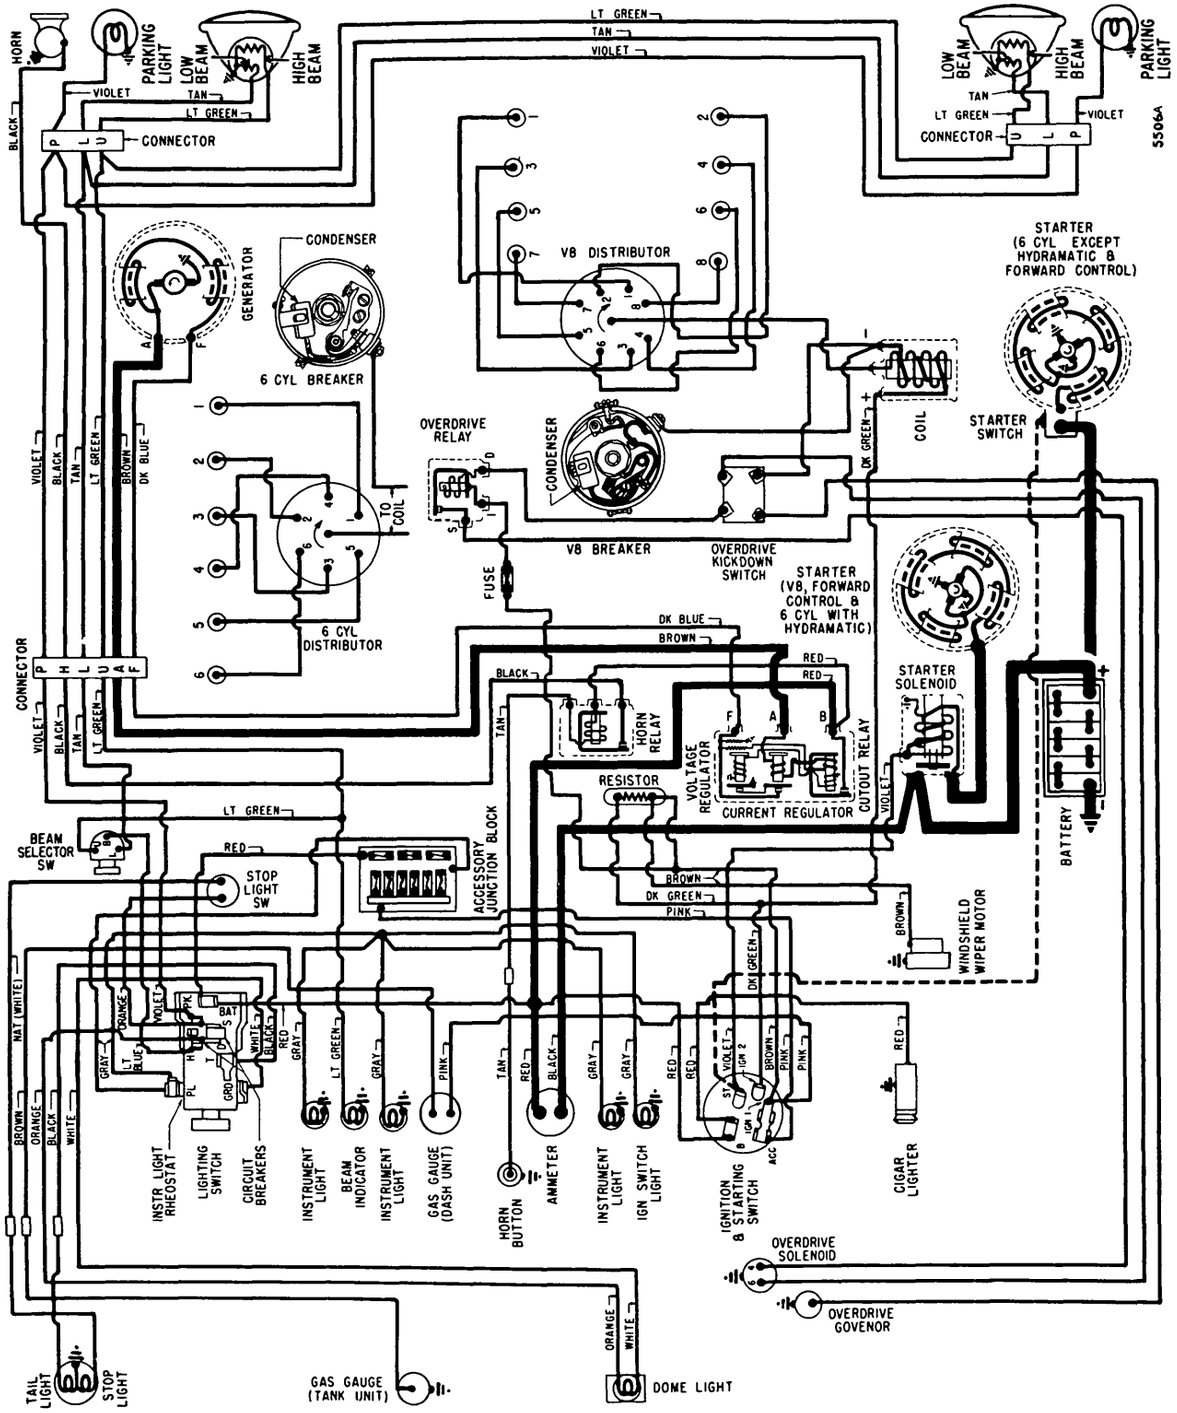
Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

Automatic Advance—1112407

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	350	0-4	700
7-9	750	14-18	1500
11-13	1200	22-26	2400
16-18	1800	32-36	3600

Vacuum Spark Control: Delco-Remy 1116089 (6 Cyl. Distr.), 1116085 (V8 Distr.)

Vacuum Advance—1110847



Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7
14	28	13 5-15 5

Vacuum Advance—1112403 & 1112407

Start	0	4-6
7.5	15	7.5-10

►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION (265" V8 ENGINE):* Incorrect installation may cut off oil to RIGHT or LEFT valve lifter gallery (valve lifters, pushrods, and rocker arms) *See "Ignition Notes" in Chevrolet Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

IGNITION TIMING

6 CYL. ENGINE

Setting (6 Cyl. Engines)–TDC (with engine at normal idle speed).

Timing Mark (6 Cyl. Engines)–Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing, with Octane Selector set on "O". Then adjust Octane Selector as follows:

Octane Selector Setting (6 Cyl. Engines)–Set for slight ping when accelerating with wide open throttle.

V8 ENGINE

Setting (V8 Engines) - 4° BTDC. *Set timing at IDLE SPEED with vacuum line connected.*

►*IGNITION TIMING PROCEDURE CHANGE: Previous recommendation of setting timing at 1000 RPM with vacuum line disconnected has been discontinued.*

Timing Mark (V8 Engines)–Mark on vibration dampener and an indicator on left side of timing chain cover. Indicator is marked with five lines on both sides of "O". Each line represents 2°.

CARBURETOR

►*CARBURETOR APPLICATION NOTE: Rochest r "B" & "BC" Carburetors are standard on all 6 Cyl. Models (except Forward Control). Rochester "2G" & "2GC" Carburetors are standard on all V8 Models. Carter Updraft Carburetor is standard on Forward Control Models.*

THROTTLE LINKAGE ADJUSTMENT (Hydra-Matic Drive Trucks): *See "Hydra-Matic Drive" in Transmission Section.*

ROCHESTER "B" & "BC"

Downdraft types with manual choke (Rochester Model "B"), and automatic choke (Rochester Model "BC").

Models	Rochester N .
235" Engine ①	② 7004468
235" Engine ③	④ 7007181
261" Engine	② 7005140

①–Except Forward Control & Automatic Transmission models.

②–With Manual Choke.

③–With Automatic Transmission (Except Forward Control models).

④–With Automatic Choke.

Idle Setting (Exc. 7005140)–1 to 2½ turns open, (turn screw out for richer mixture).

Idle Setting (7005140)–1 to 1½ turns open, (turn screw out for richer mixture).

Idle Speed–400-450 RPM. (Exc. Automatic Trans. models), 425 RPM. with Selector Lever in "N" position (Automatic Transmission models).

Float Level (All Models)–1 5/16" from bottom of each float to cover gasket (do not remove gasket) with cover inverted so that needle closed. Use No. 3696192 gauge to set float level and align floats (twisted floats may hang up or rub on bowl) Check float drop or travel by turning cover right side up so floats drop down.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Distance from gasket on cover to bottom of each float should be 1¾". Adjust by bending tang at rear of float assembly.

►*CAUTION: Both floats must be set alike and must not be twisted out of alignment.*

Accelerating Pump—No seasonal adjustment.

Fast Idle (7007181): To check setting, hold throttle in wide open position, check choke valve opening or clearance between lower edge of valve and air horn wall. This clearance should be .073" (Gauge BT-64 or Chevrolet Gauge J-5120). If clearance not correct, adjust by bending connector rod using tool BT-18 or Chevrolet Tool J-4552.

Unloader Adjustment (7007181): With throttle valve in wide open position, clearance between lower edge of choke valve and carburetor bore should be .166" (large end of Gauge BT-64 or Chevrolet Gauge J-5120). Bend tang of throttle lever with tool J-4552 to obtain necessary clearance.

Automatic Choke Setting (7007181): Centered setting. Scribe mark on cover in line with long mark on housing.

Throttle Kicker (Not used on 7007181): Operated by cam on choke lever. Opens throttle when choke closed. No adjustment.

►*OTHER DATA: See "Rochester B & BC Carburetor" in Carburetor Section.*

Throttle Linkage Adjustment (Hydra-Matic Trucks): *See "Hydra-Matic Drive" in Transmission Section.*

Fuel Pump Pressure: 3½ -4¼ lbs.

ROCHESTER "2G" & "2GC"

Dual downdraft type with manual choke (Rochester Model "2G"), automatic choke (Rochester "2GC").

Models	Rochester No.
265" Engine (V8) ①	② 7006770
265" Engine (V8) ③	④ 7008399

①—Except Forward Control models and models equipped with Overdrive or governor.
②—With Automatic Choke.
③—Models equipped with Overdrive.
④—Manual Choke.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting—After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smooth idle with highest vacuum reading and engine RPM.

Idle Speed—475 RPM (Synchro-mesh) Trans.). 425 RPM (Hydra-Matic—with selector lever in "N").

Float Level—1 5/32" from air horn gasket to top of float with assembly inverted. Use Gauge BT-107 or Chevrolet Gauge J-5915 so it rests against power piston shaft with outer leg in line with center of float. Adjust by bending float arm between pivot and float with Tool BT-69.

Float Drop—1 29/32" between air horn gasket and lowest point on bottom of float with air horn held upright (Gauge BT-107). Adjust by bending float tang.

Fast Idle: No adjustment of fast idle speed is provided, It is necessary, however, to have correct relationship between fast idle cam position and choke valve position. Check & adjust as follows: Place end of idle adjusting screw on next to highest step of fast idle cam. Using Gauge J-5921, small end of gauge must slide easily between upper edge of choke valve and bore of carburetor, with gauge held vertically. If necessary, bend choke rod for correct clearance.

Unloader Adjustment: With throttle in wide open position, wide end of Gauge J-5921 must slide freely between upper edge of choke valve and carburetor bore. Bend throttle lever tang for correct clearance.

Automatic Choke Setting: Centered (at index).

►*OTHER DATA: See "Rochester 2G & 2GC Carburetor" in Carburetor Section.*

Throttle Linkage Adjustment (Hydra-Matic Trucks): *See "Hydra-Matic Drive" in Transmission Section.*

Fuel Pump Pressure: 4-5¼ lbs.

CARTER

Carter (BB) 871SB (Forward Control Models). Single barrel updraft type with manual choke control.

Idle Setting—½-1½ turns open (turn screw out for richer mixture).

Idle Speed—450-500 RPM (Synchro-mesh), 400-450 RPM (Hydra-Matic).

Float Level—Top of float (not seam) 0" to 1/32" below top of bowl with needle valve seated. Use Gauge J-818-13A on top edge of bowl (gasket removed). Press float lever lip firmly against needle.

Accelerating Pump—Inner holes (in plunger shaft and throttle lever) Summer. Outer hole Winter.

►*OTHER DATA: See "Carter (BB) Carburetors" in Carburetor Section.*

Throttle Linkage Adjustment (Hydra-Matic Trucks): *See "Hydra-Matic Drive" in Transmission Section.*

Fuel Pump Pressure: 3½-4¼ lbs.

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type. **Replacement Pump**—As follows:

Model	AC Pump No.
6 Cyl. (exc. School Bus)	① 4149
6 Cyl. (exc. School Bus)	② 4138
6 Cyl. (School Bus)	② 9797
V8	① 4150
V8	② 4141

①—Fuel only. ②—Fuel & Vacuum.

Pressure—3½-4¼ lbs. (6 Cyl.), 4-6¼ lbs. (V8).

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: AC Electric.

Dash Unit—AC No. 1518461.

Tank Unit—AC No. 1518235 (Cab Models, except Forward Control). No. 1518236 (Forward Control Models & Utility Models with Cowl). No. 1518258 (Cowl—Single Unit Models). No. 1518234 (School Bus Chassis).

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco-2SM50 (Exc. School Bus). 12 Volt, 9 plate, 50 ampere hour capacity (20 hr. rate).

Delco-3SM70 (School Bus). 12 Volt, 11 plate, 70 ampere hour capacity (20 hr. rate).

Battery Ground—Negative ground.

Engine Ground—Engine to frame (6 Cyl.). Engine to dash (V8).

STARTER

Model	Delco-Remy No.
6 Cyl. (Exc. Fwd. Cont. & Hydra-Matic)	① 1107634
6 Cyl. (With Hydra-Matic)	② 1107633
6 Cyl. (Fwd. Cont. W/O Hydra-Matic)	② 1107626
V8 (Exc. Hydra-Matic)	② 1107627
V8 (With Hydra-Matic)	② 1107643

①—Manual Pinion Shift. ②—Solenoid Pinion Shift.

Armature—Delco-Remy 1926626 (all models).

Drive (6 Cyl. Synchro-mesh Trans., Exc. Fwd. Cont.)—Overrunning clutch (pedal operated pinion shift).

Drive (6 Cyl. Fwd. Control & Hydra-Matic, All V8 Models)—Overrunning clutch (solenoid pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Starting Switch: (Solenoid Pinion Shift Models)—Delco-Remy Solenoid Switch No. 1119767 mounted on starter and controlled by Ignition & Starter Switch 1116522 (exc. Hydra-Matic), 1116514 (Hydra-Matic).

Starter Switch (Manual Pinion Shift Models): Delco-Remy. Mounted on starter and controlled by pedal operated lever. *NOTE*—Switch has small terminal on side for coil resistor by-passing while cranking.

Hydra-Matic Neutral Safety Switch Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy. Different generators used as follows:

Model	Generator No.	Armature No.
All Models (Std.)	1100310	1928952
Optl. (30 Amp.)	1105947	
Optl. (40 Amp.)	1106981	1929360
Optl. (Power Strg.)	1106982	

Performance Data—Cold

Generator	Amperes ①	Volts	RPM
1100310	25	14.0	2780
1105947	32	14.0	1850
1106981	40	13.0	1500
1106982	40	13.0	1500

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—28 ozs.

Field Current—1.5-1.62 amperes (1100310), 1.54-1.67 amperes (1105947), 1.37-1.50 amperes (1106981, 2).

Belt Adjustment: ¾" (6 Cyl. Engine), 13/16" (V8 Engine) deflection midway between water pump and generator pulleys, with a light force applied to belt.

REGULATOR

Delco-Remy. Different regulators used as follows:

Regulator No.	For Generator No.
1118945	1100310
1118826	1105947
1118948	1106981 & 1106982

►*NOTE: Specifications below are for "Normal" settings.*

Cut-Out Relay

Cuts In—11.8-13.5 volts (1118826 & 1118945), 11.5-13.0 volts (1118948)

Contact Gap—.020".

Air Gap—.020" (with contacts just closed).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

V ltage R gulat r

Setting (1118826 & 1118945)–13.8-14.8 volts hot.

Setting (1118948)–13.6-14.3 volts hot.

Air Gap–.075" (1118826 & 1118945), .063" (1118948) with armature pressed down to point where contacts just touching.

Ch cking & Adjusting–*S "Delco-Remy 1118825 Seri s R gulat r" in Electric Equipment Section.*

►*LOADMASTER 235" & JOBMASTER 261" ENGINE PISTON RING NOTE: Upper compression ring is chrome plated and oil ring has spiral spring expander.*

►*VALVE ROTATOR NOTE: New type valve rotators are standard equipment on 235" Loadmaster, 261" Jobmaster & 265" Taskmaster Engines on 5000 & 6000 Series (special equipment on other trucks). See "Valve System" in Chevrolet Special Data.*

►*V8 ENGINE HYDRAULIC VALVE LIFTER PRODUCTION CHANGE:* Hydraulic valve lifters are standard equipment on all Late 1955 V8 Engines. Early 1955 V8 Engines when used with Synchro-mesh Transmissions were equipped with conventional type lifters.

TAPPET CLEARANCE: *NOTE–Conventional type lifters used on 6 Cyl. and Early V8 Engines, Hydraulic lifters used on Later V8 Engines.*

6 Cyl. Engine (3000 Series)–.006" Intake, .016" Exhaust, **(Other Series)**–.006" Intake, .020" Exhaust with engine "normalized". *See "Valve System" in Chevrolet Special Data.*

V8 Engines (Conventional Lifters)– .008" Intake, .016" Exhaust with engine "normalized". *See "Valve System" in Chevrolet Special Data.*

V8 Engine (Hydraulic Lifters)–Adjustment required only when cylinder head removed or lifters replaced. *See "Tappet Clearance Adjustment" under VALVE SYSTEM in Chevrolet Special Data.*

VALVE TIMING: As indicated below:

235" Thriftmaster & 235" Loadmaster

Intake Valves–Open 1° ATDC. Close 39° ALDC.

Exhaust Valve–Open 42° BLDC. Close 9° ATDC.

261" Jobmaster

Intake Valves–Open 11°30'BTDC. Close 52°30'ALDC.

Exhaust Valves–Open 51° BLDC. Close 13° ATDC.

265" V8 Taskmaster (Conventional Lifters)

Intake Valves–Open 12° BTDC. Close 54° ALDC.

Exhaust Valves–Open 52° BLDC. Close 14° ATDC.

265" V8 Taskmaster (Hydraulic Lifters)

Intake Valves–Open 18° BTDC. Close 54° ALDC.

Exhaust Valves–Open 52° BLDC. Close 14° ATDC.

Valve Timing Check (235" & 261" Engines): Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve opens and just starts to close and until triangular mark on flywheel lines up with pointer in flywheel housing opening. Mount dial indicator on rocker arm shaft support with stem contacting No. 1 exhaust valve adjusting screw, set dial indicator to .044" (Thriftmaster & Loadmaster); .063" (Jobmaster). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset No. 1 exhaust valve to correct running clearance.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" und r OILING SYSTEM in Ch vr l t Sp cial Data.*

Crankcas Capacity: (6 Cyl.)–5 qts. (refill), 5½ qts. (dry). **(V8)**–4 qts. (refill), 5 qts. (dry).

N rmal Oil Pr ssur : (6 Cyl.–45 lbs. **(V8)**–35 lbs.

Pressure R gulat r Valv s–In oil pump body. Not adjustable.

Oil Pr ssure Indicat r–AC No. 1508246. Not electric.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul–*See "Oiling System" in Chevrol t Special Data.*

Crankcase Ventilation (Standard): Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

Servicing–On all models with air cleaner mounted on valve rocker arm cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

Crankcase Ventilation (Optional): Positive Type. Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**

Servicing–Every 10,000 miles (or oftener if required), clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly.

►*VACUUM VALVE CAUTION:* If improper action of spring is suspected due to spring being distorted, or etched from corrosive action, the valve assembly should be replaced.

COOLING

Water Capacity: Standard–17 qts., (½, ¾, 1-Ton & Forward Control). 18 qts. (1½ & 2-Ton). Add one quart for heater on any model.

Optional–18.5 qts. (All except Forward Control). 17 qts. (2-Ton).

Pressure Valve: AC No. 850549. In radiator cap. 7 lb. type.

Thermostat: Harrison. In cylinder head water outlet (6 Cyl.). In water outlet in intake manifold (V8).

Standard–No. 3123993 (stamped 151), 151°. Can be used for alcohol anti-freeze.

Optional–No. 3123994 (stamped 160), 160°. No. 3133597 (stamped 170), 170°. No. 3123995 (stamped 180), 180°. *NOTE*–Do not use 180° thermostat with 7 lb. radiator cap.

Temperature Gauge: AC No. 1512979. Not electric.

Water Pump: Packless type with sealed ball bearing shaft.

See "Water Pumps" in Chevrolet Special Data.

CLUTCH

6 CYL. ENGINES

Own. Diaphragm spring, single plate, dry disc type. *See "Chevrolet (Own)" in Clutch Section.*

Clutch Disc	Diameter	Chevrolet N . Woven	Mold d
Standard	10"	3826119.	3836097
Heavy Duty ①	11"	3836021	.

①–Standard on Forward Control Models.

Pedal Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. *NOTE*–Use finger pressure only when checking clutch free travel.

R m val: Remove transmission (see Transmission Removal). Remove throwout bearing, remove fork by prying

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. *CAUTION*—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align "X" mark on cover with "X" mark on flywheel.

V8 ENGINES

Borg & Beck 11A7. Chevrolet Part No. 3837155 Single plate.

See "Borg & Beck 11A7" in Clutch Section.

Clutch Disc—Chevrolet No. 3727585.

Pedal Adjustment: Adjust clutch pedal until free travel is 1". Make sure that pedal pad contacts toeboard when pedal pressed down.

Removal: Remove transmission (see Transmission Removal). Before removing clutch assembly, punch mark flywheel, clutch cover and one pressure plate lug so these parts may be assembled in their same relative positions. Loosen hold-down screws evenly and remove cover. *NOTE*—Mark flywheel side of driven plate for correct reassembly

TRANSMISSION

3-SPEED LIGHT DUTY

Own. Three speed, all helical gear type Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).

See "Chevrolet 3-Speed (Light Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever *See "Transmission Controls" in Transmission Section.*

Removal (½ & ¾ Ton): Drain transmission Disconnect speedometer cable at transmission and shift control rods from transmission levers Remove propeller shaft Remove the two top transmission to clutch housing capscrews and insert two transmission guide pins, Tool J-1126, in these holes Remove the two lower transmission to clutch housing capscrews Slide transmission straight back on guide pins until clutch gear is free of splines in the clutch disc

3-SPEED (HEAVY DUTY)

Own. Three speed, constant mesh (second & high), sliding gear (low & reverse).

See "Chevrolet 3-Speed (Heavy Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever.

See "Transmission Control" in Transmission Section.

Removal: Same as for "3-Speed (Light Duty)" above.

4-SPEED

Own. Four-speed, constant mesh, synchro-mesh, helical gear (2nd, 3rd, & 4th), sliding spur gear (low & reverse). Floor mounted gearshift.

See "Chevrolet 4-Speed" in Transmission Section.

Transmission Control: (All Models exc. Forward Control)—Floor mounted gearshift lever

Removal (½ & ¾-Ton): See "3-Speed (Light Duty)" above.

Removal (Other Trucks): Remove screws fastening steering jacket grommet and slide grommet up out of way. Remove accelerator pedal and floor mat. Remove sheet metal screws attaching transmission cover to body floor and remove cover. On Forward Control models remove both front and rear floor pans. Remove speedometer cable from transmission rear bearing retainer. On 1-Ton, remove cotter key and pin attaching parking brake pull rod to parking lever. On 1½ & 2-Ton, disconnect parking brake lever return spring from parking brake operating lever and remove cotter key and pin attaching inner and outer levers to parking brake operating lever Remove parking brake lever lock, flat washer and spring and remove parking brake lever Drain lubricant from transmission. On 1-Ton, break universal joint at transmission joint flange and tape trunnions and bearings together On 1½ & 2-Ton, disconnect intermediate universal joint by removing two trunnion bearing "U" clamps, split joint and lower front end of rear propeller shaft to floor. Remove the four universal joint flange nuts. Remove nuts attaching propeller shaft bearing support bracket to frame cross member and remove front propeller shaft and bearing assembly. On all models, remove the two capscrews attaching transmission to clutch housing and insert two Guide Pins J-1126 in these holes. Remove flywheel underpan and remove two lower transmission to clutch housing capscrews Slide transmission straight back on guide pins until transmission free of splines in clutch disc. Remove transmission.

OVERDRIVE

Warner R10. Used with Chevrolet Truck 3-Speed (Light Duty) Transmission.

See "Chevrolet R10 Overdrive" in Transmission Section.

Overdrive Control: *See "Warner R10 & R11 Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cables have been disconnected.

HYDRA-MATIC DRIVE

Dual Range. Four speed type with fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See Transmission Section.*

►*TESTING & TROUBLE SHOOTING. See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level in transmission every day Drain & refill every 25,000 miles Use only "Automatic Transmission Fluid" Type A.

Checking Fluid Level—With selector lever in "N" position, parking brake set, and transmission at normal operating temperature, remove access hole cover plate in floor pan, and **check fluid level with engine at idling speed.** Add sufficient fluid to bring level in transmission to "F" mark on dipstick.

Capacity—8½ qts. (refill), 9 qts. (after overhaul). *NOTE*—1 qt. additional with oil cooler.

►*OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type

REAR AXLE

SEMI-FLOATING (HALF-TON)

Own. Semi-floating, hypoid gear type with Hotchkiss drive. *NOTE*—Same design as passenger car axle.

See "Chevrolet Hypoid Semi-Floating" in Rear Axle Section.

Ratio—(Synchro-mesh & Hydra-Matic) 3.90-1 (39.10) **(Overdrive)** 4.11-1 (37:9).

►*AXLE SHAFT NOTE: Shafts unequal length (right shaft longer) and may be identified by mark stamped on shaft, or by length as follows:*

Axle	Part No.	Length
Left	3694769Ⓒ	29 5/8"
Right	3694770Ⓒ	30 5/8"

Ⓒ—Part No. stamped on axle for identification.

Backlash—.005-.008"

Removal of Rear Axle Assembly: Disconnect and remove parking brake pull back spring. Remove cotter pins and clevis pins from each parking brake cable clevis, and remove clevis. Remove springs and retaining clips from cables at frame brackets. Disconnect universal joint trunnion bearing "U" bolts and split rear universal joint. Disconnect shocks from anchor plates. Disconnect hydraulic brake line to connector at rear frame bracket. Remove spring "U" bolts, nuts and anchor plates Raise rear of truck and roll assembly out toward rear *CAUTION—Be careful when pulling parking brake cables through openings in frame.*

Axle Shaft Removal: *See "Chevrolet Hypoid Semi-Floating" in Rear Axle Section.*

Axle Shaft Endplay—Free fit to .014" maximum.

STANDARD FULL-FLOATING (1½ & 2-TON) (EXC. LCF MODELS)

Own. Full-floating hypoid gear (straddle mounted pinion) with Hotchkiss drive.

►*AXLE ASSEMBLY NOTE, ¾ & 1-Ton axle assemblies are different design than used on 1½ & 2-Ton with standard rear axle assemblies.*

See "Chevrolet Truck Hypoid Full-Floating" in Rear Axle Section.

►*AXLE RATIO IDENTIFICATION NOTE: Axle ratios are identified by prefix letters in rear axle numbers stamped on top of carrier housing between reinforcing ribs. See Axle Ratios following:*

Axle Ratio Identification

Ratio	Prefix Letters
5.14-1 (36:7)	CA, CB, CE, CF
4.57-1 (32:7)	CC, CD
6.17-1 (37:6)	CG, CH, CJ
7.2-1 (36:5)	CM

Backlash—.005-.008" Screw adjustment

Removal of Axle Assembly: Remove differential cover and axle shafts (see below). Disconnect rear universal by removing two "U" bolts from rear yoke (wire trunnions to retain bearings). Slide shaft forward and lower to floor. Remove differential carrier mounting bolts.

Axle Shaft Removal (¾ & 1-Ton): Remove eight capscrews and lockwashers in axle shaft flange, install two ½"x13" screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket. *Use new gasket when installing shaft.*

►*CAUTION:* Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft *Grease at this point will cause loosening of axle shaft flange capscrews.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Axl Shaft Rem val (1½ & 2-T n): Shaft flange is splined in wheel hub (tight fit) and requires special puller for removal. Remove five capscrews and lockwashers in hub cap, remove hub cap and gasket. Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover. J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. *NOTE*–When reinstalling axle shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket.

►**Axl Shaft Note:** Shafts unequal length (rightshaft longer than left). Install in correct position.

¾ & 1-T n Trucks

Axl Shaft	Part No.	Length
Left	3680977	31¼"
Right	3680978	37"

1½-T n Trucks (27 Splines)

Axl Shaft	Part No.	Length
Left & Right	3714735	37½"

2-T n Trucks, Exc. LCF (29 Splines)

Axl Shaft	Part No.	Length
Left & Right	3709890	39 3/8"

Wh l B aring Adjustm nt: Remove wheels and axle shafts (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight, using special wrench J-2222 (¾ & 1-Ton), J-870 (1½ Ton), J-5670 (2-Ton) while turning hub by hand, then back off nut 45°, check for free turning, install adjusting nut lock with lock tangs aligned with slots in adjusting nut. Bend tang down into notch in adjusting nut, install locknut and tighten securely. Bend tang of lock down into notch of locknut.

HEAVY DUTY FULL-FLOATING (2-TON & LCF MODELS)

Own. Full floating, hypoid gear, roller pinion bearings (straddle mounted pinion), with Hotchkiss drive.

Se "Ch vrol t Truck Heavy Duty Hypoid Full Floating" in R ar Axle S ction.

Rati s–Same as for "Standard Full-Floating" above.

Backlash–.005-.008".

R m val Of R ar Axl Ass mbly: Same as for "Standard Full-Floating" above.

Axl Shaft R m val: Same as for 1½ & 2-Ton "Standard Full-Floating" above.

►**Axl Shaft N t :** Shafts unequal length (right shaft longer than left). Install in correct position.

2-T n & LCF Truck (29 Splines)

Axl Shaft	Part No.	Length
Left	3711457	38 9/64"
Right	3711458	40 9/16"

Wh el B aring Adjustm nt: Same as for "Standard Full-Floating" above.

PLANETARY 2-SPEED

Own. Full-floating, two-speed planetary reduction type. with hypoid primary pinion and ring gear.

See "Chevrol t Truck Plan tary 2-Spe d" in R ar Axl S ction.

►*NOTE: Two gear ratios availabl as follows:*

P w r Rati–6.40-1 (high), 8.72-1 (low). 32:5 Primary gears.

Sp d Ratio–5.83-1 (high), 7.95-1 (low). 35:6 Primary gears.

Two-Speed Shift Control: Vacuum power type with control on gearshift lever.

Carrier Assembly Removal: *See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.*

Axle Shaft Removal & Wheel Bearing Adjustment: Same as for "Standard Full-Floating" above.

SHOCK ABSORBERS

Delco. Direct Acting (Airplane Type) shock absorbers as follows:

Front Shocks

Model	Delco No.
½, ¾, 1-Ton	820R
1½ & 2-Ton (Except LCF)	682Z
Low Cab Forward	660AA

Rear Shocks

Model	Delco No.
½-Ton (114" W.B)	800W
½ & ¾-Ton (123¼" W.B.)	800Z
1½-Ton (Exc. School Bus Chassis)	660V
Utility	660U
Forward Control	684U

FRONT SUSPENSION

Conventional "I" Beam section, with Reverse Elliot ends and semi-elliptic springs.

Kingpin Inclination–6.16° to 8.16°.

Camber–1½° to 1¾°.

Caster (At designed load)–See table below.

Toe-In–See table below.

Model	Caster Ⓒ	Toe-In
3100, 3200	Pos. 3°	.132-.219"
3400, 3500, 3700	Pos. 2°	.26-.33"
3600	Pos. 1½°	.26-.33"
3800	Pos. 2¼°	.26-.33"
4000, 5000	Pos. 2°	.26-.33"
6000	Pos. 2¼°	.26-.33"

Ⓒ–At designed load, NOT curb weight.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut (recirculating ball).

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Own (Linkage Type). *See "Chevrolet Truck (Bendix)" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

►*NOTE: Two different type brakes used on trucks as indicated below.*

Ch vr l t-B ndix (Exc pt R ar Wh ls f 1½ & 2-T n M d ls–Duo-servo, single anchor, hydraulic (without eccentric adjustment).

Se "Ch vrol t-Bendix Hydraulic" in Brak S ction.

►*HALF-TON TRUCK BRAKE SHOE GRINDING CAUTION:* If bench type grinder used, grind shoes to .057" to .087" smaller diameter than drum size. If spindle type grinder used, grind shoe to drum diameter.

Chevr olet-Twinplex (Rear Wheels 1½ & 2-Ton Models)–Two-cylinder, four-anchor type hydraulic. Shoes are self-centering and self-energizing.

See "Chevrolet Twinplex" in Brake Section.

Wheel Cylinders–Size stamped on housing under adjusting lock spring.

Drums–Cast iron with steel web.

Drum Diameter

Model	Front	Rear
½-Ton	11"	11"
¾-Ton	12"	12"
1-Ton	12"	14"
1½ & 2-Ton	14"	15"

Lining–Molded type. Riveted on 1½ & 2-Ton Models and bonded on all others.

Thickness & Width

Model	Thickness	Width
½-Ton (Front Whl.)	.202-.222"	2"
½-Ton (Rear Whl.)	.202-.222"	1¾"
¾-Ton (Front & Rear)	.264-.284"	2"
1-Ton (Front Whl.)	.264-.284"	2"
1-Ton (Rear Whl.)	.267-.287"	2½"
1½ & 2-Ton (Front Whl.)	.267-.287"	2½"
1½ & 2-Ton (Rear Whl.)	.392-.412"	4"

Clearance–Adjust for clearance as follows:

All Models (Except 1½ & 2-Ton Rear Brakes)–Remove adjusting hole cover and turn brake adjusting screw until light drag is felt, then back off adjusting screw 7 notches (Half-Ton Models), or just enough to eliminate brake drag (Other Models), but not more than 7 notches.

Rear Wheels (1½ & 2-Ton Models)–Remove adjusting hole covers from flange plate and turn rear adjusting screw until slight drag is felt, then back off 3 notches. Repeat on front adjusting screw (2 adjustments on each wheel).

Parking Brakes: Hand lever applies rear wheel service brakes on Half-Ton & ¾-Ton Models, and an independent brake on propeller shaft on all other models.

Adjustment (½ & ¾-Ton Models)–*See "Chevrolet-Bendix Hydraulic" in Brake Section.*

Adjustment (1, 1½, 2-Ton Models & ¾-Ton with 4-Spe d Transmission)–*See "Chevrolet Twinplex" in Brak Section.*

Master Cylinder: Located under floorboard on left hand side of truck.

Checking Fluid–Maintain fluid level to lower edge of filler hole.

Removal–Remove from below. *CAUTION*–On 1½ & 2 Ton Low Cab Forward, spacer between cylinder and body bracket will fall out when mounting bolts removed.

Installation–Reverse removal procedure. On LCF Models make sure the spacers are reinstalled.

Power Brakes: See "Hydrovac Power Unit" in Brake Section.

MISC. MECHANICAL

Windshield Wip rs: Linkage type. Vacuum motor (Std. Equip.), Electric motor (Optional Equip.).

S "Windshi ld Wip rs" in Misc llan ous S cti n.

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model Designation

Series	Serial Prefix	Model
1500①	A	ONE-FIFTY
2100	B	TWO-TEN
2400	C	BEL-AIR
1508	D	SEDAN DELIVERY

①–Except Sedan Delivery.

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post.

Starting Serial Number–001001 (at each plant).

►*SERIAL NUMBER NOTE: Serial Number (example B56F001025) includes following identification date in sequence.*

Series①	Year	Assy. Plant②	Serial No.
B	56	F	001025

①–See Model Designation above.

②–See Assembly Plant Designation below.

Assembly Plant Designation

A–Atlanta	**J**–Janesville	**O**–Oakland
B–Baltimore	**K**–Kansas City	**S**–St. Louis
F–Flint	**L**–Los Angeles	**T**–Tarrytown
	N–Norwood	

ENGINE NUMBER: Stamped on right side of engine block to rear of distributor.

Starting Engine Number–0001001 (at each plant). Suffix letters and numerals indicate plant at which engine built ("F" for Flint, and "T" for Tonawanda), Model Year, and Model Type. See following for Model Type Designation.

Model Type Designation

Engine	Suffix
Regular "235"	Z
Regular "235" (with H.D. Clutch)	ZC
Powerglide "235"	Y

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. at cranking speed. A variation of 20 lbs. between cylinders indicates need for cylinder reconditioning.

VACUUM READING: At 500 RPM – 14.4" (With selector lever in Drive Range – Powerglide Cars), 16.7" (With transmission in Neutral). At 450 RPM – 14.5" (With selector lever in Drive Range - Powerglide Cars), 16.3 (With transmission in neutral).

VALVE TAPPET CLEARANCE: None in service (hydraulic).

Initial Tappet Clearance (Engs. with Hydraulic Lifters). *See "Valve System" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position. *Distorted springs should be replaced.*

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .035"

Plugs – AC No. 44-5. 14 mm. Torque to 20-25 ft. lbs.

►*SPARK PLUG INSTALLATION CAUTION:* Spark plug flash-over or misfire on 1956 engines may be caused if 1955 plugs are used. Insulators on 1956 plugs have four annular ribs that help prevent flash-over. Spark plug boot has larger inside diameter.

COIL: Delco-Remy 1115087. *12 Volt.*

Ignition Current – 1.8 amps. idling, 4 amps. stopped.

Resistor – Delco-Remy 1931614. 1.40-1.62 ohms. On firewall.

►*COIL RESISTOR NOTE:* Resistor connected to ignition switch by two leads and is by-passed during cranking (second lead provides direct connection to coil when key turned to "Start Engine" position).

DISTRIBUTOR: Delco-Remy 1112403. *12 Volt.*

Condenser–Delco-Remy 1928111. **Capacity**–.18-.23 mfd.

Contact Point Set–Delco-Remy 1924571.

Breaker Gap–.016-.021 (New points), .0125-.0175". (Used points).

Cam Angle–28-35° with .016" gap.

►*BREAKER GAP CAUTION: Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension–19-23 ozs.

Rotation – Clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center 'O' position.

Vacuum Spark Control: Delco-Remy 1116089.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum ("of HG)
Start	0	4-6
7.5	15	7.5-10

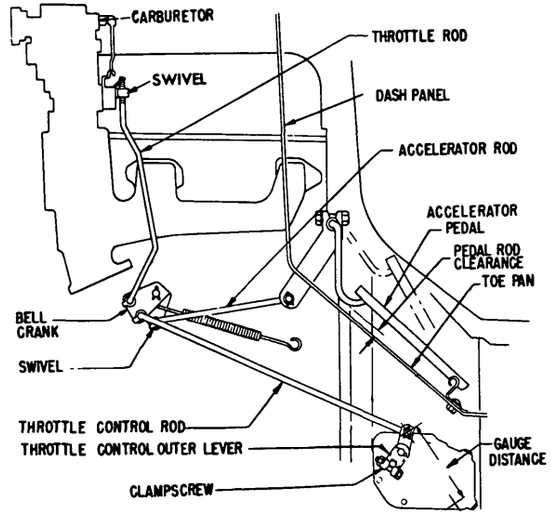
Plunger Travel – 3/16-3/32".

IGNITION TIMING

Setting - At TDC. *Set timing at IDLE SPEED with vacuum line connected.*

►*IGNITION TIMING PROCEDURE CHANGE: Previous recommendation of setting timing at 1000 RPM with vacuum line disconnected has been discontinued.*

Timing Mark - Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on "0". Then adjust selector as follows:



Octane Selector Setting - Set for slight ping when accelerating with a wide open throttle.

CARBURETOR

►*FAST IDLE CONTROL CAUTION (AIR CONDITIONED CARS):* Fast idle control is set to provide 900 RPM engine speed when Fast Idle Control Knob on dash is pulled out. **Make sure knob is pushed in when making normal fast idle adjustments** and that fast idle control linkage does not interfere with normal operation of the carburetor linkage when fast idle is not in operation.

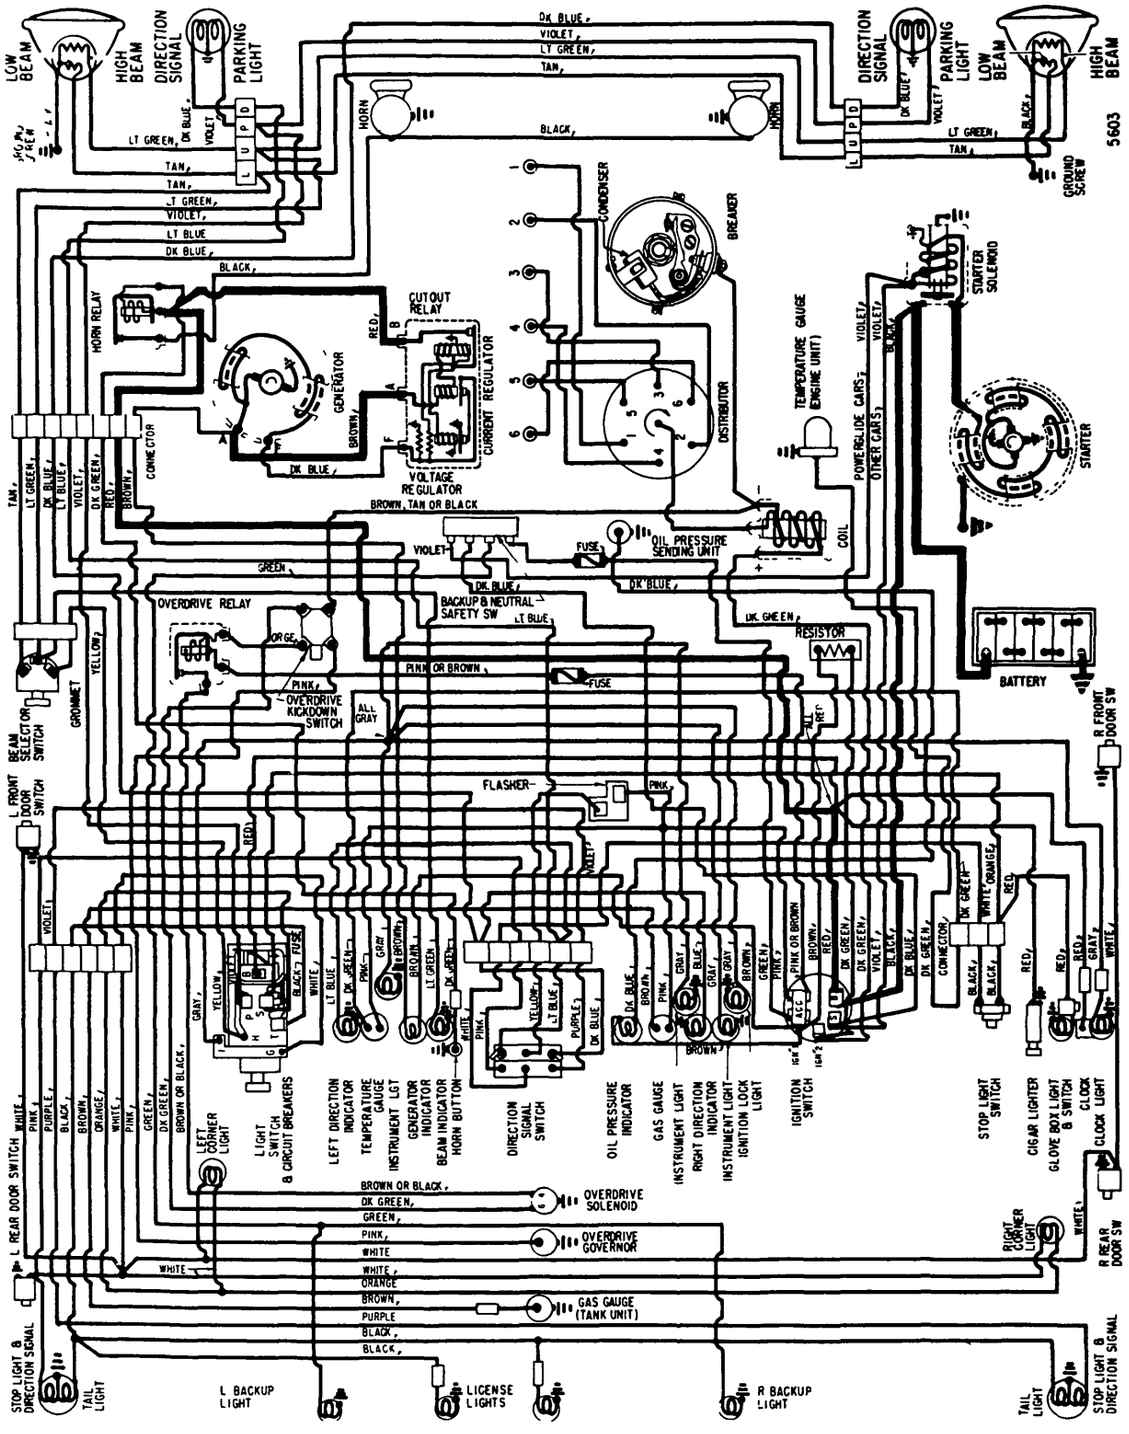
THROTTLE LINKAGE ADJUSTMENT (All Mod ls): *POWERGLIDE NOTE - Adjust transmission throttle control linkage BEFORE adjusting carburetor throttle linkage (see below).*

Carburetor Throttle Linkage (All Models): With accelerator pedal depressed, clearance between lowest point on accelerator link and toe pan (floor mat removed) should be exactly 1". With throttle actuating lever in wide open position, adjust upper throttle rod swivel for free entry into lever.

POWERGLIDE THROTTLE LINKAGE

THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE CARS): Engine must be at normal operating temperature and transmission warm (choke valve wide open and fast idle inoperative with throttle stopscrew against low step of fast idle cam) when adjustments made.

1) Adjust engine idle speed to 425 RPM with selector lever in "D" range (set hand brake firmly to hold car while making adjustments).



2) Disconnect control rod from throttle lever on transmission cover. Remove lower bolt at rear of transmission side cover. Rotate throttle valve control outer lever assembly counter-clockwise to the open throttle position.

3) Hold lever in this position and with throttle valve outer lever gauge J-5806 set at 7.09" measure distance from left side cover lower rear bolt and hole in throttle lever. If pins of gauge will enter holes, adjustment is correct. If necessary to adjust, loosen lever to clamp attaching bolt and adjust lever on throttle shaft as necessary. Reconnect control rod.

4) Disconnect bellcrank-to-transmission throttle lever rod at throttle valve lever. Disconnect accelerator-to-bellcrank rod at bellcrank.

5) Force bellcrank-to-transmission throttle lever rod forward against stop in transmission (open throttle position) and adjust bellcrank-to-carburetor throttle rod for free entry of swivel pin in throttle valve lever, with carburetor throttle valve in wide open position.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

6) With carburetor throttle valve held in wide open position and accelerator fully depressed, adjust accelerator-to-bellcrank rod for free entry of swivel pin into hole in bellcrank.

THROTTLE RETURN CHECK ADJUSTMENT (POWERGLIDE CARS): With engine idle speed set at 425 RPM, shut off engine, close choke valve and position throttle stop screw on highest step of fast idle cam. Using a 9/32" wrench on flat section of return check shaft, hold from turning, and turn the adjusting screw until it just contacts the throttle lever contact arm.

ROCHESTER BC

Model	Rochester No.
Std. Transmission	7009255
Powerglide	7009254

Idle Setting–1-2½ turns open.
Idle Speed (Synchro-mesh)–475 RPM.
Idle Speed (Powerglide)–425 RPM with Powerglide Selector lever in "D" (Drive) range.
Float Level–1 9/32" (Gauge M-250). With air-horn inverted and gasket in place, position Gauge M-250 over the floats with the tang inserted in the discharge nozzle. Bend float arms as necessary so that top of each float just touches the gauge and the float is centered between the gauge legs.
Float Drop–Bend float tang as necessary to obtain a distance of 1¾" from the gasket surface to the bottom of the float, with the air-horn upright and the float hanging free.
Choke Adjustment: Centered on index.
Fast Idle: With idle adjusting screw on next to highest step of fast idle, Gauge BT-99 (.076") should just slide between lower edge of choke valve and carburetor bore. To adjust, bend connector rod.
► *OTHER DATA: See "Rochester BC" Carburetors in Carburetion Section.*
Fuel Pump Pressure: 3½-4½ lbs.

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type.
Replacement Fuel Pump–AC No. 4149 (Fuel only), No. 4138 (Fuel & Vacuum).
Pressure–3½-4½ lbs.
See "Fuel Pumps" in Carburetion Section.
Gasoline Gauge: AC Electric.
Dash Unit – AC No. 1518473.
Tank Unit – AC No. 1518158.
"See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco 2SMR53M. *12 Volt.* 9 plate, 53 ampere hour capacity (20 hr. rate).
Battery Ground – Negative.
Engine Ground – Engine to cowl at rear head bolt.

STARTER

Delco-Remy 1107644. *12 Volt.* **Armature** – 1926626.
Drive – Overrunning clutch (solenoid pinion shift).
Rotation – Counter-clockwise at commutator end.
Brush Spring Tension – 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Starting Switch: Delco-Remy Solenoid Switch 1119789 mounted on starter and controlled by Ignition & Starter Switch 1116512.
See "Delco-Remy Starter Solenoid (Without Relay)" in Electrical Section.

Neutral Safety & Back-Up Light Switch: Delco-Remy 1998106 (Powerglide cars only).
Adjustment–*See "Chevrolet Powerglide" in Trans.Sect.*

GENERATOR

Delco-Remy. *12 Volt.* Application as follows:

Generator	Armature
1100326 (Std.)	1928952
1102041 (Pow. St.)	1929640
1102042 (Air Cond.)	1923535
1105947 (Taxi)	
1106981 (Taxi & City Pol.)	1929360

Maximum Charging Rate – *See Voltage Regulator.*

Performance Data

Generator	Amperes	Volts	RPM
1100326	25	14.0	2780
1102041, 42	30	14.0	2150
1105947	32	14.0	1850
1106981	40	13.0	1500

Rotation – Counter-clockwise at commutator end.
Brush Spring Tension – 28 ozs.
Field Current – (1100326) 1.5-1.62 amps., (1102041, 42) 1.48-1.62 amps., (1105947) 1.54-1.67 amps., (1106981) 1.37-1.50 amps. All at 12.0 Volts.
Belt Adjustment: 5/16" belt deflection with light thumb pressure midway between generator and pump pulleys.

REGULATOR

Delco-Remy. *12 Volt.* Used with generators as follows:

Delco-Remy Regulator No.	Generator No.
1119000	1100326, 1102041
1119001	1102042, 1105947
1119004	1106981

NOTE – Regulator is "1119000 Series". Specifications below are "Normal" settings.

Cutout Relay

Cuts In – 11.5-13.0 volts (1119004) 11.8 - 13.5 volts (Others). Hot.
Contact Gap – .020".
Air Gap – .020" (with contacts just closed).

Voltage Regulator

Setting – 13.6-14.3 volts (1119004), 13.8 - 14.8 volts (Others). Hot.
Air Gap – .063" (1119004), .075" (Others) with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "Delco-Remy 1119000 Series" Regulator in Electrical Section.*

Current Regulator

Setting (1119000) – 23-27 amperes (hot).
Setting (1119001) – 27-33 amperes (hot).
Setting (1119004) – 37-42 amperes (hot).
Air Gap – .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "Delco-Remy 1119000 Series" Regulator in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*
Direction Signal: *See Electrical Section.*
Automatic Ey: *See Electrical Section.*
Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel) and pull shaft and knob out. Remove switch retaining nut and switch assembly.
Stop Light Switch Location: Mechanical type mounted under instrument panel adjacent to brake pedal lever.
Adjustment–Adjust position of switch so that stop light goes on when brake pedal is depressed 5/8" from fully released position.
FUSES: All accessory fuses except as indicated below are contained on the accessory fuse and junction block located on upper inside of dash panel to left of steering column.
Overdrive–14 amps. Located in Lucite cartridge in overdrive relay feed line on engine side of dash to left of steering column.
Radio–In feed line adjacent to radio.
Back-up Light–On accessory fuse block.
►*LIGHTING SWITCH FUSE NOTE:* A 3 ampere fuse has been added to light switch to protect instrument panel rheostat from burning out.
LIGHTING CIRCUIT BREAKERS: Two 13-amp. circuit breakers located on main light switch, protect all lighting circuits.
HORNS: Delco-Remy 1999759 (Low Note), **1999760** (High Note). *12 Volt.*
Horn Relay: Delco-Remy 1116781 or 1116913.
Contacts Close – 5.0-9.5 volts.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Misc. Section.*
►*NOTE: The following repair data applies to all Pass. Car & Truck Engines.*

Bore	Stroke	Displacement	Rated HP
3 9/16"	3 15/16"	235.5 cu. ins.	30.4

Compression Ratio	Developed HP
8.0-1	140 at 4200 RPM

Compression & Vacuum Reading – *See TUNE-UP.*

ENGINE REMOVAL: *See Chevrolet Special Data.*
OIL PAN REMOVAL: Remove bolts attaching steering idler arm bracket to frame side rail and drop for clearance. Remove pan retaining bolts and remove pan.
CYLINDER HEAD: *See "Cylinder Head & Manifold" in Chevrolet Special Data.*
ENGINE MOUNTINGS: *See Chevrolet Special Data.*
TIGHTENING TORQUES: *See Chevrolet Special Data.*

PISTONS

Aluminum alloy, cam ground, tin plated, with pin offset 5/64".
Weight–1.18 lbs. (235" Engine), 1.36 lbs. (261" Engine).
Removal–Pistons and rods removed from above.
Clearance – .0005-.0011" measured 1.29" below top of piston. Selective fit.
Replacement Pistons: Furnished Std. & .001", .020", .030", .040" Oversize. *STANDARD AND .001". PISTON NOTE* - Two sizes pistons furnished for Standard and .001" Oversize as follows:
235" Engine - Std. - Marked **S4** (3.5625-3.5630"), **S5** (3.5630-3.5635"), **.001" Oversize -** Marked **S6** (3.5635-3.5640"), **S7** (3.5640-3.5645").
261" Engine - Std. - Marked **S4** (3.7500-3.7505"), **S5** (3.7505-3.7510"), **.001" Oversize -** Marked **S6** (3.7510-3.7515"), **S7** (3.7515-3.7520").
Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.
Installing Pistons: Install piston with notch in piston and mark "Front" toward front of engine.

PISTON PINS

Locked in rod. No bushing used in piston.
Diameter - 235" Eng. - .8660-.8665". **261" Eng.** - .9270-.9275".
Pin Fit in Piston - Thumb push fit (at room temp.). To check fit, with piston and pin at 60° F., apply light oil film to pin, insert pin vertically in one piston boss (one end of pin in either piston boss). Pin should hold own weight, but should install easily with thumb pressure.
Replacement Pins: Furnished Std. & .0015", .003", .005", oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.(1&2)	.0930-.0935"	①	②
Oil(3)	.181-.188"	③ .015-.055"	.000-.008"

①- (235" Eng.) .007-.020". (261" Eng.) .010-.020"
②- (235" Eng.) .001-.003". (261" Eng.) .002-.0035"
③- On Rails.

►*RING INSTALLATION CAUTION: Install compression rings with side marked "TOP" upward.*
Replacement Rings: Furnished Std. & .005", .010", .020", .030", .040" oversize.

CONNECTING RODS

Length–6 13/16". **Weight**–31.76 ozs. (Exc. 261" Engine).
Crankpin Journal Diameter–2.311"-2.312", all engines.
Lower Bearing–Replaceable precision type.
Clearance–.0007-.0028". Not adjustable, replace bearings.
Sideplay–.005-.012" at lower end.
Replacement Bearings: Std. .001", .002", .010", .020" undersize.
Installing Rods: Numbers on rods and caps must be together and installed in same numbered cylinders with numbers and pin clamp bolt toward camshaft side.

CRANKSHAFT

►*CAUTION: No. 1 (front) and No. 2 (front intermediate) bearings similar in appearance but must not be interchanged. No. 2 bearing marked by "1" in il gr ve.*
Journal Diameters–(1) 2.6835"–2.6845", (2) 2.7145"–2.7155", (3) 2.7455"–2.7465", (4) 2.7765"–2.7775". *NOTE*–Journal taper or out-of-round limits .001". Run-out Limits for Nos. 2 & 3 journals is .002".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Clearance –.0005" minimum,. 003" maximum (new bearings), Service limits .0005" min. .0045" maximum. See Adjustment below.

NOTE–Precision type bearings can be replaced singly.

Bearings–Steel backed thin wall babbitt. *Boring or reaming not required*

Bearing Adjustment: Precision type. Replace bearings.

Replacement Bearings: Furnished Std. .002", .010", .020", .030" undersize.

Bearing Installation: Not necessary to remove crankshaft or engine from car. *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Bearing Cap Installation–No. 2 & No. 3 bearing caps marked for identification. Install No 2 cap with mark "FRONT" toward front of engine, No. 3 cap with mark "REAR" toward rear of engine

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chevrolet Special Data*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data*

End Thrust: Taken by No. 3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of No. 3 bearing. Adjust by replacing bearing. **Endplay**–.0035"-.0095".

Vibration Damper: *See "Vibration Dampener" in Chevrolet Special Data.*

CAMSHAFT

Journal Diameters–(1) 2.1537-2.1547", (2) 2.0912-2.0922", (3) 2.0287-2.0297", (4) 1.9662-1.9672".

►*NOTE:* Journal out-of-round limits .001". Run-out limits .002".

Bearing Type–Steel backed babbitt lined bushing *See "Camshaft & Bearings" in Chevrolet Special Data*

Clearance –.0015-.0035".

End Thrust: Taken by thrust plate behind camshaft gear.

Endplay Adjustment–*See "Timing Gears" in Chevrolet Special Data.*

Endplay–Free fit to .003" maximum.

Timing Gears: Fibre (Pass. Cars. Exc. Corvette), Aluminum (Corvette and Trucks). Steel crankshaft gear.

Replacement Timing Gears & Installation: *See "Timing Gears" in Chevrolet Special Data.*

Timing Gear Backlash – .003-.005".

Camshaft Setting: Gears punch marked. Punch marks on both gears must line up directly opposite each other.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data*

VALVES

Tappet Clearance: (Passenger Cars) – None in Service (hydraulic).

Initial Tappet Clearance (Engs. with Hydraulic Lifters)- *See "Valve System" in Chevrolet Special Data.*

(Trucks) – (235") .006" Intake, .016" Exhaust. (261") .006" Intake, .020" Exhaust, HOT. *See "Valve System" in Chevrolet Special Data.*

Valve	Head Diam.	Stem Diam.	Length
Intake	1 7/8"	.3410-.3417"	6.376-6.396"
Exhaust	1 1/2"	.3410-.3417"	4.913-4.933"
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	30° ℄	.4004"	.0010-.0027"
Exhaust	45° ℄	.4004"	.0010-.0027"

℄ – Seat angle in block 1° additional.

►*VALVE GRINDING CAUTION:* Replacement valves are furnished with face angles of 30° and 45°. When seats are ground to new recommendations of 30° and 45°, valves must be ground to recommended angle of 29° (Intake) and 44° (Exhaust) whether valves are being re-used or new valves are being installed.

Valve Seat Width – 3/64"-1/16" (Intake), 1/16-3/32" (Exhaust).

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Precision type. Pressed in head.

Valve Guide Installation–*See "Valve System" in Chevrolet Special Data.*

Valve Springs: Install springs with closed coil end down.

Spring Specifications

	Pressure	Length
Valve Closed	74-82 lbs.	1.858"
Valve Open	196-208 lbs.	1.462"

Free Length – 2.281"

►*VALVE SPRING HEIGHT CAUTION:* Check installed height of valve springs. If distance from spring seat in head to top of valve spring exceeds 1 55/64", install shim approximately 1/16" thick. At no time should spring be shimmed to give installed height of less than 1 51/64".

Valve Lifters (Pass. Cars) – Hydraulic type. *See "Valve System" in Chevrolet Special Data.*

Hydraulic Lifter Overhaul & Testing – *See "Valve System" in Chevrolet Special Data.*

Valve Lifters (Trucks): Mechanical type.

Rocker Arm Assembly: *See "Valve System" in Chevrolet Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

235" Engine

Intake Valves – Open 10°30' BTDC, Close 53°30'ALDC.

Exhaust Valves – Open 49° BLDC, Close 15° ATDC.

Valve Timing Check – *(CAUTION* - It will be necessary to replace the hydraulic valve lifter and pushrod operating No. 1 exhaust valve, with a conventional lifter and pushrod). Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer on right face of flywheel housing. Mount dial indicator on rocker arm shaft with stem of indicator contacting No 1 exhaust valve adjusting screw and set the dial indicator to .058". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset tappet to correct running clearance.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: 5½ qts (dry), 5 qts (refill).

Normal Oil Pressure: 35 lbs. (approx.).

Pressure Regulator Valve–In oil pump body. Not adjustable

Oil Pressure Indicator–Light located at right side of instrument cluster, controlled by a pressure operated switch, Delco-Remy 1998149, located in main oil gallery on left side of engine. Switch closes at 4-6 lbs.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul–*See "Oiling System" in Chevrolet Special Data.*

Oil Filter Element: AC P-115

Rocker Arm Oil Lead & Overflow Pipe: *See "Oiling System" in Chevrolet Special Data.*

Crankcase Ventilation (Standard): Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

Servicing – On all models with air cleaner mounted on valve rocker arm cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

Crankcase Ventilation (Optional): Positive Type. Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**

Servicing – Every 10,000 miles (or oftener if required) clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly.

►*VACUUM VALVE CAUTION:* If improper action of spring is suspected due to spring being distorted, or etched from corrosive action, the valve assembly should be replaced.

COOLING

►*RADIATOR REMOVAL CAUTION (POWERGLIDE CARS): Transmission oil cooler is part of radiator lower tank, and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.*

Water Capacity: 16 qts. (17 qts with heater).

Pressure Valve: AC No. 850795. Radiator filler cap. 7 lb. type. **Replacement Valve** - AC No. RC-1.

Thermostat: Harrison. In cylinder head water outlet.

Standard – No. 3133595 (stamped 151) 151°. Can be used for alcohol anti-freeze.

Optional–No. 3123994 (stamped 160), 160°, No. 3133597 (stamped 170) 170°.

Temperature Gauge: AC Electric.

Dash Unit – AC No. 1513134.

Engine Unit – AC No. 1513130.

See "Temperature Gauges" in Miscellaneous Section.

Water Pump: Double outlet, packless type with sealed ball-bearing shaft.

See "Water Pumps" in Chevrolet Special Data.

Radiator Removal & Installation: *See "Radiator" in Chevrolet Special Data.*

CLUTCH

Own (Exc. Powerglide Cars)–Diaphragm spring type *See "Chevrolet (Own)" in Clutch Section.*

Clutch Disc–Chevrolet No 3836103 (Molded) 3836121 (Woven), 3836119(Hvy Duty)

Pedal Adjustment· Pedal free travel ¾-1 Loosen check nut at connecting link at clutch fork Turn adjusting nut to remove all lash at fork, **then back off two turns.** Tighten check nut.

Removal· Remove transmission (see Transmission Removal below). Remove throwout bearing from fork. Remove clutch fork tension spring from fork, disconnect clutch fork pushrod. Remove clutch fork by forcing it forward and toward center of vehicle. Install Clutch

CONTINUED ON NEXT PAGE

Form 26 B

CONTINUED FROM PRECEDING PAGE

Pilot Tool J-5824, to support clutch assembly during removal. Loosen clutch attaching bolts one turn at a time until diaphragm spring is released. Remove Pilot Tool, then remove clutch assembly from car. *CAUTION*- When installing clutch, align "X" mark on clutch cover with "X" mark on flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.
See "Chevrolet 3-Speed" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Drain Transmission and disconnect speedometer cable and shift rods. Disconnect propeller shaft at rear universal and slide shaft toward rear to disengage from transmission. Remove two top transmission to clutch housing screws and install Guide Pins J-1126. Remove the two lower screws and slide transmission back until clutch spines are disengaged. Remove transmission from below car.

OVERDRIVE

Warner Model AS1-R10H. Solenoid operated type with governor control and throttle operated kickdown. Lockout Switch not used.
See "Chevrolet R10 Overdrive" in Transmission Section.

Overdrive Control: *See "Warner R10 & R11 Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh transmission (above) after disconnecting control cable and wiring

POWERGLIDE TRANSMISSION

Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS. See "Chevrolet Powerglide" in Trans. Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication: Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing an "AQ-ATF" marking on container.

Capacity—5 qts. (refill), 11 qts (after overhaul).

►*POWERGLIDE DRAINING CAUTION—There is no drain plug on converter. Drain transmission case only, add 4½ qts.. of fluid initially, recheck after idling engine.*

Checking Fluid Level—Engine must be idling with the parking brake set, transmission warm, and the control lever in "N" range when taking dipstick readings Dipstick is located under hood on right side just opposite starter

►*OTHER DATA. See "Chevrolet Powerglide" in Transmission Section.*

UNIVERSALS

Own. Yoke & Spider (Trunnion) type.

►*CAUTION.* Rear bearing companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever companion flange nut loosened. *See "Chevrolet Pass. Car (Hotchkiss Drive) in Rear Axle Section.*

REAR AXLE

Own. Semi-floating, hypoid gear type, with Hotchkiss Drive. Pinion bearing adjustment is different than on previous models

See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section.

►*PINION BEARING PRELOAD CAUTION.* Rear universal joint companion flange controls rear axle pinion bearing preload Bearing preload must be adjusted whenever companion flange nut is loosened

Car Model	Axle Ratio	Serial Prefix
Std Transmission	3 70-1	.AA or BA
Overdrive	4 11-1	AC or BC
Powerglide	3 55-1	.AB or BB

Backlash — .006-.009" (.008" preferred).

Removal: Raise car and support with jack stands under frame side rails Remove rear wheels and remove two trunnion bearing "U" bolts from rear universal yoke and separate the joint (tape bearings to trunnion). Disconnect hand brake cable at equalizer and remove cables from clamps at frame Disconnect hydraulic brake lines at rear axle housing Disconnect shocks. Support axle assembly on hydraulic jack and remove spring "U" bolts, nuts and anchor plate, and lower axle to floor

Axle Shaft Removal: Raise car and place jack stands under axle housing Remove tire, wheel and brake drum assembly Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange) Attach axle Puller J-5748,with slide hammer, to flange and remove axle shaft and bearing assembly. Be careful not to disturb backing plate. *NOTE*—If bearing retainer and parking brake strut interfere, raise strut slightly with screw driver to obtain clearance.

SHOCK ABSORBERS

Delco. Direct acting non-adjustable. Serviced by replacement.

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs and new spherical type joints connecting control arms and steering knuckles

See "Chevrolet (Spherical Joint)" in Front Suspension Section.

Kingpin Inclination — 3½-4½°.
Caster — Pos. ½-1½°.
Camber — 0° to Pos. 1°.

►*CASTER & CAMBER ADJUSTMENT NOTE: Adjusted by shims located between upper control arm inner support shaft and support bracket.*

Toe-In — 1/16-1/8" (per wheel), 1/8-1/4" (total both wheels).

Toe-Out on Turns — With inside wheel at 20°, outside wheel should be 18° 10".

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Own (Linkage Type). *See "Chevrolet Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic, without anchor pin adjustment Hand lever applies rear wheel service brakes

See "Chevrolet-Bendix Hydraulic" in Brake Section

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION:* To compensate for lack of brake anchor adjustment, brake shoes are ground to a 057- 087" smaller diameter than the drum diameter Grinding shoes to the true drum diameter on bench grinders will cause heel and toe contact, resulting in erratic brake action *NOTE—If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter*

Drums—Diameter 11".

Wheel Cylinder Diameter—Front 1 1/8", Rear 1".

	Brake Lining Width	Thickness
Front Whl	2"	.187- 194"
Rear Whl	1 3/4"	187- 194"

Length Per Shoe—9 3125" (Primary), 11 6875' (Secondary)

Braking Power—55 9% (front wheels), 44 1% (rear wheels

Clearance—Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag after adjustment.

Standard Master Cylinder: Located on engine side of firewall in line with brake pedal.

Checking Fluid—Reservoir is integral with master cylinder. Maintain level in cylinder to lower edge of filler hole

Removal—Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove four retaining nuts and lock washers holding master cylinder to firewall and remove cylinder.

Installation—Reverse removal procedure making sure that push rod clevis is straddling the brake pedal Refill master cylinder and bleed all brake lines. Adjust push-rod-to-main cylinder clearance as follows: Make sure brake pedal returns to fully released position with no binding, and that pedal retracting spring has not lost its tension, then adjust brake pedal clevis to give a barely perceptible end play between main cylinder piston and brake pushrod (1/16-3/16" pedal movement should be felt).

Power Brakes: Bendix Vacuum Type Power Unit replaces conventional master cylinder.
See "Bendix Power Unit" in Brake Section.

►*SLOW POWER BRAKE PEDAL RETURN CORRECTION:* *See "Brake Notes" in Chevrolet Special Data*

MISC. MECHANICAL

►*SEE CHEVROLET V8 PAGES (FOLLOWING) FOR ALL MISC. MECHANICAL DATA.*

►*AIR CONDITIONED CAR SERVICE CAUTION Use extreme care when disconnecting any part of air conditioning equipment or lines See "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model Designation

Series	Serial Prefix	Model
1500	VA	ONE-FIFTY
2100	VB	TWO-TEN
2400	VC	BEL-AIR
2934	VE	CORVETTE
1508	VD	SEDAN DELIVERY

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post

Starting Serial Number—001001 (at each plant) for all models except Corvette

►*SERIAL NUMBER NOTE Serial Number (example VB56F001025) includes following identification information in sequence*

Series①	Year	Assy. Plant②	Serial No
VB	56	F	001025

①—See Model Designation above

②—See Assembly Plant Designation below

Assembly Plant Designation

A-Atlanta	J—Janesville	O—Oakland
B—Baltimore	K—Kansas City	S—St Louis
F—Flint	L—Los Angeles	T—Tarrytown
	N—Norwood	

ENGINE NUMBER: Stamped on pad at front right hand side of cylinder block behind water pump

Starting Engine Number—001001 (at each plant) Suffix letters and numerals indicate plant at which engine built ("F" for Flint, "T" for Tonawanda), Model Year (56) and Model Type Designation (see below).

Model Type Designation

Engine	Suffix
V8 with 3-Speed Trans	G
V8 with Overdrive	GC
V8 with Air Cond & Overdrive	GQ
V8 with Powerpack & Overdrive	GE
V8 with Air Cond & 3-Spd Trans	GF
V8 with Hvy Duty Clutch	GJ
V8 with Air Cond & H D Clutch	GK
V8 with Power Pack	GL
V8 with Air Cond & Power Pack	GM
V8 with Power Pack O D & Air Cond	GN
V8 with Powerglide	F
V8 with Powerglide & Power Pack	FB
V8 with Powerglide & Air Cond	FC
V8 with Powerglide Air Cond Pow Pack	FD
V8 (Corvette) with 3-Spd Trans.	GR
V8 (Corvette) with Powerglide	FG

TUNE-UP

COMPRESSION PRESSURE: 150 lbs. (162 & 170 HP Engs.), 160 lbs. (Others), at cranking speed. A variation of 20 lbs. between cylinders indicates need for cylinder reconditioning.

VACUUM READING: Steady 17-21" at idling speed

VALVE TAPPET CLEARANCE: (Corvette)—.008" Intake, .018" Exhaust, with engine HOT and idling. (Others)—None in service - hydraulic.

Initial Tappet Clearance (Engs. with Hydraulic Lifters)- *See "Valve System" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: V8 (Std.)—Single exhaust with crossover pipe. Heat control valve with counterweight and thermostatic coil spring located between right manifold and exhaust pipe. Hook coil spring under stop stud. Install counterweight with square projection up and upper end of spring stop resting on top of stop stud.

V8 (Corvette Std., Others Optl.)—Dual exhaust system. Coil spring and counterweight same as other V8 (Std.)

►*DUAL EXHAUST NOTE*· With valve closed, most exhaust gases are discharged through left exhaust pipe.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders—RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7

SPARK PLUG GAP: .035".

Spark Plugs—AC No. 44-5 (Std. V8), AC No. C-43 (Corvette). 14 mm. Torque to 20-25 ft. lbs.

►*SPARK PLUG INSTALLATION CAUTION* Spark plug flash-over on 1956 engines may be caused if 1955 plugs are used. Insulators on 1956 plugs have four annular ribs that help prevent flash-over, and larger inside diameter on spark plug boot. If 1955 plugs installed, flash-over or misfire will be prevalent due to loose fit of boot.

COIL. Delco-Remy 1115087 (Std.), 1115091 (Corvette). *12 Volt.*

Ignition Current—1.8 amps. idling, 4 amps. stopped.

Resistor - Delco-Remy 1931614 (exc Corvette), 1115091 (Corvette) 1.40-1.62 ohms On firewall

►*COIL RESISTOR NOTE* Resistor connected to ignition switch by two leads and is by-passed during cranking (second lead provides direct connection to coil when key turned to "Start Engine" position).

DISTRIBUTOR: Delco-Remy. *12 Volt.* Single breaker, or double breaker types with 8 lobe cam. Used as follows

Application	Delco-Remy Distr. No
V8 (Std.), 2-Bbl.Carb.(Early)	1110866, 1110369
V8 (Std.), 2-Bbl.Carb.(Later)	1110847
V8 (Std.), 4-Bbl.Carb.(Early)	1110866, 1110869
V8 (Std.), 4-Bbl.Carb.(Later)	1110878
V8 (Corvette), 4-Bbl.Carb.(Early)	1110872
V8 (Corvette), 4-Bbl.Carb.(Later)	1110879
V8 & Corvette, TWO 4-Bbl.Carb.(Early)	1110872
V8 & Corvette, TWO 4-Bbl.Carbs.(Later)	1110879

Condenser—Delco-Remy 1869704. **Capacity** .18-.23 mfd.

Contact Point Set - Delco-Remy 1924499 (Distributor 1110847, 66, 69, 78), Delco-Remy 1918148 (Distributor 1110872 & 79 Two used)

Breaker Gap - .019" (New Points - Distr 1110847, 66, 69, 78), .015" (New Points - Distr 1110872, 79), .016" (Used Points).

Cam Angle—26-33° with .016' gap (Distributor 1110847, 66, 69, 78), 34° plus or minus 1° for both sets of points operating together (Distributor 1110872, 79)

►*CAM ANGLE NOTE (Double Breaker Distributors)* Adjust each set of points separately for cam angle of 29° plus or minus 1° (block other set of points open with insulator at least .025" thick). Cam angle for both sets operating together should then be 34° plus or minus 1° with breaker gap of .014-.018

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Clockwise viewed from above.

Automatic Advance—1110847

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		400	0-4		800
8-10		1150	16-20		2300
15-17		1800	30-34		3600

Automatic Advance—1110866, 69, 72

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		350	0-4		700
7.5-9.5		750	15-19		1500
10-12		1200	20-24		2400
13-15		1750	26-30		3500

Automatic Advance - 1110878, 79

6-8		750	12-16		1500
9.5-11.5		1300	19-23		2600
13-15		1850	26-30		3700

Vacuum Spark Control: Delco-Remy 1116100 (Distributor 1110847 & 66), **1116104** (Distributor 1110869 & 78). *NOTE* - No vacuum control used on 1110872 & 79

Vacuum Advance—1116100

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7
11.75	23.5	12-20

Vacuum Advance—1116104

Distr. Degress	Eng. Degrees	Vacuum (" of HG)
Start	0	7-9
11.75	23.5	14-15.5

►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION (265' V8 ENGINE)* Incorrect installation may cut off oil to RIGHT or LEFT valve lifter gallery (valve lifters, pushrods, and rocker arms) *See 'Ignition Notes" in Chevrolet Special Data*

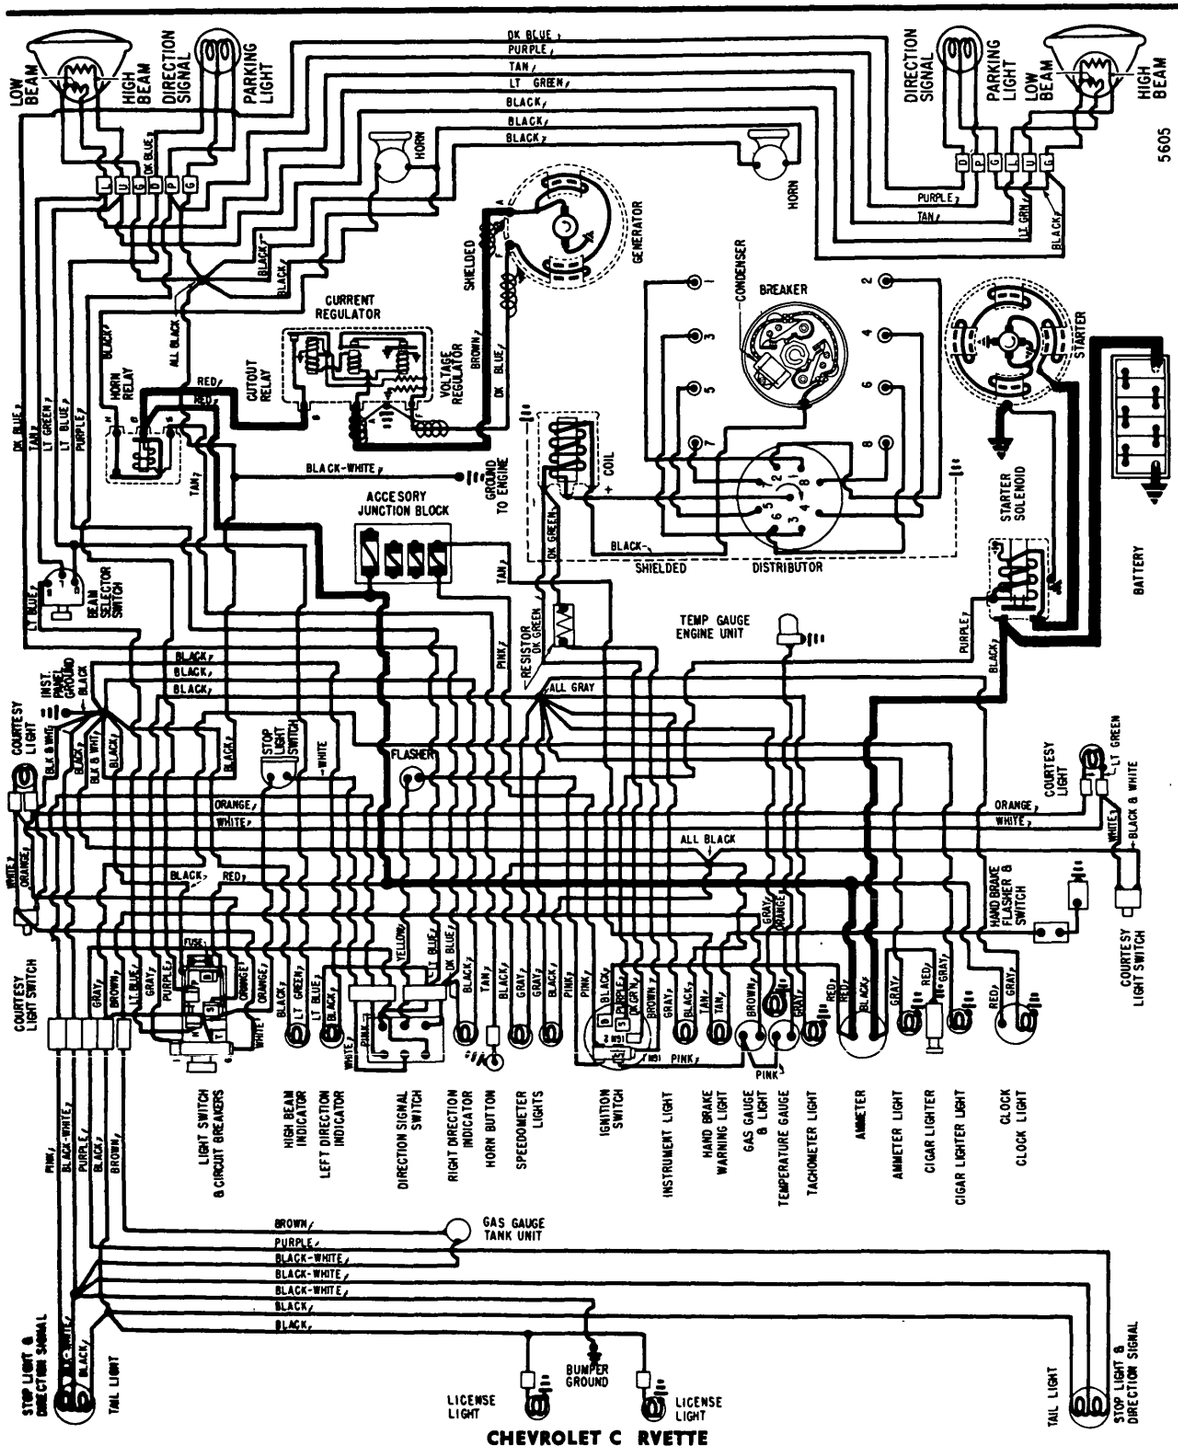
IGNITION TIMING

Setting - *As indicated in table below at IDLE SPEED with vacuum line connected*

►*IGNITION TIMING PROCEDURE CHANGE Previous recommendation of setting timing at 1000 RPM with vacuum line disconnected has been discontinued*

Distributor No	Ignition Setting (Idle Speed)
1110847	4° BTDC
1110866	4° BTDC
1110869	4° BTDC
1110872 (1 Carb)	4° BTDC
1110872 (2 Carbs)	ℂ 8° BTDC
1110878	4° BTDC
1110879 (1 Carb)	4° BTDC
1110879 (2 Carbs)	℗ 8° BTDC

ℂ - Do not exceed 10° BTDC



℗ - Do not exceed 12° BTDC

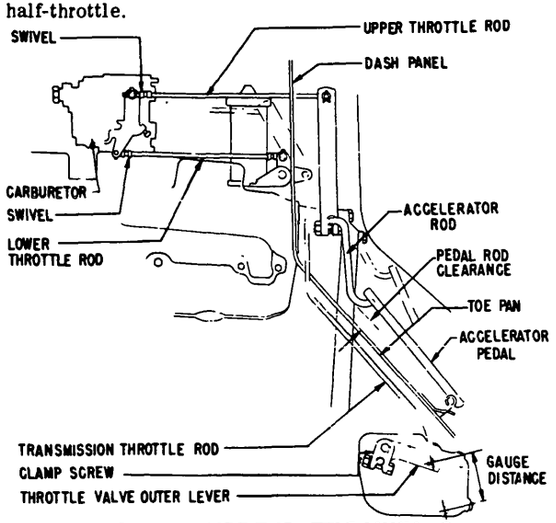
Timing Mark—Mark on vibration damper and an indicator on left side of valve chain cover. Indicator is marked with five lines on each side of "O" mark. Each line represents 2°.

CARBURETOR

►*CARBURETOR APPLICATION NOTE. Rochester 2GC Dual Carburetors is Std. on all models (Exc. Corvette).*

CONTINUED ON NEXT PAGE

CHEVROLET C RVETTE



CONTINUED FROM PRECEDING PAGE

Roch st r 4GC and Cart r WCFB 4-Barr l Carbur t rs us d n a mix d basis on m d ls (Exc. C rvette) with P w r Packag . A singl r TWO Carter WCFB 4-Barrel Carburetors used on C rv tt .

► *FAST IDLE CONTROL CAUTION (AIR CONDITIONED CARS):* Fast idle control is set to provide 900 RPM engine speed when Fast Idle Control Knob on dash is pulled out. **Make sure knob is push d in wh n making normal fast idle adjustments** and that fast idle control linkage does not interfere with normal operations of the carburetor linkage when fast idle is not in operation.

THROTTLE LINKAGE ADJUSTMENT (All M d ls): *POWERGLIDE NOTE – Adjust transmission throttl linkage BEFORE adjusting carbur tor throttl linkage (see below).*

Carburetor Throttle Linkage (All Mod ls): With accelerator pedal depressed so that clearance between lowest point on accelerator link and toe pan (floor mat removed) is exactly ¾" (2-Bbl. Carbs.), 1" (4-Bbl. Carb. - except Corvette), 3/8" (Corvette - single and double carbs.); adjust upper throttle rod swivel so that it enters carburetor throttle lever freely (rear carburetor on Corvette double carburetor installation), connect rod. **Corvette Double Carb. M d ls** - Hold rear carburetor throttle valves wide open, check front carburetor for throttle valves being wide open and against stop. Adjust by turning nut on front carburetor control shaft. *NOTE* - With correct adjustment, front carburetor throttle valves begin to open with rear carburetor at half-throttle.

POWERGLIDE THR TTLE LINKA E

Transmission Throttle Contr l Linkage Adjustm nt (Powerglide Cars): With selector lever in "D" (Drive) range and with hand brake applied, adjust engine idle to correct speed (engine and transmission at normal operating temperature). Turn engine off and check choke valve to make sure it is fully open and that throttle stop screw is against low step of fast idle

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

cam. Disconnect transmission throttle rod at transmission. Remove extreme lower rear bolt in side cover on transmission. Rotate transmission throttle valve outer lever assembly counter-clockwise to the open throttle position (against stop). Hold in this position and with throttle valve positioning gauge J-5906 set to 2 7/8", measure the distance between the bolt hole inside cover and hole in throttle lever. If pin or gauge enters hole, adjustment of lever is correct If necessary to adjust, loosen lever to clamp attaching screw and adjust outer lever to obtain correct adjustment. Install bolt in side cover and attach throttle rod to transmission lever Force transmission throttle control rod forward against stop in transmission (open throttle) and adjust lower rod on carburetor throttle lever for free entry of swivel pin into carburetor throttle lever, with carburetor throttle valve in wide open position. Adjust upper throttle rod as outlined in Carburetor Throttle Linkage above

ROCHESTER 2GC

Mdl	Rochester No.
Std Transmission	7008387
Powerglide	7008388

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting—After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smooth idle with highest vacuum reading and RPM

Idle Speed—450-500 RPM (Synchro mesh), 400-450 RPM (Powerglide—with Selector Lever in "D" range).

Float Level—1¼" (Gauge BT-129) With air-horn inverted and gasket in place, position the float level gauge over the float so it rests against the pump side of power piston shaft, with the outer gauge leg in line with the center of the float Bend float arm to adjust

Float Drop—Bend float tang as required to obtain a distance of 1 29/32" from the gasket surface to bottom of the float, with air-horn upright and float hanging free.

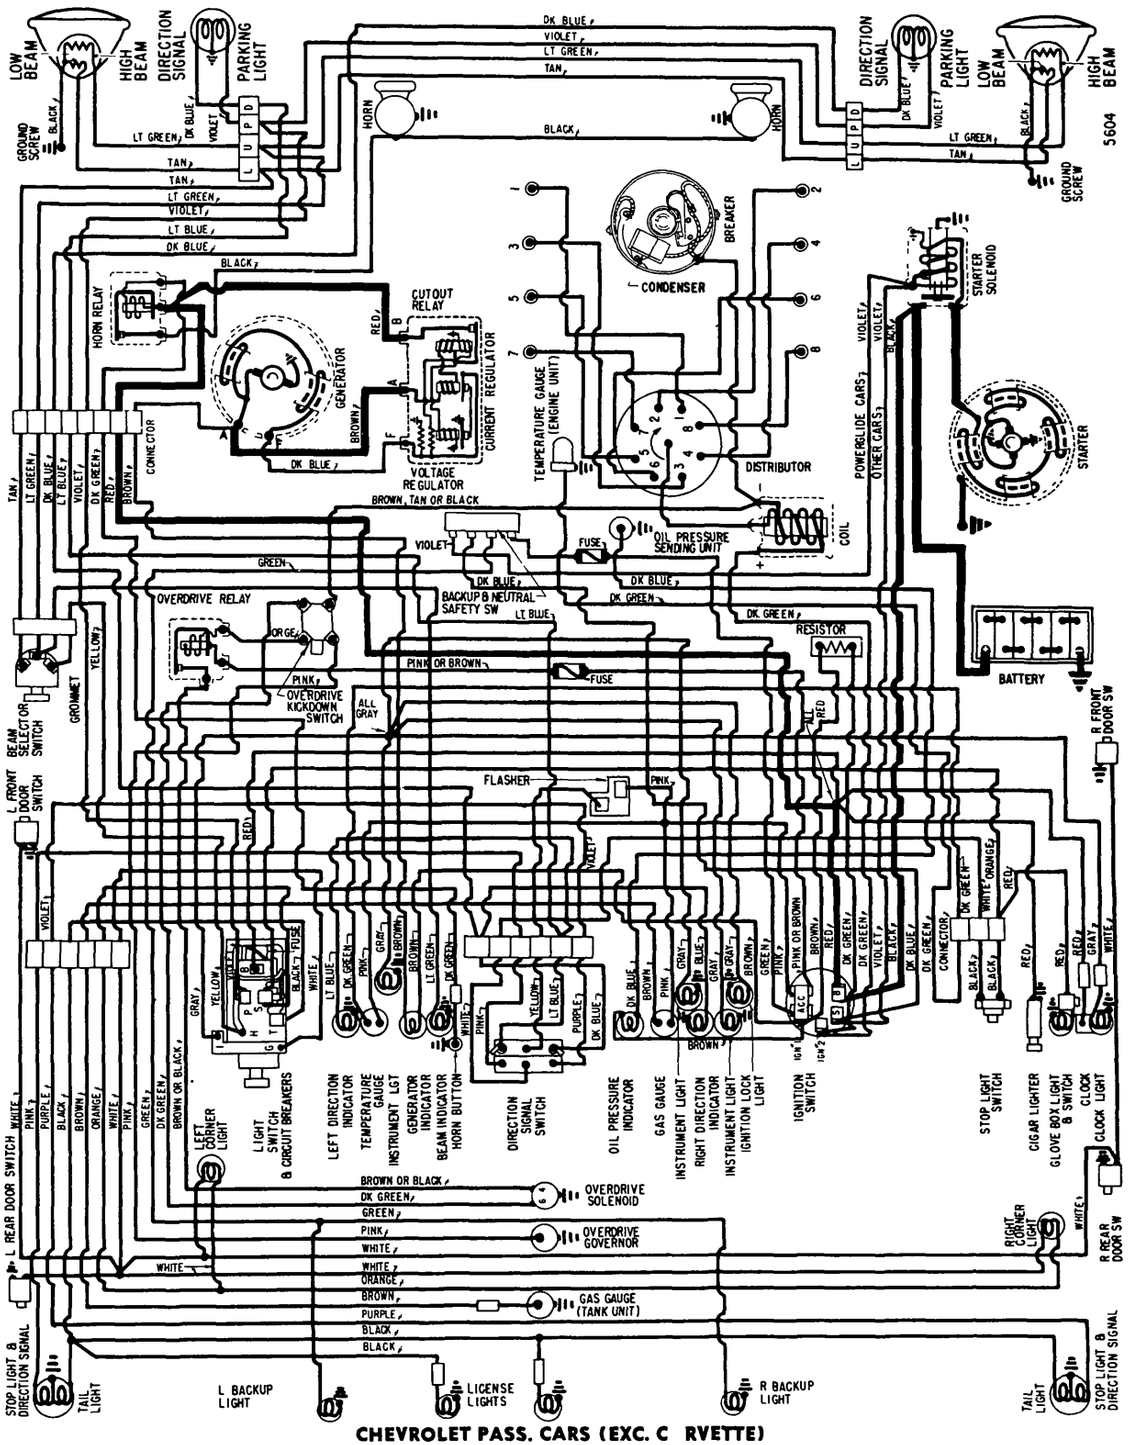
Automatic Choke Setting: Centered at index.

►*OTHER DATA: See "Rochester 2GC Carburetor" in Carburetion Section.*

ROCHESTER 4GC 4-BARREL
No. 7008737

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting—Adjust idle mixture screws for highest steady vacuum.



Idle Speed—450-500 RPM (Std. & O.D.), 400-425 RPM (Powerglide - with Selector Lever in "D" range).

►*OTHER DATA: See "Rochester 4GC" Carburetor in Carburetion Section.*

CARTER WCFB 4-BARREL
No. 2366S, SA (Std. V8 Power Pkg. & Corvette with Single Carb.)

►*CHOKE SETTING PRODUCTION CHANGE & STALLING CORRECTION: Adjust automatic choke to 1 point rich, superseding previous setting of "centered" setting.*

CONTINUED ON NEXT PAGE

CHEVROLET PASS. CARS (EXC. CORVETTE)

CONTINUED FROM PRECEDING PAGE

►*MANIFOLD FUEL DISTRIBUTION: Carbur tor RIGHT barrels fe d Cyl. 2-3-5-8, LEFT barr ls 1-4-6-7.*
Idle Setting–¼-1¼ turns open. Adjust both screws alike. Turn screws out for richer mixture.
Idle Speed – (Exc. Corvette) 450-500 RPM (S.M. & O.D.) 400-450 RPM (Powerglide – With Selector Lever in "D" range).
Idle Speed – (Corvette) 600 RPM. *NOTE* - On Powerglide Cars with Selector Lever in "D" Range and brake set.
►*OTHER DATA: See "Carter WCFB" Carburetors in Carburetion Section.*

CARTER WCFB 4-BARREL
No. 2419S (Front), No. 2362S (Rear)
(Corvette Eng. with TWO Carbs.)

►*RECOMMENDED CHANGES FOR IMPROVED IDLING & LOW SPEED OPERATION: See "Carter WCFB 4-Barrel Carburetor" in Carburetion Section.*
►*CARBURETOR INSTALLATION NOTE:* **Front and rear carburetors operate together at idle speed and for high-speed or full power operation. Front carburetor throttle begins to open when rear carburetor throttle valves are approximately at half-throttle position.**
►*CARBURETOR ADJUSTMENT NOTE:* These carburetors have special "Idle Air Bypass Adjustment Screws" but these screws are NOT used for adjustment. *See "Carter WCFB 4-Barrel Carburetors" in Carburetion Section for complete adjustment instructions.*
Idle Mixture & Idle Speed Setting - *See "Carter WCFB 4-Barrel Carburetors" in Carburetion Section for recommended adjustment procedure.*
Throttle Linkage Adjustment: *See CARBURETOR above.*
►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type.
Replacement Pump – AC No. 4150 (Fuel only), No. 4141 or 708 (Fuel & Vacuum). *NOTE* - No. 4150 only used on Corvette.
Pressure – 4-5¼ lbs.
See "Fuel Pumps" in Carburetion Section.
Gasoline Gauge: AC Electric.

Dash Unit – (Corvette) AC 1518244, (Others) 1518473.
Tank Unit – (Corvette) AC 1617911, (Others) 1518158.
See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco 2SMR53W (Std. V8), 2SM53W (Corvette). *12 Volt,* 9 plate, 53 ampere hour capacity (20 hr. rate).
Battery Ground – Negative.
Engine Ground – Engine to cowl at rear head bolt.

STARTER

Delco-Remy. *12 Volt.* Application as follows:

Car Model	Starter No.
V8, Std. Trans.	1107645
V8, Powerglide	1107649
Corvette	1107627

Armatur (All) – Delco-Remy No. 1926626.
Driv – Overrunning clutch (solenoid pinion shift).
R tati n – Counter-clockwise at commutator end.
Brush Spring Tensi n – 35 ozs. minimum.

P rformanc Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75 max.
10.5 ft. lbs. min.	Lock	5.8	435 max.

Starting Switch: Delco-Remy Solenoid Switch 1119767 (Corvette), 1119789 (Others) mounted on starter and controlled by Ignition & Starter Switch 1116512. Turn key full RIGHT against spring tension to start. *See "Delco-Remy Starter Solenoid (Without Relay)" in Electrical Section.*
Neutral Safety & Back-up Light Switch: Delco-Remy No.1998112 (Corvette), 1998106 (Others).
Adjustment – *See "Chevrolet Powerglide" in Transmission Section.*

GENERATOR

Delco-Remy. *12 Volt.* Application as follows:

Application	Generator	Armature
V8 Std.	1100321	1928952
V8 Pwr. Strg.	1102041	1929640
V8 Air Cond.	1102042	1923535
V8 Spec. (Cab)	1105947	
V8 Spec. (Cab & Pol.)	1106981	1929360
Corvette	1102043	1929640

Performance Data

Generator	Amperes ①	Volts	RPM
1100321	25	14.0	2780
1102041, 42, 43	30	14.0	2150
1105947	32	14.0	1850
1106981	40	13.0	1500

① – Not maximum output. See Regulator data.

Rotation – Counter-clockwise at commutator end.
Brush Spring Tension – 28 ozs.
Field Current – (1100321) 1.5-1.62 amps., (1102041, 42, 43) 1.48-1.62 amps., (1105947) 1.54-1.67 amps., (1106981) 1.37-1.50 amps., all at 12.0 volts.
Belt Adjustment: 13/16" belt deflection midway between fan and generator pulleys with light pressure applied.

REGULATOR

Delco-Remy. *12 Volt.* Application as follows:

Regulator No.	Generator
1119000	1100321
1119001	1102041, 42, 43; 1105947
1119004	1106981

NOTE – Regulators are "1119000 Series Regulators". Specifications below are for "Normal" Settings.

Cutout Relay

Cuts In – 11.8-13.5 volts Hot (1119000, 1), 11.5-13.0 volts Hot (1119004).
Contact Gap – .020".
Air Gap – .020" (with contacts just closed).

Voltage Regulator

Setting – 1119000, 1) 13.8-14.8 volts Hot, (1119004) 13.6-14.3 volts Hot.
Air Gap – .075" (1119000, 1), .063" (1119004) with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "Delco-Remy 1119000 Series Regulator" in Electrical Section.*

Current Regulator

Setting – (1119000) 23-27 amperes Hot, (1119001) 27-33 amperes Hot, (1119004) 37-42 amperes Hot.
Air Gap – .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "Delco-Remy 1119000 Series Regulator" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*
Direction Signals: *See Electrical Section.*
Autronic Eye: *See Electrical Section.*
Direction Signals: *See Electrical Section.*
Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel) and pull shaft and knob out. Remove switch retaining nut and switch assembly.
Stop Light Switch Location: Mechanical type mounted under instrument panel adjacent to brake pedal lever.
Adjustment–Adjust position of switch so that stop light goes out when brake pedal depressed 5/8" from fully released position.
FUSES: All accessory fuses except as indicated below are contained on the accessory fuse and junction block located on upper inside of dash panel to left of steering column.
Overdrive–14 amps. Located in Lucite cartridge in overdrive relay feed wire on engine side of dash panel to left of steering column.
Back-up Light –On accessory fuse block.
►*LIGHTING SWITCH FUSE NOTE:* A 3 ampere fuse has been added to light switch to protect instrument panel rheostat from burning out.
LIGHTING CIRCUIT BREAKERS: Two 13-amp. circuit breakers located on main light switch.
HORNS: Delco-Remy 1999759 (Low Note), **1999760** (High Note). *12 Volt.*
Horn Relay: Delco-Remy No. 1116913, or 1116781.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Misc. Sect.*
►*PASSENGER CAR ENGINE NOTE: Hydraulic valve lifters are used on the Standard V8 Engine and solid Type lifters are used on the Corvette engine.*
ENGINE SPECIFICATIONS: V8, Valve-in-Head.

Bore	Stroke	Displacement	Rated HP
3¾"	3"	265 cu. ins.	45

Engine	Compr. Ratio	Developed HP
V8 Std.	8.0-1	162 at 4400 RPM
V8 Powerglide	8.0-1	170 at 4400 RPM
V8 Power Package	9.25-1	205 at 4600 RPM
V8 Corvette	9.25-1	225 at 5200 RPM

Compression & Vacuum Reading – *See TUNE-UP.*
►*NOISY VALVE OPERATION & LACK OF OIL IN VALVE SYSTEM (265" V8 ENGINE):* Lack of oil in valve system of RIGHT or LEFT cylinder banks may be caused by incorrect distributor installation. *See "Ignition Notes" in Chevrolet Special Data.*
ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

OIL PAN REMOVAL: Disconnect steering idler arm bracket from frame side rail and drop for clearance.

ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data.*

CYLINDER HEAD & MANIFOLDS: *See Chevrolet Special Data.*

TIGHTENING TORQUES: *See Chevrolet Special Data.*

PISTONS

Cast aluminum, slipper skirt, with piston pin offset 5/64".

Weight—18.77 ozs.

Removal—Pistons and rods removed from above.

Replacement Pistons: Furnished Std. Size & .020", .030", .040" oversize.

►*STANDARD SIZE PISTON NOTE:* Standard pistons furnished in four sizes with size code stamped on piston. The sizes and codes are: **S4** (3.7500-3.7505"), **S5** (3.7505-3.7510"), **S6** (3.7510-3.7515"), **S7** (3.7515-3.7520").

Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.

Installing Pistons: Install pistons with cast depression in head and "F" mark cast in side of piston toward front of block. *See Rod Installation.*

PISTON PINS

Piston pin is pressed into connecting rod and retainers are not used.

Diameters—.9270-.9273". **Length**—3.1200".

Pin Fit in Piston—.00015-.00025". Pins should be capable of supporting own weight in either pin boss at 60°F.

Pin Fit in Connecting Rod—*NOTE—Special tools required for removal & installation. See "Piston Pins" in Chevrolet Special Data.*

Replacement Pins: Furnished only in assembly with piston. Oversizes not available.

PISTON RINGS

Upper compression ring is chrome plated and oil control ring is 3-piece type (2 chrome plated rails and spacer).

Ring	Width	End Gap	Side Clearance
Compr.No.1	.077-.078"	.008-.016"	.001-.003"
Compr.No.2	077-.078"	.009-.018"	.001-.003"
Oil	.181-.188"	.015-.055" ①	.000-.008"

① — On rails.

►*RING INSTALLATION CAUTION:* Install compression rings with side marked "TOP" upward.

Replacement Rings: Furnished Std. & .020", .030", .040" Oversize.

CONNECTING RODS

Length (Center to Center) — 5.7000". **Weight** — 19.02 ozs.

Crankpin Journal Diameter—1.999-2.000".

Lower Bearing—Replaceable precision type.

Clearance—.001-.003" (new), .001-.004" (used).

Side play—.008-.014" (both rods).

Replacement Bearings: Furnished Standard size, .001", .002", .010", .020" Undersize.

Installing Rods: Install rod in piston so that flange or heavy side of rod at bearing end will be toward front of piston (cast depression in head of piston and "F" mark on piston strut) on Nos. 1, 3, 5, and 7 pistons, and rod flange to rear of piston on Nos. 2, 4, 6, and 8 pistons. Install rod and piston assembly in cylinder with cast depression in piston head and "F" mark on strut toward front of cylinder block.

CRANKSHAFT

Journal Diameter—2.2978-2.2988".

►*NOTE: Journal runout at intermediate bearing is .002" maximum.*

Clearance—.001-.003" (new bearings), .001-.004" (used bearings).

End Thrust—Taken at No. 5 (rear) main bearing.

Endplay—.002-.006". Check at front end of rear main bearing.

Replacement Bearings: Furnished Standard size, .001", .002", .010", .020" Undersize.

Bearing Installation: Not necessary to remove crankshaft or engine from car. *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data.*

Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data.*

CAMSHAFT

►*CAUTION: Camshafts differ on engines as follows:*

Model	Chevrolet No.
Corvette (All)	3711354
Others (Synchro-mesh)	① 3704212
Others (Powerglide)	② 3728779

① — Cast 3703906. ② — Cast 3728284.

Journal Diameters—1.8682-1.8692" (all journals).

Clearance—.0015-.0035".

Bearings—Steel backed babbitt lined bushing.

Replacement Bearings: "Precision" type (do not require reaming). Use Tool Set J-6098 to remove and install bearings.

Camshaft Setting: Both sprockets marked '0'. Install chain with sprocket marks adjacent and in line with straight edge across shaft centers.

►*CAUTION: When installing sprocket on camshaft, line up dowel holes in sprocket and shaft. DO NOT DRIVE SPROCKET ON SHAFT, use three mounting bolts and DRAW sprocket into place.*

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Chevrolet Special Data.*

Timing Chain: Link Belt. Width — .875". Pitch — .500. Length — 46 links.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data.*

VALVES

Tappet Clearance: (Corvette) — .008" Intake, .018" Exhaust, with engine hot and idling. (Others) — None in service - hydraulic.

Initial Tappet Clearance (Engs. with Hydraulic Lifters). *See "Valve System" in Chevrolet Special Data.*

Valve	Head Diam.	Stem Diam.	Length
Intake	1.720"	.3415-.3422"	4.902-4.922"
Exhaust	1½"	.3410-.3417"	4.913-4.933"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45° ③	①	.001-.0027"
Exhaust	45° ③	②	.0015-.0032"

① — .3336" (Std. V8 S.M.), .3732" (Std. V8 Powerglide) .40432" (Corvette).

② — .3336" (Std. V8 S.M.), .3732" (Std. V8 Powerglide), .41355" (Corvette).

③ — Seat angle in head is 46°.

►*VALVE GRINDING CAUTION:* Replacement valves furnished with face angle of 45°. When seats are ground to new recommendation of 45°, valves must be ground to recommended angle of 44° (Intake & Exhaust), whether valves being re-used or new valves installed.

Valve Seat Width—3/64"-1/16" (Intake), 1/16"-3/32" (Exhaust).

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

►*VALVE SEAL PRODUCTION CHANGE:* New "shedders" installed over upper end of valve springs used on later cars and should be installed on all engines. These shedders replace previous type shield within valve springs. *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance is excessive. Valves are furnished with .003", .015", .030" oversize stems. Use Reamer Set J-5830.

Valve Springs: Install springs with closed coil end of spring toward cylinder head. On intake valve springs a baffle is used inside spring.

Spring Specifications (Std. V8)

	Pressure	Length
Valve Closed	76-84 lbs.	1.696"
Valve Open	155-165 lbs.	1.366"

Spring Specifications (Corvette)

	Pressure	Length
Valve Closed	65-72 lbs.	1.696"
Valve Open	151-161 lbs.	1.306"

►*VALVE SPRING INSTALLED HEIGHT CAUTION:* Check installed height of valve spring after grinding valves by measuring the distance from spring seat in cylinder head to top of valve spring. If this dimension exceeds 1 45/64", install valve spring seat shim furnished 1/32" & 1/16" thick. Installed height of spring must be 1 11/16 - 1 45/64".

Valve Lifters (Std. V8): Hydraulic type. *See "Valve System" in Chevrolet Special Data.*

Valve Lifters (Corvette): Plain barrel type. Remove in same manner as for hydraulic valve lifters. See *"Valve System" in Chevrolet Special Data.*

Rocker Arms: Mounted individually on studs pressed into cylinder head.

Rocker Arm Stud Replacement — *See "Valve System" in Chevrolet Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Conventional Std. V8 Valve Timing

Intake Valves — Open 18° BTDC, Close 54° ALDC.

Exhaust Valves — Open 52° BLDC, Close 20° ATDC.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Powerglide Std. V8 Valve Timing

Intake Valves – Open 26°30' BTDC, Close 63°30' ALDC.
Exhaust Valves – Open 66°30' BLDC, Close 23°30' ATDC.

Corvette Valve Timing

Intake Valves – Open 21°30' BTDC, Close 62°30' ALDC.
Exhaust Valves – Open 62°30' BLDC, Close 23°30' ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: 4 qts. refill (exc. Corvette), 5 qts. refill (Corvette). Add 1 qt. when filter changed.

Normal Oil Pressure: 30 lbs. at 1170-1200 RPM.

Pressure Regulator Valve – In oil pump. Not adjustable.

Oil Pressure Indicator (Std. V8) – Light on right side of instrument cluster, controlled by pressure switch, Delco-Remy No. 1998149, located on left side of engine. Switch operates at 4-6 lbs.

Oil Pressure Indicator (Corvette) – AC No. 1508063. Not electric.

Oil Filter: Full flow type. Replace element at 6000 mile intervals. Use new seal, tighten center bolt to 20-25 ft. lbs.

Replacement Filter Element – AC No. PF-131.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul–*See "Oiling System" in Chevrolet Special Data.*

Crankcase Ventilation–Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

COOLING

►*RADIATOR REMOVAL CAUTION (POWERGLIDE CARS): Transmission oil cooler is part of radiator lower tank, and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.*

Water Capacity: 16 qts. (17 qts. with heater).

Pressure Valve: AC Type RC-1, Chevrolet No. 850795. 7 lb. type radiator filler cap.

Thermostat: Harrison. In water outlet on intake manifold.
(Std.) No. 3133595 (stamped 151), 151°.
(Optl.) No. 3123994 (stamped 160), 160°; or No. 3133597 (stamped 170), 170°.

Temperature Gauge (Std. V8): AC. Electric type.
Dash Unit – AC No. 1513134.
Engine Unit – AC No. 1513130.
See "Temperature Gauges" in Miscellaneous Section.

Temperature Gauge (Corvette): AC No. 1513198. Not electric.

Water Pump: Packless type with ball bearing shaft.
See "Water Pumps" in Chevrolet Special Data.

CLUTCH

Own (Diaphragm Spring Type) or Borg & Beck. Single plate.
See "Chevrolet (Own)" or "Borg & Beck" Clutches in Clutch Section.

Borg & Beck	Model	Assy. No.	Disc No.
V8 Std. (Pow. Pkg.)	10A9	361404	382527
V8 O.D. (Pow. Pkg.)	10A9	361404	382526
Corvette	10.5A9	361402	382528

Own (Diaphragm Spring Type)	Cover No.	Disc No.
Synchro-mesh (10")	3836723	3836708
H.D. & O.D. (11")	3836719	3836906

►*STD. V8 OVERDRIVE DRIVEN PLATE REPLACEMENT NOTE (BORG & BECK CLUTCH):* New Clutch Driven Plate Assy., Part No. 3741089, has been released to replace Clutch Driven Plate Assembly, Part No. 3729780, to eliminate drive line rattle. New assembly has six inner damper springs instead of the four on old assembly.

Pedal Adjustment: Pedal Free Travel ¾-1". Loosen check nut at connecting link at clutch fork. Turn adjusting nut to remove all lash at fork, **then back off two turns.** Tighten check nut.

Removal (Borg & Beck): Remove transmission (see Transmission Removal below). Remove clutch housing pan. Pull out clutch release bearing and sleeve. Mark flywheel, cover, and one pressure plate lug with punch to insure proper reassembly. Loosen holding screws a turn or two at a time to avoid bending rim of cover, until cover is free. Remove clutch assembly and clutch disc assembly from clutch housing. When removing driven disc be sure to mark flywheel side.

Removal (Diaphragm Spring Type): Remove transmission (see Transmission Removal below). Remove clutch throwout bearing from fork, then clutch fork tension spring from fork. Remove clutch fork by forcing it forward and toward center of vehicle. Install Clutch Pilot Tool J-5824 to support clutch assembly. Loosen clutch attaching bolts one turn at a time until diaphragm spring is released. Remove tool, then clutch assembly from vehicle. *NOTE* - When installing clutch, align "X" marks on cover and flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.
See "Chevrolet 3-Speed" in Transmission Section.

Transmission Control: *See "Transmission Controls" in in Transmission Section.*

Removal: Drain transmission and disconnect speedometer cable and shift rods. Disconnect propeller shaft at rear universal and slide shaft toward rear to disengage from transmission. Remove two top transmission to clutch housing screws and install Guide Pins J-1126. Remove the two lower screws and slide transmission back until clutch splines disengage. Remove transmission from below car.

OVERDRIVE

Warner Model AS1-R10H. Solenoid operated type with with governor control and throttle operated kickdown. Lockout Switch not used.
See "Chevrolet Overdrive" in Transmission Section.

Overdrive Control: *See "Warner R10 & R11 Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

POWERGLIDE TRANSMISSION

Powerglide Transmission–Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Chevrolet Powerglide" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication–Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing an "AQ-ATF" marking on container.

Capacity–5 qts. (refill), 11 qts. (after overhaul).

►*POWERGLIDE DRAINING CAUTION: There is no drain plug on converter. Drain transmission case only, add 4½ qts. of fluid initially, recheck after idling engine.*

►*CHECKING FLUID LEVEL & FILLING TRANSMISSION NOTE:* A filler plug has been added to transmission side cover for use in checking fluid level and adding fluid to transmission. This change made necessary because filler tube and dipstick is not accessible from under hood on air conditioned cars.

Checking Fluid Level–Engine must be idling with parking brake set, transmission warm, and the selector lever in "N" position when taking dipstick readings (on cars without air conditioning), or checking level at filler plug on side of transmission (cars with air conditioning). Maintain fluid level to "F" mark on dipstick (cars without air conditioning), or to bottom of filler plug hole on side of transmission (cars with air conditioning).

►*OTHER DATA: See "Chevrolet Powerglide" in Transmission Section.*

UNIVERSALS

Own. Yoke & Spider (Trunnion) type.

►*CAUTION:* **Rear universal companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever nut loosened.** *See "Chevrolet (Pass. Car)" in Rear Axle Section..*

REAR AXLE

Own. Semi-floating, hypoid gear type, with Hotchkiss Drive. Pinion bearing adjustment is different than on previous models.
See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section.

►*PINION BEARING PRELOAD CAUTION:* Rear universal joint companion flange controls rear axle pinion bearing preload. Bearing preload must be adjusted whenever companion flange nut is loosened.

Axle Ratios	Standard	Optional
Std. V8 (Synchro-mesh)	3.70-1	
Std. V8 (Overdrive)	4.11-1	
Std. V8 (Powerglide)	3.55-1	
Corvette (Synchro-mesh)	3.55-1	3.27-1
Corvette (Powerglide)	3.55-1	3.27-1

Backlash – .006-.009" (.008" preferred).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Removal: Raise car and support with jack stands under frame side rails. Remove rear wheels and remove two trunnion bearing "U" bolts from rear universal yoke and separate the joint (tape bearings to trunnion). Disconnect hand brake cable and equalizer and remove cable from clamps at frame. Disconnect hydraulic brake lines at rear axle housing Disconnect shocks. Support axle assembly on hydraulic jack and remove spring "U" bolts, nuts and anchor plate, and lower axle to floor.

Axle Shaft Removal: Raise car and place jack stands under axle housing. Remove tire, wheel and brake drum assembly. Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange). Attach Axle Puller J-5748, with slide hammer, to flange and remove axle shaft and bearing assembly. Be careful not to disturb backing plate. *NOTE*–If bearing retainer and parking brake strut interfere, raise strut slightly with screwdriver to obtain clearance.

SHOCK ABSORBERS

Delco. Direct acting non-adjustable. Serviced by replacement.

FRONT SUSPENSION

Independent with direct acting shock absorbers within front coil springs. Different types used as follows:

Corvette – "Threaded Bushing" type pivot points on upper and lower control arms.

Others – "Spherical Joint" type pivot points between control arms and steering knuckle support.

See "Chevrolet" in Suspension & Wheel Alignment Sect.

Kingpin Inclination – 3½ - 4½° crosswise.

Caster – (Corvette) 0° to Pos. 1°, (Others) Pos. ½-1½°.

Camber – 0° to Pos. 1°.

Toe-In – (Corvette) 0-1/8". (Others) 1/16"-1/8" per wheel or 1/8-1/4" total.

Toe-Out on Turns – With outside wheel at 20°, inside wheel should be 23° (Corvette), 22-26° (Others).

STEERING

Manual: Different type steering systems used as follows: **Corvette - Saginaw Worm & Roller.** Push-pull adjustment.

Others – Saginaw Ball Bearing Worm & Nut. Recirculating ball type.

See Saginaw "Worm & Roller" or "Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Own (Linkage Type). *See "Chevrolet Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic, without anchor pin adjustment. Hand lever applies rear wheel service brakes.

See "Chevrolet-Bendix Hydraulic" in Brake Section.

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION:* To compensate for lack of brake anchor adjustment, brake shoes are ground to a .057-.087" smaller diameter than the drum diameter. Grinding to the true diameter on a bench grinder will cause heel and toe contact, resulting in faulty brake action. *NOTE–If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter.*

►*SLOW BRAKE PEDAL RETURN CORRECTION: See "Brake Notes" in Chevrolet Special Data.*

Drums–Diameter 11".

Wheel Cylinder Diameter–Front 1 1/8", Rear 1".

Lining	Width	Thickness
Front Whl.	2"	.187-.194"
Rear Whl.	1¾"	.187-.194"

Length Per Shoe–9.3125" (Primary), 11.6875" (Secondary).

Braking Power–55.9% (Front Wheels), 44.1% (Rear Wheels).

Clearance–Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag after adjustment.

Standard Master Cylinder: Located on engine side of firewall in line with brake pedal.

Checking Fluid–Reservoir is integral with master cylinder. Maintain level in cylinder to lower edge of filler hole.

Removal–Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove four retaining nuts and lock washers holding master cylinder to firewall and remove cylinder.

Installation–Reverse removal procedure making sure that push rod clevis is straddling the brake pedal. Refill master cylinder and bleed all brake lines. Adjust push rod-to-main cylinder clearance as follows: Make sure brake pedal returns to fully released position with no binding, and that pedal retracting spring has not lost its tension, then adjust brake pedal clevis to give a barely perceptible end play between main cylinder piston and brake pushrod (1/16-3/16" pedal movement should be felt).

Power Brakes: Bendix Vacuum Type Power Unit replaces conventional master cylinder.

See "Bendix Power Unit" in Brake Section.

MISC. MECHANICAL

Windshield Wipers: Cable operated type (Std.). Electric type (Optional).

See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric type with reversible motor operating each door window assembly.

See "Power Window Regulators" in Miscellaneous Section.

Power Top Controls: Hydro-Lectric. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjuster: Reversible electric motor controls horizontal front seat movement. *See "Power Seat Adjusters" in Miscellaneous Section.*

Air Conditioning: See "Frigidaire & Harrison" Air Conditioning in Miscellaneous Section.

MODEL IDENTIFICATION

Model Designation

Series	Serial Prefix	Wheelbase	Type
3100	3A	114"	Half Ton

6400S	6G	154"	⑤ 1½ Ton
6500S	6H	172"	⑤ 1½ Ton

①—Forward Control. ②—School Bus Chassis.

③—Low Cab Forward. ④—Low Cab Forward Special

⑤—Special.

►*SERIAL PREFIX NOTE (MODELS WITH V8 ENGINE): A "V" will precede the Serial Prefix, "V3X", etc.*

SERIAL NUMBER: Stamped on metal plate and attached to the body as follows: **Forward Control Models**—On instrument panel support. **Flat Face Cowl Models**—On cowl inner panel. **All Other Models**—Left front door hinge pillar.

Starting Serial Number: 001001 at each assembly plant regardless of series.

►*SERIAL NUMBER NOTE: Serial number (example 3A56K001083) includes following identification data in sequence.*

Series①	Year	Assembly Plant②	Serial No.
3A	56	K	001083

①—Serial Prefix for each model (Models with V8 engine will have a "V" preceding the "3A").

②—See Assembly Plant Designation below.

Assembly Plant Designation

A—Atlanta	**K**—Kansas City	**S**—St. Louis
B—Baltimore	**L**—Los Angeles	**T**—Tarrytown
F—Flint	**N**—Norwood	**O**—Oakland
J—Janesville		

ENGINE NUMBER (6 Cyl): Stamped on right side of block to rear of distributor.

ENGINE NUMBER (V8): Stamped on pad at front right hand side of cylinder block behind water pump.

Starting Engin Numb r: 0001001 (at each plant). Suffix letters and numerals indicate plant at which engine built ("F" for Flint, "T" for Tonawanda, "C" for Canadian), Model Year, and Model Type. *S follow-ing for S ri s Typ D signation.*

►*ENGINE NUMBER NOTE: Engine number (example 0001025 F 56 X) includes following identification data in sequence.*

Serial No.	Engine Plant①	Year	Series②
0001025	F	56	X

①—See Starting Engine Number (above).

②—Engine Series Type Designation.

Series Type Designation

Series	Engine	Designation
31, 32, 36, 3800	Thriftmaster 235" ①	X
31, 32, 36, 38, 4000	Thriftmaster 235" ②①	XG
34, 35, 3700	Thriftmaster 235" ③	W
34, 35, 3700	Thriftmaster 235" ④	WA
31, 32, 26, 28, 4000	Thriftmaster 235" ⑤	V
4000, 6000	Thriftmaster 235" ⑥	U
4000	Thriftmaster 235" ⑦	UD
6000	Jobmaster 261" ⑦	TA
6000	Jobmaster 261" ⑧	TD
31, 32, 36, 38, 4000	V8 Conv. ①	A
31, 32, 36, 38, 4000	V8 Hydramatic ①	B
31, 32, 36, 38, 4000	V8 H.D. Clutch ①	M
34, 35, 3700	V8 Forward Control	D
34, 35, 3700	V8 F.C., Hydramatic	DA
34, 35, 3700	V8 F.C., H.D. Clutch	DB
5000	V8 Conv.	E
5000	V8 Optional ⑧	EA
4000, 6000	V8 Conv. ⑥	H
6000	V8 Optional ⑧	JB

① — "A" stamped following suffix when this engine is used in 3600 Series, "B" when used in 3800 Series, "C" when used in 4000 Series.

② — With Hydra-Matic Transmission.

③ — Updraft Carburetor.

④ — Updraft Carburetor & Hydra-Matic Transmission.

⑤ — Heavy Duty Clutch. "A" stamped following suffix when this engine used in 3600 Series, "B" if used in 3800 Series, "C" if used in 3100 & 3200 Series.

⑥ — "A" stamped following suffix if used in 4000 Series.

⑦ — Optional, Heavy Duty.

⑧ — Optional, Heavy Duty. Allison Transmission.

TUNE-UP

COMPRESSION PRESSURE: (6 Cyl.) 130 lbs., **(V8)** 140 lbs. at cranking speed. Variation of 20 lbs. between cylinders indicates need for cylinder head reconditioning.

VACUUM READING: 6 Cyl. Engine—17-21" at idling speed.

V8 Engine—Adjust to highest steady vacuum reading.

VALVE TAPPET CLEARANCE: *NOTE—Conventional type lifters used on 6 Cyl. engines. Hydraulic valve lifters used on V8 Engines.*

6 Cyl. Engines—(3000 Series)—Intake .006". Exhaust .016". **(Other Series)**—Intake .006". Exhaust .020".

V8 Engin s (With Hydraulic Lift rs)—No adjustment required unless cylinder head removed or valve lifters replaced.

Initial Tapp t Clearanc (Engs. with Hydraulic Lift rs). *S "Valv Syst m" in Chevrol t Sp cial Data.*

MANIFOLD HEAT CONTROL: 6 Cyl. — Thermostatic type. Check for free operation when tuning engine. Should require 1/2 turn from unhooked to hooked position. *Distorted springs sh uld b r placed.*

V 8 — Heat control valve with counterweight and thermostatic coil spring located between right manifold and exhaust pipe. Hook coil spring under stop stud. Install counterweight with square projection up and upper end of spring stop resting on top of stop stud.

IGNITION

FIRING ORDER: 6 Cyl. — 1-5-3-6-2-4

V8 — 1-8-4-3-6-5-7-2.

Cylinders (V8) — RIGHT BANK 2-4-6-8. LEFT 1-3-5-7.

SPARK PLUG GAP: .035"

Spark Plug — AC No. 44 or 45-Com. (½, ¾, 1, 1½ Ton), AC No. C43 (2 Ton V8). 14 mm. Torque to 20-25 ft.lbs.

►*SPARK PLUG INSTALLATION CAUTION:* Spark plugs flash-over on 1956 engines may be caused if 1955 plugs are used. Insulators on 1956 plugs have four annular ribs that help prevent flash-over, and larger inside diameter on spark plug boot. If 1955 plugs installed, flash-over or misfire will be prevalent due to loose fit of boot.

COIL: Delco-Remy 1115087. *12 Volt.*

Ignition Current — 1.8 amps. idling, 4 amps. stopped.

Resistor — Delco-Remy 1931614. 1.40-1.62 ohms.

►*COIL RESISTOR NOTE (6 Cyl. Trucks Exc. Forward Control):* Resistor connected to ignition switch by two leads. Second lead is connected through starter switch and provides a direct connection to coil when starter switch operated.

►*COIL RESISTOR NOTE (6 Cyl. Forward Control & All V8 Models):* Resistor connected to ignition switch by two leads and is by-passed during cranking (second lead provides direct connection to coil when key turned to "Start Engine" position).

DISTRIBUTOR: Delco-Remy. *12 V lt.* Application as follows:

Engine	Distributor No.	Condens r	C ntact S t
235" Engine	1112403	1928111	1924571
261" Engine	1112407	1928111	1924571
V8 Engine	1110847	1924499	1924499

Condenser Capacity — .18-.23 mfd. (all models).

Breaker Gap—.019" (new points), .016" (used points).

Cam Angle - 28-35° (Distr. 1112403 & 1112407), 26-33° (Distr. 1110847). All with .016" gap.

►*BREAKER GAP CAUTION: Manufactur r recommends final check with feeler gaug or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tensi n—19-23 ozs.

Rotation—Clockwise viewed from above.

Automatic Advanc —1110847

7.5	15	7.5-10

►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION (265" V8 ENGINE):* Incorrect installation may cut off oil to RIGHT or LEFT valve lifter gallery (valve lifters, pushrods, and rocker arms). *See "Ignition Notes" in Ch vrolet Sp cial Data.*

IGNITION TIMING

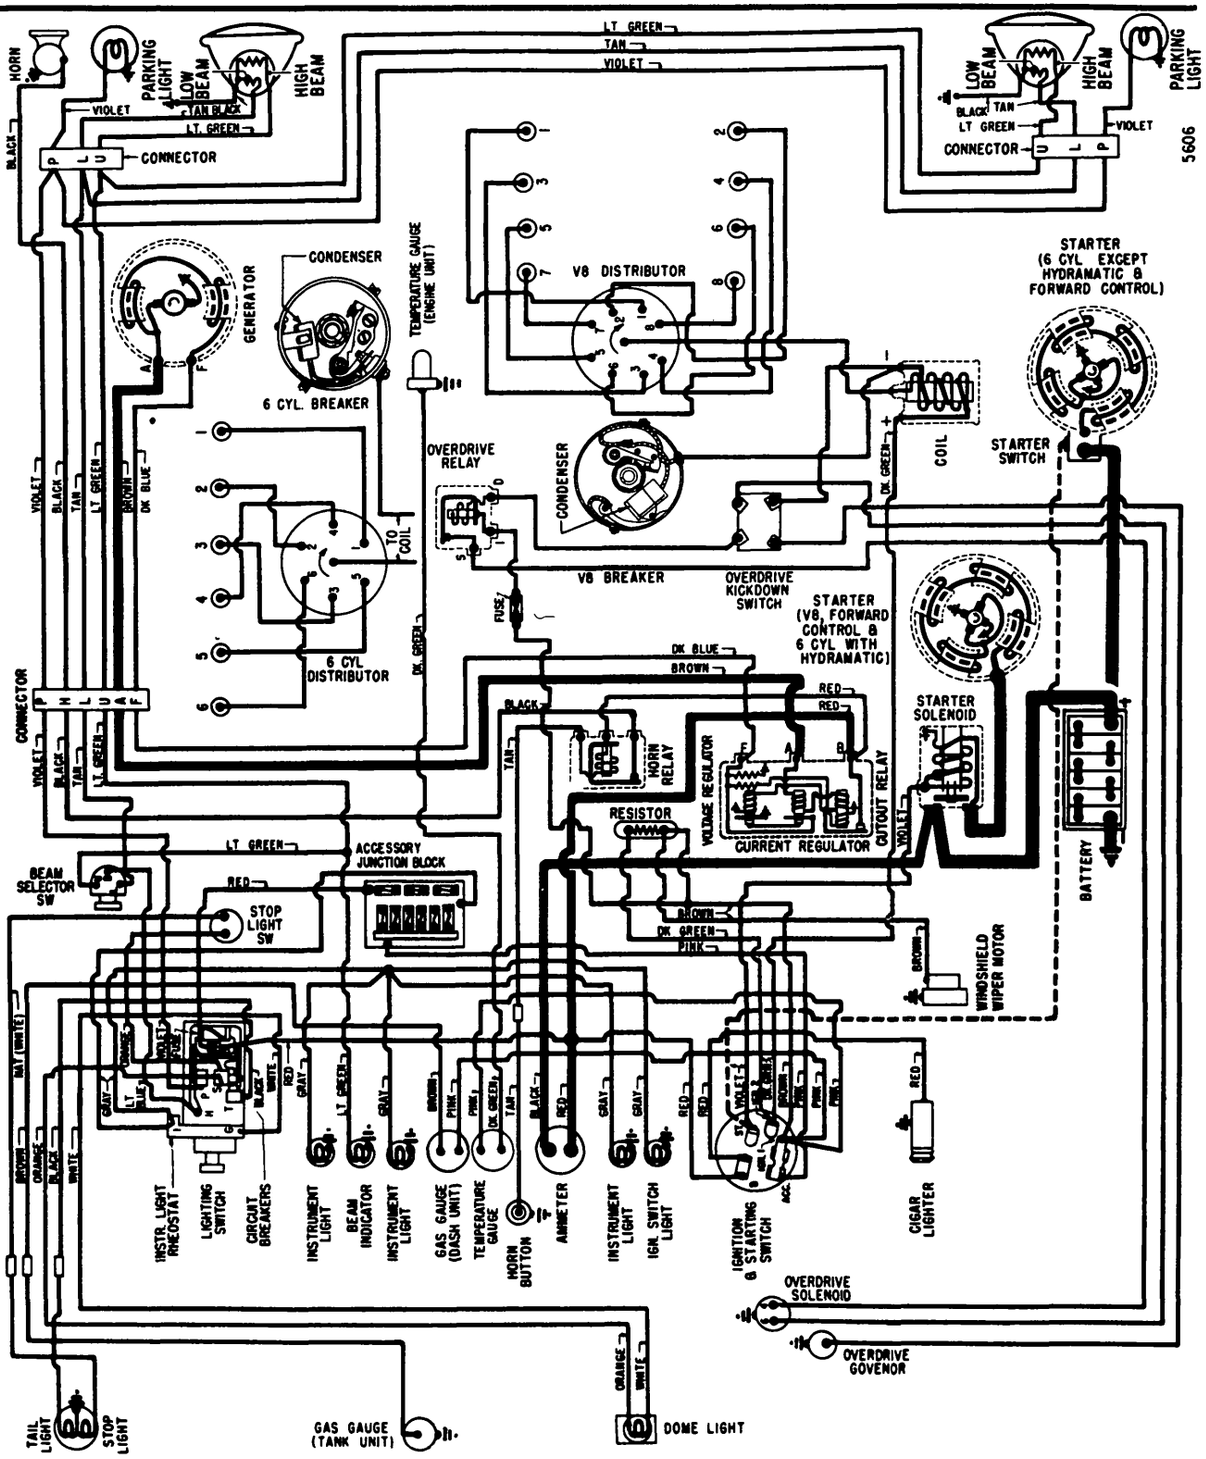
Setting - *As indicat d in table below at IDLE SPEED with vacuum line c nn cted.*

►*IGNITION TIMING PROCEDURE CHANGE: Previous rec mmendation of s tting timing at 1000 RPM with vacuum lin disc nn cted has been discontinued.*

Engin	Ignition Setting (Idle Speed)
6 Cyl. (235" & 261")	At TDC
V8 Engine	4° BTDC

Timing Mark – 6 Cyl. - Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on "O". Adjust Octane Selector as follows: Set for slight ping when accelerating with wide open throttle.

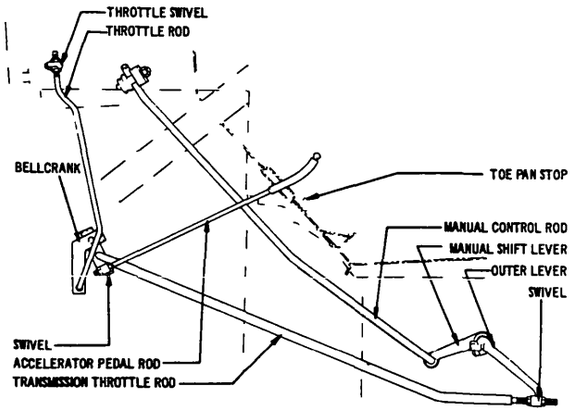
V8 – Mark on vibration damper and an indicator on left side of valve chain cover. Indicator is marked with five lines on each side of "O" mark. Each line represents 2°.



CARBURETOR

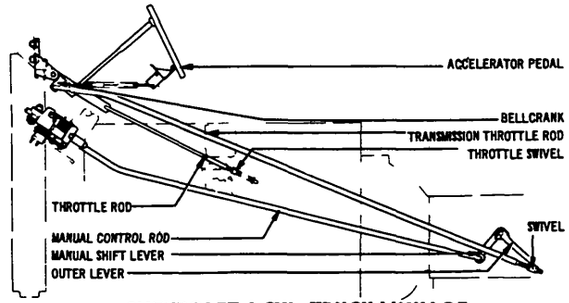
►*CARBURETOR APPLICATION: Rochester "B" & "BC" Carbur tors ar standard on all 6 Cyl. Models (Exc pt Forward Contr l). Rochester "2G" Carbur tor is standard n all V8 Models. Carter Updraft Carbur tor is standard on Forward Control Models.*

THROTTLE LINKAGE ADJUSTMENT: *NOTE–On Automatic Transmission Cars, adjust transmission throttle contr l linkag BEFORE adjusting carburetor throttle linkage.*



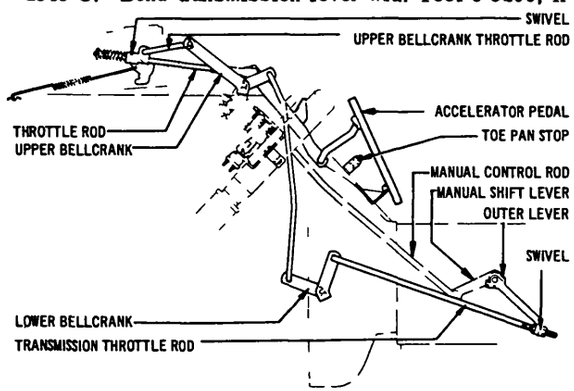
Carburetor Thr ttle Linkag : With accelerator depressed fully and throttle valve wide open, adjust threaded swivel at throttle lever for free entry into throttle lever. Then lengthen control rod by turning swivel **two full turns.** Connect rod to throttle lever.

CONTINUED ON NEXT PAGE



CONTINUED FROM PRECEDING PAGE

Throttle Linkage Adjustment: (6 Cyl. Hydra-Matic Driv Trucks, except Forward Control) – With engine at normal operating temperature and idle speed set at 425 RPM, remove lower end of carburetor throttle lever-to-bell crank rod from lever on bell crank. Install Lever Positioning Gauge J-5609 in hole in lever and gauge hole in pan rail of engine block (hole is located toward rear of bell crank position), and leave gauge in this position. Remove swivel from bell crank-to-transmission outer lever at transmission and move transmission outer lever back against stop. Check distance from hole in outer lever to back of transmission with Gauge J-2545-C. Bend lever as necessary for free entry of gauge in lever hole using Tool J-5260 *(CAUTION–Do not apply force to stops at either end of lever travel).* Hold outer lever back against stop and adjust swivel position on bell crank-to-transmission rod so it just enters hole in transmission lever. Remove Positioning Gauge from bell crank and reinstall throttle rod. Recheck engine idle speed with idle screw against stop on carburetor, and adjust carburetor throttle-to-bell crank rod so swivel at upper end freely enters hole in throttle lever. At this point, **shorten** bell crank-to-transmission outer lever by turning swivel lock nuts **two full turns.** Remove bell crank-to-carburetor throttle rod upper swivel from lever and pull rod upward until linkage is stopped by forward stop in transmission. Hold in this position and adjust accelerator-to-bell crank rod swivel until accelerator pedal is against floor stop, then shorten rod **one full turn.** Replace upper end of throttle-to-bell crank rod in throttle lever.



CHEVROLET 6 CYL. TRUCK LINKAGE (EXCEPT FORWARD CONTROL)

Throttle Linkage Adjustment: (6 Cyl. Hydra-Matic Forward Control) – With engine at normal operating temperature and idle speed set at 425 RPM, remove accelerator pedal-to-bellcrank rod and install Carburetor Control Lever Adjusting Gauge J-5629 with slotted end resting on inside shoulder of hex head brass fitting on intake manifold and pin end in rod hole in lever on bell crank. Leave gauge in this position. Remove swivel from bell crank-to-transmission outer lever rod at transmission and move lever back against stop. Check distance from hole in outer lever to back of transmission with Gauge J-2545-C. Bend lever as necessary for free entry of gauge in lever hole using tool J-5260 *(CAUTION-Do not apply force to stops at either end of lever travel).* Hold outer lever back against stop and adjust swivel position on bell crank-to-transmission rod so it just enters hole in transmission lever, then **shorten** bell crank-to-transmission outer lever rod **two full turns.** Recheck engine idle speed with idle screw against stop on carburetor. Adjust carburetor throttle-to-bell crank rod so swivel at lower end freely enters hole in throttle lever. Remove Positioning Gauge from bell crank lever Remove carburetor throttle-to-bell crank rod from throttle lever and pull bell crank-to-transmission outer lever rod up toward floorboard until linkage is stopped by forward stop in transmission. Hold rod in this position and install accelerator pedal-to-bell crank rod in bell crank lever, and adjust swivel so accelerator pedal is against toe board stop. Install carburetor throttle-to-bell crank rod, then **shorten** accelerator pedal-to-bell crank rod **one full turn.**

CHEVROLET 6 CYL. TRUCK LINKAGE (FORWARD CONTROL)

Throttle Linkage Adjustment: (V8 Hydra-Matic Drive Trucks) – Back out throttle valve adjusting screw so throttle valve is in the tightly closed position and swivel on end of throttle rod is against lug on upper bellcrank throttle rod. Remove swivel from transmission throttle lever and move lever back against its internal stop. Check distance from hole in lever to rear face of transmission case with Throttle Lever Checking Gauge J-2545-C. Bend transmission lever with Tool J-5260, if necessary, to allow entry of gauge into hole *(CAUTION-Do not apply force against stop at either end of lever travel).* Adjust length of transmission throttle rod so swivel just enters hole in transmission throttle lever. Adjust engine idle speed to 425 RPM with selector lever in "N" position. This adjustment will move transmission throttle lever off its internal stop. Depress accelerator pedal to obtain 5/8" distance between toe pan stop and bottom of pedal, then adjust length of throttle rod to give full open throttle. Depress pedal until transmission throttle lever is tight against forward stop on transmission and turn screw on toe pan stop up against accelerator pedal. Release pedal and turn screw upward **two full turns** and secure screw with jam nut (transmission throttle lever will be moved slightly off forward stop on transmission).

CHEVROLET V8 TRUCK LINKAGE

ROCHESTER "B" & "BC"

Downdraft types with manual choke (Rochester Model "B"), and automatic choke (Rochester Model "BC")

Models	Rochester Nos.
235" Engine ①	②7004468
235" Engine ③	④7009255
261" Engine	②7005140

①—Except Forward Control & Automatic Transmission models
②—With Manual Choke
③—With Automatic Transmission (Except Forward Control models)
④—With Automatic Choke

Idle Setting (Exc. 7009255) – 1-2½ turns open (turn screw out for richer mixture).
Idle Setting (7009255) – 2½ turns open (turn screw out for richer mixture).
Idle Speed – 400-450 RPM (Exc. Auto. Trans. models), 425 RPM (Auto. Trans. models with Selector Lever in "N" position).
Float Level – 1 9/32" from bottom of each float to cover gasket (do not remove gasket). Use Gauge M-250. With assembly inverted, place gauge with projection inserted in discharge nozzle. Carefully bend float lip vertically so that each float just touches top portion of gauge. Bend float arms to bring them into alignment and to center them in gauge. Tilt assembly 90° on each side and check to see that floats do not touch gauge.
Float Drop–Turn cover right side up so float drops down Distance from gasket on cover to bottom of each float should be 1¾" on all models Adjust by bending tang at rear of each float assembly
►*CAUTION Both floats must be set alike and must not be twisted out of alignment*
Accelerating Pump–No seasonal adjustment
Choke Adjustment Centered on index
Fast Idle (7009255) With fast idle screw on next to highest step of fast idle cam Gauge BT-99 (.076") should just slide between lower edge of choke valve and carburetor bore To adjust, bend connector rod
Throttle Linkage Adjustment (Hydra-Matic Driv Trucks): *See 'Carburetor" above.*
►*OTHER DATA See "Rochester B & BC" Carburetors in Carburetion Section.*
Fuel Pump Pressur 3½-4½ lbs.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ROCHESTER "2G"

Dual downdraft type with manual choke.

M d l	Rochester No.
Synchro-mesh Trans.	7008389
Overdrive Trans.	7008383

►*V8 TRUCK ENGINE CARBURETOR-TO-MANIFOLD GASKET PRODUCTION CHANGE (To Eliminate Hard H t Starting):* New intake manifold-to-carburetor gasket, Part No. 3733281, with better insulation characteristics, is now being used in production and should be used on all 2-barrel carburetor V8 Truck installations when replacement required. Former gasket, Part No. 3704952, will continue to be used on passenger cars.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idl S tting—After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smooth idle with highest vacuum reading and engine RPM.

Idl Sp d - 475 RPM (Synchro-mesh), 425 RPM with selector lever in "N" Neutral (Automatic Trans.).

Float L v l—1¼" from air horn gasket to top of float with assembly inverted. Use Gauge BT-129 so it rests against power piston shaft with outer leg in line with center of float. Adjust by bending float arm between pivot and float with Tool BT-69.

Fast Idl : No adjustment of fast idle speed is provided. It is necessary, however, to have correct relationship between fast idle cam position and choke valve position. Check & adjust as follows: Place end of idle adjusting screw on next to highest step of fast idle cam. Using Gauge J-5921, small end of gauge must slide easily between upper edge of choke valve and bore of carburetor, with gauge held vertically. If necessary, bend choke rod until correct clearance is obtained.

Thr ttl Linkag Adjustment (Hydra-Matic Drive Trucks): *Se "Carbur tor" abov .*

►*OTHER DATA: S "Rochester 2G' Carburetors in Carbur ti n S cti n.*

CARTER

Carter (BB) 871SB (F rward Control Models). Single barrel updraft type with manual choke control.

Idl S tting—½-1½ turns open (turn screw out for richer mixture).

Idl Sp d—450-500 RPM (Synchro-mesh), 400-450 RPM (Hydra-Matic).

Fl at L v l—Top of float (not seam) 0" to 1/32" below top of bowl with needle valve seated. Use Gauge J-818-13A on top edge of bowl (gasket removed). Press float lever lip firmly against needle.

Acc l rating Pump—Inner holes (in plunger shaft and throttle lever) Summer. Outer hole Winter.

Thr ttl Linkag Adjustm nt (Hydra-Matic Driv Cars): *S e "Carbur tor" abov .*

►*OTHER DATA: See "Cart r (BB)" Carburetors in Carbur tion S ction.*

Fu l Pump Pr ssur : 3½-4½ lbs.

CARB. EQUIPMENT

Fu l Pump: AC Diaphragm type.

Model	AC Pump No.
6 Cyl., Std. (Fuel only)	4149
6 Cyl., Optl. (Fuel & Vacuum)	4138, 707
V8, Std. (Fuel only)	4150
V8, Optl. (Fuel & Vacuum)	4141, 708

Pump Pressure—(6 Cyl.) 3½-4½ lbs. (V8) 4-5¼ lbs.

Gasoline Gauge: AC Electric.

Dash Unit—AC No. 1518461.

Tank Unit	Truck Model
AC No. 1518258	Half Ton
AC No. 1518236	¾ Ton
AC No. 1518498	1½ & 2 Ton
AC No. 1518234	School Bus

See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco 2SMR53 (Exc. School Bus). *12 Volt,* 9 plate, 53 ampere hour capacity (20 hr. rate).

Delco 3SM70 (School Bus). *12 Volt,* 11 plate, 70 ampere hour capacity (20 hr. rate).

Battery Ground—Negative.

Engine Ground—(6 Cyl.) Engine to frame, (V8) Engine to dash.

STARTER

Model	Delco-Remy No.
6 Cyl. (Exc. Fwd. Cont. & Hydra-Matic)	①1107634
6 Cyl. (With Hydra-Matic)	②1107633
6 Cyl. (Fwd. Cont. W/O Hydra-Matic)	②1107626
V8 (Exc. Hydra-Matic)	②1107627
V8 (Hydra-Matic)	②1107643

①—Manual Pinion Shift. ②—Solenoid Pinion Shift.

Armature—Delco-Remy 1926626 (all models).

Drive (6 Cyl. Synchro-mesh Trans., Exc. Fwd. Cont.)—Overrunning clutch with pedal operated manual pinion shift.

Drive (6 Cyl. Fwd. Cont. & Hydra-Matic Models. All V8 Models)—Overrunning clutch with solenoid pinion shift.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Starting Switch: (Solenoid Pinion Shift Models)—Delco-Remy Solenoid Switch No. 1119767 mounted on starter and controlled by Ignition & Starter Switch 1116522. Turn key full RIGHT against spring tension to start.

Starter Switch: (Manual Pinion Shift Models)- Starter switch mounted on starter and controlled by pedal operated lever.

Hydra-Matic Neutral Saf ty Switch: Delco-Remy No. 1998111 (Exc. Forward Control). Delco-Remy 1998110 (Forward Control).

Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

D lco-R my. *12 Volt.* Generators used as follows:

M d l	G n rat r N .	Armatur N .
All (Std.)	1100326	1928952
Optl., Pow. St., 30 amps.	1102041	1929640
Optl., Pow. St., 40 amps.	1106982	1932349
Optl., 30 amps.	1105947	
Optl., 40 amps.	1106981	1929360

Maximum Charging Rate—Controlled by regulator and governed by battery condition.

Performance Data - Cold

Generator	Amperes ①	Volts	RPM
1100326	25	14.0	2780
1102041	30	14.0	2150
1105947	32	14.0	1850
1106981, 2	40	13.0	1500

① — Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—28 ozs.

Field Current—1.5-1.62 amps. (1100326), 1.48-1.62 amps. (1102041), 1.54-1.67 amps. (1105947), 1.37-1.50 amps. (1106981, 2). All at 12.0 volts.

Belt Adjustment: 5/16" (6 Cyl.), 13/16"(V8) deflection midway between water pump and generator pulleys with light load applied to belt.

REGULATOR

Delco-Remy. *12 Volt.* Regulators used with generators as follows:

Regulator No.	Generator N .
1119000	1100326, 1102041
1119001	1105947
1119004	1106981, 2

►*NOTE: Regulator is "1119000 Series Regulator". Specifications below are for "Normal" settings.*

Cutout Relay

Cuts In—(1119000, 1119001) 11.8 - 13.5 volts HOT. (1119004) 11.5-13.0 volts HOT.

Contact Gap—.020".

Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—(1119000, 1119001) 13.8-14.8 volts HOT. (1119004) 13.6-14.3 volts HOT.

Air Gap—.063" (1119004), .075" (Others), with armature pressed down to point where contacts just touch.

Checking & Adjusting—*See "Delco-Remy 1119000 Series Regulator" in Electrical Section.*

Current Regulator

Setting (1119000)—23-27 amperes HOT.

Setting (1119001)—27-33 amperes HOT.

Setting (1119004)—37-42 amperes HOT.

Air Gap—.075" with armature pressed down to point where contacts just touch.

Checking & Adjusting—*See "Delco-Remy 1119000 Series Regulator" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*

Direction Signals: *See Electrical Section.*

Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel). Remove switch retaining nut and switch assembly.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*LIGHTING SWITCH FUSE NOTE:* A 3 ampere fuse has been added to lighting switch assembly to prevent instrument panel rheostat from burning out.

Stop Light Switch Location: Mechanical type mounted on underside of toeboard and operated by brake pedal

CIRCUIT BREAKERS: Two 13 amperes circuit breakers located in main lighting switch One protects headlamps and parking lamps and the other circuit breaker protects all other light circuits

HORNS: Delco-Remy 1999760 (High), 1999759 (Low)
Horn Relay: Delco-Remy 1116913. *12 Volt.*

ENGINE

►*ENGINE APPLICATION NOTE: Three variations of 235" Thriftmaster engine, the 261" Jobmaster engine, and two V8 engines (the 265" Taskmaster & Trademaster) are used in 1956 production. See "Truck Model Identification" for engine application.*

Engine	Series
Thriftmaster 6 Cyl.	Ⓒ 3000, 4000
Thriftmaster Special 6 Cyl.	② 3400, 3500, 3700
Thriftmaster Hvy. Duty 6 Cyl.	③ 6000
Jobmaster 6 Cyl.	⑩ 6000
Trademaster V8	⑤ 3000, 4000
Trademaster Hvy. Duty V8	⑥ 5000

Ⓒ—Std. Equip. Conventional Models.

③—Std. Equip. Optional on 4000 Series.
⑩—Optional Equip.
⑤—Optional Equip. Conventional & Forward Control.
⑥—Std. Equip. Optional on 4000, 6000 Series.

ENGINE SPECIFICATIONS: Own. 6 Cylinder & V8 valve-in-head engines.

Engine	Bore	Stroke	Displmnt
235" Thriftmaster	3 9/16"	3 15/16"	235.5"
261" Jobmaster	3 3/4"	3 15/16"	261.0"
265" V8 Trademaster	3 3/4"	3"	265.0"
265" V8 Taskmaster	3 3/4"	3"	265.0"

Engine	Compr. Ratio	Rated HP	Dev. HP
235" Thriftmaster	8.0-1	30.4	140 at 4200
261" Jobmaster	7.8-1	33.7	148 at 4000
265" V8 Trademaster	7.5-1	45.0	155 at 4200
265" V8 Taskmaster	7.5-1	45.0	155 at 4200

Compression & Vacuum Reading—See *TUNE-UP.*

►*NOISY VALVE OPERATION & LACK OF OIL IN VALVE SYSTEM (265" V8 ENGINE)* Lack of oil in valve system of RIGHT or LEFT cylinder banks may be caused by incorrect distributor installation *See "Ignition Notes" in Chevrolet Special Data*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data*

OIL PAN REMOVAL: (V8 Engines)—Disconnect steering idler arm bracket from right frame side rail and drop for clearance

ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data*

CYLINDER HEAD & MANIFOLDS: *See "Cylinder Head & Manifold" in Chevrolet Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data*

►*OTHER ENGINE DATA: See 1956 Passenger Car pages and not the following*

ALL 6 CYL. & V8 ENGINES: Valves—High alloy steel exhaust valves replace those formerly used.

Oil Control Ring—Three-piece oil control rings replace four-piece type used previously. New ring consists of two chrome plated rails and spacer.

6 CYL. ENGINES: Upper Main Bearing Insert—"Roll-out" type upper main bearings used. Inserts are retained by a tang which bears against cap and fits into matching groove in cylinder block. Bearings can be rolled out by removing bearing cap and inserting special plug in crankshaft oil hole.

Valve Guide Installation—On both 235" & 261" engines, exhaust valve guides are installed in head so they will extend 15/16" above the head, and intake valve guides are installed to extend 1" above the head. Use Tool J-5599 to install exhaust guides, Tool J-5598 to install intake guides.

►*THRIFTMASTER 235" HEAVY DUTY ENGINE NOTE* Upper compression rings are chrome plated and rotators are standard equipment on exhaust valves.

V8 ENGINES: Rings—Top compression rings are chrome plated.

Valve Rotators—Standard on all exhaust valves.

Valve Spring Dampers & Oil Shields—Used on all intake and exhaust valves.

►*TASKMASTER V8 PISTON NOTE:* Two small notches are ground into crown of each piston to provide additional piston-to-valve clearance (minimizing possibility of valve-piston collision during engine over-speeding conditions).

►*VALVE SPRING HEIGHT CAUTION (V8 ENGINES):* Check installed height of valve springs. Distance from top of shim, or spring seat, to top of valve spring shield should not be in excess of 1 45/64". If so, install a 1/16" or 1/32" shim to obtain an installed spring height of 1 5/8" for exhaust, 1 11/16" for intake.

VALVE TIMING: As indicated below

235" Thriftmaster & 261" Jobmaster

Intake Valves—Open 11°30' BTDC, Close 52°30' ALDC.
Exhaust Valves—Open 51° BLDC, Close 13° ATDC.

265" Trademaster & Taskmaster

Intake Valves—Open 18° BTDC, Close 54° ALDC.
Exhaust Valves—Open 52° BLDC, Close 14° ATDC.

Valve Timing Check (235" & 261" Engines): Remove all tappet clearance from No 1 exhaust valve Turn engine over until this valve opens and just starts to close and until triangular mark on flywheel lines up with pointer in flywheel housing opening Mount dial indicator on rocker arm shaft support with stem contacting No 1 exhaust valve adjusting screw set dial indicator to .063". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset No. 1 exhaust valve to correct running clearance.

OILING SYSTEM

►*ENGINE OILING SYSTEM See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data*

Crankcase Capacity (6 Cyl.)—5 qts (refill) 5½ qts (dry) **(V8 Engines)** - 4 qts refill (Trademaster), 5 qts refill (Taskmaster) Add 1 qt for filter change

Normal Oil Pressure: (6 Cyl.—45 lbs **(V8)**—35 lbs

Pressure Regulator Valves—In oil pump body Not adjustable

Oil Pressure Indicator—AC No 1508246 Not electric

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

►*OIL PUMP INTAKE NOTE:* Oil pump intake is fixed screen type and replaces "floating" type previously used. Intake and screen are removed as an assembly.

Oil Pump Overhaul—*See "Oiling System" in Chevrolet Special Data.*

Crankcase Ventilation (Standard): Air intake through valve rocker arm cover, outlet through pipe on right side of engine

Servicing—On all models with air cleaner mounted on valve rocker arm cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions

Crankcase Ventilation (Optional): Positive Type Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold Valve is spring loaded variable opening type giving constant crankcase ventilation at all speeds **Valve must close at idling to give proper air-fuel mixture**

Servicing—Every 10 000 miles (or oftener if required) clean vacuum pipe valve and filler pipe thoroughly Filler cap gasket must seal tightly

►*VACUUM VALVE CAUTION* If improper action of spring is suspected due to spring being distorted or etched from corrosive action the valve assembly should be replaced

COOLING

Water Capacity: As follows

Model	235"	265"	261"
½, ¾, 1 Ton	17 qts.	17½ qts.	
½, ¾, 1 Ton H.D.	17½ qts.	18 qts.	
1½ Ton Special	17½ qts.	18 qts.	
1½ Ton Special H.D.	18 qts.	18½ qts.	
5000 Ser., 4 or 5 speed		18 qts.	
5000 Series, H.D.		18½ qts.	
5000 Series, Powermatic		21 qts.	
6000 Series, 4 or 5 Speed	17½ qts.	18 qts.	17 qts
6000 Series, H.D.	18 qts.	18½ qts.	
6000 Series, Powermatic		21½ qts.	21 qts.

NOTE—Add one quart for models with heater.

Pressure Valve: AC No. 850795. Radiator filler cap. 7 lb. type. **Replacement Valve**—AC No. RC-1.

Thermostat: Harrison. In cylinder head water outlet (6 Cyl.). In water outlet in intake manifold (V8).

Standard—No. 3133595 (stamped 151), 151°. Can be used for alcohol anti-freeze.

Optional—No. 3123994 (stamped 160), 160°. No. 3133597 (stamped 170), 170°.

Temperature Gauge: AC Electric type

Dash Unit - AC No 1513138

Engine Unit - AC No 1513130

See "Temperature Gauges" in Miscellaneous Section

Water Pump: Packless type with sealed ball bearing shaft. *See "Water Pumps" in Chevrolet Special Data*

CLUTCH

6 CYL. ENGINES

Own. Diaphragm spring, single plate, dry disc type. *See "Chevrolet (Own)" in Clutch Section.*

Model	Cover	Wovern Disc	Molded Disc
Standard (10")	3836716	3826119	3836097
Heavy Duty (11')	3836720	3826011	

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Pedal Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. *NOTE*–Use finger pressure only when checking clutch free travel.

Removal: Remove transmission (see Transmission Removal). Remove throwout bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. *CAUTION*–Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align "X" mark on cover with "X" mark on flywheel.

CLUTCH

V8 ENGINES

Borg & Beck. Single plate, dry disc type.

Series	Model	Assy. No.	Disc No.
3000 & 4000	10.5A9	361402	352528
5000 & 6000 Ⓒ	11A9	361403	382286

Ⓒ–Heavy Duty on 3000 & 4000 Series.

See "Borg & Beck" Clutches in Clutch Section.

Pedal Adjustment: Adjust clutch pedal until free travel is 1". Make sure that pedal pad contacts toeboard when pedal pressed down.

Removal: Remove transmission (see Transmission Removal). Before removing clutch assembly, punch mark flywheel, clutch cover and one pressure plate lug so these parts may be assembled in their same relative positions. Loosen hold-down screws evenly and remove cover. *NOTE*–Mark flywheel side of driven plate for correct reassembly.

TRANSMISSION

3-SPEED LIGHT DUTY

Own. Three speed, all helical gear type. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).

See "Chevrolet 3-Speed (Light Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever. *See "Transmission Controls" in Transmission Section.*

Removal (½ & ¾ Ton): Drain transmission. Disconnect speedometer cable at transmission and shift control rods from transmission levers. Remove propeller shaft. Remove the two top transmission to clutch housing capscrews and insert two transmission guide pins, Tool J-1126, in these holes. Remove the two lower transmission to clutch housing capscrews. Slide transmission straight back on guide pins until clutch gear is free of splines in the clutch disc.

3-SPEED (HEAVY DUTY)

Own. Three speed, constant mesh (second & high), sliding gear (low & reverse).

See "Chevrolet 3-Speed (Heavy Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever.

See "Transmission Control" in Transmission Section.

Removal: Same as for "3-Speed (Light Duty)" above.

4-SPEED

Own. Four-speed, constant mesh, synchro-mesh, helical gear (2nd, 3rd, & 4th), sliding spur gear (low & reverse). Floor mounted gearshift.

See "Chevrolet 4-Speed" in Transmission Section.

Transmission Control: (All Models exc. Forward Control) –Floor mounted gearshift lever.

Removal (½ & ¾-Ton): See "3-Speed (Light Duty)" above.

Removal (Other Trucks): Remove screws fastening steering jacket grommet and slide grommet up out of way. Remove accelerator pedal and floor mat. Remove sheet metal screws attaching transmission cover to body floor and remove cover. On Forward Control models remove both front and rear floor pans. Remove speedometer cable from transmission rear bearing retainer. On 1-Ton, remove cotter key and pin attaching parking brake pull rod to parking lever. On 1½ & 2-Ton, disconnect parking brake lever return spring from parking brake operating lever and remove cotter key and pin attaching inner and outer levers to parking brake operating lever. Remove parking brake lever lock, flat washer and spring and remove parking brake lever. Drain lubricant from transmission. On 1-Ton, break universal joint at transmission joint flange and tape trunnions and bearings together. On 1½ & 2-Ton, disconnect intermediate universal joint by removing two trunnion bearing "U" clamps, split joint and lower front end of rear propeller shaft to floor. Remove the four universal joint flange nuts. Remove nuts attaching propeller shaft bearing support bracket to frame cross member and remove front propeller shaft and bearing assembly. On all models, remove the two capscrews attaching transmission to clutch housing and insert two Guide Pins J-1126 in these holes. Remove flywheel underpan and remove two lower transmission to clutch housing capscrews. Slide transmission straight back on guide pins until transmission free of splines in clutch disc. Remove transmission.

OVERDRIVE

Warner R10. Used with Chevrolet Truck 3-Speed (Light Duty) Transmission.

See "Chevrolet Overdrive" in Transmission Section.

Overdrive Control: *See "Warner R10 & R11 Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cables have been disconnected.

HYDRA-MATIC DRIVE

Dual Range. Four speed type with fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication–Check fluid level in transmission every day. Drain & refill every 25,000 miles. Use only "Automatic Transmission Fluid" Type A.

Checking Fluid Level–With selector lever in "N" position, parking brake set, and transmission at normal operating temperature, remove access hole cover plate in floor pan, and **check fluid level with engine at idling speed.** Add sufficient fluid to bring level in transmission to "F" mark on dipstick.

Capacity–8½ qts. (refill), 9 qts. (after overhaul). *NOTE*–1 qt. additional with oil cooler.

►*OTHER HYDRA-MATIC SERVICE DATA–See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

REAR AXLE

SEMI-FLOATING (HALF-TON)

Own. Semi-floating, hypoid gear type with Hotchkiss drive. *NOTE*–Same design as passenger car axle.

See "Chevrolet Hypoid Semi-Floating" in Rear Axle Section.

Ratio–(Synchro-mesh & Hydra-Matic) 3.90-1 (39:10). **(Overdrive)** 4.11-1 (37:9).

►*AXLE SHAFT NOTE: Shafts unequal length (right shaft longer) and may be identified by mark stamped on shaft, or by length as follows:*

Axle	Part No.	Length
Left	3694769Ⓒ	29 5/8"
Right	3694770Ⓒ	30 5/8"

Ⓒ–Part No. stamped on axle for identification.

Backlash–.005-.008".

Removal of Rear Axle Assembly: Disconnect and remove parking brake pull back spring. Remove cotter pins and clevis pins from each parking brake cable clevis, and remove clevis. Remove springs and retaining clips from cables at frame brackets. Disconnect universal joint trunnion bearing "U" bolts and split rear universal joint. Disconnect shocks from anchor plates. Disconnect hydraulic brake line to connector at rear frame bracket. Remove spring "U" bolts, nuts and anchor plates. Raise rear of truck and roll assembly out toward rear. *CAUTION–Be careful when pulling parking brake cables through openings in frame.*

Axle Shaft Removal: *See "Chevrolet Hypoid Semi-Floating" in Rear Axle Section.*

Axle Shaft Endplay–Free fit to .014" maximum.

FULL-FLOATING (¾, 1, 1½TON)

Own. Full-floating hypoid gear (straddle mounted pinion) with Hotchkiss drive.

►*AXLE ASSEMBLY NOTE, ¾ & 1-Ton axle assemblies are different design than used on 1½ & 2-Ton with standard rear axle assemblies.*

See "Chevrolet Truck Hypoid Full-Floating" in Rear Axle Section.

►*AXLE RATIO IDENTIFICATION NOTE: Axle ratios are identified by prefix letters in rear axle numbers stamped on top of carrier housing between reinforcing ribs. See Axle Ratios following:*

Axle Ratio Identification

Ratio	Prefix Letters
5.14-1 (36:7)	CA, CB, CE, CF
4.57-1 (32:7)	CC, CD
6.17-1 (37:6)	CG, CH, CJ
7.2-1 (36:5)	CM

Backlash–.005-.008". Screw adjustment.

Removal of Differential Carrier: Drain lubricant, remove axle housing cover and axle shafts, see axle shaft removal below. Remove two trunnion bearing "U" bolts

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

from rear yoke and split rear universal joint (hold bearings on trunnion with tape). Remove bolts and lockwashers holding carrier to axle housing, support carrier in floor jack and roll from under truck.

Axle Shaft Removal (¾ & 1-Ton): Remove eight capscrews and lockwashers in axle shaft flange, install two ½"x13" screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket *Use new gasket when installing shaft.*

►*CAUTION* Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft *Grease at this point will cause loosening of axle shaft flange capscrews.*

Axle Shaft Removal (1½ & 2-Ton): Shaft flange is splined in wheel hub (tight fit) and requires special puller for removal Remove five capscrews and lockwashers in hub cap, remove hub cap and gasket Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover. J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. *NOTE*–When reinstalling axle shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket.

►**Axle Shaft Note:** Shafts unequal length (right shaft longer than left). Install in correct position.

Wheel Bearing Adjustment: Remove wheels and axle shafts (see above) Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight, using special wrench J-2222 (¾ & 1-Ton), J-870 (1½ Ton), J-5670 (2-Ton) while turning hub by hand, then back off nut 45°, check for free turning, install adjusting nut lock with lock tangs aligned with slots in adjusting nut. Bend tang down into notch in adjusting nut, install locknut and tighten securely. Bend tang of lock down into notch of locknut:

HEAVY DUTY FULL-FLOATING (2-TON & LCF MODELS)

Own. Full floating, hypoid gear, roller pinion bearings (straddle mounted pinion), with Hotchkiss drive.

See "Chevrolet Truck Heavy Duty Hypoid Full Floating" in Rear Axle Section.

Ratios–Same as for "Standard Full-Floating" above.

Backlash– 005- 008".

Removal Of Rear Axle Assembly: Same as for "Standard Full-Floating" above.

Axle Shaft Removal: Same as for 1½ & 2-Ton "Standard Full-Floating" above.

►**Axle Shaft Note:** Shafts unequal length (right shaft longer than left). Install in correct position.

Wheel Bearing Adjustment: Same as for "Standard Full-Floating" above

PLANETARY 2-SPEED

Own. Full-floating, two-speed planetary reduction type. with hypoid primary pinion and ring gear.

See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.

►*NOTE: Two gear ratios available as follows:*

Power Ratio–6.40-1 (high), 8.72-1 (low). 32:5 Primary gears.

Speed Ratio–5.83-1 (high), 7.95-1 (low). 35:6 Primary gears.

Two-Speed Shift Control: Vacuum power type with control on gearshift lever.

Carrier Assembly Removal: *See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.*

Axle Shaft Removal & Wheel Bearing Adjustment: Same as for "Standard Full-Floating" above

SHOCK ABSORBERS

Delco. Direct Acting (Airplane Type) shock absorbers as follows:

Front Shocks

Model	Delco No.
½, ¾, 1 Ton	820R
2 Ton School Bus	682Z

Rear Shocks

Model	Delco No.
½ Ton (114")	800W
½ Ton (123¼")	800Z
¾ Ton	800Z
1 Ton	684U
1½ Ton	660U
2 Ton School Bus (Exc. H.D.)	660U
2 Ton School Bus (H.D.)	660W

FRONT SUSPENSION

Conventional "I" Beam section, with Reverse Elliott ends and semi-elliptic springs.

Kingpin Inclination – 6-8°

Caster (At designed load) – See Table below.

Camber – 1°.

Toe-In – See Table below.

Model	Caster	Toe-In
3100, 3200	1½°	1/8-7/32"
34, 35, 37, 40, 5000	2°	1/4-7/32"
3600	1½°	1/4-7/32"
3800, 6000	2¼°	1/4-7/32"

STEERING

Manual: Saginaw Ball Bearing Worm & Nut (recirculating ball).

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Bendix Linkage Type – *See "Chevrolet Truck (Bendix)" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

►*NOTE: Two different type brakes used on trucks as indicated below.*

Chevrolet-Bendix (Except Rear Wheels of 1½ & 2-Ton Models–Duo-servo, single anchor, hydraulic (without eccentric adjustment)

See "Chevrolet-Bendix Hydraulic" in Brake Section.

►*HALF-TON TRUCK BRAKE SHOE GRINDING CAUTION:* If bench type grinder used, grind shoes to .057" to .087" smaller diameter than drum size. If spindle type grinder used, grind shoe to drum diameter.

Chevrolet-Twinplex (Rear Wheels 1½ & 2-Ton Models)–Two-cylinder, four-anchor type hydraulic. Shoes are self-centering and self-energizing.

See "Chevrolet Twinplex" in Brake Section.

Wheel Cylinders– Size stamped on housing under adjusting lock spring.

Drums–Cast iron with steel web.

Drum Diameter

Model	Front	Rear
½-Ton	11"	11"
¾-Ton	12"	12"
1-Ton	12"	14"
1½ & 2-Ton	14"	15"

Lining–Molded type. Riveted on 1½ & 2-Ton Models and bonded on all others.

Thickness & Width

Model	Thickness	Width
½-Ton (Front Whl.)	202-.222"	2"
½-Ton (Rear Whl.)	.202-.222"	1¾"
¾-Ton (Front & Rear)	.264- 284"	2"
1-Ton (Front Whl.)	.264-.284"	2"
1-Ton (Rear Whl.)	.267- 287"	2½"
1½ & 2-Ton (Front Whl.)	.267- 287"	2½"
1½ & 2-Ton (Rear Whl.)	392- 412"	4"

Clearance–Adjust for clearance as follows.

All Models (Except 1½ & 2-Ton Rear Brakes)–Remove adjusting hole cover and turn brake adjusting screw until light drag is felt, then back off adjusting screw 7 notches (Half-Ton Models), or just enough to eliminate brake drag (Other Models), but not more than 7 notches

Rear Wheels (1½ & 2-Ton Models)–Remove adjusting hole covers from flange plate and turn rear adjusting screw until slight drag is felt, then back off 3 notches. Repeat on front adjusting screw (2 adjustments on each wheel)

Parking Brakes: Hand lever applies rear wheel service brakes on Half-Ton & ¾-Ton Models, and an independent brake on propeller shaft on all other models.

Adjustment (½ - & ¾-Ton Models)–*See "Chevrolet-Bendix Hydraulic" in Brake Section.*

Adjustment (1, 1½, 2-Ton Models & ¾-Ton with 4-Speed Transmission)–*See "Chevrolet Twinplex" in Brake Section.*

Master Cylinder: Located under floorboard on left hand side of truck

Checking Fluid–Maintain fluid level to lower edge of filler hole.

Removal–Remove from below. *CAUTION*–On 1½ & 2 Ton Low Cab Forward, spacer between cylinder and body bracket will fall out when mounting bolts removed.

Installation–Reverse removal procedure. On LCF Models make sure the spacers are reinstalled.

Power Brakes: *See "Hydrovac Power Unit" in Brake Sect.*

Removal–Remove vacuum line, brake fluid line to wheel and master cylinders, and air cleaner hose from vacuum unit. Remove nuts and bolt securing unit to its bracket on right side rail of frame.

MISC. MECHANICAL

Windshield Wipers: Linkage type. Vacuum motor (Std. Equip.). Electric motor (Optl. Equip.).

See "Windshield Wipers" in Miscellaneous Section.

MODEL IDENTIFICATION

Model D signation		
S ri s	S rial Prefix	Model
1500 ①	A	ONE-FIFTY
2100	B	TWO-TEN
2400	C	BEL-AIR
1508	D	SEDAN DELIVERY

① - Except Sedan Delivery.

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post.

Starting Serial Numb r - 100001 (at each plant) for all models.

► *SERIAL NUMBER NOTE: Serial Number (example B57F100025) includ s following identification information in s qu nce.*

S ri s ①	Y ar	Assy. Plant ②	Serial No.
B	57	F	100001

① - See "Serial Prefix" in Model Identification above.
② - See Assembly Plant Designation below.

Car Ass mbly Plant Designation

A - Atlanta	**K** - Kansas City	**S** - St. Louis
B - Baltimore	**L** - Los Angeles	**T** - Tarrytown
F - Flint	**N** - Norwood	**W** - Willow Run
J - Janesville	**O** - Oakland	

ENGINE NUMBER: Stamped on right side of engine block to rear of distributor.

► *ENGINE NUMBER NOTE: Engine Number (example T 101 A) includ s following identification information in sequence:*

Plant ①	M nth ②	Day ③	Engine Type ④
T	1	01	A

① - "F" Flint, "T" Tonawanda.
② - "1" (January) "2" (February), etc.
③ - "01" (First Day), "02" (Second Day), etc.
④ - See Model Type Designation below.

Mod l Typ Designation

Equipm nt	Engine Number Suffix
3-Speed Trans.	A
Heavy Duty Clutch	AD
Powerglide	B

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. minimum with all cylinders equal within 20 lbs. at cranking speed.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

Initial Tapp t Clearance (Engs. with Hydraulic Lifters) - *Se "Valve System" in Ch vrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation. Should require ½ turn from unhooked to hooked position. *Distorted spring should be replaced.*

IGNITION

FIRING ORDER: 1–5–3–6–2–4.

SPARK PLUG GAP: .035".

Spark Plug - AC No. 44 (Std.). No. 45 (Hotter, for continuous City operation). C-43 COM (Colder, for continuous heavy duty service). 14mm. Tighten to 20-25 ft. lbs.

COIL: D lco-R my 1115087.

Igniti n Curr nt - 1.8 amps. idling, 4 amps. stopped.

R sistor - Delco-Remy 1931614. 1.40-1.62 Ohms.

► *COIL RESISTOR NOTE:* Resistor connected to ignition switch by two leads and is by-passed during cranking (see diagram) when coil is energized directly from ignition bypass terminal on starter solenoid.

DISTRIBUTOR: D lc -R my 1112403.

Condenser - Delco-Remy 1928111. **Capacity -** .18-.23 mfd.

Contact Point Set - Delco-Remy 1924571.

Breaker Gap - .016-.021" (new points), .0125-.0175" (used points).

Cam Angle - 28-35° with .016" gap.

► *BREAKER GAP CAUTION - Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension - 19-23 ozs.

Rotation - Clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center "0" position.

Vacuum Spark Control: Delco-Remy 1116089.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6
7.5	15	7.5-10

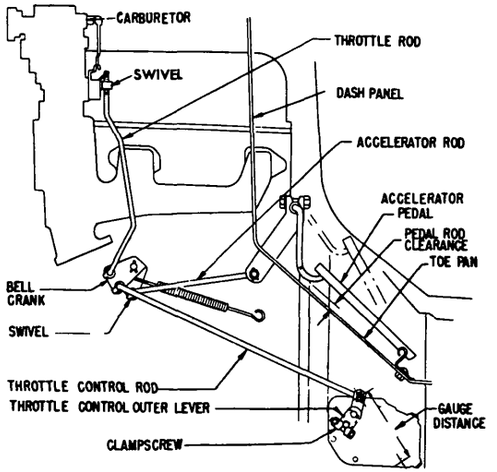
IGNITION TIMING

Setting - At TDC. *Set timing at IDLE SPEED with vacuum line connected.*

► *IGNITION TIMING PROCEDURE CHANGE: Previous recommendation of setting timing at 1000 RPM with vacuum line disconnected has been discontinued.*

Timing Mark - Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on "0". Then adjust selector as follows:

Octane Selector Setting - Set for slight ping when accelerating with a wide open throttle.



CARBURETOR

THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE CARS): Engine must be at normal operating temperature and transmission warm (choke valve wide open and fast idle inoperative with throttle stopscrew against low step of fast idle cam) when adjustments made.

1) Adjust engine idle speed to 425 RPM with selector lever in "D" (Drive) range (set hand brake firmly to hold car while making adjustments).

2) Disconnect control rod from throttle lever on transmission cover. Remove lower bolt at rear of transmission side cover. Rotate throttle valve control outer lever assembly counterclockwise to the open throttle position.

3) Hold lever in this position and with throttle valve outer lever gauge J-5806 set at 7.09" measure distance from left side cover lower rear bolt to hole in throttle lever. If pins of gauge will enter holes, adjustment is correct. If necessary to adjust, loosen lever to clamp attaching screw and adjust lever on throttle shaft as necessary. Reconnect throttle rod.

POWERGLIDE THROTTLE LINKAGE

4) Disconnect bellcrank-to-transmission throttle lever rod at throttle valve lever. Disconnect accelerator-to-bellcrank rod at bellcrank.

5) Force bellcrank-to-transmission throttle lever rod forward against its stop in transmission (open throttle position) and adjust bellcrank-to-carburetor throttle rod for free entry of swivel pin in throttle valve lever, with carburetor throttle valve in wide open position.

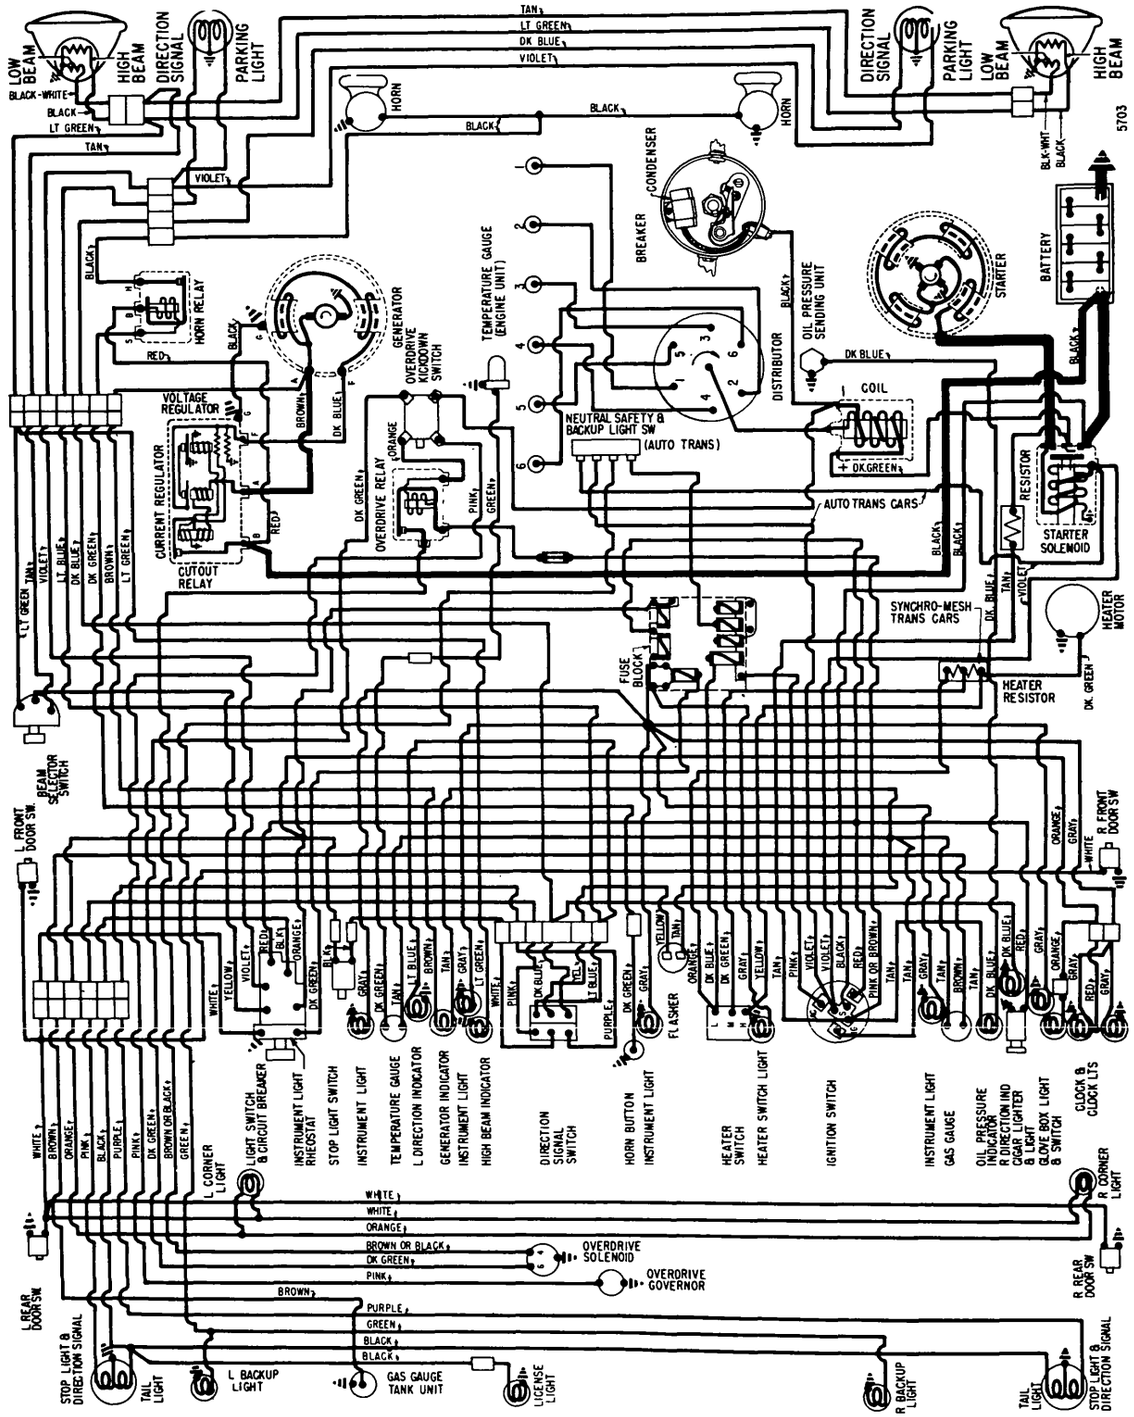
6) With carburetor throttle valve held in wide open position and accelerator fully depressed, adjust accelerator-to-bellcrank rod for free entry of swivel pin into hole in bellcrank.

Model	ROCHESTER BC	Rochester No.
Std. Transmission		7009657
Powerglide		7009656
Governor Controlled Engine		7009784

► *CHOKE SETTING CHANGE FOR IMPROVED PERFORMANCE: See "Choke Adjustment" below.*

► *METERING JET CHANGE FOR IMPROVED PART THROTTLE PERFORMANCE: See Rochester Single & Dual Jet Specification Table for latest jets.*

Idle Setting - 1-2½ turns open.



Idle Speed (Synchro-mesh) - 475 RPM.

Idle Speed (Powerglide) - 425 RPM with Powerglide selector lever in "D" (Drive) range.

Float Level - 1 9/32" (Gauge M-250). With air horn inverted and gasket in place, position Gauge M-250 over the floats with the tang inserted in the discharge nozzle. Bend float arms as necessary so that top of each float just touches the gauge and the float is centered between the gauge legs.

Float Drop - Bend float tang as necessary to obtain a distance of 1¾" from the gasket surface to bottom of the float, with the air-horn upright and the float hanging free.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Choke Adjustm nt: Three notches lean. *NOTE* - This supersedes previous setting of one notch rich (Synchro-mesh cars), and one notch lean (Powerglide cars).

Fast Idle: With fast idle adjusting screw on next to highest step of fast idle cam, Gauge BT-99 (.076") should just slide between lower edge of choke valve and carburetor bore. To adjust, bend connector rod.

► *OTHER DATA: See "Rochest r BC Carburetors" in Carburetion Section.*

FUEL PUMP PRESSURE: 3½-4½ lbs.

CARB. EQUIPMENT

Fuel Pump: AC. Diaphragm type.
Replacement Fuel Pump - AC No. 4149 (Fuel only), No. 4138 or 707 (Fuel & Vacuum).
Pressure - 3½-4½ lbs. at 450-1000 RPM.
See "Fuel Pumps" in Carburetion Section

Gasoline Gauge: AC. Electric type.
Dash Unit - AC No. 1518711.
Tank Unit - AC No. 1518775 (Sta. Wgn.), 1518776 (Others). *See "Fuel Gauges" in Carburetion Section.*

BATTERY

Delco 2SMR53W. *12 Volt.* 9 plate, 53 ampere hour capacity (20 hr. rate).
Battery Ground - Negative.
Engine Ground - Engine to cowl at rear head bolt.

STARTER

Delco-Remy 1107652. Armature - 1932185.
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	①Amperes
0 ft. lbs	6200-9400	10.6	49-76
	Lock	4.25	270-310

① - Includes solenoid.

Starting Switch: Delco-Remy Solenoid Switch 1119781 mounted on starter and controlled by Ignition & Starter Switch 1116535.
See "Delco-Remy Starter Solenoid (Without Relay)" in Electrical Section.

Neutral Safety & Back-up Light Switch: Delco-Remy 1998173 (Powerglide cars only).
Adjustment - *See "Chevrolet Powerglide" in Trans. Sect.*

GENERATOR

Delco-Remy. Used as follows:

Application	Generator No.	Armature No.
6 Cyl. Std.	1100326	1928952
6 Cyl. Pwr. Strg.	1102041	1929640
6 Cyl. Air Cond.	1102083	1932900
6 Cyl. A.C. & P.Strg.	1102084	1938761

Performance Data - Cold

Generator	Amperes	Volts	RPM
1100326	25	14.0	2570
1102041	30	14.0	2210
1102083, 84	35	14.0	2510

Rotati n - Counter-clockwise at commutator end.
Brush Spring Tensi n - 28 ozs.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Field Current - 1.5-1.62 amps. (1100326), 1.48-1.62 amps. (1102041), 1.69-1.79 amps. (1102083,84), at 12 volts.

Belt Adjustment: 5/16" belt deflection midway between water pump and generator pulleys.

REGULATOR

Delco-Remy. Used as follows:

Delco-Remy Regulator No.	Generator No.
1119000	1100326
1119003	1102041
1119168	1102083,84

Cut out Relay

Cuts In - 11.8-13.5 volts.
Contact Gap - .020".
Air Gap - .020" with contacts just closed.

Voltage Regulator

Setting - 13.8-14.8 volts at 125°F.
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" in Electrical Section.*

Current Regulator

Setting (1119000) - 23-27 amperes.
Setting (1119003) - 27-33 amperes.
Setting (1119168) - 33-37 amperes.
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps. Sealed Beam. *See Electrical Section.*
Directional Signals: *See Electrical Section.*
Autronic Eye: *See Electrical Section.*
Lighting Switch Removal: Pull handle out to headlamp position. Depress switch shaft retainer (under dash) and remove knob and shaft assembly. Remove retaining ferrule, escutcheon and bezel, then remove switch assembly. Disconnect multi-plug connector. *NOTE* - Use screwdriver inserted in side of switch to pry plug from switch.
Stop Light Switch Location: Mechanical type mounted under dash in contact with brake pedal.
Adjustment - Adjust position of switch so that stop light comes on when brake pedal is depressed 5/8" from fully released position.
LIGHTING CIRCUIT BREAKER: One 13 amp. circuit breaker located on main lighting switch, protects headlamp and parking light circuits.
FUSES: All fuses except as noted below are contained on the accessory junction block located on upper inside of dash panel to left of steering column.
Panel & Accessory Lamps - 3 amps. *See Note below.*
Tail, Dome, Glove Box, Clock & Stop Lamps - 9 amps. *See Note below.*
Heater (Without Air Conditioner) - 10 amps.
Air Conditioner (Includes Heater) - 20 amps.
Backing Light - 9 amps.
Overdrive - 9 amps. Located in feed line to relay.
►*NOTE:* If car not equipped with accessory junction block, these fuses will be found in an in-line fuse holder back of instrument panel.

Horn Relay: Delco-Remy 1116920.
Contact Closes - 5.0-9.5 volts.
Contact Gap - .027".

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 6 Cyl., Valve in head.

►*ENGINE SERVICE NOTE:* Data below applies to all 6 Cyl. Engines: 235" (Pass. Cars), 235" & 261" (Trucks). See Chevrolet Truck for 235" & 261" Truck engine specifications.

Bore	Stroke	Displacement
3 9/16"	3 15/16"	235 cu. ins.

Compr. Ratio	Rated HP	Developed HP
8.0-1	30.4	140 at 4200 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*

OIL PAN REMOVAL: Remove bolts attaching steering idler arm bracket to frame side rail, and drop for clearance. Remove pan retaining bolts and drop pan. *NOTE* - Crankshaft may have to be turned so oil pan will clear front cross member.

CYLINDER HEAD: *See "Cylinder Head & Manifolds". in Chevrolet Special Data.*

ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data.*

PISTONS

Aluminum alloy, cam ground, tin plated, with pin offset 5/64".
Weight - 1.18 lbs. (235" engine), 1.36 lbs. (261" Engine).
Removal - Pistons and rods removed from above.
Clearance - .0005-.0011" measured 1.29" below top of piston. Selective fit.
Replacement Pistons: Furnished Std. & .001", .020", .030", .040" Oversize. *STANDARD AND .001". PISTON NOTE* - Two sizes pistons furnished for Standard and .001" Oversize as follows:
235" Engine - Std. - Marked **S4** (3.5625-3.5630"), **S5** (3.5630-3.5635"), **.001" Oversize** - Marked **S6** (3.5635-3.5640"), **S7** (3.5640-3.5645").
261" Engine - Std. - Marked **S4** (3.7500-3.7505"), **S5** (3.7505-3.7510"), **.001" Oversize** - Marked **S6** (3.7510-3.7515"), **S7** (3.7515-3.7520").

Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.
Installing Pistons: Install piston with notch in piston and mark "Front" toward front of engine.

PISTON PINS

Locked in rod. No bushing used in piston.
Diameter - 235" Eng. - .8660-.8665". **261" Eng.** - .9270-.9275".
Pin Fit in Piston - .00015-.00025" clearance. With both piston and pin at 70°F., and light film of oil on pin, pin should hold own weight in either piston pin boss. It should be possible to install pin in piston with thumb pressure.
Replacement Pins: Furnished Std. & 0015", .003", .005" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.(1&2)	.0930-.0935"	①	②
Oil(3)	.181-.188"	③	.015-.055"	.000-.008"

①- (235" Eng.) .007-.020". (261" Eng.) .010-.020"
②- (235" Eng.) .001-.003". (261" Eng.) .002-.0035"
③- On Rails.

►*RING INSTALLATION CAUTION:* Install Compression rings with side marked "TOP" up.

CONNECTING RODS

Length - 6.81" Center-to-center.
Crankpin Journal Diameter - 2.311-2.312".
Lower Bearing - Replaceable precision type.
Clearance - .001-.003" (New), .001-.004" (Used).
Sideplay - .005-.012".
Replacement Bearings: Std. & .001", .002", .010", .020" Undersize.
Installing Rods: Install rods with piston pin clamp and number on rod lower end toward camshaft.

CRANKSHAFT

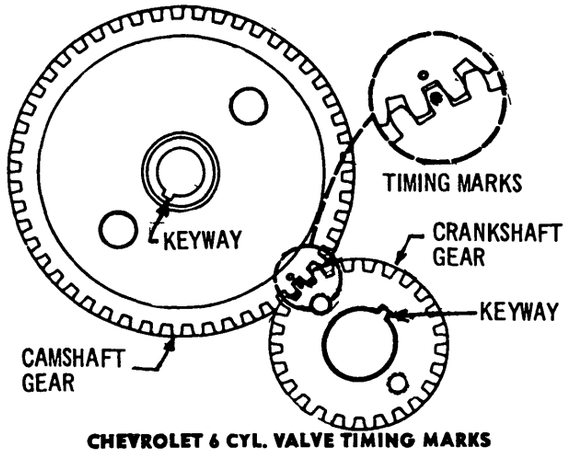
Journal Diameters - **(1)** 2.6835-2.6845", **(2)** 2.7145-2.7155", **(3)** 2.7455-2.7465", **(4)** 2.7765-2.7775".
Clearance - .001-.003" (New), .001-.004" (235" Eng. Used), .001-.0045" (261" Eng. - Used).
Bearings - Thin wall babbitt with steel back.
Bearing Adjustment: Precision type. Replace bearings.
End Thrust - Taken by No. 3 (rear intermediate) main bearing.
End Play - .003-.009".
Replacement Bearings: Furnished Std. & .002", .010", .020", .030" Undersize.
Bearing Installation: Can be replaced without removing engine.
See "Crankshaft & Main Bearings". in Chevrolet Special Data.
Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings". in Chevrolet Special Data.*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data.*
Vibration Dampener: *See "Vibration Dampener". in Chevrolet Special Data.*

CAMSHAFT

Journal Diameters - **(1)** 2.1537-2.1547", **(2)** 2.0912-2.0922", **(3)** 2.0287-2.0297", **(4)** 1.9662-1.9672".
►*NOTE:* Journal out-of-round limits .001". Run-out limits .002".
Bearing Type - Steel backed babbitt lined bushings, precision type. Reaming not required.
Clearance - .0015-.0035".
End Thrust: Controlled by spacer and thrust plate behind camshaft sprocket.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE



End Play - .001-.005".

Timing Gear: Fibre camshaft gear, steel crankshaft gear.

Back Lash - .003-.005".

Replacement Timing Gears & Installation: See *"Timing Gears" in Chevrolet Special Data.*

Camshaft Setting: Timing is correct when timing marks on gears are together.

CHEVROLET 6 CYL. VALVE TIMING MARKS

Camshaft Removal & Replacement: *See "Camshaft & Bearings" in Chevrolet Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data*

VALVES

Tappet Clearance: (Pass. Cars) - None in service (hydrulic).

Initial Tappet Clearance (Engs. with Hydraulic Lifters) - *See "Valve System" in Chevrolet Special Data.*

(Trucks) - 235" Eng. - .016" Intake, .018" Exhaust. Hot. 261" Eng. - .020" Intake & Exhaust, Hot. *See "Valve System" in Chevrolet Special Data.*

Valve	Head Diam.	Stem Diam.	Length
Intake	1 7/8"	.3410-.3417"	6.364-6.394"
Exhaust	1 1/2"	.3410-.3417"	①

Valve	②Seat Angle	Lift	Stem Clearance
Intake	30°	.4004"	.001-.0027"
Exhaust	45°	.4004"	.001-.0027"

① - 235" Eng., 4.905-4.930"; 261" Eng., 4.902-4.932".

② - Face Angle 29° Intake, 44° Exhaust.

►*VALVE GRINDING CAUTION:* Replacement valves are furnished with face angles of 30° and 45°. When seats are ground to recommendations of 30° and 45°, valves must be faced to recommended angle of 29° (Intake) and 44° (Exhaust).

Valve Seat Width - 3/64-1/16" (Intake), 1/16-3/32" (Exhaust).

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: *Precision type, pressed in head.*

Valve Guide Installation - *See "Valve System" in Chevrolet Special Data.*

Valve Springs: *Install springs with closed coil end down.*

Spring Specifications

	Pressure	①Length
Valve Open (All)	194-210 lbs.	1 29/64"

① - Free Length 2 5/32" (Conv.), 2 15/64" (Auto Trans.)

►*VALVE SPRING HEIGHT CAUTION:* Check installed height of valve springs. If distance from spring seat in head to top of valve spring exceeds 1 55/64", install shim approximately 1/16" thick. At no time should shim spring be installed to obtain installed height of less than 1 51/64".

Valve Lifters (Pass. Cars): Hydraulic type. *See "Valve System" in Chevrolet Special Data.*

Valve Lifters (Trucks): Mechanical type. Removed from above.

Rocker Arm Assembly: *See "Valve System" in Chevrolet Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

►*VALVE TIMING NOTE:* Specifications are for valve timing with Zero valve lash and apply to both 235 & 261" engines. *See Valve Timing Check below.*

Intake Valves - Open 10°30' BTDC. Close 53°30' ALDC

Exhaust - Open 49° BLDC. Close 15° ATDC.

Valve Timing Check - *CAUTION:* It will be necessary to replace the hydraulic valve lifter and pushrod operating No. 1 exhaust valve, with a conventional lifter and pushrod). Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer on right face of flywheel housing. Mount dial indicator on rocker arm shaft with stem of indicator contacting No. 1 exhaust valve adjusting screw and set dial indicator to .063". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .005". A greater or lesser reading indicates either excessive gear wear or improperly installed timing gears. Reset tappet clearance to specifications.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: 5 qts. (refill), 5½ qts. (dry).

Normal Oil Pressure: 30 lbs. at 1170-1200 RPM.

Pressure Regulator Valve - In oil pump body. Not adjustable.

Oil Pressure Indicator - Light located at right side of instrument cluster, controlled by pressure switch, Delco-Remy 1998149 or AC No. 1508425, located in main oil gallery on left side of engine. Switch closes when pressure drops to 4-7 lbs.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul — *See "Oiling System" in Chevrolet Special Data.*

Oil Filter Element: AC P-115.

Rocker Arm Oil Lead & Overflow Pipe: *See "Oiling System" in Chevrolet Special Data.*

Crankcase Ventilation (Standard): Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

Servicing — On all models with air cleaner mounted on valve rocker arm cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

Crankcase Ventilation (Optional): Positive Type. Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**

Servicing — Every 10,000 miles (or oftener if required) clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly.

►*VACUUM VALVE CAUTION:* If improper action of spring is suspected due to spring being distorted, or etched from corrosive action, the valve assembly should be replaced.

COOLING

►*RADIATOR REMOVAL CAUTION (POWERGLIDE CARS): Transmission oil cooler is part of radiator lower tank, and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.*

Water Capacity: 16 qts. (17 qts. with heater).

Pressure Valve: AC No. 850795. Radiator filler cap. 7 lb. type. **Replacement Valve** - AC No. RC-1.

Thermostat: Harrison. In cylinder head water outlet.

Standard — No. 3133595 (stamped 151) 151°. Can be used for alcohol anti-freeze.

Optional — No. 3123994 (stamped 160), 160°, No. 3133597 (stamped 170) 170°.

Temperature Gauge: AC electric.

Dash Unit - AC No. 1513317.

Engine Unit - AC No. 1513321.

See "Temperature Gauges" in Miscellaneous Section.

Water Pump: Packless type with sealed ball-bearing shaft. *See "Water Pumps" in Chevrolet Special Data.*

CLUTCH

Own. Diaphragm Spring type. 9½" (Std.), 11" (H. D.). *See "Chevrolet (Own)" in Clutch Section.*

Clutch Disc - (Std. 9½") Chevrolet No. 3737944 (Woven - Hub marked White), No. 3737942 (Molded - Hub not paint marked); (Heavy Duty 11") Chevrolet No. 38-36906 (Woven - Hub marked Pink).

Pedal Adjustment: Pedal free travel ¾-1". Loosen check nut at connecting link at clutch fork. Turn adjusting nut to remove all lash at fork, **then back off two turns.** Tighten check nut.

Removal: Remove transmission (see Transmission Removal below). Remove throwout bearing from fork. Remove clutch fork tension spring from fork, disconnect clutch fork pushrod. Remove clutch fork by forcing it forward and toward center of vehicle. Install Clutch Pilot Tool J-5824, to support clutch assembly during removal. Loosen clutch attaching bolts one turn at a time until diaphragm spring is released. Remove Pilot Tool, then remove clutch assembly from car. *CAUTION* - When installing clutch, align "X" mark on clutch cover with "X" mark on flywheel.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh (Std.) three or four speed (close-ratio) optional.
See "Chevrolet 3-Speed" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Drain Transmission and disconnect speedometer cable and shift rods. Disconnect propeller shaft at rear universal and slide shaft toward rear to disengage from transmission. Remove two top transmission to clutch housing screws and install Guide Pins J-1126. Remove the two lower screws and slide transmission back until clutch spines are disengaged. Remove transmission from below car

OVERDRIVE

Warner R10. Solenoid operated type with governor control and throttle operated kickdown.
See "Chevrolet Overdrive" in Transmission Section.

Overdrive Control: *See "Warner R10 & R11 Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh transmission (above) after disconnecting control cable and wiring

POWERGLIDE TRANSMISSION

Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS. See "Chevrolet Powerglide" in Trans. Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication: Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing an "AQ-ATF" marking on container.
Capacity - 4½ qts. (refill), 10½ qts. (after overhaul).

►*POWERGLIDE DRAINING CAUTION–There is no drain plug on converter. Drain transmission case only, add 4½ qts. of fluid initially, recheck after idling engine.*

Checking Fluid Level–Engine must be idling with the parking brake set, transmission warm, and the control lever in "N" range when taking dipstick readings. Dipstick is located under hood on right side.

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER POWERGLIDE SERVICE DATA: See "Powerglide" in Transmission Section.*

UNIVERSALS

Own. Yoke & Spider (trunnion) type.

►*CAUTION* - Rear universal companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever companion flange nut loosened. *See "Chevrolet Pass Car (Hotchkiss Drive)" in Rear Axle Section.*

REAR AXLE

Own Semi-floating, hypoid gear type with Hotchkiss Drive. *NOTE* - "POSITRACTION" Limited Slip Differential Optl.
See "Chevrolet Pass Car (Hotchkiss Drive)" Rear Axle and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.

►*PINION BEARING PRELOAD CAUTION:* Rear universal joint companion flange nut controls rear axle pinion bearing preload. Bearing preload must be adjusted whenever companion flange nut is loosened.

Ratios - 3.55-1 (Std.), 4.11-1 (Overdrive), 3.36-1 (Powerglide).

Backlash - .003-.010" (.005-.008" preferred).

Removal: Raise car and support with jack stands under frame side rails. Remove rear wheels and remove two trunnion bearing "U" bolts from rear universal yoke and separate the joint (tape bearings to trunnion). Disconnect hand brake cable and equalizer and remove cables from clamps at frame. Disconnect hydraulic brake lines at rear axle housing. Disconnect shocks. Support axle assembly on hydraulic jack and remove spring "U" bolts, nuts and anchor plate, and lower axle to floor

Axle Shaft Removal: Raise car and place jack stands under axle housing. Remove tire, wheel and brake drum assembly. Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange). Attach axle Puller J-5748,with slide hammer, to flange and remove axle shaft and bearing assembly. Be careful not to disturb backing plate. *NOTE*–If bearing retainer and parking brake strut interfere, raise strut slightly with screw driver to obtain clearance.

SHOCK ABSORBERS

Delco. Direct acting non-adjustable.

Replacement Shock Absorbers

Model	Front	Rear
Pass. Exc.Conv.(No AC)	5531202	5531211
Pass. Exc.Conv.(With AC)	5524088	5531211
Conv. .	5524088	5524089
Sed De. Sta.Wag.,Taxi	5524088	5524089

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs and new spherical type joints connecting control arms and steering knuckles.
See "Chevrolet (Spherical Joint)" in Suspension and "Wheel Alignment Section

Steering Axis Inclination - 3-4°

Caster - Pos. 1° preferred.. Limits Pos. ½° to Pos. 1½°.

Camber - Pos. ½° preferred. Limits 0° to Pos. 1°.

Toe-In - 1/8-1/4".

Toe-Out on Turns - With inner wheel at 20°, outer wheel should be 18°10'

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section

Power Steering: Own (Linkage Type). *See "Chevrolet Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic, without anchor pin adjustment Hand lever applies rear wheel service brakes
See "Chevrolet-Bendix Hydraulic" in Brake Section

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION:* To compensate for lack of brake anchor adjustment, brake shoes are ground to a .057-.087" smaller diameter than the drum diameter Grinding shoes to the true drum diameter on bench grinders will cause heel and toe contact, resulting in erratic brake action
NOTE–If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter

Drums–Diameter 11".

Wheel Cylinder Diameter–Front 1 1/8", Rear 1".

	Brake Lining Width	Thickness
Front Whl	2"	.187-.194"
Rear Whl	1 3/4"	.187-.194"

Length Per Shoe–9.3125" (Primary), 11.6875" (Second-

Braking Power–55.9% (front wheels), 44.1% (rear

Clearance–Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag

Standard Master Cylinder: Located on engine side of firewall in line with brake pedal.

Checking Fluid–Reservoir is integral with master cylinder. Maintain level in cylinder to lower edge of filler hole.

Removal–Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove four retaining nuts and lock washers holding master cylinder to firewall and remove cylinder.

Installation–Reverse removal procedure making sure that push rod clevis is straddling the brake pedal. Refill master cylinder and bleed all brake lines. Adjust push-rod-to-main cylinder clearance as follows: Make sure brake pedal returns to fully released position with no binding, and that pedal retracting spring has not lost its tension, then adjust brake pedal clevis to give a barely perceptible end play between main cylinder piston and brake pushrod (1/8-3/8" pedal movement should be felt).

Power Brakes: Std. Trans. - Hydrovac Power Unit. Used with standard master cylinder.
See "Hydrovac Power Unit" in Brake Section.

Auto. Trans. - Bendix Vacuum Power Unit. Replaces conventional master cylinder.
See "Bendix Power Unit" in Brake Section.

Removal - Disconnect vacuum lines and hydraulic brakes line. Remove lever-to-pushrod bolt and disengage push-rod from lever. Take out four mounting bolts and remove unit.

MISC. MECHANICAL

Windshield Wipers: Vacuum, cable operated (Std.), Electric type (Optional).
See "Windshield Wipers" in Miscellaneous Section

Window Regulators: Electric type with reversible motor operating each door window assembly.
See "Power Window Regulators" in Miscellaneous Section

Power Top Control: Hydro-Lectric. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjuster: Reversible electric motor controls horizontal front seat movement. *See "Power Seat Adjusters" in Miscellaneous Section.*

Air Conditioning: *See "Chevrolet Air Conditioning" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model Designation

Series	Serial Prefix	Model
1500 ①	VA	ONE-FIFTY
2100	VB	TWO-TEN
2400	VC	BEL-AIR
2934	VE	CORVETTE
1508	VD	SEDAN DELIVERY

① - Except Sedan Delivery.

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post.

Starting Serial Number - 100001 (at each plant) for all models except Corvette.

►*SERIAL NUMBER NOTE: Serial Number (example VB57F100025) includes following identification information in sequence.*

Series ①	Year	Assy. Plant ②	Serial No.
VB	57	F	100001

① - See "Serial Prefix" in Model Identification above.
② - See Car Assembly Plant Designation below.

Car Assembly Plant Designation

A - Atlanta	**K** - Kansas City	**S** - St. Louis
B - Baltimore	**L** - Los Angeles	**T** - Tarrytown
F - Flint	**N** - Norwood	**W** - Willow Run
J - Janesville	**O** - Oakland	

ENGINE NUMBER: Stamped on pad at front right hand side of cylinder block behind water pump.

►*ENGINE NUMBER NOTE: Engine Number (example T101 C) includes following identification information in sequence.*

Plant ①	Month ②	Day ③	Engine Type ④
T	1	01	C

① - "F" Flint, "T" Tonawonda.
② - "1" (January), "2" (February), etc.
③ - "01" (First Day). "02" (Second Day) etc.
④ - See Model Type Designation below.

Model Type Designation

Pass. Cars (265 Cu. In. Engine)

Equipment	Engine Number Suffix
3-Speed Transmission	C
Overdrive	CD
Heavy Duty Clutch	CE

Pass. Cars (283 Cu. In. Engine)

Equipment	Engine Number Suffix
4-Barrel Carburetor	E
Fuel Injection	EJ
Fuel Injection & Hi Lift Cam	EK
Overdrive & 4-Barrel Carburetor	EC

Turboglide & Fuel Injection	GF

Corvette (283 Cu. In. Engine)

Equipment	Engine Number Suffix
3-Speed Trans. & 4-Barrel Carburetors	EF
3-Speed Trans., Fuel Injection & Hi Lift Cam	EL
3-Speed Transmission & Fuel Injection	EM
Dual 4-Barrel Carbs. & Hi Lift Cam	EG
Dual 4-Barrel Carburetors	EH
Dual 4-Barrel Carbs. & Powerglide	FG
Powerglide	FH
Powerglide & Fuel Injection	FK

TUNE-UP

COMPRESSION PRESSURE: 150 lbs. min. (265" & 283" Engines with 2-Bbl. Carb.), 160 lbs. min. (283" Engine with 4-Bbl. Carb.) and cylinders equal within 10 lbs.

VACUUM READING: 18-21" steady at idling speed (except Fuel Injection Engines), 13.5" (Fuel Injection Engines).

VALVE TAPPET CLEARANCE: (Corvette Engine with Special Camshaft & Mechanical Lifters) - .012" Intake, .018" Exhaust, HOT. *NOTE* - Intake can be set at .008" for competition. Adjust tappet clearance by turning rocker arm stud nut (self-locking).

Initial Tappet Clearance (Engs. with Hydraulic Lifters). *See "Valve System" in Chevrolet Special Data.*

►*FUEL INJECTION ENGINE ADJUSTMENT NOTE:* When running engine with rocker covers removed, air cleaner must be installed and a shield should be improvised to prevent oil fumes entering the fuel injection system.

Engines with Hydraulic Lifters - None in service.

MANIFOLD HEAT CONTROL: (Single Exhaust) - Single exhaust pipe with cross over pipe from right exhaust manifold. Heat control valve with thermostatic coil spring located between right exhaust manifold and exhaust pipe. Make sure valve shaft is free to turn. If sticking, free up with kerosene or alcohol containing a small amount of baking soda.

Dual Exhaust - Coil spring and counterweight (same as for single exhaust).

►*DUAL EXHAUST NOTE: With valve closed, most exhaust gases are discharged through left exhaust pipe.*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders - RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035".

Spark Plugs - (Except Corvette Engine) AC No. 44 (Std.), No. 45 (Hotter - for continuous city operation), No. C-43 COM (Colder - for continuous heavy duty operation). **(Corvette Engine)** AC No. 46 (Std.), No. 44 (Town & Country operation), No. C-43COM (Heavy Duty & High Speed operation). *NOTE* - These plugs supersede previous plugs, No. C-43 (Std.), and No. 43-5 COM (continuous high speed). C-42-1 Com. (Road Racing).

COIL: Delco-Remy 1115087 (Std.), 1115091 (Corvette).

Ignition Current - 1.8 amps. idling, 4 amps. stopped.

Resistor - (Std. - 1115087 Coil) Delco-Remy 1931614, 1.40-1.62 ohms. **(Corvette - 1115091 Coil)** Delco-Remy 1931385.

►*COIL RESISTOR NOTE:* Resistor in coil primary circuit is bypassed during cranking as follows: Coil is energized directly from ignition bypass terminal on starter solenoid (Exc. Corvette), Coil is energized directly by second lead from ignition switch to coil (Corvette).

DISTRIBUTOR: Delco-Remy.

Application	Delco-Remy Distr. No.
V8 265" & 283" Eng. (2-Bbl. Carb.)	1110874
V8 283" Engine (4-Bbl. Carb.)	1110890
V8 Corvette Eng. (1 or 2 4-Bbl. Carb.)	1110891
V8 Corvette Eng. Fuel Injection (Early)	1110889
V8 Corvette Eng. Fuel Injection (Later)	1110905
V8 Corvette Eng. Fuel Injection (Later)	1110906

►*DISTRIBUTOR NOTE: Different types used as follows:*

Models 1110874 & 1110890 - New external adjustment "Window" type. *See "Delco-Remy Window Distributors" in Electrical Section.*

1110889, 1110891, 1110905 & 1110906 - Double breaker with conventional distributor cap (not window type). Vacuum Spark Control not used (centrifugal weight advance only).

Condenser - Delco-Remy 1932004 (1110874 & 1110890), 1869704 (1110889 & 1110891). **Capacity -** .18-.23 mfd.

Contact Point Set - Delco-Remy 1931988 (1110874 & 110890), 1918148 (1110889 & 1110891) 1938330 (1110905 & 1110906).

Breaker Gap (1110874 & 1110890) - *NOTE* - When cam angle properly adjusted (see below), breaker gap opening (.016") will be correct.

Breaker Gap (1110889, 1110891, 1110905 & 1110906) - .014-.018" (new points).

Cam Angle (1110874 & 1110890) - 28-32°. Set to 30°.

Cam Angle (1110889, 1110891, 1110905 & 1110906) - Adjust each set of points to 29° ± 1° with other set of points blocked open with .025" thick insulator. Cam angle for both sets of points operating together will be 34° ± 1°.

Breaker Arm Spring Tension - 19-23 ozs.

Rotation - Clockwise viewed from above.

Automatic Advance - 1110874

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	400	0-4	800
8-10	1150	16-20	2300
15-17	1800	30-34	3600

CONTINUED FROM PRECEDING PAGE

►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION (265" V8 ENGINE):* Incorrect installation may cut off oil to RIGHT or LEFT valve lifter gallery (valve lifters, pushrods, and rocker arms). *See "Ignition Notes" in Ch vrol t Sp cial Data.*

IGNITI N TIMING

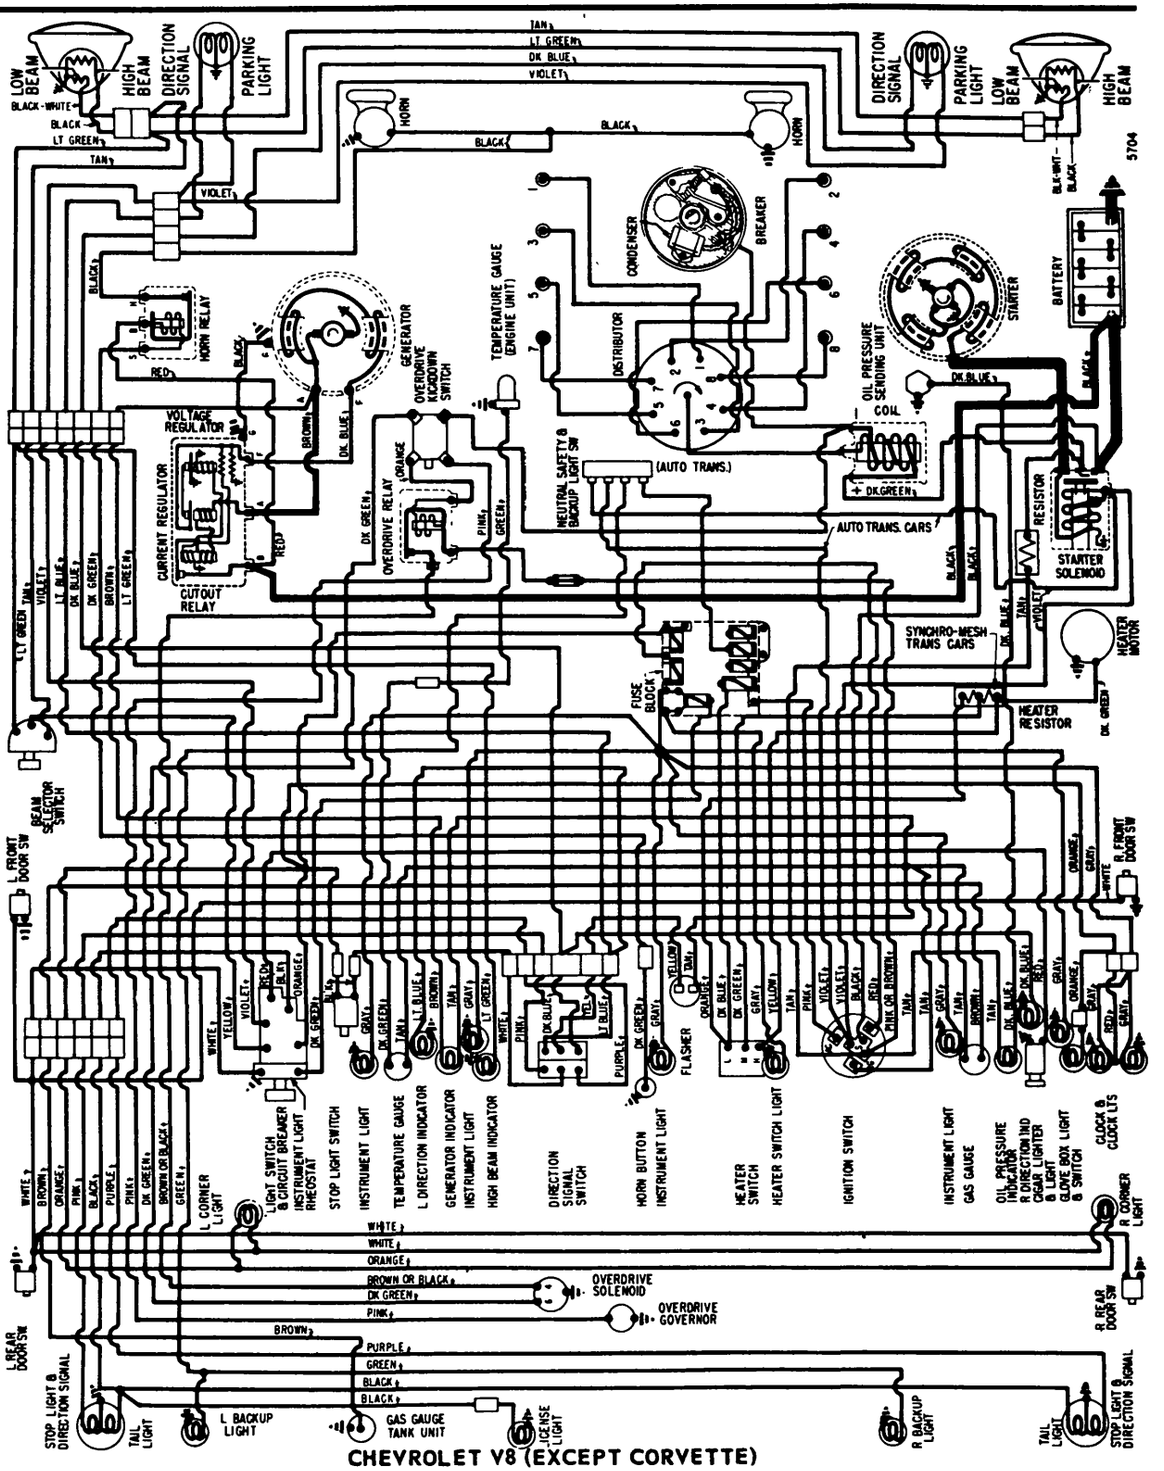
Std. S tting - Set timing to setting indicated below.

►*IGNITION TIMING PROCEDURE CHANGE: Previous recomm ndation of s tting timing at 1000 RPM has been disc ntinued.*

Engin	Igniti n Timing Setting	Setting
V8 265" & 283" (2-Bbl. Carb.)		4° BTDC
V8 283" (4-Bbl. Carb.)		4° BTDC
Corvette (One 4-Bbl. Carb.)		4° BTDC
Corvette (Dual 4-Bbl. Carb.)		① 12° BTDC
Corvette (Fuel Injection) ②		① ③ 12° BTDC
Corvette (Fuel Injection) ④		⑤ ⑥ 4° BTDC

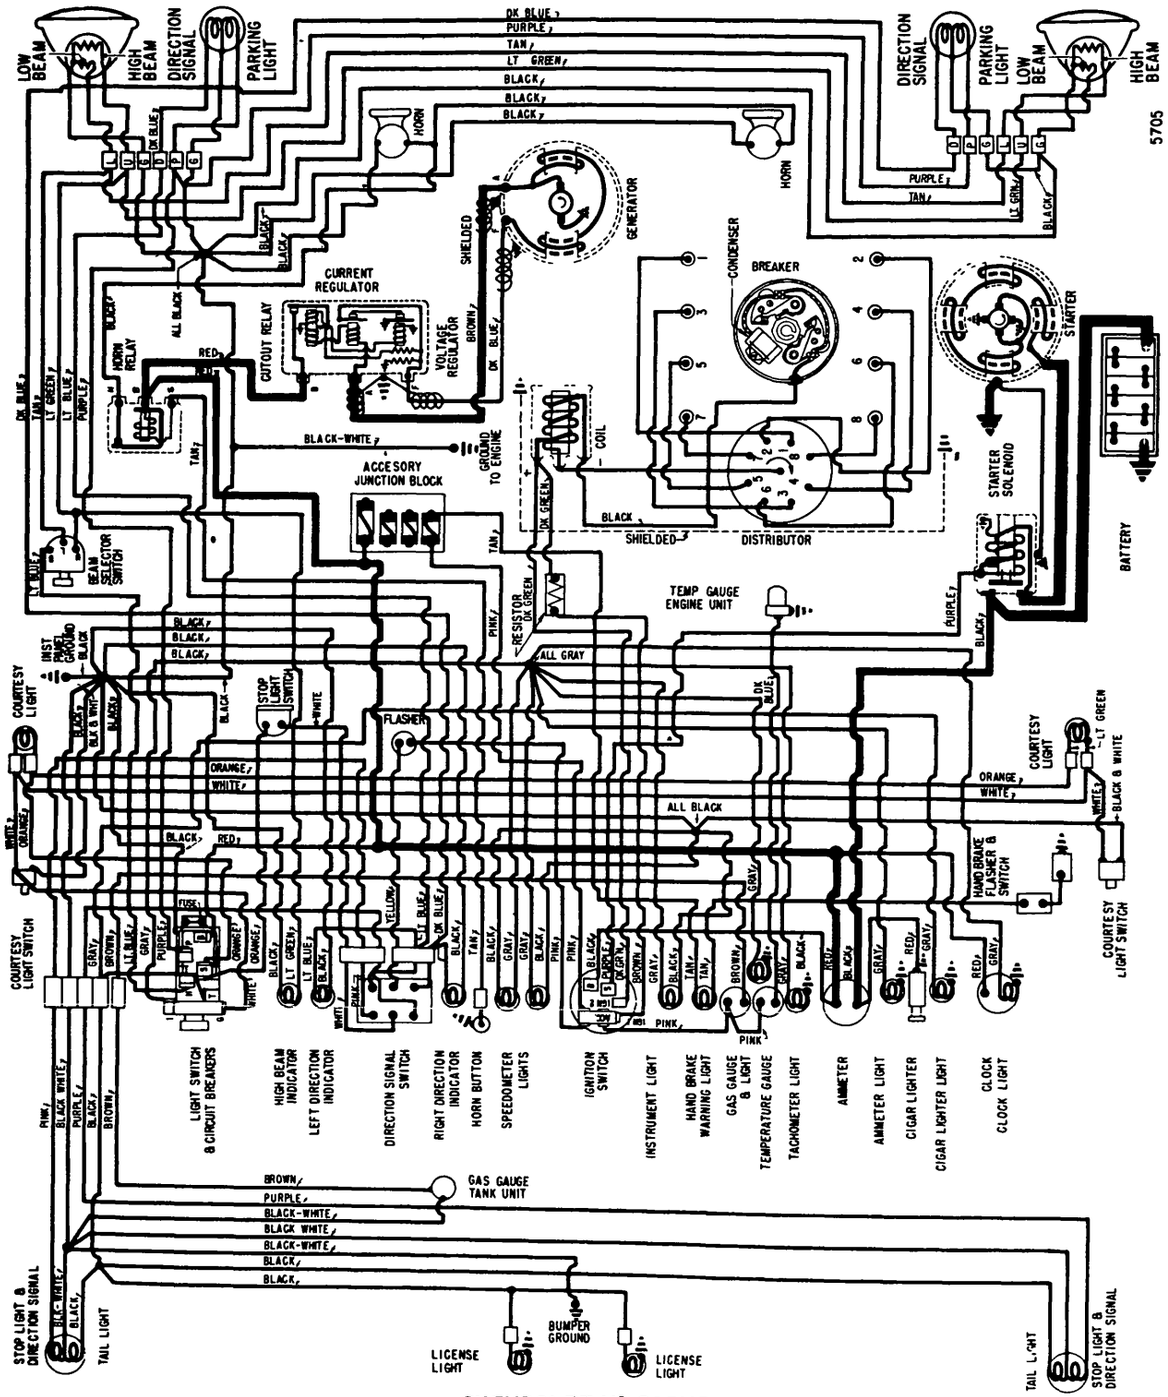
① - Do not exceed 14° BTDC.
② - Automatic Transmission.
③ - Engine idling at 600 RPM.
④ - Synchro-mesh Transmission.
⑤ - Engine idling at 800-850 RPM.
⑥ - Do not exceed 8° BTDC.

Timing Mark - Mark on vibration dampener and an indicator on left side of engine front cover. Indicator is marked with 8 lines on "advance" side of "0" mark, and two lines on "retard" side. Each line indicates 2°.



CARBURETOR

►*CARBURETOR APPLICATION NOTE: Rochester 2GC Dual Carbur tor is standard on all models (Exc. Corvett). Roch ster 4GC and Carter WCFB 4-Barrel Carburetors us d on a mixed basis on all models (Exc. Corv tt) with Pow r Package. ONE or TWO Carter WCFB 4-Barr l Carbur tors used on Corvette. Rochester "Ramj t" Fu l Inj ction System is optional on Corvette 283" Engin .*

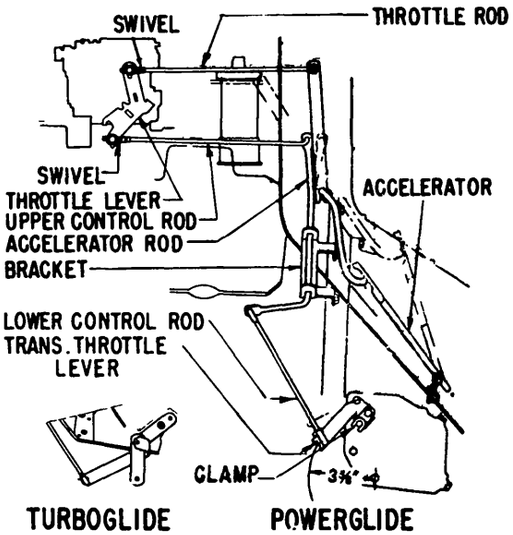


►*FAST IDLE CONTROL CAUTION (AIR CONDITIONED CARS):* Fast idle control is set to provide 900 RPM engine speed when Fast Idle Control Knob is pulled out. Make sure knob is pushed in when making normal fast idle adjustments and that fast idle control linkage does not interfere with normal operation of carburetor linkage when fast idle is not in operation.

THROTTLE LINKAGE ADJUSTMENT: Powerglide Cars - Remove lower control rod and loosen transmission throttle lever clamp screw. Insert Tool J-5906 between transmission left hand side cover lower front bolt and hole in lever. Distance should be 3.60", as indicated on gauge, from centerline of bolt to hole centerline. With gauge in place and holding lever clamp in full detent position (rotated counterclockwise), tighten lever to clamp and remove gauge. Install lower control rod. Disconnect upper control rod from throttle lever on carburetor. Place throttle valve in wide open position and pull upper control rod forward until it is stopped by transmission internal stop. Adjust swivel on end of upper control rod for free entry into throttle lever, then attach swivel to throttle lever. Check adjustment by placing linkage in idle position, then return to wide open throttle by rotating throttle lever on carburetor. Push up on transmission throttle lever and note if lower control rod deflects, which would indicate that transmission is not on

CONTINUED ON NEXT PAGE

CHEVROLET V8 (EXCEPT CORVETTE)



CHEVROLET V8 CORVETTE

CONTINUED FROM PRECEDING PAGE

its internal stop. If rod deflects or throttle valve does not reach wide open position, repeat the adjustment. Depress accelerator pedal and place lowest part of accelerator rod ¾" (Pass. Cars), 3/8" (Corvette) above floor panel. Disconnect throttle rod at carburetor throttle lever and adjust swivel on rod for free entry in hole in lever with throttle valves wide open.

Turboglide Cars: Remove upper control rod from throttle lever. Place throttle lever in wide open position and pull rod forward until stator control valve spring is overcome and lever is bottomed. Adjust swivel on upper control rod for free entry into hole in lever, then attach swivel. Check adjustment by placing linkage in idle position, then return to wide open throttle position by rotating throttle lever. Push upward on transmission throttle lever and note if lower control rod deflects, indicating that stator control valve spring is not fully

CHEVROLET TRANSMISSION THROTTLE LINKAGE

compressed. If rod deflects, or throttle lever will not reach full detent, repeat the adjustment. *CAUTION - Stall tests must not be performed on cars with this transmission.*

ROCHESTER 2GC 2-BARREL

Model	Rochester No.
Standard Transmission (Early)	7010647
Standard Transmission (Later)	7011131
Powerglide & Turboglide (Early)	7010648
Powerglide & Turboglide (Later)	7011124
Governor Equipped Eng. (Early)	7010719
Governor Equipped Eng. (Later)	7011149

► *PARTS CHANGES FOR IMPROVED PERFORMANCE*
See "Rochester 2GC Carburetors" in Carburetion Section

► *MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting - After idle speed set to correct specifica-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

tions (see Idle Speed below), turn both idle mixture screws for smooth idle with highest vacuum reading and RPM.

Idle Speed - 450 RPM (Synchro-mesh), 425 RPM (Powerglide & Turboglide, with selector lever in "D").

Float Level - 1¼" (Gauge BT-129). With air horn inverted and gasket in place, position float level gauge over float so it rests against pump side of power piston shaft, with the outer gauge leg in line with center of float. Bend float arm to adjust.

Float Drop - Bend float tang as required to obtain a distance of 1 29/32" from gasket surface to bottom of float, with air horn upright and float hanging free. Use scale or scribed mark on float and pump gauge.

Automatic Choke Setting: Centered at index.

► *OTHER DATA: See "Rochester 2GC Carburetors" in Carburetion Section.*

ROCHESTER 4GC 4-BARREL

Rochester 4GC No. 7009846 (Early), No. 7012126 (Later).

► *PRODUCTION AND PARTS CHANGES FOR IMPROVED PERFORMANCE: See "Rochester 4GC Carburetors" in Carburetion Section.*

► *MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 2–3–5–8, LEFT barrels 1–4–6–7.*

Idle Setting - Adjust idle mixture screws for peak vacuum and engine RPM reading.

Idle Speed - 450 RPM (Synchro-mesh), 425 RPM (Powerglide & Turboglide, with selector lever in "D").

► *OTHER DATA: See "Rochester 4GC Carburetors" in Carburetion Section.*

CARTER WCFB 4-BARREL

(Power Pkg. & Corvette Eng. With Single Carb.)

Carter WCFB 2555S (Std. Trans.), 2505S (Auto. Trans.), 2655S (All Trans.).

► *CARBURETOR REPLACEMENT NOTE: Carb. No. 2505S with choke set one point lean can be used to replace No. 2555S.*

► *MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting - (2505S & 2555S) ¾-1¾ turns open. (2655S) ½-1½ turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed (All Carbs.) - 475 RPM (Synchro-mesh), 425 RPM (Powerglide & Turboglide with selector lever in "D").

► *OTHER DATA: See "Carter WCFB Carburetors" in Carburetion Section.*

CARTER WCFB 4-BARREL

No. 2626S (Front), No. 2627S (Rear)

(Corvette Engine with TWO Carbs.)

► *CARBURETOR NOTE: "Idle Air Mixture Screws" have been eliminated on these carburetors and the special procedure formerly required is no longer necessary.*

► *CARBURETOR OPERATION NOTE: Front and rear carburetors operate together at idle speed and at high speed for full power operation. Front carburetor throttle begins to open when rear carburetor throttle valves are approximately at half-throttle position.*

Idle Setting - Set both idle mixture screws on each carburetor 1 turn open. Start and warm up engine. With engine at normal operating temperature, set idle speed to correct RPM (see Idle Speed below). Adjust all idle mixture screws individually (rear carburetor screws first, front carburetor screws last), for best engine idle "feel" and highest engine RPM. Reset idle speed to correct figure, readjust all idle mixture screws, finally reset idle speed.

Idle Speed - 600 RPM (With Std. Camshaft), 800-850 RPM (With "SR" Racing Camshaft).

Synchronizing Carburetors: Adjust accelerator pedal so it is 3/8" above toeboard (carpet removed) with throttle valve of rear carburetor wide open. With rear carburetor on wide open throttle, adjust front carburetor control shaft until throttle on front carburetor is wide open and against throttle stop. Tighten locknut on front control shaft. *NOTE* - When linkage is properly adjusted, front carburetor will begin to open when rear carburetor is at approximately half-throttle.

► *OTHER DATA: See "Carter WCFB Carburetors" in Carburetion Section.*

ROCHESTER "RAMJET"

(Optional on Corvette 283" Engine)

► *See "Rochester (Ramjet) Fuel Injection" in Carburetion Section.*

FUEL PUMP PRESSURE: 4-5¼ lbs.

CARB. EQUIPMENT

Fuel Pump: AC diaphragm type.

Replacement Pump - (Exc. Corvette) AC No. 4150 Std. (Fuel only), No. 4141S or 708 Optl. (Fuel & Vacuum).

(Corvette) - AC No. 4346 (Fuel only).

Pressure - 4-5½ lbs.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: AC Electric.

Dash Unit - (Corv.) AC 1518244, (Others) 1518711.

Tank Unit - Used as follows:

	AC No.
Pass. Car (Std.)	1518776
Pass. Car (2 Carb.)	1518784
Sta. Wgn. & Sed. Del. (Exc. 2 Carb.)	1518775
Sta. Wgn. (9 Pass.)	1518774
Corvette	1518785

See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco 2SMR53W (Std. Pass. Cars), 25M53W (Corvette).

12 Volt, 9 plate, 53 ampere hour capacity (20 hr. rate).

Battery Ground - Negative.

Engine Ground - Engine to cowl at rear head bolt.

STARTER

Delco-Remy 1107664 (Exc. Turboglide), 1107660 (Turboglide).

Armature - Delco-Remy 1935829.

Drive - Overrunning clutch (solenoid pinion shift).

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75 max.
10.5 ft. lbs.	Lock	5.8	435 max.

Starting Switch: Delco-Remy Solenoid Switch 1119919 mounted on starter and controlled by Ignition & Starter Switch 1116535 (Exc. Corvette), 1116512 (Corvette) with key starting. NOTE - Separate Relay, Delco-Remy 1116904, used on Corvette with Powerglide. *See "Delco-Remy Starter Solenoid Switch (No Relay)" in Electrical Section.*

Neutral Safety & Back-up Light Switch: Delco-Remy No. 1998173 (Powerglide Cars), 1998174 (Turboglide Cars), 1998112 (Corvette).

Adjustment - *See "Powerglide" or "Turboglide" in Transmission Section.*

GENERATOR

Delco-Remy. Application as follows:

Model	Generator No.	Armature No.
Std. 25 Amp.	1100321	1928952
Std. 30 Amp.	1102041	1929640
Corvette	1102043	1929640
Air Cond. 35 Amp.	1102083	1932900
A.C. & Pwr. Strg.	1102084	1938761

Performance Data - Cold

Generator	Amperes ①	Volts	RPM
1100321	25	14.0	2750
1102041, 3	30	14.0	2210
1102083, 4	35	14.0	2210

① - Not maximum output. See Regulator Data.

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 28 ozs.

Field Current - 1.5-1.62 amps. (1100321), 1.48-1.62 amps. (1102041,3), 1.69-1.79 amps. (1102083,4), all at 12.0 volts.

Belt Adjustment: 13/16" belt deflection midway between fan and generator pulleys with light pressure applied.

REGULATOR

Delco-Remy. Application as follows:

Regulator No.	Generator No.
1119000	1100321
1119003	1102041, 3
1119002 or 1119168	1102083, 4

Cutout Relay

Cuts In - 11.8-13.5 volts.

Contact Gap - .020".

Air Gap - .020" with contacts just closed.

Voltage Regulator

Setting - 13.8-14.8 volts at 125°F.

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 12 volt Regulators" in Electrical Section.*

Current Regulator

Setting (1119000) - 23-27 amperes.

Setting (1119003) - 27-33 amperes.

Setting (1119002 or 1119168) - 32-37 amperes.

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 12 volt Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*

Directional Signals: *See Electrical Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Autronic Eye: See *Electrical Section*

Lighting Switch Removal: Pull handle out to headlamp position. Depress switch shaft retainer (under dash) and remove knob and shaft assembly. Remove retaining ferrule, escutcheon and bezel, then remove switch assembly. Disconnect multi-plug connector. *NOTE* - Use screwdriver inserted in side of switch to pry plug from switch.

Stop Light Switch Location: Mechanical type mounted under dash in contact with brake pedal.

LIGHTING CIRCUIT BREAKER: One 13 amp circuit breaker located on main light switch, protects headlamp and parking light circuits.

FUSES: All fuses except as noted below are contained on the accessory junction block located on upper inside of dash panel to left of steering column.

NOTE - Corvette has two 13 ampere circuit breakers on light switch.

Panel & Accessory Lamps - 3 amps.
Tail, Dome, Glove Box, Clock & Stop Lamps - 9 amps
Heater (Without Air Conditioning) - 10 amps
Air Conditioner (Includes Heater) - 20 amps
Radio - 7½ amps.
Backing Light - 9 amps
Overdrive - 9 amps. Located in feed line to relay.

Horn Relay: Delco-Remy 1116920

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION* *Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*VALVE LIFTER NOTE* *Hydraulic valve lifter used on all engines with standard camshaft. Mechanical type lifter used on engines with "Hi-Lift" camshaft.*

ENGINE SPECIFICATIONS: V8 Valve-in-head

Engine	Bore	Stroke	Rated HP	Displacement
265	3 3/4"	3"	450	265 cu ins
283 (All)	3 7/8"	3"	480	283 cu ins

Engine	Compr. Ratio	Developed HP
Turbo-Fire 265 ①	8.0-1	162 at 4400 RPM
Turbo-Fire 283 ②	8.5-1	185 at 4600 RPM
Super Turbo-Fire 283 ③	9.5-1	220 at 4800 RPM
Corvette ④	9.5-1	245 at 5000 RPM
Corvette ④	9.5-1	250 at 5000 RPM
Corvette ④⑤⑦	9.5-1	270 at 6000 RPM
Corvette ④⑥⑦	10.5-1	283 at 6200 RPM

① - One Single Barrel Carburetor
② - One 2-Barrel Carburetor
③ - One 4-Barrel Carburetor & Dual Exhaust
④ - Either Standard Pass Car or Corvette
⑤ - Two 4-Barrel Carburetors & Dual Exhaust
⑥ - Fuel Injection & Dual Exhaust
⑦ - With special "SR" Racing Camshaft.

Compression & Vacuum Reading - *See TUNE-UP*

►***NOISY VALVE OPERATION & LACK OF OIL IN VALVE SYSTEM (265" V8 ENGINE)*** Lack of oil in valve system of RIGHT or LEFT cylinder banks may be caused by incorrect distributor installation. *See "Ignition Notes" in Chevrolet Special Data.*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data*

OIL PAN REMOVAL: Disconnect steering idler arm bracket from frame side rail and drop for clearance. Remove retaining bolts and remove pan.

ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data*

CYLINDER HEAD & MANIFOLDS: *See Chevrolet Special Data*

TIGHTENING TORQUES: *See Chevrolet Special Data*

PISTONS

Cast aluminum, slipper skirt, with piston pin offset 5/64".

Removal - Pistons and rods removed from above.

Replacement Pistons: Furnished Std. & 001", 020", 030", 040" oversize. With fitted pins.

►*STANDARD & 001" OVERSIZE PISTON NOTE* These pistons furnished in TWO sizes as follows:
265" Eng.-Std. - Marked **S4** (3 7500-3 7505"), **S5** (3 7505-3 7510"), **.001" Oversize** - Marked **S6** (3 7510-3 7515"), **S7** (3 7515-3 7520")
283" Eng.-Std. - Marked **S4** (3 8750-3 8755"), **S5** (3 8755-3 8760"), **.001" Oversize** - Marked **S6** (3 8760-3 8765"), **S7** (3 8765-3 8770")

►*283" ENGINE PISTON NOTE* Pistons have four depressions in head to prevent interference with valves at higher engine speeds. 'Domed" type pistons are used in 10.5-1 compression ratio engines.

Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513) With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler should be 7-18 lbs.

Installing Pistons: Install pistons with cast depression in head and 'F' mark cast in piston strut toward front of block. *See Rod Installation*

PISTON PINS

Pin is press fit in connecting rod.

Diameter - .9270-.9273'

Pin Fit in Piston - .00015-.00025' clearance. With piston and pin at 60°F., and light film of oil on pin, pin should support own weight in either pin boss.

Pin Fit in Connecting Rod - Pressed in rod. *For pin removal and installation, see "Piston Pins" in Chevrolet Special Data*

Replacement Pins: Furnished only in assembly with piston. Replace with new piston and fitted pin assembly.

PISTON RINGS

Compression rings are 'twist" type (Top ring has **upper** inner edge chamfered, lower ring has **lower** inner edge chamfered) and faces are tapered for correct wiping action. Oil ring is 3 piece type (two rails with spacer)

Ring	Width	End Gap	Side Clearance
Compr. (1 & 2)	.077-.078"	.009-.018"	.0012-.0032'
Oil (3)	.161-.188'	① .005-.015'	.0006-.0084'

① - on rails

Replacement Rings: Cromflex ring sets furnished Std. & .020', .030', .040' oversize.

Installing Rings: Install compression rings with mark "TOP" or "G.M." upward.

CONNECTING RODS

Length (Center to Center) - 5.7000" **Weight** - 19.02ozs.
Crankpin Journal Diameter - 1.999-2.000"
Lower Bearing - Replaceable precision type. *See "Connecting Rod & Main Bearing Note" under Crankshaft below*
Clearance - .001-.003" (new), .001-.004" (used)
Side Play - .008-.014" (both rods)

Replacement Bearings: Furnished Std., .001", .002", .010', .020' Undersize.

Installing Rods: Install rod in piston so that flange or heavy side of rod at bearing end will be toward **front** of piston (cast depression in head of piston and "F" mark on piston strut) on Nos. 1, 3, 5, and 7 pistons, and rod flange to **rear** of piston on Nos. 2, 4, 6, and 8 pistons. Install rod and piston assembly in cylinder with cast depression in piston head and "F" mark on strut toward front of cylinder block.

CRANKSHAFT

Journal Diameter - 2.2978-2.2988"

►*CONNECTING ROD & MAIN BEARING NOTE (Corvette Engines) Connecting rod bearings and front and intermediate main bearings are special steel backed aluminum alloy with a thin tin-copper overlay.*

Clearance - .001-.003" (new), .001-.004" (Used)
End Thrust - Taken by No. 5 (rear) main bearing
End Play - .002-.006" Check at front end of rear main bearing.

Replacement Bearings: Furnished in .001", .002", .010", .020" Undersize.

Bearing Installation: Not necessary to remove engine or crankshaft from car. *See "Crankshaft & Main Bearings" in Chevrolet Special Data*

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings' in Chevrolet Special Data*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data*

Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data*

CAMSHAFT

►*CAMSHAFT CAUTION* Different camshafts used as follows:

Model	Chevrolet No.
265" Engine	3704212
283' Engine (Std.)	3733431
283' Engine (Hi-Lift Cam)	3736097

Journal Diameters - 1.8682-1.8692" (all journals)
Bearings - Steel backed babbitt lined bushings
Clearance - .0015-.0035"

Replacement Bearings: "Precision" type (do not require reaming) Use Tool Set J-6098 to remove and install bearings.

Camshaft Setting: Both sprockets marked 'O' Install chain with sprocket marks adjacent and in line with straight edge across centers.

►*CAUTION* When installing sprocket on camshaft, line up dowel holes in sprocket and shaft. *DO NOT DRIVE SPROCKET ON SHAFT,* use three mounting bolts and DRAW sprocket into place.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Camshaft Removal & Installation: See *"Camshaft & Bearings" in Chevrolet Special Data.*

Timing Chain: Link belt. **Width** - .875". **Pitch** - .500". **Length** - 46 Links.

Engine Front Cover Oil Seal (Crankshaft Front Seal): See *"Engine Front Cover" in Chevrolet Special Data.*

VALVES

Tappet Clearance (Hi-Lift Cam) - Intake .012" (.008" for competition), Exhaust .018", Hot.

(All Others). None in service, hydraulic lifters.

Initial Tappet Clearance (Engs. with Hydraulic Lifters) - See *"Valve System" in Chevrolet Special Data.*

►283". *ENGINE VALVE NOTE:* Special lightweight valves used with Hi-Lift Camshaft and mechanical lifters. Identified by swirl polish under head

Valve	Head Diam.	Stem Diam.	Length
Intake	1.720"	.3415-.3422"	①4.902-4.922"
Exhaust	1.5"	.3410-.3417"	4.913-4.933"

Valve	②Seat Angle	Lift	Stem Clearance
Intake	45°	③	.001-.0027"
Exhaust	45°	③	.0015-.0032"

①- 4.8799" on cars with "Hi-Lift" camshaft.

②- Face angle 44°.

③- 265" Eng., .3336"; 283" Eng. Std., .3987", Hi-Lift Camshaft, Intake .3938", Exhaust .3998".

Valve Seat Width - .035-.060" (Intake), .062-.093" (Exhaust).

Valve Stem Seal Installation: See *"Valve System" in Chevrolet Special Data.*

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance is excessive. Valves with oversize stems furnished .003", .015", .030" Oversize. Use Reamer Set J-5830.

Valve Springs: Install with closed end of coil toward cylinder head, and shield over spring on intake valves.

►*VALVE SPRING NOTE:* Valve spring shield on both intake and exhaust valves on 283" engine.

Spring Specifications
265" Engine

Valve	Spring Pressure	Length
Closed	76-84 lbs.	1.696"
Open	155-165 lbs.	1.366"

283" Engine①

Valve	Spring Pressure	Length
Closed	65-72 lbs.	1.696"
Open	151-165 lbs.	1.306"

①- Except engines with "Hi-Lift" camshaft.

►*VALVE SPRING INSTALLED HEIGHT CAUTION:* Check installed height of valve spring after grinding valves by measuring distance from spring seat in cylinder head to top of valve spring. If this dimension exceeds 1 45/64", install valve spring seat shim furnished 1/32 & 1/16" thick. Installed height of spring must be 1 11/16-1 45-64".

Valve Lifters (Std. V8): Hydraulic type. See *"Valve System" in Chevrolet Special Data.*

Valve Lifters (Corvett): Plain barrel type. Remove in same manner as for hydraulic valve lifters. See *"Valve System" in Chevrolet Section.*

Rocker Arms: Mounted individually on studs pressed into cylinder head.

Rocker Arm Stud Replacement - See *"Valve System" in Chevrolet Special Data.*

VALVE TIMING

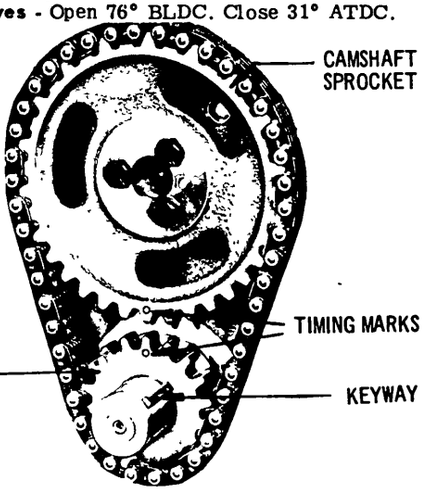
See *"Camshaft Setting" under CAMSHAFT above.*

Valve Timing Specifications (265" Engine)

Intake Valves - Open 18° BTDC. Close 72° ALDC.

Exhaust Valves - Open 52° BLDC. Close 20° ATDC.

Valve Timing Specifications (283" Engine)
(With Standard Camshaft)



Intake Valves - Open 12°30' BTDC. Close 57°30'ALDC

Exhaust Valves - Open 54°30' BLDC. Close 15°30' ATDC.

Valve Timing Specifications (283" Engine)
(With "Hi-Lift" Camshaft)

Intake Valves - Open 35° BTDC. Close 72° ALDC.

Exhaust Valves - Open 76° BLDC. Close 31° ATDC.

CHEVROLET V8 VALVE TIMING MARKS

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: 4 qts. refill (exc. Corvette), 5 qts. refill (Corvette). Add 1 qt. when filter changed.

Crankcase Capacity: 4 quarts (refill) 5 qts. (dry)

Normal Oil Pressure: 30 lbs. at 1170-1200 RPM.

Pressure Regulator Valve - In oil pump. Not adjustable.

Oil Pressure Indicator (Std V8) Light located at right side of instrument cluster, controlled by a pressure switch Delco-Remy 1998149 or AC No. 1508425, located in main oil gallery adjacent to distributor. Switch closes when pressure drops to 4-7 lbs.

Oil Pressure Gauge (Corvette) - AC No. 1508131. Not electric.

Oil Filter: Full flow type. Replace element at 6,000 mile intervals. Use new seal, tighten center bolt to 20-25 ft. lbs.

Replacement Filter Element - AC No. PF-131.

Oil Pump: Spur gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul - See *"Oiling System" in Chevrolet Special Data.*

Crankcase Ventilation - Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

COOLING

►*RADIATOR REMOVAL CAUTION (POWERGLIDE OR TURBOGLIDE): Transmission oil cooler is part of radiator lower tank, and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.*

Water Capacity: 16 qts. add 1 qt. for heater.

Pressure Valve: AC RC 1, Chevrolet No. 750795. 7 lb. type radiator filler cap.

Thermostat: Harrison. In water outlet on intake manifold.

Standard - No. 3133595 (stamped 151) 151° Can be used for alcohol anti-freeze.

Optl. - No. 3133596 (stamped 160) 160°. No. 3133597 (stamped 170) 170°.

Temperature Gauge: AC electric.

Dash Unit - AC No. 1513317 (Std. V8), 1513198 (Corvette).

Engine Unit - AC No. 1513321.

See *"Temperature Gauges" in Miscellaneous Section.*

Water Pump: Packless type with ball bearing shaft.

See *"Water Pumps" in Chevrolet Special Data.*

CLUTCH

►*CLUTCH NOTE: Both Chevrolet (Own) Diaphragm type & Borg & Beck Coil Spring type Clutches used:*

Chevrolet (Own) Diaphragm Clutch

Car Model	Size	Chevrolet No.
V8 (Std.)	10"	3836723
V8 (Heavy Duty)	11"	3836719

Borg & Beck Clutch

V8 & Corvette (4Bbl. Carb)	①3744753
V8 & Corvette (Two 4 Bbl. Carb)	②3744752

①- Borg & Beck 10A8W Assy. No. 361468.

②- Borg & Beck 10A8 Assy. No. 361466 (use 361468 for service).

See *"Chevrolet (Own)" and "Borg & Beck" Clutches in Clutch Section.*

Clutch Disc (Chevrolet Clutch)

Car Model	Chevrolet No.
Std. 10" (Woven - Blue Hub)	3737946
Std. 10" (Molded - Lt. Brown Hub)	3737948
Overdrive 10" (Woven - Maroon Hub)	3741091
Heavy Duty 11" (Woven - Pink Hub)	3836906

Clutch Disc (Borg & Beck Clutch)

Std. (4 Bbl. Carb) 10" (Black Hub)	③3738227
Overdrive (4 Bbl. Carb) 10" (Lt. Green)	④3738229
Std. (Two 4 Bbl. Carb) 10" (Dark Brown)	⑤3740462

③- Borg & Beck No. 382657.

④- Borg & Beck No. 382653.

⑤- Borg & Beck No. 382657.

Pedal Adjustment: Pedal free-travel ¾-1". To adjust, disconnect trunnion on rear end of clutch fork rod from cross shaft (remove cotter pin, washer, and spring), turn trunnion on rod for correct free play (one turn equals approximately 3/16" play), reinstall trunnion.

Removal (Borg & Beck): Remove transmission (see Transmission Removal below). Remove clutch housing pan. Pull out clutch release bearing and sleeve. Mark

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

flywheel, cover, and one pressure plate lug with punch to insure proper reassembly Loosen holding screws a turn or two at a time to avoid bending rim of cover, until cover is free Remove clutch assembly and clutch disc assembly from clutch housing When removing driven disc be sure to mark flywheel side

R moval (Diaphragm Spring Type)· Remove Transmission (see Transmission Removal below) Remove clutch throwout bearing from fork then clutch fork tension spring from fork Remove clutch fork by forcing it forward and toward center of vehicle Install Clutch Pilot Tool J 5824 to support clutch assembly Loosen clutch attaching bolts one turn at a time until diaphragm spring is released Remove tool then clutch assembly from vehicle *NOTE* When installing clutch align 'X" marks on cover and flywheel

SYNCHRO-MESH TRANSMISSION

Own Three speed synchro-mesh (Std) three or four speed (close ratio) optional

See Chevrolet 3 speed in Transmission Section

Transmission Controls· *See 'Transmission Controls' in Transmission Section*

R moval: Drain transmission and disconnect speedometer cable and shift rods Disconnect propellor shaft at rear universal and slide shaft toward rear, off transmission output shaft Remove two top transmission to clutch housing screws and install Guide Pins J-1126 Remove the two lower screws and slide transmission back until clutch gear splines disengaged Remove transmission from below car

OVERDRIVE

Warner R10 Solenoid operated type with governor control and throttle operated kickdown Lockout switch not used

See 'Chevrolet Overdrive' in Transmission Section

Overdrive Control: *See "Warner R10 &R11 Overdrive Control" in Transmission Section*

Removal: Same as for synchro-mesh (above) after disconnecting control cable and wiring

POWERGLIDE TRANSMISSION

Torque converter and hydraulically operated planetary gear unit with manual controls

► *PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS See "Chevrolet Powerglide" in Transmission Section*

► *TESTING & TROUBLE SHOOTING See "Chevrolet Powerglide" in Transmission Section*

Lubrication: Check fluid level in transmission every 1,000 miles, drain and refill at 25,000 mile intervals, with Automatic Transmission Fluid type "A" bearing an "AQ-ATF" marking on container

Capacity - 4½ qts (refill), 10½ qts (after overhaul)

► *POWERGLIDE DRAINING CAUTION* There is no drain plug on converter Drain transmission case only, add 4½ qts of fluid initially, recheck after idling engine

Checking Fluid Level - Engine must be idling with transmission warm, selector lever in "N" range and parking brake applied Check fluid level on dipstick located in filler tube on right side of engine opposite starter Fluid level should be at full mark on dipstick *NOTE - DO NOT OVERFILL*

Thr ttl Linkag Adjustment: *See CARBURETOR above*

► *OTHER POWERGLIDE SERVICE DATA S e "Chevrolet Powerglide' in Transmission Section*

TURBOGLIDE TRANSMISSION

New "non-shifting" hydraulically controlled, planetary type transmission with three unit torque converter

► *PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION See "Chevrolet Turboglide" Transmission in Transmission Section*

► *TESTING & TROUBLE SHOOTING See 'Chevrolet Turboglide" in Transmission Section*

Lubrication: Check fluid level in transmission every 1000 miles, drain and refill every 25,000 miles Use Automatic Transmission Fluid Type A (with "AQ-ATF" mark on container)

Capacity - 3½ qts (refill), 9½ qts (after overhaul)

► *TURBOGLIDE DRAINING CAUTION*· There is no drain plug on converter Drain transmission case only, add 3½ qts of fluid initially, recheck after idling engine

Checking Fluid Level (Exc Air Cond. Cars) - With transmission at normal operating temperature, transmission selector lever in "D" (drive) range, and engine idling, check fluid level on dipstick in filler tube on right side of engine Fluid level should be at full mark on dipstick *CAUTION - DO NOT OVERFILL*

Checking Fluid Level (Air Cond. Cars) - *NOTE* - Regular filler tube and dipstick not used Fluid Level is checked from beneath car (car on hoist) as follows With transmission at normal operating temperature, selector lever in "N" (neutral) range and engine idling, check fluid level by removing cap from oil level tube at rear of transmission oil pan under extension housing Oil level should be at *top* of tube If oil level low, remove speedometer drive gear fitting, add oil through fitting hole until fluid level reaches top of oil level tube

Throttle Linkage Adjustment: *See CARBURETOR above*

► *OTHER TURBOGLIDE SERVICE DATA See 'Chevrolet Turboglide' in Transmission Section*

UNIVERSALS

Own. Yoke & Spider (Trunnion) type

► *CAUTION* Rear universal companion flange nut controls rear axle pinion bearing preload Preload must be adjusted whenever companion flange nut loosened *See 'Chevrolet Pass Car (Hotchkiss Drive)" in Rear Axle Section*

REAR AXLE

Own Semi-floating hypoid gear type, with Hotchkiss Drive *NOTE* - "Positraction" Limited Slip Differential optional

See "Chevrolet Pass Car (Hotchkiss Drive)" Rear Axle & "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section

► *PINION BEARING PRELOAD CAUTION* Rear universal joint companion flange nut controls rear axle pinion bearing preload Bearing preload must be adjusted whenever companion flange nut is loosened

Rati s - 3 55-1 (Std), 4 11-1 (Overdrive) 3 36-1 (Powerglide & Turboglide)

Backlash - 003- 010" (005- 008" preferred)

Removal Raise car and support with jack stands under frame side rails Remove rear wheels and remove two trunnion bearing "U" bolts from rear universal yoke and separate the joint (tape bearings to trunnion) Disconnect hand brake cable and equalizer and remove cable from clamps at frame Disconnect hydraulic brake lines at rear axle housing Disconnect shocks Support axle assembly on hydraulic jack and remove spring "U" bolts, nuts and anchor plate, and lower axle to floor

Axle Shaft Removal Raise car and place jack stands under axle housing Remove tire, wheel and brake drum assembly Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange) Attach Axle Puller J-5748, with slide hammer, to flange and remove axle shaft and bearing assembly Be careful not to disturb backing plate *NOTE*–If bearing retainer and parking brake strut interfere, raise strut slightly with screwdriver to obtain clearance

SHOCK ABSORBERS

Delco. Direct acting hydraulic, non-adjustable Serviced by replacement

Replacement Sh ck Absorb rs

Model	Fr nt	R ar
Pass exc Conv (No A C)	5531202	5531211
Pass exc Conv (With A C)	5524088	5531211
Convertible	5524088	5524089
Corvette	5531206	5531213
Sedan Del ,Sta Wgn ,Taxicab	5524088	5524089

FRONT SUSPENSION

Independent with direct acting shock absorbers within front coil springs. Different types used as follows

Corvette – "Threaded Bushing" type pivot points on upper and lower control arms.

Others – "Spherical Joint" type pivot points between control arms and steering knuckle support.

See "Chevrolet" in Suspension & Wheel Alignment Sect.

Steering Axis Inclination - 3-4°

Caster - Pos 1° preferred Limits Pos ½° to Pos 1½°

Camber - Pos ½° preferred Limits 0° to Pos 1°

Toe-In - 1/8-1/4"

Toe-Out on Turns - With inner wheel at 20° outer wheel should be 18°10'

STEERING

Manual. Different type steering systems used as follows **Corvette - Saginaw W rm & R ller.** Push-pull adjustment.

Others – Saginaw Ball Bearing W rm & Nut. Recirculating ball type.

See Saginaw "Worm & Roller" or "Ball Bearing Worm & Nut" in Steering Section.

Power Steering: *See "Chevrol t Pow r St ring" in Steering Section.*

St ring Linkag *See "Steering Linkage" in Steering Section*

Ste ring Whe l & Horn Button R m val *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Steering Gear Removal *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

BRAKES

Chevrolet-Bendix. Duo-servo single anchor hydraulic, without anchor pin adjustment. Hand lever applies rear wheel service brakes.
See "Chevrolet-Bendix Hydraulic" in Brake Section.

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION*
To compensate for lack of brake anchor adjustment, brake shoes are ground to a .057-.087 smaller diameter than the drum diameter. Grinding to the true diameter on a bench grinder will cause heel and toe contact, resulting in faulty brake action. *NOTE—If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter.*

Drums—Diameter 11".
Wheel Cylinder Diameter—Front 1 1/8", Rear 1".

Lining	Width	Thickness
Front Whl	2"	.187-.194"
Rear Whl	1¾	.187-.194"

Length Per Shoe—9.3125" (Primary), 11.6875" (Secondary).
Braking Power—55.9% (Front Wheels), 44.1% (Rear Wheels).

Clearance—Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag after adjustment.

Standard Master Cylinder. Located on engine side of firewall in line with brake pedal.

Checking Fluid—Reservoir is integral with master cylinder. Maintain level in cylinder to lower edge of filler hole.

Removal—Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove four retaining nuts and lock washers holding master cylinder to firewall and remove cylinder.

Installation—Reverse removal procedure making sure that push rod clevis is straddling the brake pedal. Refill master cylinder and bleed all brake lines. Adjust push rod-to-main cylinder clearance as follows: Make sure brake pedal returns to fully released position with no binding, and that pedal retracting spring has not lost its tension, then adjust brake pedal clevis to give a barely perceptible end play between main cylinder piston and brake pushrod (1 8-3/8" pedal movement should be felt).

Power Brakes: Std. Trans. - Hydrovac Power Unit. Used with standard master cylinder.
See "Hydrovac Power Unit" in Brake Section.
Aut. Trans. - Bendix Vacuum Power Unit. Replaces conventional master cylinder. *See "Bendix Power Unit" in Brake Section.*

MISC. MECHANICAL

Windshield Wipers: Vacuum, cable operated (Std.). Electric type (Optional).
See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric type with reversible motor operating each door window assembly.
See "Power Window Regulators" in Miscellaneous Section.

Power Top Controls: Hydro-Electric. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjuster: Reversible Electric motor controls horizontal front seat movement. *See "Power Seat Adjusters" in Miscellaneous Section.*
Air Conditioning: *See "Chevrolet Air Conditioning" in Miscellaneous Section.*

① - Hydra-Matic Transmission.
② - Heavy Duty Clutch. ④ - Powermatic Transmission.
③ - Updraft Carburetor. ⑤ - 4-Barrel Carburetor.

TUNE-UP

COMPRESSION PRESSURE: (6 Cyl.) 130 lbs. **(V8)** 150 lbs. All cylinders should read alike within 20 lbs.

VACUUM READING - 17-21" (Single & Dual Carb.), 16-20" (4-Barrel Carb.).

VALVE TAPPET CLEARANCE: (235") - .006" Intake, .018" Exhaust, Hot.
(261) - .006" Intake, .020" Exhaust, Hot.

(V8 Engines) - None in service (Hydraulic). For initial tappet adjustment, *see "VALVE SYSTEM" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: 6 Cyl. - Thermostatic type. Check for free operation. Should require ½ turn from unhooked to hooked position. Distorted spring should be replaced.
V8 - Thermostatic coil spring type located between right manifold and exhaust pipe.

IGNITION

FIRING ORDER: 6 Cyl. - 1-5-3-6-2-4.
V8 - 1-8-4-3-6-5-7-2.
Cylinders (V8) - RIGHT BANK 2-4-6-8. LEFT 1-3-5-7.

SPARK PLUG GAP: .035".

Spark Plug - AC used as follows:

Model	Std.	① Hot	② Cold
½-1½ Ton	AC-44	AC-45 or 46	C-43COM
2 Ton (Early)	C-42COM	C-43COM	
2 Ton (Later)	C-42-1COM	AC-44	C-43COM

① - City type operation.
② - Continuous heavy duty operation.

COIL: Delc -R my 1115087.
Ignition Curr nt - 1.8 amps. idling, 4 amps. stopped.
R sist r - Delco-Remy 1931614.

► *COIL RESISTOR NOTE (6 Cyl. Trucks Exc. Forward Control):* Resistor connected to ignition switch by two leads. Second lead is connected through starter switch and provides a direct connection to coil when starter switch operated.

► *COIL RESISTOR NOTE (6 Cyl. Forward Control & All V8 Models):* Resistor connected in coil primary circuit (see diagram) is bypassed during cranking when coil is energized directly from ignition bypass terminal on starter solenoid.

DISTRIBUTOR: Delco-Remy. Conventional type used on 6 Cyl. models. "Window Type" used on V8 models. *See "Delco-Remy (Window Type) Distributors" in El ctrical Section.*

Engine	D lc -R my No.
Thriftmaster 235"	1112403
Jobmaster 261"	1112403
Trademaster 265" & 283" (Exc. Hydra-Matic)	1110874
Trademaster 265" (With Hydra-Matic)	1110890
Taskmaster 283" (2-Barrel Carb.)	① 1112349
Super Taskmaster 283" (4-Barrel Carb.)	①② 1112350

① - Without Vacuum Spark Control.
② - Use 1112349 for service replacement.

Condenser - Delco-Remy 1928111 (1112403 Distr.), 1932004 (Others). **Capacity** - .18-.23 mfd.

Contact Point Set - Delco-Remy 1924571 (6 Cyl.). 1931988 (V8).

Breaker Gap (6 Cyl.) - .019" (new points). .016" (used points).

Breaker Gap (V8) - *NOTE - When cam dwell is properly adjusted, breaker gap opening (.016") will be correct. See CAM ANGLE below.*

Cam Angle - 28-35° (6 Cyl.), 28-32° (V8). *NOTE - Set V8 distributors to 30°.*

Breaker Arm Spring Tension - 19-23 ozs.

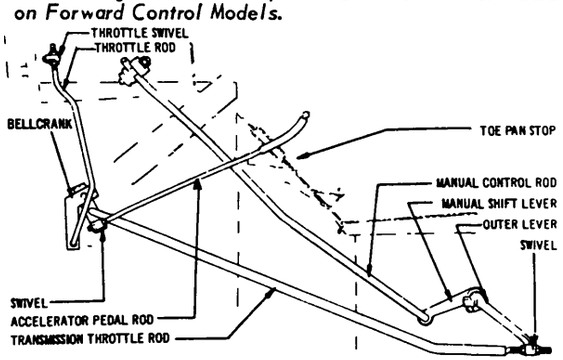
►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION (265" V8 ENGINE):* Incorrect installation may cut off oil to RIGHT or LEFT valve lifter gallery (valve lifters, pushrods, and rocker arms). *See "Ignition Notes" in Chevrolet Special Data.*

IGNITION TIMING

Setting - 6 Cyl. Engines - At TDC. **All V8 Engines** - 4° BTDC. *Set timing at IDLE SPEED with vacuum line connected*

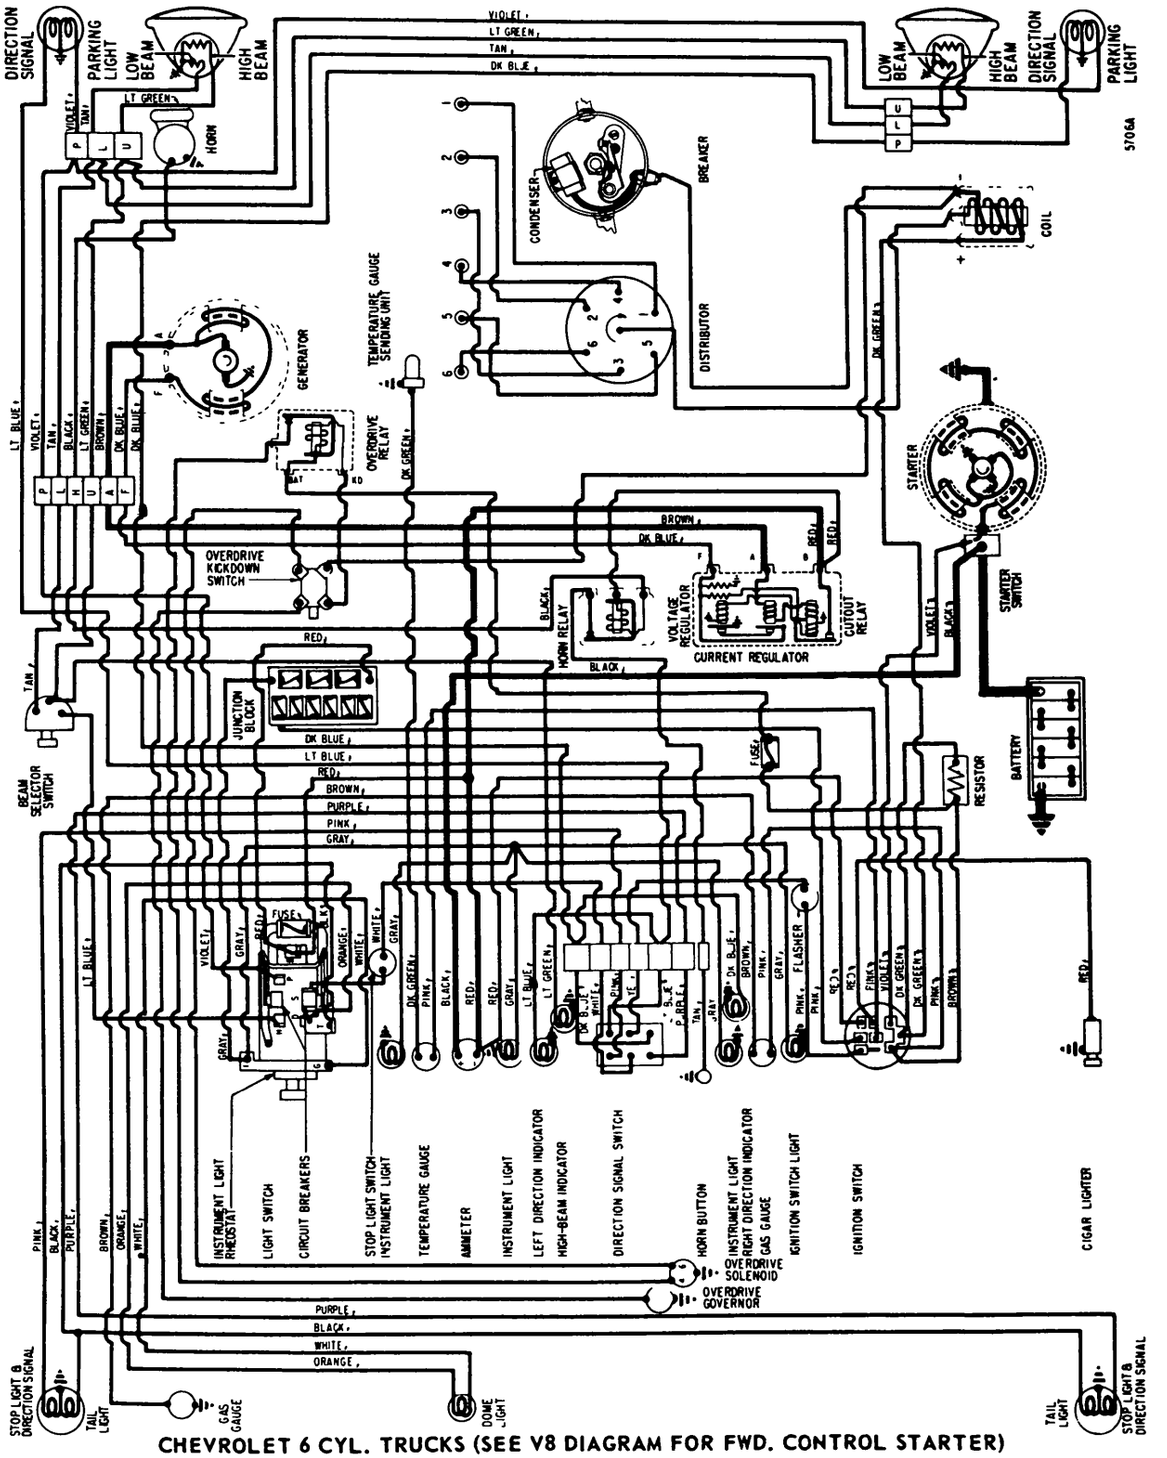


►*IGNITION TIMING PROCEDURE CHANGE: Previous recommendation of setting timing at 1000 RPM with vacuum line disconnected has been discontinued*

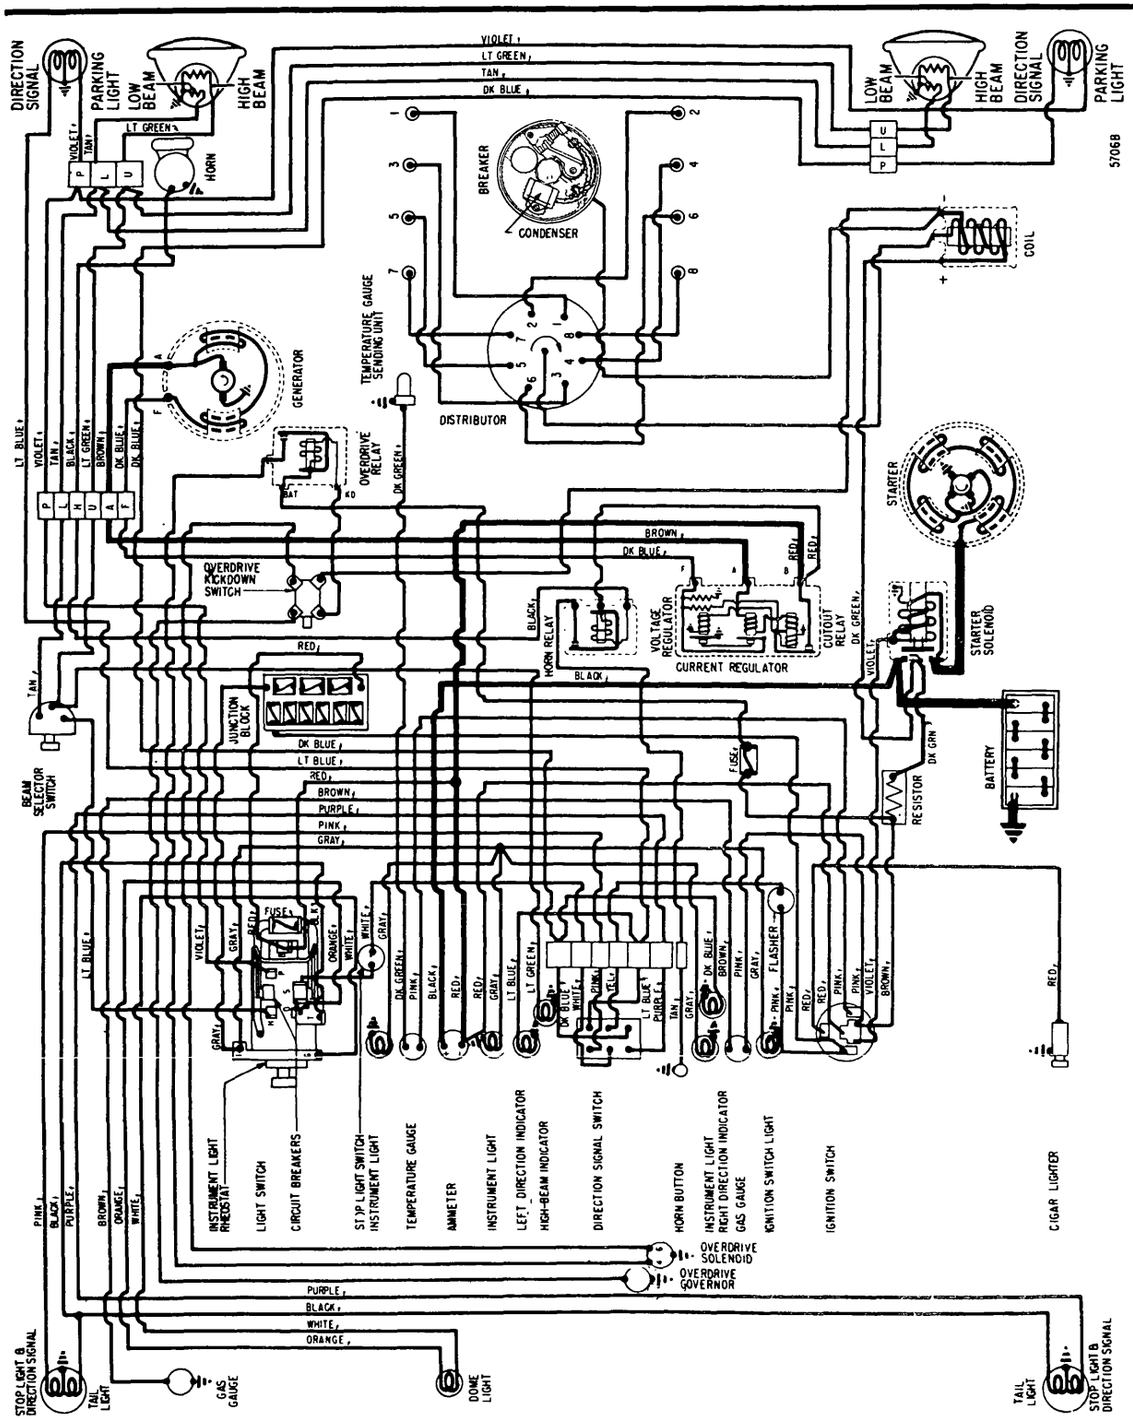
Timing Mark (6 Cyl.) - Steel ball insert in flywheel lined up with pointer in inspection hole in right front faceof housing with Octane Selector set on "0". Adjust Octane Selector as follows: Set for slight ping when accelerating with wide open throttle.

Timing Mark (V8) - Mark on vibration dampener and an indicator on left side of engine front cover. Indicator is marked with 8 lines on "advance" side of "0" mark, and two lines on "retard" side. Each line indicates 2°.

CARBURETOR



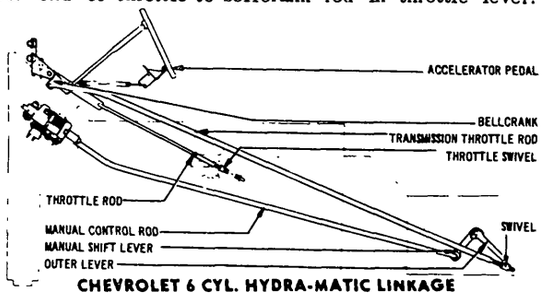
►*CARBURETOR APPLICATION: Rochester "B" & "BC" Carburetors are standard on all 6 Cyl. Models (Exc. Forward Control). Rochester "2G" Carburetor is standard on 265" Trademaster & 283" Taskmaster Engines. Rochester "4G" Carburetor is standard on Super Taskmaster Engines. Carter Updraft Carburetor is standard on Forward Control Models.*



CHEVROLET 6 CYL. HYDRA-MATIC LINKAGE (EXCEPT FORWARD CONTROL)

Throttle Linkag Adjustm nt (6 Cyl. Hydra-Matic Drive Trucks xc pt Forward Control): With engine at normal operating temperature and idle speed set at 400-450 RPM remove lower end of carburetor throttle lever-to-bellcrank rod from lever on bellcrank Install Lever Positioning Gauge J-5609 in hole in lever and gauge

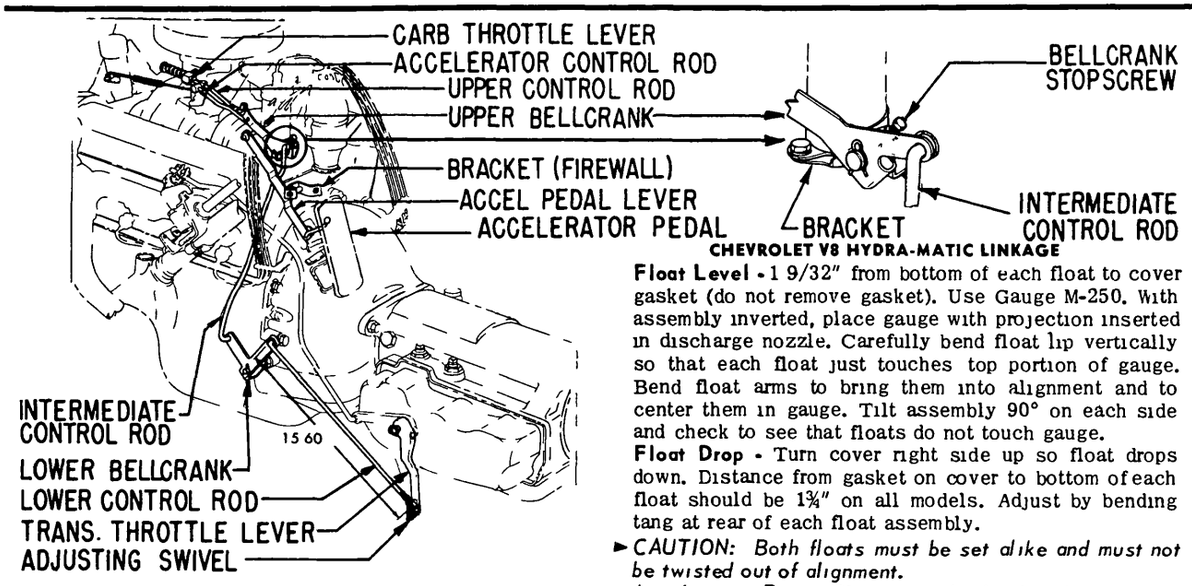
CONTINUED ON NEXT PAGE



CHEVROLET 6 CYL. TRUCKS (SEE V8 DIAGRAM FOR FWD. CONTROL STARTER)

CHEVROLET V8 TRUCKS (SEE 6 CYL. DIAGRAM FOR PEDAL CONTR. STARTER)

CONTINUED FROM PRECEDING PAGE



hole in pan rail of engine block (hole is located toward rear of bellcrank position), and leave gauge in this position. Remove swivel from bellcrank-to-transmission outer lever at transmission and move transmission outer lever back against its stop. Check distance from hole in outer lever to back of transmission with Gauge J-2545-C. Bend lever as necessary for free entry of gauge in lever hole using Tool J-5260 (*CAUTION - D not apply force to stops at either end of lever travel*). Hold outer lever back against its stop and adjust swivel position on bellcrank-to-transmission rod so it just enters hole in transmission lever. Remove Positioning Gauge from bellcrank and reinstall rod. Recheck engine idle speed with idle screw against stop on carburetor, and adjust carburetor throttle-to-bellcrank rod so swivel at upper end freely enters hole in throttle lever. At this point, **short n** bellcrank-to-transmission outer lever rod by turning swivel locknuts **three and one-half** turns. Remove bellcrank-to-carburetor throttle rod upper swivel from lever and pull rod upward until linkage is stopped by forward stop in transmission. Hold in this position and adjust accelerator-to-bellcrank rod swivel until accelerator pedal is against floor stop, then **shorten** rod **one full turn.** Replace upper end of throttle-to-bellcrank rod in throttle lever.

CHEVROLET 6 CYL. HYDRA-MATIC LINKAGE (FORWARD CONTROL MODELS)

Throttle Linkage Adjustment (F rward C ntrol M d ls With Hydra-Matic Drive): With engine at normal operating temperature and idle speed set at 400-450 RPM, insert 1/8" diameter pin into gauge pin hole in mounting bracket of accelerator pedal lever. Adjust length of throttle rod so that swivel just enters throttle lever. Remove swivel from outer lever and move lever back against transmission stop. Check distance from hole in outer lever to rear face of transmission with Checking Gauge J-2545-C, bending lever as necessary (Tool J-5260) to allow entry of gauge into hole. *CAUTION - Do not apply force against stop at either end of lever travel.* Adjust transmission throttle rod so that swivel at transmission case just enters outer lever then **sh rt-en** throttle rod **three and ne-half turns** of jam nut. Tighten nut. Remove pin from hole in accelerator pedal lever, back off adjusting screw and depress accelerator pedal until outer lever is tight against forward stop on transmission and then turn adjusting screw against accelerator pedal lever. Release accelerator pedal turn adjusting screw down **ne full turn,** and secure with jam nut.

CONTINUED ON NEXT PAGE

CHEVROLET V8 HYDRA-MATIC LINKAGE

CONTINUED FROM PRECEDING PAGE

Throttle Linkage Adjustment (V8 Hydra-Matic Drive Trucks): With carburetor at hot idle remove lower control rod from transmission throttle lever and hold lever back against transmission stop Check distance from hole in lever to back of transmission case with Lever Checking Gauge J-2545-C and bend lever as necessary to allow entry of gauge into hole (Tool J-5260) Adjust lower control rod to 15 60" and install in transmission throttle lever then install intermediate and upper control rods **Shorten** lower control rod by loosening adjusting swivel **three and one-half turns** and tightening locknuts Back off bellcrank stopscrew and rotate upper bellcrank until linkage is stopped by full detent stop in transmission then turn stopscrew until it contacts bracket Release upper bellcrank and turn stopscrew in **one-half to one full turn** and lock **On 3100, 3200, 3600 Series Only** install 1 8" gauge pin through hole in accelerator pedal lever and bracket at firewall then install accelerator control rod to accelerator pedal lever and rotate lever until bellcrank stopscrew contacts bracket Adjust length of accelerator control rod so swivel just enters lug on upper control rod

ROCHESTER "B" & "BC"

Downdraft types with manual choke (Rochester Model "B") and automatic choke (Rochester Model "BC").

Model	Rochester No
235" (exc Hydra-Matic) Ⓒ	B 7004468
235" (with Hydra Matic) Ⓒ	BC 7009255
261" Ⓒ	B 7005140

Ⓒ Except Forward Control

Idle Setting - 1½-2½ turns open (7004468 & 7005140) 2½ turns open (7009255) Turns screw out for richer mixture

Idle Speed - 450-500 RPM (exc Auto Trans models) 425 RPM (Auto Trans models with selector lever in "N" position)

Float Level - 1 9/32" from bottom of each float to cover gasket (do not remove gasket). Use Gauge M-250. With assembly inverted, place gauge with projection inserted in discharge nozzle. Carefully bend float lip vertically so that each float just touches top portion of gauge. Bend float arms to bring them into alignment and to center them in gauge. Tilt assembly 90° on each side and check to see that floats do not touch gauge.

Float Drop - Turn cover right side up so float drops down. Distance from gasket on cover to bottom of each float should be 1¾" on all models. Adjust by bending tang at rear of each float assembly.

► *CAUTION: Both floats must be set alike and must not be twisted out of alignment.*

Accelerating Pump - No seasonal adjustment.

Choke Adjustment· Centered on index.

Fast Idle (7009255): With fast idle screw on next to highest step of fast idle cam, Gauge BT-99 (.076") should just slide between lower edge of choke valve and carburetor bore. To adjust, bend connector rod.

Throttle Linkage Adjustment (Hydra-Matic Drive Trucks)· *See CARBURETOR above*

► *OTHER DATA See "Rochester B & BC Carburetors" in Carburetion Section*

ROCHESTER "2G"

Dual downdraft type with manual choke

V8 Taskmaster 283" Ⓒ (Later)	7011143

Ⓒ Without governor Ⓒ With governor

► *MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting - After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smooth idle with highest vacuum reading and RPM.

Idle Speed - 475 RPM (Synchro-mesh), 425 RPM with transmission in "N" (Automatic Trans.).

Float Level - 1¼" from air horn gasket to top of float with assembly inverted. Use Gauge BT-129 so it rests against power piston shaft with outer leg in line with center of float. Adjust by bending float arm between pivot and float with Tool BT-69.

Throttle Linkage Adjustment (Hydra-Matic Drive Trucks) *See CARBURETOR above*

► *OTHER DATA See "Rochester 2G Carburetors" in Carburetion Section*

ROCHESTER "4G"

Rochester 4G No 7009661 (early), 7011161 (later). Four barrel downdraft type with manual choke and vacuum operated governor

Replacement Package - Rochester No. 7015713.

Idle Setting - Adjust idle mixture screws for highest steady vacuum.

Idle Speed - 450 RPM (Synchro-mesh), 425 RPM (Automatic Trans. with selector lever in "D" range).

Throttle Linkage Adjustment (Hydra-Matic Drive Trucks)· *See CARBURETOR above*

► *OTHER DATA. See "Rochester 4G & 4GC Carburetors" Carburetion Section*

CARTER

Carter (BB) 871SC (Forward Control Models). Single barrel updraft type with manual choke.

Idle Setting - ½-1½ turns open (turn screw out for richer mixture.)

Idle Speed - 450-500 RPM (Synchro-mesh), 400-450 RPM (Hydra-Matic).

Float Level - Top of float (not seam) 0" to 1/32" below top of bowl with needle valve seated. Use Gauge J-818-13A on top edge of bowl (gasket removed). Press float lever lip firmly against needle.

Accelerating Pump - Inner hole (in plunger shaft and throttle lever) Summer. Outer hole, Winter.

Throttle Linkage Adjustment (Hydra-Matic Drive Trucks): *See CARBURETOR above*

► *OTHER DATA See "Carter BB Carburetors" in Carburetion Section*

FUEL PUMP PRESSURE: 3½-4½ lbs.

Model	Starter	Armature
6 Cyl. (Exc. Fwd. Cont.)	1107634 ①	1926626
6 Cyl. (Fwd. Cont.)	1107652 ②	1932185
6 Cyl. (Hydra-Matic)	1107677 ② ③	1926626
V8 (Exc. Hydra-Matic)	1107664 ②	1935829
V8 (Hydra-Matic)	1107674 ②	1927343

① - Manual Pinion shift. ② - Solenoid pinion shift.
③ - Delco-Remy 1107633 also used.

Drive (6 Cyl. Synchro-mesh Trans., Exc. Fwd. Cont.) - Overrunning clutch with pedal operated manual pinion shift.

Drive (6 Cyl. Fwd. Cont. & Hydra-Matic Trans., All V8 Models) - Overrunning clutch with solenoid pinion shift.

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. minimum.

Performance Data - 1107634, 74, 77

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10 5 ft. lbs.	Lock	5.8	435

Performance Data - 1107652, 64

Torque	RPM	Volts	① Amperes
0 ft. lbs.	6200-9400	10 6	49-76
	Lock	4.25	270-310

① - Includes solenoid.

Starting Switch (Solenoid Pinion Shift Models): Delco-Remy Solenoid 1119919 (1107652 & 1107664), 1119760 (1107674), 1119793 (1107677) Mounted on starter and controlled by Ignition & Starter Switch 1116537.
See "Delco-Remy Solenoid Starting Switch (Without Relay)" in Electrical Section.

Starting Switch (Manual Pinion Shift Models): Delco-Remy Switch 1930496. Mounted on starter and actuated by pedal operated lever. Ignition Switch 1116522 is connected to small terminal on side of starter switch to bypass resistor for starting.
See "Delco-Remy Manual Pinion Shift Starter Switches" in Electrical Section.

Hydra-Matic Neutral Safety Switch: Delco-Remy 1998110.
Adjustment - *See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy. Used as follows

Model	Generator	Armature
Std. (25 Amp.)	1100326	1928952
Optl. (30 Amp.)	1105947	1928003
Optl (40 Amp.)	1106981	1929360
Power Strg.	1102041	1929640
Power Strg. (Optl.)	1106982	1932349

Performance Data - Cold

Generator	① Amperes	Volts	RPM
1100326	25	14 0	2570
1102041	30	14.0	2210
1105947	32	14 0	1850
1106981, 2	40	13 0	1500

① - Not maximum output. See Current Regulator.

Rotation - Counterclockwise at commutator end.

Brush Spring Tension- 28 ozs (1100326, 41, 47), 20 ozs (1106981, 2)

Field Current - 1.5-1.62 amps. (1100326), 1 48-1.62 amps. (1102041), 1 54-1 67 amps (1105947), 1 37-1.50 amps. (1106981, 82) All at 12 volts.

Belt Adjustment: 5/16" (6 Cyl.), 13/16" (V8) deflection midway between water pump and generator pulleys with light load applied to belt.

REGULATOR

Delco-Remy. Application as follows

Regulator No.	Generator No.
1119000 (25 Amp.)	1100326
1119001 (30 Amp.)	1105947
1119003 (30 Amp.)	1102041
1119004 (40 Amp.)	1106981, 82

►*NOTE - Specifications below are for "NORMAL" settings.*

Cutout Relay

Cuts In - 11.5-13.0 volts (1119004), 11.8-13.5 volts (Others).
Contact Gap - .020".
Air Gap - .020" (with contacts just closed).

Voltage Regulator

Setting - 13.6-14.3 volts (1119004), 13.8-14.8 volts (Others).
Air Gap - .075" with armature pressed down to point where contacts just touching.
Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" in Electrical Section.*

Current Regulator

Setting - (1119000) 23-27 Amperes (1119003) 27-33 Amperes, (1119004) 37-42 Amperes.
Air Gap - .075" with armature pressed down to point where contacts just touching.
Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators' in Electrical Section*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*
Directional Signals: *See Electrical Section.*
Lighting Switch Removal: Disconnect all wires from switch (tag wires for reinstallation), depress switch shaft retainer (on top of switch) and remove knob and shaft Remove retaining ferrule, remove switch.
Stop Light Switch Location Attached to under side of toe pan to left of brake pedal.
LIGHTING CIRCUIT BREAKERS: Two 13 ampere circuit breakers located in main lighting switch. One protects headlamps and parking lamps and the other circuit breaker protects all other light circuits except instrument panel lights.
FUSES: Instrument Lights - 3 ampere. On lighting switch.
Overdrive - 9 ampere. In overdrive relay lead.
Horn Relay: Delco-Remy 1116920.
Contacts Close - 5 0-9.5 volts.
Contact Gap - .027".

ENGINE

Engine	Series
Thriftmaster 235" (6 Cyl.)	① 3000, 4000
Thriftmaster 235" (6 Cyl.)	② 3400, 3500, 3700
Jobmaster 261" (6 Cyl.)	① 6000
Trademaster 265" (V8)	③ 3000, 4000
Taskmaster 283" (V8)	④ 5000
Super Taskmaster 283" (V8)	⑤ 5000

① - Std. Equip., Conventional Models.
② - Std. Equip., Forward Control Models.
③ - Optional Equip., Conventional & Forward Control.
④ - Std. Equip. Optional on 6000 Series.
⑤ - Optional Equip.

ENGINE SPECIFICATIONS: Own. 6 Cyl. & V8 Valve-in-head.

Engine	Bore	Stroke	Displacement
Thriftmaster	3 9/16"	3 15/16"	235.5 cu. ins.
Jobmaster	3 3/4"	3 15/16"	261 cu. ins.
Trademaster	3 3/4"	3"	265 cu. ins.
Taskmaster	3 7/8"	3"	283 cu. ins.
Super Taskmaster	3 7/8"	3"	283 cu. ins.

Engine	Compr. Ratio	Rated HP	D v. HP
Thriftmaster	8.0-1	30.4	① 140
Jobmaster	7.8-1	33.7	② 148
Trademaster	8.0-1	45.0	① 155
Taskmaster	8.0-1	48.0	② 160
Super Taskmaster	8.0-1	48.0	③ 175

① - At 4200 RPM. ② - At 4000 RPM. ③ - At 4400 RPM.
Compression & Vacuum Reading - *See TUNE-UP.*

►*NOISY VALVE OPERATION & LACK OF OIL IN VALVE SYSTEM (265" V8 ENGINE)* Lack of oil in valve system of RIGHT or LEFT cylinder banks may be caused by incorrect distributor installation *See "Ignition Notes" in Chevrolet Special Data*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*

OIL PAN REMOVAL: (6 Cyl. Engine) - Drain oil and remove flywheel housing under pan, flywheel underpan extension, and oil pan screws. Remove oil pan.

OIL PAN REMOVAL: (V8 Engin) - Drain oil, disconnect steering idler arm bracket from right hand frame side rail and drop for clearance. On 5000 Series truck, remove oil gauge tube attaching bolt and remove gauge and tube. Remove oil pan bolts and screws and remove oil pan.

CYLINDER HEAD & MANIFOLDS: *See "Cylinder Head & Manifold" in Chevrolet Special Data.*

ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data.*

►*OTHER ENGINE DATA See 1957 Passenger Car pages and note the following.*

PISTON RINGS (6 CYL. ENGINES): 235" & 261" Engines have "Chrome Plated" top compression rings. Other compression rings are cast iron, oil rings are three piece steel (2 Chrome-Plated Rails & Spacer).

VALVES (ALL ENGINES): Rotocoil Valve Rotators - Used on exhaust valves of some 6 Cyl. & V8 engines.

VALVE LIFTERS (ALL ENGINES): Mechanical type lifters used on all 6 cyl.truck engines. Hydraulic lifters used on all V8 engines.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

VALVE TIMING (ALL ENGINES): As follows

235" Thriftmaster & 261" Jobmaster

Intake Valves—Open 11°30' BTDC, Close 52°30' ALDC.
Exhaust Valves—Open 51° BLDC, Close 13° ATDC.

265" Trademaster

Intake Valve - Open 18° BTDC. Close 72° ALDC.
Exhaust Valve - Open 52° BLDC. Close 20° ATDC.

283" Taskmaster & Super Taskmaster

Intake Valve - Open 12°30' BTDC. Close 57°30' ALDC.
Exhaust Valve - Open 54°30' BLDC. Close 15°30' ATDC.

Valve Timing Check (235" & 261" Engines): Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve opens and just starts to close and until triangular mark on flywheel lines up with pointer in flywheel housing opening. Mount dial indicator on rocker arm shaft support with stem contacting No. 1 exhaust valve adjusting screw, set dial indicator to .063". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset No. 1 exhaust valve to correct running clearance

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: (235") 5 qts Add 1 qt with filter change **(261")** 5 qts Add 2 qts with filter change **(283" Trademaster)** 4 qts, **(283" Taskmaster)** 5 qts Add 1 qt with filter change

Normal Oil Pressure - 30 lbs. at 1170-1200 RPM.

Pressure Regulator Valve - In pump body, not adjustable.

Oil Pressure Indicator - AC No. 1508246. Not electric.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

►*OIL PUMP SCREEN NOTE:* Oil pickup pipe should be installed with pickup pipe screen horizontal and toward bottom of pan.

Oil Pump Overhaul - *See "Oiling System" in Chevrolet Special Data.*

Crankcase Ventilation (Standard): Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

Servicing - On all models with air cleaner mounted on valve rocker arm cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

Crankcase Ventilation (Optional): Positive Type. Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**

Servicing - Every 10,000 miles (or oftener if required), clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly.

►*VACUUM VALVE CAUTION* If improper action of spring is suspected due to spring being distorted, or etched from corrosive action, the valve assembly should be replaced.

►*TASKMASTER V8 CRANKCASE VENTILATION NOTE:* Positive type crankcase ventilation is Standard.

COOLING

Water Capacity: In quarts for each type engine:
½, ¾, 1 Ton (Std.) - 17 (235"), 17½ (265").
½, ¾, 1 Ton (H.D.) - 17½ (235"), 18 (265").
1½ Ton Spec. (Std.) - 17½ (235"), 18 (265").
1½ Ton Spec. (H.D.) - 18 (235", 18½ (265").
5000 Series - 18 (283" Std.), 18½ (283" Powermatic).
6000 Series (Std.) - 17½ (235"), 17 (261"), 18 (283").
6000 Series (H.D.) - 18 (235"), 18½ (283").
6000 Series (Powermatic) - 21 (261"), 21½ (283").
NOTE - Add 1 qt. for heater.

Pressure Valve: AC No. 850795. Radiator filler cap. 7 lb. type. Replacement Valve - AC No. RC-1.

Thermostat: Harrison. In cylinder head water outlet (6 Cyl.). In water outlet in intake manifold (V8).
Standard - No. 3133595 (stamped 151) 151°. Can be used for alcohol anti-freeze.
Optional - No. 3133596 (stamped 160) 160°. No. 313-3597 (stamped 170), 170°.

Temperature Gauge: AC Electric.
Dash Unit - AC No. 1513138.
Engine Unit - AC No. 1513321.
See "Temperature Gauges" in Miscellaneous Section.

Water Pump: Packless type with sealed ball bearing shaft
See "Water Pumps" in Chevrolet Special Data.

CLUTCH

Own. (Diaphragm Spring) and Borg & Beck (Coil Spring) types used. Single plate, dry disc type.

Chevrolet (Own) Diaphragm Clutch

Model	Size	Chevrolet No
6 Cyl. (Exc. H.D., Fwd. Contr.)	10"	3836715
6 Cyl. Fwd. Contr. (Exc. 2 ton)	11"	3836719
6 Cyl. ½, ¾, 1, 1½ ton H.D	11"	3836719
Borg & Beck Clutch		
6 Cyl. 2 ton (261" Eng.)	11"	① 3837155
V8 ½, ¾, 1, 1½ ton	11"	① 3837155
V8 2 ton	11"	3743203

① - Borg & Beck 11A9 No. 361455.
See "Chevrolet (Own)" or "Borg & Beck" in Clutch Section.

Clutch & Clutch Disc Application - As follows

Clutch Disc (Chevrolet Clutch)

Model	Chevrolet No.
Std. 10" (Woven-Red Hub)	3836119
Std. 10" (Molded-Orange Hub)	3836097
H.D. 11" (Woven-Pink Hub)	3836906
Clutch Disc (Borg & Beck)	
Std. 10½" (Dark Green Hub)	③ 3727585
H.D. 11" (Yellow Hub)	⑪ 3733153

③ - Borg & Beck No. 382528.
⑪ - Borg & Beck No. 382286.

6 CYL. ENGINES

Pedal Adjustment: Pedal free travel ¾-1" To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. *NOTE*—Use finger pressure only when checking clutch free travel.

Removal: Remove transmission (see Transmission Removal). Remove throwout bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. *CAUTION*—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align "X" mark on cover with "X" mark on flywheel.

V8 ENGINES

Pedal Adjustment: Adjust clutch pedal until free travel is 1". Make sure that pedal pad contacts toeboard when pedal pressed down.

Removal: Remove transmission (see Transmission Removal). Before removing clutch assembly, punch mark flywheel, clutch cover and one pressure plate lug so these parts may be assembled in their same relative positions. Loosen hold-down screws evenly and remove cover. *NOTE*—Mark flywheel side of driven plate for correct reassembly.

TRANSMISSION

3-SPEED LIGHT DUTY

Own. Three speed, all helical gear type. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).
See "Chevrolet 3-Speed (Light Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever. *See "Transmission Controls" in Transmission Section.*

Removal (½ & ¾ Ton): Drain transmission. Disconnect speedometer cable at transmission and shift control rods from transmission levers. Remove propeller shaft. Remove the two top transmission to clutch housing capscrews and insert two transmission guide pins, Tool J-1126, in these holes. Remove the two lower transmission to clutch housing capscrews. Slide transmission straight back on guide pins until clutch gear is free of splines in the clutch disc.

3-SPEED (HEAVY DUTY)

Own. Three speed, constant mesh (second & high), sliding gear (low & reverse).
See "Chevrolet 3-Speed (Heavy Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever.
See "Transmission Control" in Transmission Section.

Removal: Same as for "3-Speed (Light Duty)" above.

4-SPEED

Own. Four-speed, constant mesh, synchro-mesh, helical gear (2nd, 3rd, & 4th), sliding spur gear (low & reverse). Floor mounted gearshift.

Transmission Control: Floor mounted gearshift lever.

Removal (½ Ton): *See "3-speed (Light Duty)" above.*

Removal (Other Trucks): Drain transmission, disconnect parking brake and remove lever. Remove propellor shaft, transmission gearshift lever (use Tool K-353). Remove screws that fasten steering jacket grommet to floor and slide grommet up jacket out of way. Remove accelerator pedal and floor mat. Remove sheet metal screws attaching transmission cover to body floor, remove cover. On Forward Control Models, remove both front and rear floor pans. Disconnect speedometer cable from driven gear fitting at transmission rear bearing retainer. Remove two top attaching screws, insert Guide Pins J-1126, remove flywheel underpan, two lower transmission screws, slide transmission straight back, remove transmission from vehicle.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

OVERDRIVE

Warner R10. Used with Chevrolet Truck 3-Speed (Light Duty) Transmission.

See "Chevrolet Overdrive" in Transmission Section.

Overdrive Control: *See "Warner R10 & R11 Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cables have been disconnected.

HYDRA-MATIC DRIVE

Dual Range. Four speed type with fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level in transmission every day. Drain & refill every 25,000 miles. Use only "Automatic Transmission Fluid" Type A.

Checking Fluid Level—With selector lever in "N" position, parking brake set, and transmission at normal operating temperature, remove access hole cover plate in floor pan, and **check fluid level with engine at idling speed.** Add sufficient fluid to bring level in transmission to "F" mark on dipstick.

Capacity—8½ qts. (refill), 9 qts. (after overhaul). *NOTE*—1 qt. additional with oil cooler.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

REAR AXLE

SEMI-FLOATING (HALF-TON)

Own. Semi-floating, hypoid gear type with Hotchkiss drive. *NOTE*—Same design as passenger car axle.

See "Chevrolet Hypoid Semi-Floating" in Rear Axle Section.

Ratio—(Synchro-mesh & Hydra-Matic) 3.90-1 (39.10). **(Overdrive)** 4.11-1 (37:9).

►*AXLE SHAFT NOTE: Shafts unequal length (right shaft longer) and may be identified by mark stamped on shaft, or by length as follows:*

Axle	Part No.	Length
Left	3694769①	29 5/8"
Right	3694770①	30 5/8"

①—Part No. stamped on axle for identification.

Backlash—.005-.008".

Removal of Rear Axle Assembly: Disconnect and remove parking brake pull back spring. Remove cotter pins and clevis pins from each parking brake cable clevis, and remove clevis. Remove springs and retaining clips from cables at frame brackets. Disconnect universal joint trunnion bearing "U" bolts and split rear universal joint. Disconnect shocks from anchor plates. Disconnect hydraulic brake line to connector at rear frame bracket. Remove spring "U" bolts, nuts and anchor plates. Raise rear of truck and roll assembly out toward rear *CAUTION—Be careful when pulling parking brake cables through openings in frame.*

Axle Shaft Removal: *See "Chevrolet Hypoid Semi-Floating" in Rear Axle Section.*

Axle Shaft Endplay—Free fit to .014" maximum.

FULL-FLOATING (¾, 1, 1½ TON) (EXC. LCF MODELS)

Own. Full-floating hypoid gear (straddle mounted pinion) with Hotchkiss drive.

►*AXLE ASSEMBLY NOTE, ¾ & 1-Ton axle assemblies are different design than used on 1½ & 2-Ton with standard rear axle assemblies.*

See "Chevrolet Truck Hypoid Full-Floating" in Rear Axle Section.

►*AXLE RATIO IDENTIFICATION NOTE: Axle ratios are identified by prefix letters in rear axle numbers stamped on top of carrier housing between reinforcing ribs. See Axle Ratios following:*

Axle Ratio Identification

Ratio	Prefix Letters
5.14-1 (36:7)	CA, CB, CE, CF
4.57-1 (32:7)	CC, CD
6.17-1 (37:6)	CG, CH, CJ
7.2-1 (36:5)	CM

Backlash—.005-.008". Screw adjustment.

Removal of Differential Carrier: Drain lubricant, remove axle housing cover and axle shafts, see axle shaft removal below. Remove two trunnion bearing "U" bolts from rear yoke and split rear universal joint (hold bearings on trunnion with tape). Remove bolts and lockwashers holding carrier to axle housing, support carrier in floor jack and roll from under truck.

Axle Shaft Removal (¾ & 1-Ton): Remove eight capscrews and lockwashers in axle shaft flange, install two ½"x13" screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft withdraw shaft from housing, remove and discard gasket *Use new gasket when installing shaft*

►*CAUTION* Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft *Grease at this point will cause loosening of axle shaft flange capscrews.*

Axle Shaft Removal (1½ & 2-Ton): Shaft flange is splined in wheel hub (tight fit) and requires special puller for removal Remove five capscrews and lockwashers in hub cap, remove hub cap and gasket Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover. J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. *NOTE*—When reinstalling axle shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket

►**Axle Shaft Note:** Shafts unequal length (right shaft longer than left). Install in correct position.

Wheel Bearing Adjustment: Remove wheels and axle shafts (see above) Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock Tighten adjusting nut tight, using special wrench J-2222 (¾ & 1-Ton), J-870 (1½ Ton), J-5670 (2-Ton) while turning hub by hand, then back off nut 45°, check for free turning, install adjusting nut lock with lock tangs aligned with slots in adjusting nut Bend tang down into notch in adjusting nut, install locknut and tighten securely. Bend tang of lock down into notch of locknut

HEAVY DUTY FULL-FLOATING (2-TON & LCF MODELS)

Own. Full floating, hypoid gear, roller pinion bearings (straddle mounted pinion), with Hotchkiss drive.

See "Chevrolet Truck Heavy Duty Hypoid Full Floating" in Rear Axle Section.

Ratios—Same as for "Standard Full-Floating" above.

Backlash— 005- 008"

Removal Of Rear Axle Assembly: Same as for "Standard Full-Floating" above

Axle Shaft Removal: Same as for 1½ & 2-Ton "Standard Full-Floating" above

►**Axle Shaft Note:** Shafts unequal length (right shaft longer than left). Install in correct position.

Wheel Bearing Adjustment: Same as for "Standard Full-Floating" above.

PLANETARY 2-SPEED

Own. Full-floating, two-speed planetary reduction type with hypoid primary pinion and ring gear.

See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.

►*NOTE: Two gear ratios available as follows:*

Power Ratio—6.40-1 (high), 8 72-1 (low). 32:5 Primary gears

Speed Ratio—5 83-1 (high), 7.95-1 (low). 35:6 Primary gears

Two-Speed Shift Control: Vacuum power type with control on gearshift lever.

Carrier Assembly Removal: *See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.*

Axle Shaft Removal & Wheel Bearing Adjustment: Same as for "Standard Full-Floating" above

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SHOCK ABSORBERS

Delco. Direct Acting (Airplane Type) shock absorbers as follows.

Shock Absorber Nos.	Front	Rear
½, ¾, 1 ton (Exc. Fwd. Contr.)	5532049	5534435
½, ¾, 1 ton Fwd. Contr.	5513193	5513349
1½, 2 ton (Exc. Fwd. Contr., Sch. Bus)	5521698	5534401
1½ ton Sch. Bus	5521698	5320846
2 ton Sch. Bus	5521699	5534401

FRONT SUSPENSION

Conventional "I" Beam section, with Reverse Elliott ends and semi-elliptic springs.

Kingpin Inclination - 7.16°.

Caster - Pos. 1½° (3100, 3200), Pos. 3° (3600), Pos. 2° (3400, 3500, 3700, 4000, 5000), Pos. 2¼° (3800, 6000).

Camber - Pos. ½° to Pos. 1½°.

Toe-In - 1/8" to 7/32" (½ Ton), ¼" to 5/16" (Others).

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be 22.5° to 23.5°.

STEERING

Manual Saginaw Ball Bearing Worm & Nut (recirculating ball)
See "Saginaw Ball Bearing Worm & Nut" in Steering Section

Power Steering Bendix Linkage Type – *See "Chevrolet Truck (Bendix)" in Steering Section.*

Steering Linkage *See "Steering Linkage" in Steering Section*

Steering Wheel & Horn Button Removal *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

Steering Gear Removal *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

BRAKES

►*NOTE Two different type brakes used on trucks as indicated below*

Chevrolet-Bendix (Except Rear Wheels of 1½ & 2-Ton Models–Duo-servo single anchor hydraulic (without eccentric adjustment)
See "Chevrolet-Bendix Hydraulic" in Brake Section.

►*HALF-TON TRUCK BRAKE SHOE GRINDING CAUTION* If bench type grinder used, grind shoes to 057" to 087" smaller diameter than drum size If spindle type grinder used, grind shoe to drum diameter

Chevrolet-Twinplex (Rear Wheels 1½ & 2-Ton Models)– Two-cylinder four-anchor type hydraulic Shoes are self-centering and self-energizing
See "Chevrolet Twinplex" in Brake Section

Wheel Cylinders– Size stamped on housing under adjusting lock spring

Drums–Cast iron with steel web

Drum Diameter

Model	Front	Rear
½-Ton	11"	11"
¾-Ton	12"	12"
1-Ton	12	14"
1½ & 2-Ton	14"	15"

Lining–Molded type Riveted on 1½ & 2-Ton Models and bonded on all others

Thickness & Width

Model	Thickness	Width
½-Ton (Front Whl.)	202- 222"	2"
½-Ton (Rear Whl.)	202- 222"	1¾"
¾-Ton (Front & Rear)	264- 284"	2"
1-Ton (Front Whl.)	264- 284"	2"
1-Ton (Rear Whl.)	267- 287"	2½"
1½ & 2-Ton (Front Whl.)	267- 287"	2½"
1½ & 2-Ton (Rear Whl.)	392- 412"	4"

Clearance–Adjust for clearance as follows

All Models (Except 1½ & 2-Ton Rear Brakes)–Remove adjusting hole cover and turn brake adjusting screw until light drag is felt then back off adjusting screw 7 notches (Half-Ton Models) or just enough to eliminate brake drag (Other Models) but not more than 7 notches

Rear Wheels (1½ & 2-Ton Models)–Remove adjusting hole covers from flange plate and turn rear adjusting screw until slight drag is felt then back off 3 notches Repeat on front adjusting screw (2 adjustments on each wheel)

Parking Brakes: Hand lever applies rear wheel service brakes on Half-Ton & ¾-Ton Models and an independent brake on propeller shaft on all other models

Adjustment (½ & ¾-Ton Models)–*See "Chevrolet-Bendix Hydraulic" in Brake Section*

Adjustment (1, 1½, 2-Ton Models & ¾-Ton with 4-Speed Transmission)–*See "Chevrolet Twinplex" in Brake Section*

Master Cylinder: Located under floorboard on left hand side of truck

Checking Fluid–Maintain fluid level to lower edge of filler hole

Removal–Remove from below. *CAUTION*–On 1½ & 2 Ton Low Cab Forward, spacer between cylinder and body bracket will fall out when mounting bolts removed

Installation–Reverse removal procedure On LCF Models make sure the spacers are reinstalled

Power Brakes *See "Hydrovac Power Unit" in Brake Sect.*

Removal–Remove vacuum line, brake fluid line to wheel and master cylinders, and air cleaner hose from vacuum unit. Remove nuts and bolt securing unit to its bracket on right side rail of frame

MISC. MECHANICAL

Windshield Wipers Linkage type. Vacuum motor (Std. Equip.). Electric motor (Optl. Equip.).
See 'Windshield Wipers' in Miscellaneous Section.

►*JACKING & HOISTING CAUTION (ALL MODELS): Before jacking or hoisting, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section*

MODEL IDENTIFICATION

Model Designation

Series	Serial Prefix	Model
1100	A	Delray & ① Yeoman
1500	C	Biscayne & ① Brookwood
1700	E	Bel Air & ① Nomad
1171	G	Sedan Delivery

① - Station Wagons

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post. *NOTE* - Number (example below) includes identification data as indicated.

① ② ③ ④

A 58 F 100001

① - Serial Prefix. See Model Designation table above.
② - Year. 58 (1958).
③ - Assembly Plant Designation. See table below.
④ - Unit Number. Continuous for all cars except Corvette at each assembly plant starting with 100001.

Assembly Plant Designation

A - Atlanta	**K** - Kansas City	**S** - St. Louis
B - Baltimore	**L** - Los Angeles	**T** - Tarrytown
F - Flint	**N** - Norwood	**W** - Willow Run
J - Janesville	**O** - Oakland	

ENGINE NUMBER: Stamped on pad on right side of engine block directly above oil level dipstick (to rear of distributor). *NOTE* - Number (example below) includes identification data as indicated.

⑤ ⑥ ⑦

T 101 A

⑤ - Engine Plant - **F** - Flint, **T** - Tonawanda, **C** - Engines built in Canada.
⑥ - Code number indicating Month and Day of engine manufacture. This is not an individual or continuous number.
⑦ - Engine type. See table following.

Engine Type

NOTE - Following engines are all 6 Cyl. 235" displacement.

A - 3-Speed Synchro-Mesh Transmission
AE - Above engine with Heavy Duty Clutch.
AF - Taxicab with 3-Speed Transmission.
B - Powerglide Transmission.
BC - Taxicab with Powerglide Transmission.

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. minimum with all cylinders equal within 20 lbs at cranking speed.

VACUUM READING: 17-21" steady at idling speed.

VALVE TAPPET CLEARANCE: None in service (Hydraulic). For initial tappet clearance, *see "Valve System" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation. Should require 1/2 turn from unhooked to hooked position Replace distorted spring

IGNITION

FIRING ORDER: 1-5-3-6-2-4.
SPARK PLUG GAP: '.035".
Spark Plug - AC No. 44 (Std.) No. 45 or 46 (Hotter, for continuous City operation). No. C-43 COM (Colder, for continuous heavy duty service). 14 mm. Tighten to 20-25 ft lbs.
COIL: Delco-Remy 1115087.
Ignition Current - 1.8 Amps. idling, 4 Amps. stopped.
Resistor - Delco-Remy 1931614. 1.40-1.62 ohms.
►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by a lead from starter solenoid-to-coil.*
DISTRIBUTOR: Delco-Remy 1112403.
Condenser - Delco-Remy 1928111. **Capacity** - .18-.23 mfd.
Contact Point Set - Delco-Remy 1924571.
Breaker Gap - .019" (New points), .016" (Used points).
Cam Angle - 28-35° with .016" gap.
►*BREAKER GAP CAUTION: Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*
Breaker Arm Spring Tension - 19-23 ozs.
Rotation - Clockwise viewed from above.

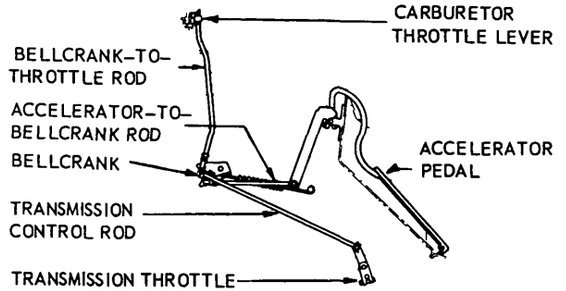
Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center "0" position.
Vacuum Spark Control: Delco-Remy 1116076

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4-6
7.5	15	7.5-10



IGNITION TIMING

Setting - At TDC. Set timing at idle speed with vacuum line disconnected.
Timing Mark - Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on "0".

CARBURETOR

►*CARBURETOR APPLICATION: Rochester BC No. 7012127 (Std.), No. 7011102 (Powerglide).*

THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE CARS): **1)** Disconnect control rod from throttle lever at transmission cover. Remove lower bolt at rear of transmission side cover. Rotate throttle valve control outer lever counter-clockwise to open throttle position.
2) Hold lever in this position and with throttle valve outer lever Gauge **J-5906** set at 7.09", measure disance from left side cover lower rear bolt to hole in throttle lever. If pins of gauge will enter holes, adjustment is correct. If necessary to adjust, loosen lever to clamp attaching screw and adjust lever on throttle shaft as necessary. Reconnect throttle rod.
3) Disconnect bellcrank-to-transmission throttle lever rod at throttle valve lever. Disconnect accelerator-to-bellcrank rod at bellcrank.
4) Force bellcrank-to-transmission throttle lever rod forward against its stop in transmission (open throttle position) and adjust bellcrank-to-carburetor throttle rod for free entry of swivel pin in throttle valve lever, with carburetor throttle valve in wide open position.
5) With carburetor throttle valve held in wide open position and accelerator fully depressed, adjust accelerator-to-bell crank rod for free entry of swivel pin into hole in bellcrank.

CHEVROLET 6 CYL. POWERGLIDE THROTTLE LINKAGE

ROCHESTER BC

Idle Setting - 1½ turns open. 2½ turns open after engine temperature normal.
Idle Speed (Synchro-Mesh) - 475 RPM.
Idle Speed (Powerglide) - 450 RPM with selector lever in "D" (Drive) range.
Float Level - 1 9/32" (Gauge M-250). With air horn inverted and gasket in place, position Gauge M-250 over the floats with the tang inserted in the discharge nozzle. Bend float arms as necessary so that top of each float just touches the gauge and the float is centered between the gauge legs.
Float Drop - Bend float tang as necessary to obtain a distance of 1¾" from the gasket surface to bottom of the float, with the air horn upright and the float hanging free.
Choke Adjustment: One notch lean (Synchro-Mesh), Centered on Index (Powerglide Cars).
Fast Idle: With fast idle adjusting screw on second step and against high step of fast idle cam, Gauge BT-99 (.076") should just slide between lower edge of choke valve and carburetor bore. To adjust bend connector rod.
►*OTHER DATA: See "Rochester BC" Carburetors in Carburetion Section*
FUEL PUMP PRESSURE: 3½-4½ lbs.

CARB. EQUIPMENT

Fuel Pump· AC. Diaphragm type
Replacement Fuel Pump - AC No. 4433 (Fuel & Vacuum).
Pressure - 3½-4½ lbs. at idle speed.
See "Fuel Pumps" in Carburetion Section.
Gasoline Gauge: AC Electric type.
Dash Unit - AC No 1518938 (All).
Tank Unit - See table below.

Model	AC No.
Pass. Car	①1518903 or ②5640058
Sta. Wgn. (6 Pass.)	1518775
Sta. Wgn. (9 Pass.)	①1518935 or ②5640059

① - 5/16" tube. ② - 3/8" tube.
See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco 2SMR53W. *12 Volt* 9 plate, 53 ampere hour capacity (20 hr rate)
Battery Ground - Negative
Engine Ground - Engine to cowl at rear head bolt

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

STARTER

D lc -R my 1107652. Armatur - 1932185.
Driv - Overrunning clutch (solenoid pinion shift).
R tati n - Counterclockwise at commutator end.
Brush Spring T nsi n - 35 ozs. minimum.

P rf rmance Data

Torque	RPM	Volts	①Amperes
0 ft. lbs.	6200-9400	10.6	49-76
....	..... Lock	4.25	270-310

①- Includes solenoid.

Starting Switch: Delco-Remy Solenoid Switch 1119781 mounted on starter and controlled by Ignition & Starter Switch 1116544.

S "D lco-R my Starter Solenoid (Without Relay)" in Electrical S ction.

N utral Saf ty & Back-up Light Switch: Delco-Remy 1998677 (Powerglide cars only).

Adjustm nt - *See "Ch vrolet Powerglide" in Transmission S ction*

GENERATOR

D lc -R my. Used as follows:

Applicati n	Generator	Armature
Standard	1102096	1923535
Power Strg.	1102115	1940313
Spec. Equip.	1102114	1940737
Spec. Equip.	1106985	1927074

P rf rmance Data

Generator	Amperes	Volts	RPM
1102096	30	14.0	2240
1102114, 5	35	14.0	2510
1106985	45	13.0	1400

R tati n - Counter-clockwise at commutator end.
Brush Spring T nsi n - 28 ozs. (Exc. 1106985), 20 ozs. (1106985).
Fi ld Curr nt - 1.69-1.79 Amps. (Exc. 1106985), 2.14 - 2.28 Amps. (1106985). All at 12.0 volts.
B lt Adjustm nt: 5/16" deflection midway between generator and fan pulleys.

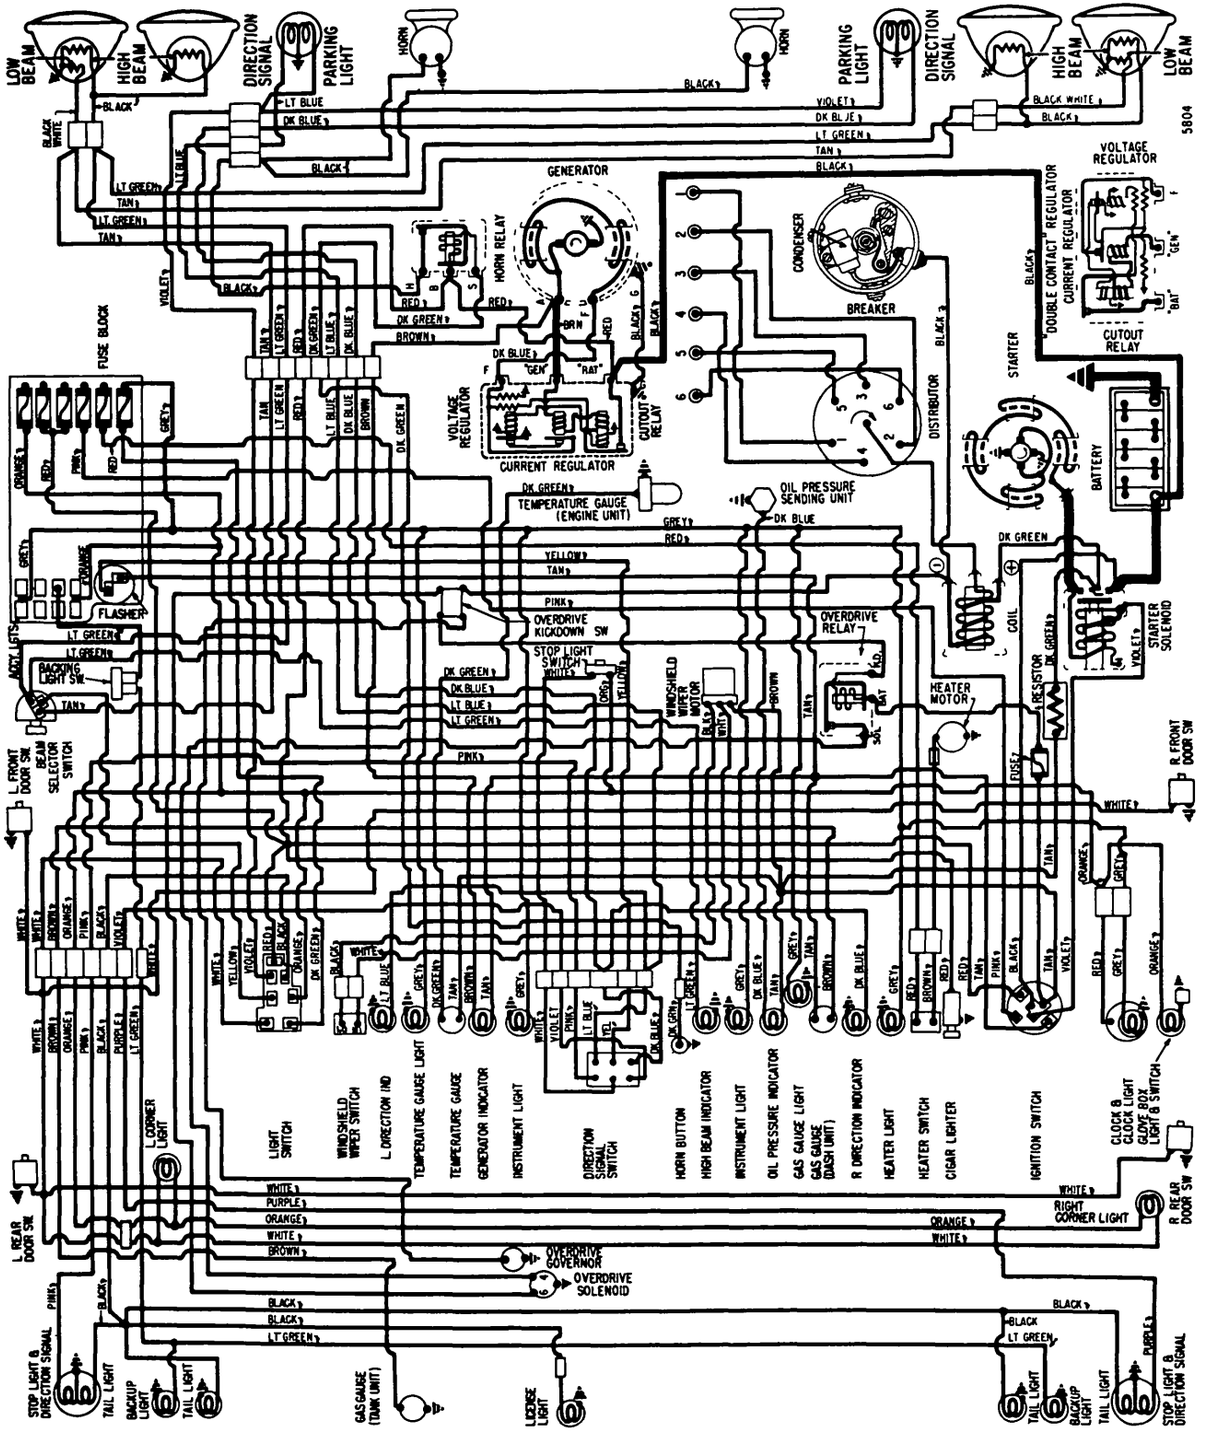
REGULATOR

D lc -R my. Used as follows:

R gulat r N .	Generator No.
1119001	1102096
1119002	1102114,5
1119603	1106985

►*DOUBLE CONTACT REGULATOR NOTE: Regulator 1119603 has double contacts for voltage regulation.*

►*NOTE - Specifications b low are for "Normal" settings.*



Cut ut Relay

Cuts In - 11 8-13 5 volts (1119001,2) 11 8-13.0 volts (1119603).
C ntact Gap - .020". **Air Gap** - .020".

V ltag Regulator

Setting - (1119001,2) 13.8 - 14.8 volts at 125° F.
S tting - (1119603) 13.8-14.6 volts (Upper contacts), .1-.3 volts lower (Lower contacts) at 125° F.
C ntact Gap -- (1119603) .016" (Upper contacts) with lower contacts just touching.
Air Gap - .075" (Exc. 1119603), .067" (1119603) with armature pressed down to point where contacts just touch.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

Current Regulator

Setting (1119001) - 27-33 amperes.
Setting (1119002) - 32-37 amperes.
Setting (1119603) - 43-47 amperes.
Air Gap - .075". With armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Dual Headlights (4-Headlight System). *See "4-Headlight System" in Electrical Section.*
Directional Signals: *See Electrical Section.*
Autronic Eye: *See Electrical Section.*
Lighting Switch Removal: Pull handle out to "ON" position. Depress switch shaft retainer (under dash) and remove knob and shaft assembly. Remove retaining ferrule and escutcheon, then remove switch assembly. Disconnect multi-plug connector. *NOTE* - Use screwdriver inserted in side of switch to pry plug from switch.
Stop Light Switch Location: Mechanical type mounted under dash in contact with brake pedal.
Adjustment - Adjust position of switch so that stop light comes on when brake pedal is depressed 5/8" from fully released position.
CIRCUIT BREAKER (Lighting): One 15 ampere circuit breaker located on main light switch protects all head and parking lamps.
FUSES: All fuses contained in accessory fuse panel behind instrument panel on left side of steering column.
10 Ampere - Protects Tail lamps.
15 Ampere - Protects Spot lamp and Antenna.
10 Ampere - Protects Back-up and Brake Alarm lights.
7.5 Ampere - Protects Radio Circuits.
20 Ampere - Protects Heater & Air Conditioning.
3 Ampere - Protects Instrument Lamps.
Horn Relay: Delco-Remy 116920.
Contact Close - 5.0-9.5 volts.
Contact Gap - .027".

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care in disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own 6-Cyl., valve-in-head.

Bore	Stroke	Displacement
3 9/16"	3 15/16"	235.5 cu. ins.
Compression Ratio	**Rated HP**	**Developed HP**
8.25-1	30.4	145 at 4200 RPM

Compression & Vacuum Reading - *See TUNE-UP*
ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*
OIL PAN REMOVAL: Remove hood, then remove battery-to-engine ground cable and generator lead wires. Remove radiator and disconnect oil cooler lines. Remove fan and pulley assembly, then remove rocker arm cover and install lifting Tool J-4536. Attach a chain fall and lift engine to remove load from front mounts, then remove center bolts from each mount. Disconnect exhaust pipe from manifold. On synchro-mesh cars, disconnect clutch idler shaft bracket from engine. Remove overdrive solenoid (if so equipped). Remove flywheel underpan extension and disconnect shifter rods at transmission. On automatic transmission cars, disconnect oil cooler lines and transmission control linkage at transmission. On all models, disconnect propeller shaft at rear axle, then remove center mount support bolts and slide to rear until free of transmission. Drain transmission and remove transmission crossmember and mounting block. Disconnect speedometer cable at transmission. Drain crankcase and remove oil pan bolts, then raise engine far enough so oil pan clears crossmember and pan can be removed through front of engine compartment. *NOTE* - Rotate crankshaft so oil pan clears counterweights.
CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Chevrolet Special Data.*
ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data.*
TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data.*

PISTONS

Aluminum alloy, cam ground, tin plated, with pin offset 5/64".
Removal - Pistons and rods removed from above.
Clearance - .0005-.0011", measured 1.29" from top of piston. Selective fit.
Replacement Pistons: Furnished Std. & .001", .020", .030", .040" Oversize. *STANDARD AND .001" PISTON NOTE* - Two sizes pistons furnished for Standard and .001" Oversize as follows:
235" Engine - Std. - Marked **S4** (3.5625-3.5630"), **S5** (3.5630-3.5635"), **.001" Oversize** - Marked **S6** (3.5635-3.5640"), **S7** (3.5640-3.5645").
261" Engine - Std. - Marked **S4** (3.7500-3.7505"), **S5** (3.7505-3.7510"), **.001" Oversize** - Marked **S6** (3.7510-3.7515"), **S7** (3.7515-3.7520").
Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.
Installing Pistons: Install piston with notch in piston and mark "Front" toward front of engine.

PISTON PINS

Locked in rod. No bushing used in piston.
Diameter - 235" Eng. - .8660-.8665". **261" Eng.** - .9270-.9275".
Pin Fit in Piston - .00015-.00025" clearance. With both piston and pin at 70°F., and light film of oil on pin, pin should hold own weight in either piston pin boss. It should be possible to install pin in piston with thumb pressure.
Replacement Pins: Furnished Std. & .0015", .003", .005" and .010" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.(1&2)	.0930-.0935"	①	②
Oil(3)	.181-.188"	③ .015-.055"	.000-.008"

①- (235" Eng.) .007-.020". (261" Eng.) .010-.020"
②- (235" Eng.) .002-.004". (261" Eng.) .002-.0035".
③- On Rails.

Replacement Rings: Furnished Std., .020", .030" and .040" Oversize.
►*RING INSTALLATION CAUTION:* Install Compression rings with side marked "GM" up.

CONNECTING RODS

Length - 6.81" Center-to-center.
Crankpin Journal Diameter - 2.311-2.312".
Lower Bearing - Replaceable precision type.
Clearance - .001-.003" (New), .001-.004" (Used).
Sideplay - .005-.012".
Replacement Bearings: Std. & .001", .002", .010", .020" Undersize.
Installing Rods: Install rods with piston pin clamp and number on rod lower end toward camshaft.

CRANKSHAFT

Journal Diameters - **(1)** 2.6835-2.6845", **(2)** 2.7145-2.7155", **(3)** 2.7455-2.7465", **(4)** 2.7765-2.7775".
Clearance - .001-.003" (New), .001-.004" (235" Eng. Used), .001-.0045" (261" Eng. - Used).
Bearings - Thin wall babbitt with steel back.
Bearing Adjustment: Precision type. Replace bearings.
End Thrust - Taken by No. 3 (rear intermediate) main bearing.
End Play - .003-.009".
Replacement Bearings: Furnished Std. & .002", .010", .020", .030" Undersize.
Bearing Installation: Can be replaced without removing engine.
See "Crankshaft & Main Bearings" in Chevrolet Special Data.
Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data.*
Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data.*

CAMSHAFT

Journal Diameters - **(1)** 2.1537-2.1547", **(2)** 2.0912-2.0922", **(3)** 2.0287-2.0297", **(4)** 1.9662-1.9672".
►*NOTE:* Journal out-of-round limits .001". Run-out limits .002".
Bearing Type - Steel backed babbitt lined bushings, precision type. Reaming not required.
Clearance - .0015-.0035".
End Thrust: Controlled by spacer and thrust plate behind camshaft sprocket.
End Play - .001-.005".
Timing Gear: Fibre camshaft gear, steel crankshaft gear.
Back Lash - .003-.005".
Replacement Timing Gears & Installation: *See "Timing Gears" in Chevrolet Special Data.*
Camshaft Setting: Timing is correct when timing marks on gears are together.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Camshaft Removal & Replacement: *See "Camshaft & Bearings" in Chevrolet Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data*

VALVES

Tappet Clearance: (Pass. Cars) - None in service (hydraulic).

Initial Tappet Clearance (Engs. with Hydraulic Lifters): *See "Valve System" in Chevrolet Special Data.*

(Trucks) - 235" Eng. - .006" Intake, .018" Exhaust, Hot, 261" Eng. - .006" Intake, .020" Exhaust, Hot. *See "Valve System" in Chevrolet Special Data.*

Valve	Head Diam.	Stem Diam.	Length
Intake	1 7/8"	.3410-.3417"	6.364-6.394"
Exhaust	1 1/2"	.3410-.3417"	①

Valve	②Seat Angle	Lift	Stem Clearance
Intake	30°	.4004"	.001-.0027"
Exhaust	45°	.4004"	.001-.0027"

① - 235" Eng., 4.905-4.930"; 261" Eng., 4.902-4.932".

② - Face Angle 29° Intake, 44° Exhaust.

►*VALVE GRINDING CAUTION:* Replacement valves are furnished with face angles of 30° and 45°. When seats are ground to recommendations of 30° and 45°, valves must be faced to recommended angle of 29° (Intake) and 44° (Exhaust).

Valve Seat Width - 3/64-1/16" (Intake), 1/16-3/32" (Exhaust).

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: *Precision type, pressed in head.*

Valve Guide Installation - *See "Valve System" in Chevrolet Special Data.*

Valve Springs: *Install springs with closed coil end down.*

Spring Specifications

Valve (All)	Pressure	Length
Closed	74-82 lbs.	1.858"
Open	196-208 lbs.	1.462"

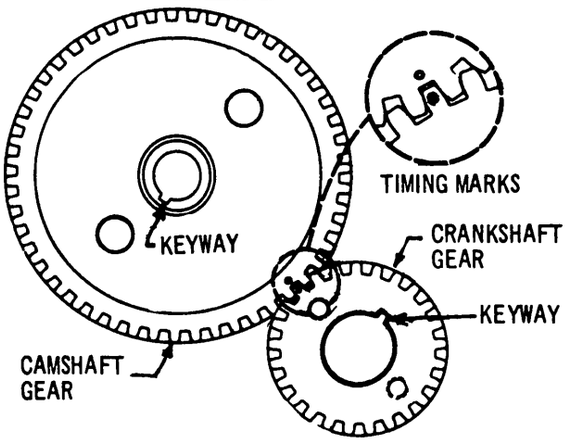
Free Length - **(235)** - 2 5/32" (Conv.), 2 15/64" (Auto. Trans.); **(261)** - 2 9/32".

►*VALVE SPRING HEIGHT CAUTION:* Check installed height of valve springs. If distance from spring seat in head to top of valve spring exceeds 1 55/64", install shim approximately 1/16" thick. At no time should shim spring be installed to obtain installed height of less than 1 51/64".

Valve Lifters (Pass. Cars): Hydraulic type. See *"Valve System" in Chevrolet Special Data.*

Valve Lifters (Trucks): Mechanical type. Removed from above.

Rocker Arm Assembly: *See "Valve System" in Chevrolet Special Data.*



VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

►*VALVE TIMING NOTE:* Specifications are for valve timing with Zero valve lash. *See Valve Timing Check below.*

Intake Valves - Open 10°30' BTDC. Close 53°30' ALDC

Exhaust - Open 49° BLDC. Close 15° ATDC.

CHEVROLET 6 CYL. VALVE TIMING MARKS

Valve Timing Check - *CAUTION:* It will be necessary to replace the hydraulic valve lifter and pushrod operating No. 1 exhaust valve, with a conventional lifter and pushrod). Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer on right face of flywheel housing. Mount dial indicator on rocker arm shaft with stem of indicator contacting No. 1 exhaust valve adjusting screw and set dial indicator to .063". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .005". A greater or lesser reading indicates either excessive gear wear or improperly installed timing gears. Reset tappet clearance to specifications.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: 5 qts. (refill), 5½ qts. (dry).

Normal Oil Pressure: 35 lbs. at 2000 RPM.

Pressure Regulator Valve - In oil pump body. Not adjustable.

Oil Pressure Indicator - Light located at right side of instrument cluster, controlled by pressure switch, Delco-Remy 1998149 or AC No. 1508425, located in main oil gallery on left side of engine. Switch closes when pressure drops to 4-7 lbs.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul—*See "Oiling System" in Chevrolet Special Data.*

Oil Filter Element: AC P-115.

►*ROCKER ARM OIL LEAD NOTE:* A drilled passage from lifter gallery eliminates the need for pipe lead used on former models. This change was made in late production 1957 engines.

Crankcase Ventilation (Standard): Air intake through breather filter in valve rocker arm cover and outlet through crankcase breather pipe on right side of engine.

Servicing - Clean breather filter in a good solvent every 2,000 miles, then oil mesh with light engine oil.

Crankcase Ventilation (Optional): Positive Type. Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**

Servicing – Every 10,000 miles (or oftener if required) clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly.

►*VACUUM VALVE CAUTION:* If improper action of spring is suspected due to spring being distorted, or etched from corrosive action, the valve assembly should be replaced.

COOLING

►*RADIATOR REMOVAL CAUTION (POWERGLIDE CARS): Transmission oil cooler is part of radiator lower tank, and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.*

Water Capacity: 16½ qts. (17½ qts. with heater).

Pressure Valve: AC No. 850800. Radiator filler cap, 13 lb. type. Replacement Valve - AC No. RC-6.

Thermostat: Pellet type. In cylinder head water outlet. **Standard** - No. 3136185 (180°F), **Optional** - No. 3138868 (170°F) or No. 3136184 (160°F), for use with Methanol (alcohol) anti-freeze.

Temperature Gauge: AC electric.

Dash Unit - AC No. 1513485.

Engine Unit - AC No. 1513321.

See "Temperature Gauges" in Miscellaneous Section.

Water Pump: Packless type with sealed ball-bearing shaft. *See "Water Pumps" in Chevrolet Special Data.*

CLUTCH

Own. Diaphragm Spring type. 9½" (Std.), 11" (H. D.). *See "Chevrolet (Own)" in Clutch Section.*

Clutch Disc - (Std. 9½") Chevrolet No. 3737944 (Woven - Hub marked White), No. 3737942 (Molded - Hub not paint marked); (Heavy Duty 11") Chevrolet No. 38-36906 (Woven - Hub marked Pink).

Pedal Adjustment: Pedal free play ¾-1". Remove cotter pin, washer and spring, then turn swivel to secure correct free play. *NOTE* - Check by holding fork pushrod to rear (to remove lash). Conical point on swivel should line up with dimple in clutch lever and shaft assembly. Reinstall spring, washer and cotter pin.

Over-Center Spring Adjustment: Loosen adjusting hook nut at back of pedal bracket and turn jam nut to obtain an installed length of 10 5/16" for over-center spring. Tighten nut to 8-12 ft. lbs.

Removal: Remove transmission (see Transmission Removal below). Remove throwout bearing from fork. Remove clutch fork tension spring from fork, disconnect clutch fork pushrod. Remove clutch fork by forcing it forward and toward center of vehicle. Install Clutch Pilot Tool J-5824, to support clutch assembly during removal. Loosen clutch attaching bolts one turn at a time until diaphragm spring is released. Remove Pilot

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Tool, then remove clutch assembly from car. *CAUTION* - When installing clutch, align "X" mark on clutch cover with "X" mark on flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.

See "Chevrolet 3-Speed" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: 1) Drain transmission and disconnect speedometer cable and shift rods. Remove propeller shaft center bearing support bolts. Separate rear universal joint and pull propeller shaft assembly to rear under axle housing.

2) Support rear of engine, remove transmission rear support noting number of shims

3) Remove two top transmission to clutch housing screws, install guide pins (J-1126), then remove two lower capscrews. Slide transmission back on guide pins to clear clutch disc splines.

OVERDRIVE

Warner R10. Solenoid operated type with governor control and throttle operated kickdown

See "Chevrolet Overdrive" in Transmission Section.

Overdrive Control: *See "Warner R10 & R11 Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh transmission (above) after disconnecting control cable and wiring

POWERGLIDE TRANSMISSION

Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS See "Chevrolet Powerglide" in Trans. Section.*

►*TESTING & TROUBLE SHOOTING See "Chevrolet Powerglide" in Transmission Section.*

Lubrication - Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick.

►*DRAIN & REFILL NOTE.* Periodic drain and refill is no longer recommended. Replace transmission fluid only when transmission removed for repairs.

Capacity - 3½ qts. (refill), 10½ qts. (after overhaul)

Checking Fluid Level - Engine must be idling with transmission warm, selector lever in N range and parking brake applied Check fluid level on dipstick located in filler tube on right side of engine opposite starter Fluid level should be at full mark on dipstick *NOTE - DO NOT OVERFILL*

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER POWERGLIDE SERVICE DATA. See "Chevrolet Powerglide" in Transmission Section*

UNIVERSALS

Own. Yoke & Spider (trunnion) type.

►*CAUTION* - Rear universal companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever companion flange nut loosened. *See "Chevrolet Pass Car (Hotchkiss Drive)" in Rear Axle Section*

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Chevrolet Special Data.*

REAR AXLE

Own. Semi-floating, hypoid gear type with Hotchkiss Drive. *NOTE* - "POSITRACTION" Limited Slip Differential Optl.

See "Chevrolet Pass Car (Hotchkiss Drive)" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section

►*PINION BEARING PRELOAD CAUTION:* Rear universal joint companion flange nut controls rear axle pinion bearing preload Bearing preload must be adjusted whenever companion flange nut is loosened

Ratios - 3 55-1 (Std), 4 11-1 (Overdrive), 3 36-1 (Powerglide).

Backlash - .003- 010" (.005-.008" preferred)

Carrier Removal: Remove rear wheels, brake drum and gasket. Remove bearing retainer bolts (on inside of axle flange) and use Tool J-5748 to remove axle shaft and bearing assembly so that axle clears differential side gears. Separate rear universal joint, lower propeller shaft, then drain rear axle lubricant. Remove differential carrier nuts and lift out carrier assembly.

Axle Shaft Removal: Raise car and place jack stands under axle housing Remove tire, wheel and brake drum assembly Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange) Attach axle Puller J-5748,with slide hammer, to flange and remove axle shaft and bearing assembly Be careful not to disturb backing plate *NOTE*–If bearing retainer and parking brake strut interfere, raise strut slightly with screw driver to obtain clearance

SHOCK ABSORBERS

Delco. Direct acting non-adjustable.

Replacement Shock Absorbers

Model	Front	Rear
Pass. (Std.)	5543712	5543707
Pass. (AC or AT)	5543709	5543707
Pass. (Air Susp.)	5543711	5543708
Taxi	5543709	5543702

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs and spherical type joints connecting control arms and steering knuckles.

See "Chevrolet (Spherical Joint)" in Suspension and Wheel Alignment Section.

Steering Axis Inclination - 7¼° ±½°.

Caster - (Std.) 0° ±½°. (Air Susp.) 1½° ±½°.

Camber - (Std. & Air Susp.) Pos. ½° ±½°.

Toe-In - (Std.) 1/8" to 1/4". (Air Susp.) 0" to 1/8".

Toe-Out on Turns - Inner wheel 20°, outer wheel should be 18½°.

REAR SUSPENSION

Rear Suspension: *See "Chevrolet Rear Suspension" in Suspension & Wheel Alignment Section.*

AIR SUSPENSION

Air springs replace coil springs on all four wheels and shock absorbers mounted to rear of air springs *See "Front Suspension" above for alignment Specifications and "Chevrolet Air-Suspension" in Suspension & Wheel Alignment Section.*

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut

See "Saginaw Ball Bearing Worm & Nut" in Steering Section

Power Steering: Own (Linkage Type). *See "Chevrolet Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic, without anchor pin adjustment Hand lever applies rear wheel service brakes

See "Chevrolet-Bendix Hydraulic" in Brake Section

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION* To compensate for lack of brake anchor adjustment, brake shoes are ground to a 057- 087" smaller diameter than the drum diameter Grinding shoes to the true drum diameter on bench grinders will cause heel and toe contact, resulting in erratic brake action *NOTE–If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter*

Drums–Diameter 11

Wheel Cylinder Diameter–Front 1 1/8 , Rear 1

	Brake Lining Width	Thickness
Front Whl	2	.187- 194
Rear Whl	1 3/4	187- 194"

Length Per Shoe–9 3125 (Primary), 11 6875 (Second-

Braking Power–55 9% (front wheels), 44 1% (rear

Clearance–Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag

Standard Master Cylinder: Located on engine side of firewall in line with brake pedal

Checking Fluid–Reservoir is integral with master cylinder. Maintain level in cylinder to lower edge of filler hole

Removal - Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove cotter and clevis pins from brake pedal arm, then remove four retaining nuts and lockwashers and remove cylinder from firewall.

Power Brakes: Bendix or Moraine Power Unit replaces standard master cylinder.

See "Bendix Power Unit" or "Moraine Power Unit" in Brake Section.

Removal: Remove vacuum hoses from power unit, hydraulic line from master cylinder. Disengage pushrod from pushrod lever and remove four attaching bolts and lift out unit. Note position of odd bolt and washer during removal.

MISC. MECHANICAL

►*SEE CHEVROLET V8 PAGES (FOLLOWING) FOR ALL MISC MECHANICAL DATA*

►*JACKING & HOISTING CAUTION (ALL MODELS): Before jacking or hoisting, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

Series	Model Designation Serial Prefix	Model
1200	B	Delray & ① Yeoman
1600	D	Biscayne & ① Brookwood
1800	F	Bel Air & ① Nomad
800	J	Corvette
1271	H	Sedan Delivery

① - Station Wagons

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post. *NOTE* - Number (example below) includes identification data as indicated.

① ② ③ ④

B 58 F 100001

① - Serial Prefix. See Model Designation table above.
② - Year. 58 (1958).
③ - Assembly Plant Designation. See table below.
④ - Unit Number. Continuous for all cars except Corvette at each assembly plant starting with 100001. Corvette continuous starting with 10000‡.

Assembly Plant Designation

A - Atlanta	K - Kansas City	S - St. Louis
B - Baltimore	L - Los Angeles	T - Tarrytown
F - Flint	N - Norwood	W - Willow Run
J - Janesville	O - Oakland	

ENGINE NUMBER: Stamped on pad at front, right hand side of cylinder block. *NOTE* - Number (example below) includes identification data as indicated.

⑤ ⑥ ⑦

T 101 C

⑤ - Engine Plant - F - Flint, T - Tonawanda, C - Engines built in Canada.
⑥ - Code number indicating Month and Day of engine manufacture. This is not an individual or continuous number.
⑦ - Engine type. See table following.

Engine Type

C - 283" Engine & 3-Spd. Trans. (CB,CD,CF,CG,CH indicate Carburetion & Equipment options).
CQ,CR,CS,CT - 283" Corvette Engine & 3-Spd. Trans. (with Carburetion & Equipment options).
D - 283" Engine & Powerglide (DB,DE,DF indicate Carburetion & Equipment options).
DG,DH,DJ - 283" Corvette Engine & Powerglide (with Carburetion & Equipment options).
E - 283" Engine & Turboglide (EB,EC,ED indicate Carburetion & Equipment options).
F - 348" Engine & 3-Spd. Trans. (FA indicates Carburetor option).
G - 348" Engine & Powerglide.
H - 348" Engine & Turboglide (HA indicates Carburetor option).

TUNE-UP

COMPRESSION PRESSURE: 283" (Exc. Corv. with Solid Lifters) 150 lbs. Min. (Dual Carb.), 160 lbs. Min. (4-Bbl. Carb.).
(Corv. with Solid Lifters) 140 lbs. Min. with 20 lbs variation limit between cylinders.
348" (All) 160 lbs. Min. with 20 lbs. variation limit between cylinders.
VACUUM READING: 17-21" (Dual Carb.), 16-20" (4-Bbl. Carb.).
VALVE TAPPET CLEARANCE: (Solid Lifters) .012" (Intake), .018" (Exhaust) Hot.
(Hydraulic Lifters) None in service. For initial tappet *adjustment, see "Valve System" in Chevrolet Special Data.*
MANIFOLD HEAT CONTROL: (Single Exhaust) - Single exhaust pipe with cross over pipe from right exhaust manifold. Heat control valve with thermostatic coil spring located between right exhaust manifold and exhaust pipe. Make sure valve shaft is free to turn. If sticking, free up with kerosene or alcohol containing a small amount of baking soda.
Dual Exhaust - Coil spring and counterweight (same as for single exhaust).
►*DUAL EXHAUST NOTE: With valve closed, most exhaust gases are discharged through left exhaust pipe.*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders - RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.
SPARK PLUG GAP: .035".
Spark Plugs - AC No. 44 (Std.), No. 45 or 46 (Hotter for continuous City operation), No. C-43 COM (Colder for continuous heavy duty service), 14 mm. Tighten to 20-25 ft. lbs.
COIL: Delco-Remy 1115087 (283" Exc. Corvette & 348"). 1115091 (Corvette & 348" With Triple Carburetors).
Ignition Current - 1.8 Amps. idling, 4 Amps. stopped.
Resistor - Delco-Remy 1931614 (Exc. Corvette), 1931385 (Corvette). 1.4-1.62 ohms.
►*COIL RESISTOR NOTE: Resistor connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by a lead from starter solenoid-to-coil.*
DISTRIBUTOR: Delco-Remy.

Application	Delco-Remy Distr. Nos.
V8 283" (2-Bbl. Carb.)	1110920
V8 283" (4-Bbl. Carb.)	1110890
V8 283" (Two 4-Bbl.)	1110891
V8 283" (Fuel Inj., Std. Cam)	1110915
V8 283" (Fuel Inj. & Sp. Cam)	1110914
V8 348"	1110907, 1110927, 1110930

►*DISTRIBUTOR NOTE: Different types used as follows:*
Models 1110890, 907, 915, 920, 927, 930 - External adjustment "Window" type. *See "Delco-Remy Window Distributors" in Electrical Section.*
Models 1110891, 914 - Double breaker with conventional distributor cap (not window type). Vacuum spark control not used (centrifugal weight advance only)
Condenser - Delco-Remy 1932004 (Except 1110891, 914), 1869704 (1110891,914) **Capacity** - .18-.23 mfd.
Contact Point Set - Delco-Remy 1931988 (Except No. 1110891, 914), 1918148 (1110891, 914 - two used).
Breaker Gap (Except 1110891, 914) - *NOTE* - When cam angle properly adjusted (see below), breaker gap will be correct (.016").
Breaker Gap (1110891, 914) - .014-.018" (new points).
Cam Angle (Except 1110891, 914) - 28-32°. Set to 30°.
Cam Angle (1110891, 914) - Adjust each set of points to 29°±1° with other set blocked open with .025" thick insulator. Cam angle for both sets of points operating together should be 34°±1°.
Breaker Arm Spring Tension - 19-23 ozs.
Rotation - Clockwise viewed from above.

Automatic Advance - 1110890, 91

IGNITION TIMING

►*IGNITION TIMING CAUTION:* On late 1958 V8 cars, vacuum spark control line is connected directly to intake manifold so that vacuum advance is operative during engine closed-throttle idling. On these cars, **vacuum line must be disconnected when ignition timing is being set.** Connect vacuum line after ignition timing completed.

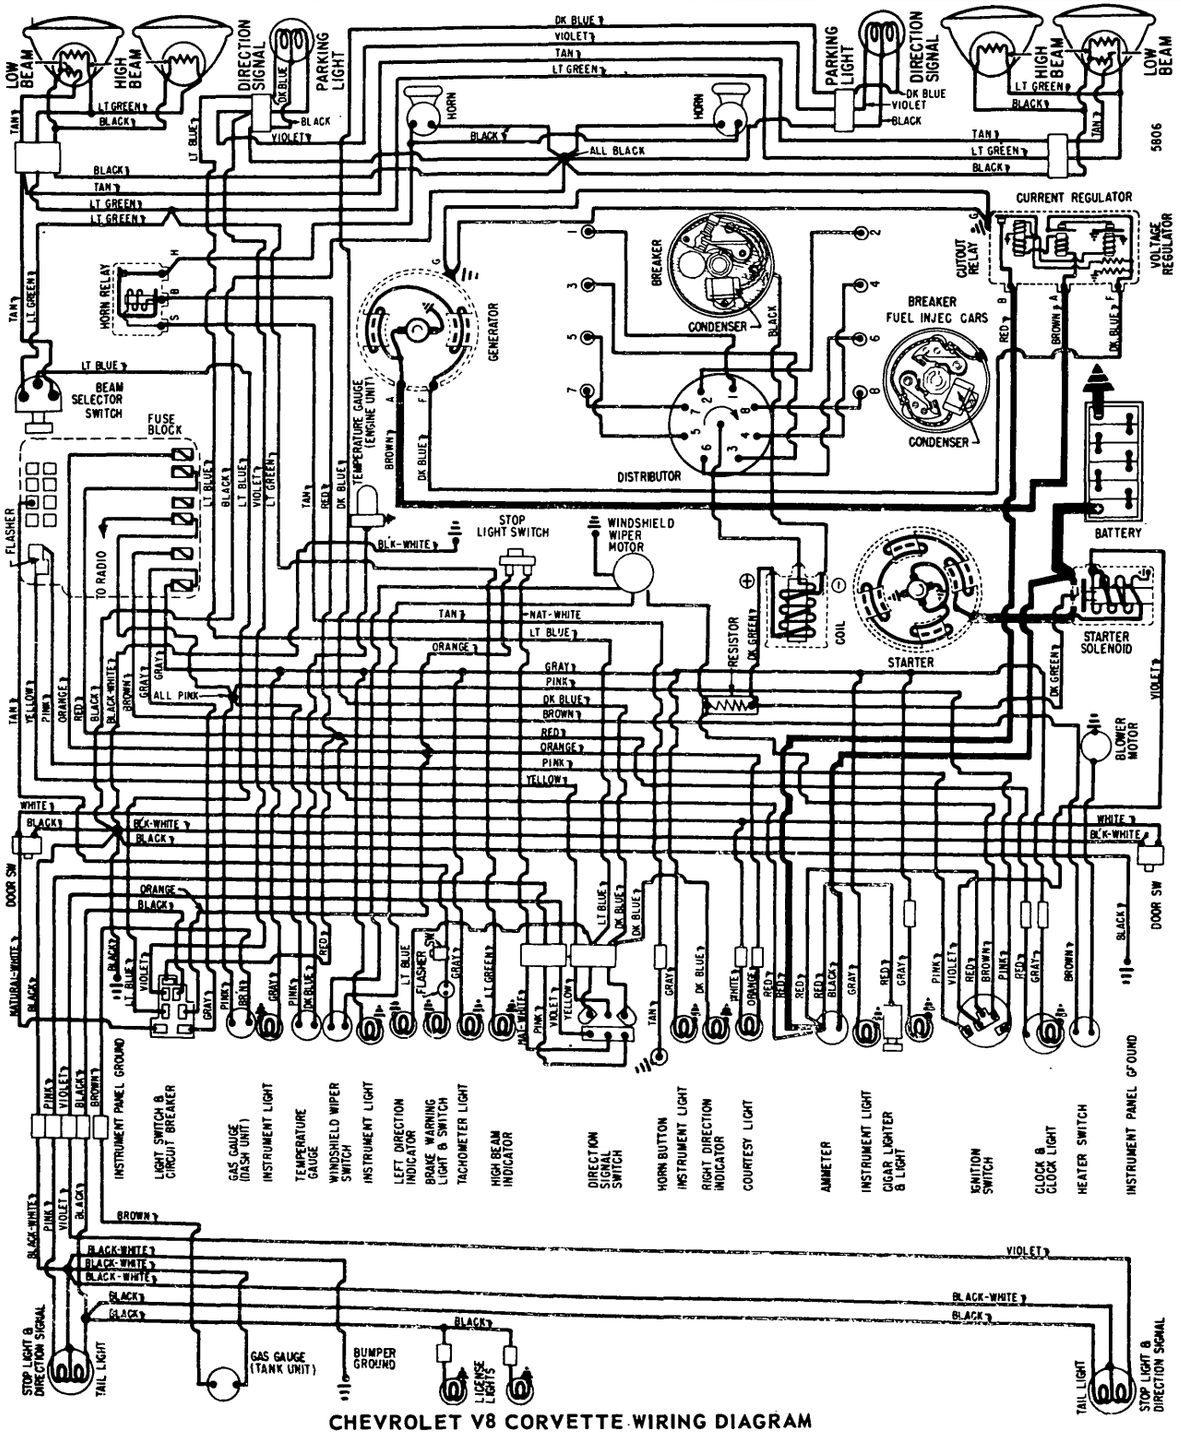
283" All Optl.	Rochester Ramjet Fuel Injection
348" Pass. Std.	4-Bbl. Rochester 4GC or Carter WCFB
348" Pass. Optl.	Three Rochester 2G & 2GC

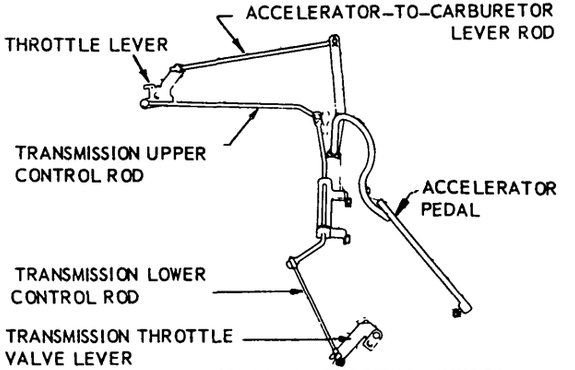


FAST IDLE CONTROL CAUTION (AIR CONDITIONED CARS): Fast idle control is set to provide 900 RPM engine speed when Fast Idle Control Knob is pulled out. Make sure knob is pushed in when making normal fast idle adjustments and that fast idle control linkage does not interfere with normal operation of carburetor linkage when fast idle is not in operation.

THROTTLE LINKAGE ADJUSTMENT: Powerglide Cars - Remove lower control rod and loosen transmission throttle lever clamp screw. Insert Tool J-5906 between transmission left hand side cover lower front bolt and hole in lever. Distance should be 3.60", as indicated on gauge, from centerline of bolt to hole centerline. With gauge in place and holding lever clamp in full detent position (rotated counterclockwise), tighten lever to clamp and remove gauge. Install lower control rod. Disconnect upper control rod from throttle lever on carburetor and open throttle. Adjust upper control rod length for free entry into throttle lever. Check adjustment by releasing linkage to its idle position then hold carburetor throttle lever in wide open position and press downward on transmission outer throttle lever and check for deflection. Readjust upper throttle rod if rod deflects. Place ½" (Pass. Car), .85" (Corvette), wood block under accelerator pedal rod depress accelerator

CONTINUED ON NEXT PAGE

CHEVROLET V8 (EXCEPT CORVETTE) WIRING DIAGRAM



CHEVROLET V8 CORVETTE WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

against block and adjust swivel on accelerator-to-carburetor throttle lever rod for free entry into throttle lever when held in wide open position. Readjust length of accelerator rod when detent is not felt before reaching wide open throttle.

Turboglide Cars: Disconnect transmission throttle valve rod at carburetor throttle lever. Place ½" block of wood under accelerator pedal rod, hold accelerator in this position, pull transmission throttle valve rod toward front of car to full travel through detent and adjust transmission throttle valve rod length for free entry into carburetor throttle lever. Remove wood block and check for feel of detent before accelerator pedal rod strikes floor mat. Road test and readjust if necessary to insure that stator high angle is obtained at full throttle.

POWERGLIDE & TURBOGLIDE THROTTLE LINKAGE

DASHPOT ADJUSTMENT (Turboglide Cars Exc. Fuel Injection): With carburetor adjustments completed, automatic choke in wide open position, throttle valves fully closed (dashpot plunger fully depressed) a .060" feeler should just pass between dashpot plunger and contact arm on transmission throttle valve rod. To adjust, loosen dashpot jam nut and screw assembly in or out on its bracket. Tighten jam nut. If engine stalls reduce clearance. If engine races increase clearance.

ROCHESTER 2GC 2-BARREL

Model	Rochester No.
283" Std. Trans. (Early)	7012133
283" Std. Trans. (Later)	7012451
283" Auto. Trans.	7012452

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting - After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smooth idle with highest vacuum reading and RPM.

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans., with selector lever in "D").

Float Level - 1 19/64" (Gauge BT-144). With air horn inverted and gasket in place, position float level gauge over float so it rests against pump side of power piston shaft, with outer gauge leg in line with center of float. Bend float arm to adjust.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fl at Dr p - Bend float tang as required to obtain a distance of 1 29/32" from gasket surface to bottom of float, with air horn upright and float hanging free. Jse scale or scribed mark on float and pump gauge.

Automatic Choke Setting - Centered at index.

Throttle Linkage Adjustment (Synchro-mesh): With accelerator pedal fully depressed (hold in this position), adjust threaded swivel on throttle rod at carburetor throttle lever so that swivel freely enters throttle lever with throttle valves wide open, then **lengthen rod by turning swivel two full turns,** connect rod

Throttle Linkage Adjustment (Powerglide) *See CARBURETOR above*

►*OTHER DATA: See "Rochester 2GC Carburetor" in Carburetion Section*

ROCHESTER 4GC 4-BARREL

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs	6200-9400	10.6	49- 76
	Lock	4.25	270-310

Performance Data - 1107687, 88

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs	3600-5100	10 6	65-100
	Lock	3.5	300-360

Ⓒ - Includes Solenoid

Starting Switch· Delco-Remy Solenoid Switch 1119919 mounted on starter controlled by Ignition & Starter Switch 1116544 (Std Pass) 1116547 (Corvette), 1116549 (Taxi) with key starting *NOTF* - Separate Relay Delco-Remy 1116904 used on Corvette

Neutral Safety & Back-up Light Switch Delco-Remy No 1998174 or 1998677 (Pass Car), No 1998660 (Corvette)

Adjustment - *See 'Powerglide or Turboglide" in Transmission Section*

GENERATOR

Delco-Remy Application as follows

Application	Generat r	Armatur
Standard	1102097	1923535
Pow Steering	1102115	1940313
Air Cond & Police	1102114	1940737
Special	1106985	1927074
Corvette (Std.)	1102043	1929640
Corvette (Spec. & Fuel Inj)	1102059	1925210

Performanc Data - Cold

Generator	Amperes	Volts	RPM
1102097	30	14.0	2240
1102043, 59	30	14.0	2310
1102114, 15	35	14.0	2630
1106985	45	13 0	1475

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 28 ozs. (Exc 1106985), 20 ozs. (1106985).

Field Current - 1.48-1.62 Amps (1102043, 59), 1 69-1 79 Amps. (1102097,114, 115), 2.14-2 28 Amps. (1106985) All at 12 0 volts, 80°F.

Belt Adjustment: 13/16" belt deflection midway between fan and generator pulleys with light pressure applied.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REGULATOR

Delco-Remy. Application as follows

Regulator No.	Generator No.
1119001	1102043, 59, 96, 97
1119002	1102114, 15
1119603	1106985

►*DOUBLE CONTACT REGULATOR NOTE: Regulator 1119603 has double contacts for voltage regulation. NOTE - Specifications below are for "Normal" settings.*

Cutout Relay

Cuts In - 11.8-13.5 volts (1119001, 2), 11.8-13.0 volts (1119603).
Contact Gap - .020".
Air Gap - .020".

Voltage Regulator

Setting - (1119001,2) 13.8-14.8 volts at 125°F.
Setting - (1119603) 13.8-14.6 volts (Upper contacts), .1-.3 volts lower (Lower contacts) at 125°F.
Contact Gap - (1119603) .016" (Upper contacts) with lower contacts just touching.
Air Gap - .075" (Exc. 1119603), .067" (1119603) with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 12 volt Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section*

Current Regulator

Setting (1119001) - 27-33 amperes.
Setting (1119002) - 32-37 amperes.
Setting (1119603) - 43-47 amperes
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. 4-Headlight System. *See "4-Headlight System" in Electrical Section.*
Direction Signals: *See Electrical Section.*
Autronic Eye: *See Electrical Section.*
Lighting Switch Removal: Pull handle out to "ON" position. Depress switch shaft retainer (under dash) and remove knob and shaft assembly. Remove retaining ferrule and escutcheon, then remove switch assembly. Disconnect multi-plug connector. *NOTE* - Use screwdriver inserted in side of switch to pry plug from switch.
Stop Light Switch Location: Mechanical type mounted under dash in contact with brake pedal.
Adjustment - Adjust position of switch so that stop light comes on when brake pedal is depressed 5/8" from fully released position.
CIRCUIT BREAKER (Lighting): One 15 ampere circuit breaker located on main light switch protects all head and parking lamps.
FUSES: All fuses contained in accessory fuse panel behind instrument panel on left side of steering column
10 Ampere - Protects Tail Lamps.
15 Ampere - Protects Stop Lamp and Antenna
10 Ampere - Protects Back-up and Brake Alarm Lights
7.5 Ampere - Protects Radio Circuits
20 Ampere - Protects Heater and Air Conditioning.
3 Ampere - Protects Instrument Lamps.
NOTE - Standard wiring harness has two-fuse junction block. **10 Amp** protects Instrument Lights, **3 Amp** protects Tail Lights
Horn Relay: Delco-Remy 1116920.
Contacts Close - 5.0-9.5 volts.
Contact Gap - .027".

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section*

►*ENGINE NOTE: Standard 283" Turbo-Fire engine, same as previous model and NEW 348" Turbo-Thrust engine with wedge type combustion chamber formed by 16° angle of top of block and "Peaked-roof" piston head. Bottom surface of cylinder head is flat machined.*

ENGINE SPECIFICATIONS: V8 Valve-in-head.

Engine	Bore	Stroke	Rated HP	Displacement
283"	3.875"	3.0 "	48	283 cu. ins.
348"	4.125"	3.25"	54.5	348 cu. ins.

Engine	Compr. Ratio	Developed HP
283" ①	8.5-1	185 at 4600 RPM
283" ②	9.5-1	230 at 4800 RPM
283" ③	9.5-1	250 At 5000 RPM
283" ④	9.5-1	245 at 5000 RPM
283" ⑤	9.5-1	270 at 6000 RPM
283" ⑥	10.5-1	290 at 6200 RPM
348" ②	9.5-1	250 at 4400 RPM
348" ⑦	9.5-1	280 at 4800 RPM

① - One 2-Bbl. Carb. ② - One 4-Bbl. Carb.
③ - Fuel Injection (Pass. & Corv.)
④ - Dual 4-Bbl. Carb. (Corv.).
⑤ - Dual 4-Bbl. Carb. & Sp. Camshaft (Corv.).
⑥ - Fuel Injection & Sp. Camshaft.
⑦ - Three 2-Bbl. Carbs.

Compression & Vacuum Reading - *See TUNE-UP.*
ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*
OIL PAN REMOVAL: Raise car (Jack or Hoist), drain crankcase, remove distributor cap, exhaust crossover pipe, and heat valve Remove front engine mounting bolts. *NOTE* - Turn crankshaft so harmonic balancer key slot is down (crankshaft counterweights will clear oil pan baffle). Raise engine at harmonic balancer approximately 3". Remove oil pan bolts, tilt oil pan sideways to remove it.
ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data.*
CYLINDER HEAD & INTAKE MANIFOLD: *See "Cylinder Head & Manifold" in Chevrolet Special Data.*
TIGHTENING TORQUES: *See Chevrolet Special Data*

PISTONS

Cast aluminum, slipper skirt, with piston pin offset .060" to major thrust side.
Removal - Pistons and rods removed from above
Replacement Pistons: Furnished Std & 001", 020", 030", and .040" Oversize With fitted pins
►*STANDARD & .001" OVERSIZE PISTON NOTE* **(283" Eng.).** These pistons furnished in TWO sizes as follows
283" Eng. - Std. - Marked **S4** (3.8750-3.8755"), **S5** (3.8755-3.8760"), **.001" Oversize** - Marked **S6** (3.8760-3.8765"), **S7** (3.8765-3.8770").
►*283" ENGINE PISTON NOTE:* Pistons have four depressions in head to prevent interference with valves at higher engine speeds. "Domed" type pistons are used in 10.5-1 compression ratio engines.
Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler should be 4-6 lbs. (283" Eng.), or 5-9 lbs (348" Eng.).
Installing Pistons: Install pistons with cast depression in head and "F" mark cast on piston strut toward front of block. *See Rod Installation.*

PISTON PINS

Pin is pressed fit in connecting rod.
Diameter - (283") 9270-.9273". (348") .9895-.9898".
Pin Fit in Piston - .00015-.00025" clearance. With piston and pin at 60°F, and light film of oil on pin. Pin should support own weight in either pin boss.
Pin Fit in Connecting Rod - Pressed fit in rod. For pin removal and installation, *see "Piston Pins" in Chevrolet Special Data.*
Replacement Pins: Furnished only in assembly with piston. Replace with new piston and fitted pin assembly.

PISTON RINGS

Compression rings are "twist" type (Top ring has **upper** inner edge chamfered, lower ring has **lower** inner edge chamfered) and faces are tapered for correct wiping action. Oil ring is 3-piece type (two rails with spacer).

283" Engine

Ring	Width	End Gap	Side Clearance
Compr.(1,2)	.077-.078"	.009-.018"	.0012-.0032"
Oil (3)	.181-.188"	① 015-.055"	.0006- 0084"

348" Engine

Ring	Width	End Gap	Side Clearance
Compr. (1,2)	.0780-.0775'	.015- 025"	②
Oil (3)	.250" Max	.015-.055"	

① - On rails. ② - Upper 0012- 0027" lower 0012-.0032".

Replacement Rings: Cromflex ring sets furnished Std. and 020", .030", .040" Oversize
Installing Rings: Install compression rings with mark "GM" upward.

CONNECTING RODS

Length (Center to Center) - (283") 5 700" (348") 6 134-6.136"
Crankpin Journal Diameter - (283") 1.999-2 000". (348") 2.199-2 200"
Lower Bearing - Replaceable precision type, steel-backed babbitt. *See 'Connecting Rod & Main Bearing Note" under Crankshaft below.*
Clearance - 001- 003". Wear limit 004".
Side Play - .008-.014" (All).
Replacement Bearings: Std and 001", 002", 010" and 020" Undersize.
Installing Rods Install rod in piston so that flange or heavy side of rod at bearing end will be toward **front** of piston (marked by cast depressions in head of piston and "F" mark on piston strut) on Nos 1-3-5-7 pistons,

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

and flange on rod to rear of piston on Nos. 2-4-6-8 pistons. Install rod and piston assembly in cylinder with cast depressions in head and "F" mark on strut toward front of cylinder block. Oil hole in connecting rod will be toward center of engine.

CRANKSHAFT

Journal Diameter - (283") 2.2978-2.2988", (348") 2.4980-2.4990".

Bearings - Steel-backed babbitt (Std.), see Note below.

►*CONNECTING ROD AND MAIN BEARING NOTE (Corvette Engines with Special Camshaft),* Connecting rod and main bearings are special steel backed aluminum alloy with thin lead alloy overplate.

Clearance - (283") .001-.003". (348") .0008-.0034". Wear limit .004".

End Thrust - Taken by No. 5 (rear) main bearing.

End Play - .002-.006". Check at front end of rear main bearing.

Replacement Bearings: Furnished Std., .001", .002", .010" and .020" Undersize.

Bearing Installation: Not necessary to remove engine from car, see *"Crankshaft & Main Bearings" in Chevrolet Special Data.*

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data.*

Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data.*

CAMSHAFT

►*CAMSHAFT NOTE* Corvette with Fuel Injection and 10.5-1 compression ratio has special camshaft, solid lifters, and heavy duty main and connecting rod bearings.

Journal Diameter - (All) 1.8682-1.8692".

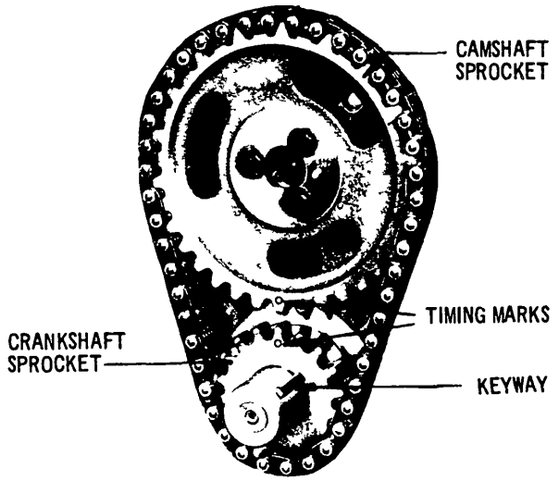
Bearings - Steel backed babbitt lined bushings.

Clearance - .0015-.0035"

Replacement Bearings: "Precision" type (do not require reaming). Use Tool J-6098 to remove and install bearings.

Camshaft Setting: Both Sprockets marked "0". Install chain with sprocket marks adjacent and in line with straightedge across shaft centers.

►*CAUTION* When installing sprocket on camshaft, line up dowel holes in sprocket and shaft. DO NOT DRIVE SPROCKET ON SHAFT, use three mounting bolts and DRAW sprocket in place.



Camshaft Removal & Installation: *See "Camshaft & Bearings" in Chevrolet Special Data*

Timing Chain: Link belt type. See below for specifications.

Engine	Width	Pitch	Length (Links)
283"	.875"	.500"	46
348"	.88"	.500"	48

Installation & Removal - *See "Timing Chain" in Chevrolet Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data.*

CHEVROLET V8 VALVE TIMING MARKS

VALVES

Tappet Clearance: (Solid Lifters) Intake .012", Exhaust .018" Hot.

Initial Tappet Clearance (Engs. with Hydraulic Lifters) - *See "Valve System" in Chevrolet Special Data.*

283" Engine

Valve	Head Diam.	Stem Diam.	⑤ Length
Intake	1.720"	.3415-.3422"	4.902-4.922"
Exhaust	1.50"	.3410-.3417"	4.913-4.933"

Valve	① Seat Angle	④ Lift	Stem Clearance
Intake	45°	.3987"	.001-.0027"
Exhaust	45°	.3987"	0015-.0032"

348" Engine

Valve	Head Diam.	Stem Diam.	Length
Intake	1.935-1.945"	.3715-.3722"	5.10-5.11"
Exhaust	1.655-1.665"	.3700-.3717"	5.11-5.12"

Valve	① Seat Angle	Lift	Stem Clearance
Intake	45°	.3987"	② .0010-.0027"
Exhaust	45°	.3987"	③ .0025-.0042"

① - Face Angle 44°. ② - Wear limit 004".
③ - Wear limit .005". ④ - Standard Camshaft
⑤ - Spec. Camshaft 4.8699-4.8899" (Int.), 4.8905-4.9105" (Exh.).

Valve Seat Width - 3/64-1/16" (Int.), 1/16"-3/32" (Exh.).

Valve Stem Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance is excessive. Valves with oversize stems furnished .003", .015", .030" Oversize. Use Reamer Set J-5830(283"), or J-7049 (348").

Valve Springs: Install with closed end of coil toward cylinder head and oil shield over spring.

►*VALVE SPRING NOTE* Specifications are for spring *only (not with dampener).*

283" Engine

Valve	Spring Pressure ①	Length
Closed	69-79 lbs	1.696"
Open	159-169 lbs	1.230"

348" Engine

Valve	Spring Pressure	Length
Closed	78-86 lbs	1.626"
Open	184-196 lbs	1.230"

① - With standard camshaft.

►*VALVE SPRING INSTALLED HEIGHT CAUTION:* Check installed height of valve spring after grinding valves by measuring distance from spring seat in cylinder head to top of valve spring. If this dimension exceeds 1 45/64" (283") or 1 3/4" (348"), install valve spring seat shim furnished 1/16" thick Installed height of spring must be 1 21/32" (All Engines) *NOTE - 348" Engine specifications supersed previous specifications of 1 3/4" for preferred height, 1 53/64" for top limit.*

Valve Lifters: Hydraulic lifters (Std.) except Corvette engine with 10.5-1 compression ratio. *See "Valve System" in Chevrolet Special Data.*

Rocker Arms: Mounted individually on studs pressed into cylinder head.

Rocker Arm Stud Replacement - *See "Valve System" in Chevrolet Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing Specifications (283" Std. Cam.)

Intake Valves - Open 12° 30' BTDC. Close 57° 30' ALDC.

Exhaust Valves - Open 54° 30' BLDC. Close 15° 30' ATDC.

Valve Timing Specifications (283" Spec. Cam.)

Intake Valves - Open 35° BTDC. Close 72° ALDC.

Exhaust Valves - Open 76° BLDC. Close 31° ATDC.

Valve Timing Specifications (348")

Intake Valves - Open 18° 30' BTDC. Close 67° 30' ALDC.

Exhaust Valves - Open 68° 30' BLDC. Close 25° 30' ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: 4 qts. (Exc. Corv.), 5 qts. (Corv.). Add 1 qt. with filter change.

Normal Oil Pressure: 35 lbs. at 2000 RPM.

Pressure Regulator Valve - In oil pump Not adjustable.

Oil Pressure Indicator (Std. V8) - Light located at right side of instrument cluster, controlled by a pressure Switch Delco-Remy 1998149 or AC No 1508425, located in main oil gallery adjacent to distributor. Switch closes when pressure drops to 4-7 lbs.

Oil Pressure Gauge (Corvette) - AC No. 1508063. Not electric.

Oil Filter: Full flow type as optional equipment. Replace element every 4,000 miles. Use new seal, tighten center bolt to 20-25 ft lbs. *NOTE* - Cover with cavity for oil circulation used without filter

Replacement Filter Element - AC No PF-141.

Oil Pump: Spur gear type. Located in crankcase, driven by distributor gear

Oil Pump Overhaul - *See "Oiling System" in Chevrolet Special Data*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Crankcase Ventilation - Air intake through crankcase breather cap and outlet at crankcase ventilator pipe.

COOLING

►*RADIATOR REMOVAL CAUTION (Auto. Trans.):* Transmission oil cooler is part of radiator lower tank and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.

►*WATER BY-PASS NOTE:* 283" engine utilizes hole in cylinder block for water by-pass. 348" engine has by-pass at top of water pump which is connected to inlet manifold which has crossover passages to cylinder head.

Water Capacity: 16 qts. (283"), 22 qts. (348"). Add 1 qt. for heater.

Pressure Valve: AC No. 850800. Radiator filler cap. 13 lb. type. Replacement Valve-AC No. RC-6.

Thermostat: Pellet type. In cylinder head water outlet. **Standard** - No. 3136185 (180°F), **Optional** - No.3138868 (170°F) or No. 3136184 (160°F), for use with Methanol (alcohol) anti-freeze.

Temperature Gauge: AC electric.

Dash Unit - AC No. 1513485 (Pass. Car), 1513198 (Corv.).

Engine Unit - AC No. 1513321 (All).

See "Temperature Gauges" in Miscellaneous Section.

Water Pump: Packless type with ball bearing shaft. See Water By-Pass Note above.

See "Water Pumps" in Chevrolet Special Data.

CLUTCH

►*CLUTCH NOTE: Both Chevrolet (Own) Diaphragm type & Borg & Beck Coil Spring type Clutches used.*

Chevrolet (Own) Diaphragm Clutch

Car Model	Size	Chevrolet No.
283" Std.	10"	3742862
283" 4-Bbl. & FI	11"	3742867
283" O.D. & HD	11"	3744300

Borg & Beck Clutch

348"	10½"	①3739756
Corv	10"	②3744753

① - B & B 10.5A9 Assy. No. 361470.
② - B & B 10A8W Assy. No. 361468.

See "Chevrolet (Own)" and "Borg & Beck" Clutches in Clutch Section.

Clutch Disc (Chevrolet Clutch)

Car Model	Chevrolet No.
283" Std. 10" Woven or Molded	①
283" 4-Bbl. & FI 10" Molded	3746431
283" O.D. 10" Woven	3749442
283" HD 11" Woven	3748464

① - 3746431 Woven, 3743505 Molded.

Clutch Disc (Borg & Beck Clutch)

348" 10½" Woven	①3749490
Corv. 10" Woven Drk. Brown	②3740462

① - B & B No. 382856. ② - B & B No. 382855.

Pedal Adjustment: Pedal free play ¾-1". Remove cotter pin, washer and spring, then turn swivel to secure free play. *NOTE* - Check by holding fork pushrod to rear (to remove lash). Conical point on swivel should line up with dimple in clutch and shaft assembly. Reinstall spring, washer and cotter pin.

Over-Center Spring Adjustment: Loosen adjusting hook nut at back of pedal bracket and turn jam nut to obtain an installed length of 10 5/16" for over-center spring.

Removal: Remove transmission (See Transmission Removal below). Remove clutch throwout bearing from fork, then clutch fork tension spring from fork. Remove clutch fork by forcing it forward and toward center of vehicle. Install Clutch Pilot Tool J-5824 to support clutch assembly. Loosen clutch attaching bolts one turn at a time until tension of spring is released. Remove tool, then clutch assembly from vehicle. *NOTE* - When installing clutch, align "X" mark on cover and flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three-speed synchro-mesh (Std.), three or four-speed (close ratio) optional.

See "Chevrolet 3-Speed" and "Chevrolet 4-Speed (Close Ratio)" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: 1) Drain transmission and disconnect speedometer cable and shift rods. Remove propeller shaft center bearing support bolts. Separate rear universal joint and pull propeller shaft assembly to rear under axle housing.

2) Support rear of engine, remove transmission rear support noting number of shims.

3) Remove two top transmission to clutch housing cap screws, install guide pins (J-1126), then remove two lower capscrews. Slide transmission back on guide pins to clear clutch disc splines.

OVERDRIVE

Warner R10. Solenoid operated type with governor control and throttle operated kickdown. Lockout switch not used.

See "Chevrolet Overdrive" in Transmission Section.

Overdrive Control: *See "Warner R10 & R11 Overdrive Control" in Transmission Section.*

Removal: Same as for synchro-mesh (above) after disconnecting control cable and wiring.

POWERGLIDE TRANSMISSION

Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS: See "Chevrolet Powerglide" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication - Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick.

►*DRAIN & REFILL NOTE:* Periodic drain and refill is no longer recommended. Replace transmission fluid only when transmission removed for repairs.

Capacity - 3½ qts. (refill), 10½ qts. (after overhaul).

Checking Fluid Level - Engine must be idling with transmission warm, selector lever in "N" range and parking brake applied. Check fluid level on dipstick located in filler tube on right side of engine opposite starter. Fluid level should be at full mark on dipstick. *NOTE - DO NOT OVERFILL.*

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER POWERGLIDE SERVICE DATA: See "Chevrolet Powerglide" in Transmission Section.*

TURBOGLIDE TRANSMISSION

New "non-shifting" hydraulically controlled, planetary type transmission with three unit torque converter.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Chevrolet Turboglide" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Turboglide" in Transmission Section.*

Lubrication - Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick.

►*DRAIN & REFILL NOTE:* Periodic drain and refill is no longer recommended. Replace transmission fluid only when transmission removed for repairs.

Capacity - 3½ qts. (refill), 9½ qts. (after overhaul).

Checking Fluid Level (Exc. Air Cond. Cars) - With transmission at normal operating temperature, transmission selector lever in "D" (drive) range, and engine idling, check fluid level on dipstick in filler tube on right side of engine. Fluid level should be at full mark on dipstick. *CAUTION - DO NOT OVERFILL.*

Checking Fluid Level (Air Cond. Cars) - *NOTE* - Regular filler tube and dipstick not used. Fluid Level is checked from beneath car (car on hoist) as follows: With transmission at normal operating temperature, selector lever in "N" (neutral) range, and engine idling, check fluid level by removing cap from oil level tube at rear of transmission oil pan under extension housing. Oil level should be at top of tube. If oil level low, remove speedometer drive gear fitting, add oil through fitting hole until fluid level reaches top of oil level tube.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER TURBOGLIDE SERVICE DATA: See "Chevrolet Turboglide" in Transmission Section.*

UNIVERSALS

Own. Yoke & Spider (Trunnion) type.

►*CAUTION:* Rear universal companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever companion flange nut loosened. *See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section.*

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Chevrolet Special Data.*

REAR AXLE

Own. Semi-floating hypoid gear type, with Hotchkiss Drive. *NOTE* - "Positraction" Limited Slip Differential optional.

See "Chevrolet Pass. Car (Hotchkiss Drive)" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.

►*PINION BEARING PRELOAD CAUTION:* Rear uni-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

versal joint companion flange nut controls rear axle pinion bearing preload Bearing preload must be adjusted whenever companion flange nut is loosened

Ratios - 3 55-1 (Std), 4 11-1 (Overdrive), 3 36-1 (Powerglide & Turboglide)

Backlash - 003-.010" (005- 008" preferred)

Carrier Removal: Remove rear wheels, brake drums and gasket. Remove bearing retainer bolts (on inside of axle flange) and use Tool J-5748 to remove axle shaft and bearing assembly so that axle clears differential side gears. Separate rear universal joint, lower propeller shaft, then drain rear axle lubricant and remove differential carrier nuts and lift out carrier assembly.

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Chevrolet Special Data.*

Axle Shaft Removal Raise car and place jack stands under axle housing Remove tire, wheel and brake drum assembly Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange) Attach Axle Puller J-5748, with slide hammer, to flange and remove axle shaft and bearing assembly Be careful not to disturb backing plate *NOTE*–If bearing retainer and parking brake strut interfere, raise strut slightly with screwdriver to obtain clearance

SHOCK ABSORBERS

Delco. Direct acting non-adjustable.

Replacement Shock Absorbers

Model	Front	Rear
Pass.(Std.)	5543712	5543707
Pass.(AC or AT)	5543709	5543707
Pass. (Air Susp.)	5543711	5543708
Taxi	5543709	5543702

FRONT SUSPENSION

Independent with direct acting shock absorbers within front coil springs. Different types used as follows

Corvette – "Threaded Bushing" type pivot points on upper and lower control arms.

Others – "Spherical Joint" type pivot points between control arms and steering knuckle support.
See "Chevrolet" in Suspension & Wheel Alignment Sect.

Steering Axis Inclination - 7¼°±½°.
Caster - (Std.) 0°±½°. (Air Susp.) 1½°±½°.
Camber - (Std. & Air Susp.) Pos. ½°±½°.
Toe-In - (Std.) 1/8" to 1/4". (Air Susp.) 0" to 1/8".
Toe-Out on Turns - Inner wheel 20° outer wheel should be 18½°.

REAR SUSPENSION

Rear Suspension: *See "Chevrolet Rear Suspension" in Suspension & Wheel Alignment Section.*

AIR SUSPENSION

Air springs replace coil springs on all four wheels. Shock absorbers mounted to rear of air springs. *See Front Suspension above for Alignment Specifications and "Chevrolet Air-Suspension" in Suspension & Wheel Alignment Section.*

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball type.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: *See "Chevrolet Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic, without anchor pin adjustment Hand lever applies rear wheel service brakes
See "Chevrolet-Bendix Hydraulic" in Brake Section.

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION*
To compensate for lack of brake anchor adjustment, brake shoes are ground to a 057- 087 smaller diameter than the drum diameter Grinding to the true diameter on a bench grinder will cause heel and toe contact, resulting in faulty brake action *NOTE–If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter*

Drums–Diameter 11 '
Wheel Cylinder Diameter–Front 1 1/8', Rear 1

Lining	Width	Thickness
Front Whl	2	187- 194 '
Rear Whl	1¾ '	187- 194

Length Per Shoe–9 3125 ' (Primary), 11 6875 ' (Secondary)

Braking Power–55 9% (Front Wheels), 44 1% (Rear Wheels)

Clearance–Single adjusting screw located at bottom of backing plate Back off adjusting screw 7 notches from slight drag position Brakes must be free of any drag after adjustment

Standard Master Cylinder Located on engine side of firewall in line with brake pedal

Checking Fluid–Reservoir is integral with master cylinder Maintain level in cylinder to lower edge of filler hole

Removal - Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove cotter and clevis pins from brake pedal arm, then remove four retaining nuts and lockwashers and remove cylinder from firewall.

Installation–Reverse removal procedure making sure that push rod clevis is straddling the brake pedal Refill master cylinder and bleed all brake lines Adjust push rod-to-main cylinder clearance as follows Make sure brake pedal returns to fully released position with no binding, and that pedal retracting spring has not lost its tension, then adjust brake pedal clevis to give a barely perceptible end play between main cylinder piston and brake pushrod (1 8-3/8" pedal movement should be felt)

Power Brakes: Bendix or Moraine Power Unit. Replaces standard master cylinder.
See "Bendix Power Unit" or "Moraine Power Unit" in Brake Section.

Removal: Remove vacuum hoses and hydraulic lines from power unit. Disengage pushrod from pushrod lever and remove four attaching bolts and lift out unit. Note position of odd bolt and washer during removal.

MISC. MECHANICAL

Windshield Wipers: Vacuum, link arm operated (Std.), Electric type (Optional).
See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric type with reversible motor operating each door window assembly
See 'Power Window Regulators" in Miscellaneous Section

Power Top Controls Hydro-Electric *See 'Power Top Controls' in Miscellaneous Section*

Power Seat Adjuster: Reversible Electric motor controls horizontal front seat movement *See 'Power Seat Adjusters' in Miscellaneous Section*

Air Conditioning: *See "Chevrolet Air Conditioning in Miscellaneous Section*

① - Letter "V" ahead of Series Prefix indicates V8 Engine.
② - Letter "P" ahead of Series Prefix (3C,3D,3E) indicates rear axle with 14" brakes.
③ - Letter "P" ahead of series Prefix (Exc. 3C,3D,3E) indicates H.D. Single Speed Axle.
④ - Forward Control. ⑤ - Conventional. ⑥ - School Bus ⑦ - Low Cab Forward. ⑧ - Special 1½-Ton. ⑨ - H.D. 2-Ton.

SERIAL NUMBER: Stamped on metal plate and attached to body as follows: **Forward Control Models** - On instrument panel support. **Flat Face Cowl Models** - On cowl inner panel. **All Other Models** - Left front door hinge pillar. *NOTE* - Number (example below) includes identification data as indicated.

① ② ③ ④
6F 58 K 100001

① - Series Prefix. See Model Designation table above.
② - Year 58 (1958).
③ - Assembly Plant Designation. See table below.
④ - Unit number. Continuous for all trucks starting with 100001.

Assembly Plant Designation

A - Atlanta	**K** - Kansas City	**S** - St. Louis
B - Baltimore	**L** - Los Angeles	**T** - Tarrytown
F - Flint	**N** - Norwood	**W** - Willow Run
J - Janesville	**O** - Oakland	

ENGINE NUMBER: 6 Cyl. - Stamped on pad on right side of engine block directly above oil level dipstick (to rear of distributor).
V8 Eng. - Stamped on pad at front right hand side of cylinder block.
NOTE - Number (example below) indicates identification data as indicated.

⑤ ⑥ ⑦
F 1210 P

⑤ - Engine Plant - **F** - Flint, **T** - Tonawanda, **C** - Engines built in Canada.
⑥ - Code number indicating Month & Day of engine manufacture. This is not an individual or continuous number.
⑦ - Engine type. See table following.

Engine Type

J, K - 235" Eng. (JC, JF, KA indicate Clutch and Trans. Opts.)
L - 261" Eng. (LC, LD, LE indicate Trans. and Brake Opts.)
M, N, P - 283" Eng. (MA, NA, NC, ND, PA, PC, PD indicate Trans. and Brake Opts.)

TUNE-UP

COMPRESSION PRESSURE: (6 Cyl.) 130 lbs., **(V8)** 140 lbs., minimum, All cylinders should read alike within 20 lbs.

VACUUM READING - 17-21" (Single & Dual Carb.), 16-20" (4-Barrel Carb.).

VALVE TAPPET CLEARANCE: (235") - .006" Intake, .018" Exhaust, Hot.
(261) - .006" Intake, .020" Exhaust, Hot.
(V8 Engines) - None in service (Hydraulic). For initial tappet adjustment, see *"VALVE SYSTEM" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic coil spring type, located between manifold and exhaust pipe. *NOTE* - Must operate freely.

IGNITION

FIRING ORDER: 6 Cyl. - 1-5-3-6-2-4. **V8** - 1-8-4-3-6-5-7-2.
Cylinders (V8) - *RIGHT BANK 2-4-6-8, LEFT 1-3-5-7.*
SPARK PLUG GAP: .035".
Spark Plug - All Eng. ½ to 1½-Ton. AC44 (Std.), AC45 or 46 (Hotter for City Driving), AC43 COM (Heavy Duty).
All Eng. 2-Ton. AC42-1 COM (Std.), AC43 (Hotter for City Driving). *NOTE* - 14 mm. Torque to 20-25 lbs.

COIL: Delco-Remy 1115087.
Ignition Current - 1.8 amps. idling, 4 amps. stopped.
Resistor - Delco-Remy 1931614.

►*COIL RESISTOR NOTE (6 Cyl. Trucks Exc. Forward Control):* Resistor connected to ignition switch by two leads. Second lead is connected through starter switch and provides a direct connection to coil when starter switch operated.

►*COIL RESISTOR NOTE (6 Cyl. Forward Control & All V8 Models):* Resistor connected in lead from ignition switch-to-coil. This resistor is bypassed during cranking by a lead from starter solenoid-to-coil.

DISTRIBUTOR: Delco-Remy. Conventional type used on 6 Cyl. models. Two types of "Window" distributors used on V8, centrifugal with Vacuum Advance. and centrifugal only. *See "Delco-Remy (Window Type) Distributors" in Electrical Section.*

Delco-Remy Distributors

Engine	Delco-Remy No.
Thriftmaster 235"	1112403
Jobmaster 261"	1112403
Trademaster 283" (3,4000)	1110920
Taskmaster 283" (5,6000), Dual Carb.	① 1112720,25
Super Taskmaster 283" (5,6000) 4-Bbl. Carb.	① 1112721,26

① - Without Vacuum Control.
Condenser - Delco-Remy 1932004 (1110920), 1928111 (Others).
Capacity - .18-.23 mfd.
Contact Point Set - Delco-Remy 1931988.
Breaker Gap (6 Cyl.) - .019" (new points), .016" (Used points).
Breaker Gap (V8) - *NOTE* - When cam dwell is properly adjusted, breaker gap opening (.016") will be correct. *See CAM ANGLE below.*
Cam Angle - 28-35° (6 Cyl.), 28-32° (V8). Set V8 distributors to 30°.
Breaker Arm Spring Tension - 19-23 ozs.

Automatic Advance - 1112403

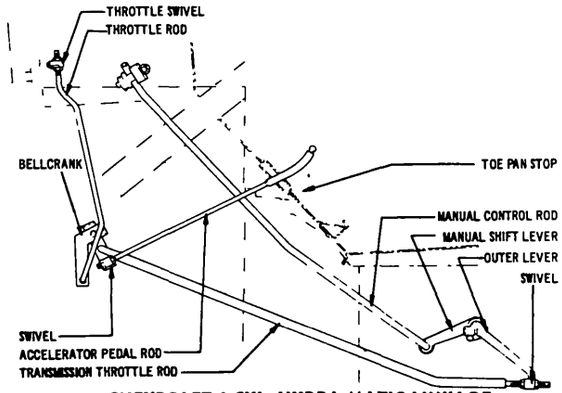
IGNITION TIMING

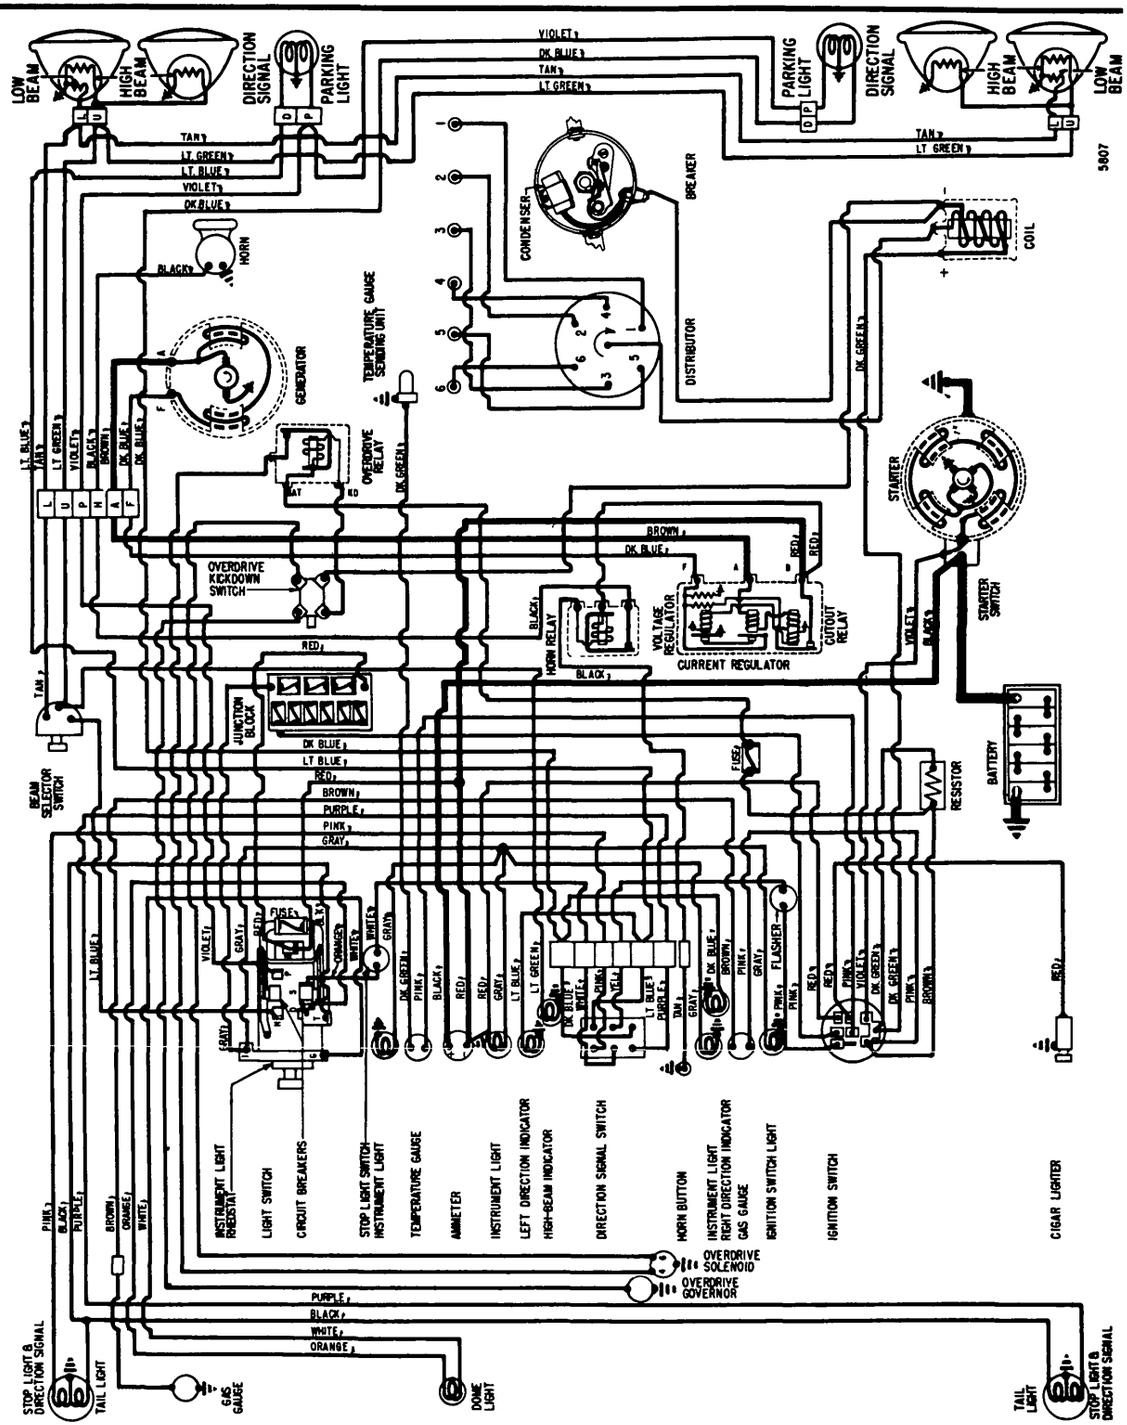


Setting - TDC (6 Cyl.), 4° BTDC (V8) Set timing at idle speed with vacuum line disconnected.

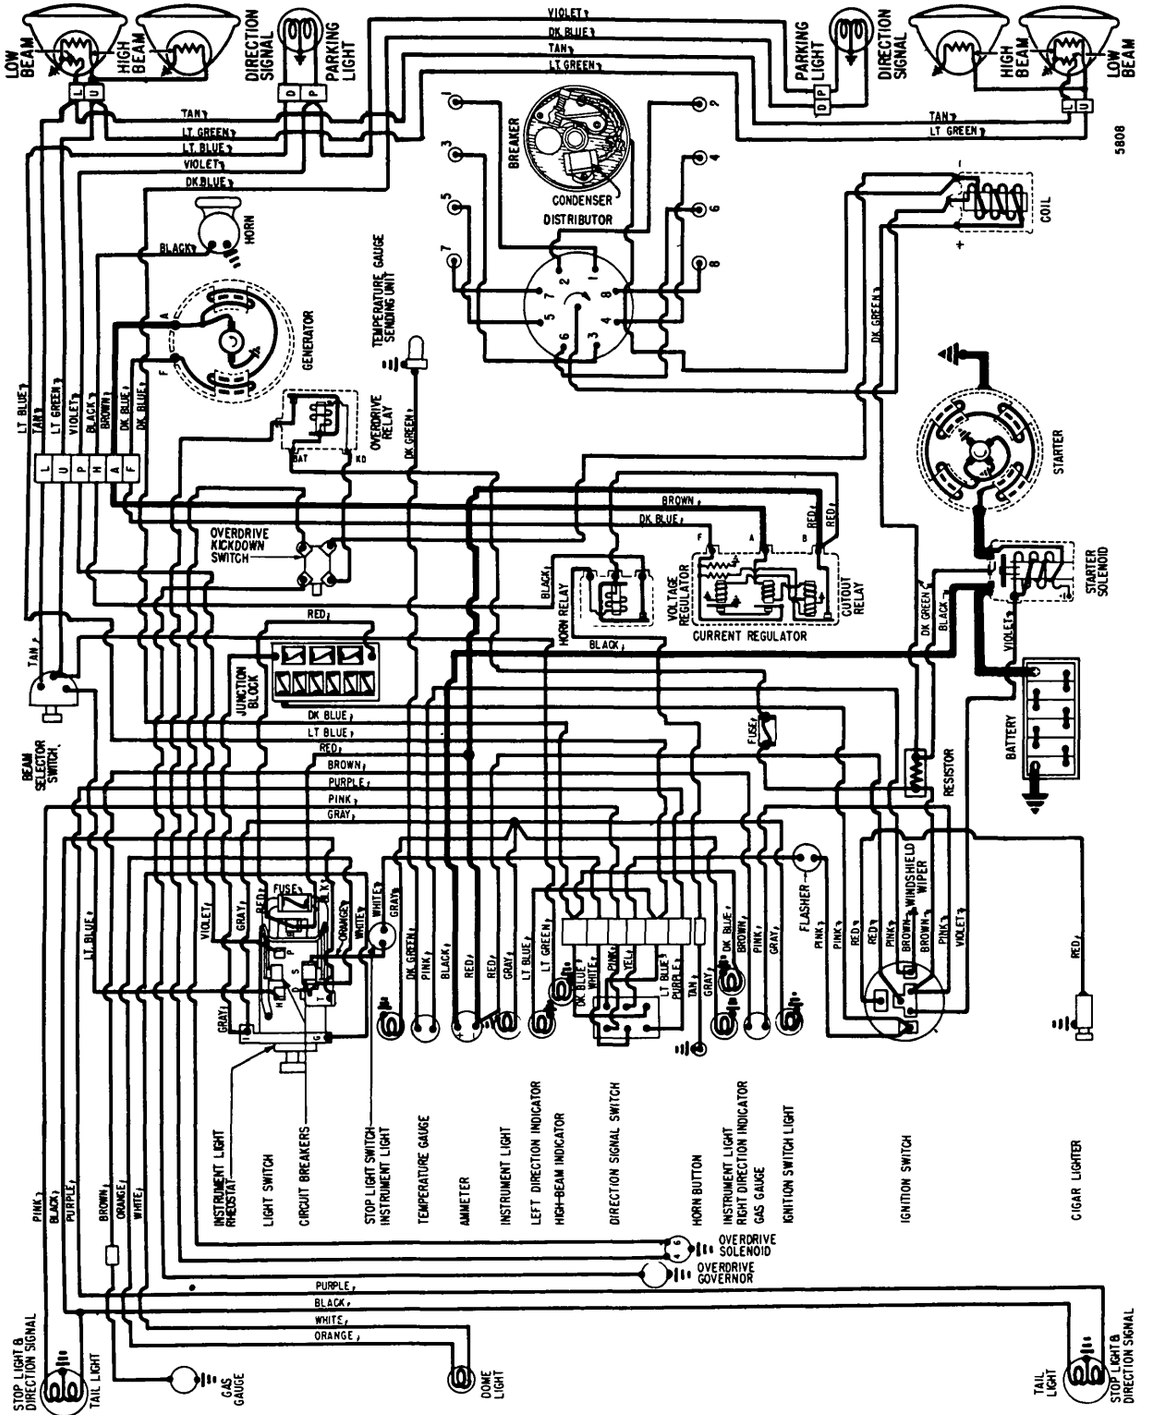
Timing Mark (6 Cyl.) Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on "O". Then adjust Selector as follows: Set for slight ping when accelerating with wide open throttle.

Timing Mark (V8) - Mark on vibration damper and timing tab attached to engine front cover. Timing tab marked "A" (Advance), "O" (TDC) and lines at 2° graduations with the greatest number of graduations on advance or BTDC side.

CARBURETOR



Engine	CARBURETOR APPLICATION	Carburetor
6 Cyl. (Exc. Fwd. Control)		Rochester B
6 Cyl. (Forward Control)		Carter BB
V8 283" Trademaster	2-Bbl.	Rochester 2G
V8 283" Taskmaster	2-Bbl.	Rochester 2G
V8 283" Super Taskmaster	4-Bbl.	Rochester 4G



CHEVROLET 6 CYL. HYDRA-MATIC LINKAGE (EXCEPT FORWARD CONTROL)

Throttle Linkage Adjustment (6 Cyl. Hydra-Matic Drive Trucks except Forward Control): With engine at normal operating temperature and idle speed set at 400-450 RPM, remove lower end of carburetor throttle lever-to-bellcrank rod from lever on bellcrank. Install Lever Positioning Gauge J-5609 in hole in lever and gauge hole in pan rail of engine block (hole is located toward rear of bellcrank position), and leave gauge in this position. Remove swivel from bellcrank-to-transmission outer lever at transmission and move transmission outer lever back against its stop. Check distance from hole in outer lever to back of transmission with Gauge J-2545-C. Bend lever as necessary for free entry of gauge in lever hole using Tool J-5260 *(CAUTION - Do not apply force to stops at either end of lever travel).* Hold outer lever back against its stop and adjust swivel position on bellcrank-to-transmission rod so it just enters hole in transmission lever. Remove Positioning Gauge from bellcrank and reinstall rod. Recheck en-

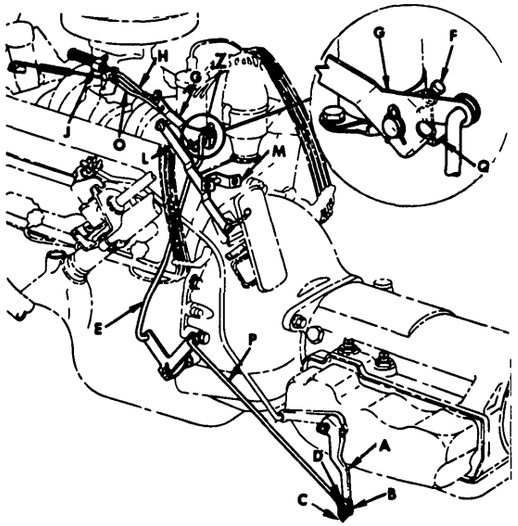
CHEVROLET 6 CYL. TRUCK WIRING DIAGRAM

CHEVROLET V8 TRUCK WIRIN DIAGRAM

CONTINUED FROM PRECEDING PAGE

gine idle speed with idle screw against stop on carburetor, and adjust carburetor throttle-to-bellcrank rod so swivel at upper end freely enters hole in throttle lever. At this point, **shorten** bellcrank-to-transmission outer lever rod by turning swivel locknuts **three and one-half** turns. Remove bellcrank-to-carburetor throttle rod upper swivel from lever and pull rod upward until linkage is stopped by forward stop in transmission. Hold in this position and adjust accelerator-to-bellcrank rod swivel until accelerator pedal is against floor stop, then **shorten** rod **one full turn.** Replace upper end of throttle-to-bellcrank rod in throttle lever.

CHEVROLET 6 CYL. HYDRA-MATIC LINKAGE (FORWARD CONTROL MODELS)



Throttle Linkage Adjustment (Forward Control Models With Hydra-Matic Drive): With engine at normal operating temperature and idle speed set at 400-450 RPM, insert 1/8" diameter pin into gauge pin hole in mounting bracket of accelerator pedal lever. Adjust length of throttle rod so that swivel just enters throttle lever. Remove swivel from outer lever and move lever back against transmission stop. Check distance from hole in outer lever to rear face of transmission with Checking Gauge J-2545-C, bending lever as necessary (Tool J-5260) to allow entry of gauge into hole. *CAUTION - Do not apply force against stop at either end of lever travel.* Adjust transmission throttle rod so that swivel at transmission case just enters outer lever, then **shorten** throttle rod **three and one-half turns** of jam nut.

THROTTLE LINKAGE ADJUSTMENT: (V8 Hydra-Matic Drive Trucks) - With carburetor at idle speed, disconnect rod "P" at transmission outer lever "A". Hold outer lever "A" back against transmission stop and check distance from hole in outer lever "A" to back of transmission (use Gauge J-2545-C). Bend outer lever "A" as required to allow entry of gauge in hole (Use Tool J-5260). With rods "E" and "H" connected, loosen "D" 3½ turns and tighten "B". Back off stop screw "F" and rotate lever "G" until linkage is stopped by full detent stop in transmission. Adjust screw "F" to contact bracket "Q", release lever "G" and advance screw "F" ½ -1 full turn. *NOTE* - On Series 31,32,3600, install 1/8" gauge pin through hole in lever "L" and bracket "M", Install rod "O" to lever "L" and rotate "L" until screw "F" contacts bracket "Q". Adjust length of rod "O" so swivel just enters lug "H". If unable to get downshift on road test, check for interference between rod

"E" and cylinder block in area over "G" and bend rod as necessary to give clearance.

CHEVROLET V8 TRUCK HYDRA-MATIC LINKAGE

ROCHESTER "B"

Models	Rochester No.
235" (S.M. & Hydra-Matic)	7004468
261" (Powermatic)	7005140

Idle Setting - 1½-2½ turns open. Turn screw out for richer mixture.

Idle Speed - 450-500 RPM (Synchro-mesh), 450 RPM (Hydra-Matic) with selector lever in "N" position.

Float Level - 1 9/32" from bottom of each float to cover gasket (do not remove gasket). Use Gauge M-250. With assembly inverted, place gauge with projection inserted in discharge nozzle. Carefully bend float lip vertically so that each float just touches top portion of gauge. Bend float arms to bring them into alignment and to center them in gauge. Tilt assembly 90° on each side and check to see that floats do not touch gauge.

Float Drop - Turn cover right side up so float drops down. Distance from gasket on cover to bottom of each float should be 1¾" on all models. Adjust by bending tang at rear of each float assembly.

►*CAUTION: Both floats must be set alike and must not be twisted out of alignment.*

Accelerating Pump - No seasonal adjustment.

Choke Adjustment: Centered on index.

Throttle Linkage Adjustment: See *CARBURETOR above.*

►*OTHER DATA: See "Rochester B" Carburetors in Carburetion Section*

ROCHESTER 2G

Model	Rochester No.
283" (No Gov.) Early	7012035
283" (No Gov.) Later	7012453
283" (Vel. Gov.) Early	7012047
283" (Vel. Gov.) Later	7012455
283" (Vac. Gov.) Early	7012233
283" (Vac. Gov.) Later	7012457

►*MANIFOLD FUEL DISTRIBUTION: Carbur tor RIGHT barr l f ds Cyl. 2-3-5-8, LEFT barr l 1-4-6-7.*

Idl S tting - After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smooth idle with highest vacuum reading and RPM.

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto-Trans.) with selector lever in Drive.

Float Level - 1 19/64" (Gauge BT-144) with air horn inverted and gauge placed over float so it rests against pump side of power piston shaft and outer gauge leg in line with center of float. Adjust by bending float arm (Tool BT-69) between pivot and float.

Throttle Linkage Adjustment (Hydra-Matic Drive Trucks): See *CARBURETOR above.*

►*OTHER DATA: See "Rochester 2G" Carburetors in Carburetion Section*

ROCHESTER 4G

Model	Rochester No.
283" (3700 RPM Gov.)	7012303
283" (4000 RPM Gov.)	7011487

Idle Setting - Adjust idle mixture screws for highest steady vacuum.

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans.) with selector lever in Drive.

Throttle Linkage Adjustment (Hydra-Matic Drive Trucks): See *CARBURETOR above.*

►*OTHER DATA: See "Rochester 4G" Carburetors in Carburetion Section.*

CARTER BB

Carter (BB) 871SC (Forward Control Models). Single barrel updraft type with manual choke.

Idle Setting - ½-1½ turns open (turn screw out for richer mixture).

Idle Speed - 450-500 RPM (Synchro-mesh), 400-450 RPM (Hydra-Matic).

Float Level - Top of float (not seam) 0" to 1/32" below top of bowl with needle valve seated. Use Gauge J-818-13A on top edge of bowl (gasket removed).

Accelerating Pump - Inner hole (in plunger shaft and throttle lever) Summer. Outer hole, Winter.

Throttle Linkage Adjustment (Hydra-Matic Drive Trucks): See *CARBURETOR above.*

►*OTHER DATA: See "Carter BB" Carburetors in Carburetion Section*

CARB. EQUIPMENT

Fuel Pump: (6 Cyl.) AC No 4434 (fuel only), No 4433 (fuel & vacuum) (V8) AC No 4430 (fuel only)

- Not Maximum output. See Current Regulator.

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 28 ozs. (1102096, 114, 115; 1105116), 20 ozs. (1106676, 79, 80; 1106985).

Field Current - 1.69-1.79 Amps. (1102096, 114, 115), 2.73-3.0 Amps. (1105116), 2.14-2.28 Amps. (1106676, 79, 80; 1106985), all at 12 volts.

Belt Adjustment: 5/16" (6 Cyl.), 13/16" (V8) deflection midway between water pump and generator pulleys with light load applied to belt.

REGULATOR

Delco-Remy. Used as follows:

Regulator No.	Generator No.
1119001 (30 Amp.)	1102096
1119002 (35 Amp.)	1102114,5
1119604 (35 Amp.)	1105116
1119603 (45 Amp.)	1106676,985
1119606 (50 Amp.)	1106679,80

►*DOUBLE CONTACT REGULATOR NOTE: Regulators 1119603,4,6 have double contacts for voltage regulation. NOTE - Specifications below are for "NORMAL" settings.*

Cut out Relay

Cuts In - 11.8-13.5 volts (1119001,2), 11.8-13.0 volts (1119603,4,6).

Contact Gap - .020". **Air Gap** - .020".

Vibrating Regulator

Setting (1119001,2) - 13.8-14.8 volts.

Setting (1119603,4,6) - 13.8-14.6 volts (Upper contacts), .1-.3 volts lower (Lower contacts) at 125°F.

Contact Gap - (1119603,4,6) .016".

Air Gap - .075" (1119001,2), .067" (1119603,4,6), with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 12 Volt" and "Delco-Remy (Double Contact)" Regulators in Electrical Section.*

Current Regulator

Setting - 27-33 Amps. (1119001), 32-37 Amps. (1119002), 43-47 Amps. (1119603), 31.0-35.5 Amps.(1119604 at 125°F), 48-52 Amps. (1119606).

►*NOTE:* 1119604 is "Temperature Compensated" type.

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 12 Volt" and "Delco-Remy (Double Contact)" Regulators in Electrical Section.*

MISC. ELECTRICAL

Headlights: *Sealed Beam. 4-Headlight System. See "4-Headlight System" in Electrical Section.*

Directional Signals: *See Electrical Section*

Lighting Switch Removal: Disconnect all wires from switch (tag wires for reinstallation), depress switch shaft retainer (on top of switch) and remove knob and shaft. Remove retaining ferrule, remove switch.

Stop Light Switch Location: Attached to underside of toe pan at left of brake pedal.

LIGHTING CIRCUIT BREAKERS: Dual circuit breakers located in lighting switch.

15 Ampere. Protects headlamps and parking lamps.

15 Ampere. Protects all other vehicle lamps except instrument panel lights.

FUSES: 3 Ampere. Protects instrument panel lights.

Horn Relay: Delco-Remy 1116920.

Contacts Close - 5.0-9.5 volts.

Contact Gap - .027".

ENGINE

Engine Model	Type
Thriftmaster	235" 6 Cyl.
Jobmaster	261" 6 Cyl.
Trademaster (Light Duty)	283" V8
Taskmaster	283" V8
Super Taskmaster	283" V8

ENGINE SPECIFICATIONS: 6 Cyl & V8 valve-in-head.

Engine	Bore	Stroke	Displacement
Thriftmaster	3 9/16"	3 15/16"	235 cu. ins.
Jobmaster	3 3/4 "	3 15/16"	261 cu. ins.
Trademaster	3 7/8 "	3"	283 cu. ins.
Taskmaster	3 7/8 "	3"	283 cu. ins.
Super Taskmaster	3 7/8 "	3"	283 cu. ins.

Engine	Comp. Ratio	Rated HP	Developed HP
Thriftmaster	8.25-1	30.4	145 at 4200 RPM
Jobmaster	8.00-1	33.7	150 at 4000 RPM
Trademaster	8.5-1	48.0	160 at 4200 RPM
Taskmaster	8.00-1	48.0	175 at 4400 RPM
Super Taskmaster	8.00-1	48.0	175 at 4400 RPM

Compression & Vacuum Reading - *See TUNE-UP*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*

OIL PAN REMOVAL: (6 Cyl. Engines) - Raise front of vehicle and place on stands, drain lubricant and remove bolts and screws. *NOTE* - Turn crankshaft as necessary to allow clearance at front crossmember.

OIL PAN REMOVAL: (V8 Engine) - Raise front of vehicle and place on stands, drain lubricant. On 5, 6000 Series Trucks, remove oil level gauge and tube. Remove bolts and screws, lower oil pan.

ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data.*

CYLINDER HEAD & MANIFOLDS: *See "Cylinder Head & Manifold" in Chevrolet Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data.*

►*OTHER ENGINE DATA: See 1958 Passenger Car Pages and note the following:*

PISTON RINGS (6 CYL. ENGINES): 235" & 261" engines have "Chrome Plated" top compression rings. Other compression rings are cast iron. Oil rings are three piece steel (heavy chrome plate oil control rails used in 261" & 283" Engines).

VALVES: "Rotocoil Valve Rotators" used on 261" & 283" Engines with stellite faced and hard tipped exhaust valves.

VALVE LIFTERS (ALL ENGINES): Mechanical type cast alloy iron used on all engines except 283" engine which has Hydraulic Lifters.

VALVE TIMING (ALL ENGINES): As follows:

235" Thriftmaster & 261" Jobmaster

Intake Valve - Open 11°30'BTDC. Close 52°30' ALDC.

Exhaust Valve - Open 51° BLDC. Close 13° ATDC.

283" Trademaster & Taskmaster

Intake Valve - Open 12°30'BTDC. Close 57°30' ALDC.

Exhaust Valve - Open 54°30'BLDC. Close 15°30'ATDC.

Valve Timing Check (235" & 261" Engines): Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve opens and just starts to close and until triangular mark on flywheel lines up with pointer in flywheel housing opening. Mount dial indicator on rocker arm shaft support with stem contacting No. 1 exhaust valve adjusting screw, set dial indicator to .063". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .005". Reset No. 1 exhaust valve to correct running clearance.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: (235") 5 qts. Add 1 qt. with filter change. **(261")** 5 qts. Add 2 qts. with filter change. **(283" Trademaster)** 4 qts., **(283" Taskmaster)** 5 qts. Add 1 qt. with filter change.

Normal Oil Pressure - 35 lbs. at 2000 RPM.

Pressure Regulator Valve - In pump body, not adjustable.

Oil Pressure Indicator - AC No. 1508246. Not electric.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

►*OIL PUMP SCREEN NOTE:* Oil pickup pipe should be installed with pickup pipe screen horizontal and toward bottom of pan.

Oil Pump Overhaul - *See "Oiling System" in Chevrolet Special Data.*

Crankcase Ventilation (Standard): Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

Servicing - On all models with air cleaner mounted on valve rocker arm cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

Crankcase Ventilation (Optional): Positive Type. Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**

Servicing - Every 10,000 miles (or oftener if required), clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly.

►*VACUUM VALVE CAUTION:* If improper action of spring is suspected due to spring being distorted, or etched from corrosive action, the valve assembly should be replaced.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*TASKMASTER V8 CRANKCASE VENTILATION NOTE*

Positive type crankcase ventilation is Standard.

COOLING

Water Capacity: In quarts for each type engine

Model	Standard	Heavy Duty
3000 Series (235")	17	17½
4000 Series (235")	17½	18
4, 5-speed (261")	① 17	
3000 Series (283")	17½	18
4000 Series (283")	18	18½
5000 Series (283")	②	
6000 Series (283")	③	

① - Powermatic 21 ② - 4, 5-speed 18½, Powermatic 21
③ - 4, 5-speed 18, Powermatic 21½-

NOTE - Add 1 quart for heater

Pressure Valve: Radiator filler cap AC No RC1 (Std), 7 lb , AC No RC12 (5,6000 Series with Auto Trans), 9 lbs

Thermostat: Harrison In cylinder head water outlet (6 Cyl) In water outlet in intake manifold (V8)

Standard - No 3133595 (stamped 151) 151° Can be used for alcohol anti-freeze

Optional - No 3133596 (stamped 160) 160° No 3133597 (stamped 170) 170°

Temperature Gauge: AC Electric

Dash Unit - AC No 1513381

Engine Unit - AC No 1513321

See "Temperature Gauges" in Miscellaneous Section

Water Pump: Packless type with sealed ball bearing shaft

See "Water Pumps" in Chevrolet Special Data

CLUTCH

Own (Diaphragm Spring) and **Borg & Beck** (Coil Spring) types used Single plate, dry disc type

Chevrolet (Own) Diaphragm Clutch

6 CYL. ENGINES

P dal Adjustm nt: Pedal free travel ¾-1" To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork *NOTE* - Use finger pressure only when checking clutch free travel

R m val: Remove transmission (see Transmission Removal) Remove throwout bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench) Install Clutch Pilot Tool J-5824 (to support clutch), loosen all six cover bolts evenly remove assembly from below *CAUTION* - Do not allow pressure plate to hang on retracting springs (support by hand) When installing clutch align "X" mark on cover with "X" mark on flywheel

V8 ENGINES

Pedal Adjustment: Adjust clutch pedal until free travel is 1" Make sure that pedal pad contacts toeboard when pedal pressed down

Removal: Remove transmission (see Transmission Removal). Before removing clutch assembly, punch mark flywheel, clutch cover and one pressure plate lug so these parts may be assembled in their same relative positions Loosen hold-down screws evenly and remove cover *NOTE*—Mark flywheel side of driven plate for correct reassembly

TRANSMISSION

3-SPEED LIGHT DUTY

Own. Three speed, all helical gear type Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse)

See "Chevrolet 3-Speed (Light Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever *See "Transmission Controls" in Transmission Section*

Removal (½ & ¾ Ton): Drain transmission Disconnect speedometer cable at transmission and shift control rods from transmission levers Remove propeller shaft Remove the two top transmission to clutch housing capscrews and insert two transmission guide pins, Tool J-1126, in these holes Remove the two lower transmission to clutch housing capscrews Slide transmission straight back on guide pins until clutch gear is free of splines in the clutch disc

3-SPEED (HEAVY DUTY)

Own. Three speed, constant mesh (second & high), sliding gear (low & reverse)

See "Chevrolet 3-Speed (Heavy Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever

See "Transmission Control" in Transmission Section.

Removal: Same as for "3-Speed (Light Duty)" above

4-SPEED

Own. Four-speed, constant mesh, synchro-mesh, helical gear (2nd, 3rd, & 4th), sliding spur gear (low & reverse) Floor mounted gearshift.

Transmission Control: Floor mounted gearshift lever.

Removal (½ Ton). *See "3-speed (Light Duty)" above.*

Removal (Other Trucks): Drain transmission, disconnect parking brake and remove lever. Remove propellor shaft, transmission gearshift lever (use Tool J-8109) Remove screws that fasten steering jacket grommet to floor and slide grommet up jacket out of way Remove accelerator pedal and floor mat. Remove sheet metal screws attaching transmission cover to body floor, remove cover. On Forward Control Models, remove both front and rear floor pans. Disconnect speedometer cable from driven gear fitting at transmission rear bearing retainer. Remove two top attaching screws, insert Guide Pins J-1126, remove flywheel underpan, two lower transmission screws, slide transmission straight back, remove transmission from vehicle.

HYDRA-MATIC DRIVE

Dual Range. Four speed type with fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See Transmission S ction.*

►*TESTING & TROUBLE SHOOTING. S "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level in transmission every day Drain & refill every 25,000 miles Use only "Automatic Transmission Fluid" Type A

Checking Fluid Level—With selector lever in "N" position, parking brake set, and transmission at normal operating temperature, remove access hole cover plate in floor pan, and **check fluid lev l with engine at idling speed.** Add sufficient fluid to bring level in transmission to "F" mark on dipstick.

Capacity—8½ qts. (refill), 9 qts. (after overhaul) *NOTE*—1 qt additional with oil cooler

Throttle Linkage Adjustment: *S e CARBURETOR above.*

►*OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission S ction*

UNIVERSALS

Spicer. Needle bearing type.

FRONT AXLE

4-WHEEL DRIVE

Full floating hypoid gear type Differential assembly (ring gear and pinion assembly) is serviced in same manner as rear axle

See "Chevrolet 4-Wheel Driv " in Rear Axl S ction

Ratio - (½ Ton) 3 90-1 (¾-Ton) 4 57-1 (1-Ton) 5 14-1

Removal: Separate propeller shaft from front axle differential Place jack stands behind front springs Disconnect drag link from steering arm Disconnect brake hoses, shock absorbers from spring clamp plate Remove "U" bolts roll axle from under truck

Axle Shaft Assembly Removal: Remove front wheel (¾ and 1-ton) and drum (½-ton) Remove hub cap and drive flange stud nuts Remove drive flange-to-axle shaft retaining snap ring, drive flange and shim *NOTE* - Use screws in tapped holes in flange (if necessary) to force flange from shaft, then replace plastic plugs Use Tool J-6893 (½-ton), J-6649 (¾ & 1-ton) to remove outer locknut Remove lock and inner locknut Remove hub assembly (½-ton), drum and hub assembly (¾ & 1-ton), but do not drop loose outer bearing from bore of hub Remove brake and spindle assembly mounting nuts (½-ton), brake assembly and spindle Remove brake and spindle mounting nuts (¾ & 1-ton), then remove slinger Remove axle shaft and joint assembly

Installati n: Install axle shaft and joint assembly, being careful not to damage seal with shaft splines Seat

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

spindle-to-steering knuckle studs (flat side up to clear brake cylinder on ½-ton), then position brake assembly (½-ton) and slinger (¾ & 1-ton) over studs and tighten stud nuts to 50-60 ft lbs Install hub over spindle (½-ton), drum and hub assembly (¾ & 1-ton) *NOTE* - Lubricate bearings before assembly and DO NOT damage seal Install inner nut and tighten wrench tight, then back off 1/8 turn Hub should be free to turn Install lock and outer locknut (against spacer on ¾ & 1-ton) Install shim and drive flange *NOTE* - Add only enough shims (.010") as necessary for flange to clear end of axle ball housing *CAUTION - Shims in excess of .030" will cause excessive wear of spindle bushing and inner race with the installation of the snap ring.* Install snap ring and flange nuts Tighten flange nuts to 18-20 ft lbs (½-ton), 32-38 ft. lbs (¾ & 1-ton) Install hub caps and lubricate front axle

REAR AXLE

SEMI-FLOATING (HALF-TON)

Own. Semi-floating, hypoid gear type with Hotchkiss drive. *NOTE*—Same design as passenger car axle.

See "Chevrolet Hypoid Semi-Floating" in Rear Axle Section.

Ratio - (Synchro-mesh & Hydra-Matic) 3.90-1 (39-10) Std., 3.70-1 (37-10) Opt'l

►*AXLE SHAFT NOTE:* Shafts unequal length (right shaft longer) and may be identified by mark stamped on shaft, or by length as follows:

Axle	Part No.	Length
Left	3694769 Ⓒ	29 5/8"
Right	3694770 Ⓒ	30 5/8"

Ⓒ - Part No. stamped on axle for identification

Backlash - .005-.008"

Axle Shaft Removal: Remove wheel and brake drum Drain rear axle lubricant, remove housing cover Remove differential pinion shaft lockscrew, pinion shaft, axle shaft spacer and pinions Push axle shaft in toward center of car and remove "C" washers from inner ends of shaft, then remove axle shaft

Axle Shaft Endplay - Free fit to .014" maximum

Differential Carrier Removal: Remove axle shafts to clear differential side gears, *see "Axle Shaft Removal"*. Separate rear universal joint (tape bearings to trunnion) Remove differential carrier to housing bolts and separate carrier from housing

FULL-FLOATING (¾, 1, 1½ & 2-TON)

Own. Full-floating hypoid (straddle mounted pinion) with Hotchkiss drive

See "Chevrolet Truck Hypoid Full Floating" in Rear Axle Section

►*AXLE RATIO IDENTIFICATION NOTE:* Axle ratios are identified by prefix letters in rear axle numbers stamped on top of carrier housing between reinforcing ribs

Axle Ratio Identification

Ratio	Prefix Letters
4.57-(32:7)	CC,DC,CP
5.14-1 (36:7)	CA,CB,CE,CF,CG
6.17-1 (37:6)	CG
7.2-1 (36.5)	CM

Backlash - .005-.008"

Removal of Differential Carrier: Drain lubricant, remove axle housing cover and axle shafts, see axle shaft removal below. Remove two trunnion bearing "U" bolts from rear yoke and split rear universal joint (hold bearings on trunnion with tape). Remove bolts and lockwashers holding carrier to axle housing, support carrier in floor jack and roll from under truck.

Axle Shaft Removal (¾ & 1-Ton): Remove eight capscrews and lockwashers in axle shaft flange, install two ½"x13" screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket. *Use new gasket when installing shaft.*

Axle Shaft Removal (1½ & 2-Ton): Remove hubcap, then thread Tool J-1436-1 into hole in axle shaft and use slide hammer to remove shaft

NOTE—When reinstalling axle shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines

►**Axle Shaft Note:** Shafts unequal length (right shaft longer than left). Install in correct position.

Wheel Bearing Adjustment: Remove wheels and axle shafts (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight, using special wrench J-2222 (¾ & 1-Ton), J-870 (1½ Ton), J-5670 (2-Ton) while turning hub by hand, then back off nut 45°, check for free turning, install adjusting nut lock with lock tangs aligned with slots in adjusting nut. Bend tang down into notch in adjusting nut, install locknut and tighten securely. Bend tang of lock down into notch of locknut.

PLANETARY 2-SPEED

Own. Full-floating, two-speed planetary reduction type. with hypoid primary pinion and ring gear.

See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.

Axle Ratio - 6.40-1 (high), 8.72-1 (low) 35:6 Primary gears

Two-Speed Shift Control: Vacuum power type with control on gearshift lever.

Carrier Assembly Removal: *See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.*

Axle Shaft Removal & Wheel Bearing Adjustment: Same as for "Standard Full-Floating" above.

SHOCK ABSORBERS

Delco. Direct Acting (Airplane Type) shock absorbers as follows:

Shock Absorber Nos.	Front	Rear
½, ¾, 1 ton (Exc. Fwd. Contr.)	5532049	5534435
½, ¾, 1 ton Fwd. Contr.	5513193	5513349
1½, 2 ton (Exc. Fwd. Contr., Sch. Bus)	5521698	5534401
1½ ton Sch. Bus	5521698	5320846
2 ton Sch. Bus	5521699	5534401

FRONT SUSPENSION

2-WHEEL DRIVE

Conventional "I" Beam Section, with Reverse Elliott ends and semi-eliptic springs

Kingpin Inclination - 6.16-8.18° (Exc. 6242,6642 with Eaton Axle), 4° (6242,6642 with Eaton Axle)

Caster (At Designed Load) - Pos. 1.5° (31,3200), 3.0° (.3600), 2.25° (3800), 2° (34,35,37,41,44,45,5000), 2.25° (6000), 2.75° (6242,6642)

Camber - 1.25-1.75° (Exc. 6242,6642 with Eaton Axle), 1°30' (6242,6642 with Eaton Axle)

Toe-In - 13-.22" (31,3200), 25-.31" (All Others)

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be 22.5-23.5°.

4-WHEEL DRIVE

Optional on some ½, ¾ and 1-Ton models

Kingpin Inclination - 8°

Caster - 1¾° Not adjustable

Camber - 1½°. Not adjustable

Toe-In - 1/32-5/32" *NOTE* - Adjust tie rod ends Fine thread end changes toe-in ¼" per turn, coarse end 9/32"

STEERING

Manual: Saginaw Ball Bearing Worm & Nut (recirculating ball).

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Bendix Linkage Type — *See "Chevrolet Truck (Bendix)" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

►*NOTE: Two differential type brakes used on trucks as indicated below.*

Chevrolet-Bendix (Front - 3,4,5,6000 Series), (Rear -

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

3000 Series) - Duo-Servo, single anchor type hydraulic (Without ecce ntric adjustment)

S e "Chevrolet-Bendix Hydraulic" in Brake Section

►*HALF-TON TRUCK BRAKE SHOE GRINDING CAUTION.* If bench type grinder used, grind shoes to 057"-087" smaller diameter than drum size If spindle type grinder used, grind shoe to drum diameter

Chevrolet-Twinplex (Rear-4,5,6000 Series) - Two cylinder, four anchor type hydraulic Shoes are self-centering and self-energizing

S e "Chevrolet-Twinplex" in Brake Section

Wheel Cylinders - Size stamped on housing under adjusting lock spring

Drums - Cast iron with steel web

Model	Drum Diameter Front	Rear
1/2-Ton	11"	11"
3/4-Ton	12"	©12"
1-Ton	12"	14"
1½ & 2-Ton	14"	15"

© - On Fwd Contr models

Lining - Molded type Bonded on 1'2-ton models, riveted on all other models

Model	Thickness	Width
1/2-Ton (Front Whl)	3/16"	2"
1 '2-Ton (Rear Whl)	3/16"	1¾"
3/4-Ton (Front & Rear)	1/4"	© 2"
1-Ton (Front Whl)	1/4"	2"
1-Ton (Rear Whl)	1/4"	2½"
1½ & 2-Ton (Front Whl)	1/4"	2½"
1½ & 2-Ton (Rear Whl)	3/8"	4"

© - On Fwd Contr models

Clearance - Adjust for clearance as follows·

All Models (Except 1½ & 2-Ton Rear Brakes)—Remove adjusting hole cover and turn brake adjusting screw until light drag is felt, then back off adjusting screw 7 notches (Half-Ton Models), or just enough to eliminate brake drag (Other Models), but not more than 7 notches

Rear Wheels (1½ & 2-Ton Models)—Remove adjusting hole covers from flange plate and turn rear adjusting screw until slight drag is felt, then back off 3 notches. Repeat on front adjusting screw (2 adjustments on each wheel)

Parking Brakes: Hand lever applies rear wheel service brakes on Half-Ton & ¾-Ton Models, and an independent brake on propeller shaft on all other models.

Adjustment (½ & ¾-Ton Models)—*See "Chevrolet-Bendix Hydraulic" in Brake Section.*

Adjustment (1, 1½, 2-Ton Models & ¾-Ton with 4-Speed Transmission)—*See "Chevrolet Twinplex" in Brake Section.*

Master Cylinder: Located under floorboard on left hand side of truck

Checking Fluid—Maintain fluid level to lower edge of filler hole.

Removal—Remove from below. *CAUTION*—On 1½ & 2 Ton Low Cab Forward, spacer between cylinder and body bracket will fall out when mounting bolts removed.

Installation—Reverse removal procedure. On LCF Models make sure the spacers are reinstalled

Power Brakes: *See "Hydrovac Power Unit" in Brake Sect.*

Removal—Remove vacuum line, brake fluid line to wheel and master cylinders, and air cleaner hose from vacuum unit. Remove nuts and bolt securing unit to its bracket on right side rail of frame.

MISC. MECHANICAL

Windshield Wipers: Linkage type Vacuum motor used on 3,4000 Series, New Electric Motor used on all ther models

See "Windshield Wipers" in Misc llaneous S ction.

►*JACKING & HOISTING CAUTION (ALL MODELS):* Before jacking or hoisting, see *"Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

Model	Series	Series Prefix
Biscayne, Brookwood Ⓒ	1100	A

Ⓒ - Station Wagons.

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post. *NOTE* - Number (example below) includes identification data.

① ② ③ ④

A 59 F 100001

① - Series. See Series Table above.
② - Year - 1959.
③ - Assembly Plant. See Assembly Plant Table below.
④ - Unit Number. Continuous for all cars at each assembly plant starting with 100001.

Assembly Plant Designation

A - Atlanta	**J** - Janesville	**N** - Norwood
B - Baltimore	**K** - Kansas City	**O** - Oakland
F - Flint	**L** - Los Angeles	**S** - St. Louis
G - Pontiac	**W** - Willow Run	**T** - Tarrytown

ENGINE NUMBER: Stamped on pad on right side of engine block directly above oil level dipstick (to rear of distributor). *NOTE* - Number (example below) includes identification data.

① ② ③

T 101 A

① - Engine Plant. **F** - Flint, **T** - Tonawanda, **C** - Engines built in Canada.
② - Code number indicating month and day of manufacture. This is not an individual or continuous number.
③ - Engine type. **A** - With 3-speed transmission, **B** - With Powerglide, **AE** - With heavy duty clutch.

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. minimum with all cylinders equal within 20 lbs. at cranking speed.

VACUUM READING: 17-21" steady at idling speed.

VALVE TAPPET CLEARANCE: None in service (Hydraulic). For initial tappet clearance, see *"Valve System" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation. Should require ½ turn from unhooked to hooked position. Replace distorted spring.

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .035".

Spark Plugs - AC No. 44.

COIL: Delco-Remy 1115120.

Ignition Current - 1.8 amps. idling, 4.0 amps. stopped.

Resistor - Resistance type cable used in harness between bulkhead disconnect plug and starter solenoid bypass terminal (in coil primary circuit for regular operation). Bypassed during cranking when coil energized directly from starter solenoid bypass terminal.

DISTRIBUTOR: Delco-Remy 1112403.

Condenser - Delco-Remy 1928111. **Capacity** .18-.23 mfd.

Contact Point Set - Delco-Remy 1924571.

Breaker Gap - .016".

Cam Angle - 28-35° with .016" gap.

►*BREAKER GAP CAUTION: Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension - 19-23 ozs.

Rotation - Clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center "0" position.

Vacuum Spark Control: Delco-Remy 1116140.

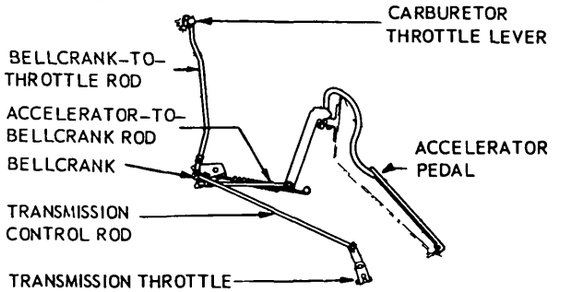
Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4-6
10-12	20-24	15-16

IGNITION TIMING

Setting - 5° BTDC at idle speed with vacuum line disconnected. *NOTE - Supersedes previous specification of TDC and will give better economy.*

Timing Mark - First short vertical line on flywheel, clockwise from steel timing ball (TDC) insert. Line up with pointer in inspection hole in right front face of housing with Octane Selector set on "O".



CARBURETOR

►*CARBURETOR APPLICATION: Rochester BC single barrel carburetor used.*

►*WARM ENGINE HARD START CORRECTION (Auto. Trans.):* When engine tune-up does not correct condition, set choke cover one notch lean of index mark.

►*CARBURETOR THROTTLE BODY TO FLOAT BOWL SEALING CORRECTION:* When throttle body to float bowl screws work loose, install new gasket (black in color) released for current models.

THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE CARS): 1) Disconnect control rod from throttle lever at transmission cover. Remove lower bolt at rear of transmission side cover. Rotate throttle valve control outer lever counterclockwise to open throttle position. 2) Hold lever in this position and with throttle valve outer lever Gauge J-5906 set at 7.09", measure distance from left side cover lower rear bolt to hole in throttle lever. If pins of gauge will enter holes, adjustment is correct. If necessary to adjust, loosen lever to clamp attaching screw and adjust lever on throttle shaft as necessary. Reconnect throttle rod. 3) Disconnect bellcrank-to-transmission throttle lever rod at throttle valve lever. Disconnect accelerator-to-bellcrank rod at bellcrank. 4) Force bellcrank-to-transmission throttle lever rod forward against its stop in transmission (open throttle position) and adjust bellcrank-to-carburetor throttle rod for free entry of swivel pin in throttle valve lever, with carburetor throttle valve in wide open position. 5) With carburetor throttle valve held in wide open position and accelerator fully depressed, adjust accelerator-to-bellcrank rod for free entry of swivel pin into hole in bellcrank.

CHEVROLET 6 CYL. POWERGLIDE THROTTLE LINKAGE

ROCHESTER BC

Rochester BC. Single barrel carburetor used as follows:

Model	Rochester Carburetor No.
Synchro-mesh (Std.)	7013003
Synchro-mesh (Governor)	7013005
Synchro-mesh (Economy)	7013953
Powerglide (Std.)	7013000
Powerglide (Governor)	7012502
Powerglide (Economy)	7013956

Idle Setting - 1½ turns open. 2½ turns open after engine temperature normal..

Idle Speed - 475 RPM Synchro-mesh, 450 RPM Powerglide in "D".

Float Level - 1 9/32" (Gauge M-250). With air horn inverted and gasket in place, position Gauge M-250 over floats with tang inserted in discharge nozzle. Bend float arms as necessary so that top of each float just touches gauge and float is centered between gauge legs.

Float Drop - Bend float tang as necessary to obtain a distance of 1¾" from gasket surface to bottom of float, with air horn upright and float hanging free

Choke Adjustment: 1 notch lean (Synchro-mesh), centered on index (Powerglide).

Fast Idle: With fast idle adjusting screw on second step and against high step of fast idle cam, Gauge BT-99 (.076") should just slide between lower edge of choke valve and bore. To adjust, bend connector rod.

Throttle Linkage Adjustment: See *CARBURETOR above.*

►*OTHER DATA:* See *"Rochester BC Carburetors" in in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type. Fuel only.

Replacement Fuel Pump - AC 4434.

Pressure - 3½-4½ lbs. at 450-1000 RPM.

See *"Fuel Pumps" in Carburetion Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Gas lin Gaug : AC Electric type.
Dash Unit - AC No. 5640248.
Tank Unit - *See table below.*

BATTERY

D lco. 2SMR53W. 12 volt, 9 plate, 53 ampere hour capacity (20 hr. rate).
Battery Ground - Negative.
Engine Ground - Engine to cowl at rear head bolt.

STARTER

D lco-Remy 1107652. Armature - 1932185.
Drive - Overrunning clutch (solenoid pinion shift).
R tation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	6200-9400	10.6	49-76
	Lock	4.25	270-310

Ⓒ - Includes solenoid.

Starting Switch: Delco-Remy Solenoid Switch 1119919 mounted on starter and controlled by Ignition & Starter Switch 1116556.
S e "Delco-Remy Starter Solenoid (Without Relay)" in El ctrical Section.

N utral Safety & Back-up Light Switch: Delco-Remy 1998677 used with Powerglide cars.
See "Chevrolet Powerglide" in Transmission Section.

GENERATOR

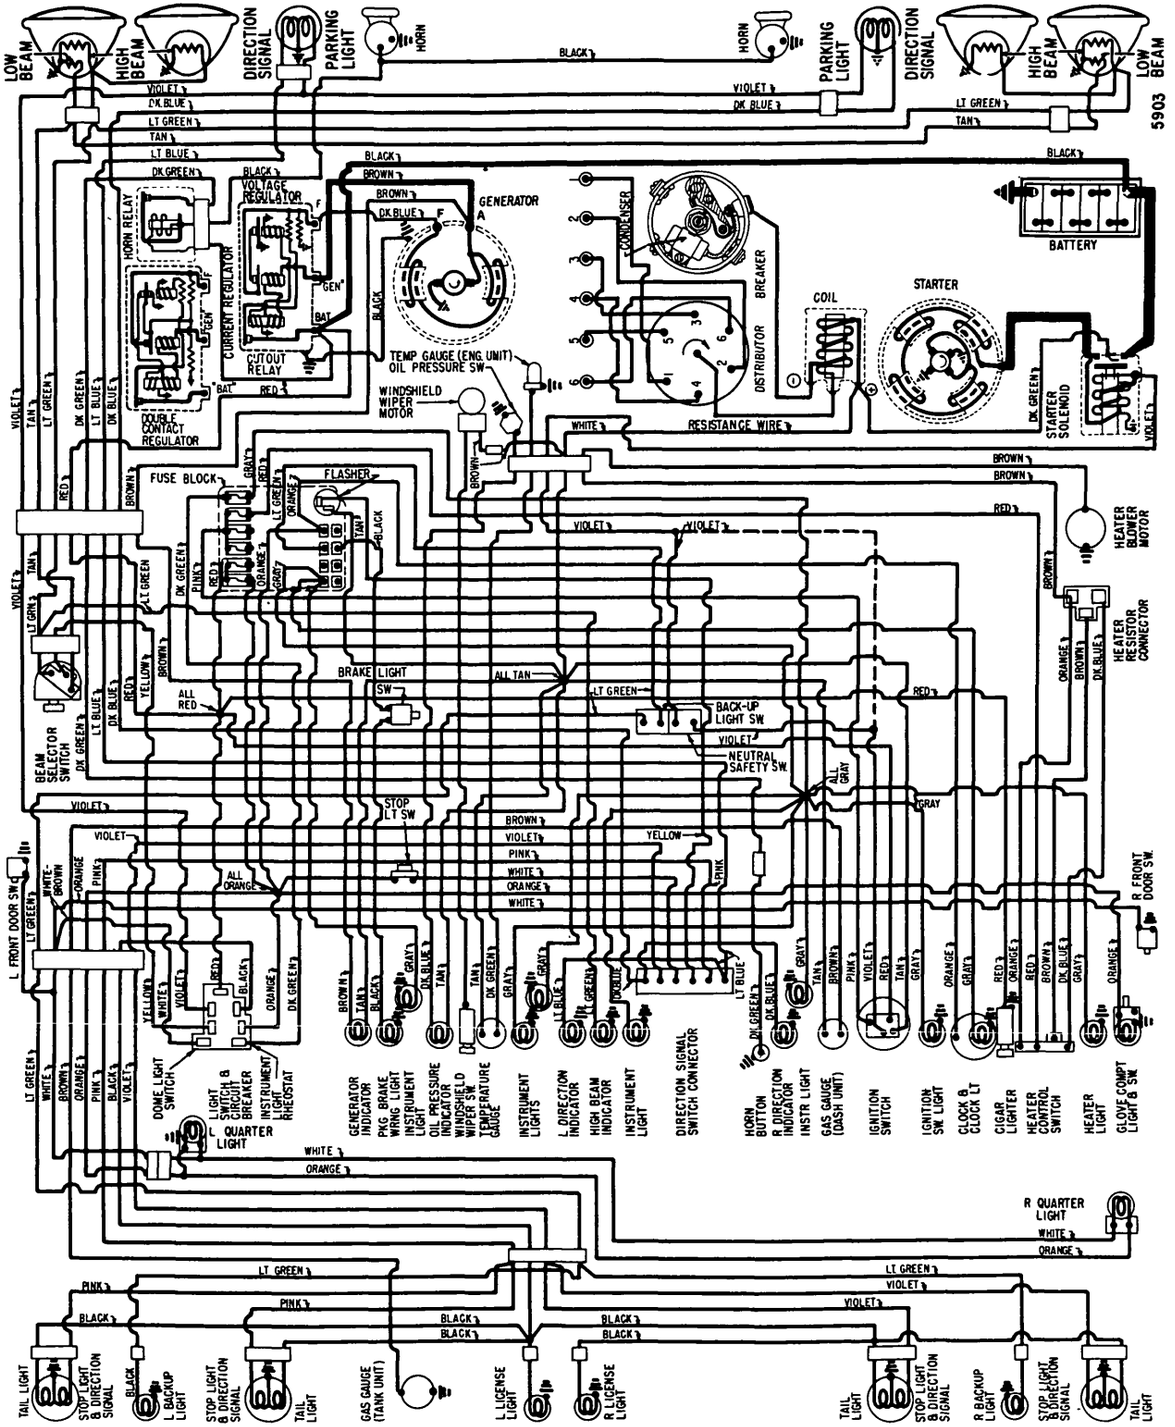
D lco-Remy. Used as follows:

Application	Generator	Armature
Standard	1102096	1923535
Air Cond.	1102114	1940737
Pwr. Strg.	1102115	1940313
Spec. Equip.	1106985	1927074

Performance Data

Generator	Amperes	Volts	RPM
1102096	30	14.0	2240
1102114, 115	35	14.0	2630
1106985	45-50	13.0	1400

R tation - Counterclockwise at commutator end.
Brush Spring Tension - 28 ozs.
Field Current - 1.69-1.79 amps. at 12 volts and 80°F.
B lt Adjustment: 3/8" deflection under 15 lb. load midway between generator and fan pulleys.



REGULATOR

D lco-Remy. Used as follows:

R gulator No.	Generator No.
1119001	1102096
1119002	1102114,5
1119603	1106985

►*DOUBLE CONTACT REGULATOR NOTE: Regulator 1119603 has d ubl c ntacts for v ltag r gulati n.*

Cut ut R lay

Cuts In - 11 8-13 5 volts (1119001 2) 11 8-13 0 volts (1119603)

C ntact Gap - .020". **Air Gap** - .020".

V ltage Regulator

S tting - (1119001,2) 13.8 - 14.8 volts at 125° F.

Setting - (1119603) 13.8-14.6 volts (Upper contacts), .1-.3 volts lower (Lower contacts) at 125° F.

C ntact Gap -- (1119603) .016" (Upper contacts) with lower contacts just touching.

Air Gap - .075" (Exc. 1119603), .067" (1119603)with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

Curr nt Regulator

Setting (1119001) - 27-33 amperes.

Setting (1119002) - 32-37 amperes.

Setting (1119603) - 43-47 amperes.

Air Gap - .075". With armature pressed down to point where contacts just touch.

Ch cking & Adjusting - *See "Delco-Remy 12 Volt Regulators" and "D lco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Dual Headlights (4-Headlight System). *See "4-Headlight System" in Electrical Section.*

Dir ctional Signals: *See Electrical Section.*

Autr nic Eye: *See Electrical Section.*

Lighting Switch Removal: Pull handle out to "ON" position. Depress switch shaft retainer (under dash) and remove knob and shaft assembly. Remove retaining ferrule and escutcheon, then remove switch assembly. Disconnect multi-plug connector. *NOTE* - Use screwdriver inserted in side of switch to pry plug from switch.

Stop Light Switch Location: Mechanical type mounted under dash in contact with brake pedal.

Adjustment - Adjust position of switch so that stop light comes on when brake pedal is depressed 5/8" from fully released position.

CIRCUIT BREAKERS: A circuit breaker located in main lighting switch protects headlights and parking lights.

FUSES: Fuses contained in fuse block beneath dash on left side except as noted.

►*TAIL LIGHT FUSE CAUTION:* Fuse block may be marked for 10 amp fuse. Destroy marking and make sure 15 amp. fuse is installed.

20 Ampere - Heater & Air Conditioning.

15 Amp r - Tail, Stop, Courtesy, Glove Box, License Plate, Dome Lights and Clock.

10 Amp re - Back-up lights, Brake Warning light

9 Amp r - Overdrive. In wiring harness on engine side of dash.

3 Amp r - Instrument & Clock lights.

ENGINE

►*1950-58, 59 ROCKER ARM IDENTIFICATION NOTE: See "Rocker Arms" in Chevrolet Special Data*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data*

OIL PAN REMOVAL: Drain crankcase. Raise and support car Drain cooling system and disconnect radiator hoses at radiator Disconnect battery ground strap at engine. Disconnect fuel pump inlet pipe at pump. Disconnect accelerator control rod at its lever. Remove overdrive solenoid. Disconnect power brake hose at check valve. Remove oil filter and support bracket Remove nuts and gasket at exhaust pipe flange-to-exhaust pipe connection. Disconnect lower transmission control rods at transmission. Disconnect clutch fork pushrod at clutch fork Disconnect all clutch control assembly from engine. Loosen transmission, and remove engine front mounting bolts. Remove hood Lift engine with Tool J-4536 about 3" or until valve rocker cover contacts dash upper panel Remove oil pan retaining bolts and screws. On synchro-mesh cars, remove flywheel underpan extension Remove pan

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Chevrolet Special Data*

ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data*

PISTONS

Aluminum alloy, cam ground, tin plated, with pin offset 5/64"

Removal - Pistons and rods removed from above

Clearance - .0005-.0011" Measured 1 29" from top of piston Selective fit

►*STANDARD & 001" PISTON NOTE* Standard and 001" pistons are furnished in two sizes as follows

235" Engine - Std. - Marked S4 (3 5625-3 5630"), **S5** (3 5630-3 5635"), **.001" Oversize** - Marked **S6** (3 5635-3 5640"), **S7** (3 5640-3 5645")

261" Engine - Std. - Marked **S4** (3 7500-3 7505"), **S5** (3 7505-3 7510"), **.001" Oversize** - Marked **S6** (3 7510-3 7515"), **S7** (3 7515-3 7520")

Fitting New Pistons: Use 0015" x ½" feeler (part of Tool J-5513) With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole) Pull required to withdraw feeler must be 7-18 lbs

Installing Pistons: Install piston with notch in piston and mark "Front" toward front of engine

Replac m nt Pistons: Furnished Std & 001", 020", 030", 040" Oversize

PISTON PIN

Locked in rod No bushing used in piston

Diam t r - **235" Eng.** - 8660- 8665" **261" Eng.** - 9270-9275"

Pin Fit in Piston - .00015- 00025" clearance With both piston and pin at 70°F, and light film of oil on pin, pin should hold own weight in either piston pin boss. It should be possible to install pin in piston with thumb pressure

Replacement Pins: Furnished Std. & .0015", .003", .005" Oversize

PISTON RINGS

Ring	Width	End Gap	Side Clearanc
Compr.(1&2)	.0930- 0935"	...①.....	...②
Oil(3).	181-.188"	..③.015-.055"	.....000-.008"

①- (235" Eng.) .007-.020". (261" Eng.) .010-.020"

②- (235" Eng) .002-.004" (261" Eng.) .002-.0035".

③- On Rails

Replacement Rings: Furnished Std., .020", .030" and .040" Oversize.

►*RING INSTALLATION CAUTION:* Install Compression rings with side marked "GM" up.

CONNECTING RODS

Length - 6 81" Center-to-center

Crankpin Journal Diameter - 2 311-2 312".

Lower Bearing - Replaceable precision type.

Clearance - 001- 003" (New), 001-.004" (Used).

Sideplay - 005- 012"

Replacement Bearings: Std & 001", 002", .010", 020" Undersize

Installing Rods: Install rods with piston pin clamp and number on rod lower end toward camshaft

CRANKSHAFT

Journal Diameters - **(1)** 2 6825-2.6845", **(2)** 2.7145-2 7155", **(3)** 2 7455-2 7465", **(4)** 2.7765-2 7775"

Clearance - 001- 003" (New), 001- 004" (235" Eng. Used), 001- 0045" (261" Eng - Used).

Bearings - Thin wall babbitt with steel back

Bearing Adjustment: Precision type. Replace bearings.

End Thrust - Taken by No. 3 (rear intermediate) main bearing

End Play - 003- 009"

Replacement Bearings: Furnished Std. & 002", 010", 020", 030" Undersize

Bearing Installation: Can be replaced without removing engine

See "Crankshaft & Main Bearings" in Chevrolet Special Data

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chevrolet Special Data*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data*

Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data*

CAMSHAFT

Journal Diameters - **(1)** 2 1537-2 1547", **(2)** 2 0912-2 0922", **(3)** 2 0287-2 0297", **(4)** 1 9662-1 9672"

►*NOTE* Journal out-of-round limits 001" Run-out limits 002"

Bearing Type - Steel backed babbitt lined bushings, no reaming required

Clearance - 0015- 0035"

End Thrust: Controlled by spacer and thrust plate behind camshaft sprocket

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

End Play - 001- 005"
Timing Gear: Fibre camshaft gear, steel crankshaft gear
Back Lash - 003- 005"
Replacement Timing Gears & Installation: *See "Timing Gears" in Chevrolet Special Data*
Camshaft Setting: Timing is correct when timing marks on gears are together
Camshaft Removal & Replacement: *See "Camshaft & Bearings" in Chevrolet Special Data*
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data*

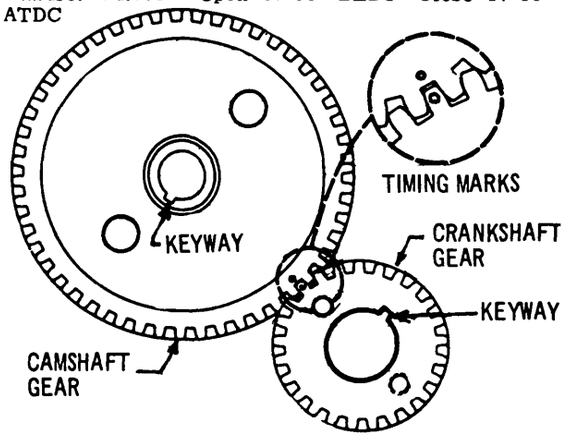
VALVES

Tappet Clearance: (Pass. Cars) - None in service (hydraulic).
Initial Tappet Clearance (Engs. with Hydraulic Lifters) - *See "Valve System" in Chevrolet Special Data*
(Trucks) - 235" Eng - 006" Intake, 018" Exhaust, Hot, 261" Eng - 006" Intake, 020" Exhaust, Hot
See "Valve System" in Chevrolet Special Data

	Head Diam	Stem Diam.	Length
Intake	1 870-1 880"	3410- 3417"	6 376-6 396"
Exhaust	1 495-1 505"	3410- 3417"	4 913-4 933"

Valve	Seat Angle ℂ	Lift	Stem Clearance
Intake	②30°	3275"	0010- 0027"
Exhaust	②45°	3275"	0013- 0030"

ℂ - Valve face angle 29° Intake, 44° Exhaust
② -Valve face and seat angle specifications are service specifications New engine specifications are Seat angle - 31° Intake, 46° Exhaust Face angle - 30° Intake, 45° Exhaust



►*VALVE GRINDING CAUTION* Replacement valves are furnished with face angles of 30° and 45° When seats are ground to recommendations of 30° and 45°, valves must be faced to recommended angle of 29° Intake, 44° Exhaust

►*VALVE STEM END GRINDING CAUTION (261" Eng)* DO NOT grind hardened valve stem tip excessively on 261" Engine
Valve Seat Width - 235' Eng. 1/16-3/32" (Int & Exh)
261" Eng. - 1/16-3/32" (Int), 3/32-1/8" (Exh)
Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data*
Valve Guides: Precision type, pressed in head
Valve Guide Installation - *See "Valve System" in Chevrolet Special Data*
Valve Springs: Install springs with closed coil end down
Free Length - (235") 2 5/32", (261") 2 9/32"

Spring Specifications

Valve (All)	Pressure	Length
Closed	62-68 lbs	1 858"
Open	158-168 lbs	1 528"

►*VALVE SPRING HEIGHT CAUTION* Check installed height of valve springs If distance from spring seat in head to top of valve spring exceeds 1 55/64", install shim approximately 1 16" thick. At no time should shim spring be installed to obtain installed height of less than 1 51/64"
Valve Lifters (Pass Cars): Hydraulic type *See "Valve System" in Chevrolet Special Data*
Valve Lifters (Trucks): Mechanical type. Removed from above
Rocker Arm Assembly: *See "Valve System" in Chevrolet Special Data* **VALVE TIMING**
See "Camshaft Setting" under CAMSHAFT above
►*VALVE TIMING NOTE:* Specifications are for valve timing with Zero valve lash. *See Valve Timing Check*
Intake Valves - Open 16° BTDC Close 48° ALDC
Exhaust Valves - Open 46°30' BLDC Close 17°30' ATDC

CHEVROLET 6 CYL. VALVE TIMING MARKS

Valve Timing Check - *CAUTION* It will be necessary to replace the hydraulic valve lifter and pushrod operating No 1 exhaust valve, with a conventional lifter and pushrod) Remove all tappet clearance from No 1 exhaust valve Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer on right face of flywheel housing Mount dial indicator on rocker arm shaft with stem of indicator contacting No 1 exhaust valve adjusting screw and set dial indicator to 063" Turn crankshaft until indicator hand just stops moving Timing is correct if indicator reading is ZERO plus or minus .005" A greater or lesser reading indicates either excessive gear wear or improperly installed timing gears Reset tappet clearance to specifications

OILING SYSTEM

►*ENGINE OILING SYSTEM See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data*
Crankcase Capacity: 5 qts (refill), 5½ qts (dry)
Normal Oil Pressure: 35 lbs at 2000 RPM
Pressure Regulator Valve - In oil pump body Not adjustable
Oil Pressure Indicator - Light located at right side of instrument cluster, controlled by pressure switch, AC No 1508753 located in main oil gallery on left side of engine Switch closes when pressure drops to 4-7 lbs
Oil Pump: Gear type Located in crankcase, driven by distributor gear
Oil Pump Overhaul - *See "Oiling System" in Chevrolet Special Data*
Oil Filter Element: AC P-115.
►*ROCKER ARM OIL LEAD NOTE* Drilled orifice in cylinder block has been increased in size from 1/16" to 11/32" and the overflow end of oil connector has been closed to sustain oil pressure in rocker shaft
Crankcase Ventilation (Standard): Air intake through breather filter in valve rocker arm cover and outlet through crankcase breather pipe on right side of engine
Servicing - Clean breather filter in a good solvent every 2 000 miles then oil mesh with light engine oil
Crankcase Ventilation (Optional): Positive Type. Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds **Valve must close at idling to give proper air-fuel mixture.**
Servicing - Every 10,000 miles (or oftener if required) clean vacuum pipe, valve, and filler pipe thoroughly Filler cap gasket must seal tightly
►*VACUUM VALVE CAUTION·* If improper action of spring is suspected due to spring being distorted, or etched from corrosive action, the valve assembly should be replaced

COOLING

►*RADIATOR REMOVAL CAUTION (POWERGLIDE CARS) Transmission oil cooler is part of radiator lower tank and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material*
Water Capacity: 16½ qts Std , 17½ qts with heater
Pressure Valve: Radiator filler cap, AC No 850800, AC type RC-6, 13 lb
Thermostat: Pellet type In cylinder head water outlet
►*THERMOSTAT INSTALLATION NOTE* 170° thermostat used as standard in production beginning with Engine No F1119 160° & 180° thermostats optional Use 160° thermostat with Methanol type anti-freeze
Temperature Gauge: AC electric
Dash Unit - AC No 1513665
Engine Unit - AC No 1513321
See "Temperature Gauges" in Miscellaneous Section
Water Pump: Packless type with sealed ball bearing shaft *See "Water Pumps" in Chevrolet Special Data*

CLUTCH

Own. Diaphragm Spring type 10" (Std), 11" (H D)
See "Chevrolet (Own)" in Clutch Section

Clutch Disc -	Wov n-Ch vr l t N	.-Mold d
9½" 1st Design	ℂ 3754604	3743502
9½" 2nd Design	3769724	3769723
11" Hvy Dty	3754603	

ℂ - Hub painted white

Pedal Adjustment: (Preferred Method) - Disconnect forward end of clutch fork pushrod from cross shaft lever Hold fork pushrod rearward (to remove all lash), then adjust swivel on pushrod so conical point lines up with "dimple" in cross shaft lever This will give desired 060" clearance between bearing and clutch spring This procedure provides free travel setting of ¾-1"

Over-Center Spring Adjustment: Loosen adjusting hook nut at back of pedal bracket and turn jam nut to obtain an installed length of 10 5/16" for over-center spring. Tighten nut to 8-12 ft. lbs.
Removal· Remove transmission (see Transmission Removal below). Remove throwout bearing from fork. Remove clutch fork tension spring from fork, disconnect clutch fork pushrod. Remove clutch fork by forcing it forward and toward center of vehicle. Install Clutch Pilot Tool J-5824, to support clutch assembly during

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

removal. Loosen clutch attaching bolts one turn at a time until diaphragm spring is released. Remove Pilot Tool, then remove clutch assembly from car.

SYNCHRO-MESH TRANSMISSION

Oper. Three speed synchro-mesh.

See "Chevrolet 3-Speed" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: 1) Drain transmission and disconnect speedometer cable and shift rods. Remove propeller shaft center bearing support bolts. Separate rear universal joint and pull propeller shaft assembly to rear under axle housing.

2) Support rear of engine, remove transmission rear support noting number of shims.

3) Remove two top transmission to clutch housing screws, install guide pins (J-1126), then remove two lower capscrews. Slide transmission back on guide pins to clear clutch disc splines.

OVERDRIVE

Warner R10. Solenoid operated type with governor control and throttle operated kickdown.

See "Chevrolet Overdrive" in Transmission Section.

Overdrive Control: *See "Warner R10 & R11 Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh transmission (above) after disconnecting control cable and wiring.

POWERGLIDE TRANSMISSION

Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS: See "Chevrolet Powerglide" in Trans. Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication - Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Use Automatic Transmission Fluid Type A with an AQ-ATF-A number. Type A with AQ-ATF number is permissible when AQ-ATF-A not available.

►*DRAIN & REFILL NOTE:* Periodic drain and refill is no longer recommended. Replace transmission fluid only when transmission removed for repairs.

Capacity - 4½ qts. (refill), 10½ qts. (after overhaul).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER POWERGLIDE SERVICE DATA: See "Chevrolet Powerglide" in Transmission Section.*

UNIVERSALS

Oper. Yoke & Spider (trunnion) type.

►*CAUTION* - Rear universal companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever companion flange nut loosened.

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Chevrolet Special Data.*

REAR AXLE

Oper. Semi-floating, hypoid gear type with Hotchkiss Drive. *NOTE* - "POSITRACTION" Limited Slip Differential Optl.

See "Chevrolet Pass. Car (Hotchkiss Drive)" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.

►*PINION BEARING PRELOAD CAUTION:* Rear universal joint companion flange nut controls rear axle pinion bearing preload. Bearing preload must be adjusted whenever companion flange nut is loosened.

Ratios - 3.55-1 (Std.), 4.11-1 (Early Overdrive), 3.70-1 (Later Overdrive), 3.36-1 (Powerglide).

Backlash - .003-.010" (.005-.008" preferred).

Carrier Removal: Remove rear wheels, brake drum and gasket. Remove bearing retainer bolts (on inside of axle flange) and use Tool J-5748 to remove axle shaft and bearing assembly so that axle clears differential side gears. Separate rear universal joint, lower propeller shaft, then drain rear axle lubricant. Remove differential carrier nuts and lift out carrier assembly.

Axle Shaft Removal: Raise car and place jack stands under axle housing. Remove tire, wheel and brake drum assembly. Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange). Attach axle Puller J-5748, with slide hammer, to flange and remove axle shaft and bearing assembly. Be careful not to disturb backing plate. *NOTE*—If bearing retainer and parking brake strut interfere, raise strut slightly

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Chevrolet Special Data.*

SHOCK ABSORBERS

Delco. Direct acting non-adjustable.

Replacement Shock Absorbers

Model	Front	Rear
Pass. S.M. (Exc. Air Susp. & AC)	5543736	5543732
Pass. Auto. Trans. (Exc. Air Susp.)	5543735	5543732
Pass. Air Susp.	5543737	5543734
Sta. Wgn., Taxi	5543735	5543733
El Camino Pickup & Sed. Del.	5543735	5543733

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs and spherical type joints. *See "Chevrolet (Spherical Joint) Suspension" in Suspension and Wheel Alignment Section.*

►*FRONT WHEEL ROLLER BEARING & INNER SEAL NOTE:* Roller bearings available for heavy duty Taxis, Police Cars *See "SUSPENSION NOTES" in Chevrolet Special Data.*

Steering Axis Inclination - 7¼° ±½°.

Caster - 0° ±½° (Std.), 1½° ±½° (Air Susp.).

Camber - Pos ½° ±½° (Std & Air Susp.)

Toe-In - 1/8-1/4" (Std.), 0-1/8" (Air Susp.).

Toe-Out on Turns - Inner Wheel 20°, Outer Wheel should be 18°

REAR SUSPENSION

Rear Suspension: *See "Chevrolet Rear Suspension" in Suspension & Wheel Alignment Section.*

AIR SUSPENSION

Air springs replace coil springs on all four wheels. Shock absorbers mounted to rear of air springs. *See "Front Suspension" above for Alignment Specifications and "Chevrolet Air-Suspension" in Suspension & Wheel Alignment Section.*

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut.

See "Saginaw Ball Bearing Worm & Nut" in Steering Section

Power Steering: Own (Linkage Type). *See "Chevrolet Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic, without anchor pin adjustment. Hand lever applies rear wheel service brakes.

See "Chevrolet-Bendix Hydraulic" in Brake Section

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION.* To compensate for lack of brake anchor adjustment, brake shoes are ground to a .057-.087" smaller diameter than the drum diameter. Grinding shoes to the true drum diameter on bench grinders will cause heel and toe contact, resulting in erratic brake action. *NOTE—If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter*

Drums—Diameter 11".

Wheel Cylinder Diameter—Front 1 1/8", Rear 1".

Brake Lining	Width	Thickness
Front wheel	2.14"	.175"
Rear wheel	2.00"	.175"

Length Per Shoe—9.3125" (Primary), 11.6875" (Secondary).

Braking Power—55.9% (Front Wheels), 44.1% (Rear Wheels).

Clearance—Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag

Standard Master Cylinder: Located on engine side of firewall in line with brake pedal.

Checking Fluid—Reservoir is integral with master cylinder. Maintain level in cylinder to lower edge of filler hole.

Removal - Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove cotter and clevis pins from brake pedal arm, then remove four retaining nuts and lockwashers and remove cylinder.

Power Brakes: New Bendix or Moraine Power Units. *See "Bendix Hydraulic (Disc) Reaction" or "Moraine Hydraulic (Diaphragm) Reaction" type Power Unit in Brake Section.*

Removal: Disconnect clevis at brake pedal assembly (remove clevis if necessary to clear hole in firewall). Remove vacuum hoses from brake unit and hydraulic line from master cylinder. Remove four nuts and lockwashers and withdraw power unit.

MISC. MECHANICAL

Windshield Wipers: Electric (Single Speed Std., Two Speed Optl.). Link-and-crank arm type.

See "Windshield Wipers" in Miscellaneous Section.

Window Regulators: Electric type with reversible motor operating each door window assembly.

See "Power Window Regulators" in Miscellaneous Section.

Power Top Control: Hydro-Lectric. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: A reversible electric motor for each of the three basic movements of 6-way seat control. *See "Power Seat Adjusters" in Miscellaneous Section*

Air Conditioning: *See "Chevrolet Air Conditioning" in Miscellaneous Section.*

►*JACKING & HOISTING CAUTION (ALL MODELS): Before jacking, hoisting, towing or working under car, see "Jacking & Hoisting Precautions" and "Chevrolet Air Suspension" in Suspension Section*

MODEL IDENTIFICATION

TUNE-UP

COMPRESSION PRESSURE: 283" Pass. 2-Bbl. - 140 lbs. min.
283" Pass. Others - 150 lbs. min.
283" Corv. - 140 lbs. (Mech. Lifters), 160 lbs. (Hydr. Lifters).
348" - 150 lbs.

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters **except as follows:**
283" Pass. Hi-Lift Cam. - .008" Intake, .018" Exhaust. Hot & Idling (Slow speed driving).
283" Pass. Hi-Lift Cam - .012" Intake, .018" Exhaust, Hot & Idling (High speed driving).
283" Corv. Hi-Lift Cam - .012" Intake, .018" Exhaust, Hot & Idling.
348" Hi-Lift Cam - .008" Intake, .018" Exhaust, Hot & Idling (Maximum economy).
348" Hi-Lift Cam - .012" Intake, .018" Exhaust, Hot & Idling (Maximum power output).
Initial Tappet Clearance (Engines with Hydraulic Lifters) - *See "Valve System" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Single Exhaust - Single exhaust pipe with crossover pipe from right exhaust manifold. Heat control valve with thermostatic coil spring located between right exhaust manifold and exhaust pipe. Make sure valve shaft is free to turn. If sticking, free up with kerosene or alcohol containing a small amount of baking soda.
Dual Exhaust - Coil spring and counterweight (same as for single exhaust).
►*DUAL EXHAUST NOTE:* With valve closed, most exhaust gases are discharged through left exhaust pipe.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.
SPARK PLUG GAP: .035".
Spark Plug - 283" Pass. AC No. 44 (Std.), No. 45 or 46 (hotter for continuous City operation), No. C-43 COM (Colder for continuous heavy duty service), 14 mm. Tighten to 20-25 ft. lbs.
283" Corvette - AC No. 46 (City), No. 44 (Town & Country), No. C43 COM (Hvy. Duty), No. C42-1 COM (Very Heavy Duty).
348" - AC No. 44N (Std.), No. 43N (Hvy. Duty). *NOTE - Long Reach plugs.*

COIL: Delco-Remy (283" Eng.) 1115115 (Std.), 1115083 (Fuel Injection); **Corvette** - Delco-Remy 1115091 (Std.), 1115071 (Fuel Injection); **348" Eng.** - 1115083 (Std.), 1115111 (Three 2-Bbl. Carb.), 1115114 (Hi-Lift Cam).
Ignition Current - 1.8 amps. idling, 4.0 amps. stopped.
Resistor - Delco-Remy 1931385 (Corvette, 348" Eng. with three 2-Bbl. Carbs. & Hi Lift Camshaft).
Resistor (Others) - Resistance type cable used between coil and ignition switch. Bypassed during cranking by lead from solenoid to coil.

DISTRIBUTOR: Delco-Remy. Used as follows:

Application	Delco-Remy No.
283" (2-Bbl. Carb.)	1110947
283" (4-Bbl. Carb.)	1110946
283" (Two 4-Bbl. Carbs.)	1110891
283" (Fuel Inj.)	1110915
283" (Fuel Inj. & Hi-Lift Cam.)	1110914
348" (Std.)	1110946
348" Hi-Lift Cam & Auto. Trans.	1110948
348" Hi-Lift Cam & Synchro-mesh	1110919

►*DISTRIBUTOR NOTE: Different types used as follows:*
Models 1110915, 946, 947, 948 - External adjustment "Window" type. *See "Delco-Remy Window Distributors" in Electrical Section.*
Models 1110891. 914, 919 - Double breaker with conventional distributor cap (not window type), Vacuum spark control not used (centrifugal weight advance only).
Condenser (Window Type) - Delco-Remy 1932004.
Capacity - .18-.23 mfd.
Condenser (Double Breaker) - Delco-Remy 1869704.
Capacity - .18-.23 mfd.
Contact Point Set (Window Type) - Delco-Remy 1931988.
Contact Point Set (Double Breaker) - Delco-Remy 1938330 (two used).
Breaker Gap (Window Type) - Gap (.016") will be correct when cam angle correctly set (see below).
Breaker Gap (Double Breaker) - .014-.018" (new points).
Cam Angle (Window Type) - 28-32°. Set at 30°. Gives .016" point opening.
Cam Angle (Double Breaker) - Adjust each set of points to 29°±1° with other set blocked open with .025" thick insulator. Cam angle for both sets of points operating together should be 34°±1°.
Breaker Arm Spring Tension - 19-23 ozs.
Rotation --Clockwise viewed from above.

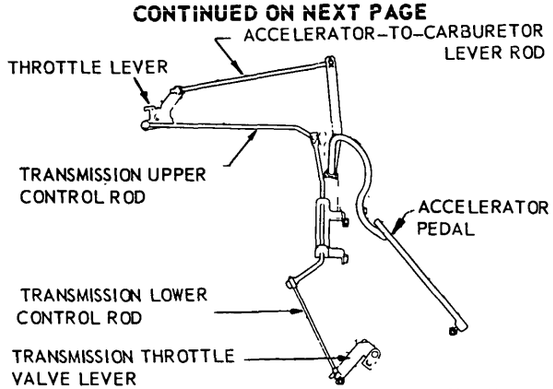
attached to engine front cover. Timing tab marked "A" (Advance), "O" (TDC) and lines at 2° increments with greatest number of lines on advance or BTDC side.

►*TIMING SETTING CAUTION: Timing must be set with vacuum line disconnected and manifold or carburetor opening taped closed. On engin s with "t e" connection, disconnect vacuum line at "tee".*



CARBURETOR

Engine	Carbur tor Applicati n
283" Pass. Std.	One Rochester 2GC 2-Bbl.
283" Pass. Optl.	Roch. 4GC or Carter WCFB 4-Bbl.
283" Corvette Std.	One Carter WCFB 4-Bbl.
283" Corvette Optl.	Two Carter WCFB 4-Bbl.
283" All Optl.	Rochester Ramjet Fuel Injection
348" Std.	One Roch. 4GC or Carter WCFB 4-Bbl.
348" Optl.....	1-Carter AFB 4-Bbl. or 3-Roch. 2GC 2-Bbl.

►*FAST IDLE CONTROL CAUTION (AIR CONDITIONED CARS):* Fast idle control is set to provide 900 RPM engine speed when Fast Idle Control Knob is pulled out. Make sure knob is pushed in when making normal fast idle adjustments and that fast idle control linkage does not interfere with normal operation of carburetor linkage when fast idle is not in operation.

THROTTLE LINKAGE ADJUSTMENT: P werglid Cars - Remove lower control rod and loosen transmission throttle lever clamp screw. Insert Tool J-5906 between transmission left hand side cover lower front bolt and hole in lever. Distance should be 3.60", as indicated on gauge, from centerline of bolt to hole centerline. With gauge in place and holding lever clamp in full detent position (rotated counterclockwise), tighten lever to clamp and remove gauge. Install lower control rod. Disconnect upper control rod from throttle lever on carburetor and open throttle. Adjust upper control rod length for free entry into throttle lever. Check adjustment by releasing linkage to its idle position then hold carburetor throttle lever in wide open position and press downward on transmission outer throttle lever and check for deflection. Readjust upper throttle rod if rod deflects. Place ½" (Pass. Car), .85" (Corvette), wood block under accelerator pedal rod, depress accelerator against block and adjust swivel on accelerator-to-carburetor throttle lever rod for free entry into throttle lever when held in wide open position. Readjust length

CONTINUED ON NEXT PAGE

POWERGLIDE & TURBOGLIDE THROTTLE LINKAGE

CONTINUED FROM PRECEDING PAGE

of accelerator rod when detent is not felt before reaching wide open throttle.

Turboglid Cars - Disconnect transmission throttle valve rod and accelerator rod from carburetor throttle lever. Pull throttle valve rod forward to full limit of its travel and then adjust swivel for free entry into carburetor throttle lever with lever in wide open position. Attach swivel to lever. To check adjustment, put carburetor throttle lever in wide open position and push downward (counterclockwise) on transmission throttle valve lever. If transmission throttle valve rod attached to carburetor throttle lever deflects (transmission not on internal stop) or carburetor throttle lever will not reach wide open position, repeat adjustment. Now place carburetor throttle lever at wide open throttle and depress accelerator pedal to hold pedal lever in contact with stop. Adjust swivel on accelerator rod for free entry into carburetor throttle lever. Secure swivel to lever. Depress accelerator pedal by hand. Detent should be felt before accelerator pedal rod strikes carpet.

THROTTLE RETURN CHECK ADJUSTMENT (Turboglide Cars Exc. Fu l Inj ction): With fast idle screw on high step of fast idle cam, hold plunger with an open end wrench and turn plunger screw so it just contacts carburetor throttle lever. To check, make a full throttle start, then release accelerator and apply brakes simultaneously. If engine remains at high RPM turn plunger screw clockwise ½-turn. If engine stalls, turn screw ½-turn counterclockwise.

ROCHESTER 2GC 2-BARREL

Rochest r 2GC, N , 7013007 (Synchro-mesh), 7013008 (Auto. Trans.), 7013018 (Auto. Trans. & Air Cond.), 7013082 (Auto. Trans. Canada). Idle Compensator (thermostatically controlled idle air bypass) used on air conditioned cars.

►*CARBURETOR THROTTLE BODY TO FLOAT BOWL SEALING CORRECTION:* When throttle body to fuel bowl screws work loose, install new gasket (black in color) now released for current models.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barr l feeds Cyls. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

►*IDLE COMPENSATOR CAUTION:* When making idle Setting & Idle Speed adjustments, Idle Compensator must be in closed position. Depress button on back side of float bowl.

Idl S tting - After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smoothest idle with highest vacuum reading and 450 RPM (Auto. Trans. in "D" Range), 475 RPM (Synchro-mesh Models). Turn screws out ¼ turn.

Idl Sp d - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans. in "D") with Idle Compensator button pushed in on air cond. cars (Idle Compensator "off").

Fl at L v l - 1 23/64" (Gauge BT-152). With air horn inverted and gasket in place, position float level gauge over float so it rests against pump side of power piston shaft, with outer gauge leg in line with center of float. Bend float arm to adjust.

Float Drop - Bend float tang as required to obtain a distance of 1 29/32" from gasket surface to bottom of float, with air horn upright and float hanging free. Use scale or scribed mark on float and pump gauge.

Automatic Choke Setting: Centered at index.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 2G & 2GC Carburetors" in Carburetion Section.*

ROCHESTER 4GC 4-BARREL

Engine	Rochester No.
283" Pass. Auto. Trans. (Std.)	7013004

348" Auto. Trans. (Air Cond.)	7013012

►*ROCHESTER 4GC CARBURETOR CUTOUT ON TURNS CORRECTION & PRODUCTION CHANGES: See "Rochester 4GC Carburetor" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels feed 1-4-6-7.

►*IDLE COMPENSATOR CAUTION:* Idle Compensator (thermostatically controlled idle air bypass) used on air conditioned cars and must be in closed position when making Idle Setting and Idle Speed adjustments. Remove air cleaner and insert pencil or suitable tool in throttle bore.

Idle Setting - After idle speed correctly set (see below), turn each idle mixture screw for smoothest idle with highest vacuum reading and RPM. *NOTE* - Approximate adjustment obtained by setting screws lean to moderate rough idle and then backing out ¼-turn.

Idle Speed - 450 RPM (Auto. Trans. in "D") with Idle Compensator closed.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4GC Carburetors" in Carburetion Section.*

CARTER WCFB 4-BARREL
(Single Carburetor)

V8 Pass.Optl.(Pwr. Strg.)	1106680	
Corvette Std.	1102043	1929640
Corv. Optl. & 348" Hi-Lift Cam.	1102059	1925210

Performance Data - Cold

Generator	Amperes	Volts	RPM
1102097	30	14.0	2240
1102114, 115	35	14.0	2630
1105116, 118	35	14.0	1730
1106985	45	13.0	1475
1106679, 680	50	13.0	1600
1102043, 059	30	14.0	2310

Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 28 ozs. (Exc. 1106679, 680, 985), 20 ozs. (1106679, 680, 985).
Field Current - 1.48-1.62 amps. (1102043, 059); 1.69-1.79 amps. (1102097, 114, 115); 2.14-2.28 amps. (1106679, 680, 985); 2.73-3.0 amps. (1105116, 118). All at 12 volts and 80°F.
Belt Adjustment: 3/4" (283" Eng.), 13/16" (348" Eng.) deflection midway between pulleys with a 15 lb. push.

REGULATOR

Delco-Remy. Used as follows:

Regulator No.	Generator No.
1119001	1102043, 059, 097
1119002	1102114, 115
1119603	1106985
1119604	1105116, 118
1119606	1106679, 680

►*DOUBLE CONTACT REGULATOR NOTE: Regulators 1119603, 604, 606 have double contacts for voltage regulation.*
NOTE - Specifications below are "Normal" settings.

Cutout Relay

Cuts In - 11.8-13.5 volts (1119001, 002), 11.8-13.0 volts (1119603, 604, 606).
Contact Gap - .020". **Air Gap -** .020".

Voltage Regulator

Setting (1119001, 002) - 13.8-14.8 volts at 125°F.
Setting (1119603. 604, 606) - 13.8-14.6 volts (upper contacts), .1-.3 volts lower (lower contacts) at 125°F.
Contact Gap (1119603, 604, 606) - .016" (upper contacts) with lower contacts just touching.
Air Gap - .075" (1119001, 002), .067" (1119603, 604, 606) with armature pressed down to point where contacts just touch.
Ch cking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy Double Contact Regulators" in Electrical Section.*

Curr nt R gulat r

S tting (1119001) - 27-33 amperes.
S tting (1119002) - 32-37 amperes.
Setting (1119603) - 43-47 amperes.
Setting (1119604) - 31.0-35.5 amperes.
Setting (1119606) - 48-52 amperes.
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *Se "Delco-Remy 1119000 Series Regulators" and "D lco-Remy Double Contact Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. 4-Headlight System.
See "4-Headlight System" in Electrical Section.
Direction Signals: *See Electrical Section.*
Autronic Eye: *See Electrical Section.*
Lighting Switch Removal: Pull handle out to "ON" position. Depress switch shaft retainer (under dash) and remove knob and shaft assembly. Remove retaining ferrule and escutcheon, then remove switch assembly. Disconnect multi-plug connector. *NOTE* - Use screwdriver inserted in side of switch to pry plug from switch.
Stop Light Switch Location: Mechanical type mounted under dash in contact with brake pedal.
Adjustment - Adjust position of switch so that stop light comes on when brake pedal is depressed 5/8" from fully released position.
CIRCUIT BREAKERS: A circuit breaker located in main lighting switch protects headlights and parking lights.
FUSES: Fuses contained in fuse block beneath dash on left side except as noted.
►*TAILLIGHT FUSE CAUTION:* Fuse block may be may be marked for 10 amp. fuse. Destroy marking and make sure 15 amp. fuse is installed.
20 Ampere - Heater & Air Conditioning
15 Ampere - Tail, Stop, Courtesy, Glove Box, License Plate, Dome Lights and Clock.
10 Ampere - Back-up lights, Brake Warning light.
9 Ampere - Overdrive. In wiring harness on engine side of dash.
3 Ampere - Instrument & Clock lights.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTIONS: Us extreme care when disconn cting any part of air conditioning equipment or lines for access to ngine, see "Air Conditioning Service Cautions" in Misc llan ous Section.*
►*NOTE: Engines with special camshaft use mechanical valve lifters. In the following data, engines will be referred to by "lifter type" or "Hi-Lift Cam".*

ENGINE SPECIFICATIONS: Own. V8, valve-in-head, 283" and 348" engines of same design used previously.

Engine	Bore	Stroke	Rat d HP	Displac m nt
283"	3.875"	3.0"	48	283 cu. in.

Compr ssion & Vacuum Reading - *See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*

OIL PAN REMOVAL: *See "Oil Pan" in Chevrolet Special Data.*

ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Chevrolet Special Data.*

►*CYLINDER HEAD DESIGN NOTE:* 1959 283" Eng. (With Hi-Lift Cam) and 348" Eng. have new spark plug cooling passages in cylinder head to match cooling holes in block for better water circulation. New head gasket used to index both cooling holes. "Long Reach" Spark Plugs must be used with this type head. *See "Replacement Cylinder Head Note" in Chevrolet Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data.*

PISTONS

Cast aluminum alloy, autothermic type with piston pin offset .060" toward major thrust side.

283" Eng. - Flat head, slipper skirt with machined relief for valve clearance (Std.) or domed piston having machined relief (Fuel Injection with Hi-Lift Cam).

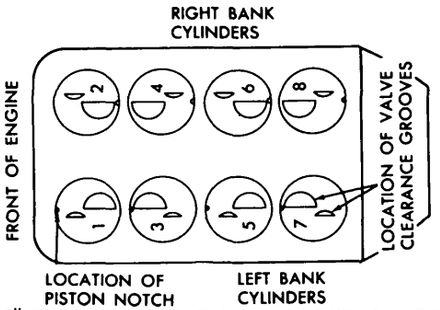
348" Eng. - Peak roof, slipper skirt (Std.), half flat with machined relief for valve clearance and half slanted downward 16° (With Hi-Lift Cam).

Rem val - Piston & rods removed from above.

R plac ment Pist ns: Furnished Std., & .001", .020", .030", .040" oversize with fitted pins (Exc. Hi-Lift Cam), Std. & .001", .030" oversize fitted with pins (Hi-Lift Cam),

►*STANDARD & .001" OVERSIZE PISTON NOTE:* These pistons furnished in TWO sizes as follows:

283" Eng. - **Std.** - Marked **S4** (3.8750-3.8755"), **S5** (3.8755-3.8760"); **.001" Oversiz** - Marked **S6** (3.8760-3.8765"), **S7** (3.8765-3.8770").



348" Eng. - **Std.** - Marked **S4** (4.1250-4.1255"), **S5** (4.1255-4.1260"); **.001" Oversize** - Marked **S6** (4.1260-4.1265"), **S7** (4.1265-4.1270").

Clearance - .0006-.0010", measured 2.44" (283" Eng.), 2.94" (348" Eng.) from top of piston. *NOTE -* Pistons in 283" Eng. with Hi-Lift Cam have .0016-.0020" clearance.

Fitting New Pistons (Exc. Pistons with .0016-.0020" Clearance): Use .0015" x 1/2" feeler (part of Tool J-5513). With piston and cylinder bore clean and dry, insert feeler and inverted piston into cylinder to point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler should be 4-6 lbs.

Installing Pistons: Install pistons with cast depression in head and "F" mark cast in side of piston toward front of block, except 348" Eng. with 11.0-1 pistons (see Note below). *See Rod Installation.*

►*348" ENGINE SPECIAL PISTON NOTE:* Pistons used on 11.0-1 ratio engines extend into combustion chamber and have cutouts to allow for valve clearance. Pistons must be installed as shown in diagram.

348" ENGINE 11.0-1 RATIO PISTON INSTALLATION

PISTON PIN

Pin is press fit in connecting rod.

Diameter - (283" Eng.) .9270-.9273". (348" Eng.) .9895-.9898".

Length - (283" Eng.) 2.990-3.010". (348" Eng.) 3.250-3.270".

Pin Fit in Piston - .00015-.00025". With piston and pin at 60°F, and light film of oil on pin, pin should support own weight in either pin boss.

Pin Fit in Connecting Rod - Pressed fit in rod. Special procedure used for removal & installation, *see "Piston Pins" in Chevrolet Special Data.*

Replacement Pins: Furnished in assembly with new pistons. Replace with new piston and fitted pin assembly.

PISTON RINGS

Compression rings are plain cast alloy iron, with chrome plated upper and wear resistant coating lower. Oil ring is 3-piece type with chrome plate O.D. rails and stainless steel spacer.

283" Engin

Ring	Width	End Gap	Sid Cl aranc
Comp. (1 & 2)	① .0775-.0780"	.010-.020"	.0012-.0032"
Oil (3)	.224-.231"	② .015-.055"	.0006-.0084"

348" Engin

Ring	Width	End Gap	Sid Cl arance
Compr. (1 & 2)	.0770-.0780"	.015-.025"	③
Oil (3)	④ .224-.232"	⑤ .015-.055"	

① - Upper ring .077-.078" with Hi-Lift Cam.
② - On rails.
③ - Upper .0012-.0027", lower .0012-.0032".
④ - .1855-.1865" with Hi-Lift Cam.
⑤ - .013-.025" with Hi-Lift Cam.

Replacement Rings: Service type rings furnished Std., .020", .030", .040" Oversize.

Installing Rings: Install compression rings with mark "GM" up.

CONNECTING ROD

Length (Center-to-Center) - (283") 5.700". (348") 6.134-6.136".

Weight - (283") 19.02 ozs. (348") 19.20 ozs.

Crankpin Journal Diameter - (283") 1.999-2.000". (348") 2.199-2.200".

Lower Bearing - Replaceable precision type. (Std.) - Steel backed babbitt. (Hi-Lift Cam) - Steel backed aluminum alloy matrix with thin lead alloy overplate.

Clearance - .001-.003". Wear limit .004".

Sideplay - .008-.014" (two rods).

Replacement Bearings: Std. & .001", .002", .010", .020" Undersize.

Installing Rods: *NOTE - See diagram for special 11.0-1 ratio piston installation.* Install rod in piston so that flange or heavy side of rod at bearing end will be toward **front** of piston (marked by cast depression in head of piston and "F" mark on piston strut) on Nos. 1-3-5-7 pistons, and flange on rod to **rear** of piston on Nos. 2-4-6-8 pistons. Install rod and piston assembly in cylinder with cast depression in head and "F" mark on strut toward front of cylinder block. Oil hole in connecting rod will be toward center of engine.

CRANKSHAFT

Journal Diameter - (283") 2.2978-2.2988", (348") 2.4980-2.4990".

Bearings - Replaceable precision type. (Std.)Steel-backed babbitt. (Hi-Lift Cam) No. 1 through 4 are steel-backed aluminum alloy matrix with a thin lead alloy overplate. No. 5 steel-backed babbitt.

Clearance - (283") .001-.003". (348") .0008-.0034". Wear limit .004".

End Thrust - Taken by rear (No. 5) main bearing.

Endplay - .002-.006".

Replacement Bearings: Furnished Std., .001", .002", .010", .020". Undersize.

Bearing Installation: Not necessary to remove engine from car, *see "Crankshaft & Main Bearings" in Chevrol t Special Data.*

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cov r" in Chevrolet Special Data.*

Vibrati n Damp n r: *Se "Vibration Dampener" in Chevrolet Special Data.*

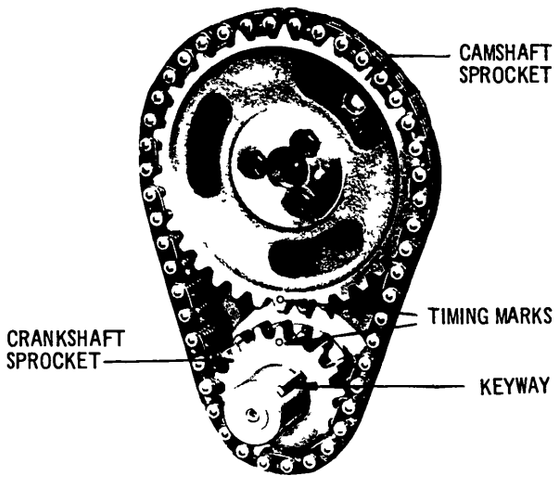
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CAMSHAFT

►*SPECIAL CAMSHAFT NOTE:* Special "Hi-Lift" camshafts used in various engines. These camshafts are used with solid valve lifters.

Journal Diameter - (All) 1.8682-1.8692".



Bearings - Steel backed babbitt lined bushings.

Clearance - .0015-.0035".

Replacement Bearings: "Precision" type (do not require reaming). Use Tool J-6098 to remove and install bearings.

Camshaft Setting: Both Sprockets marked "0". Install chain with sprocket marks adjacent and in line with straightedge across shaft centers.

►*CAUTION.* When installing sprocket on camshaft, line up dowel holes in sprocket and shaft. DO NOT DRIVE SPROCKET ON SHAFT, use three mounting bolts and DRAW sprocket in place.

CHEVROLET V8 VALVE TIMING MARKS

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Chevrolet Special Data.*

Timing Chain: Link belt type. See below for specifications.

Engine	Width	Pitch	Length (Links)
283"	.875"	.500"	46
348"	.88"	.500"	48

Installation & Removal - *See "Timing Chain" in Chevrolet Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data.*

VALVES

Tappet Clearance: *See TUNE-UP for complete specifications on all engines.*

283" Engine

	Head Diam.	Stem Diam.	Length
Intake	1.715-1.725"	.3415-.3422"	① 4.9024-4.9224"
Exhaust	1.495-1.505"	.3410-.3417"	4.913-4.933"

348" Engine

	Head Diam.	Stem Diam.	Length
Intake	1.935-1.945"	.3715-.3722"	5.10-5.11"
Exhaust	1.655-1.665"	.3700-.3717"	5.11-5.12"

All Engines

	Seat Angle ②	Lift	Stem Clearance
Intake	45°	③ .3987"	④ .0010-.0027"
Exhaust	45°	③ .3987"	④ .0017-.0034"

① - 4.869-4.889" with mechanical lifters.

② - Valve face angle 44°.

③ - .4058" Intake, .4120" Exhaust with mechanical lifters.

④ - Wear limit .004".

►*NOTE: Valve face and seat angle specifications are service specifications. New engine specifications are: Seat Angle - 46°, Face Angle 45°.*

►*VALVE GRINDING CAUTION:* Replacement valves are furnished with face angles of 45°. When seats are ground to recommendations of 45°, valves must be faced to recommended angle of 44°.

Valve Seat Width - .035-.060" Intake, 062-.093" Exhaust.

Valve Stem Oil Seals: All Engines - Two seals on all valves as follows: *NOTE - Third seal used on 283" intake valves, see below* 1) Cup shaped cap or shield installed over upper end of valve spring under spring seat (retained by spring retainer) and 2) Synthetic rubber "O" ring installed in second groove of valve stem directly under valve locks. *NOTE - "O" ring seal must seat flat in groove and not be twisted*

Intake Valve Stem Seals (283" Eng.): New synthetic rubber seal on valve stem and guide in addition to "O" ring and spring shield seals (see above). Secured on guide and valve stem by two snap rings. Valve guide machined and chamfered to 45° angle

Valve Stem Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance is excessive. Valves with oversize stems furnished .003", .015", .030" Oversize. Use Reamer Set J-5830 (283"), or J-7049 (348").

Valve Springs. Install springs with closed end of coil toward cylinder head and oil shield over spring.

►*VALVE SPRING DAMPER NOTE:* Damper not used on 348" Eng. with mechanical lifters Damper replaced by inner spring

283" Engine

Valve	Lbs. Pressure	Length
Closed	69-79	1.696"
Open	159-169	1.306"

348" Eng. (Hydraulic Lifters)

Valve	Lbs. Pressure	Length
Closed	78-86	1.626"
Open	184-196	1.230"

348" Eng. (Mechanical Lifters)

	Inner Spring		Outer Spring	
Valve	Lbs. Pressure	Length	Lbs. Pressure	Length
Closed	20-24	1.488"	69-79	1.696"
Open	55-61	1.060"	159-169	1.306"

►*VALVE SPRING INSTALLED HEIGHT CAUTION:* Check installed height of valve spring after grinding valves by measuring distance from spring seat in cylinder head to top of valve spring. If this dimension exceeds 1 45/64" (283") or 1 3/4" (348"), install valve spring seat shim furnished 1/16" thick. Installed height of spring must be 1 21/32" (All Engines). *NOTE - 348" Engine specifications supersede previous specifications of 1 3/4" for preferred height, 1 53/64" for top limit.*

Valve Lifters: Hydraulic lifters are standard on all engines except with special camshaft. *See "Valve System" in Chevrolet Special Data.*

Rocker Arms: Mounted individually on studs pressed into cylinder head

Rocker Arm Stud Replacement - *See "Valve System" in Chevrolet Special Data*

VALVE TIMING

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: (Exc. Corvette) 4 qts, with filter changes 5 qts. **(Corvette)** 5 qts, with filter change 6 qts

Normal Oil Pressure: 35 lbs at 2,000 RPM.

Pressure Relief Valve - In oil pump. Not adjustable

Oil Pressure Indicator (Std. V8) - Light located at left side of instrument panel, controlled by a pressure Switch AC No. 1508753 (283"), 1508754 (348") located in main oil gallery adjacent to distributor Switch closes when pressure drops to 4-7 lbs.

Oil Pressure Gauge (Corvette) - AC No. 1508895

Oil Filter: Full flow type, std. on 283" Eng with Fuel Injection, mandatory on 348" Eng with Hi-Lift Cam All other engines optional. Replace element every 4,000 miles. Use new seal, tighten center bolt to 20-25 ft lbs *NOTE* - Cover with cavity for oil circulation used without filter

Replacement Filter Element - AC No PF-141

Oil Pump: Spur gear type. Located in crankcase, driven by distributor gear

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Pump Ov rhaul - S *"Oiling System" in Ch vrol t Sp cial Data.*

Crankcas V ntilati n - Air intake through crankcase breather cap and outlet at crankcase ventilator pipe.

COOLING

►*RADIATOR REMOVAL CAUTION (Auto. Trans.):* Transmission oil cooler is part of radiator lower tank and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.

►*WATER BY-PASS NOTE:* 283" engine utilizes hole in cylinder block for water by-pass. 348" engine has by-pass at top of water pump which is connected to inlet manifold which has crossover passages to cylinder head.

Water Capacity: (283") 17½ qts. (3-Speed Trans.), 17¼ qts. (Auto. Trans.). (348") 21 qts. Add 1 qt. for heater with all models.

Pressure Valv : Radiator filler cap, used as follows:

M d l	AC No.	Pressure	AC Type
Corv.Less F.I.	850795	7 lb.	RC-1
Corv. With F.I.	850800	13 lb.	RC-6
V8 Pass.	850800	13 lb.	RC-6

Th rm stat: Pellet type. In cylinder head water outlet.

►*THERMOSTAT INSTALLATION NOTE:* 170° thermostats used in production beginning with 283" Eng. at No. F1111 (Flint), T1209 (Tonawanda); with 348" Eng. at No. T1217 (Tonawanda). 160° & 180° thermostats are optional. Use 160° thermostat with Methanol type antifreeze.

T mp ratur Gaug : AC electric. *NOTE* - On Corvette the dash unit is part of combination gas & thermo unit; on V8 Pass. dash unit is part of gauge and case assembly. Both units use the same engine unit.

Dash Unit - (V8 Pass.) AC No. 1513665, (Corv.) 1513715.

Engin Unit - (All) AC No. 1513321.

See "T mp ratur Gaug s" in Miscellaneous Section.

Water Pump: Packless type with sealed ball bearing shaft. *Se "Wat r Pumps" in Chevrolet Special Data.*

CLUTCH

►*CLUTCH NOTE:* Borg & Beck Spring type used in Corvette, Chevrolet (Own) Diaphragm (two types) used in all other models. 283" Eng. (Exc. Corv.) use same type as previous models. 348" Eng. uses new diaphragm type with 6 diaphragm fingers bent upward with weight attached. Other 12 fingers remain straight as previous type. Weighted fingers increase plate load as engine speed increases.

Chevr let (Own) Diaphragm Clutch

M d l	Chevrolet No.
Pass. 2-Bbl. Carb. (Exc. H.D. Clutch, O.D.)	3742861

Corvette (Stamped 1468 on cover) 3745946

Clutch Disc (Chevrolet Clutch)

Pass. With O.D., 348", 11" Cast 8721	3748721
Pass. 283" (Exc. H.D., O.D.) 10" Cast 3748731	3748731

Clutch Disc (B rg & Beck Clutch)

Corvette (Stamped P-7175) 3745947

S e "Ch vr let (Own)" and "B rg & B ck" Clutches in Clutch S cti n.

►*CORVETTE FAST ACTION CLUTCH PEDAL LINKAGE ADJUSTMENT:* For procedure to alter linkage to secure 4½" rather than 6½" pedal movement, *s "Clutch Not s" in Ch vrol t Sp cial Data.*

Pedal Adjustment: (Preferred Method). Disconnect forward end of clutch fork pushrod from cross shaft lever. Hold fork pushrod rearward (to remove all slack) then adjust swivel on pushrod so conical point lines up with the "dimple" in cross shaft lever. This will give desired .060" clearance between bearing and clutch spring. This procedure supersedes free travel setting of 3/4"-1" formerly recommended.

Over-Center Spring Adjustment: Loosen adjusting hook nut at back of pedal bracket and turn jam nut to obtain an installed length of 10 5/16" for over-center spring.

Removal: Remove transmission (See Transmission Removal below). Remove clutch throwout bearing from fork, then clutch fork tension spring from fork. Remove clutch fork by forcing it forward and toward center of vehicle. Install Clutch Pilot Tool J-5824 to support clutch assembly. Loosen clutch attaching bolts one turn at a time until tension of spring is released. Remove tool, then clutch assembly from vehicle. *NOTE* - When installing clutch, align "X" mark on cover and flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three-speed synchro-mesh (Std.), four-speed (close ratio) optional.

See "Chevrolet 3-Speed" and "Chevrolet 4-Speed (Close Ratio)" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: 1) Drain transmission and disconnect speedometer cable and shift rods. Remove propeller shaft center bearing support bolts. Separate rear universal joint and pull propeller shaft assembly to rear under axle housing.

2) Support rear of engine, remove transmission rear support noting number of shims.

3) Remove two top transmission to clutch housing cap screws, install guide pins (J-1126), then remove two lower capscrews. Slide transmission back on guide pins to clear clutch disc splines.

OVERDRIVE

Warner R10. Solenoid operated type with governor control and throttle operated kickdown. Lockout switch not used.

See "Chevrolet Overdrive" in Transmiss ion Section.

Overdrive Control: *See "Warner R10 &R11 Overdrive Control" in Transmission Section.*

Removal: Same as for synchro-mesh (above) after disconnecting control cable and wiring.

POWERGLIDE TRANSMISSION

Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS: See "Chevrolet Powerglide" in Transmission S ction.*

►*TESTING & TROUBLE SHOOTING: S e "Chevrol t Powerglid " in Transmission Section.*

Lubrication - Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Use Automatic Transmission Fluid Type A with an AC-ATF-A number. Type A with AC-ATF number is permissible when AC-ATF-A not available.

►*DRAIN & REFILL NOTE:* Periodic drain and refill is no longer recommended. Replace transmission fluid only when transmission removed for repairs.

Capacity - 4½ qts. (refill), 10½ qts. (after overhaul).

Checking Fluid Level - Engine must be idling with transmission warm, selector lever in "N" range and parking brake applied. Check fluid level on dipstick located in filler tube on right side of engine opposite starter. Fluid level should be at full mark on dipstick. *NOTE - DO NOT OVERFILL.*

Throttle Linkage Adjustment: *See CARBURETOR abov .*

►*OTHER POWERGLIDE SERVICE DATA: See "Ch vrolet Powerglide" in Transmission Section.*

TURBOGLIDE TRANSMISSION

New "non-shifting" hydraulically controlled, planetary type transmission with three unit torque converter.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Chevrolet Turboglide" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevr l t Turboglide" in Transmission Section.*

Lubrication - Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Use Automatic Transmission Fluid Type A with an AC-ATF-A number. Type A with AC-ATF number is permissible when AC-ATF-A not available.

►*DRAIN & REFILL NOTE:* Periodic drain and refill is no longer recommended. Replace transmission fluid only when transmission removed for repairs.

Capacity - 2 qts. (refill), 9½ qts. (after overhaul).

Checking Fluid Level (Exc. Air Cond. Cars) - With transmission at normal operating temperature, transmission selector lever in "D" (drive) range, and engine idling, check fluid level on dipstick in filler tube on right side of engine. Fluid level should be at full mark on dipstick. *CAUTION - DO NOT OVERFILL.*

Checking Fluid Level (Air Cond. Cars) - *NOTE* - Regular filler tube and dipstick not used. Fluid Level is checked from beneath car (car on hoist) as follows: With transmission at normal operating temperature, selector lever in "N" (neutral) range, and engine idling, check fluid level by removing cap from oil level tube at rear of transmission oil pan under extension housing. Oil level should be at top of tube. If oil level low, remove speedometer drive gear fitting, add oil through fitting hole until fluid level reaches top of oil level tube.

Throttle Linkage Adjustment: *See CARBURETOR abov .*

►*OTHER TURBOGLIDE SERVICE DATA: Se "Ch vr let Turb glid " in Transmission S ction.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

UNIVERSALS

Own Yoke & Spider (Trunnion) type

►*CAUTION.* Rear universal companion flange nut controls rear axle pinion bearing preload Preload must be adjusted whenever companion flange nut loosened *See "Chevrolet Pass Car (Hotchkiss Drive)" in Rear Axle Section*

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Chevrolet-Special Data.*

REAR AXLE

Own. Semi-floating hypoid gear type, with Hotchkiss Drive *NOTE* - "Positraction" Limited Slip Differential optional

See "Chevrolet Pass Car (Hotchkiss Drive)" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section

►*PROPELLER SHAFT "SHUDDER" CORRECTION: See "Propeller Shafts" in Chevrolet Special Data.*

►*PINION BEARING PRELOAD CAUTION* Rear universal joint companion flange nut controls rear axle pinion bearing preload Bearing preload must be adjusted whenever companion flange nut is loosened

Axle Ratios - Used as follows

Engine	Synchro-Mesh	Auto. Trans.
283" Pass	① 3 55-1 (9-32)	3 36-1 (11-37)
283" Corv	② 3 70-1	3 55-1 (9-32)
348"	3 36-1 (11-37)	3 08-1 (12-37)

① - 4 11-1 (9-37) with Overdrive

② - 4 11-1 (9-37) & 4 56-1 used with Positraction

►*AXLE IDENTIFICATION NOTE* Conventional axles have serial number on front right side of differential carrier Positraction axles have "P" and number on front left side of carrier

Axle Shaft Removal Raise car and place jack stands under axle housing Remove tire, wheel and brake drum assembly Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange) Attach Axle Puller J-5748, with slide hammer, to flange and remove axle shaft and bearing assembly Be careful not to disturb backing plate *NOTE*—If bearing retainer and parking brake strut interfere, raise strut slightly with screwdriver to obtain clearance

Carrier Removal: Remove rear wheels, brake drums and gasket. Remove bearing retainer bolts (on inside of axle flange) and use Tool J-5748 to remove axle shaft and bearing assembly so that axle clears differential side gears. Separate rear universal joint, lower propeller shaft, then drain rear axle lubricant and remove differential carrier nuts and lift out carrier assembly.

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Chevrolet Special Data.*

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs Corvette has threaded bushings at pivot point, all other models have spherical joints

See "Chevrolet (Spherical Joint) Suspension" in Suspension and Wheel Alignment Section

►*FRONT WHEEL ROLLER BEARING & INNER SEAL NOTE* Roller bearings available for heavy duty Taxis, Police Cars Etc

ROLLER TYPE FRONT WHEEL BEARING ADJUSTMENT: Tighten spindle nut (while rotating wheel in both directions) until slight drag is felt Back off nut 1/12 turn (½ nut flat) or more to align cotter pin holes DO NOT exceed 1/6 turn or 1 nut flat *CAUTION* - Use only inner bearing seal Part No 3759306 (without 90° flange on inside of stamping)

Steering Axis Inclination - 7¼±½"

Caster (Pass) - 0°±½° (Std Susp), Pos 1½°±½° (Air Susp)

Caster (Corvette) - Pos 2¼°±½°

Camber - Pos ½°±½° (All Susp)

Toe-In - Pass 1/8"-1/4" (Std Susp), 0-1/8" (Air Susp)

Toe-In - Corvette 1/8"

Toe-Out on Turns - With inner wheel at 20°, outer wheel should be at 18°

REAR SUSPENSION

Rear Suspension: *See "Chevrolet Rear Suspension" in Suspension & Wheel Alignment Section*

AIR SUSPENSION

Air springs replace coil springs on all four wheels Shock absorbers mounted to rear of air springs *See Front Suspension above for Alignment Specifications and "Chevrolet Air-Suspension" in Suspension and Wheel Alignment Section*

SHOCK ABSORBERS

Delco. Direct acting non-adjustable

Replacement Shock Absorbers

Model	Front	Rear
Corvette	5531206	5531213
Corvette ①	5543738	5543739
Pass Exc Taxi, AC & Air Susp	5543736	5543732
Pass Air Susp	5543737	② 5543734
Pass Auto Trans (Exc Air Susp)	5543735	5543732
Sta Wgn (Exc Air Susp)	5543735	5543733
El Camino Pickup, Sed Del (Exc A S)	5543735	5543733
Taxi	5543735	5543733

① - With H D Brake/Susp (Exc F I with Hi-Lift Cam)

② - Exc Station Wagon.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball type

See "Saginaw Ball Bearing Worm & Nut" in Steering Section

Power Steering: Own (Linkage Type). *See "Chevrolet (Linkage Type) Power Steering in Steering Section*

Steering Linkage: *See "Steering Linkage" in Steering Section*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic, without anchor pin adjustment Hand lever applies rear wheel service brakes

See "Chevrolet-Bendix Hydraulic" in Brake Section

►*OPTIONAL METALLIC SHOE LINING NOTE* Used for "Special Purpose Option" and can be used with old drums provided surface of drum is smooth

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION*- To compensate for lack of brake anchor adjustment, brake shoes are ground to a .057-.087" smaller diameter than the drum diameter Grinding to the true diameter on a bench grinder will cause heel and toe contact, resulting in faulty brake action *NOTE - If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter*

Drum Diameter - 11"

Wheel Cylinder Diameter - Front 1 1/8", rear 1"

Lining Thickness- .175"(Exc Corv), .187-.194"(Corv)

Lining Width & Length

	Front Wheel	Rear Wheel
Primary Shoe	① 2.75x9.30"	② 2x9.30"
Secondary Shoe	③ 2.75x11.70"	④ 2x11.70"

① - Corvette 2" x 9.30" ② - Corvette 1¾" x 9.30"

③ - Corvette 2" x 11.70" ④ - Corvette 1¾" x 11.70"

Clearance - Adjusting screw backed off 12 notches from slight drag position Brakes must be free of any drag after adjusting *NOTE* - This setting supersedes previous specification of 7 notches

Standard Master Cylinder: Located on engine side of firewall in line with brake pedal

Checking Fluid—Reservoir is integral with master cylinder Maintain level in cylinder to lower edge of filler hole

Removal - Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove cotter and clevis pins from brake pedal arm, then remove four retaining nuts and lockwashers and remove cylinder from firewall.

Installation—Reverse removal procedure making sure that push rod clevis is straddling the brake pedal Refill master cylinder and bleed all brake lines Adjust push rod-to-main cylinder clearance as follows Make sure brake pedal returns to fully released position with no binding, and that pedal retracting spring has not lost its tension, then adjust brake pedal clevis to give a barely perceptible end play between main cylinder piston and brake pushrod (1 8-3/8" pedal movement should be felt)

Power Brakes: New Bendix or Moraine Power Units *See "Bendix Hydraulic (Disc) Reaction" or "Morain Hydraulic (Diaphragm) Reaction" typ Power Unit in Brake Section*

Removal: Disconnect clevis at brake pedal assembly (remove clevis if necessary to clear hole in firewall) *Remove vacuum hoses from brake unit and hydraulic* line from master cylinder Remove four nuts and lockwashers and withdraw power unit

MISC. MECHANICAL

Windshield Wipers: Electric (Single Speed Std, Two Speed Optl) Link-and-crank arm type

See "Windshield Wipers" in Miscellaneous Section

Window Regulators: Electric type with reversible motor operating each door window assembly

See "Power Window Regulators" in Miscellaneous Section

Power Top Control: Hydro-Lectric *See "Power Top Controls" in Miscellaneous Section*

Power Seat Adjusters: A reversible electric motor for each of the three basic movements of 6-way seat control *See "Power Seat Adjusters" in Miscellaneous Section*

Air Conditioning: *See "Chevrolet Air Conditioning" in Miscellaneous Section*

① - Letter "V" ahead of Series Prefix indicates V8 engine.

② - Forward Control. ③ - Conventional

④ - School Bus. ⑤ - Low Cab Forward.

⑥ - Special 1½-Ton. ⑦ - H.D. 2-Ton.

SERIAL NUMBER: Stamped on metal plate and attached to body as follows: **Forward Control Models** - On Steering Column. **Flat Faced Cowl** - On Cowl inner panel. **All Other Models** - Left front door hinge pillar. *NOTE* - Number (example below) includes identification data as indicated.

① ② ③ ④
6F 59 K 100001

① - Series Prefix. See table above.
② - Year - 1959.
③ - Assembly Plant. See table below
④ - Unit number. Continuous for all trucks at each assembly plant.

Assembly Plant Designation

A - Atlanta	J - Janesville	O - Oakland
B - Baltimore	K - Kansas City	S - St. Louis
F - Flint	L - Los Angeles	T - Tarrytown
G - Pontiac	N - Norwood	W - Willow Run

ENGINE NUMBER: 6 Cyl. - Stamped on pad on right side of engine block directly above oil level dipstick (to rear of distributor).

V8 Eng. - Stamped on pad at front right hand side of cylinder block.

NOTE - Number (example below) includes identification data as indicated.

① ② ③
F 1210 P

① - Engine Plant. **F** - Flint, **T** - Tonawanda, **C** - Engines built in Canada.

② - Code number indicating month and day of manufacturer. This is not an individual or continuous number.

③ - Engine Type. See table below.

Engine Type

J, K - 235" Eng. (JC, JF, KA indicate clutch and transmission options).

L - 261" Eng. (LC, LD, LE indicate transmission and brake options).

M,N,P - 283" Eng. (MA, NA, NC, ND, PA, PC, PD indicate transmission and brake options).

TUNE-UP

COMPRESSION PRESSURE: 6 Cyl. - 130 lbs. min. **V8** - 140 lbs. min. All cylinders should be alike within 20 lbs.

VACUUM READING: 17-21" (1 & 2-Bbl. Carb.), 16-20" (4-Bbl. Carb.).

VALVE TAPPET CLEARANCE: 235" - .006" Intake, .018" Exhaust. Hot. **261"** - .006" Intake, .020" Exhaust. Hot. **283"** - Zero lash, hydraulic lifters. *For initial tappet adjustment, see "VALVE SYSTEM" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic coil spring type located between manifold and exhaust pipe. Must operate freely.

IGNITION

FIRING ORDER: 6 Cyl. - 1-5-3-6-2-4. **V8** - 1-8-4-3-6-5-7-2.

Cylinders (V8) - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035".

Spark Plug - All Eng. ½ Ton - AC 44 (Std.), AC 45 or 46 (Hotter for City Driving), C-43 COM (Hotter for City Driving.

All Eng. 2-Ton - AC C-42-1 COM (Std.), AC C-43 COM 'Hotter for City Driving).

►*SPARK PLUG NOTE:* All plugs are 14 mm, and should be torqued to 20-25 ft. lbs.

COIL: Delco-Remy 1115087.

Ignition Current - 1.8 amps. idling, 4.0 amps. stopped.

Resistor - Delco-Remy 1931614.

►*COIL RESISTOR NOTE (6 Cyl. Exc. Forward Control):* Resistor connected to ignition switch by two leads. Second lead is connected through starter switch and provides a direct connection to coil when starter switch operated.

►*COIL RESISTOR NOTE (6 Cyl. Forward Control & All V8 Models):* Resistor connected in lead from ignition switch to coil. Bypassed during cranking by lead from starter solenoid to coil.

DISTRIBUTOR: Delco-Remy. Conventional type used on 6 Cyl. models. Two types of "Window" distributors used on V8, centrifugal with Vacuum Advance, and centrifugal advance only. *See "Delco-Remy Window Distributors" in Electrical Section.*

Delco-Remy Distributors

Engine	Delco-Remy No.

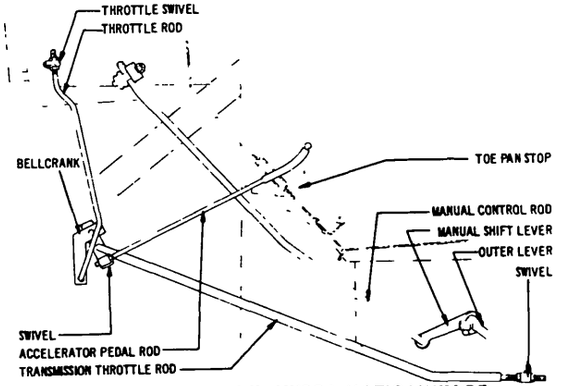
►*OVERSPEED WARNING SYSTEM NOTE:* Engine overspeed warning light mounted in cab and controlled by vacuum switch on Rochester 2G Carburetor 7013013. Oil pressure switch used for testing light bulb circuit (light should go on when ignition switch is turned on).

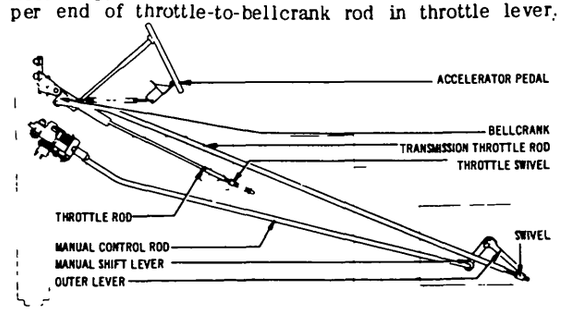
Throttle Linkage Adjustment (6 Cyl. Hydra-Matic Drive Trucks except Forward Control): With engine at normal operating temperature and idle speed set at 400-450 RPM, remove lower end of carburetor throttle lever-to-bellcrank rod from lever on bellcrank. Install Lever Positioning Gauge J-5609 in hole in lever and gauge hole in pan rail of engine block (hole is located toward

CONTINUED ON NEXT PAGE



CHEVROLET 6 CYL. TRUCK WIRING DIAGRAM

CHEVROLET V8 TRUCK WIRING DIAGRAM



CONTINUED FROM PRECEDING PAGE

rear of bellcrank position), and leave gauge in this position. Remove swivel from bellcrank-to-transmission outer lever at transmission and move transmission outer lever back against its stop. Check distance from hole in outer lever to back of transmission with Gauge J-2545-C. Bend lever as necessary for free entry of gauge in lever hole using Tool J-5260 (*CAUTION - Do not apply force to stops at either end of lever travel).* Hold outer lever back against its stop and adjust swivel position on bellcrank-to-transmission rod so it just enters hole in transmission lever. Remove Positioning Gauge from bellcrank and reinstall rod. Recheck en-

CHEVROLET 6 CYL. HYDRA-MATIC LINKAGE (EXCEPT FORWARD CONTROL)

gine idle speed with idle screw against stop on carburetor, and adjust carburetor throttle-to-bellcrank rod so swivel at upper end freely enters hole in throttle lever. At this point, **shorten** bellcrank-to-transmission outer lever rod by turning swivel locknuts **three and one-half** turns. Remove bellcrank-to-carburetor throttle rod upper swivel from lever and pull rod upward until linkage is stopped by forward stop in transmission. Hold in this position and adjust accelerator-to-bellcrank rod swivel until accelerator pedal is against floor stop, then **shorten** rod **one full turn.** Replace upper end of throttle-to-bellcrank rod in throttle lever.

CHEVROLET 6 CYL. HYDRA-MATIC LINKAGE (FORWARD CONTROL MODELS)

Thr ttle Linkage Adjustment (Forward Control M dels With Hydra-Matic Drive): With engine at normal operating temperature and idle speed set at 400-450 RPM,

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

insert 1/8" diameter pin into gauge pin hole in mounting bracket of accelerator pedal lever. Adjust length of throttle rod so that swivel just enters throttle lever. Remove swivel from outer lever and move lever back against transmission stop. Check distance from hole in outer lever to rear face of transmission with Checking Gauge J-2545-C, bending lever as necessary (Tool J-5260) to allow entry of gauge into hole. *CAUTION - Do not apply force against stop at either end of lever travel.* Adjust transmission throttle rod so that swivel at transmission case just enters outer lever, then **shorten** throttle rod **three and one-half turns** of jam nut.

THROTTLE LINKAGE ADJUSTMENT: (V8 Hydra-Matic Drive Trucks) - With carburetor at idle speed, disconnect rod "P" at transmission outer lever "A". Hold outer lever "A" back against transmission stop and check distance from hole in outer lever "A" to back of transmission (use Gauge J-2545-C). Bend outer lever "A" as required to allow entry of gauge in hole (Use Tool J-5260). With rods "E" and "H" connected, loosen "D" 3½ turns and tighten "B". Back off stop screw "F" and rotate lever "G" until linkage is stopped by full detent stop in transmission. Adjust screw "F" to contact bracket "Q", release lever "G" and advance screw "F" ½ -1 full turn. *NOTE* - On Series 31,32,3600, install 1/8" gauge pin through hole in lever "L" and bracket "M", Install rod "O" to lever "L" and rotate "L" until screw "F" contacts bracket "Q". Adjust length of rod "O" so swivel just enters lug "H". If unable to get downshift on road test, check for interference between rod "E" and cylinder block in area over "G" and bend rod as necessary to give clearance.

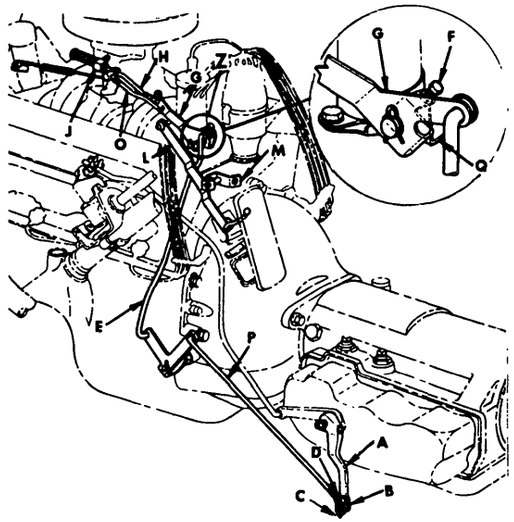
ROCHESTER "B"

Model	Rochester No.
235" All Trans. (Std.)	7013029
235" 3-Speed (Economy)	7013953
261" Auto. Trans.	7015140

Idle Setting - 1½-2½ turns open. Turn screw out for richer mixture.

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans. in "D").

Float Level - 1 9/32" from bottom of each float to cover gasket (do not remove gasket). Use Gauge M-250. With assembly inverted, place gauge with projection inserted in discharge nozzle. Carefully bend float lip vertically so that each float just touches top portion of gauge. Bend float arms to bring them into alignment and to center them in gauge. Tilt assembly 90° on each side and check to see that floats do not touch gauge.



Float Drop - Turn cover right side up so float drops down. Distance from gasket on cover to bottom of each float should be 1¾" on all models. Adjust by bending tang at rear of each float assembly.

►*CAUTION: Both floats must b s t alike and must not be twisted out of alignment.*

Acc l rating Pump - No seasonal adjustment.

Ch k Adjustm nt: Manual choke used.

Thr ttle Linkag Adjustm nt: *See CARBURETOR above.*

CHEVROLET V8 TRUCK HYDRA-MATIC LINKAGE

►*OTHER DATA: See "Rochester B Carburetors" in Carburetion Section.*

ROCHESTER 2G

Model	Rochester No.
283" (No Gov.)	7013009
283" (Vel. Gov.)	7013011
283" (Vac. Gov.)	7013013

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8. LEFT barrel feeds 1-4-6-7.*

Idle Setting - After idle speed set to correct specifications (see below), turn both idle mixture screws for smooth idle with highest vacuum reading and RPM.

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans, in "D").

Float Level - 1 23/64" (Gauge BT-152) with air horn inverted and gauge placed over float so it rests against pump side of power piston shaft and outer gauge leg in line with center of float. Adjust by bending float arm (Tool BT-69) between pivot and float.

Float Drop - 1 29/32" (Gauge BT-152) from air horn gasket to bottom of float with air horn held upright. To adjust, bend float tang.

Choke Setting: Manual choke used.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 2G & 2GC Carburetors" in Carburetion Section.*

ROCHESTER 4G

Model	Rochester No.
283" (3700 RPM Gov.)	7013023
283" (4000 RPM Gov.)	7013021

Idl S tting - Adjust idle mixture screws for highest steady vacuum.

Idl Sp d - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans. in "D").

Thr ttl Linkag Adjustm nt: *S CARBURETOR above.*

►*OTHER DATA: S "Roch ster 4G & 4GC Carbur tors" in Carburetion Section.*

CARTER BB

Carter (BB) 871SC (Forward C ntr l M d ls). Single barrel updraft type with manual choke.

Idle Setting - ½-1½ turns open (turn screw out for richer mixture).

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans. in "D").

Float Level - Top of float (not seam) 0" to 1/32" below top of bowl with needle valve seated. Use Gauge J-818-13A on top edge of bowl (gasket removed).

Accelerating Pump - Inner hole (in plunger shaft and throttle lever) Summer. Outer hole, Winter.

Throttle Linkage Adjustm nt: *S e CARBURETOR abov .*

►*OTHER DATA: See "Cart r BB Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: 6 Cyl. AC No. 4466 Fuel & Vacuum (With Vacuum Wiper), No. 4434 Fuel only (Electric Wiper).
283" V8 - AC No. 4701.
Pressure - 3½-4½ lbs. (6 Cyl.), 5¼-6½ lbs. (V8) idling.
See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: AC Electric
Dash Unit - AC No. 1518461.
Tank Unit - See table below.

BATTERY

Delco-Remy 2SMR53W. 12 Volt, 9 plate, 53 ampere hour capacity (20 hr. rate).
Battery Ground - Negative.
Engine Ground - Engine to frame (6 Cyl.), engine to dash (V8).

STARTER

Delco-Remy. Application as follows:

Truck Model	Start r	Armature
6 Cyl. (Exc. Fwd. Cont.)	1107634 ①	1926626
6 Cyl. (Fwd. Cont.)	1107652 ②	1932185
6 Cyl. (Hydra-Matic)	1107677 ②	1926626
V8 (Exc. Hydra-Matic)	1107664 ②	1935829
V8 (Hydra-Matic)	1107674 ②	1927343

① - Manual Pinion shift. ② - Solenoid Pinion shift.

Driv (6 Cyl. Synchro-m sh Trans. Exc. Fwd. C nt.) - Overrunning clutch with pedal operated pinion shift

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Drive (6 Cyl. Fwd. Cont. & Hydra-Matic Trans., All V8 Models) - Overrunning clutch with solenoid pinion shift.
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. min.

Performance Data - 1107634,74,77

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Performance Data - 1107652,64

Torque	RPM	Volts	①	Amperes
0 ft. lbs.	6200-9400	10.6		49-76
	Lock	4.25		270-310

① - Includes solenoid.

Starting Switch (Solenoid Pinion Shift Models): Delco-Remy Solenoid 1119919 (1107664) 1119760 (1107674), 1119793 (1107677), 1119919 (1107652) Mounted on starter and controlled by Ignition & Starter Switch 1116537 Turn key full RIGHT against spring tension to start

Starting Switch (Manual Pinion Shift Models): Delco-Remy Switch 1930496. Mounted on starter and actuated by pedal operated lever. Ignition Switch 1116522 is connected to small terminal on side of starter switch to bypass resistor for starting.
See "Delco-Remy Manual Pinion Shift Starter Switches" in Electrical Section.

Hydra-Matic Neutral Safety Switch: Delco-Remy 1998110. Mounted on steering column.
Adjustment - *See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy Used as follows

1106985	50	13 0	1475
1106679, 680	50	13 0	1600

① - Not Maximum output See Current Regulator
Rotation - Counterclockwise at commutator end
Brush Spring Tension - 28 ozs (All generators)
Field Current - 1 69-1 79 amps (1102096, 114, 115), 2 73-3 0 amps (1105116,118,1105123,124), 2 14-2 28 amps (1166676,679,680,985), all at 12 volts
Belt Adjustment: 3/8" (6 Cyl), 3/4" (V8) deflection midway between fan and generator pulleys with 15 lbs pressure

REGULATOR

Delco-Remy Used as follows

Regulator No.	Generator No.
1119001 (30 Amp)	1102096
1119002 (35 Amp)	1102114,115,173,174
1119604 (35 Amp)	1105116,117
1119610 (40 Amp)	1105123,124
1119603 (45-50 Amp)	1106676,985
1119606 (50 Amp)	1106679,680

►*DOUBLE CONTACT REGULATOR NOTE* Regulators 1119603,604,606,610 have double contacts for voltage regulation *NOTE* - Specifications below are "NORMAL" settings

Cutout Relay
Cuts In - 11 8-13 5 volts (1119001,2) 11 8-13 0 volts (1119603,4,6,10)
Contact Gap - 020" **Air Gap** - 020"

Voltage Regulator
Setting (1119001,2) - 13 8-14 8 volts
Setting (1119603,4,6,10) - 13 8-14 6 volts (Upper contacts), 1- 3 volts lower (Lower contacts) at 125°F
Contact Gap (1119603,4,6,10) - 016"
Air Gap - 075" (1119001,2), 067" (1119603,4,6,10), with armature pressed down to point where contacts just touch
Checking & Adjusting - *See "Delco-Remy 12 Volt" and "Delco-Remy (Double Contact)" Regulators in Electrical Section*

Current Regulator
Setting - 27-33 amps (1119001), 32-37 amps (1119002), 43-47 amps (1119603), 31 0-35 5 amps (1119604) at 125°F , 48-52 amps (1119606), 36 0-40 5 amps (1119610) at 125°F
►*NOTE* 1119604 & 1119610 are "Temperature Compensated" type
Air Gap - 075" with armature pressed down to point where contacts just touch
Checking & Adjusting - *See "Delco-Remy 12 Volt" and 'Delco-Remy (Double Contact)" Regulators in Electrical Section*

MISC. ELECTRICAL

Headlights: *Sealed Beam 4 Headlight System*
See "4 Headlight System" in Electrical Section
Directional Signals: *See Electrical Section*
Lighting Switch Removal: Disconnect all wires from switch (tag wires for reinstallation) depress switch shaft retainer (on top of switch) and remove knob and shaft Remove retaining ferrule remove switch
Stop Light Switch Location: Attached to underside of toe pan at left of brake pedal
LIGHTING CIRCUIT BREAKERS. Dual circuit breakers located in lighting switch
15 Amper Protects headlamps and parking lamps
15 Amper Protects all other vehicle lamps except instrument panel lights
FUSES: 3 Amp r Protects instrument panel lights
Horn Relay: Delco-Remy 1116920
Contacts Close - 5 0-9 5 volts
Contact Gap - 027"

ENGINE

►*AIR CONDITIONED TRUCK SERVICE CAUTION Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine See "Air Conditioning Service Cautions" in Miscellaneous Section*

Engine Model	Type
Thriftmaster	235" 6 Cyl
Jobmaster	261" 6 Cyl
Trademaster	283" V8
Taskmaster	283" V8
Super Taskmaster	283" V8

ENGINE SPECIFICATIONS: 6 Cyl & V8 valve-in-head

Engine	Bore	Stroke	Displacement
Thriftmaster	3 9/16"	3 15/16"	235 cu in
Jobmaster	3 3/4"	3 15/16"	261 cu in
Trademaster	3 7/8"	3"	283 cu in
Taskmaster	3 7/8"	3"	283 cu in
Super Taskmaster	3 7/8"	3"	283 cu in

Engine	Compr. Ratio	Rated HP	Developed HP
Thriftmaster	8 25-1	30 4	135 at 4000 RPM
Jobmaster	8 00-1	33 7	150 at 4000 RPM
Trademaster	8 50-1	48 0	160 at 4200 RPM
Taskmaster	8 00-1	48 0	160 at 4200 RPM
Super Taskmaster	8 00-1	48 0	175 at 4400 RPM

Compression & Vacuum Reading - *See TUNE-UP*
ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data*
OIL PAN REMOVAL: (6 Cyl Engines) Raise front of vehicle and place on stands drain lubricant and remove bolts and screws *NOTE* Turn crankshaft as necessary to allow clearance at front crossmember
OIL PAN REMOVAL: (V8 Engine) - Raise front of vehicle and place on stands drain lubricant On 5 6000 Series Trucks remove oil level gauge and tube Remove bolts and screws lower oil pan
ENGINE MOUNTINGS: *See 'Engine Mountings" in Chevrolet Special Data*
CYLINDER HEAD & MANIFOLDS: *See "Cylinder Head & Manifold" in Chevrolet Special Data*
TIGHTENING TORQUES: *See "Tightening Specifications in Chevrolet Special Data*
►*OTHER ENGINE DATA See Chevrolet Passenger Car pages and note the following*
PISTON RINGS: All engines have "Chrome Plated" top compression rings Other compression rings are cast iron Oil rings are three piece steel with heavy chrome plate oil control rails
Oil Ring Width - 181- 188" (6 Cyl), 235- 245" (V8)
VALVES- "Rotocoil Valve Rotators" used on 261" and 283" Taskmaster Engines with stellite faced and hard tipped exhaust valves
Valve Lift (283" Eng) - 3336"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valv S at Width - 235" Eng. - .062-.093" Int. & Exh. **261" Eng.** - .062-.093" Intake, .093" - .125" Exhaust. **283" Trademaster** - .062-.093" Intake & Exhaust. **283" Taskmaster & Super Taskmaster** - .062-.093" Intake, .093-.125" Exhaust. *NOTE* - Seats on these engines are induction hardened.

►*VALVE SEAT & FACE ANGLE RECONDITIONING CAUTION:* To maintain interference and parallel fit between valve face and seat follow specifications below:

Engine	Int. - Seat Angle - Exh.
235", 261"	31° - 46°
283"	46° - 46°

Engine	Int.- Face Angle - Exh.
235"	30° - 45°
261"	30° - 46°
283"	45° - Ⓒ

Ⓒ - 45° Trademaster, 46° Taskmaster & Super Taskmaster.

Valve Spring Specifications

Engine	Lbs. Pressure	Length
235" Eng.	65	1 27/32"
261" Eng.	78	1 27/32"
283" Eng.	80	1 45/64"

Valve Spring Free Length - 2.156" (235"), 2.281" (261").

Valve Timing Specifications (283" Eng.)

Intake Valves - Open 18° BTDC. Close 54° ALDC.
Exhaust Valves - Open 52° BLDC. Close 20° ATDC.

Valve Timing Check (261" Eng.): Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve opens and just starts to close and until triangular mark on flywheel lines up with pointer in flywheel housing opening. Mount dial indicator on rocker arm shaft support with stem contacting No. 1 exhaust valve adjusting screw, set dial indicator to .063". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .005". Reset No. 1 exhaust valve to correct running clearance.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: (235") 5 qts. refill, 6 qts, with filter change. **(261")** 6 qts. refill (Includes full flow filter). **(283")** 4 qts. refill (Trademaster), 5 qts. refill (Taskmaster). Add 1 qt. for filter change.

Normal Oil Pressure - (6 Cyl.) 35 lbs. at 2000 RPM. **(V8)** 30 lbs. at 1170-1200 RPM.

Pressure Regulator Valve - In pump body, not adjustable.

Oil Pressure Indicator - AC No. 1508246. Not electric.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

►*OIL PUMP SCREEN NOTE:* Oil pickup pipe should be installed with pickup pipe screen horizontal and toward bottom of pan.

Oil Pump Overhaul - *See "Oiling System" in Chevrolet Special Data.*

Oil Filt r: AC partial flow (235"), full flow (261" & 283").

R plac ment Filt r El ment - (235") AC-P-115 1 qt. or AC-P-117 2 qt., partial flow. (261" & V8) AC-PF-141 full flow.

Crankcas V ntilati n (Standard): Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

Servicing - On all models with air cleaner mounted on valve rocker arm cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

Crankcase Ventilation (Optional): Positive Type. Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**

Servicing - Every 10,000 miles (or oftener if required), clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly.

►*VACUUM VALVE CAUTION:* If improper action of spring is suspected due to spring being distorted, or etched from corrosive action, the valve assembly should be replaced.

►*TASKMASTER V8 CRANKCASE VENTILATION NOTE:* Positive type crankcase ventilation is Standard.

COOLING

Water Capacity: In quarts for each type engine.

Model	Standard	Heavy Duty
3000 Series (235")	17	17½
4000 Series (235")	17½	18
4, 5-speed (261")	Ⓒ 17	
3000 Series (283")	17½	18

5000 Series (283")	Ⓒ	
6000 Series (283")	Ⓒ	

Ⓒ - Powermatic 21. Ⓒ - 4, 5-speed 18½, Powermatic 21.
Ⓒ - 4, 5-speed 18, Powermatic 21½.

NOTE - Add 1 quart for heater.

Pressure Valve: Radiator filler cap. AC No. RC1 (Std.), 7 lb.; AC No. RC12 (5,6000 Series with Auto. Trans.), 9 lbs.

Thermostat: Harrison. In cylinder head water outlet (6 Cyl.). In water outlet in intake manifold (V8).

Standard - No. 3133596 (stamped 160) 157-163°F.
Optional - No. 3133595 (151°F), No. 3133597 (170°F), No. 3133698 (180°F).

Temperature Gauge: AC Electric.
Dash Unit - AC No. 1513381.
Engine Unit - AC No. 1513321.
See "Temperature Gauges" in Miscellaneous Section.

Water Pump: Packless type with sealed ball bearing shaft.
See "Water Pumps" in Chevrolet Special Data.

CLUTCH

Own (Diaphragm Spring) and **Borg & Beck** (Coil Spring) types used. Single plate, dry disc type.
See "Chevrolet (Own)" or "Borg & Beck" Clutches in Clutch S cti n.

Ch vr l t (Own) Diaphragm Clutch

Model	Siz	Ch vr let No.
6 Cyl. (Exc. H.D., Fwd. Contr.)	10"	3751039
Series 3 & 4 6 Cyl.	11"	3751041

B rg & Beck Clutch

Series 3 & 4 V8, Series 6	11"	3758681

Clutch Disc Applicati n - As follows:

6 Cyl. (Exc. H.D., Fwd. Contr.) 10" Orange hub.	3836097
6 Cyl. H.D., All V8 11" White hub	3758678

6 CYL. ENGINES

Pedal Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. *NOTE* - Use finger pressure only when checking clutch free travel.

Removal: Remove transmission (see Transmission Removal). Remove throwout bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool J-5824 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. *CAUTION* - Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align "X" mark on cover with "X" mark on flywheel.

V8 ENGINES

Pedal Adjustment: Adjust clutch pedal until free travel is 1". Make sure that pedal pad contacts toeboard when pedal pressed down.

Removal: Remove transmission (see Transmission Removal). Before removing clutch assembly, punch mark flywheel, clutch cover and one pressure plate lug so these parts may be assembled in their same relative positions. Loosen hold-down screws evenly and remove cover. *NOTE*–Mark flywheel side of driven plate for correct reassembly.

TRANSMISSION

3-SPEED LIGHT DUTY

Own. Three speed, all helical gear type. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).
See "Chevrolet 3-Speed (Light Duty)" in Transmissi n Section.

Transmission Control: Steering column mounted gearshift lever. *See "Transmission Controls" in Transmission Section.*

Removal (½ & ¾ Ton): Drain transmission. Disconnect speedometer cable at transmission and shift control rods from transmission levers. Remove propeller shaft. Remove the two top transmission to clutch housing capscrews and insert two transmission guide pins, Tool J-1126, in these holes. Remove the two lower transmission to clutch housing capscrews. Slide transmission straight back on guide pins until clutch gear is free of splines in the clutch disc.

3-SPEED (HEAVY DUTY)

Own. Three speed, constant mesh (second & high), sliding gear (low & reverse).
See "Chevrolet 3-Speed (Heavy Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever.
See "Transmission Control" in Transmission S cti n.

Removal: Same as for "3-Speed (Light Duty)" above.

4-SPEED

Own. Four-speed, constant mesh, synchro-mesh, helical gear (2nd, 3rd, & 4th), sliding spur gear (low & reverse). Floor mounted gearshift.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Transmission Control: Floor mounted gearshift lever.
Removal (½ Ton): See *"3-speed (Light Duty)" above.*

Removal (Other Trucks): Drain transmission, disconnect parking brake and remove lever. Remove propellor shaft, transmission gearshift lever (use Tool J-8109) Remove screws that fasten steering jacket grommet to floor and slide grommet up jacket out of way. Remove accelerator pedal and floor mat. Remove sheet metal screws attaching transmission cover to body floor, remove cover. On Forward Control Models, remove both front and rear floor pans. Disconnect speedometer cable from driven gear fitting at transmission rear bearing retainer. Remove two top attaching screws, insert Guide Pins J-1126, remove flywheel underpan, two lower transmission screws, slide transmission straight back, remove transmission from vehicle.

HYDRA-MATIC DRIVE

Dual Range. Four speed type with fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION:* See *Transmission Section.*

►*TESTING & TROUBLE SHOOTING.* See *"Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level in transmission every day Drain & refill every 25,000 miles. Use only "Automatic Transmission Fluid" Type A

Checking Fluid Level—With selector lever in "N" position, parking brake set, and transmission at normal operating temperature, remove access hole cover plate in floor pan, and **check fluid level with engine at idling speed.** Add sufficient fluid to bring level in transmission to "F" mark on dipstick.

Capacity—8½ qts. (refill), 9 qts. (after overhaul). *NOTE*—1 qt. additional with oil cooler.

Throttle Linkage Adjustment: See *CARBURETOR above.*

►*OTHER HYDRA-MATIC SERVICE DATA*—See *"Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

FRONT AXLE

4-WHEEL DRIVE

Full floating hypoid gear type Differential assembly (ring gear and pinion assembly) is serviced in same manner as rear axle

See "Chevrolet 4-Wheel Drive" in Rear Axle Section

Ratio - (½-Ton) 3 90-1 (¾-Ton) 4 57-1 (1-Ton) 5 14-1

Removal: Separate propeller shaft from front axle differential Place jack stands behind front springs Disconnect drag link from steering arm Disconnect brake hoses, shock absorbers from spring clamp plate Remove "U" bolts, roll axle from under truck

Axle Shaft Assembly Removal: Remove front wheel (¾ and 1-ton) and drum (½-ton) Remove hub cap and drive flange stud nuts Remove drive flange-to-axle shaft retaining snap ring, drive flange and shim *NOTE* - Use screws in tapped holes in flange (if necessary) to force flange from shaft then replace plastic plugs Use Tool J-6893 (½-ton), J-6649 (¾ & 1-ton) to remove outer locknut Remove lock and inner locknut Remove hub assembly (½-ton), drum and hub assembly (¾ & 1-ton), but do not drop loose outer bearing from bore of hub Remove brake and spindle assembly mounting nuts (½-ton), brake assembly and spindle Remove brake and spindle mounting nuts (¾ & 1-ton), then remove slinger Remove axle shaft and joint assembly

Installation: Install axle shaft and joint assembly, being careful not to damage seal with shaft splines Seat spindle-to-steering knuckle studs (flat side up to clear brake cylinder on ½-ton), then position brake assembly (½-ton) and slinger (¾ & 1-ton) over studs and tighten stud nuts to 50-60 ft lbs Install hub over spindle (½-ton), drum and hub assembly (¾ & 1-ton) *NOTE* - Lubricate bearings before assembly and DO NOT damage seal. Install inner nut and tighten wrench tight, then back off 1/8 turn Hub should be free to turn Install lock and outer locknut (against spacer on ¾ & 1-ton) Install shim and drive flange *NOTE* - Add only enough shims (.010") as necessary for flange to clear end of axle ball housing *CAUTION - Shims in excess of .030" will cause excessive wear of spindle bushing and interfere with the installation of the snap ring* Install snap ring and flange nuts Tighten flange nuts to 18-20 ft lbs (½-ton), 32-38 ft lbs (¾ & 1-ton) Install hub caps and lubricate front axle

REAR AXLE

HALF-TON SEMI-FLOATING (OWN)

Own. Semi-floating, hypoid gear type with Hotchkiss drive *NOTE* - Same design as passenger car axle

See "Chevrolet Hypoid Semi-floating" in Rear Axle Section

Ratio - 3 9-1 (39-10) or 3 7-1 (37-10)

►*AXLE SHAFT NOTE* Shafts unequal length (right shaft longer) and may be identified by mark stamped on shaft or by length as follows

Axle	Part No.	Length
Left	3694769℄	29 5/8"
Right	3694770℄	30 5/8"

℄ - Part No stamped on axle for identification

Backlash - .005-.008"

Axle Shaft Removal: Remove wheel and brake drum Drain rear axle lubricant remove housing cover Remove differential pinion shaft lockscrew, pinion shaft, axle shaft spacer and pinions Push axle shaft in toward center of car and remove "C" washers from inner ends of shaft, then remove axle shaft

Axle Shaft Endplay - Free fit to .014" maximum

Differential Carrier Removal: Remove axle shafts to clear differential side gears, see *"Axle Shaft Removal"* Separate rear universal joint (tape bearings to trunnion) Remove differential carrier to housing bolts and separate carrier from housing

HALF-TON SEMI-FLOATING (SPICER)

Spicer "Positraction". Semi-floating, hypoid gear type with Hotchkiss drive, incorporating a limited slip differential *NOTE* - Optional on all models except Four Wheel Drive

See "Spicer Hypoid Semi-floating" in Rear Axle Section

Ratio - 3 92-1 (47-12)

Backlash - .003-.006"

Axle Shaft Removal: Remove wheel and brake drum, drain lubricant, then remove nuts securing axle shaft bearing retainer and brake backing plate to axle housing Pull axle shaft, bearing, retainer and retaining ring assembly from housing *CAUTION - Support shaft to prevent damage to oil seal* Pry out oil seal if advisable to replace it

Rear Axle Assembly Removal: Remove parking brake pull back spring and brake cable clevis pins Remove clevis from cable Remove two springs and retaining clip from each cable at frame brackets Separate rear universal joint (tape bearings to trunnion) Disconnect shock absorbers from anchor plate, and hydraulic brake line at rear frame bracket Remove spring "U" bolts, nuts, and anchor plates Raise vehicle and roll axle assembly to rear

►*LUBRICATION NOTE:* Use only G M No 3758790 or 3758791 lubricant Incorrect lubricant will cause Positraction rear axle to chatter

FULL-FLOATING (¾, 1, 1½ & 2-TON)

Own. Full-floating hypoid (straddle mounted pinion) with Hotchkiss drive

►*AXLE ASSEMBLY NOTE* ¾, 1-ton & 2-ton drive pinion assemblies have roller bearing at rear end, and tapered double roller (one piece outer race) at front end 1½-ton has roller bearing at rear end and double row ball bearing at front end Flange type axle shafts used in ¾ & 1-ton models splined axle shaft flanges and hubs used in 1½ & 2-ton models

See "Chevrolet Truck Hypoid Full Floating" in Rear Axle Section

►*AXLE RATIO IDENTIFICATION NOTE* Axle ratios are identified by prefix letters in rear axle numbers stamped on top of carrier housing between reinforcing ribs

Axle Ratio Identification

Ratio	Prefix Letters
4 57-(32 7)	CC,DC,CP
5 14-1 (36 7)	CA,CB,CE,CF,CG
6 17-1 (37 6)	CG
7 2-1 (36 5)	CM

Backlash - .005-.008"

Removal of Differential Carrier: Drain lubricant, remove axle housing cover and axle shafts, see axle shaft removal below. Remove two trunnion bearing "U" bolts from rear yoke and split rear universal joint (hold bearings on trunnion with tape). Remove bolts and lockwashers holding carrier to axle housing, support carrier in floor jack and roll from under truck.

Axle Shaft Removal (¾ & 1-Ton) Remove eight capscrews and lockwashers in axle shaft flange install two ½"x13" screws in special threaded holes in flange (between regular mounting screw holes) turn these screws up evenly to loosen the shaft withdraw shaft from housing remove and discard gasket *Use new gasket when installing shaft*

►*CAUTION* Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft *Grease at this point will cause loosening of axle shaft flange capscrews*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*AXLE SHAFT NOTE:* Shafts unequal length (right shaft longer than left). Install in correct position.

Axle Shaft Removal (1½ & 2-Ton): Remove hubcap, then thread Tool J-1436-1 into hole in axle shaft and use slide hammer to remove shaft

NOTE–When reinstalling axle shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket.

►*AXLE SHAFT NOTE:* Some models have different length axle shafts. Install longer shaft on right side.

Wheel Bearing Adjustment: Remove wheels and axle shafts (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight, using special wrench J-2222 (¾ & 1-Ton), J-870 (1½ Ton), J-5670 (2-Ton) while turning hub by hand, then back off nut 45°, check for free turning, install adjusting nut lock with lock tangs aligned with slots in adjusting nut. Bend tang down into notch in adjusting nut, install locknut and tighten securely. Bend tang of lock down into notch of locknut.

PLANETARY 2-SPEED

Own. Full-floating, two-speed planetary reduction type. with hypoid primary pinion and ring gear.
See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.

Axle Ratio - 6 40-1 (high), 8 72-1 (low) 35:6 Primary gears

Two-Speed Shift Control: Vacuum power type with control on gearshift lever.

Carrier Assembly Removal: *See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.*

Axle Shaft Removal & Wheel Bearing Adjustment: Same as for "Standard Full-Floating" above.

SHOCK ABSORBERS

Delco. Direct acting (Airplane type) shock absorbers as follows.

Shock Absorber No.	Front	Rear
Series 3 (Exc. Fwd. Contr.)	5532049	5534435
Series 3 Fwd. Contr	5513193	5534435
Series 4, 6 (Exc.Fwd.& Sch. Bus.)	5521698	5534401
Series 6 School Bus	5521699	5534401
Series 6 Fwd. Contr.	5532425	5534401

FRONT SUSPENSION

2-WHEEL DRIVE

Conventional "I" Beam Section, with Reverse Elliott ends and semi-eliptic springs

Kingpin Inclination - 6 16-8 18° (Exc 6242,6642 with Eaton Axle), 4° (6242,6642 with Eaton Axle).
Caster (At Design d L ad) - Pos 1 5° (31,3200), 3.0° (3600), 2 25° (3800), 2° (34,35,37,41,44,45,5000),2 25° (6000), 2.75° (6242,6642)
Camber - 1 25-1 75° (Exc 6242,6642 with Eaton Axle), 1°30' (6242,6642 with Eaton Axle)
Toe-In - 13- 22" (31,3200), 25- 31" (All Others)
Toe-Out on Turns - With outer wheel at 20°, inner wheel should be 22.5-23 5°

4-WHEEL DRIVE

Optional on some ½,¾ and 1-Ton models
Kingpin Inclination - 8°
Caster - 1¾° Not adjustable
Camber - 1½° Not adjustable
Toe-In - 1/32-5/32" *NOTE* - Adjust tie rod ends Fine thread end changes toe-in ¼" per turn, coarse end 9/32"

STEERING

Manual: Saginaw Ball Bearing Worm & Nut (recirculating ball).
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.
Power Steering: Bendix Linkage Type – *See "Chevrolet Truck (Bendix)" in Steering Section.*
Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*
Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

►*NOTE: Two different type brakes used on trucks as indicated below.*
Chevrolet-Bendix (Front - 3,4,5,6000 Series), (Rear - 3000 Series) - Duo-Servo, single anchor type hydraulic (Without ecce ntric adjustment)
See "Chevrolet-Bendix Hydraulic" in Brake Section.
►*HALF-TON TRUCK BRAKE SHOE GRINDING CAUTION:* If bench type grinder used, grind shoes to 057"-087" smaller diameter than drum size If spindle type grinder used, grind shoe to drum diameter
Chevrolet-Twinplex (Rear-4,5,6000 Series) - Two cylinder, four anchor type hydraulic Shoes are self-centering and self-energizing
See "Chevrolet-Twinplex" in Brake Section
Wheel Cylinders - Size stamped on housing under adjusting lock spring
Drums - Cast iron with steel web

Drum Diameter

Model	Front	Rear
1/2-Ton	11"	11"
3/4-Ton	12"	ℂ12"
1-Ton	12"	14"
1½ & 2-Ton	14"	15"

ℂ - On Fwd Contr models

Lining - Molded type Bonded on 1'2-ton models, riveted on all other models

Thickness & Width

Model	Thickn ss	Width
1/2-Ton (Front Whl)	3/16"	2"
1'2-Ton (Rear Whl.)	3/16"	1¾"
3/4-Ton (Front & Rear)	1/4"	ℂ 2"
1-Ton (Front Whl)	1/4"	2"
1-Ton (Rear Whl.)	1/4"	2½"
1½ & 2-Ton (Front Whl.)	1/4"	2½"
1½ & 2-Ton (Rear Whl.)	3/8"	4"

ℂ - On Fwd Contr. models.

Clearance - Adjust for clearance as follows:

All Models (Except 1½ & 2-T n R ar Brak s)–Remove adjusting hole cover and turn brake adjusting screw until light drag is felt, then back off adjusting screw 7 notches (Half-Ton Models), or just enough to eliminate brake drag (Other Models), but not more than 7 notches.

Rear Wheels (1½ & 2-Ton M d ls)–Remove adjusting hole covers from flange plate and turn rear adjusting screw until slight drag is felt, then back off 3 notches. Repeat on front adjusting screw (2 adjustments on each wheel).

Parking Brakes: Hand lever applies rear wheel service brakes on Half-Ton & ¾-Ton Models, and an independent brake on propeller shaft on all other models.
Adjustment (½ & ¾-Ton M d ls)–*Se "Ch vr l t-Bendix Hydraulic" in Brak S cti n.*
Adjustment (1, 1½, 2-Ton M d ls & ¾-T n with 4-Sp ed Transmission)–*See "Ch vrolet Twinplex" in Brak Section.*

Master Cylinder: Located under floorboard on left hand side of truck.
Checking Fluid–Maintain fluid level to lower edge of filler hole.
Removal–Remove from below. *CAUTION*–On 1½ & 2 Ton Low Cab Forward, spacer between cylinder and body bracket will fall out when mounting bolts removed.
Installation–Reverse removal procedure. On LCF Models make sure the spacers are reinstalled.

Power Brakes: *See "Hydrov c P w r Unit" in Brak S ct.*
Removal–Remove vacuum line, brake fluid line to wheel and master cylinders, and air cleaner hose from vacuum unit. Remove nuts and bolt securing unit to its bracket on right side rail of frame.

MISC. MECHANICAL

Windshield Wipers: Linkage type. Vacuum motor (3,4000 Std.), electric motor (3,4000 Optl., Other Std).
See "Windshield Wipers" in Misc llaneous S ction.
Air Conditioning: *See "Ch vrol t Air Conditioning" in Miscellaneous Section.*

►*JACKING & HOISTING CAUTION (ALL MODELS): Before jacking or hoisting, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

Assembly Plant Designation

A - Atlanta	**J** - Janesville	**N** - Norwood
B - Baltimore	**K** - Kansas City	**O** - Oakland
F - Flint	**L** - Los Angeles	**S** - St Louis
G - Framingham	**W** - Willow Run	**T** - Tarrytown

ENGINE NUMBER: Stamped on pad on right side of engine block directly above oil level dipstick (to rear of distributor) *NOTE* - Number (example below) includes identification data

① ② ③
T 0101 A

① - Engine Plant **F** - Flint **T** - Tonawanda **C** - Engines built in Canada
② - Code number indicating month and day of manufacture. This is not an individual or continuous number
③ - Engine type *See Engine Type table below*

Std Engine & SM. Trans.

A - Basic Engine	**AJ** - H D Clutch, Pwr Strg, AC
AE - H D Clutch	**AK** - Pwr Strg
AF - Air Cond	**AM** - H D Clutch, Pwr Strg
AG - H D Clutch & Air Cond	**AZ** - Pwr Strg, Air Cond

1300 Engine & SM Trans.

AP - Basic Engine	**All Engines & Powerglide**
AR - H D Clutch	**B** - Basic Engine
AS - Pwr Strg	**BE** - Pwr Strg
AT - H D Clutch & Pwr Strg	**BG** - Air Cond ①
	BH - Pwr Strg, Air Cond ①

① - Except 1300 Engine

►*1300 ENGINE NOTE* This engine used in Biscayne 1300 Series Fleet Cars only Engine is basically the same as that used in standard cars except for use of economy carburetor and mechanical valve lifters (different valve lift and valve timing)

TUNE-UP

COMPRESSION PRESSURE: 130 lbs minimum with all cylinders equal within 20 lbs, at cranking speed
VACUUM READING: 17-21" steady, at idling speed
VALVE TAPPET CLEARANCE: (Exc. 1300 with 3-Speed Trans.) - Zero lash, hydraulic lifters *NOTE - for initial valve adjustment see "VALVES"*
(1300 with 3-Speed Trans.) - 006-011" Intake, 013-018" Exhaust
MANIFOLD HEAT CONTROL: Thermostatic type Check for free operation Should require ½ turn from unhooked to hooked position Replace distorted spring

IGNITION

FIRING ORDER: 1-5-3-6-2-4
SPARK PLUG GAP: 035"
Spark Plugs - AC No 44 Torque to 20-25 ft lbs
COIL: Delco-Remy 1115120.
Ignition Current - 1 8 amps idling, 4 0 amps stopped
Resistor - Resistance type cable (1 8 ohms) used in harness between bulkhead disconnect plug and starter solenoid bypass terminal (in coil primary circuit for regular operation) Bypassed during cranking when coil energized directly from starter solenoid bypass terminal
DISTRIBUTOR: Delco-Remy 1112403.
Condenser - Delco-Remy 1928111 **Capacity** 18-23 mfd
Contact Point Set - Delco-Remy 1924571
Breaker Gap - 016"
Cam Angle - 28-35° with 016" gap
►*BREAKER GAP CAUTION*· Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points
Breaker Arm Spring Tension - 19-23 ozs
Rotation - Clockwise viewed from above

Automatic Advance

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		375	0-4		750
4-6		700	8-12		1400
9-11		1350	18-22		2700
12-14		1750	24-28		3500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center "O" position
Vacuum Spark Control: Delco Remy 1116140

Vacuum Advance

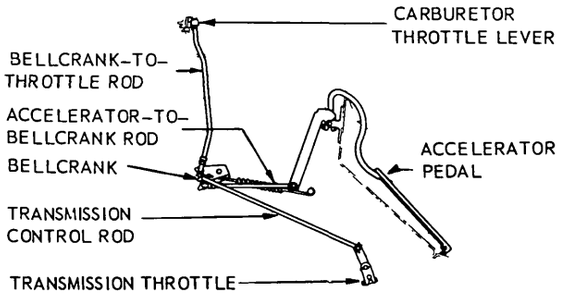
Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	4-6
10-12	20-24	15-16

Ignition Switch: Replacement - Disconnect negative battery terminal Place switch in "Lock" position and insert wire in hole in face of cylinder While pushing in on wire (to depress plunger) turn key counterclockwise and withdraw lock cylinder Use Tool J-7607 to remove ignition switch nut (passenger side), pull switch out from under dash and remove wiring connectors and lamp socket and bulb To remove "theft resistant connector" use suitable tool of heavy wire to press on lock clip within slot in connector and gently work connector away from switch until connector is released

IGNITION TIMING

Setting - 5° BTDC at idle speed with vacuum line disconnected

Timing Mark - First short vertical line on flywheel, clockwise from steel ball (TDC) insert This line should align with pointer in inspection hole in right front face of housing with Octane selector set on "O"



CARBURETOR

►*CARBUPETOR APPLICATION Rochester 3C single barrel carburetor used*

THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE CARS): **1)** Disconnect control rod from throttle lever at transmission cover Remove lower bolt at rear of transmission side cover Rotate throttle valve control outer lever counterclockwise to open throttle position

2) Hold lever in this position and with throttle valve outer lever Gauge J-5906 set at 7 09", measure distance from left side cover lower rear bolt to hole in throttle lever If pins of gauge will enter holes adjustment is correct If necessary to adjust, loosen lever to clamp attaching screw and adjust lever on throttle shaft as necessary Reconnect throttle rod

3) Disconnect bellcrank-to-transmission throttle lever rod at throttle valve lever Disconnect accelerator-to-bellcrank rod at bellcrank

CHEVROLET 6 CYL. POWERGLIDE THROTTLE LINKAGE

4) Force bellcrank-to-transmission throttle lever rod forward against its stop in transmission (open throttle position) and adjust bellcrank-to-carburetor throttle rod for free entry of swivel pin in throttle valve lever, with carburetor throttle valve in wide open position

5) With carburetor throttle valve held in wide open position and accelerator fully depressed, adjust accelerator-to-bellcrank rod for free entry of swivel pin into hole in bellcrank

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ROCHESTER BC

R ch ster BC. Single barrel carburetor used as follows

Model	Rochester Carburetor No.
Synchro-mesh (Std)	7013003
Synchro-mesh (Governor)	7013005
Synchro-mesh (Economy)	7013955
Powerglide (Std)	7013000
Powerglide (Economy)	7013956

Idle Setting - 1½ turns open 2½ turns open after engine temperature normal

Idle Speed - 475 RPM Synchro-mesh, 450 RPM Powerglide in "D"

Float Level - 1 9/32" (Gauge M-250) With air horn inverted and gasket in place, position Gauge M-250 over floats with tang inserted in discharge nozzle Bend float arms as necessary so that top of each float just touches gauge and float is centered between gauge legs

Float Drop - Bend float tang as necessary to obtain a distance of 1¾" from gasket surface to bottom of float, with air horn upright and float hanging free

Choke Adjustment: 1 notch rich (Synchro-mesh), 2 notches rich (Powerglide)

Fast Idle: With fast idle adjusting screw on second step and against high step of fast idle cam, Gauge BT-99 (076") should just slide between lower edge of choke valve and carburetor bore To adjust, bend connector rod

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA See "Rochester BC Carburetors" in Carburetion Section*

CARB. EQUIPMENT

FUEL FILTER: Located in fuel line connection at inlet fuel filter nut Remove inlet connection, fuel filter nut and remove filter element and spring **Clean** element by washing in solvent and blowing out **Replace** element every 15,000 miles

Fuel Pump: AC Diaphragm type. Fuel only

Replacement Fuel Pump - AC 4434

Pressure - 3½-4½ lbs. at 450-1000 RPM

See "Fuel Pumps" in Carburetion Section

Gasoline Gauge: AC Electric type

Dash Unit - AC No. 5642364

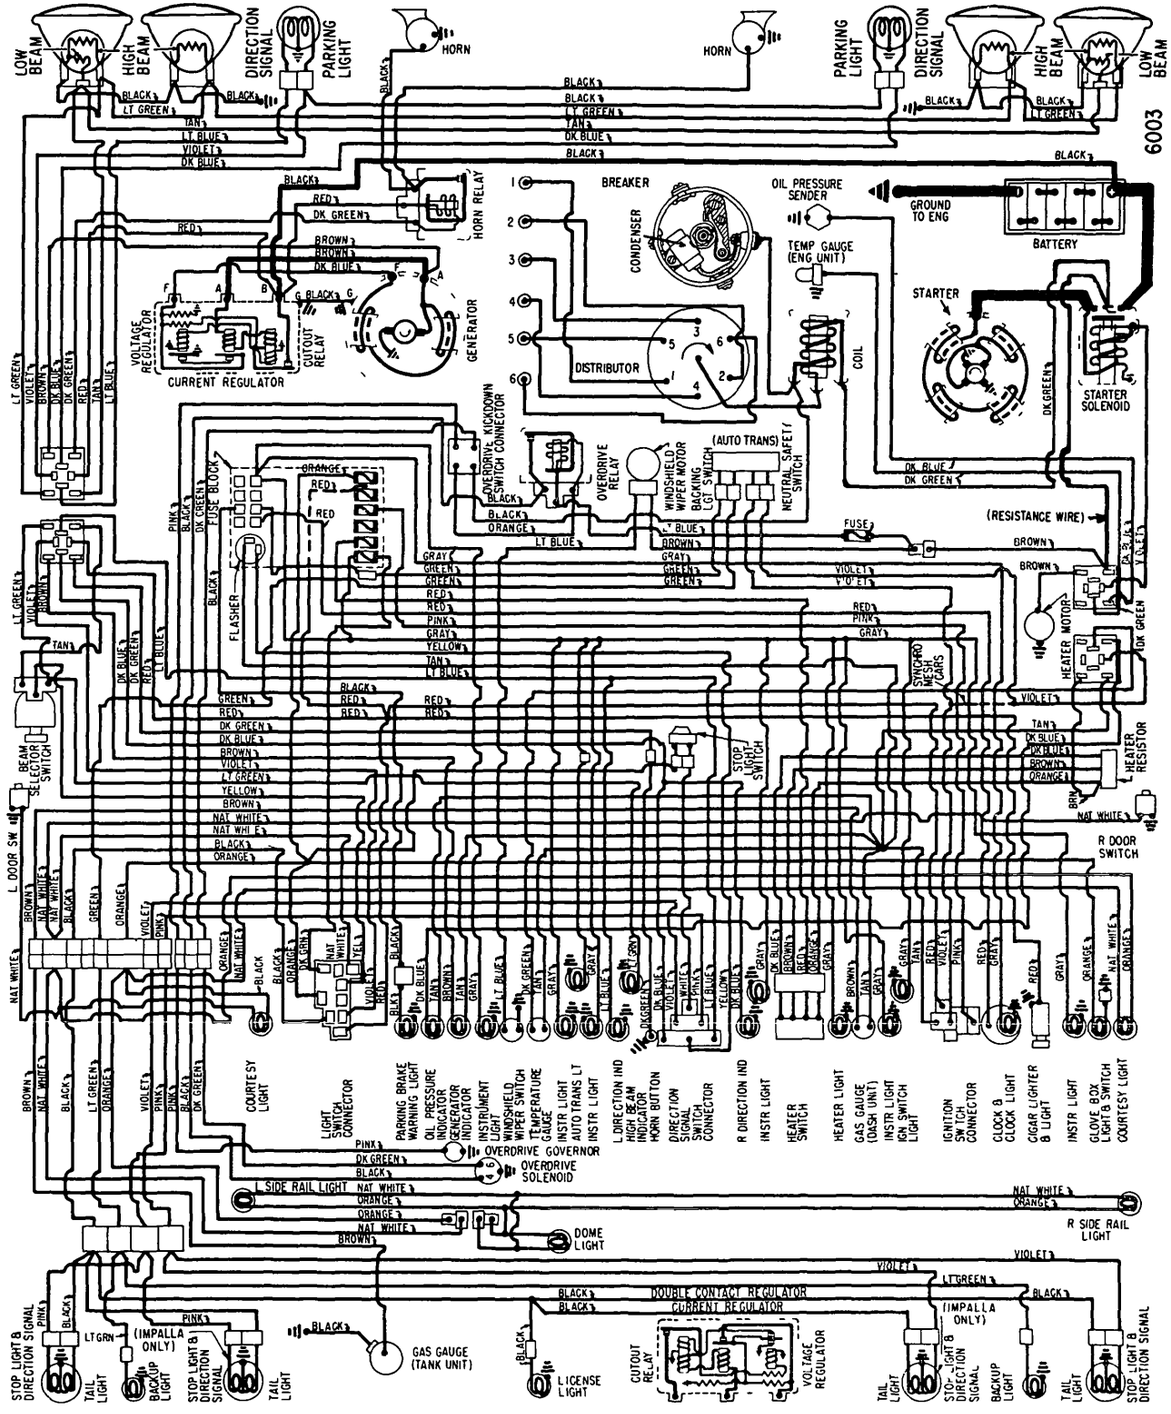
Tank Unit - See table below.

Model	AC No.
Pass Car	5640697
Sta. Wgn.①Sed. Del , Par. Del	5640662
Sta. Wgn. (9-Pass.)	5640659

① - Exc 9 Pass. models.

See "Fuel Gauges" in Carburetion Section

Cruise Control: Automatic speed control. *See "Cruise Control" in Carburetion Section.*



ELECTRICAL

►*SEE CHEVROLET V8 PAGES (FOLLOWING) FOR ALL BATTERY, STARTER, GENERATOR, REGULATOR & MISC ELECTRICAL DATA*

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTIONS: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine See "Air Conditioning Service Cautions" in Miscellaneous Section*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ENGINE SPECIFICATIONS: Own. 6-cyl. valve-in-head.

Bore	Stroke	Displacement
3 9/16"	2 15/16"	235.5 cu. in.
Compr. Ratio	**Rated HP**	**Developed HP**
8.25-1	30.4	135 at 4000 RPM

Compression & Vacuum Reading - *See TUNE-UP*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*

OIL PAN REMOVAL: Drain crankcase. Raise and support car. Drain cooling system and disconnect radiator hoses at radiator. Disconnect battery ground strap at engine. Disconnect fuel pump inlet pipe at pump. Disconnect accelerator control rod at its lever. Remove overdrive solenoid. Disconnect power brake hose at check valve. Remove oil filter and support bracket. Remove nuts and gasket at exhaust pipe flange-to-exhaust pipe connection. Disconnect lower transmission control rods at transmission. Disconnect clutch fork pushrod at clutch fork. Disconnect all clutch control assembly from engine. Loosen transmission, and remove engine front mounting bolts. Remove hood. Lift engine with Tool J-4536 about 3" or until valve rocker cover contacts dash upper panel. Remove oil pan retaining bolts and screws. On synchro-mesh cars, remove flywheel underpan extension. Remove pan. *NOTE* - turn crankshaft as necessary for oil pan to clear counterweights.

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Chevrolet Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data.*

►*ENGINE DATA NOTE:* Data following includes both Pass. Car & Trucks as noted.

PISTONS

Aluminum alloy, cam ground, tin plated, with pin offset 5/64".

Removal - Pistons and rods removed from above.

Clearance - (235" Pass.) .0005-.0011"; (235" Trk.) .0006-.0010"; (261") .0012-.0016".

►*STANDARD & .001" PISTON NOTE:* Standard and .001" pistons are furnished in two sizes as follows:

235" Engine - Std. - Marked **S4** (3.5625-3.5630"), **S5** (3.5630-3.5635"), **.001" Oversize** - Marked **S6** (3.5635-3.5640"), **S7** (3.5640-3.5645").

261" Engine - Std. - Marked **S4** (3.7500-3.7505"), **S5** (3.7505-3.7510"), **.001" Oversize** - Marked **S6** (3.7510-3.7515"), **S7** (3.7515-3.7520").

Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.

Installing Pistons: Install piston with notch in piston and mark "Front" toward front of engine.

Replacement Pistons: Furnished Std. & .001", .020", .030", .040" Oversize.

PISTON PIN

Locked in rod. No bushing used in piston.

Diameter - 235" Eng. - .8660-.8665". **261" Eng.** - .9270-.9275".

Pin Fit in Piston - .00015-.00025" clearance. With both piston and pin at 70°F, and light film of oil on pin, pin should hold own weight in either piston pin boss. It should be possible to install pin in piston with thumb pressure.

Replacement Pins: Furnished Std. & .0015", .003", .005" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (1 & 2)	.0930-.0935"	①	②
Oil (3)	③	④ .015-.055"	.000-.008"

① - (235") .007-.020" (Pass.), .0007-.017" (Trucks); (261") .015-.025" (Top), .010-.020" (No. 2).

② - (235") .002-.004". (261") .002-.0035".

③ - (235" Pass.) .224-.231"; (235", 261" Truck) .177-.182".

④ - On rails.

Replacement Rings: Furnished Std., .020", .030" and .040" Oversize.

►*RING INSTALLATION CAUTION:* Install Compression rings with side marked "GM" up.

CONNECTING ROD

Length - 6.81" Center-to-center.

Crankpin Journal Diameter - 2.311-2.312".

Lower Bearing - Replaceable precision type.

Clearance - .001-.003" (New), .001-.004" (Used).

Sideplay - .005-.012".

Replacement Bearings: Std. & .001", .002", .010", .020" Undersize.

Installing Rods: Install rods with piston pin clamp and number on rod lower end toward camshaft.

CRANKSHAFT

Journal Diameters - **(1)** 2.6835-2.6845", **(2)** 2.7145-2.7155", **(3)** 2.7455-2.7465", **(4)** 2.7765-2.7775".

Clearance - (235" Pass.) .0008-.0024" (No. 1,2), .0010-.0026" (No. 3,4).

(235", 261" Trk.) New - .001-.003". Used - (235") .001-.004", (261") .001-.0045".

Bearing - Thin wall babbitt with steel back.

Bearing Adjustment: Precision type. Replace bearings.

End Thrust - Taken by No. 3 (rear intermediate) main bearing.

Endplay - .0035-.0095" (Pass.), .003-.009" (Trk.).

Replacement Bearings: Furnished Std. & .002", .010", .020", .030" Undersize.

Bearing Installation: Can be replaced without removing engine.

See "Crankshaft & Main Bearings" in Chevrolet Special Data.

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data.*

Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data.*

CAMSHAFT

Journal Diameters - **(1)** 2.1537-2.1547", **(2)** 2.0912-2.0922", **(3)** 2.0287-2.0297", **(4)** 1.9662-1.9672".

►*NOTE:* Journal out-of-round limits .001". Run-out limits .002".

Bearing Type - Steel backed babbitt lined bushings, no reaming required.

Clearance - .0015-.0035".

End Thrust: Controlled by spacer and thrust plate behind camshaft sprocket.

Endplay - .001-.005".

►*CAMSHAFT LOBE LIFT NOTE:* When improper valve operation is indicated, check lift of each lobe. *See "Camshaft & Bearings" in Chevrolet Special Data.*

Timing Gear: Fibre camshaft gear, steel crankshaft gear.

Back Lash - .003-.005".

Replacement Timing Gears & Installation: *See "Timing Gears" in Chevrolet Special Data.*

Camshaft Setting: Timing is correct when timing marks on gears are together.

Camshaft Removal & Replacement: *See "Camshaft & Bearings" in Chevrolet Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data.*

VALVES

Tappet Clearance: (1300 with 3-Speed Trans.) .006-.011" Intake, .013-.018" Exhaust.

Others - Zero lash, hydraulic lifters. *NOTE - For "Initial Valve Adjustment" see below.*

Trucks - (235") .006" Intake, .018" Exhaust. (261") .006" Intake, .020" Exhaust. All Hot.

Valve	Head Diam.	Stem Diam.	Length
Intake	1.870-1.880"	.3410-.3417"	①
Exhaust	1.495-1.505"	③	②

Valve	Seat Angle ④	Lift	Stem Clearance
Intake	⑤ 30°	⑥ .3275"	.0010-.0027"
Exhaust	⑤ 45°	⑥ .3275"	.0013-.003"

① - (235" Pass.) 6.376-6.396"; (235" & 261" Trk.) 6.364-6.394".

② - (235" Pass.) 4.913-4.933"; (235" Trk.) 4.905-4.930", (261" Trk.) 4.902-4.932".

③ - (235" Pass.) .3410-.3417"; (235", 261" Trk.) .001" taper, .3410-.3417" (top), .3400-.3407" (bottom).

④ - Valve face and seat angle specifications are service specifications. New engine specifications are: (235", 261") Seat Angle - 31° Intake, 46° Exhaust; Face Angle - (235") 30° Intake, 45° Exhaust, (261") 30° Intake, 46° Exhaust.

⑤ - Valve face angle 29° Intake, 44° Exhaust.

⑥ - (1300 with 3-Speed Trans.) .3105" Intake, .3325" Exhaust.

►*VALVE GRINDING CAUTION:* Replacement valves are furnished with face angles of 30° and 45°. When seats are ground to recommendations of 30° and 45°. valves must be faced to recommended angle of 29° Intake, 44° Exhaust.

►*VALVE STEM END GRINDING CAUTION (261" Eng.):* DO NOT grind hardened valve stem tip excessively on 261" Engine.

Valve Seat Width - 235" Eng. 1/16-3/32" (Int. & Exh.). **261" Eng.** - 1/16-3/32" (Int.), 3/32-1/8" (Exh.).

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Precision type, pressed in head.

Valve Guide Installation - *See "Valve System" in Chevrolet Special Data.*

Initial Valve Adjustment (Hydraulic Lifters): Bring engine to operating temperature, remove rocker arm cover. Back off rocker arm adjusting screw (engine idling) until arms start to clatter. Turn adjusting screw down until clatter stops and 1½ additional turns.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valve Springs: Install springs with closed coil end down. **Free Length** - Pass. 2.16". 235" truck 2.156", 261" truck 2.281".

Spring Specifications (Pass.)

Valve	Pressure	Length
Closed	62-68 lbs.	1.858"
Open	158-168 lbs.	1.528"

Spring Specifications (Trucks)

Engine	Pressure	Length
235"	65 lbs.	1 27/32"
261"	78 lbs.	1 27/32"

►*VALVE SPRING HEIGHT CAUTION:* Check installed height of valve springs. If distance from spring seat in head to top of valve spring exceeds 1 7/8", install 1/32" shims under spring to bring installed height within 1 51/64-1 7/8".

Valve Lifters: (Pass.) Hydraulic standard except Special Biscayne with 3-Speed Trans. which has mechanical type. *See "Valve System" in Chevrolet Special Data.* **(Trucks)** Mechanical type. Removed from above.

Valve Rotators: (261") Rotocoil type.

Rocker Arm Assembly: *See "Valve System" in Chevrolet Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

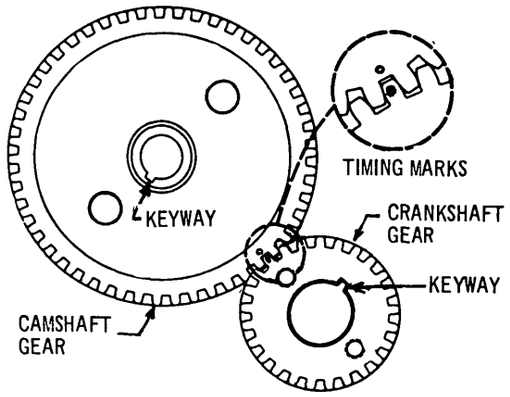
Valve Timing Specifications

(Pass. Exc. 1300 with 3-Speed Trans.)

Intake Valves - Open 16° BTDC. Close 48° ALDC.
Exhaust Valves - Open 46° 30' BLDC. Close 17° 30' ATDC.

(1300 with 3-Speed Trans.)

Intake Valves - Open 1° ATDC. Close 39° ALDC.
Exhaust Valves - Open 42° BLDC. Close 9° ATDC.



(235" Truck)

Intake Valves - Open 28° BTDC. Close 68° ALDC.
Exhaust Valves - Open 56°30'42" BLDC. Close 23° 30'42" ATDC.

(261" Truck)

Intake Valves - Open 11°30' BTDC. Close 52°30' ALDC.
Exhaust Valves - Open 51° BLDC. Close 13° ATDC.

Valve Timing Check - *NOTE - Mechanical type lifter must be used when making valve timing check.* Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve opens and just starts to close and until triangular flywheel mark (19° BTDC) lines up with pointer on right face of flywheel housing. Mount

CHEVROLET 6 CYL. VALVE TIMING MARKS

dial indicator on rocker arm shaft with stem of indicator contacting No. 1 exhaust valve adjusting screw and set dial indicator to .043" (235"), .063" (261"). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .005". A greater or lesser reading indicates either excessive gear wear or improperly installed timing gears. Reset tappet clearance to specifications.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: (235") 5 qts. (261") 6 qts. Add 1 qt. for filter

Normal Oil Pressure: 35 lbs. at 2000 RPM.

Pressure Regulator Valve - In oil pump body. Not adjustable.

Oil Pressure Indicator - Light located on left side of instrument panel, controlled by pressure switch AC No. 1508753 located in main oil gallery on left side of engine. Switch closes when pressure drops to 4-7 lbs.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul - *See "Oiling System" in Chevrolet Special Data.*

Oil Filter Element: Replacement element AC No. 115. Replace every 4000 miles.

Crankcase Ventilation (Standard): Air intake through breather filter in valve rocker arm cover and outlet through crankcase breather pipe on right side of engine.

Servicing - Clean breather filter in a good solvent every 2,000 miles, then oil mesh with light engine oil.

Crankcase Ventilation (Optional): Positive Type. Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**

Servicing - Every 10,000 miles (or oftener if required) clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly.

►*VACUUM VALVE CAUTION:* If improper action of spring is suspected due to spring being distorted, or etched from corrosive action, the valve assembly should be replaced.

COOLING

►*RADIATOR REMOVAL CAUTION (POWERGLIDE CARS): Transmission oil cooler is part of radiator lower tank and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.*

Water Capacity: 17 qts. Std., 18 qts. with heater.

Pressure Valve: Radiator filler cap, AC No. 850800 Type RC-6, 13 lb.

Thermostat: Pellet type. In cylinder head water outlet. 170°F Std., 160°F & 180°F Optional. Use 160°F thermostat with Methanol type anti-freeze.

Temperature Gauge: AC Electric.

Dash Unit - AC No. 1514193.
Engine Unit - AC No. 1513321.
See "Temperature Gauges" in Miscellaneous Section.

Water Pump: Packless type with sealed ball bearing. *See "Water Pumps" in Chevrolet Special Data.*

MECHANICAL

►*SEE CHEVROLET V8 PAGES (FOLLOWING) FOR ALL CLUTCH, SYNCHRO-MESH TRANSMISSION, OVERDRIVE, POWERGLIDE TRANSMISSION, UNIVERSALS, REAR AXLE, FRONT & REAR SUSPENSION, SHOCK ABSORBER, STEERING, BRAKES & MISC. MECHANICAL DATA.*

►*JACKING & HOISTING CAUTION (ALL MODELS): Before jacking or hoisting car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

TUNE-UP

COMPRESSION PRESSURE: 283" Pass. - 2-Bbl. Carb. - 140 lbs. min.
283" Pass. Others & 348" All - 150 lbs. minimum.
Corvette - (Hydraulic Lifters) 160 lbs., **(Mechanical Lifters)** 140 lbs.
All cylinders must be alike within 20 lbs.

VALVE TAPPET CLEARANCE: (Hydraulic Lifters) - Zero lash. *See "Initial Valve Adjustment" under VALVES.*
(Mechanical Lifters) - 348" - .012" Int., .018" Exh.
Corvette - .008" Int., .018" Exh. (Cast Iron Head), .006" Int., .014" Exh. (Aluminum Head); with Special Camshaft.

MANIFOLD HEAT CONTROL: Heat control valve and thermostatic coil assembly located between right exhaust manifold and crossover pipe (Single Exhaust), exhaust pipe (Dual Exhaust). Assembly not used on fuel injection cars. Make sure valve shaft is free to turn. If sticking, free up with kerosene or alcohol containing a small amount of baking soda.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.
SPARK PLUG GAP: .035" (.033-.038").
Torque all spark plugs to 20-25 ft. lbs.
Spark Plugs - (283" Pass.) - AC No. 44 (Std.), AC No. 45 or 46 (City Operation), AC No. C43 COM (Heavy Duty Operation).
(Corvette) Cast Iron Head - AC No. 46 (City), AC No. 44 (Town & Country), AC No. C43 COM (Heavy Duty & High Output), AC No. C42-1 COM (Extended & Extreme High Output).
(Corvette) Aluminum Head & Fuel Injection - AC No. 44FF (City), AC No. 42FF (Extended & Extreme High Output).
(348" Pass.) - AC No. 44N (Std.), AC No. 43N (Heavy Duty Operation).
COIL: Delco-Remy. (283") - 1115115.
(348") - 1115083 (Std.), 1115111 (Three 2-Bbl. Carb. & 4-Bbl. Carb. with Powerglide Trans.), 1115114 (Special Cam).
(Corvette) - 1115091 (Std.), 1115107 (Fuel Injection).
Ignition Current - 1.8 amps. idling, 4.0 amps. stopped.
Resistor (348" Eng. with Three 2-Bbl. Carbs. and Special Camshaft) - Delco-Remy 1931385.
Resistor (Others) - Resistance type cable (1.8 ohms) used in harness between bulkhead disconnect plug and starter solenoid bypass terminal (in coil primary circuit for regular operation). Bypassed during cranking when coil energized directly from starter solenoid bypass terminal.

DISTRIBUTOR: Delco-Remy. Used as follows:

Application	Delco-Remy No.
283" (2-Bbl. Carb.)	1110947
283" (4-Bbl. Carb.)	1110946
348" (Std. Cam)	1110948
348" (Sp. Cam)	1110919
Corvette (4-Bbl. Carb.)	1110946
Corvette (Dual 4-Bbl. Carb.)	1110891
Corvette (Fuel Inj. Std. Cam)	1110915
Corvette (Fuel Inj. Spec. Cam)	1110914

►*DISTRIBUTOR NOTE:* Different types used as follows:
Models 1110915, 46, 47, 48 - External adjustment "Window" type. *See "Delco-Remy Window Distributors" in Electrical Section.*
Models 1110891, 914, 919 - Double breaker with conventional distributor cap (not window type). Vacuum spark control not used (centrifugal weight advance only).
Condenser (Window Type) - Delco-Remy 1932004.
Capacity .18-.23 mfd.
Condenser (Double Breaker) - Delco-Remy 1869704.
Capacity .18-.23 mfd.
Contact Point Set (Window Type) - Delco-Remy 1931988.
Contact Point Set (Double Breaker) - Delco-Remy 1938330.
Breaker Gap (Window Type) - Gap (.016") will be correct when cam angle correctly set (see below).
Breaker Gap (Double Breaker) - .014-.018" (new points).
Cam Angle (Window Type) - 28-32°. Set at 30°. Gives .016" point opening.
Cam Angle (Double Breaker) - Adjust each set of points to 29°±1° with other set blocked open with .025" thick insulator. Cam angle for both sets of points operating together should be 34°±1°.
Breaker Arm Spring Tension - 19-23 ozs.
Rotation - Clockwise viewed from above.

Automatic Advance - 1110891, 915, 946

Start	0	7-9
7 5	15	15-16

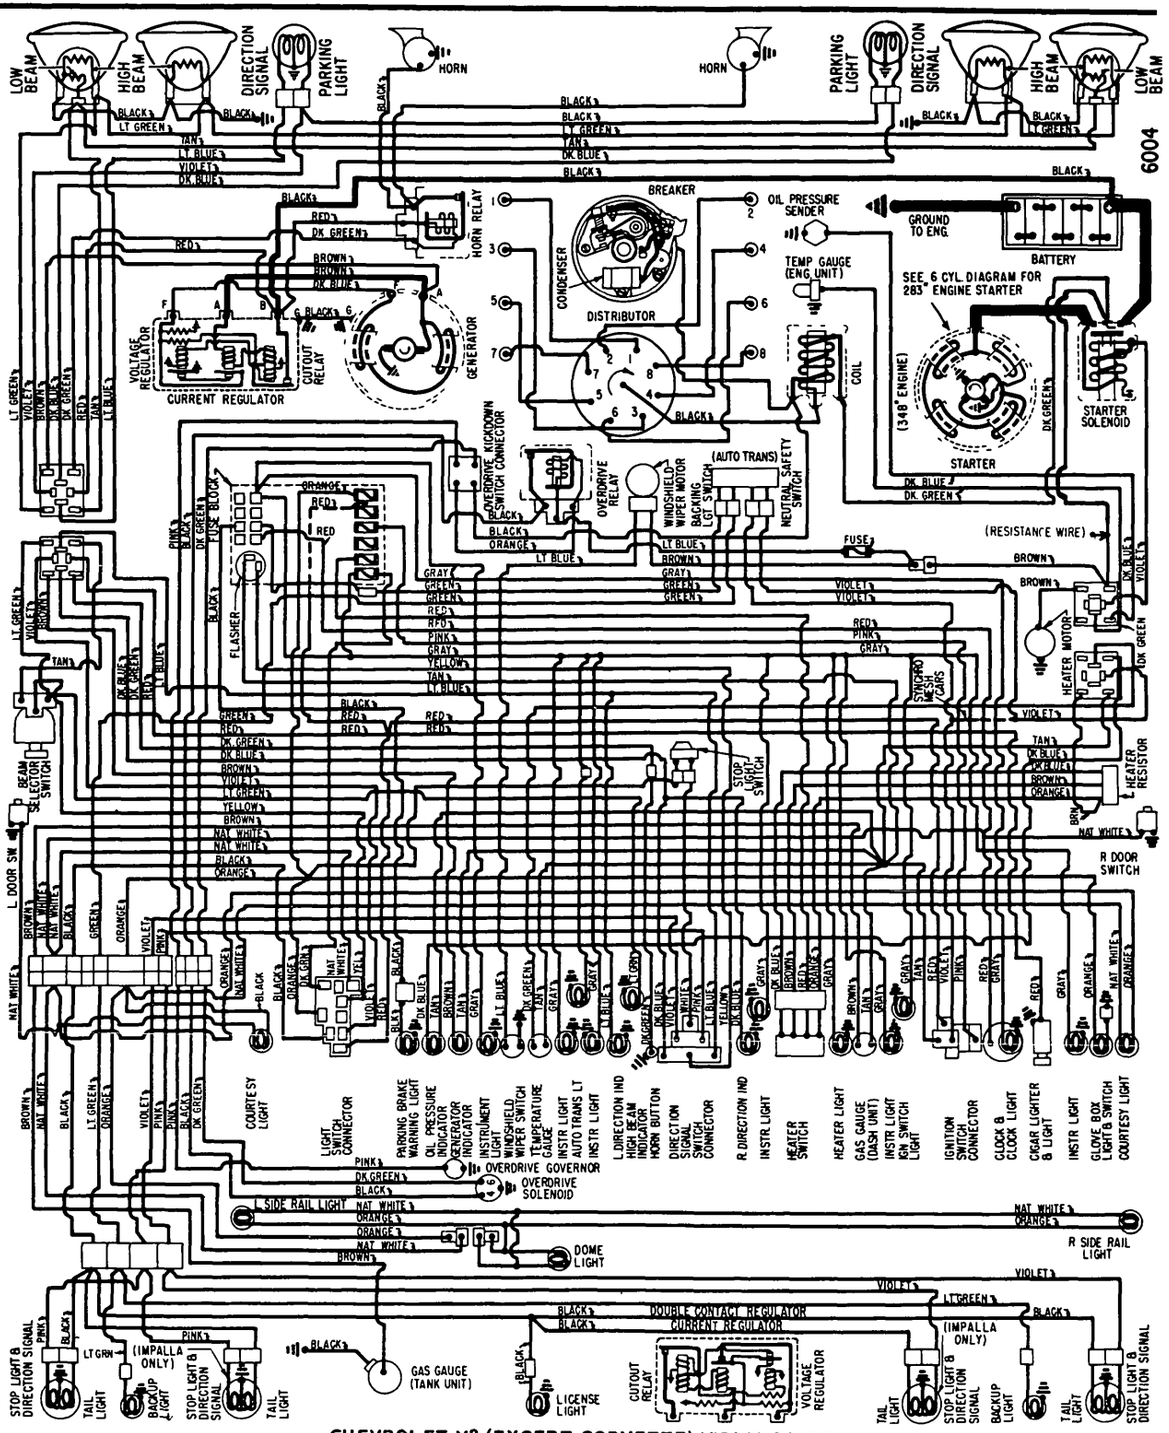
Ignition Switch: Replacement - Disconnect negative battery terminal. Place switch in "Lock" position and insert wire in hole in face of cylinder. While pushing in on wire (to depress plunger) turn key counterclockwise and withdraw lock cylinder. Use Tool J-7607 to remove ignition switch nut (passenger side), pull switch out from under dash and remove wiring connectors and lamp socket and bulb. To remove "theft resistant connector" use suitable tool of heavy wire to press on lock clip within slot in connector and gently work connector away from switch until connector is released

IGNITION TIMING

Engine	Std. Setting
283"	① 4° BTDC
348"	① 8° BTDC
348" Sp Cam	②
Corvette (One 4-Bbl Carb)	① 4° BTDC
(Two 4-Bbl Carbs. & Hyd Lifters)	① 12° BTDC
(Two 4-Bbl Carbs & Mech Lifters)	③ 12° BTDC
(Fuel Inj & Hyd Lifters)	④ 8° BTDC
(Fuel Inj & Mech Lifters)	⑤ 18°BTDC

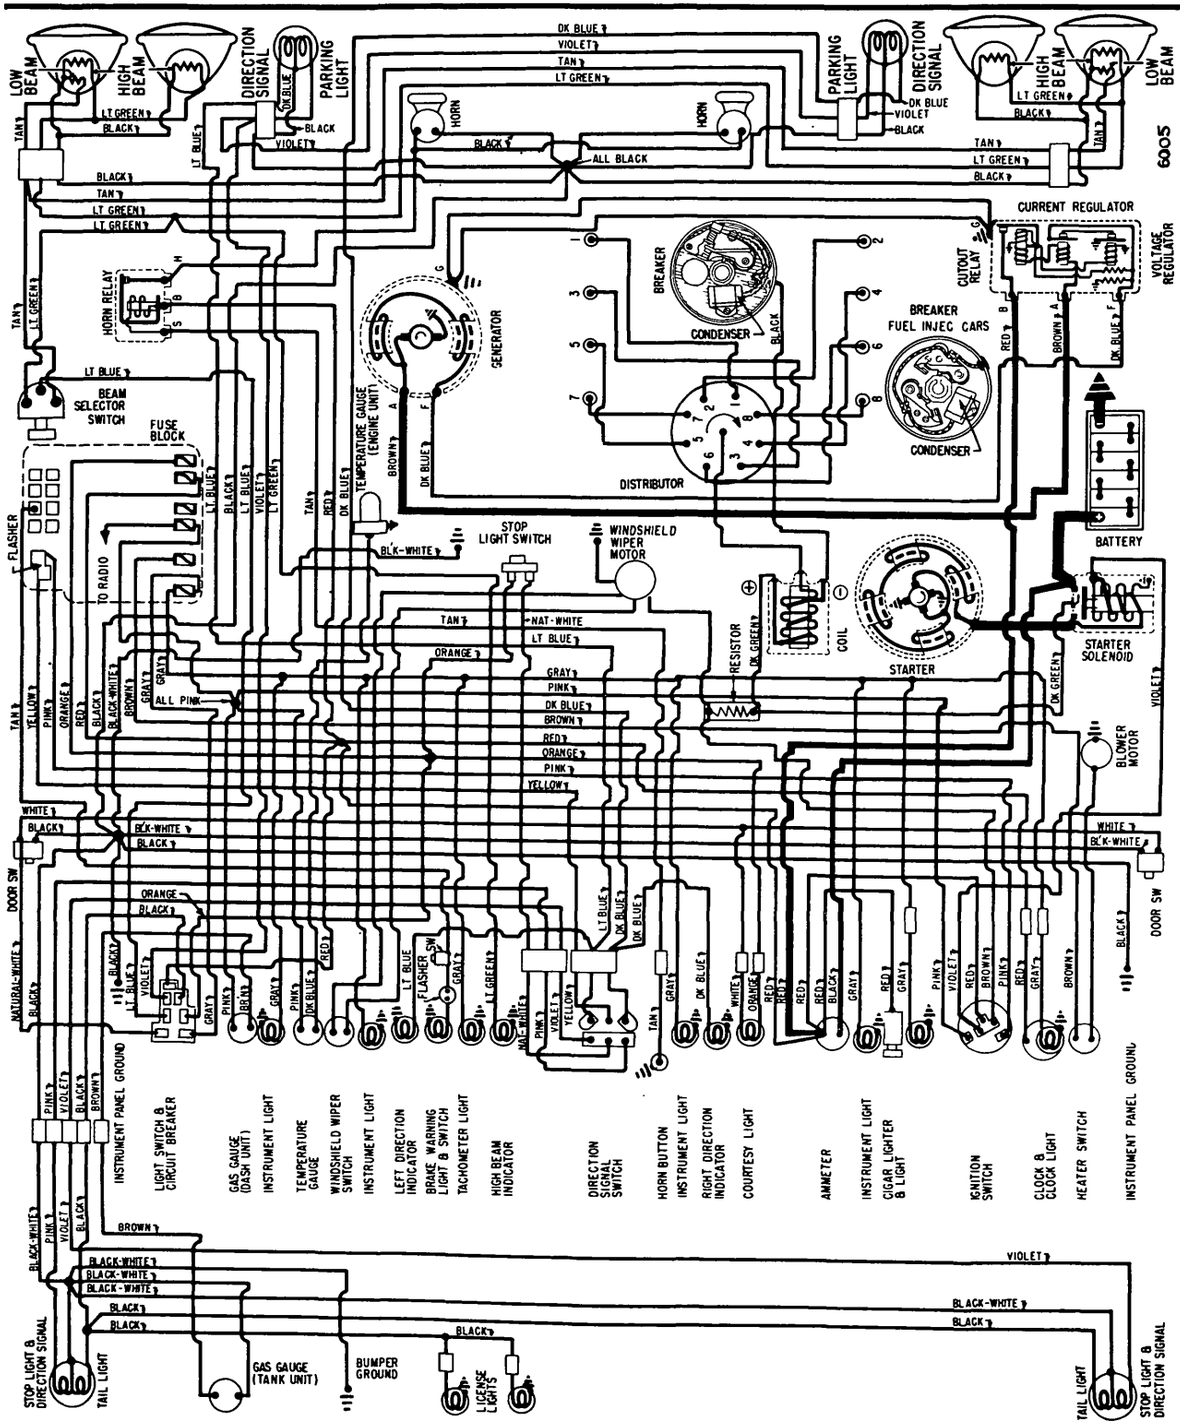
① - Idling at 475 RPM (Synchro-mesh), 450 RPM (Auto Trans)

② - 10° BTDC (Premium Fuel), 12° BTDC (Super Premium Fuel) See *"Maximum Advance Caution 348" Special Cam" below*



③ - Idling at 800-850 RPM ④ - Idling at 550 RPM

⑤ - Idling at 650 RPM



►*1960-61 CHEVROLET (EXC. CORVAIR) ENGINE IGNITION TIMING SERVICE SETTING RANGE LIMIT NOTE* Ignition timing should be within following specifications when "tailoring" for particular operating conditions **235" Eng.** (0° to 8° BTDC), **283" Eng. with 2-Bbl. Carb.** (4° to 8° BTDC), **283" & 348" Engs. with 4-Bbl. Carbs.** (4° to 10° BTDC)

►*MAXIMUM ADVANCE CAUTION (348" Special Cam):* Total maximum advance (Initial Setting plus Distributor Automatic Advance at 2500 Distr RPM) should not exceed 34° (Premium Fuel) or 36° (Super Premium

Corvette Optl. Sp. Cam	Two Carter WCFB 4-Bbl.
Corvette Optl	Rochester Ramjet Fuel Injection
Corvette Optl. Sp. Cam	Rochester Ramjet Fuel Injection

►*FAST IDLE CONTROL CAUTION (AIR CONDITIONED CARS):* Fast idle control is set to provide 900 RPM engine speed when Fast Idle Control Knob is pulled out. Make sure knob is pushed in when making normal fast idle adjustments and that fast idle control linkage does not interfere with normal operation of carburetor linkage when fast idle is not in operation.

THROTTLE LINKAGE ADJUSTMENT: Powerglide Cars - Remove lower control rod and loosen transmission throttle lever clamp screw. Insert Tool J-5906 between transmission left hand side cover lower front bolt and hole in lever. Distance should be 3.60", as indicated on gauge, from centerline of bolt to hole centerline. With gauge in place and holding lever clamp in full detent position (rotated counterclockwise), tighten lever to clamp and remove gauge. Install lower control rod. Disconnect upper control rod from throttle lever on carburetor and open throttle. Adjust upper control rod

CONTINUED ON NEXT PAGE

POWERGLIDE & TURBOGLIDE THROTTLE LINKAGE

CONTINUED FROM PRECEDING PAGE

length for free entry into throttle lever. Check adjustment by releasing linkage to its idle position then hold carburetor throttle lever in wide open position and press downward on transmission outer throttle lever and check for deflection. Readjust upper throttle rod if rod deflects. Place ½" (Pass. Car), .85" (Corvette), wood block under accelerator pedal rod, depress accelerator against block and adjust swivel on accelerator-to-carburetor throttle lever rod for free entry into throttle lever when held in wide open position. Readjust length of accelerator rod when detent is not felt before reaching wide open throttle.

Turboglide Cars - Disconnect transmission throttle valve rod and accelerator rod from carburetor throttle lever. Pull throttle valve rod forward to full limit of its travel and then adjust swivel for free entry into carburetor throttle lever with lever in wide open position. Attach swivel to lever. To check adjustment, put carburetor throttle lever in wide open position and push downward (counterclockwise) on transmission throttle valve lever. If transmission throttle valve rod attached to carburetor throttle lever deflects (transmission not on internal stop) or carburetor throttle lever will not reach wide open position, repeat adjustment. Now place carburetor throttle lever at wide open throttle and depress accelerator pedal to hold pedal lever in contact with stop. Adjust swivel on accelerator rod for free entry into carburetor throttle lever. Secure swivel to lever. Depress accelerator pedal by hand. Detent should be felt before accelerator pedal rod strikes carpet.

THROTTLE RETURN CHECK ADJUSTMENT (TURBO-GLIDE CARS ONLY): With the fast idle screw on high step of fast idle cam, hold plunger with an open end wrench and turn plunger screw so it just contacts carburetor throttle lever. To check, make a full throttle start, then release accelerator and apply brakes simultaneously. If engine remains at high RPM turn plunger screw clockwise ½-turn. If engine stalls, turn screw ½-turn counterclockwise.

ROCHESTER 2GC 2-BARREL

Rochester 2GC, No. 7013007 (Synchro-mesh), 7013008 (Auto. Trans.), 7013018 (Auto. Trans. & Air Cond.).

►*HESITATION ON LOW SPEED ACCELERATION CORRECTION (7013008 & 7013018).* On carburetors not marked by "D" or later letter on identification tag, install new Accelerating Pump & Spring Assembly. *See "Rochester 2G & 2GC Carburetors" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

►*IDLE COMPENSATOR CAUTION:* When making idle Setting & Idle Speed adjustments, Idle Compensator must be in closed position Depress button on back side of float bowl.

Idle Setting - After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smoothest idle with highest vacuum reading and 450 RPM (Auto. Trans. in "D" Range), 475 RPM (Synchro-mesh Models). Turn screws out ¼ turn.

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans. in "D") with Idle Compensator button pushed in on air cond. cars (Idle Compensator "off").

Float Level - 1 23/64" (Gauge BT-152). With air horn inverted and gasket in place, position float level gauge over float so it rests against pump side of power piston shaft, with outer gauge leg in line with center of float. Bend float arm to adjust.

Float Drop - Bend float tang as required to obtain a distance of 1 29/32" from gasket surface to bottom of float, with air horn upright and float hanging free. Use scale or scribed mark on float and pump gauge.

Automatic Choke Setting: Centered at index.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 2G & 2GC Carburetors" in Carburetion Section.*

ROCHESTER 4GC 4-BARREL

Engine	Rochester Carb. No. Early	Later
283" Auto.Trans. (No Air Cond.)	7013004	7015004
283" Auto. Trans. (Air Cond.)	7013010	7015010
348" Auto. Trans. (No Air Cond.)	7013006	7015006
348" Auto. Trans. (Air Cond.)	7013012	7015012

►*ROCHESTER 4GC CARBURETOR FLOAT DESIGN & SETTING CHANGE TO CORRECT CUTTING OUT ON TURNS (Cars with Early Carburetors):* Engine cut-out on hard cornering can be eliminated by installation of new type floats and torsion springs furnished in Kit No. 7017804 and setting float level to new specifications. *See "Rochester 4GC 4-Barrel Carburetors" in Carburetion Section.*

►*ROCHESTER 4GC CARBURETOR PRODUCTION CHANGE & FLOAT SETTING CAUTION:* Late carburetors listed above have new type floats and torsion springs. These carburetors require special float setting. *See "Rochester 4GC 4-Barrel Carburetors" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels feed 1-4-6-7

►*IDLE COMPENSATOR CAUTION:* Idle Compensator (thermostatically controlled idle air bypass) used on air conditioned cars and must be in closed position when making Idle Setting and Idle Speed adjustments. Remove air cleaner and insert pencil or suitable tool in throttle bore.

Idle Setting - After idle speed correctly set (see below), turn each idle mixture screw for smoothest idle with highest vacuum reading and RPM. *NOTE* - Approximate adjustment obtained by setting screws lean to moderate rough idle and then backing out ¼-turn.

Idle Speed - 450 RPM (Auto. Trans. in "D") with Idle Compensator closed

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4G & 4GC Carburetors" in Carburetion Section.*

CARTER WCFB 4-BARREL

Engine	(Single Carburetor)	Carter No.
283" Pass. & Corvette	2818S (Early),	3059S (Later)
348" Synchro-mesh	2817S (Early),	3060S (Later)
348" Auto Trans.	2816S (Early),	3061S (Later)

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels feed 1-4-6-7.*

Idle Setting - Initial setting ½-2 turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans. in "D").

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL

Engine	Carter No.
348" Auto. Trans	2897S & 3012S

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels feed 1-4-6-7.*

Idle Setting - ½-2 turns open. Turn both screws alike. Turn screws out for richer mixture

Idle Speed - 600 RPM. Selector in "D" on Auto Trans

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA: See "Carter AFB 4-Barr lCarburetors" in Carburetion Section.*

CARTER WCFB 4-BARREL
(Two Carburetors)

Engine	Carter No.
283" Corvette (Hydr. Lifters).	Front 2626S, Rear 2627S
283" Corvette (Mech. Lifters) .	Front 2613S, Rear 2614S

Idle Setting - 1/8-1 1/4 turns open (2613S, 2614S), 1/4-1 1/4 turns open (2626S, 2627S). Adjust all four mixture screws equally.

Idle Speed - 600 RPM (Hydr. Lifters), 800-850 RPM (Mech. Lifters) with Auto. Trans. in "D".

Interconnecting Linkage Adjustment: With rear carburetor at wide open throttle, adjust nut on front carburetor control shaft until front carburetor throttle is wide open and against throttle stop. Front carburetor must begin to open when rear carburetor is at approximately ½ throttle.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetors" in Carburetion Section.*

TRIPLE CARBURETORS
(Rochester 2G & 2GC)

Engine	Rochester Carburetor No. Front	Center	Rear
348" Synchro-mesh,Std.	7013015	7013020	7013017
348" Synchro-mesh,Optl	7013973	7013974	7013975

Idle Speed - Hydr. Lifters - 475 RPM (Synchro-mesh), 450 RPM (Auto Trans. in "D"). **Mech. Lifters** - 600 RPM. Selector lever in "D" on Auto. Trans. Cars. *For complete adjustment data on these carburetors including linkage adjustment to secure correct synchronization, see "Rochester Triple Carburetors" in Carburetors" in Carburetion Section*

ROCHESTER "RAMJET"
(Fuel Injection)

For Model Application and Adjustments, see "Rochester Ramjet Fuel Injection" in Carburetion Section.

CARB. EQUIPMENT

Fuel Pump: AC diaphragm type. Fuel only

Replacement Pump - AC No. 4701 (283"), No 4657 (348" except Sp. Cam & SM), No. 4799 (348" Sp Cam & SM).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Pressure - 5¼-6½ lbs. (4701, 4657), 9¼-10¾ lbs. (4799). *See "Fuel Pumps" in Carburetion Section*

Gasoline Gauge: AC Electric.

Dash Unit - (Pass.) AC No. 5643264, (Corv.) No. 5643032.

Tank Unit - See table below.

Model	AC No.
Pass. (Dual Exh.) ① 3/8" pipe	5640659
Pass. Others 5/16" pipe	5640657
Sta. Wgn., Sed. Del, Pick-up Del. ②	5640661
Sta. Wgn., Sed. Del, Pick-up Del. ③	5640662
Sta. Wgn. (9 Pass.) 3/8" pipe	5640659

① - Exc. Sta. Wgn., Sed. Del., & Pick-up Del.
② - Dual Exh., except 9 Pass.
③ - Exc. Dual Exh. & 9 Pass.
See "Fuel Gauges" in Carburetion Section

Air Cleaner: (Exc. 283" 2-Bbl. Carb.) Dry filter element type. Test or replace element every 15,000 miles. *NOTE - Cleaning element is not recommended*

Air Cleaner: (283" 2-Bbl. Carb.) Oil wetted type with polyurethane element. Remove from screen, rinse in solvent or kerosene every 5000 miles, squeeze out element lightly, recoil with clean engine oil and carefully reinstall on screen.

Cruise Control: Automatic speed control. *See "Cruise Control" in Carburetion Section.*

BATTERY

(6 Cyl. & 283") Delco 2SMR53. 12 volt, 9 plate, 53 ampere hour capacity (20 hr. rate).

(348") Delco 558. 12 volt, 11 plate, 61 ampere hour capacity (20 hr. rate).

Battery Ground - Negative to engine.

Engine Ground - Engine to cowl.

STARTER

Delco Remy. Used as follows:

Engine	Delco-Remy No.
6 Cyl	1107652
283" (Exc. Turboglide)	1107664
283" (Turboglide)	1107694
348" (Std.)	1107688
348" (Turboglide)	1107687

Armature - Delco-Remy 1932185 (6 Cyl.), 1935829 (V8).

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. minimum.

Performance Data - 1107652, 664, 694

Torque	RPM	Volts	①Amperes
0 ft. lbs.	6200-9400	10 6	49-76
	Lock	4.25	270-310

Performance Data - 1107687, 688

Torque	RPM	Volts	①Amperes
0 ft. lbs.	3600-5100	10.6	65-100
	Lock	3.5	300-360

① - Includes Solenoid.

Starting Switch: Delco-Remy Solenoid Switch 1119919 mounted on starter and controlled by Ignition Switch 1116577 (Corv.), 1116576 (Pass. Exc. Taxi), 1116580 (Biscayne Taxi).

Neutral Safety Switch: Delco-Remy 1998677 (Exc. Corv.) and includes Back-Up Switch Delco-Remy 1998660 (Corv.) Neutral Safety Switch used with Auto. Trans.

Neutral Safety Switch Adjustment - *See "Powerglide" or "Turboglide" in Transmission Section*

GENERATOR

Delco-Remy. Used as follows:

Application	Generator	Armature
6 Cyl. Std.	1102096	1923535
283" Std.	1102097	1923535
6 Cyl., 283" Air Cond.	1102174	1948005

1106681	45	13	1400
1106679	50	13	1600
1102043	30	14	2240

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 28 ozs.

Field Current - 1.48-1.62 amps. (1102043); 1.69-1.79 amps. (1102096,7,173,174); 2.73-3.0 amps. (1106116, 123); 2.14-2.28 amps. (1106679,81). All at 12volts, 80°F.

Belt Adjustment: 3/8" (6 Cyl.) 3/4" (283"), 13/16"(348") with 15 lb. pressure, 7/16-1/2" (Corv.) with light thumb pressure, midway between generator and fan pulleys.

REGULATOR

Delco-Remy. Used as follows.

Regulator	Generator No.
1119001 (6 Cyl., 283" Eng.)	1102043,096,7
1119002 (6 Cyl., 283" Eng.)	1102173,4
1119234 (348" Eng.)	1102097
1119235 (348" Eng.)	1102173,4
1119604	1115116
1119610	1105123
1119619	1106679,81

►*DOUBLE CONTACT REGULATOR NOTE: Regulators 1119604,610,619 have double contacts for voltage regulation*

NOTE - Specifications below are for "Normal" settings

Cutout Relay

Cuts In - 11.8-13.5 volts (1119001,2,234); 11.8-13.0 volts (1119604,10,19).

Contact Gap - .020". **Air Gap** - 020".

Voltage Regulator

Setting - (1119001,2,234,235) 13.8-14.8 volts at 125°F.

Setting - (1119604,10,19) 13.8-14.6 volts (upper contacts), .2-.3 volts lower (lower contacts) at 125°F.

Contact Gap - (1119604,10,19) .016" (upper contacts) with lower contacts just touching.

Air Gap - (1119001,2,234,235) .075", (1119604,10,19) .067" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" or "Delco-Remy (Double Contact) Regulators" in Electrical Section*

Current Regulator

NOTE - 1119604,10,19 are "Temperature Compensated" type.

Setting - 27.0-31.0 amps. (1119001,234), 31.0-35.5 amps (1119002,235,604), 36.0-40.5 amps. (1119610); 46.0-50.5 amps. (1119619).

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" or "Delco-Remy (Double Contact) Regulators" in Electrical Section*

MISC. ELECTRICAL

Direction Signals: *See Electrical Section*

Autronic Eye: *See Electrical Section*

Lighting Switch Removal: Pull handle out to "ON" position. Depress switch shaft retainer (under dash) and remove knob and shaft assembly. Remove retaining ferrule and escutcheon, then remove switch assembly. Disconnect multi-plug connector. *NOTE* - Use screwdriver inserted in side of switch to pry plug from switch.

Stop Light Switch Location: Mechanical type mounted under dash in contact with brake pedal.

Adjustment - Adjust position of switch so that stop light comes on when brake pedal is depressed 5/8" from fully released position.

CIRCUIT BREAKERS: A 15 amp circuit breaker located in main lighting switch protects headlights, beam indicator, and parking lights.

FUSES: Fuses contained in fuse block located beneath dash on left side except as noted.

3 AG/AGC-15 Ampere. Tail, Stop, License Plate, Dome, Glove Compartment.

3 AG/AGC-3 Ampere. Instrument, Ignition, Clock, Radio, Air Cond. lights.

3AG/AGC-10 Ampere. Back-up lights, Clock, Parking Brake Alarm.

3AG/AGC 4 or 7 Ampere. Radio.

3 AG/AGC-10 Ampere. Heater blower.

SAE 9 Ampere. Overdrive. In wiring harness on engine side of dash.

SAE 20 Ampere. Air Cond. blower.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section*

►*NOTE: Engines with special camshaft use mechanical valve lifters. In the following data, engines will be referred to by "Special Cam"*

ENGINE SPECIFICATIONS: Own V8, valve-in-head, 283" and 348" engines of same design used previously.

Engine	Bore	Stroke	Rated HP	Displacement
283"	3.875"	3.0"	48	283 cu. in.
348"	4.125"	3.25"	54.5	348 cu. in.

ENGINE DATA NOTE: Data following includes Pass Car & Truck as noted in copy

PISTONS

Cast aluminum alloy, autothermic type with piston pin offset 060" toward major thrust side

283" Eng. - Flat head, slipper skirt with machined relief for valve clearance (Std) or domed piston having machined relief (Fuel Injection)

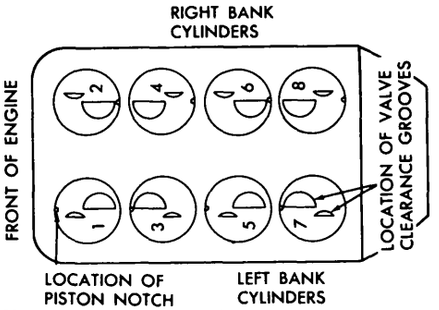
348" Eng. - Peak roof, slipper skirt (Std), half flat with machined relief for valve clearance and half slanted downward 16° (With Special Cam)

Removal - Pistons & rods removed from above

Replacement Pistons: Furnished Std , & 001", 020", 030", 040" Oversize (Exc 283" Fuel Inj , or 348" Special Cam), Std , 001", 030" (283" Fuel Inj or 348" Sp Cam) with fitted pins

►*STANDARD & 001" OVERSIZE PISTON NOTE* These pistons furnished in TWO sizes as follows

283" Eng. - Std. - Marked **S4** (3 8750-3 8755"), **S5** (3 8755-3 8760"), **.001" Oversize** - Marked **S6** (3 8760-3 8765"), **S7** (3 8765-3 8770")



348" Eng. - Std. - Marked **S4** (4 1250-4 1255"), **S5** (4 1255-4 1260"), **.001" Ov rsiz** - Marked **S6** (4 1260-4 1265"), **S7** (4 1265-4 1270")

Cl aranc - 0006- 0010" (Pass), 0016- 0020" (Corv), measured 2 44" (283" Eng), 2 94" (348" Eng) from top of piston

Fitting N w Pist ns (Exc. Pist ns with .0016-.0020" Cl aranc): Use 0015" x 1/2" feeler (part of Tool J-5513) With piston and cylinder bore clean and dry, insert feeler and inverted piston into cylinder to point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole) Pull required to withdraw feeler should be 4-6 lbs

Installing Pistons: Install pistons with cast depression in head and "F" mark cast in side of piston toward front of block, except 348" Eng with Special Cam (see NOTE below) *See Rod Installation*

►*348" ENGINE WITH SPECIAL CAMSHAFT NOTE:* Pistons used with these engines extend into combustion chamber and must be installed as shown in diagram

348" ENGINE (SPEC. CAM) PISTON INSTALLATION

PISTON PIN

Pin is press fit in connecting rod

Diameter - (283" Eng) 9270- 9273" (348" Eng) 9895- 9898"

Length - (283" Eng) 2 990-3 010" (348" Eng) 3 250-3 270"

Pin Fit in Piston - 00015- 00025" With piston and pin at 60°F and light film of oil on pin, pin should support own weight in either pin boss

Pin Fit in Connecting Rod - Press fit in rod Special procedure used for removal & installation, *see "Piston Pins" in Chevrolet Special Data*

Replacement Pins: Furnished in assembly with new pistons Replace with new piston and fitted pin assembly

PISTON RINGS

Compression rings are plain cast alloy iron, with chrome plated upper and wear resistant coating lower Oil ring is 3-piece type with chrome plate O D rails and stainless steel spacer *NOTE* - 348" (Special Cam) has cast alloy oil ring

283" Engine

Ring	Width	End Gap	Side Clearance
Comp (1&2)①	0775- 0780"	010- 020"	0012- 0032"
Oil (3)	224- 231"	② 015- 055"	0006- 0084"

348" Engine

Ring	Width	End Gap	Side Clearance
Compr (1&2)	0770- 0780"	015- 025"	③
Oil (3)	④ 224- 232"	⑤ 015- 055"	

① – Upper ring 077- 078" with Special Cam
② - On rails
③ - Upper 0012- 0027", lower 0012-0032"
④ - 1855- 1865" with Special Cam
⑤ - 013- 025" with Special Cam

R plac ment Rings: Service type rings furnished Std , 020", 030", 040" Oversize

Installing Rings: Install compression rings with mark "GM" up

CONNECTING ROD

Length (Center-to-Center) - (283") 5 699-5 701" (348") 6 134-6 136"

Weight - (283") 19 02 ozs (348") 19 20" ozs

Crankpin Journal Diameter - (283") 1 999-2 000" (348") 2 199-2 200"

Lower Bearing - Replaceable precision type **Std** - Steel backed babbitt **Special Cam Eng. (Exc. 348" with Auto. Trans.)** Premium aluminum bearings

Clearance - 001- 003" Wear limit 004"

Sideplay - 008- 014" (two rods)

Replacement Bearings: Std & 001", 010", 020" Undersize

Installing Rods: *NOTE - S diagram for 348" Eng (Special Cam) piston installation* Install rod in piston so that flange or heavy side of rod at bearing end will be toward **front** of piston (marked by cast depression in head of piston and "F" mark on piston strut) on Nos 1-3-5-7 pistons, and flange on rod to **rear** of piston on Nos 2-4-6-8 pistons Install rod and piston assembly in cylinder with cast depression in head and "F" mark on strut toward front of cylinder block Oil hole in connecting rod will be toward center of engine

CRANKSHAFT

Journal Diameter - (283") 2 2978-2 2988" (348") 2 4980-2 4990"

Bearings - Replaceable precision type **Std.** - Steel backed babbitt **Special Cam Eng. (Exc. 348" with Auto. Trans.)** Premium aluminum bearings used No 1 through No 4 No 5 steel backed babbitt

Clearance - (283") 001- 003" (348") 0008- 0034" Wear limit 004"

End Thrust - Taken by rear (No 5) main bearing **Endplay** - 002- 006"

Replacement Bearings: Furnished Std , 001", 002", 010", 020" Undersize

Bearing Installation: Not necessary to remove engine from car, *see "Crankshaft & Main Bearings" in Chevrolet Special Data*

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings' in Chevrolet Special Data*

Crankshaft Front Oil Seal· *See "Engine Front Cover" in Chevrolet Special Data*

Exhaust	③46°	3987"	⑤ 0017- 0034"

① - Standard stem diameter Furnished 003", 015" & 030" Oversize

② - 4 869-4 889" Corvette with mechanical lifters

③ - Valve Face Angle 45°

④ - 2-Bbl. Carb. .3987", (4-Bbl. Carb. or Fuel Inj. with regular cam) 394" Intake, .400" Exhaust (Two 4-Bbl. Carbs. or Fuel Inj. with Special Cam).

⑤ - Wear limit 004"

⑥ - Regular Camshaft. 4058" Intake, 4120" Exhaust for Engines with Special Camshaft

⑦ - Valve Face Angle - (283" Pass & Trk) Intake 45°, Exhaust (283" Pass & Trademaster) 45° (Taskmaster) 46°

Valve Rotators - Used on 283" Truck Engine

Valve Seat Width - 035- 060" Intake, 062- 093" Exhaust

Initial Valve Adjustment (Hydraulic Lifters): Bring engine to operating temperature, remove rocker arm cover Back off rocker arm stud nut (Engine idling) until arm starts to clatter Turn rocker arm stud nut down until clatter stops and then ¾ additional turn

Initial Valve Adjustment (Mechanical Lifters): Adjust rocker arm nut on stud to give desired specification

Valve Stem Seal Installation: *See "Valve System" in Chevrolet Special Data*

Valve Guides: Integral with cylinder head Ream valve guide holes for oversize valves if valve stem clearance is excessive Valves with oversize stems furnished 003", 015", 030" Oversize Use Reamer Set J-5830 (283"), or J-7049 (348")

Valve Springs: Install springs with closed end of coil toward cylinder head and oil shield over spring

►*348" ENGINE VALVE SPRING NOTE* 348" Engines with Special Camshaft and mechanical lifters use inner and outer springs in place of spring and damper assembly

283" Engine (2-Bbl. Carb.)

Valve	Lbs. Pressure	Length
Closed	76-84	1 696"
Open	155-165	1 366"

283" Engine (4-Bbl. Carb.) Corvette (All Equipment)

Valve	Lbs. Pressure	Length
Closed	69-79	1 696"
Open	159-169	1 306"

348" Engine - Regular Cam, Hydraulic Lifters

Valve	Lbs. Pressure	Length
Closed	78-86	1 626"
Open	184-196	1 230"

348" Engine - Special Cam, Mechanical Lifters

	Outer Spring		Inner Spring	
Valve	Lbs. Pressure	Length	Lbs. Pressure	Length
Closed	69-79	1 696"	20-24	1 488"
Open	159-169	1 306"	55-61	1 06"

►*VALVE SPRING HEIGHT CAUTION:* Check installed height of valve spring by measuring distance from surface of spring seat in head to top of valve spring *NOTE - When measurement taken to top of spring shield, if equipped, add 1/32" to specifications given below* If measurement exceeds maximum, add 1/32" shims to bring height to preferred specification (see below)

Valve Spring Height Specifications

Engine	Max. Height	Preferred Hgt.	Shim No.
283" All	1 45/64"	1 5/8"	3731058
348" Hydr Lifter	1 21/32"	1 19/32"	3731058
348" Mech Lifters	1 11/16"	1 5/8"	3764539

Valv Lift rs: Hydraulic lifters standard except on engines with special camshaft *See "Valve System" In Chevrolet Special Data*

R ck r Arms: Mounted individually on studs pressed into cylinder head

R ck r Arm Stud R plac m nt - *Se "Valv Syst m" in Chevrolet Special Data*

VALVE TIMING

Valve Timing Specifications

(283" Engine 2-Bbl. Carb.)

Intake Valves - Open 18° BTDC Close 54° ALDC
Exhaust Valves - Open 52° BLDC Close 20° ATDC

(283" Pass. & Corvette 4-Bbl. Carb.)
(Corvette, Two 4-Bbl. Carbs. & Fuel Inj., Reg. Cam)

Intake Valves - Open 12°30' BTDC Close 57°30' ALDC
Exhaust Valves - Open 54°30' BLDC Close 15°30' ATDC.

(348" Engine - Regular Cam)

Intake Valves - Open 18°30' BTDC Close 67°30' ALDC.
Exhaust Valves - Open 68°30' BLDC Close 25°30' ATDC.

(Corvette Two 4-Bbl. Carbs. & Fuel Inj. Sp. Cam)
(348" Engine Sp. Cam, Std. Trans.)

Intake Valves - Open 35° BTDC Close 72° ALDC
Exhaust Valves - Open 76° BLDC Close 31° ATDC

(348" Engine Sp. Cam, Powerglide)

Intake Valves - Open 33° BTDC Close 74° ALDC
Exhaust Valves - Open 88° BLDC Close 19° ATDC

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubricati n" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: 4 qts (Pass.), 5 qts. (Corvette) refill, 5 qts. (Pass) 6 qts. (Corvette) with filter change

Normal Oil Pressure - 35 lbs. at 2000 RPM

Pressure Relief Valve - In oil pump Not adjustable

Oil Pressure Indicator (Std. V8) - Light located at left side of instrument panel, controlled by a pressure Switch AC No 1508753 (283"), 1508754 (348") located in main oil gallery adjacent to distributor. Switch closes when pressure drops to 4-7 lbs

Oil Pressure Gauge (Corvette) - AC No 1508895

Oil Filter: Full flow type standard on all V8 Engines Replace element every 4,000 miles or less under extreme driving conditions

Replacement Filter Element - AC No PF-141

Oil Pump: Spur gear typel Located in crankcase, driven by distributor gear

Oil Pump Overhaul - *See "Oiling System" in Ch v-rolet Special Data*

Crankcase Ventilation - Air intake through crankcase breather cap and outlet at crankcase ventilator pipe

COOLING

►*RADIATOR REMOVAL CAUTION (Auto Trans):* Transmission oil cooler is part of radiator lower tank and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material

►*WATER BY-PASS NOTE:* 283" engine utilizes hole in cylinder block for water by-pass 348" engine has by-pass at top of water pump which is connected to inlet manifold which has crossover passages to cylinder head

►*COOLING SYSTEM NOTE:* **Corvette** - Aluminum cross-flow radiator with special Aluminum drop valve filler cap optional Avoid use of salt based inhibited anti-freeze

►*FAN NOTE:* A Viscous Coupling, 5 blade, 3100 RPM limited speed fan optional

Wat r Capacity: (283") 17½ qts (3-Speed Trans), 17¼ qts (Auto Trans) (348") 21 qts Add 1 qt for heater with all models

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Pressure Valve: Radiator filler cap, used as follows:

Model	ACN.	Pressure	AC Type
Corv. Less F.I.	850795	7 lb.	RC-1
Corv. With F.I.	850800	13 lb.	RC-6
V8 Pass.	850800	13 lb.	RC-6

Thermostat: Pellet type. In cylinder head water outlet. 170°F Part No. 3138868 (Std.), 160°F No. 3136184 & 180°F No. 3136185 Optional. Use 160°F with Methanol (alcohol) anti-freeze.

Temperature Gauge: AC electric.
Dash Unit - (V8 Pass.) AC No. 1514195. (Corv.) 1513715.
Engine Unit - (All) AC No. 1513321.
See "Temperature Gauges" in Miscellaneous Section.

Water Pump: Packless type, with sealed ball bearing. *See "Water Pump" in Chevrolet Special Data.*

CLUTCH

Various types used as follows:

6 Cyl. & 283" 2-Bbl. Carb. Engines - Own diaphragm spring type with all flat spring fingers.
283" 4-Bbl. Carb. & 348" Engines - Own diaphragm spring semi-centrifugal type (6 spring fingers bent upward with weights at outer ends to provide this semi-centrifugal action).
Corvette - Borg & Beck Model 10A8W, Assembly No. 361468.

Chevrolet (Own) Diaphragm Clutch

Model	Cover & Spring	Disc No.
6 Cyl. Exc. H.D. 10"	3752850	①3769723
6 Cyl. H.D. 11"	3751041	②3777088
283" 2-Bbl ③	3772926	3777086
283" O.D 11"	3744199	3754610
283" 4-Bbl.	3742866	3754610
348" 10½"	3758517	3758499
(Borg & Beck Clutch)		
Corvette (Stamped 1468 on cover)	3745946	3754612

① - Molded, with hub painted dark green.
② - Woven.
③ - Exc. H.D. & O.D.

See "Chevrolet (Own)" and "Borg & Beck" Clutches in Clutch Section.

►*CORVETTE FAST ACTION CLUTCH PEDAL LINKAGE ADJUSTMENT:* For procedure to alter linkage to secure 4½" rather than 6½" pedal travel, *see "Clutch Notes" in Chevrolet Special Data.*

Pedal Adjustment (Std. Travel): Disconnect forward end of clutch fork pushrod from cross shaft lever. Hold fork pushrod to rear to remove all lash, then adjust swivel to line up dimple in clutch lever shaft assembly (Pass. Cars) or back off swivel 2 turns (Corvette) to give desired .060" clearance between bearing and clutch spring and free travel setting of ¾-1".

Over-Center Spring Adjustment: Loosen adjusting hook nut at back of pedal bracket and turn jam nut to obtain an installed length of 10 5/16" for over-center spring.

Removal: Remove transmission (See Transmission Removal below). Remove clutch throwout bearing from fork, then clutch fork tension spring from fork. Remove clutch fork by forcing it forward and toward center of vehicle. Install Clutch Pilot Tool J-5824 to support clutch assembly. Loosen clutch attaching bolts one turn at a time until tension of spring is released. Remove tool, then clutch assembly from vehicle. *NOTE* - When installing clutch, align "X" mark on cover and flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three-speed synchro-mesh (Std.), three or four-speed (close ratio) optional.

See "Chevrolet 3-Speed" and "Chevrolet 4-Speed (Close Ratio)" in Transmission Section.

►*HIGH GEAR JUMP-OUT CORRECTION:* When caused by loose transmission-to-clutch housing bolts, make sure that ½-13 x 1¾" bolts are installed.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: 1) Drain transmission and disconnect speedometer cable and shift rods. Remove propeller shaft center bearing support bolts. Separate rear universal joint and pull propeller shaft assembly to rear under axle housing.
2) Support rear of engine, remove transmission rear support noting number of shims.
3) Remove two top transmission to clutch housing cap screws, install guide pins (J-1126), then remove two lower capscrews. Slide transmission back on guide pins to clear clutch disc splines.

OVERDRIVE

Warner R10. Solenoid operated type with governor control and throttle operated kickdown. Lockout switch not used.
See "Chevrolet Overdrive" in Transmission Section

Overdrive Control: *See "Warner R10 &R11 Overdrive Control" in Transmission Section.*

Removal: Same as for synchro-mesh (above) after disconnecting control cable and wiring.

POWERGLIDE TRANSMISSION

Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS: See "Chevrolet Powerglide" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication: Check fluid level in transmission every 1000 miles. Add oil only when level drops to "Add One Quart" mark on dipstick. Use Automatic Transmission Fluid Type A, Suffix A. Type A fluid can be used if "Type A, Suffix A" fluid not available.

►*DRAIN & REFILL NOTE:* Periodic drain and refill is no longer recommended. Replace transmission fluid only when transmission removed for repairs.
Capacity - 4½ qts. (refill), 10½ qts. (after overhaul).

Checking Fluid Level - Engine must be idling with transmission warm, selector lever in "N" range and parking brake applied. Check fluid level on dipstick located in filler tube on right side of engine opposite starter. Fluid level should be at full mark on dipstick. *NOTE - DO NOT OVERFILL.*

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER POWERGLIDE SERVICE DATA: See "Chevrolet Powerglide" in Transmission Section.*

TURBOGLIDE TRANSMISSION

New "non-shifting" hydraulically controlled, planetary type transmission with three unit torque converter.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Chevrolet Turboglide" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Turboglide" in Transmission Section.*

Lubrication: Check fluid level in transmission every 1000 miles. Add oil only when level drops to "Add One Quart" mark on dipstick. Use Automatic Transmission Fluid Type A, Suffix A. Type A fluid can be used if "Type A, Suffix A" fluid not available.

Checking Fluid Level - Engine must be idling at 800-1000 RPM with transmission warm, selector lever in "N" range and parking brake applied. Check fluid level on dipstick located in filler tube on right side of engine opposite starter. Fluid level should be at full mark on dipstick. *NOTE - DO NOT OVERFILL.*

►*DRAIN & REFILL NOTE:* Periodic drain and refill is no longer recommended. Replace transmission fluid only when transmission removed for repairs.
Capacity - 2 qt. (refill), 9½ qts. (after overhaul).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER TURBOGLIDE SERVICE DATA: See "Chevrolet Turboglide" in Transmission Section.*

UNIVERSALS

Own. Yoke & Spider (Trunnion) type.

►*CAUTION:* Rear universal companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever companion flange nut loosened. *See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section*

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Chevrolet Special Data.*

REAR AXLE

Own. Semi-floating hypoid gear type, with Hotchkiss Drive. *NOTE* - "Positraction" Limited Slip Differential optional.

See "Chevrolet Pass. Car (Hotchkiss Drive)" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.

►*PINION BEARING PRELOAD CAUTION:* Rear universal joint companion flange nut controls rear axle pinion bearing preload. Bearing preload must be adjusted whenever companion flange nut is loosened.

►*AXLE IDENTIFICATION NOTE:* Conventional axles have serial number on right front side of differential. Positraction axles have serial number on left front side of differential and lubrication tag on filler plug.

►*PROPELLER SHAFT SHUDDER CORRECTION: See "Propeller Shaft Notes" in Chevrolet Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Axl Rati s

M d l		Gear Rati
6 Cyl.	Std.	3.55-1
	Overdrive	3.70-1
	Powerglide	3.36-1
283"	3-Speed Trans.	3.36-1
	Overdrive	3.70-1
	Powerglide	3.08-1
	Turboglide	3.36-1
Corvette	3-Speed Trans.	3.70-1
	4-Speed Trans.	4.11-1 or 4.56-1
	Powerglide	3.55-1
348"	All Carbs. Reg. Cam,3-Spd.Trans.	3.36-1
	All Carbs. Reg. Cam 4-Spd. Trans.	3.70-1

	All Carbs. Sp. Cam, Std, Trans.	3.70-1
	4-Bbl. Carb. Sp. Cam, Powerglide	3.55-1

Backlash - .003-.010" (.005-.008" preferred).

Axl Shaft R moval: Raise car and place jack stands under axle housing. Remove tire, wheel and brake drum assembly. Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange). Attach Axle Puller J-5748, with slide hammer, to flange and remove axle shaft and bearing assembly. Be careful not to disturb backing plate. *NOTE* - If bearing retainer and parking brake strut interfere, raise strut slightly with screwdriver to obtain clearance.

Carrier R moval: Remove rear wheels, brake drums and gasket. Remove bearing retainer bolts (on inside of axle flange) and use Tool J-5748 to remove axle shaft and bearing assembly so that axle clears differential side gears. Separate rear universal joint, lower propeller shaft, then drain rear axle lubricant and remove differential carrier nuts and lift out carrier assembly.

Propell r Shaft Alignment: *See "Propeller Shaft Notes" in Chevrolet Special Data.*

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs. Corvette has threaded bushings at pivot point, all other models have spherical joints.

See "Chevrolet (Spherical Joint) Suspension" and "Chevrolet Corvette Front Suspension" in Suspension and Wheel Alignment Section.

Steering Axis Inclination - 7¼°±½° (Pass. Car), 3½°-4½° (Corv.)

Caster - 0°±½° (Pass. Car), 2°±½° (Corv.).

Camb r - Pos. ½°±½° (Pass Car), 0°±½° (Corv.).

Toe-In - 1/8"-1/4" (Pass. Car), 0"-1/8" (Corv. per wheel).

Toe-Out n Turns - With inner wheel at 20°, outer wheel should be 18° (Pass. Car), 17° (Corv).

Wh l B aring Adjustment - (Ball Bearings) - Torque adjusting nut to 28 ft. lbs , back off nut until bearings are loose (0 ft. lbs.) then retorque to 12 ft. lbs. and back off to nearest cotter pin hole if necessary.

►*FRONT WHEEL ROLLER BEARING & INNER SEAL NOTE:* Roller bearings available for heavy duty Taxis, Police Cars, Etc. For correct adjustment, lubrication and seal, adjust these bearings as directed below. *CAUTION* - Use only Inner Bearing Seal Part No. 3759306 (without 90° flange on inside of stamping) with these bearings.

Wh l B aring Adjustm nt - (Roller Bearings) - Tighten adjusting nut while rotating wheel until slight drag is felt, then back off nut 1/12 turn (½ nut flat) or more to align slot in nut with cotter pin hole in spindle *(CAUTION - Do not exceed 1/6 turn or 1 nut flat)*, install cotter pin.

REAR SUSPENSION

Rear Suspension: *See "Chevrolet Rear Suspension" in Suspension & Wheel Alignment Section.*

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable.

Replacement Shock Absorbers

Model	Front	Rear
Corvette	5552326	5552351
Pass (Exc. H.D.)	5552322	5552321
Pass. Auto. Trans.,Air Cond.	5543718	5552321
Taxi,Sta.Wgn.Sed.Del.,Pickup Del	5543718	5552323

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball type.

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Own (Linkage Type). *See "Chevrolet (Linkage Type) Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball BearingWorm & Nut" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic, without anchor pin adjustment. Hand lever applies rear wheel service brakes.

See "Chevrolet-Bendix Hydraulic" in Brake Section.

►*OPTIONAL METALLIC SHOE LINING NOTE (Pass. & Corvette):* Used with "Special Purpose Option" and can be used with old drums provided surface of drum is smooth.

►*CORVETTE OPTIONAL BRAKE NOTE:* Two options - **RPO 686** consisting of special riveted "Sintered Iron" segmented linings with standard wheel cylinders. **RPO-687** consisting of riveted "SinteredIron"segmented linings, special wheel cylinders, and with vanes cast on drum rim, air scoops on backing plate, fins between drum and wheel hub.

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION:* To compensate for lack of brake anchor adjustment, brake shoes are ground to a .057- 087" smaller diameter than the drum diameter. Grinding to the true diameter on a bench grinder will cause heel and toe contact, resulting in faulty brake action. *NOTE - If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter.*

Drum Diameter - 11".

Wheel Cylinder Diameter - (Pass., Corv Std. & RPO-686) front 1 3/16", rear 1" (Corv RPO 687) front 1 1/8", rear 7/8".

Braking Power: (Pass.) 58 5% of front, 41.5% rear. (Corv. Std.) 56% front, 44% rear. (Corv. RPO 686) 58.5% front, 41.5% rear. (Corv RPO 687) 62% front, 38% rear.

Lining Width & Length
Pass. Car (M ld d Asb stos)

	Fr nt Wh l	R ar Wheel
Primary	2 75" x 9 30"	2.00" x 9.30"
Secondary	2.75" x 11 70"	2.00" x 11.70"

C rv. Std. (Molded Asbestos)

	Front Whe l	Rear Wheel
Primary	2.0" x 9.29"	1.75" x 9.29"
Secondary	2.0" x 11.69"	1.75" x 11.69"

Corv. RPO 686 (Sintered Iron)

	Front Wheel	Rear Wheel
Primary	(6) 1.0" x 2.0"	(6)1.0" x 2.0"
Secondary	(10) 7/8" x 2.0"	(10).325" x 2.0"

Corv. RPO 687 (Sintered Iron)

	Front Wheel	Rear Wheel
Primary	(6)1.25" x 1.64"	(12)1 25" x 1.64"
Secondary	(6) 7/8" x 2.0"	(10)7/8" x 2.0"

Lining Thickness - (Pass.) .168". (Corv. Std.) .175". (Corv. RPO 686). .205" (Primary front & rear), .325" (Secondary front), .205" (Secondary rear). (Corv. RPO 687) .205" (Primary front & rear), .325" (Secondary front & rear).

Clearance - Adjusting screw backed off 17 notches (Corv. RPO 687), 12 notches (Others) from slight drag position. Brakes must be free of any drag after adjusting.

Standard Master Cylinder: Located on engine side of firewall in line with brake cylinder.

Checking Fluid - Reservoir is integral with master cylinder. Maintain level in cylinder to lower edge of hole.

Removal - Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove cotter and clevis pins from brake pedal arm, then remove four retaining nuts and lockwashers and remove cylinder from firewall.

Installation - Reverse removal procedure making sure that pushrod clevis is straddling the brake pedal. Refill master cylinder and bleed all brake lines. Adjust pushrod-to-main cylinder clearance as follows: Make sure brake pedal returns to fully released position with no binding, and that pedal retracting spring has not lost its tension, then adjust brake pedal clevis to give a barely perceptible endplay between main cylinder piston and brake pushrod (1/8-3/8" pedal movement should be felt).

Power Brakes: Bendix or Moraine Power Unit. *See "Bendix Power Brake Unit Hydraulic (Disc) Reaction" or "Moraine Power Brake Unit Hydraulic (Diaphragm) Reaction" types in Brake Section.*

Removal: Disconnect clevis at brake pedal assembly (remove clevis if necessary to clear hole in firewall). Remove vacuum hoses from brake unit and hydraulic lines from master cylinder. Remove four nuts and lockwashers and withdraw power unit.

MISC. MECHANICAL

Windshield Wipers: Electric (Single Speed Std., Two Speed Optl.) Link-and-crank arm type.

See "Windshield Wipers" in Miscellaneous Section.

Window Regulators: Electric type with reversible motor operating each door & tail gate window assembly.

See "Power Window Regulators" in Miscellaneous Section.

Power Seat Adjusters: Electric 4-Way & 6-Way. TWO types 6-Way used: **1)** Three motor type (separate motor for each movement). **2)** One motor type with three solenoid clutches.

See "G.M. Seat Controls" in Miscellaneous Section.

Air C nditi ning: *See "Chevrolet Air Conditioning" in Miscellaneous S ction.*

►*JACKING & HOISTING CAUTION (ALL MODELS): Before jacking or hoisting these trucks, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

►*TOWING PROCEDURE (4-WHEEL DRIVE MODELS):* Observe the following precautions

1) Slow Speed & Short Distances - Place transmission lever in "Neutral" and Transfer Case lever in "Two Wheel High" position

2) High Speed or Long Distances - If all four wheels on ground, disconnect front and rear propeller shafts or pull rear axle shafts instead of disconnecting rear propeller shaft If front wheels off ground, disconnect rear propeller shaft or pull rear axle shafts If rear wheels off ground, disconnect front propeller shaft

ENGINE NUMBER: 6 Cyl. Stamped on right side of block next to distributor

V8 Eng. Stamped on forward edge of block under right cylinder head

NOTE - Number (example below) includes identification data as indicated

① ② ③
F 1210 P

① - Engine Plant **F** - Flint **T** - Tonawanda **C** - Engines built in Canada
② - Code number indicating month (Dec) and day (10th) of manufacture This is not an individual or continuous number
③ - Engine Type See table below

Engine Type

J, K - 235" (JB,JC,KA, indicate clutch and transmission options)
L - 261" (LB,LD,LE,LJ,LK,LM indicate transmission, brake and steering options)
M,N,P - 283" (MA,NA,NB,NE,NF,NG,NH PA,PD indicates transmission and brake options)

TUNE-UP

COMPRESSION PRESSURE: 6 Cyl. - 130 lbs min **V8** - 140 lbs min All cylinders alike within 20 lbs
VACUUM READING: 17-21"
VALVE TAPPET CLEARANCE: 235" - 006" Intake, 018" Exhaust Hot **261"** - 006" Intake, 020" Exhaust Hot **283"** - Zero lash hydraulic lifters, *see Initial Valve Adjustment under VALVES*
MANIFOLD HEAT CONTROL: Thermostatic coil spring type located between manifold and exhaust pipe Must operate freely

IGNITION

FIRING ORDER: 6 Cyl. - 1-5-3-6-2-4 **V8** - 1-8-4-3-6-5-7-2
Cylinders (V8) - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7
SPARK PLUG GAP: 035"
Spark Plugs - ½ to 1½ Ton Exc. 261 - AC No 44 (Std), AC No 45 or 46 (City Oper), AC No 43 COM (Hvy Duty) **2-2½ Ton, Incl. 261** - AC No 42-1 COM (Std), No 43 COM (City Oper)
COIL: Delco-Remy 1115087.
Resistor - Resistance type cable (1 8 ohms) used in harness between bulkhead disconnect plug and starter solenoid bypass terminal (in coil primary circuit for regular operation) Bypassed during cranking when coil energized directly from starter solenoid bypass terminal
DISTRIBUTOR: Delco-Remy. Conventional type used on 6 Cyl models Two types of "window" distributors used on V8 - centrifugal with vacuum Advance, and centrifugal advance only *See "Delco-Remy Window Distributors" in Electrical Section.*

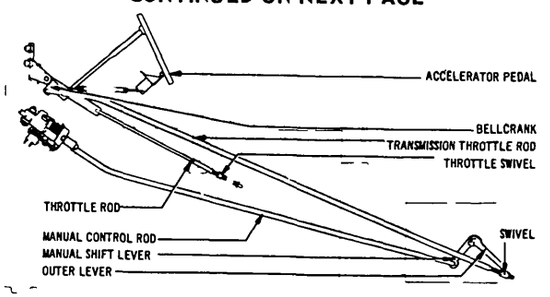
CARBURETOR

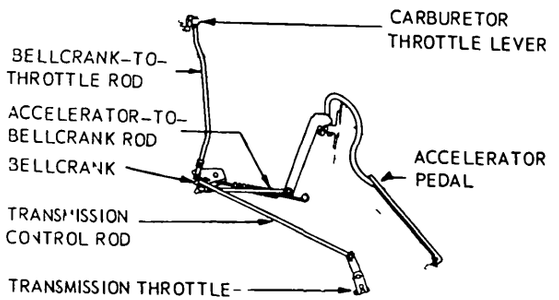
Engin	CARBURETOR APPLICATION	Carbur tor
6 Cyl	(Exc Fwd Contr)	Rochester B
6 Cyl	(Fwd Contr)	Carter BB
V8		Rochester 2G 2-Bbl

►*OVERSPEED WARNING SYSTEM NOTE* Engine overspeed warning light mounted in cab and controlled by vacuum switch on Rochester 2G Carburetor Oil pressure switch used for testing light bulb circuit (light should go on when ignition switch turned on)



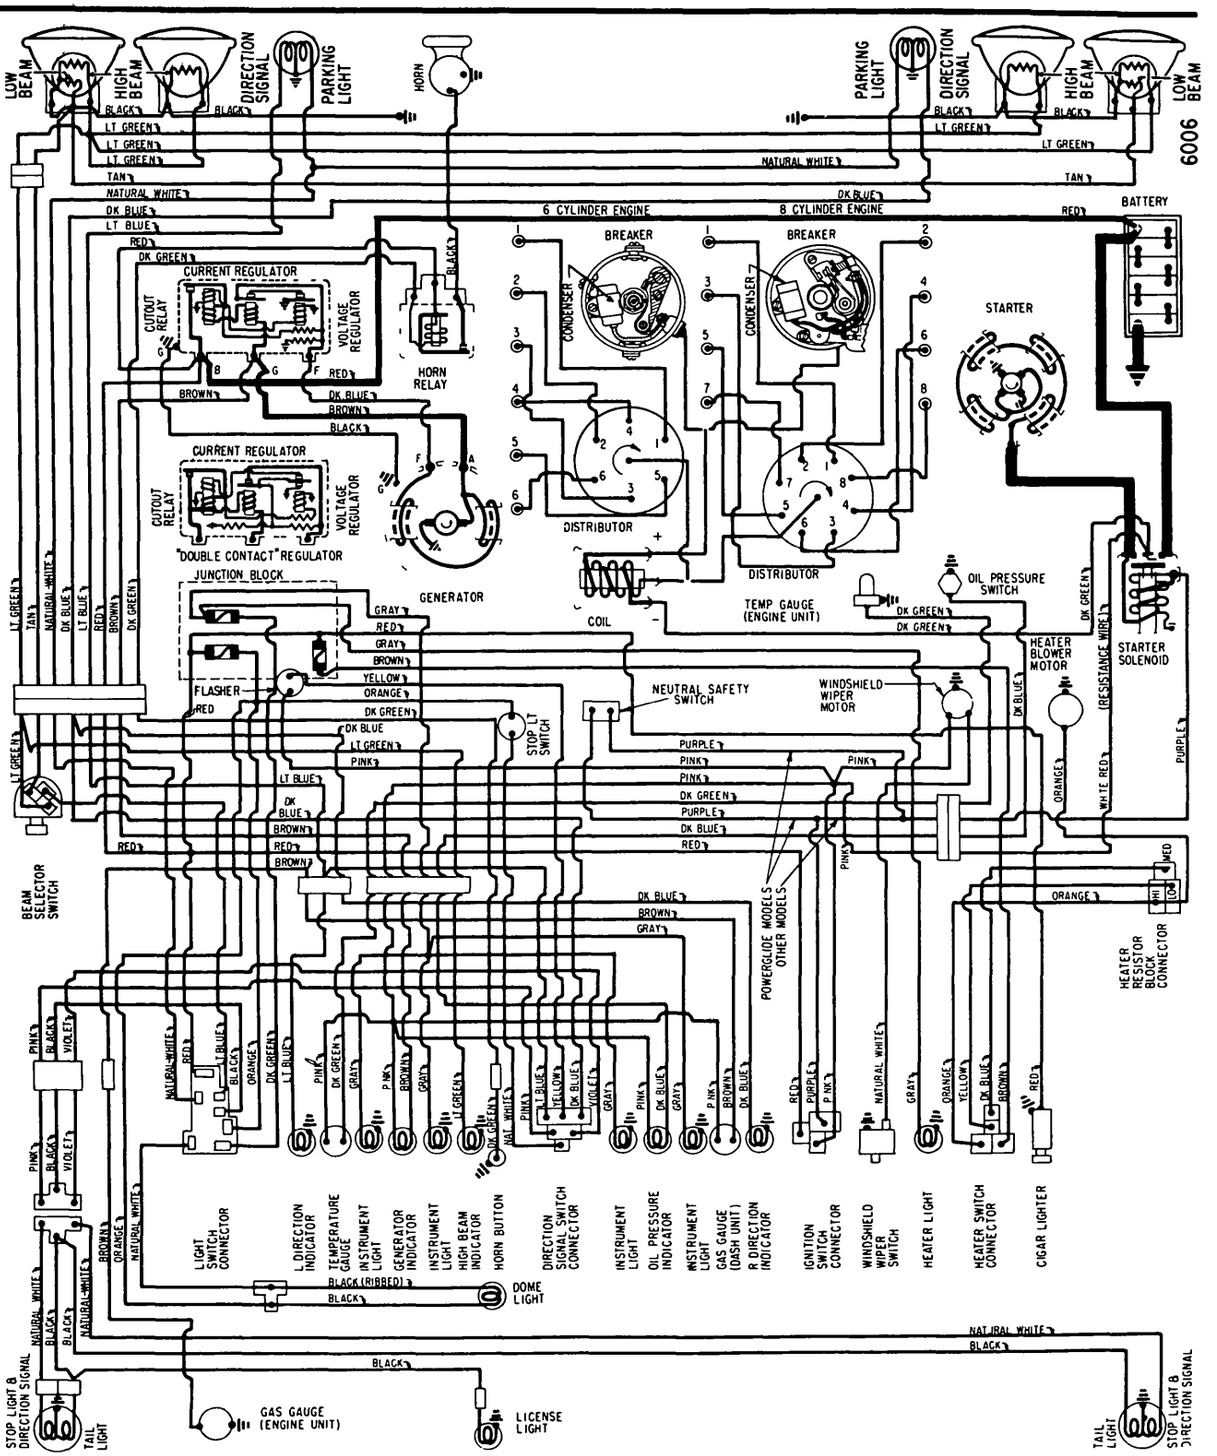
THROTTLE LINKAGE ADJUSTMENT (HYDRA-MATIC):

F rward C ntrol M d ls - With engine at normal operating temperature and idle speed set at 400-450 RPM insert 1 8" diameter pin into gauge pin hole in mounting bracket of accelerator pedal lever Adjust length of throttle rod so that swivel just enters throttle lever Remove swivel from outer lever and move lever back against transmission stop Check distance from hole in outer lever to rear face of transmission with Checking Gauge J-2545-C, bending lever as necessary (Tool J-5260) to allow entry of gauge into hole *CAUTION - Do not apply force against stop at either end of lever trav l* Adjust transmission throttle rod so that swivel at transmission case just enters outer lever then **snorten** throttle rod **thr and one-nalf turns** of jam nut



THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE):

6 Cyl - 1) Disconnect control rod from throttle lever at transmission cover Remove lower bolt at rear of transmission side cover Rotate throttle valve control outer lever counterclockwise to open throttle position



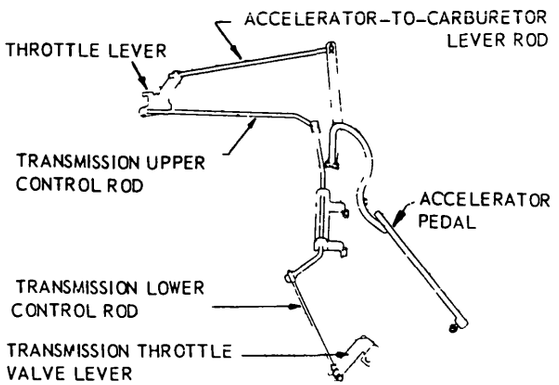
CONTINUED ON NEXT PAGE

6 CYL. (FORWARD CONTROL) HYDRA-MATIC THROTTLE LINKAGE

6 CYL POWERGLIDE THROTTLE LINKAGE

CONTINUED FROM PRECEDING PAC

2) Hold lever in this position and with throttle valve outer lever Gauge J-5906 set at 7.09", measure distance from left side cover lower rear bolt to hole in throttle lever. If pins of gauge will enter holes, adjustment is correct. If necessary to adjust, loosen lever to clamp attaching screw and adjust lever on throttle shaft as necessary. Reconnect throttle rod.



3) Disconnect bellcrank-to-transmission throttle lever rod at throttle valve lever. Disconnect accelerator-to-bellcrank rod at bellcrank.

4) Force bellcrank-to-transmission throttle lever rod forward against its stop in transmission (open throttle position) and adjust bellcrank-to-carburetor throttle rod for free entry of swivel pin in throttle valve lever, with carburetor throttle valve in wide open position.

5) With carburetor throttle valve held in wide open position and accelerator fully depressed, adjust accelerator-to-bellcrank rod for free entry of swivel pin into hole in bellcrank.

THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE):

V8 - Remove lower control rod, loosen transmission throttle lever clamp screw. Insert Tool J-5906 between transmission left hand side cover lower front bolt and hole in lever. Distance should be 3.60", as indicated on gauge, from centerline of bolt to hole centerline. With gauge in place and holding lever clamp in full detent position (rotate clockwise), tighten lever to clamp and remove gauge. Install lower control rod. Disconnect upper control rod from throttle lever on carburetor. Adjust upper control rod length for free entry into throttle lever with transmission throttle lever pulled forward against transmission internal stop. Attach throttle rod to carburetor lever. Check adjustment by releasing linkage to its idle position, then hold carburetor throttle lever in wide open position and press downward on transmission outer throttle lever and check for deflection. Readjust upper throttle rod if rod deflects. Place ½" wood block under accelerator pedal rod, depress accelerator against block, and adjust swivel on accelerator-to-carburetor throttle lever rod for free entry into throttle lever when held in wide open position. Readjust length of accelerator rod when detent is not felt before reaching wide open throttle

V8 POWERGLIDE THROTTLE LINKAGE

ROCHESTER "B" (SINGLE BARREL)

Engine	Rochester Carb. No.
235" (Std.)	7015011
235" (Economy)	7015021
261"	7015013

►*ENGINE SURGE CORRECTION AT 30-60 MPH (235" Engine with No. 7015011 Carburetor):* Caused by lean fuel-air mixture. Correct by installing richer metering jet, Rochester No. 7001860 (Stamped "55"), in place of standard metering jet No. 7002954 (Stamped "54"). *See "Rochester Single Carburetors" in Carburetion Section.*

Idle Setting - 1½-2½ turns open. Turn screw out for richer mixture.

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto Trans. in "D").

Float Level - 1 9/32" from bottom of each float to cover gasket (do not remove gasket). Use Gauge M-250. With assembly inverted, place gauge with projection inserted in discharge nozzle. Carefully bend float lip vertically so that each float just touches top portion of gauge. Bend float arms to bring them into alignment and to center them in gauge. Tilt assembly 90° on each side and check to see that floats do not touch gauge.

Float Drop - Turn cover right side up so float drops down. Distance from gasket on cover to bottom of each float should be 1¾" on all models. Adjust by bending tang at rear of each float assembly.

►*CAUTION: Both floats must be set alike and must not be twisted out of alignment.*

Accelerating Pump - No seasonal adjustment.

Choke Adjustment: Manual choke used.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester Single Carburetors" in Carburetion Section.*

ROCHESTER 2G (2-BARREL)

Engine	Rochester Carb. No.
283" Std.	7015015
283" (Velocity Governor)	7013011
283" (Vacuum Governor)	7015017

►*ENGINE SURGE DURING PART THROTTLE OPERATION CORRECTION (7015015 & 7013011):* On carburetors not marked by "A" or "B" on identification tag, install larger main metering jets. *See "Rochester 2G & 2GC Carburetors" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8. LEFT barrel feeds 1-4-6-7.*

Idle Setting - After idle speed set to correct specifications (see below), turn both idle mixture screws for smooth idle with highest vacuum reading and RPM.

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans, in "D").

Float Level - 1 23/64" (Gauge BT-152) with air horn inverted and gauge placed over float so it rests against pump side of power piston shaft and outer gauge leg in line with center of float. Adjust by bending float arm (Tool BT-69) between pivot and float.

Float Drop - 1 29/32" (Gauge BT-152) from air horn gasket to bottom of float with air horn held upright. To adjust, bend float tang.

Choke Setting: Manual choke used.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester Dual 2G & 2GC Carburetors" in Carburetion Section.*

CARTER BB (UPDRAFT)

Carter (BB) 871SC (Forward Control Models). Single barrel updraft type with manual choke.

Idle Setting - ½-1½ turns open (turn screw out for richer mixture).

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans. in "D").

Float Level - Top of float (not seam) 0" to 1/32" below top of bowl with needle valve seated Use Gauge J-818-13A on top edge of bowl (gasket removed).

Accelerating Pump - Inner hole (in plunger shaft and throttle lever) Summer. Outer hole, Winter.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter BB Updraft Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC used as follows:

Model	AC No.
6 Cyl. Std.	4434
6 Cyl. Fwd Contr. & Flat Faced Cowl	4666
V8	4701

Pressure - 3½-4½ lbs. (6 Cyl.), 5½-6½ lbs. (V8) steady at 450-1000 RPM.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: AC Electric.

Dash Unit - (Flat faced cowl) AC No. 5643021. (Others) AC No. 5643018.

Tank Unit - Various types used. Replace with same type as original equipment.

See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco. 2SMR53, 12 volt, 9 plate, 53 ampere hour capacity (20 hr. rate).

668. 12 volt, 11 plate, 70 ampere hour capacity (20 hr. rate).

3SMR72, 12 volt, 11 plate, 72 ampere hour capacity (20 hr. rate).

Ground - Negative.

Engine Ground - Engine to frame (6 Cyl.), to dash (V8).

STARTER

Delco-Remy. As follows	Starter	Armature
6 Cyl Std.	1107652	1932185
6 Cyl. Fwd. Contr.	1107677	1926626
V8	1107664	1935829

Drive - Overrunning clutch with solenoid pinion shift

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 35 ozs min

Performance Data - 1107652,64

Torque	RPM	Volts	Ⓒ Amperes
0 ft lbs	6200-9400	10.6	49-76
	Lock	4 25	270-310

Ⓒ - Includes Solenoid.

Starting Switch: Delco-Remy Solenoid 1119919 (Exc. Auto. Trans.) 1119793 (Auto. Trans). Mounted on starter and controlled by Ignition & Starter Switch

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1116567 (Exc Fwd Control), No. 1116579 (Fwd. Control)

Neutral Safety Switch: Delco-Remy 1998110 Mounted on steering column. Used with Auto. Transmission.

Adjustment - *See "Hydra-Matic Drive" or "Powerglide" in Transmission Section*

GENERATOR

Delco-Remy. Used as follows

Application	Generator	Armature
6 Cyl & V8 Std	1102096	1923535
6 Cyl. & V8 Optl.	1102173,74	1948005
Special Equip	1105116	1940161
Special Equip	1105123	1945922
Special Equip.	1106679,81	

Performance Data - Cold

Generator	Amperes	Volts	RPM
1102096	30	14.0	2240
1102173,74	35	14.0	2500
1105116	35	14.0	1730
1105123	40	14 0	1930
1106679	50	13 0	1600
1106681	45	13.0	1400

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 28 ozs.

Field Current - 1.69-1.79 amps (1102096,173,174), 2 73-3.0 amps (1105116, 123), 2.14-2 28 amps. (1106679, 81)

Belt Adjustment: 3/8" (6 Cyl), 3/4" (V8) with light pressure applied midway between water pump and generator pulleys

REGULATOR

Delco-Remy. Used as follows

Regulator	Generator
1119001 (30 Amp.)	1102096
1119002 (35 Amp)	1102173,74
1119604 (35 Amp)	1105116
1119610 (40 Amp)	1105123
1119619 (50 Amp.)	1106679,81

►*DOUBLE CONTACT REGULATOR NOTE Pegulators 1119604, 610, 619 have double contacts for voltage regulation*

NOTE - Specifications below are for "Normal" settings.

Cutout Relay

Cuts In - 11.8-13 5 volts (1119001,2), 11.8-13.0 volts (1119604,10,19)

Contact Gap - .020" **Air Gap** - 020".

Voltage Regulator

Setting - (1119001,2) 13 8-14 8 volts at 125°F

Setting - (1119604,10,19) 13 8-14.6 volts (upper contacts), .1- 3 volts lower (lower contacts) at 125°F

Contact Gap - (1119604,10,19) 016" (upper contacts) with lower contacts just touching

Air Gap (1119001,2) 075", (1119604 10,29) 067" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" or "Delco-Remy (Double Contact) Regulators" in Electrical Section*

Current Regulator

►*NOTE· 1119604,10,19 are "Temperature Compensated" type.*

Setting - 27.0-31.0 Amps. (1119001), 31.0-35.5 Amps. (1119002,604), 36.0-40.5 Amps. (1119610); 46.0-50.5 Amps. (1119619). Cold.

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" or "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL

Directional Signals: *See Electrical Section.*

Lighting Switch Removal: Remove connector from switch. Depress switch shaft retainer (on top of switch) and remove knob and shaft. Remove retaining ferrule and switch assembly.

Stop Light Switch Location: Located on underside of dash panel brace Adjust switch position to make electrical contact with 13/16" pedal pad travel.

CIRCUIT BREAKERS: Located on lighting switch.

FUSES: Located on junction block mounted on upper inside of dash panel to left of steering column.

Horn Relay: Delco-Remy 1116920.

ENGINE

►*AIR CONDITIONED TRUCK SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

Engine Model	Type
Thriftmaster	235" 6 Cyl.
Jobmaster	261" 6 Cyl.
Trademaster	283" V8
Taskmaster	283" V8

ENGINE SPECIFICATIONS: 6 Cyl. & V8 Valve-in-Head.

Engine	Bore	Stroke	Displacement

Thriftmaster(Econ.)	3 9/16"	3 15/16"	235 cu. in.
Jobmaster	3 3/4"	3 15/16"	261 cu. in.
Trademaster	3 7/8"	3"	283 cu. in.
Taskmaster	3 7/8"	3"	283 cu. in.

Engine	Compr. Ratio	Rated HP	Developed HP
Thriftmaster(Std)	8.25-1	30.4	135 at 4000 RPM
Thriftmaster(Econ.)	8.25-1	30.4	110 at 3200 RPM
Jobmaster	8.00-1	33.7	150 at 4000 RPM
Trademaster	8.50-1	48.0	160 at 4200 RPM
Taskmaster	8 00-1	48.0	160 at 4200 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data*

OIL PAN REMOVAL: (6 Cyl. Engines) - Raise front of vehicle and place on stands, drain lubricant and remove bolts and screws *NOTE* - Turn crankshaft as necessary to allow clearance at front crossmember.

OIL PAN REMOVAL: (V8 Engine) - Raise front of vehicle and place on stands, drain lubricant. On Taskmaster engines remove oil level gauge and tube. Remove bolts and screws, lower oil pan.

CYLINDER HEAD & MANIFOLDS: *See "Cylinder Head & Manifold" in Chevrolet Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data*

►*OTHER ENGINE DATA See Chevrolet 6 Cyl. & V8 Pass. Car P-*

OILING SYSTEM

►***ENGINE OILING SYSTEM: See "Engine Lubrication" and "OILING SYSTEM in Chevrolet Special Data.***

Crankcase Capacity: 235" & 261" 6 Cyl. 5 qts. 283" Trademaster (Series 10 through 40) 4 qts. 283" Trademaster (Series 50) 5 qts. 283" Taskmaster 5 qts.

NOTE - Add 1 qt. for filter change.

Normal Oil Pressure - (6 Cyl.) 35 lbs. at 2000 RPM. **(V8)** 30 lbs. at 1170-1200 RPM.

Pressure Regulator Valve - In pump body, not adjustable.

Oil Pressure Indicator - Light on Instrument panel controlled by switch AC No. 1508753 (Exc. Flat Faced Cowl). Oil Pressure Gauge AC No. 1508246 (Flat Faced Cowl). Not electric.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

►*OIL PUMP SCREEN NOTE:* Oil pickup pipe should be installed so that bottom of pickup screen is parallel with oil pan rails.

Oil Pump Overhaul - *See "Oiling System" in Chevrolet Special Data.*

Oil Filter: AC partial flow (235"), full flow (261" & 283").

Replacement Filter Element - (235") AC-P-115 or AC-P-117 partial flow. **(261" & 283")** AC-PF-141 full flow.

Filter Valve Replacement (283") - Drain crankcase, remove filter and cartridge. Remove oil filter valve bolts, valve and seal. *NOTE* -Check valve for cracks, replace if broken. A 10 lb. valve must be used. Position valve away from engine when reinstalling.

Crankcase Ventilation (Standard): Air intake through oil filler cap, outlet through road draft tube at rear of engine.

Servicing - Clean oil filler cap in solvent and reoil with light engine oil every 2000 miles, or more often if required by operating conditions.

Crankcase Ventilation (Optional): Positive Type. Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**

Servicing - Every 10,000 miles (or oftener if required), clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly.

►*VACUUM VALVE CAUTION:* If improper action of spring is suspected due to spring being distorted, or etched from corrosive action, the valve assembly should be replaced.

COOLING

Water Capacity: In quarts for each type engine.

Standard Cooling System

Form 29 B

CONTINUED FROM PRECEDING PAGE

Pressure Valve: Radiator Filler Cap. AC Type RC1 7 lb.

Thermostat: Harrison poppet valve (235"), Dole pellet bypass (261" & 283"). In cylinder head water outlet. **Replacement Thermostats - (Series 10 through 50)** 160°F. No. 3133596. (Ser. 60) 160°F. No. 3139133. (Series 60) 180°F No. 3139134.

Temperature Gauge: AC Electric.
Dash Unit - AC No. 1513381.
Engine Unit - AC No. 1513321.
See "Temperature Gauges" in Miscellaneous Section.

Water Pump: Packless type with sealed ball bearing.
See "Water Pumps" in Chevrolet Special Data.

CLUTCH

Two types used as follows:
235" Engine. Chevrolet (Own) conventional flat spring type.
261" & 283" Engine. Borg & Beck 11A9, Assembly No. 361483. Coil spring type.

Chevrolet (Own) Diaphragm Spring

Model	Cover & Spring	Disc No.
235",Ser.10 thru 60 (Exc.H.D.)	3752850	①3836097
235" Ser.10 thru 60 (Exc. H.D.)	3752850	①3836119
235" H.D.	3751041	3758678
235" Fwd. Contr.	3751041	

Borg & Beck Coil Spring

261", Ser. 50,60	3758681
283", Ser. 10 thru 60	3758681

① - Molded lining. ② - Woven lining.

See "Chevrolet (Own)" or "Borg & Beck" Clutches in Clutch Section.

Adjustments - Two adjustments must be made.

Pedal Total Travel (Bumper Adjustment) - *NOTE - Fill master cylinder to ½" below top of reservoir.* Locate clutch pedal bumper to bring clutch pedal even with brake pedal. Disconnect return spring, bottom cylinder pushrod and piston (push pushrod forward as far as possible). Pull clutch fork to rear until bearing touches levers and turn adjusting nut (behind pushrod fulcrum) until clearance between fulcrum pivot and clutch fork is 5/32" (use 5/32" diameter drill).

Pedal Free Travel Adjustment - Adjust pushrod eccentric bolt (on early models) and adjustable pushrod (late models) so as to obtain free travel between master cylinder pushrod and piston. This will amount to 1/8" free travel measured at center line of pedal pad, just before pushrod contacts piston. *NOTE* - This adjustment insures piston uncovering port in reservoir.

Removal: Remove transmission, see Transmission Removal below then proceed as follows:

1) Disconnect slave cylinder at clutch fork and remove bearing from fork.

2) Press fork away from ball mounting (use screwdriver) or remove ball stud from rear of clutch housing. *NOTE* - Pry retainer out of fork with small screwdriver.

3) Install Tool J-5824 to support assembly, loosen clutch attaching bolts gradually to release spring tension then remove tool and remove clutch assembly. *NOTE - On coil spring clutches, mark clutch cover, flywheel and one pressure plate before removing clutch from flywheel.*

Bleeding System: Same as for a brake system. Bleed clutch hydraulic line at clutch slave cylinder bleed hole.

SYNCHRO-MESH TRANSMISSION

3-SPEED LIGHT DUTY

Own. Three-speed, all helical gear type. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).
See "Chevrolet 3-Speed (Light Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever. *See "Transmission Controls" in Transmission Section.*

Removal (Series 10,20): Drain transmission. Disconnect speedometer cable at transmission and shift control rods from transmission levers. Remove propeller shaft. Remove the two top transmission to clutch housing capscrews and insert two transmission guide pins, Tool J-1126, in these holes. Remove the two lower transmission to clutch housing capscrews. Slide transmission straight back on guide pins until clutch gear is free of splines in the clutch disc.

3-SPEED HEAVY DUTY

Own. Three-speed, constant mesh (second & high), sliding gear (low & reverse).
See "Chevrolet 3-Speed (Heavy Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever.
See "Transmission Control" in Transmission Section.

Removal: Same as for "3-speed (Light Duty)" above.

4-SPEED

Own. Four-speed, constant mesh, synchro-mesh, helical gear (2nd, 3rd & 4th), sliding spur gear (low & reverse). Floor mounted gearshift.

Transmission Control: Floor mounted gearshift lever.

Removal (Series 10): *See "3-Speed (Light Duty)" above.*

Removal (Other Trucks): Drain transmission, disconnect parking brake and remove lever. Remove propeller shaft, transmission gearshift lever (use Tool J-8109). Remove screws that fasten steering jacket grommet to floor and slide grommet up jacket out of way. Remove accelerator pedal and floor mat. Remove sheet metal screws attaching transmission cover to body floor, remove cover. On Forward Control Models, remove both front and rear floor pans. Disconnect speedometer cable from driven gear fitting at transmission rear bearing retainer. Remove two top attaching screws, insert Guide Pins J-1126, remove flywheel underpan, two lower transmission screws, slide transmission straight back, remove transmission from vehicle.

TRANSFER CASE

4-WHEEL DRIVE

Timken. Two-speed, manually controlled, used with 4-wheel drive.

Removal - Disconnect propeller shafts from transfer case. Disconnect all control linkage and speedometer cable from transfer case. Support transfer case on jack and remove transfer case stud nut, cotter pins, stud nuts, and mounting rubbers. Lower transfer case and remove from car.

HYDRA-MATIC DRIVE

Dual Range Hydra-Matic (Forward Control Models) of same design as used on previous models.

►*PRODUCTION CHANGES AND REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication - Check fluid every 1,000 miles, drain and refill every 25,000 miles. Use only Automatic Transmission Fluid Type "A" (Suffix "A"). *NOTE* - When this type of fluid is not available, it is permissible to use Type "A".

Checking Fluid Level - Bring transmission to operating temperature, check fluid with control lever in "N" position and with engine idling. Add oil when level reaches "L" mark (1 qt. low) on indicator. *CAUTION* - Fluid level should never be higher than "F" mark on indicator.

Capacity - 8½ qts. (refill), 9 qts. (after overhaul). *NOTE* - 1 qt. additional with oil cooler.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER HYDRA-MATIC DRIVE SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

POWERGLIDE TRANSMISSION

Automatic transmission of same design as used on Passenger models, used on all except Forward Control models.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Powerglide Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Powerglide Transmission" in Transmission Section.*

Lubrication - Check fluid every 1,000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Use "Automatic Transmission Fluid Type "A" Suffix "A". When Suffix "A" not available, use Type "A".

►*DRAIN & REFILL NOTE:* Periodic drain and refill is no longer recommended. Replace transmission fluid only when transmission removed for repairs.

Capacity - 4½ qts. (refill), 10 qts. (after overhaul).

Checking Fluid Level - Bring transmission to operating temperature, check level with control lever in "N" position with engine idling. Add fluid when level reaches "Add 1 qt. mark" on oil level rod. DO NOT OVERFILL. Use only Automatic Transmission Fluid Type "A", Suffix "A". When Suffix "A" not available, use Type "A".

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Chevrolet Powerglide" Transmission in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

►*PROPELLER SHAFT VIBRATION CORRECTION (P20 Forward Control):* Caused by incorrect installation of rear spring-to-mounting bracket spacers. Install Spacer No. 3753831 (Left side) & No. 3753732 (Right side) with thick edge toward rear of truck. *NOTE* - Word "Front" appears on each bracket

FRONT AXLE

4-WHEEL DRIVE

Full floating hypoid gear type. Differential assembly (ring gear and pinion assembly) is serviced in same manner as rear axle.
See "Chevrolet 4-Wheel Drive" in Rear Axle Section.

Ratio - (Series 10) 3.90-1, (Series 20) 4.57-1.

Front Axle Shaft Assembly: Removal - Remove wheels (and brake drums on Series 10). Remove hub caps, drive flange stud nuts, retaining ring, drive flange, and shims *NOTE - Use tapped holes in flange to force flange off shaft.* Use Tool J-6893 (Series 10), J-6649 (Series 20), to remove outer and inner locknuts and shim.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Remove hub assembly. *CAUTION - On Series 20, do not drop loose outer bearing from hub bore.* Remove brake and spindle mounting nuts (and slinger on Series 20), remove brake assembly and spindle. Remove axle shaft and universal joint assembly.

Installation - Reverse removal procedure and note the following: *CAUTION - DO NOT damage seal with axle splines. Splines must engage differential side gears.*

1) On Series 10, install spindle seat on knuckle studs with flat side up.

2) Torque stud nuts to 50-60 ft. lbs. torque.

3) Install hub assembly and adjust wheel bearings. See Wheel Bearing Adjustment below.

4) Install sufficient number of .010" shims (not to exceed .030") between drive flange and hub to prevent contact between inner surface of axle housing ball end and ball joint housing. *CAUTION - Shim thickness must not be great enough to cause excessive wear of spindle bushing or interfere with installation of flange retaining ring.*

5) Tighten flange nuts to 18-20 ft. lbs. (Series 10), 32-38 ft. lbs. (Series 20).

Wheel Bearing Adjustment: With drive flange and shim not installed, and outer locknut and lock removed, tighten inner locknut wrench-tight, then back nut off 1/8 turn and make certain that hub turns freely by hand. Align tang on lock with keyway on spindle and seat lock against inner locknut. *NOTE - Turn nut slightly, if necessary, to line up pin on inner locknut with hole in lock.* Tighten outer locknut securely against the lock. Install drive flange and shim. *See Front Axle Shaft Assembly Installation above.*

Front Axle Shaft Disassembly: 1) Hold assembly vertical and rap face of universal joint down sharply against vise or bench to separate inner and outer shafts. *NOTE* - Snap ring on inner shaft will contract permitting joint to separate.

2) Tilt race and cage to remove balls. Align race and cage to remove them from bell housing. Disassemble cage and race.

NOTE - Shaft and universal joint must be replaced as an assembly.

Knuckle Housing: Removal - Remove axle shaft, see above, then proceed as follows:

1) Remove upper and lower bearing caps and shims.

2) Remove seal retainers and seals from front and rear seal retainer bolts.

3) Drive roll pins from upper and lower knuckle housing flanges and remove bolts and washers at front and rear flanges to separate upper and lower housings, then remove bearing cups.

4) Pull upper trunnion bronze bearing and remove key. Remove lower trunnion bearing cone and roller.

Installation - Reverse removal procedure and note the following:

1) Install bearing and cone on lower trunnion, insert key in upper trunnion and install bronze bushing.

2) Position housings over bearings and insert bolts through flanges with nuts finger tight.

3) After inserting roll pin in flange, tighten housing bolts to 50-60 ft. lbs.

4) Place new seals in retainers and install on housings. Tighten larger retainer bolts to 14-18 ft. lbs., smaller bolts to 9-13 ft. lbs.

5) Install .010" shims at each bearing and install cap. Tighten bolts to 50-60 ft. lbs. *NOTE - Knuckle should move easily with no play with 14-20 ft. lbs. (15-16 ft. lbs. preferred) turning torque.* Adjust number of shims at lower bearing cap as necessary.

REAR AXLE

HALF-TON SEMI-FLOATING

Own. Semi-floating, hypoid gear type with Torque Arm Drive. Eaton Positraction differential Optional. *NOTE* - Same design as passenger car axle.

See "Chevrolet Hypoid Semi-floating" and "Eaton Positraction Differential" in Rear Axle Section.

►*PINION BEARING PRELOAD CAUTION:* Rear universal joint companion flange nut controls rear axle pinion bearing preload. Bearing preload must be adjusted whenever companion flange nut is loosened.

Axle Ratio Identification ①

Ratio	Identification
3.90 (39-10) Std.	MA(C14),MD(C15),MG(K10)
3.90 (39-10) Optl.-Positraction	MC(C14),MF(C15)
3.38 (44-13) Optl.	MB (C14),ME(C15)

① - Stamped as prefix to Unit No. on Carrier Housing.

Axle Shaft Removal: Remove wheel and brake drum. Drain lubricant, remove housing cover. Remove differential pinion shaft lockscrew, pinion shaft, and axle shaft spacer. Push axle shafts inward and remove "C" washers from inner ends and remove shafts.

Axle Shaft Endplay - Free fit to .014" maximum.

Differential Carrier Removal: Remove axle shafts to clear differential side gears, *see "Axle Shaft Removal".* Reinstall axle shaft spacer, pinion shaft and lockscrew to retain assembly during removal. Separate rear universal joint (tape bearings to pinion). Remove differential carrier to housing bolts and separate carrier from housing.

►*POSITRACTION LUBRICATION CAUTION:* Use GM No. 3758790 or 3758791 lubricant in these axles (this lubricant can be used in regular axles).

FULL-FLOATING (SERIES 20 TO 60)

Own. Full-floating hypoid (straddle mounted pinion) with torque arm drive (Ser.20), Hotchkiss drive (Others). *See "Chevrolet Truck Hypoid Full Floating" in Rear Axle Section.*

Axle Ratio Identification ①

Ratio	Identification
4.57 (32-7) Std.	MH (C20), MK(K20)
4.57 (32-7) Optl. (H.D.,3,4-Speed)	MJ(C20)
5.14 (36-7) Std.	ML(P20),PA(C30),PC(P30)
5.14 (36-7) Optl.(H.M.,H.D. 3,4-Speed)	MN(P20)
5.14 (36-7) Optl.②	PB(C3602,03,09,12),PK(P30)
6.17 (37-7) Std.	PD(C40),PE(C,L,S50;S62,64)
7.20 (36-5) Std.	PF(C,L60;S67)
7.20 (36-5) Optl.	PF(S62,64);PH(C.L.,S60)

① - Stamped as prefix to Unit No. on Carrier Housing.

② - Dual Wheels.

Backlash - .005-.008".

Removal of Differential Carrier: Drain lubricant, remove axle housing cover and axle shafts, see axle shaft removal below. Remove two trunnion bearing "U" bolts from rear yoke and split rear universal joint (hold bearings on trunnion with tape). Remove bolts and lockwashers holding carrier to axle housing, support carrier in floor jack and roll from under truck.

Axle Shaft Removal (Series 20,30): Remove eight capscrews and lockwashers in axle shaft flange, install two ½"x13" screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket. *Use new gasket when installing shaft.*

►*CAUTION:* Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft. *Grease at this point will cause loosening of axle shaft flange capscrews.*

►*AXLE SHAFT NOTE:* Shafts unequal length (right shaft longer than left). Install in correct position.

Axle Shaft Removal (Series 40,50,60): Remove hubcap, then thread Tool J-1436-1 into hole in axle shaft and use slide hammer to remove shaft.

NOTE - When reinstalling axle shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket.

►*AXLE SHAFT NOTE:* Some models have different length axle shafts. Install longer shaft on right side.

Wheel Bearing Adjustment: Remove wheels and axle shafts see above, bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten inner adjusting nut to 50-65 ft. lbs. (Series 20 & 30), 75-100 ft. lbs. (Series 40,50,60), with special wrench J-2222 (Series 20 & 30), J-870 (Series 40), J-5670(Series 50 & 60) while turning hub, then back off nut 1/8 turn. Check hub for free turning, install adjusting nut lock with tangs aligned with adjusting nut slots, bend tang into adjusting nut slot. Install outer locknut and tighten securely, then bend lock tang down into notch in locknut.

PLANETARY 2-SPEED

Own. Full-floating, two-speed planetary reduction type, with hypoid primary pinion and ring gear.

See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.

Axle Ratio - 6.40-1 (high), 8.72-1 (low). 35:6 Primary gears.

Two-Speed Shift Control: Vacuum power type with control on gearshift lever.

Carrier Assembly Removal: *See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.*

Axle Shaft Removal & Wheel Bearing Adjustment: Same as for "Standard Full-Floating" above.

SHOCK ABSORBERS

Delco. Direct acting (Airplane type) shock absorbers as follows:

Series	Shock Absorber No. Front	Rear
10 (115" WB)	5549948	5549872
10 & 20 (127" WB. Std.)	5549948	5552230
10 & 20 (127" WB. H.D.)	5549949	5552232
10 & 20 (4-Whl. Dr.)	5552294	5552295
20 & 30 (Fwd. Contr. & Van)	5513193	5533131
30 & 40 (Std.)	5549948	5549599
30 & 40 (H.D.)	5549949	5549599
50 & 60	5549915	5552114

FRONT SUSPENSION

2-WHEEL DRIVE (EXC. FWD. CONTROL)

Independent type with spherical joints at pivot points and torsion bar springs.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

See "Chevrolet Truck Front Suspension" in Suspension and Wheel Alignment Section.

Curb Height - 4⅛" (Series 10 through 40), 5 1/16" (Series 50 & 60). Distance from top of bumper bracket flange to underside of frame crossmember.

Steering Axis Inclination - 8° (Series 10 through 40), 6° 53' (Series 50, 60).

Caster - Pos. 1°±½° (Series 10 through 40), Pos 2½°±½° (Series 50,60).

Camber - Pos. ½°±½° (Series 10 through 40), Pos ¾°±½° (Series 50,60)

Toe-In - 1/8" to 1/4".

Wheel Bearing Adjustment: (Series 10, 20, 30, 40) Tighten adjusting nut to 33 ft. lbs. torque while rotating hub, then back off nut to align nearest slot in nut with cotter pin hole in spindle, install cotter pin.

(Series 50 & 60) - Tighten adjusting nut to 60 ft. lbs. torque while rotating hub, then back off nut 1/6 turn (slightly more if necessary) to align slot in nut with cotter pin hole in spindle, install cotter pin.

2-WHEEL DRIVE (FWD. CONTROL)

Conventional "I" Beam section front axle with reverse Elliot ends and semi-elliptical springs.

Kingpin Inclination - 7°30' crosswise.

Caster - Pos. 2°. **Camber** - Pos. 1¼-1¾°.

Toe-In - 1/4-5/16".

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be 22½-23½°.

Wheel Bearing Adjustment: See data on same Series above.

4-WHEEL DRIVE

Optl. on Series 10 & 20. See *FRONT AXLE* above.

Kingpin Inclination - 8° crosswise.

Caster - 1¾°. **Camber** - 1½°.

NOTE - Caster and camber not adjustable.

Toe-In - 1/32-5/32". *NOTE* - Adjust by turning tie-rod ends. Fine-thread end changes toe-in 1/4" per turn, coarse end 9/32".

Wheel Bearing Adjustment: See *"FRONT AXLE 4-WHEEL DRIVE" data above.*

REAR SUSPENSION

Rear Suspension (Series 10 & 20 exc. FWD & 4WD): Coil spring type with torque arms.

See *"Chevrolet Series 10,20 Truck Rear Suspension" in Suspension & Wheel Alignment Section.*

STEERING

Manual: Saginaw Ball Bearing Worm & Nut (recirculating ball).

See *"Saginaw Ball Bearing Worm & Nut" in Steering Section.*

►*UP & DOWN MOVEMENT OF STEERING WHEEL AND* down movement of upper and lower steering shaft joints. See *"Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Power Steering (Series 50, 60 Only): Saginaw Linkage Type with control valve in steering gear.

See *"Saginaw (Rotary Valve) Power Steering" in Steering Section.*

Steering Linkage: See *"Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: See *"Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: See *"Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

►*NOTE: Two different type brakes used as indicated below.*

1) Chevrolet-Bendix Hydraulic (Front - Series 10 through 60, Rear - Series 10 through 30).

2) Chevrolet-Twinplex (Rear Series 40,50,60). Two cylinder, four anchor, hydraulic. Shoes are self-centering and self-energizing.

See *"Chevrolet-Bendix Hydraulic" and "Chevrolet-Twinplex" in Brake Section.*

►*HALF-TON TRUCK BRAKE SHOE GRINDING CAUTION:* If bench type grinder used, grind shoes to .057"-.087" smaller diameter than drum size If spindle type grinder used, grind shoes to drum diameter.

Drums - Cast iron with steel hub.

Model	Drum Diameter Front	Rear
C10	10.995"	11.002"
C20	11.105"	11.152"
C30	11.105"	12.958"
P20	11.955"	11.955"
P30	11.955"	12.955"
C40	11.105"	14.955"
C,L,S50,S62,64	13.955"	14.955"
C,L60,S67,Optl.S64,68	13.955"	14.955"
C,L,S60 Optl.	15.0"	14.955"

Braking Power (Front) - (C10) 56%, (C20) 49%, (C30) 41%,(P20) 50%, (P30) 48%, (C40) 29%, (C,L,S50,S62,64) 30%, (C,L60,S67: Optl.S64,68) 30%, (Optl C,L,S60)36%.

Clearance - Adjust for clearance as follows:

All Models (Exc. Series 40,50,60 Rear Brakes) - Remove adjusting hole cover and turn brake adjusting screw until light drag is felt, then back off adjusting screw 7 notches (Ser.10), or just enough to eliminate brake drag (Other Models), but not more than 7 notches.

Rear Wheels (Series 40,50,60 Models) - Remove adjusting hole covers from flange plate and turn rear adjusting screw until slight drag is felt, then back off 3 notches. Repeat on front adjusting screw (2 adjustments on each wheel).

Lining - Molded type Bonded on ½ ton models, riveted on all other models.

Model	Thickness & Width Thickness	Width
C10 (All)	.165"	2.00"
C20 (All)	.249"	2.75"
C30 (Front)	.249"	2.75"
C30 (Rear)	249"	2.50"
P20 (All)	.252"	2.00"
P30 (Front)	.249"	2.00"
P30 (Rear)	.252"	2.50"
C40 (Front)	.249"	2.75"
C40 (Rear)	.375"	4.00"
C,L, S50,S62, 64 (Front)	.250"	2.50"
(Rear)	.375"	4.00"
C,L60, Optl.S64,68 (Front)	.250"	2.50"
(Rear)	.375"	4.00"
Optl. C,L,S60 (Front)	.310"	3.00"
(Rear)	.375"	4.00"

Master Cylinder: Dual barrel (Clutch & Brake) mounted on engine side of firewall, directly connected from pushrod to brake pedal. *NOTE* - Single barrel master cylinder used with Automatic Transmission.

Checking Fluid - Maintain level at ½" below filler.

Removal - Disconnect clutch and brake pedal return springs Slide pushrod boot off cylinder. Remove clutch and brake lines, remove cylinder to dash bolts (three) and remove cylinder assembly.

Installation - Reverse removal procedure and bleed system. *NOTE* - Bleed clutch hydraulic line at clutch slave cylinder bleed hole.

Power Brakes: Two types of Hydrovac Power Unit (Piston & Diaphragm) used. See *"Hydrovac Power Unit" in Brake Section.*

Removal - Remove vacuum and brake fluid lines and air cleaner hose. Remove nuts and bolt securing unit to bracket.

Parking Brake: Hand lever applies rear wheel service brakes (Series 10 & 20 with 3-Speed Trans.), independent brake on propeller shaft (All Others).

Adjustment (Series 10 through 40) - See *"Chevrolet-Bendix Hydraulic" in Brake Section.*

Adjustment (Series 50 & 60) - See *"Chevrolet Twinplex" in Brake Section.*

MISC. MECHANICAL

Windshield Wipers: Single Speed Electric Motor, driving operating link rods.

See *"Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: See *"Chevrolet Air Conditioning" in Miscellaneous Section.*

TIGHTENING SPECIFICATIONS

►*TIGHTENING CAUTION: Due to use of aluminum crankcase, rear housing, cylinder heads, and other parts, bolt and stud torques must be held as close as possible to specifications in table below to avoid overstressing of base metal parts and stripped threads.*

	Inch-Lbs.	Ft. Lbs.
Cylinder Head		27-33
Exhaust Manifold		10-20
Rocker Arm Stud		27-33
Rocker Arm Stud Nut	55-125	
Rocker Arm Cover	40-60	
Pushrod Guide Ⓒ	60-80	
Oil Pan	40-60	
Oil Cooler		8-12
Oil Cooler Adapter		7-13
Oil Cooler Shroud	60-80	
Oil Pump Cover	60-80	
Oil Filter & Gen. Adapter		7-13
Connecting Rod Caps		20-26
Crankcase Rear Housing		7-13
Crankcase Halves (7/16")		42-48
Crankcase Halves (5/16")		7-13
Crankcase Cover		7-13
Drive Flange or Flywheel		20-26
Flywheel Housing		20-30
Engine Rear Mount Bolt		50-60
Engine Rear Mount Bracket Nut		20-30
Engine Front Insulator-to-Frame		80-100
Engine Front Mount Bracket-to-Trans.		20-30
Engine Front Insulator-to-Bracket		60-80
Engine Rear Shrouds	60-80	
Skid Plate-to-Rear Housing		20-30
Clutch Cover		15-20

Ⓒ - Early cars. Guides retained by rocker arm studs on later cars.

POWER TRAIN

POWER TRAIN REMOVAL. *NOTE - Complete assembly (engine, transmission, and rear axle) must be removed from car as a unit. To separate transaxle from engine, see "Corvair Transaxle" in Transmission Section.*

1) Disconnect ground cable from battery and ground strap to engine, then disconnect wires from coil, generator, oil pressure and temperature sending units. Disconnect accelerator return spring and accelerator rod from carburetor cross shaft.

2) Raise car on a hoist and remove engine side and rear shield seal retainers. Remove both rear wheels and brake drums (cover rear brake shoes), then remove axle shaft universal joints from differential carrier and pull axles out from backing plates *(see "Axle Shaft Removal" below).*

3) Remove wires from starter solenoid and disconnect speedometer cable. Disconnect carburetor cross shaft rod from control idler rear lever, and push rod up into engine compartment, then remove rear idler control lever rod.

4) Disconnect shift rod coupling (manual transmission cars); flexible control cable (automatic transmission cars). On automatic transmission cars, disconnect throttle valve and accelerator rod. Disconnect main gas line and heater fuel line at hose connections, then plug fuel lines.

5) On models with manual transmissions, disconnect clutch fork return spring and unhook clutch control cable clevis. Disconnect clutch fork pull rod, then loosen ball stud at clutch control cable cross shaft and remove cross shaft. Remove emergency brake tension spring. Remove rear engine grille retaining screws and remove grille assembly. Remove engine skid plate bolt and lockwasher.

6) Position a hydraulic transmission jack stand under engine assembly, using Tool J-7894 (adapter), and lock tool in place with attached locking knob and additional bolt and nut. Remove cotter pins and castellated nuts from front engine mount (at transmission) and from rear engine mount. *NOTE - If front mounting bracket and shims are removed from transmission, the same amount of shims removed must be replaced. Rear "toe-in" will be affected if shims are changed.*

7) Lower power train gradually and watch for possible interference at rear mount and left rear lower control arm. Remove exhaust pipe and muffler assembly.

ENGINE SERVICE

►*ENGINE FRONT & REAR IDENTIFICATION: All reference to engine and components is to position installed in car. FRONT of engine is flywheel end toward front of car. REAR of engine is accessory drive end toward rear of car.*

►*ANTI-SEIZE COMPOUND NOTE: Permatex No. 404 Anti-Seize Compound (or equivalent) must be used on threads of all bolts, studs and capscrews entering an aluminum part to prevent thread seizure and damage.*

►*ALUMINUM THREAD REPAIR NOTE: A thread repair kit, Part No. 3780960, is available for repairing stripped or damaged threads in aluminum parts.*

►*ALUMINUM PARTS CAUTION: Aluminum components of engine are relatively soft and easily damaged. Use extreme care not to nick, scratch or otherwise distort mating or bearing surfaces.*

CRANKCASE & CYLINDER HEAD STUD REPLACEMENT: Coat stud threads with anti-seize compound (see above) and install into cylinder head or crankcase with special detail of Tool J-8354 to projected length as follows: *NOTE - Measure projected length from shoulder of tool (installed on stud) to surface of crankcase or cylinder head.*

Stud	Projected Length	Tool Detail
Carb. Mounting (Outboard)	4 1/4"	2
Carb. Mounting (Inboard)	1 1/2"	2
Exhaust Manifold	1 3/32"	3
Cylinder (Long - Upper)	8 9/32"	1
Cylinder (Short - Lower)	7 9/16"	1
Rear Housing	4 11/16"	3

►*CYLINDER STUD TORQUE NOTE:* Maximum torque should be 30 ft. lbs., minimum torque 10 ft. lbs. If under 10 ft. lbs., install either .003" or .006" oversize studs as necessary.

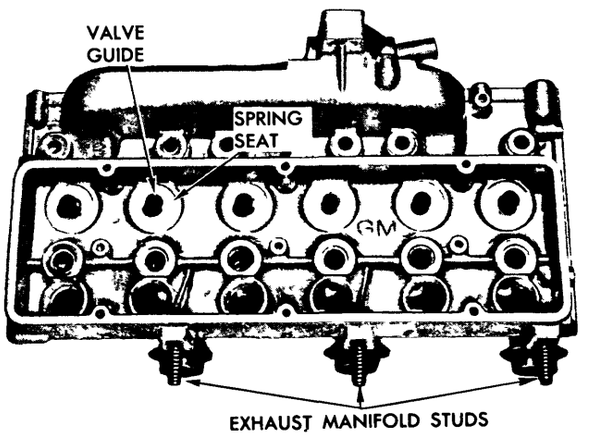
EXHAUST MANIFOLD SLEEVE REPLACEMENT: *CAUTION - Remove sleeves from cylinder head only if absolutely necessary.* Remove sleeves by turning gradually with a pipe wrench. **Do not** pry or tap sleeves to remove. To install, coat new sleeves with anti-seize compound (see above). Insert sleeves into dry ice for about 10 minutes and at same time heat cylinder head to 200°F (do not use open flame). Remove sleeves from dry ice and tap into cylinder head bores making sure sleeves are true with bores, *NOTE - Replacement sleeves furnished Std., .002", & .010" Oversize.*

ENGINE MOUNTS: Front Mount Removal - Remove clutch lever control cable cross shaft ball stud at front mount bracket or Powerglide control cable. Support engine and remove insulator-to-bracket nuts. Remove shift rod coupling from transmission shift rod. Lower engine about 2" so front engine bracket clears mount stud. Disconnect parking brake cable from mounting bracket. Remove front mount and insulator. *CAUTION - Shims between transmission and mounting bracket control rear wheel toe-in and must be replaced in original positions.*

Rear Mount Removal: Support engine and remove rear center shield. Remove bracket-to-skid plate nuts, lower engine and remove engine-to-bracket mount assembly.

CRANKCASE COVER, BLOWER & BLOWER BEARING REMOVAL: 1) Disconnect battery ground cable, accelerator and fuel lines, then remove oil level gauge and fresh air choke at air cleaner. Remove choke pipe, air cleaner, air horn and support assembly. Remove carburetor balance tube and retaining strap at engine upper shroud assembly.

2) Remove pulley belt and distributor wire harness, then disconnect cooling air throttle valve lever swivel. Remove upper engine shroud and thermostat rod as an assembly. *NOTE - As an alternate method, remove lower left shroud and remove clip from thermostat rod and remove rod from upper shroud.*



3) Remove four retaining bolts from blower pulley and remove pulley and blower from bearing hub assembly. Remove crankcase cover and blower bearing assembly as a unit. Remove crankcase-to-crankcase vent gasket and crankcase vent.

Blower Bearing Replacement: Use hypoid lubricant on bearing shaft and press bearing on crankcase cover so distance from crankcase cover gasket rail to top surface of large diameter of hub assembly is 4.520-4.530".

OIL COOLER REMOVAL: Remove all screws retaining cooler to engine shrouds, shields and cylinder head, then remove oil cooler access hole cover and remove long oil cooler mounting bolt. Remove oil cooler.

CYLINDER HEAD: Removal - *NOTE - When removing the right hand cylinder head, disconnect choke hat*

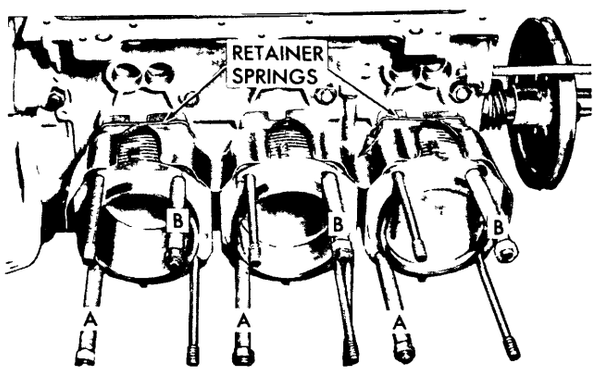
CONTINUED ON NEXT PAGE

CORVAIR CYLINDER HEAD

CONTINUED FROM PRECEDING PAGE

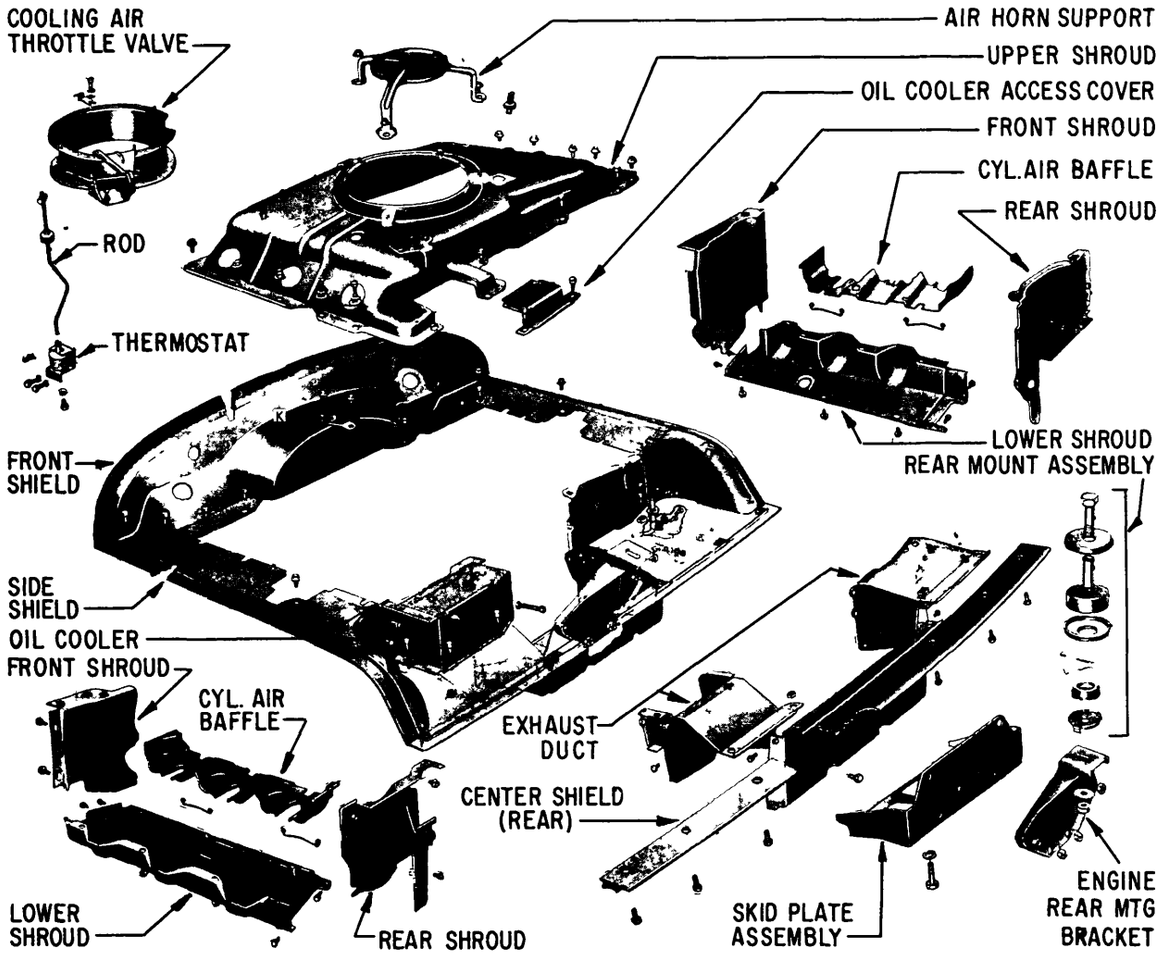
pip and ch ke fresh air pip from xhaust manif ld, then disc nn ct coil, il pressur and il temperatur s nding units in addition to the f llowing r moval procedures.

1) Drain crankcase oil, then disconnect carburetor air intake hose and remove carburetor. Remove outboard carburetor stud (long stud) from mounting. Remove vacuum balance tube from carburetor mounting flange. On left hand cylinder heads, remove generator bracket mounting bolts and swivel br acket, up away from engine upper shroud.



2) Remove spark plugs, then loosen all engine side shield retaining screws and remove screw from engine side shield under carburetor in engine compartment, attached to cylinder head, and remove side shield. Remove oil cooler.

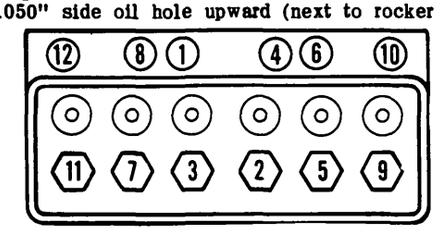
3) Raise car on a hoist and attach Tool J-7894 (adapter) to under side of engine. Remove both engine side seal retainers and rear seal retainers. Remove engine rear center shield and seal assembly. Remove lower engine shroud, then remove exhaust pipe-to-manifold nuts and remove exhaust manifold. Remove engine rear mounting nut and washer from below body rear mounting bracket.



4) Remove valve rocker cover (catch oil draining from cylinder head), then remove rocker arms, pushrods and pushrod guides. *NOTE - On later engines, remove valve rocker studs to remove pushrod guides.* Remove "O" rings from cylinder head and from bottom of pushrod drain tubes, then remove drain tubes. *NOTE - To remove No. 5 pushrod drain tube on left cylinder bank, it is necessary to remove right bank exhaust manifold.*

5) Remove cylinder head nuts and flat washers, then carefully lower engine assembly approximately 3" to clear cylinder head carburetor flange. Remove cylinder head from crankcase studs.

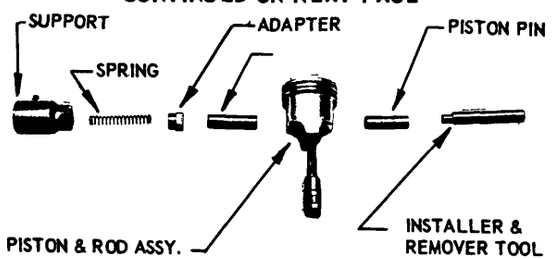
►*CAUTION: Do not rotate crankshaft with cylinder head removed unless holding fixtures are installed on studs to hold cylinder in place. ½" O.D. steel tubes 4¼" long should be installed on one long stud and ½" O.D. steel tubes 3½" long should be installed on one diagonally opposite short stud of each cylinder. See Illustration.*



CYLINDER HOLDING FIXTURES

CORVAIR ENGINE SHROUDING

Installation - To install head, reverse removal procedure and note the following: Use anti-seize compound such as Permatex No. 404 or its equivalent on the threads of all bolts, studs and capscrews entering aluminum parts. Tighten cylinder head retaining nuts and rocker arm stud nuts (rocker arm studs have internal threads at lower end that thread over cylinder head studs and act as cylinder head nuts) to 27-33 ft. lbs. in the sequence shown in diagram. Install pushrods with the .050" side oil hole upward (next to rocker arm).



CORVAIR CYLINDER HEAD

Install rocker arms and adjust to proper position (*see "Valve Lash Adjustment" below*). Tighten rocker arm cover screws to 40-60 inch-lbs.

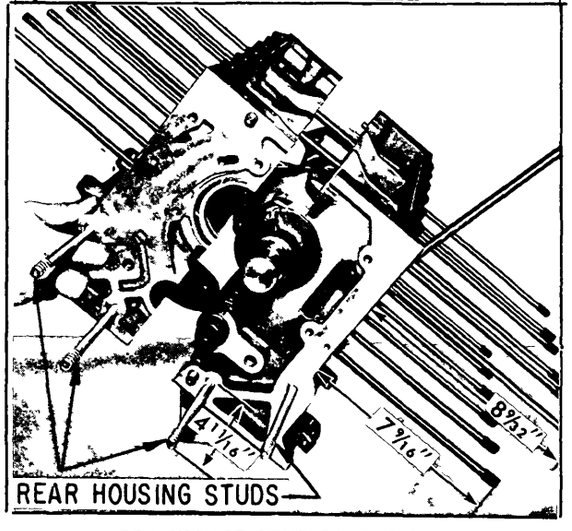
CYLINDER REMOVAL: *NOTE - Cylind r can b remov d with engine in car.* Remove cylinder heads and install holding fixtures (see above). Remove crankcase cover

CONTINUED ON NEXT PAGE

CORVAIR PISTON PIN ASSEMBLY

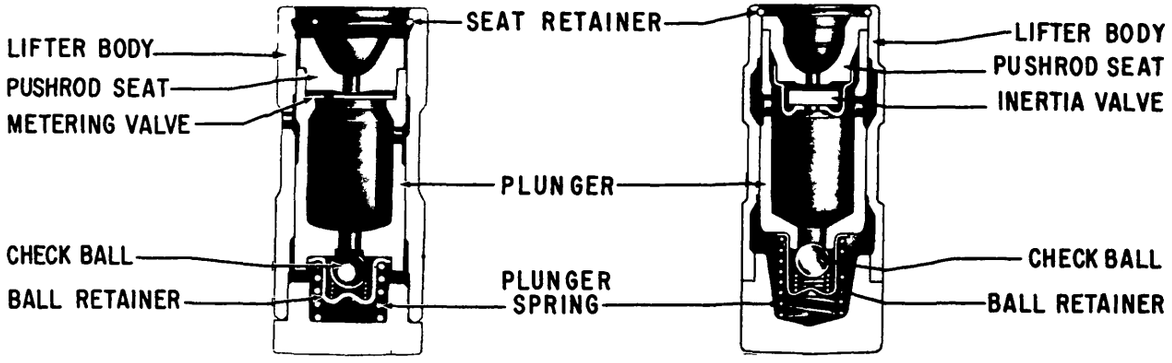
CONTINUED FROM PRECEDING PAGE

and blower assembly (see above). Remove cylinder air baffles (secured by retainer spring clips at base of cylinder). Turn crankshaft and remove connecting rod caps. Remove cylinder holding fixture and remove cylinder, piston and rod as an assembly. *NOTE - If desired, cylinder can be removed without removing piston and connecting rod. In this case, use Tool J-8356 to compress piston rings when installing cylinder.* **Installation** - Install new copper gasket over cylinder pilot and install cylinder into crankcase. Reverse removal procedure.



PISTON PIN REMOVAL & INSTALLATION: Use Tool Set J-8355 to remove and install piston pin in piston and connecting rod (see illustration). When installing, press pin in until pilot of tool bottoms on adapter and support.

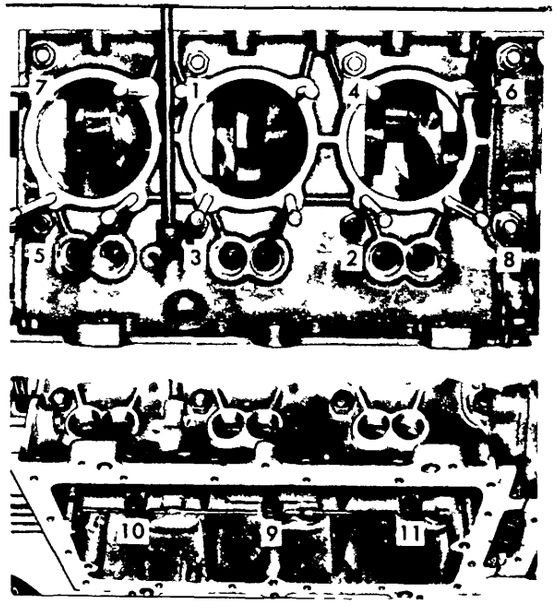
CONNECTING ROD BEARING REPLACEMENT: *NOTE - Bearings can be replaced without removing engine from car.* Remove crankcase cover and blower assembly (see above). Remove spark plugs. Remove connecting rod bearing caps (turn crankshaft to position rods for access to cap bolts).



FLYWHEEL HOUSING: Crankshaft Front Oil Seal Replacement - Tap out old seal, clean surface in housing and check for nicks. Coat beaded outer surface of seal with lubriplate and install with Tool J-2221-A or suitable installer. *CAUTION : Sealing lips of seal must be packed with a good grade of cup grease with a minimum melting point of 350 F.*

ENGINE REAR HOUSING REPLACEMENT: Observe the following: 1) Grooved pin holding oil pump pressure regulator valve must be installed with a suitable drift. 2) Oil pump gallery plug must be flush with counterbore (use sealing compound). 3) Distributor holding stud should project 1 1/8" from distributor mounting pad on housing.

►*PULLEY REMOVAL CAUTION:* Do not install puller screws into pulley more than ¼" when removing pulley as crankshaft rear oil seal will be damaged.



CRANKCASE STUD DIMENSIONS

CORVAIR HYDRAULIC VALVE LIFTER

Crankshaft Rear Oil Seal: *See CAUTIONS below.* Tap out old seal, clean surface in housing and check for nicks. Coat beaded outer surface of seal with lubriplate and install with Tool J-270-6 or suitable installer. *CAUTION - Sealing lips of seal must be packed with a good grade of cup grease with a minimum melting point of 350°F.*

►*REAR OIL SEAL PRODUCTION CHANGE & REPLACEMENT CAUTION:* Early production engines have seal flange mounted on inside of housing. Later production seals are mounted on outside of housing. Install seal from same side as removed. *If later type seal, Part No. 6257476, is used on an early engine, later type oil slinger, Part No. 6257477, must also be installed and a 1/32" x 45° chamfer made on outside face of rear housing seal opening. No slinger on later engines.*

CRANKCASE TIGHTENING SEQUENCE

CRANKCASE SEPARATION: After cylinders, rear housing, and flywheel housing removed, remove front oil slinger and snap ring. Loosen crankcase holding bolts. Tilt crankcase on right side at about 15° angle to prevent camshaft and crankshaft falling out. Remove holding bolts and remove crankcase left half.

CRANKCASE ASSEMBLY: Make sure split line surfaces are free of nicks and scratches. Install main bearing inserts in right half and install crankshaft. Install camshaft, guiding thrust washer into groove in crankcase and index timing marks on camshaft and crankshaft gears. Install main bearing inserts in left half and carefully install left half to right half. Torque holding nuts to proper specifications in sequence shown in diagram. *CAUTION - Hold bolt head and tighten nuts. DO NOT tighten at bolt head. Later production engines do not use bolts No. 9 and 11.*

MAIN BEARING REPLACEMENT: When testing bearing clearance, crankcase must be assembled without camshaft exactly as indicated under "Crankcase Assembly" above.

CRANKSHAFT DRIVE FLANGE: Drive flange and crankshaft timing gear are a one-piece unit with a tight press fit on crankshaft. A hydraulic press is necessary to remove and install gear and flange. To remove, use Support Plate J-358-1, Adapter Rings J-7028, and a hydraulic press. To install, support crankshaft between front crankshaft throw and front journal (support must clear thrust face of No. 6 crankpin). Install woodruff key and install crankshaft gear. Press gear on shaft with Tool J-6175 and a hydraulic press.

►*FLYWHEEL SEALING CAUTION:* Flywheel or flex plate-to-crankshaft gear bolts must have sealing compound applied before installation to prevent oil leakage.

CAMSHAFT GEAR REMOVAL & INSTALLATION: Remove gear by supporting gear with Tool J-971 and pressing out shaft with an arbor press. To install, support camshaft at back of front journal, install thrust washer and woodruff key and press gear on shaft with an arbor press (support gear with Tool J-971) until gear bottoms on thrust washer.

PUSHROD, PUSHROD GUIDE & DRAIN TUBE INSTALLATION: *On early production engines, pushrod guides are installed over rocker arm studs. On later production*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ngin s, guid s must b installed under rock r arm studs. Place "O" rings on each end of drain tubes and install with long end of tube toward cylinder head. Insert pushrods into drain tubes with .050" side oil hole at rocker arm end (pushrod marked with blue paint). Install pushrod guides, and rocker arm studs (later engines). Install rocker arms and make valve lash ad-

VALVE LASH ADJUSTMENT: For initial adjustment after overhaul, proceed as follows: Set distributor at No. 1 firing position and crankshaft pulley notch at 0° on timing tab. Adjust No. 1, 3, 6 Intake and No. 1, 4, 5 Exhaust valves as follows: Turn rocker arm adjusting nut down until no axial movement of pushrod is felt, then turn adjusting nut ¾ turn additional. With distributor at No. 2 firing position (pulley notch at 0°), adjust No. 2, 4, 5 Intake and No. 2, 3, 6 Exhaust valves

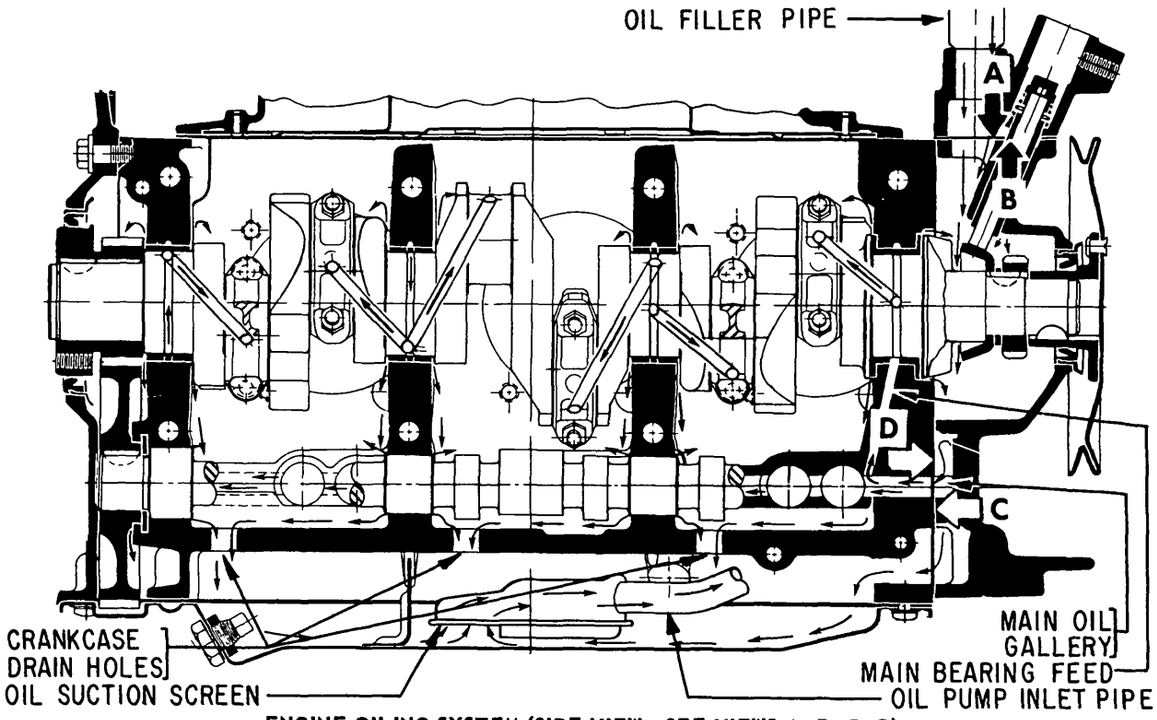
HYDRAULIC LIFTERS: Removal - Lifters are removed from lifter bores after pushrods and drain tubes removed by means of a magnet or wire hook and should be reinstalled in same bore from which removed.

Disassembly - Hold plunger down and remove pushrod seat retainer. Remove pushrod seat and inertia or metering valve assembly, plunger, and spring from lifter body. Remove check ball retainer, ball and spring. *NOTE* - Replace entire lifter if any part damaged.

Reassembly - Insert check ball in plunger, place spring in seat in ball retainer and insert retainer on plunger. Place plunger spring over ball retainer and slide lifter body over spring and plunger. Install pushrod seat and inertia or metering valve assembly into plunger and install retainer. *NOTE - Fill lifter with SAE 10 engine oil at reassembly and before installing in engine.*

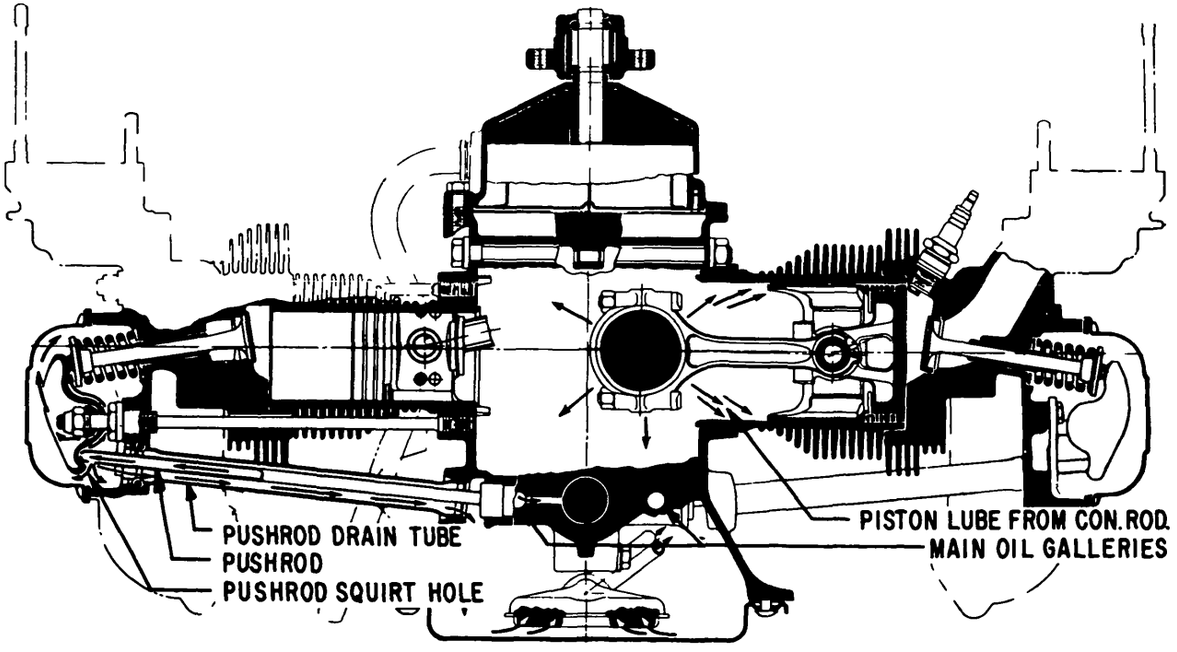
OILING SYSTEM

ENGINE LUBRICATION: Force feed type with oil under full pressure supplied to all crankshaft, camshaft, and connecting rod bearings, and to hydraulic valve lifters. Oil metered by lifters lubricates pushrods and rocker arms. All other parts are lubricated by oil spray.



OPERATION: Oil pump located in engine rear housing & driven by distributor shaft which is driven by crankshaft. Pump draws oil through fixed oil screen and intake pipe in crankcase and delivers oil to full-flow type filter mounted on Filter & Generator Adapter which is mounted on engine rear cover. Oil is then directed through oil cooler (mounted on side of engine rear cover) and then to the two main oil galleries (one on either side of camshaft) which extend entire length of crankcase. Oil is distributed through the main galleries as detailed below. *NOTE - See Engine Rear Cover and Filter & Generator Adapter illustrations for location of channels and passages in these parts and for location of bypass valves for oil filter and oil cooler.*

Crankshaft & Camshaft Bearings - Lubricated through passages in crankcase webs from main oil galleries. Individual bearings are lubricated from right or left main oil galleries as follows: **Crankshaft Bearings** - Nos. 1 & 3 (right gallery), Nos. 2 & 4 (left gallery). **Camshaft Bearings** - Nos. 1, 3, 4 (right gallery), No. 2 (left gallery).



Connecting Rod Bearings - Crankshaft is drilled and each connecting rod bearing is lubricated through passage from adjacent main bearing.

Pist ns & Pins - Lubricated by oil spray thrown on cylinder walls from both ends of connecting rod bearings.

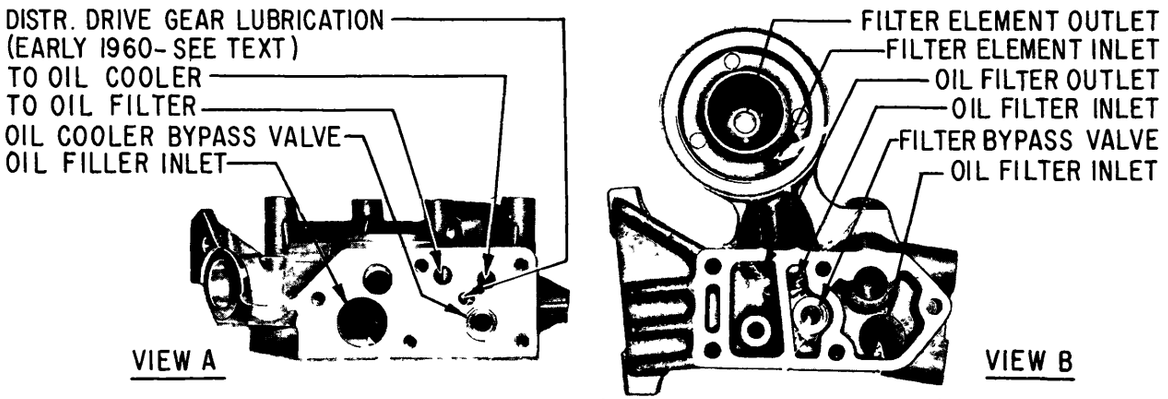
CONTINUED ON NEXT PAGE

ENGINE OILING SYSTEM (SIDE VIEW - SEE VIEWS A, B, C, D)

ENGINE OILING SYSTEM (CROSS SECTION)

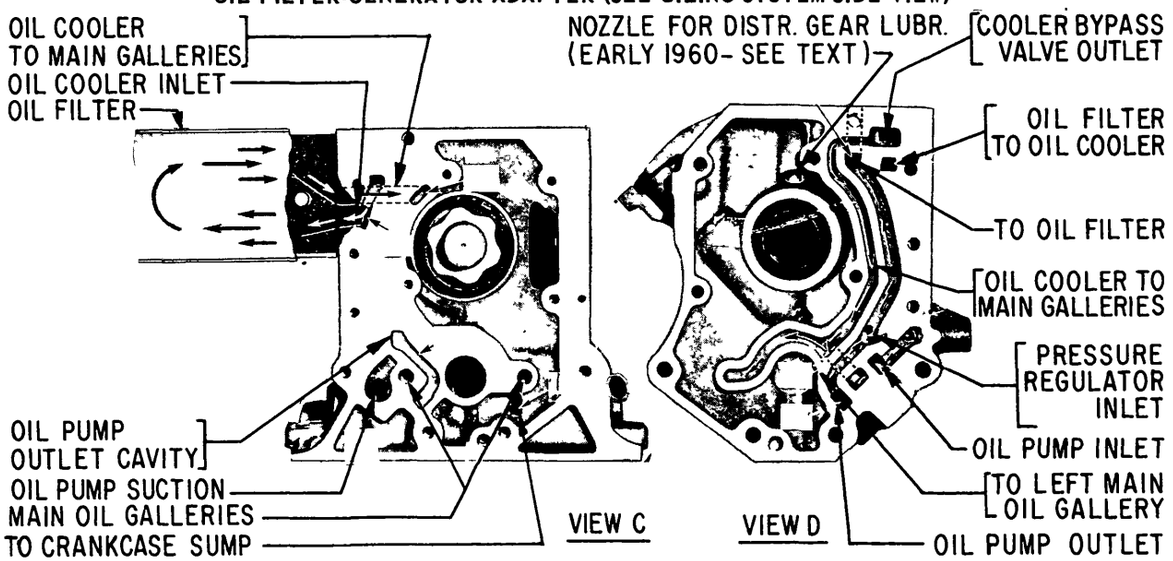
CONTINUED FROM PRECEDING PAGE

Timing Gears - Lubricated by oil spray from forward end of crankshaft and camshaft No. 1 bearings.



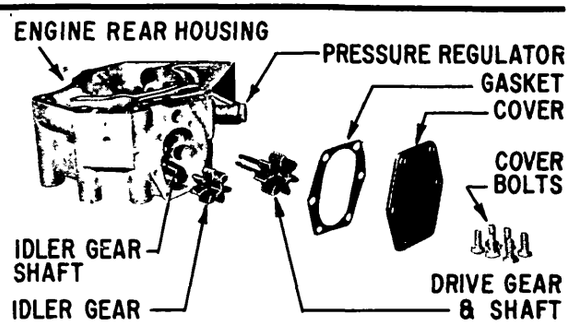
Fuel Pump Eccentric & Distributor Drive Gear - Lubricated through drilled orifice and pressed in nozzle in engine rear housing which directs oil on these parts (early cars), lubricated by overspray from No. 1 (rear) main bearing (later cars - orifice and nozzle omitted from rear housing).

Hydraulic Valve Lifters - Main oil galleries intersect lifter bores and lifters are supplied with oil directly from these galleries.



Rocker Arms, Pushrods, & Valves - Pushrods are hollow and are supplied with oil from hydraulic lifter (inertia valve in upper end of lifter permits oil to flow through hole in end of pushrod). Upper end of pushrod has a side hole which sprays the valve chamber (lifter and pushrod rotate in operation and this oil spray is directed around valve chamber) and a through hole in the end which lubricates pushrod socket and rocker arm ball (pushrod hole registers with hole in rocker arm once during each revolution directing oil upward to the rocker arm ball). Oil in rocker arm chamber is returned to crankcase through the tubular pushrod drain tubes.

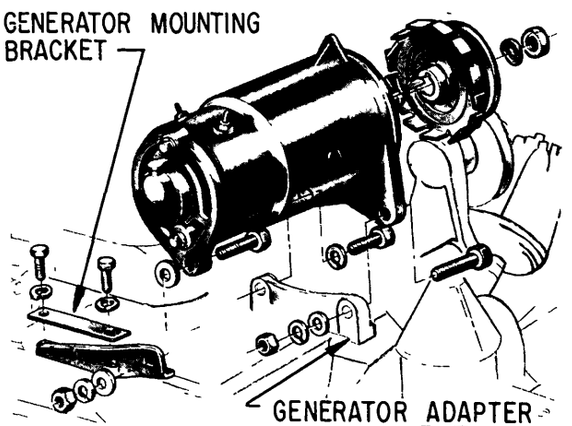
OIL FILTER: Full-flow type mounted on Filter & Generator Adapter at rear of engine. Bypass valve (10 lb. type) located in adapter (see illustration) permits oil circulation through engine if filter element is clogged.



OIL COOLER: Finned cooler mounted on side of Engine Rear Housing in the engine cooling air stream. Bypass valve (10 lb. type) located in Filter & Generator Adapter (see illustration) permits oil circulation through engine if cooler is clogged.

OIL FILTER-GENERATOR ADAPTER (SEE OILING SYSTEM SIDE VIEW)

ENGINE REAR HOUSING (SEE OILING SYSTEM SIDE VIEW)



CORVAIR OIL PUMP

OIL PUMP: Disassembly - Drain crankcase, remove rear grille, center shield and engine rear mount (support engine). Remove oil pump cover. Remove oil pump drive gear and shaft and idler gear from rear housing. Remove pressure regulator valve plug, gasket, spring,

Reassembly: Lubricate gears with engine oil. Install idler gear on idler shaft and make sure shaft is .010-.020" below housing gasket surface. Insert drive gear and shaft in housing. Clearance between gears and housing should be .005". *NOTE - Oil pump gears should extend .0025-.0045" above housing gasket surface for oil pump prime. Gears of .001" oversize thickness are available.* Install oil pump gasket and cover and pressure regulator valve assembly. Install engine rear mount, center shield and rear grille.

ELECTRICAL NOTES

GENERATOR INSTALLATION: *CAUTION - If preload on generator exists, end frame will break. To prevent this condition, use following installation procedure exactly.* Tighten generator-to-adapter bolts to 15-22 ft. lbs. and loosely assemble mounting bracket-to-generator bolt and nut (at commutator end of generator). Bracket must be able to move. Tighten generator bracket-to-cylinder head bolts finger tight. Now tighten bracket bolt at commutator end of generator to 8-11 ft. lbs. Tighten front bracket-to-cylinder head bolt to 15-22 ft. lbs. and rear bolt to same torque.

GENERATOR INSTALLATION

►*JACKING & HOISTING CAUTION: B fore jacking or hoisting, see "Jacking & H isting Precauti ns" in Susp nsion & Wh l Alignment S ction.*

►*TIRE INFLATION NOTE:* **Fr nt** - 15 lbs. Cold, 18 lbs. Hot. **Rear** - 26 lbs. Cold, 30 lbs. Hot. Riding, handling, and tire wear will be affected if proper tire pressures not maintained. Over-inflation of front tires may cause the car to "oversteer".

►*HIGH PERFORMANCE ENGINE NOTE:* "Turbo-Air Special" engine optional on Synchro-mesh cars. This engine has different camshaft, carburetors, distributors, and other parts which are included in data below.

MODEL IDENTIFICATION

Model Designation

Model	Body Style	Series
527	Std. 4-Dr. Sedan	J-500
569	Std. Club Coupe	J-500
727	Deluxe 4-Dr. Sedan	K-700
769	Deluxe Club Coupe	K-700
927	Monza Coupe	

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post. *NOTE - Number (example below) includes identification data as indicated below.*

① ② ③ ④
0 0569 W 100025

① - Year (last digit).
② - Model. See Model Designation table above.
③ - Assembly plant. "K" (Kansas City), "O" (Oakland), "W" (Willow Run).
④ - Unit number. Continuous at each assembly plant starting with 100001.

ENGINE NUMBER: Stamped on top of engine block, immediately forward of generator-oil filter adaptor. *NOTE - Number (example below) includes identification data as indicated.*

① ② ③ ④
T 01 01 Y

① - Assembly Plant. **T** Tonawanda.
② - Month Assembled. **01** January.
③ - Day Assembled. **01** First.
④ - Equipment. **Y** Synchro-mesh. **YD** High Perf. Eng. & Synchro-mesh. **Z** Powerglide.

TUNE-UP

►*TUNE-UP NOTE: Procedures and specifications listed below supersede previous recommendations. Use only data below for service adjustments.*

COMPRESSION PRESSURE: 130 lbs. minimum. Variation between highest and lowest cylinders must be less than 20 lbs.

VACUUM READING: 14-18" maximum at idle speed.

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters. If adjustment required, proceed as follows: With valve cover removed and engine at normal operating temperature, run engine at idle speed, then back off rocker arm nut (one at a time) until valve rocker arm starts to clatter against valve. Tighten rocker arm nut until clatter of rocker arm is just stopped. Turn off engine and tighten each valve rocker arm nut exactly ¾ turn. This procedure will set plunger of hydraulic lifter in center of its operating travel. *For initial adjustm nt aft r v rhaul, see "Engine S rvic " in C rvair Sp cial Data.*

►*NOTE:* To catch excess oil when checking clearance with engine operating, cut a discarded valve cover to 1/3 its normal size and install at bottom of cylinder head to use as a trough.

MANIFOLD HEAT CONTROL: None used.

IGNITION

FIRING ORDER: 1-4-5-2-3-6.

Cylinders - RIGHT BANK 1-3-5. LEFT BANK 2-4-6. *NOTE - Right rear cylinder is No. 1 and left rear cylinder is No. 2. Engine rotation, as viewed from rear of car, is counterclockwise.*

SPARK PLUG GAP: .035".

Spark Plugs - AC No. 46FF (No. 44FF for sustained high speed operation). 14mm. Torque to 25 ft. lbs. *NOTE* - No. 44FF were used on early Std. Engines. Use No. 46FF for service replacement. *CAUTION - Do not use other than "FF" type as severe damage to cylinder head will result.*

►*NO. 4 SPARK PLUG REMOVAL NOTE:* Use an offset box end wrench with a long handle on a hex head spark plug socket for easy removal of this plug. Work from front of engine.

►*SPARK PLUG COVER SEALING CAUTION:* Spark plug covers must be tightly in place in plug opening in shroud to prevent loss of all air pressure in cooling system and severe engine overheating.

COIL: Delco-Remy 1115087.

Ignition Current - 1.8 amps. idling, 4 amps. stopped.

Resistor - Resistance type cable (1.8 ohms resistance) used in harness between instrument panel disconnect plug and rear wiring harness connector. Bypassed during cranking by lead from starter solenoid to coil.

DISTRIBUTOR: Delco-Remy. Special "Window" type. *NOTE - This distributor does not have external contact point adjustment typical of other window type distributors.* Distributor is driven by gear on rear of crankshaft. Used as follows:

Eng. & Trans. ①	Delco-Remy No.	②Identification
All (Early)	1110252	③Cadmium
S-M (Later)	1110258	④Zinc
P-G (Late)	1110256	③Black
P-G (Later)	1110259	④Black
High Perf. (Early)	1110257	③Copper
High Perf. (Later)	1110260	④Copper

① - S-M - Synchro-mesh. P-G - Powerglide.
② - Color of oiler.
③ - Two pads on mounting flange.
④ - Full diameter mounting flange.

►*DISTRIBUTOR 1110252 MODIFICATION NOTE (POWERGLIDE CARS):* A modification kit is available to change advance characteristics for a 16° BTDC ignition timing setting. After distributor modified, paint oiler black and modify timing mark by installing a 16° timing tab. See tables below for 1110256 & 259 distributors for advance specifications.

Condenser - Delco-Remy 1928111. **Capacity** .18-.23 mfd.

Contact Point Set - Delco-Remy 1945376.

Breaker Gap - .019" (new points). .016" (used points).

Cam Angle - 31-36°. Set at 33°.

Breaker Arm Spring Tension - 19-23 ozs.

Rotation - Clockwise viewed from above.

Automatic Advance - 1110252 & 258

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	200	0-4	400
7-9	1050	14-18	2100
15-17	1800	30-34	3600

Automatic Advanc - 1110256

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	850	0	1700
10	1800	20	3600

Automatic Advanc - 1110259

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	700	0	1400
12	1850	24	3700

Automatic Advanc - 1110257 & 260

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	350	0	700
3.25	600	6.5	1200
12	2400	24	4800

Vacuum Spark Control: Delco-Remy. Integral type.

Vacuum Advance - 1110252, 258 & 260

7.5	15	15.5

IGNITION TIMING

Distributor	Ignition Timing Sp cificati ns	Setting
1110252 (Unmodified) ①		4° BTDC
1110252 (Modified - see above) ②		③16° BTDC
1110256, 257		③16° BTDC
1110258		4° BTDC
1110259, 260		13° BTDC

① - Cadmium colored oiler. ② - Black oiler.
③ - If pre-ignition or detonation occurs, retard spark to 14° BTDC.

Timing Mark - Early Engin s "O" and "A" marks on timing tab and notch on crankshaft pulley. Mark on pulley should be 1/3 the distance between "O" and "A" marks away from the "O" mark. **Lat r Engin s** "O", "4", "8" and "16" marks on timing tab and a notch on crankshaft pulley. Align mark on pulley with correct mark on tab.

CARBURETOR

►*CARBURETOR APPLICATION: Two R ch st r Model "H", single barrel carburet rs used.*

ACCELERATOR CONTROL LINKAGE ADJUSTMENT: Remove mudguard over idler lever "A" (see illustration) on transmission, then disconnect swivel "D" from lever "A". Disconnect swivel "B" from left carburetor cross shaft lever "E". Pull rod "C" to wide open throttle (through detent for Powerglide and against stop for standard transmission) and turn lever "E" in wide open throttle position (carburetor throttle lever against the stop). Adjust swivel "B" to align with hole in lever "E", then lengthen rod "C" by backing off swivel "B" **five full turns.** Position accelerator pedal by placing a block of wood between pedal end and floor pan or mat. Thickness of wood block should be as follows: **Floor Pan-to-Pedal** - 2" (Powerglide), 1¾" (Std. Trans.). **Floor Mat-to-Pedal** - 1¼" (Powerglide), 1" (Std. Trans.). Hold lever "A" in wide open throttle position (through detent for Powerglide) and turn swivel "D" to align with hole in lever "A". Install mudguard. *NOTE - This compl t proc dure provid s prop r cl aranc b tween acc l rator p dal and floor mat at wid op n throttl .*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

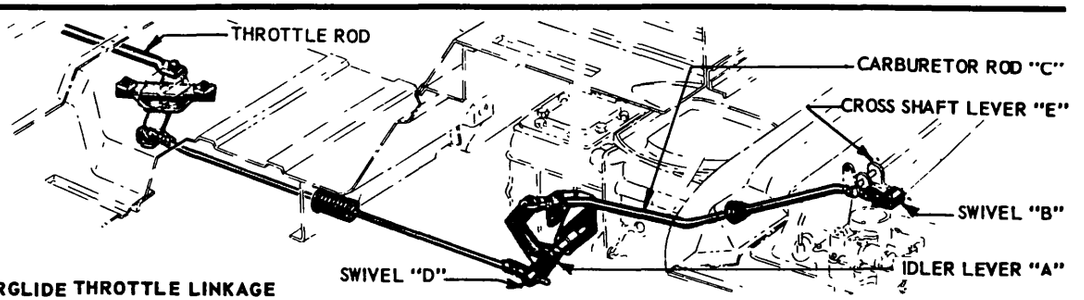
If it is impossible to make proper adjustment at either of the swivels, relationship between pedal and pedal rod is incorrect (see below).

►*PEDAL & PEDAL ROD NOTE:* To determine if pedal and pedal rod relationship are correct, lay the accelerator pedal, with rod attached, on a flat surface (rod assembly up). The distance between bench and underside of pedal rod pin (pin attaching pedal rod to rod running through tunnel) should be 1 11/16". If not correct, reposition accelerator pedal on pedal rod.

►*CARBURETOR HOT AIR INTAKE PIPE SEASONAL SETTING:* Valve in hot air pipe (from exhaust manifold) at air intake elbow should be closed for summer and open for winter operation.

SYNCHRONIZING CARBURETORS: *NOTE - Following procedures supersedes previous instructions.* Remove air cleaner and hose assembly, connect tachometer and timing light. With engine at normal operating temperature (transmission in neutral, choke wide open and carburetor off fast idle), disconnect vacuum spark hose from right carburetor and remove spark advance plastic cover from left carburetor. Rotate fast idle cam so engine is at 1200 RPM and connect vacuum gauge to right carburetor. Note reading. Attach vacuum gauge to left carburetor and note reading. If readings not equal, disconnect cross shaft from left carburetor rod at swivel and adjust swivel so reading on both carburetors is equal within 1" (turn swivel up to increase left carburetor vacuum, turn downward to decrease vacuum). *Further adjustments for idle speed, etc., must be made on both carburetors.*

ROCHESTER MODEL "H"



Engine & Trans.	Rochester Carb. No.
All (Early)	7015300
Powerglide (Late)	7015310
Powerglide (Limited Prod.)	7015312
Synchro-mesh (Late)	7015311
Synchro-mesh (Limited Prod.)	7015313
High Performance Engine	7015319

New design, single barrel downdraft type. Two carburetors are used, one on each intake manifold, with the throttle shafts connected by a cross shaft which is actuated by the accelerator linkage. A single air horn/air cleaner assembly located between the two carburetors (connected to carburetors by hose) contains the choke, choke modifier, and fast idle assemblies. Each carburetor contains a ceramic type fuel filter located in the fuel inlet fitting.

►*CARBURETOR PRODUCTION CHANGES & FLOAT SETTING CAUTION:* Different carburetors used in production (see above) have different type floats and float intake needle valve and **require different float settings.** *See "Rochester Model H Carburetors" in Carburetion Section.*

►*FUEL FILTER NOTE: Replace filter every 15,000 miles. Remove filter and wash frequently in solvent and blow dry with air.*

Idle Speed & Mixture Adjustments: For initial setting, turn idle speed screw on both carburetors ½ turn in from point where screw just touches throttle shaft lever. Turn idle mixture screw on both carburetors 1½ turns out from a lightly seated position. Then adjust idle mixture screw to obtain highest engine vacuum and RPM. Adjust idle speed screws to obtain idle speed of 800 RPM (High Perf. Eng.), 500 RPM (Others - Powerglide in D).

POWERGLIDE THROTTLE LINKAGE

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester Model H Carburetors" and "Corvair Automatic Choke & Fast Idle" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC No. 4704 (Fuel Only).
Fuel Pump Pressure - 4-5 lbs. at 500-1000 RPM.
See "Fuel Pumps" in Carburetion Section.
Gasoline Gauge: AC Electric type.
Dash Unit - AC No. 5643032.
Tank Unit - AC No. 5640382.
See "Fuel Gauges" in Carburetion Section.
Air Cleaner: Oil wetted type with reusable Polyurethane element. Clean element every 2000 miles.

►*CLEANING CAUTION:* Clean element (after removing metal support) in **kerosene or mineral spirits only.** Squeeze out all solvent, then dip in light engine oil and squeeze out excess oil. DO NOT shake, swing or wring element. **Squeeze only.**

►*INSTALLATION NOTE:* Element must be positioned on support so overhang of upper and lower lips is even. To insure proper seal, lower lip must not be crimped or folded and upper lip must rest on top of air cleaner inner flange. When installing air cleaner assembly on air horn, notch in air cleaner must index with tang on air horn casting.

BATTERY

Delco No. 457 (Std.). 12 volt, 7 plate, 35 ampere hour capacity, **No. 557 (Optl.).** 12 volt, 9 plate, 40 ampere hour capacity. Identified by green paint on negative terminal. Both batteries at 20 hr. rate. *NOTE* - Batteries are dry type for service replacement.
Battery Ground - Negative.
Engine Ground - Right cylinder head to battery ground attaching bolt on body.

STARTER

Delco-Remy No. 1108300 (Synchro-mesh), No. 1108301 (Powerglide).
Armature - Delco-Remy No. 1946226 (All).
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. (min.).

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6750-8600	10.6	58-80
	Lock	4.0	280-320

Starting Switch: Delco-Remy 1119919 mounted on starter and controlled by Ignition & Starter Switch 1116567.
Neutral Safety & Back-up Light Switch: Delco-Remy 1998717 used on Powerglide cars.
Adjustment - *See "Corvair Transaxle" in Transmission Section.*

GENERATOR

Delco-Remy No. 1100357 & 1102226 (Std.), No. 1105135 (Low Cut-In).
Armature - Delco-Remy No. 1948086 (1100357 Gen.), No. 1952301 (1102226 Gen.), No. 1950521 (1105135 Gen.).

Performance Data - 1100357

Amperes	Volts	RPM
30	14.0	2900

Rotation - Clockwise at commutator end.
Brush Spring Tension - 28 ozs.
Field Current - 1.50-1.62 amps. at 12 volts and 80°F.
Belt Adjustment: 3/8" deflection midway between blower and idler pulley under a 15 lb. load or 75 lbs. tension with Belt Tension Gauge J-7316. To adjust, move idler pulley bracket.

►*BELT INTERFERENCE (EARLY CARS): If interference between rearmost idler pulley bracket attaching nut and belt, remove stud and replace it with a 3/8" - 16 x 1¼" bolt and plain washer.*

►*NEW BELT INSTALLATION NOTE: If a new belt is installed, tension belt as for a used belt (above), then operate engine at 1500 RPM for a minute or two to seat belt, then readjust tension.*

►*GENERATOR FAN & PULLEY ASSEMBLY NOTE:* Check generator fan to make sure the proper one is installed. As this generator rotates counterclockwise (at drive end), the fan blade should slant so bottom of blade is toward direction of rotation. *NOTE - Standard passenger car generator rotates clockwise (at drive end) and the blades are slanted so bottom of blade is just opposite to the Corvair.*

►*GENERATOR PULLEY INSTALLATION CAUTION:* Pulley nut has **left-hand threads.** DO NOT attempt to turn nut in opposite direction nor install a right-hand thread nut as severe damage to armature will result.

Generator Installation: *See "Electrical Notes" in Corvair Special Data.*

REGULATOR

Delco-Remy No. 1119261 (Std. Gen.). "Post Type" with nylon adjusting nuts above Voltage & Current Regulator units for air gap adjustment.
Delco-Remy No. 1119635 (Low Cut-In Gen.). "Double Contact" type of same design used on other Chevrolet Cars. *Specifications below are "Normal" settings.*

Cutout Relay

Cuts In - 11.8-13.5 volts (1119261), 11.8-13.0 volts (1119635).
Contact Gap - .020".
Air Gap - .020" (1119261), .022" (1119635).

Voltage Regulator

Setting (1119261) - 13.8-14.7 volts at ambient temperature of 125°F.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Setting (1119635) - 13.8-14.6 volts (upper contacts), .1-.3 volts lower operating on lower contacts at ambient temperature of 125°F.

Air Gap - .075" (1119261), .067" (1119635) with armature pressed down to point where contacts just touch.

Contact Gap (1119635) - .016".

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" & "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

Current Regulator

Setting - 27.0-31.0 amperes (1119261), 27.8-32.4 amperes (1119635) at ambient temperature of 125°F.

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" & "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlights: 4-Headlight System. *See "4-Headlight Systems" in Electrical Section.*

Direction Signals: *See Electrical Section.*

Stop Light Switch Location: Under instrument panel

Adjustment - Adjust switch in mounting bracket so electrical contact is made when brake pedal depressed ½-¾" from fully released position.

Lighting Switch Removal: Disconnect battery ground cable and pull switch to ON position. Depress switch shaft retaining button (top of switch under instrument panel) and remove shaft and knob. Remove switch retaining ferrule and bezel and remove switch.

Ignition Switch Removal: With negative cable disconnected at battery, position ignition switch in "Lock" and insert a wire in small hole in cylinder face. Depress plunger with wire and continue to turn key counterclockwise until cylinder can be removed. Use a spanner wrench (Tool J-7607 or J-5893, with inside of tangs filed off), and remove attaching nut, then remove switch. To remove "theft resistant" connector, use a piece of heavy wire stock and press on lock clip in slot in connector. Hold wire in place and work connector away from switch.

CIRCUIT BREAKERS: A circuit breaker located in lighting switch protects headlights and parking lights

FUSES: Located in junction block and fuse holder beneath instrument panel.

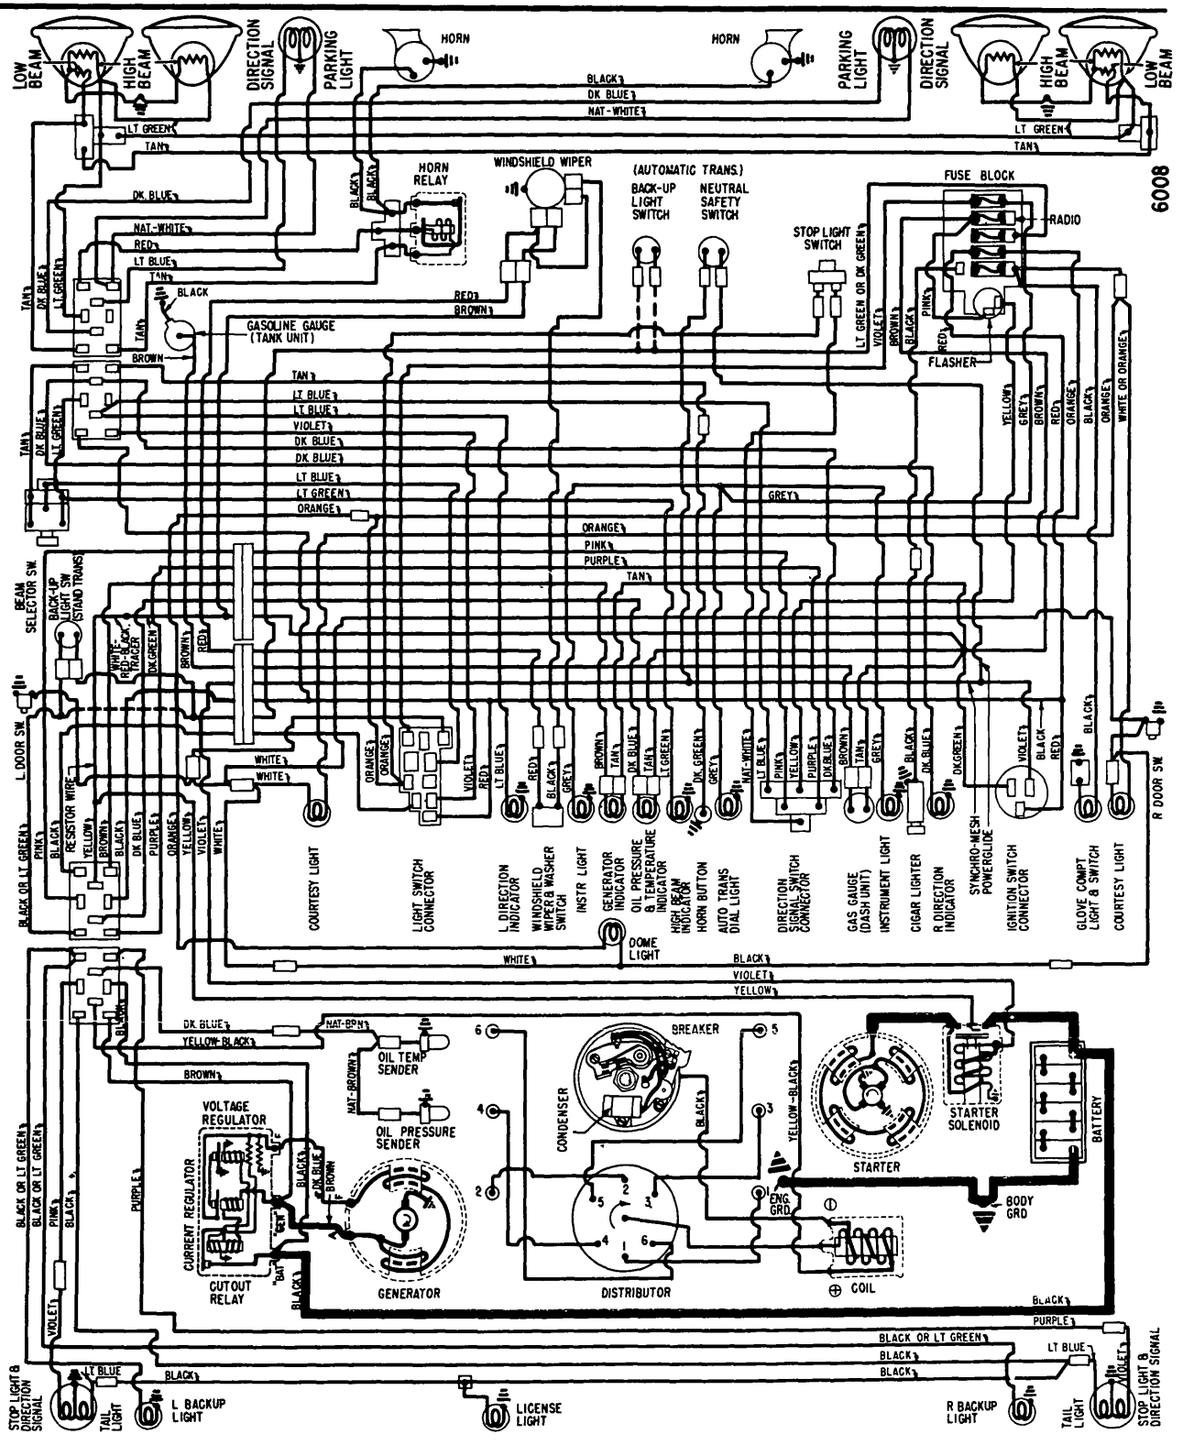
10 Amperes - Tail, stop, and dome lights.

10 Amperes - Heater blower, glove compartment light.

20 Amperes - Heater (total system), back-up light.

3 Amperes - Instrument panel light. Radio panel light. Heater control panel light.

ENGINE



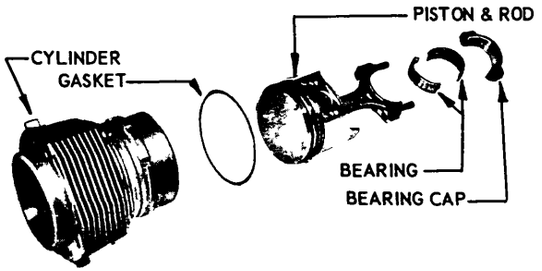
►*ANTI-SEIZE COMPOUND NOTE: Permatex No. 404 Anti-Seize Compound (or equivalent) must be used on threads of all bolts, studs and capscrews entering an aluminum part to prevent thread seizure and damage.*

►*ALUMINUM THREAD REPAIR NOTE: A thread repair kit, Part No. 3780960 is available for repairing stripped or damaged threads in aluminum parts.*

DESCRIPTION: 6 cylinder, horizontal opposed, overhead valve, air cooled type of new design. This engine is integral with the power train assembly (transmission and rear axle) and has the following features:

Crankcas : Aluminum type divided into two halves which are held together at the parting line by bolts.

CONTINUED ON NEXT PAGE



CONTINUED FROM PRECEDING PAGE

Crankshaft: Forged steel, housed between split halves of crankcase. Bearing caps are not required since steel backed babbitt lined bearings are supported between crankcase halves.

Camshaft: Cast iron alloy, nested between crankcase halves below the crankshaft. Camshaft journals ride directly on machined base metal of crankcase.

Cylinders: Individual cast iron cylinders that are positioned on crankcase by four long studs at each cylinder. These studs pass freely through holes in cylinder cooling structure and secure cylinders and head to crankcase.

CORVAIR CYLINDER ASSEMBLY

Cylinder Heads: Aluminum cylinder heads are identical, incorporating cooling fins and integral intake manifolds and contain wedge shaped combustion chambers and valves for each cylinder.

Cooling: A centrifugal blower, vertically mounted on top of crankcase cover, and operating on a permanently lubricated ball bearing delivers cooling air downward over cylinder walls and heads. Sheet metal shrouding attached to engine forms a plenum chamber and directs the flow of air. A thermostatically operated cooling valve located in lower part of plenum chamber regulates engine cooling by controlling the air flow.

Lubrication: A spur gear oil pump delivers oil under a maximum pressure of 35 lbs., controlled by an oil pressure regulator, through a full flow type oil filter and an air cooled oil cooler to passages in engine block. Oil is then directed to hydraulic lifters, rocker arm assemblies, main bearings, connecting rod bearings and camshaft bearings. Cylinder walls are spray lubricated from connecting rods and the piston pins and timing gears are lubricated by "splash" from rotating parts.

Engine Specifications

Engine	Bore	Stroke	Displacement
All	3.375"	2.260"	140 cu. ins.
Engine	**Compr. Ratio**	**Rated HP**	**Developed HP**
Std.	8.0-1	27.3	80 at 4400 RPM
High Perf.Ⓒ	8.0-1	27.3	95 at 4800 RPM

Ⓒ - Different camshaft, carburetors, and other parts.

Compression & Vacuum Reading - *See TUNE-UP.*

►*HIGH PERF. ENGINE CYLINDER HEAD NOTE:* Different cylinder head used on this engine to accommodate different valve spring shims.

ENGINE REMOVAL: *See "Power Train" in Corvair Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Corvair Special Data.*

ENGINE MOUNTS: *See "Engine Service" in Corvair Special Data.*

CRANKCASE COVER, BLOWER & BLOWER BEARING: *See "Engine Service" in Corvair Special Data.*

OIL COOLER: *See "Engine Service" in Corvair Special Data.*

CYLINDER HEAD: *See "Engine Service" in Corvair Special Data.*

EXHAUST MANIFOLD: *See "Engine Service" in Corvair Special Data.*

CRANKCASE & CYLINDER HEAD STUDS: *See "Engine Service" in Corvair Special Data.*

OIL PAN REMOVAL: Drain crankcase and remove oil pan retaining bolts. Remove pan.

CYLINDER

Individual cast iron type with integral cooling fins. Replacement cylinders are furnished only as an assembly with piston and pin.

Bore - 3.3745-3.3775". Maximum wear limit .005".

Removal - *See "Engine Service" in Corvair Special Data.*

PISTONS

Aluminum alloy, tin plated, slipper type skirt with steel strut. Piston pin is offset toward major thrust side.

Removal - Piston and rod removed as an assembly with cylinder. *See "Engine Service" in Corvair Special Data.*

Clearance - .0011-.0015" measured 2.20" from top of cylinder bores.

Installing Pistons: Install piston with notch on top of piston toward front (flywheel end) of engine on both banks.

Replacement Pistons: Standard size only. Piston, pin, and cylinder are furnished as a complete assembly.

PISTON PIN

Pin is press fit in connecting rod.

Diameter - .7999-.8002". **Length** - 2.630-2.650".

Pin Fit in Piston - .00015-.00025". With piston and pin at 70°F and light film of oil on pin, pin should support own weight in either piston pin boss.

Pin Fit in Connecting Rod - Press fit. *See "Engine Service" in Corvair Special Data.*

Replacement Pins: Standard size only furnished in assembly with piston and cylinder.

PISTON RINGS

Compression rings are cast alloy iron with wear resistant coating. Oil ring is a single piece, uncoated, with a slotted expander.

Ring	Width	End Gap	Side Clearance
Compr. (1 & 2)	.0770-.0780"	.010-.020"	.0012-.0032"
Oil (3)	.1860-.1865"	.010-.020"	.002-.0035"

Installing Rings - Install rings with identification marks and inside bevel toward top of piston.

Replacement Rings: Furnished Standard size only.

CONNECTING ROD

Length - 4.719-4.721" center-to-center.

Journal Diameter - 1.799-1.800".

Lower Bearing - Replaceable precision type.

Clearance - .0007-.0027".

Side play - .005-.010".

Bearing Replacement: Furnished Std., .001", .002", .010", & .020" Undersize, To replace bearings, *see "Engine Service" in Corvair Special Data.*

Installing Rods: No squirt hole. Install in either direction.

CRANKCASE

Cast aluminum alloy, vertically divided into two halves. *See "Engine Description" above.* Studs for mounting cylinders, cylinder heads, rocker arms, and rear housing are mounted in each half and are replaceable. Crankcase must be separated for service on either crankshaft or camshaft.

Crankcase Separation: Crankcase can be separated after removal of cylinder heads, cylinders, rear housing, and clutch housing. *See "Engine Service" in Corvair Special Data.*

Stud Replacement: *See "Engine Service" in Corvair Special Data.*

CRANKSHAFT

Journal Diameter - 2.0978-2.0988".

Bearings - Steel backed babbitt precision type. No adjustment.

Clearance - .0012-.0037".

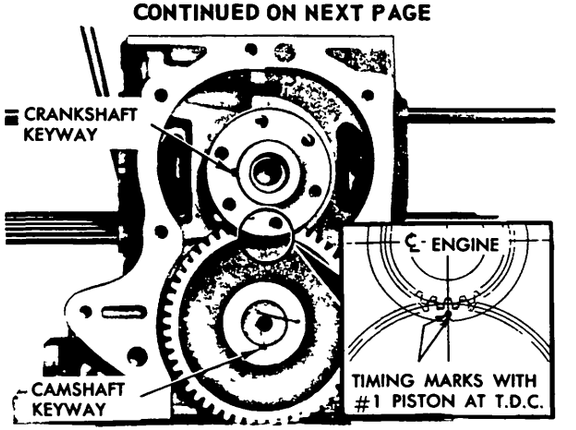
Bearing Replacement: Furnished Std., .001", .002", .010", & .020" Undersize. To replace bearings, crankcase must be separated. *See "Engine Service" in Corvair Special Data.*

End Thrust - Taken by flanged type No. 1 (rear) main bearing (at accessory drive end of engine).

Endplay - .002-.006".

Crankshaft Front & Rear Oil Seals: *See "Engine Service" in Corvair Special Data.*

Vibration Damper: None used.



Crankshaft Drive Flange: Integral with steel timing gear. Pressed on crankshaft. *See "Engine Service" in Corvair Special Data.*

CAMSHAFT

Alloy cast iron camshaft located below crankshaft on split line of engine. Camshaft journals ride directly on machined base metal of crankcase and bearing inserts are not used. Exhaust valve lobes are twice the width of intake lobes and actuate a pair of exhaust valve lifters.

►*HIGH PERF. ENGINE NOTE:* Special camshaft, Part No. 3777255, used in this engine. **Do not** interchange with Std. Engine Camshaft, Part No. 6255609.

CONTINUED ON NEXT PAGE

CORVAIR VALVE TIMING MARKS

CONTINUED FROM PRECEDING PAGE

Journal Diameter - 1.4395-1.4405" (front), 1.1995-1.2005" (all others).
Clearance - .0015-.0035" (new), .002-.004" (used). *NOTE - If beyond the above limits, replace either crankcase or camshaft.*
End Thrust: Controlled by thrust washer located between camshaft gear and front bearing.
Endplay - .002-.007".
Camshaft Removal: Crankcase must be separated. See *"Engine Service" in Corvair Special Data.*

Timing Gear: Aluminum, with steel crankshaft gear, pressed on camshaft. Replace gears in matched sets only. To remove gear, remove camshaft and see *"Engine Service" in Corvair Special Data.*
Backlash - .002-.004".
Camshaft Setting: Align notch in crankshaft gear flange with mark in camshaft gear adjacent to each other across shaft centers. Notches can be aligned only when crankcase reassembled. See *"Engine Service" in Corvair Special Data.*

VALVES

Valve	Head Diam.	①Stem Diam.	Length
Intake	1.335-1.345"	.3415-.3422"	4.489-4.509"
Exhaust	1.235-1.245"	② .3410-.3417"	4.494-4.514"
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	45°③	.314"	.0010-.0027"
Exhaust	45°③	.344"	.0015-.0032"

① - Standard. Also furnished .003" & .010" Oversize.
② - Top of stem. .3400-.3407" at bottom of stem. *NOTE - Valve stems are tapered .001".*
③ - Valve face angle 45°.
Valve Seat Width - 1/32-3/32" Intake, 1/16-1/8" Exhaust.
Valve Seat Inserts: Steel, not replaceable.
Valve Guides: Pressed into cylinder head. Not replaceable. Guides may be reamed for oversize valve stems if valve clearance excessive. Valves with oversize stems furnished .003" and .010" oversize. Use Reamer Set J-5830-01.
Valve Springs: Spring must be installed with a hardened shim (minimum .020") under it to protect aluminum head.
Free Length - 1.74" (Std. Eng.).

Spring Specifications - Std. Engine

Valve	Lbs. Pressure	Length
Closed	58-64	1.508"
Open	141-149	1.148"

►*VALVE SPRING INSTALLED HEIGHT CAUTION:* Check installed height of valve spring after grinding valves by measuring distance from top of spring shim on cylinder head to top of valve spring. If this dimension exceeds 1 15/32" Intake, 1 1/2" Exhaust, install additional 1/32" shim, Part No. 6255818 (Std. Eng.), No. 3731058 (High Perf. Eng.) to bring installed height to preferred 1 7/16" Intake, 1 15/32" Exhaust.
Pushrods: Externally mounted type between cylinder head and crankcase and enclosed in drain tubes. For servicing, see *"Engine Service" in Corvair Special Data.*
Valve Lifters: Hydraulic. See *"Engine Service" in Corvair Special Data.*
Rocker Arms: Mounted individually on cylinder-cylinder head studs.

VALVE TIMING

See *"Camshaft Setting" under CAMSHAFT above.*

Valve Timing Specifications - Std. Eng.
Intake Valves - Open 43° BTDC. Close 71° ALDC.
Exhaust Valves - Open 87° BLDC. Close 47° ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Corvair Special Data.*
Crankcase Capacity: 4 qts. refill, 5½ qts. dry engine. Add 1 pt. with filter change.
Normal Oil Pressure: 35 lbs. at 2000 RPM.
Pressure Relief Valve - In pump body. Not adjustable.
Oil Pressure-Temperature Indicator: Light on instrument panel controlled by Oil Pressure Switch, Part No. 3751700, and Oil Temperature Switch, Part No. 1998713. Light comes on when ignition switch turned on but goes off during normal engine operation. Light comes on if oil pressure low or if engine (oil) temperature goes above 280-300°F.
►*PRESSURE & TEMPERATURE SWITCHES INSTALLATION CAUTION:* Switches are grounded through threads of body. **Do not** coat these threads with sealer or anti-seize compound. Torque pressure switch to 45-65 **inch-lbs.** and temperature switch to 35-45 **inch-lbs.**
Oil Filter: Full flow type. Replace element every 4000 miles. Use a new seal and tighten center bolt to 9-15 ft. lbs.
Replacement Filter Element - AC No. PF-4.
Oil Pump: Gear type pump located in engine rear housing and driven by distributor shaft.
Pump Overhaul - See *"Engine Service" in Corvair Special Data.*
Oil Cooler: Located at rear of engine left side shield. Clean every 5000 miles by removing access cover and removing dirt, twigs, etc.
Crankcase Ventilation: Air intake through crankcase breather cap and an outlet in crankcase top cover.

COOLING

Air cooled. See *"Engine Description" above.*
Thermostat: Bellows type mounted on crankcase between No. 2 and No. 4 cylinders in air exhaust duct passage. Thermostat operates cooling air valve in and out of eye of blower to control cooling air flow. Bellows opens at 177-183°F. If bellows fails, cooling air valve will remain open.
Adjustment - Pull up on thermostat rod until bellows is stopped within its mounting bracket with rod swivel connected to hinge lever. Adjust swivel so distance from top of blower housing to top edge of air valve is 1½" measured at point of highest travel below centerline of air horn. *CAUTION - Pull on thermostat rod only, but do not pull after bellows is stopped as rod will be pulled off retaining clip.*
Temperature Gauge: Engine temperature is indicated by temperature of lubricating oil. See *"Oiling System" above.*

CLUTCH

Borg & Beck. Single plate, dry disc type with starter ring gear mounted on clutch cover.

Cover No. - Chevrolet No. 6257954 (All).

Disc. No. - Chevrolet No. 3779872 (Std. Eng.), No. 3784299 (High Perf. Engine).

►*NOTE: Clutch service as an assembly only.*

Clutch Linkage Adjustment (Pedal Free Play): *NOTE - Clutch pedal should have at least ¾" travel (freeplay).* Disconnect clutch fork pull rod from cross shaft lever, then with return spring connected in lower hole of cross shaft lever, adjust clevis swivel (connected to clutch pedal cable) until there is 1/8-3/8" clearance between cross shaft lever (pull rod lever) and rear edge of cross shaft bracket. Pull clutch fork pull rod forward until slack is taken up and clutch release bearing is touching clutch diaphragm fingers. Hold in this position and adjust swivel on end of pull rod until swivel pin aligns with upper hole in cross shaft pull rod lever. Back off swivel **three complete turns** and assemble to lever.

Removal: Remove power train from car, see *"Power Train" in Corvair Special Data.* Separate the transaxle from engine, see *"Corvair Transaxle" in Transmission Section.* Install Pilot Tool J-5824 to support clutch and loosen clutch attaching bolts slowly and evenly until all pressure released. Remove tool and clutch.

TRANSAXLE

SYNCHRO-MESH TRANSMISSION

Own. Three-speed synchro-mesh type integral with rear axle differential carrier.
See "Corvair Transaxle" in Transmission Section.
Lubrication - *NOTE - Synchro-mesh transmission and rear axle differential carrier assembly are connected by internal passages.* Check fluid level every 1000 miles. Drain and refill every 10,000 miles. Use only SAE 80 "Multi-Purpose" gear lubricant. *CAUTION - Do not use "Mineral Oil" gear lubricants or any "active sulphur soap" lubricants.*
Checking Lubricant Level - With unit at normal operating temperature, check fluid level in differential carrier first (plug is adjacent to rear axle universal joint on left side of transmission case). If level is low in differential carrier, also check level in transmission. *NOTE - With unit at operating temperature, fluid should be level with bottom of filler plug. If unit is cold, fluid should be ½" below filler plug hole.*
Draining & Refilling - Remove drain plug in transmission housing and in differential carrier housing. *NOTE - Transmission drain plug is on left side adjacent to idler arm on side of transmission case.* Refill by adding lubricant to both units (5 pints total). Check level at both units after refilling.
Transmission Shift Linkage Adjustment: See *"Corvair Transaxle" in Transmission Section.*
Removal: Remove power train from car and then separate transaxle assembly from engine. See *"Power Train" in Corvair Special Data and "Corvair Transaxle" in Transmission Section.*

POWERGLIDE TRANSMISSION

Three element torque converter and a hydraulically operated two-speed automatic transmission integral with rear axle differential carrier.
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Corvair Transaxle" in Transmission Section.*
►*TESTING & TROUBLE SHOOTING: See "Corvair Transaxle" in Transmission Section.*
Lubrication - Check fluid level in transmission every

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1000 miles. Add fluid when level reaches "Add" mark on dipstick (one pint low). Use Automatic Transmission Fluid Type "A" (Suffix "A"). Draining and refilling of transmission is not recommended except at time of transmission overhaul.

Capacity - 6 pints (converter not drained); 13-14 pints (converter drained).

Ch cking Fluid L vel - With transmission at normal operating temperature and transmission selector lever in "N" position, engine idling, check fluid level on dipstick in filler tube at right side of engine near firewall. Add fluid as necessary to bring level to "Full" mark on dipstick, using Automatic Transmission Fluid Type "A" (Suffix "A"). *NOTE - Automatic Transmission Fluid Typ "A" may be substituted if necessary.*

Draining & Refilling - *NOTE - Not required except at time of transmissi n verhaul.* Drain oil by loosening filler tube attaching nut in oil pan. Tighten filler tube nut and add 4 pints of recommended fluid using filler tube and funnel J-4264. Start engine and allow to idle 3-5 minutes in "N", then add sufficient oil to bring level to "Full" mark.

Thr ttl Linkage Adjustm nt: *See "Accelerator Control Linkag Adjustm nt" und r CARBURETOR above.*

R m val: Remove power train from car and then separate transaxle assembly from engine. *See "Power Train" in Corvair Sp cial Data and "Corvair Transaxle" in Transmission Section.*

►*OTHER DATA: S "C rvair Transaxle" in Transmission S cti n.*

DIFFERENTIAL CARRIER

Own. Straddle mounted hypoid gear type of new design with transmission input and output shaft running axially through differential pinion shaft.

Axl Rati - 3.55-1 (32-9), Standard. 3.89-1 (35-9), Optl.

Lubricati n - Check fluid level every 1000 miles. Drain and refill every 10,000 miles. Use only SAE 80 "Multi-Purpose" gear lubricant. *CAUTION - Do not use "Min-ral Oil" g ar lubricants r any "active sulphur soap" lubricants.* On synchro-mesh cars, the differential carrier and transmission assemblies are connected by internal passages and the same lubricant is used in both units. On Powerglide cars, the differential carrier and transmission are sealed from each other and different lubricants are used. Different procedures are required as follows:

Ch cking, Draining & Refilling (Synchro-mesh Cars) *See "Synchro-mesh Transmission" above.*

Ch cking Lubricant Lev l (Powerglide Cars) - With unit at normal operating temperature, check fluid level in differential carrier (plug is adjacent to rear axle universal joint on left side of transmission case). *NOTE - With unit at p rating temperature, fluid level should b lev l with b tt m of filler plug hole. If unit is cold, l v l sh uld be ½" below filler plug hole.*

Draining & Refilling (P w rglid Cars) - Drain carrier housing and replace drain plug. Refill housing with 3.1 pints of recommended gear lubricant.

Axle Shaft Removal: Remove wheel and brake drum, then remove four nuts securing axle bearing retainer to backing plate. *NOTE - Nuts are accessible through hole in axle shaft flange.* Pull brake backing plate slightly outward, then push it back onto control arm studs to break it away from bearing retainer. Pull axle outward to free universal joint splines from side gears in rear axle. Remove universal joint from yoke on axle shaft, then remove yoke from axle shaft with Tool J-5504. Remove axle shaft from lower control arm.

Carrier Removal: Remove power train from car and then separate transaxle assembly from engine. *See "Power Train" in Corvair Special Data and "Corvair Transaxle" in Transmission Section.*

Rear Axle Universal Joints: Disassemble, clean, and repack joints every 25,000 miles.

REAR SUSPENSION

Independent control arms at each side, connected to crossmember. Shock absorbers are mounted within rear coil springs and are connected to control arm and rear suspension crossmember.

See "Corvair Rear Suspension" in Suspension & Wheel Alignment Section.

►*REAR SUSPENSION ADJUSTMENT NOTE: The only adjustment required for rear suspension is "Toe-In" as indicated below.*

Toe-In - 0-¼" (total toe-in). To check, back car onto "drive-on" type equipment. Toe-in will be read as "toe-out" with car backwards as readings will be taken from rear of tires.

Camber - 1½° ±½°. Not adjustable.

FRONT SUSPENSION

Independent "Ball-Joint" type with direct acting shock absorbers mounted within front coil springs.

See "Corvair Front Suspension" in Suspension & Wheel Alignment Section.

Steering Axis Inclination - 7°±½° at 0° camber.

Caster - Pos. 4°+0°,-½°. Caster should be equal within ¼° on both sides of car.

Camber - Pos. ½°±½°. Camber should be equal within ¼° on both sides of car.

Toe-In - 3/16"+0", -1/16" (one wheel), 3/8"+0", -1/8" (two wheels)

Toe-Out on Turns - With inner wheel at 33¾°, outer wheel should be at 30½°.

Wheel Bearing Adjustment: Tighten adjusting nut to **80 inch-lbs.** torque while rotating wheel, then back off nut 1/6 turn (1 flat). If slot in nut does not line up with hole in spindle, back off nut not more than 1/12 turn or 1/2 flat to line up nearest slot with hole. Install cotter pin. *NOTE* - This adjustment will provide zero preload and .000-.004" freeplay.

SHOCK ABSORBERS

D lc . Direct acting, non-adjustable.

R plac ment Shock Absorbers - Chevrolet No. 5552308 Front, No. 5552309 Rear

Rear Shock Absorber Replacement - *See "Corvair Rear Suspension" in Suspension & Wheel Alignment Section.*

STEERING

Saginaw Ball Bearing Worm & Nut. Recirculating ball type similar to that used on other Chevrolet models. *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-Servo single anchor hydraulic, without anchor pin adjustment. Hand lever applies rear wheel service brakes. Lining is bonded to shoes.

See "Chevrolet-Bendix Hydraulic Brakes" in Brak Section.

►*REAR BRAKE ANCHOR PIN TORQUE SPECIFICATION CHANGE: Torque rear anchor pin to 100-126 ft. lbs. Supersedes previous 60-85 ft. lbs.*

Drum Diameter - 9" (front & rear).

Wheel Cylinder Diameter - .875" (front), .9375" (rear).

Brake Lining

	Front & Rear Wheels	
	Primary Shoe	Secondary Sh
Thickness	.160"	.160"
Length	7.85"	9.42"
Width	1.75"	1.75"

Clearance - Adjusting screw backed off 12 notches (front), 15 notches (rear) from a heavy drag position.

Standard Master Cylinder: Located in trunk compartment in line with brake pedal.

Checking Fluid - Maintain level of fluid even with cast boss on inside of cylinder casting. Use only G.M. Hydraulic Brake Fluid Super No. 11.

Pedal Pushrod-to-Master Cylinder Clearance - Loosen locknut on swivel (connecting pedal to pushrod) and turn pushrod to obtain a movement of 1/8" to 3/8" at pedal pad before pushrod end contacts main cylinder piston. Tighten locknut.

Removal - Disconnect hydraulic lines from master cylinder and remove brake pedal return spring. Remove retaining nuts and remove master cylinder-pedal assembly.

MISC. MECHANICAL

Windshield Wiper: Single speed electric type. *See "Windshield Wipers" in Miscellaneous Section.*

Windshield Washer: Electric type. *See "Windshield Washers" in Miscellaneous Section.*

Heater: Gasoline type. *See "Corvair Gasoline Heater" in Miscellaneous Section.*

TIGHTENING SPECIFICATIONS

1954-56 MODELS

	Ft. Lbs.
Cylinder Head	60-70
Intake Manifold (Bolts & Nuts)	22-26
Exhaust Manifold (Bolts & Nuts)	22-26
Oil Pan	9-11
Main Bearing Caps (except Rear)	100
Main Bearing Caps (Rear)	140
Flywheel	85-95
Crankshaft Pulley	45-50
Con Rod Caps	40-50
Camshaft Sprocket & Pump Eccentric	14-17
Rocker Arm Support Brackets	14-17
Engine Front Cover (⅜ & 7/16" Bolts)	30-35
Water Manifold	22-26
Oil Pump Mounting	11-14
Oil Filter to Cylinder Block	30-35
Oil Filter Housing to Base	40-45
Oil Filter Pad Cover	30-35
Flywheel Lower Housing	50-55
Transmission Mounting	60-70

1957-60 MODELS

	Ft. Lbs.
Cylinder Head	60-80
Intake Manifold (Bolts & Nuts)	22-34
Exhaust Manifold (Bolts & Nuts)	19-25
Oil Pan	10-18
Main Bearing Caps (Exc. Rear)	90-120
Main Bearing Cap (Rear)	130-160
Flywheel	85-95
Crankshaft Pulley	100 Min.
Con Rod Caps	38-48
Camshaft Sprocket & Pump Eccentric	14-22
Rocker Arm Support Brackets	14-22
Engine Front Cover	24-40
Oil Pump Mounting	11-14
Oil Filter To Cylinder Block	28-38
Oil Filter Housing Bolt (1957-58)	40-45
Oil Filter Housing (1959-60)	Hand Tight
Flywheel Lower Housing	50-55
Transmission Mounting	60-70

ENGINE MOUNTING

1954-56 MODELS

FRONT ENGINE MOUNT INSTALLATION: Cap screws fastening mounting to frame or bracket should first be screwed finger tight, then tightened alternately, one turn at a time. DO NOT TIGHTEN ONE CAP SCREW IN POSITION INDEPENDENTLY OF THE OTHER, since lower portion of asssembly would not seat evenly in upper portion. Front mounting must be properly positioned and tightened, otherwise mounting will not function properly as an insulator.

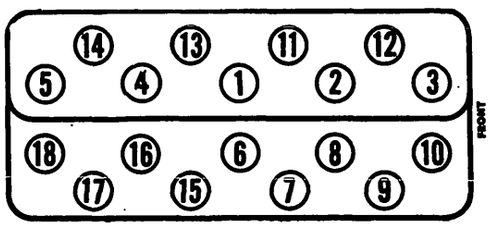
OIL PAN

1954-58 MODELS

OIL PAN REMOVAL: Remove starter and exhaust cross-over pipe. Disconnect idler arm from frame and drop steering relay rod. Remove oil pan cap-screws and withdraw pan.

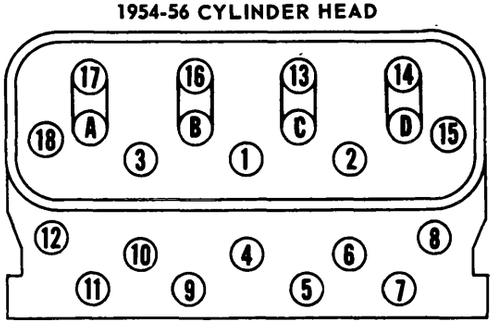
Installation: Cement new cork gaskets to pan, assemble front and rear synthetic seals to pan. Place coat of graphite grease on exposed surface of seals to insure that seal maintain their proper position in pan and do not hang up on front cover and main bearing sealing surfaces during oil pan installation.

CYLINDER HEAD & MANIFOLD



1954-60 MODELS

CYLINDER HEAD: Removal - Drain radiator and cylinder block. Remove intake manifold and generator, disconnect exhaust pipes. Remove valve covers. On air conditioned cars, remove compressor bracket attaching bolts and tip compressor to rear to remove right valve cover. On power steering cars, remove pump mounting bracket bolts and move assembly to one side to remove left valve cover. Remove rocker arm shaft assembly. Disconnect ground strap from rear of head. Rock pushrods to break oil seal between rod and lifter seat (to avoid pulling lifter from bore), then remove pushrods and remaining cylinder head bolts. Remove cylinder head with exhaust manifold attached.



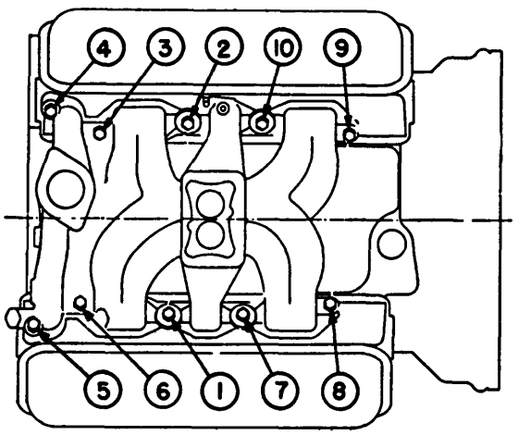
On Air Conditioned Cars - To remove right cylinder head, proceed as follows: Loosen and remove all cylinder head bolts. *NOTE - No. 17 & 18 bolts cannot be removed because of blower duct assembly.* Position rocker arm shaft away from head and remove pushrods. Tip No. 15 & 16 rocker arms to vertical position, tip their pushrods to within ½" of blower duct and tape in position. Remove oil dipstick tube. Lift head, rocker shaft assembly and exhaust manifold off dowel pins, then move down and forward to clear blower duct.

1954-56 MODELS

Installation - Use cylinder head guide studs and coat both sides of gasket with P.O.B. No. 3 Sealer. Place head in position over gasket, install pushrods and rocker arm shaft assembly with pushrods seated in rocker arms and lifters. Tighten rocker arm shaft bracket bolts (No. 1 through No. 5) and cylinder head bolts (No. 6 through No. 18) to specifications and in sequence shown in diagram.

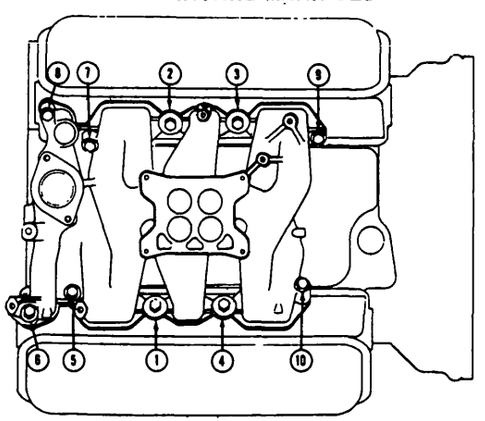
1954-56 CYLINDER HEAD

1957-60 CYLINDER HEAD



1957-60 MODELS

Installation - *NOTE* - When new cylinder head is installed on left hand bank, engine unit number must be transferred to new head. Use Guide Studs J-3455 and apply P.O. B No. 3 sealer to both sides of gasket. Place gasket and head over studs and tighten all bolts snug. Tighten **Numbered** bolts in sequence indicated in diagram to 50-60 ft. lbs. Tighten **Lettered** bolts in sequence shown in diagram to 14-22 ft. lbs. Retighten **Numbered** bolts in correct sequence to 60-80 ft. lbs. Retighten **Lettered** bolts in correct sequence to 14-22 ft. lbs.



1954-60 MODELS

INTAKE MANIFOLD: Removal - Drain radiator, disconnect upper radiator hose from water outlet. Remove air cleaner and disconnect spark plug wires and throttle linkage. Remove fuel and vacuum lines that interfere with manifold removal and disconnect primary coil wire and remove ignition wires from resistor. On power steering cars, disconnect power steering pump and bracket as an assembly. On air conditioned cars, remove external fuel filter. Disconnect generator, then

CONTINUED ON NEXT PAGE

1954-56 INTAKE MANIFOLD

1957-60 INTAKE MANIFOLD

CONTINUED FROM PRECEDING PAGE

remove attaching bolts and tip compressor and bracket rearward to obtain clearance for manifold removal. Remove intake manifold with coil and carburetor attached. Clean cylinder head and manifold machined surfaces.

Installation - Reverse removal operations using new graphite coated metal gaskets. Apply Permatex No. 3 sealer or equivalent around gasket water holes. Dip manifold bolts in C.P. No. 9 sealer, install bolts and nuts and torque to specifications. Adjust power steering belt tension, adjust throttle linkage.

CRANKSHAFT & MAIN BEARINGS

1954-60 MODELS

REAR MAIN BEARING OIL SEAL: Asbestos covered wiper seal installed in rear groove in bearing cap and block (oil slinger operates in front groove).

Oil Seal Installation - With crankshaft out of engine and bearing cap off, use a new seal coated with graphite grease, and crowd it by hand into rear groove in cap and block. Drive seal tightly into place by tapping Tool BT-12 (1954-56), Tool 23-14 (1957-58), Tool 23-18 (1959-60), with a hammer. Seal is correctly installed when relieved section of tool will pass over seal when full diameter of tool is moved across cap. Hold tool tightly against seated seal and cut flush with parting line between upper and lower bearing. *NOTE* - Ends of seal must be cut clean (no frayed ends) and seal must entirely fill groove. After bearing cap installed, wipe Dupont Cement No. 5402 in groove in block on both sides of bearing cap and press two cork seals into place in grooves.

ENGINE FRONT COVER

1954-58 MODELS

ENGINE FRONT COVER (Removal): Disconnect lower radiator hose and heater hose from front cover and disconnect generator link at generator. Remove oil pan and remove the two bolts attaching front engine mount to frame. Support engine with Special Tool BT-29 (engine must clear front cross member). Remove radiator assembly, fan blades and pulley and crankshaft pulley. Remove fuel and vacuum pump assembly. Remove front cover attaching bolts and front cover. Reverse removal sequence to install cover, using a new gasket coated on one side with gasket cement. Lubricate sealing surface of front oil seal and fuel pump operating arm. Dip attaching cover bolts in POB No. 3 sealer.

Engine Front Cover Oil Seal (Crankshaft Front Oil Seal) Replacement: ***(NOTE—Front cover oil seal can be replaced without removing front cover by using Tool J-4176).*** Remove crankshaft pulley and replace large capscrew in crankshaft end. Place fingers of Tool J-4176 over end of crankshaft and turn tool fingers so that hooks will pass through clearance between crankshaft end and inner diameter of front oil seal, (some light taps on tool center screw will force fingers behind rubber ring of oil seal). Use an end wrench on fixed nuts below puller plate and rotate each finger outward 90° to engage the finger hooks with ring of oil seal, then tighten nuts on upper plate for puller to hold fingers in position. Rotate puller center screw against crankshaft screw and remove seal.

Installation - Use Tool J-4177 to replace seal in cover, first coating outside diameter of seal with P.O.B. No. 3 and sealing lip with special lubricant Part No. 567196. Place seal in cover, then assemble adapter ring and driver so slot in driver will clear crankshaft key. Drive seal into place until adapter bottoms on cover face.

1959-60 MODELS

ENGINE FRONT COVER: Removal - Drain cooling system and disconnect lower radiator hose and heater hose from front cover. Disconnect generator link at generator and remove front engine mount to crossmember nuts. Use Tool J-8568 to raise engine to clear bolts of crossmember, then insert wood block 8" x 2" x 4" between each exhaust manifold and upper control arm and allow engine to rest on 2 x 4's. Remove oil pan, radiator assembly, fan blades and pulley, then remove crankshaft pulley. Remove distributor cap and rotate engine until rotor points toward cowl, then remove fuel pump assembly. Remove front cover attaching bolts and front cover assembly.

Installation - Reverse removal procedures and tighten belts to gauge line on Tool 33-70. *NOTE* - Use a new front oil seal and coat fuel pump rocker arm pad with Special Seal Lubricant Part No. 567196. Front cover bolts should be dipped in P.O.B. No. 3 Sealer and torqued to specifications. Coat on side of fuel and vacuum pump gasket with gasket cement such as P.O.B. No. 4.

Engine Front Cover Oil Seal (Crankshaft Front Oil Seal) Replacement: *NOTE - Front cover oil seal can be replaced without removing radiator or crankshaft pulley key as follows:* Remove crankshaft pulley and thread Pilot Bolt J-7583-3 into crankshaft. Thread Tool J-7583-1 into oil seal and then tighten Forcing Screw J-7583-2 until seal is free from front cover. Remove seal from tool and pilot bolt from crankshaft.

Installation - *NOTE - Two types seal (½" & ¾" thick) used in production. Both seals can be installed with Seal Installer J-7584-1 and Adapter Ring J-7584-2 must be used with ¾" seal.* Coat outer diameter of seal with P.O.B. No. 3 sealer and lips of seal with Special Lubricant, Part No. 567196. Position seal in front cover. If ¾" seal used, place Adapter Ring J-7584-2 between Installer J-7584-1 and seal. Place Installer over seal and thread Forcing Screw J-7584-3 into crankshaft until Installer contacts front cover. Remove tools and install pulley and belts.

FLYWHEEL HOUSING

1954-55 MODELS

LOWER FLYWHEEL HOUSING ALIGNMENT: It will always be necessary to carefully check alignment of block and lower bell housing whenever original housing is replaced. Misalignment will be evident in one or both of two conditions; step between rear surfaces of block and lower housing resulting from location of housing too far forward or rearward on block, or a non-parallel condition resulting from either block or lower housing being slightly out-of-square. To insure proper alignment on replacement, proceed as follows:

1) Remove two dowels which serve to align original lower housing with block, install and tighten clutch (flywheel bell) housing to block, place lower flywheel housing in its proper position so that it is flat against clutch housing and contacting cylinder block; then tighten bolts securing lower flywheel housing to clutch housing.
2) Using feeler gauge, check to see if lower housing and block are square with each other, and if not, install proper thickness shims (as near bolts as possible) to properly align parts. If more than .010" of shims required, use different flywheel housing. Tighten lower flywheel housing-to-cylinder block bolts. If all bolts properly tightened it will not be necessary to re-dowel between block and lower housing.
3) If dowels not used to maintain alignment, foregoing procedure will have to be followed when lower housing is removed and replaced.
4) Lower housing to cylinder block alignment can be checked after assembly by removing clutch (flywheel) housing and laying straight-edge along rear surface of block and lower housing. NOTE—Use care not to disturb lower housing when clutch housing removed and replaced.

1954-55 MODELS

CLUTCH (FLYWHEEL BELL) HOUSING ALIGNMENT: Mark flywheel and crankshaft for identification during assembly. Proceed as follows:
1) Support engine by oil pan flanges for alignment of flywheel housing. NOTE—When using engine stand, engine can be supported at front and rear of block. **Do not support on flywheel housing.**
2) With flywheel and crankshaft assembled in place, assemble clutch (flywheel bell) housing onto engine block and tighten housing attaching bolts sufficiently so housing can be shifted by tapping with lead hammer.
3) Install lower flywheel housing and tighten in place. CAUTION—Lower flywheel housing **must be in place when aligning clutch housing.** Install dial indicator, pilot shaft and strap.
4) With dial indicator stem positioned against rear face of clutch housing at approximately 2¼" radius from center line of crankshaft, revolve flywheel 360°. If reading exceeds limits, shim as necessary between housing and engine block to bring within limits. CAUTION—Be sure indicator button is kept clear of oil groove in housing.
5) Assemble dial indicator to pilot shaft using attachment, check radial runout of housing bore, attach flywheel turning tool J-4772 to lower housing to turn flywheel.
6) Shift housing as necessary with lead hammer to bring within limits. Tighten housing to block bolts to 50-55 ft. lbs. torque, recheck limits.
7) Using reamer J-4832-3 and ratchet wrench J-808-6 ream two engine block-to-clutch housing dowel pins, Part No. 557754. After dowel pins installed check to see that dowel pins do not protrude inside housing and interfere with flywheel. Clean all cutting from housing.

1956 MODELS

SYNCHRO-MESH & "DUAL RANGE" HYDRA-MATIC

LOWER FLYWHEEL HOUSING ALIGNMENT: *(NOTE* - Misalignment is evident as a "step" between block and lower housing resulting from location of housing too far forward or rearward on block). To correct misalignment, elongate dowel pin holes so as to allow lower housing to move to rear or front as required. Do not remove dowel pins or enlarge dowel pin holes with an oversize drill, as correct side-wise location of lower housing

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

must be maintained for proper engagement of starter pinion and ring gear.

REAR FLYWHEEL HOUSING ALIGNMENT: Loosen capscrews slightly. Remove dowel pins, then shift housing with a lead hammer to bring within limits. *(NOTE* - On Synchro-mesh cars it will be necessary to remove rear housing and saw off dowel pins close to block before driving pins through). After aligning housing, again tighten housing attaching bolts and recheck radial runout. Using Reamer J-4832-3 and ratchet wrench J-808-6, ream two engine block-to-rear housing dowel pin holes. Finish ream with reamer J-4832-4 and install oversize dowel pins, Part No. 557754, with large chamfer end out. *(NOTE* - Above reamers must be shortened to 4" over-all length if operation is to be performed with housing in car).

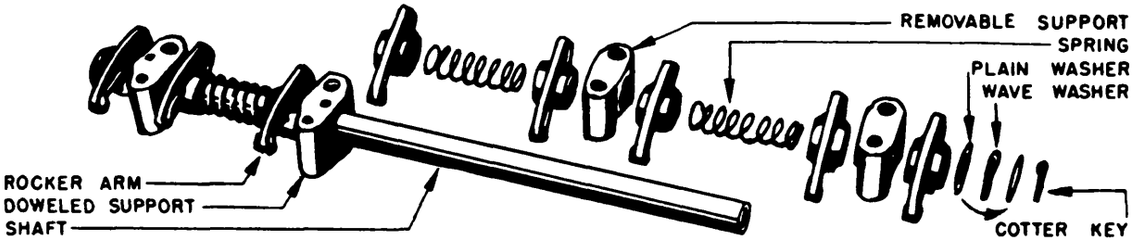
REAR FLYWHEEL HOUSING ALIGNMENT CHECK: *NOTE* - It is not necessary to have lower housing in place during this check.

1) Install pilot mounting strap J-2548 on flywheel. Install rear housing and tighten bolts. Install pilot shaft and mount dial indicator. Tap crankshaft to rear of engine.

2) Using large button on dial indicator, install indicator assembly so button contacts face of housing with approximately .015" compression With dial indicator positioned against rear face of housing (2 3/4" radius on Hydra-Matic & 2 3/8" radius on Synchro-mesh, from centerline of crankshaft) revolve flywheel 360° and note indicator reading Limits for this reading are not to exceed .003" on indicator within 360°. If reading exceeds limit, shim as necessary between housing and engine block to bring within limits

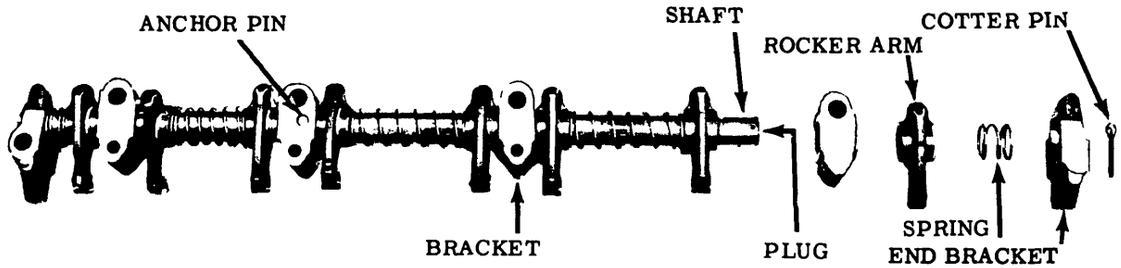
3) Assemble dial indicator to pilot shaft using attachments 8-50 and 8-51, then check radial runout of housing bore as follows. Mark flywheel housing with pencil or chalk to indicate horizontal and vertical positions. With indicator positioned at zero at either horizontal mark, rotate flywheel 180°. Indicator reading at this opposite point must not exceed 004" plus or minus. With indicator positioned at zero at top mark, rotate flywheel 180°. Indicator reading at bottom must be between .000" and minus 008".

4) If not within above limits, proceed with Rear Flywheel Housing Alignment above



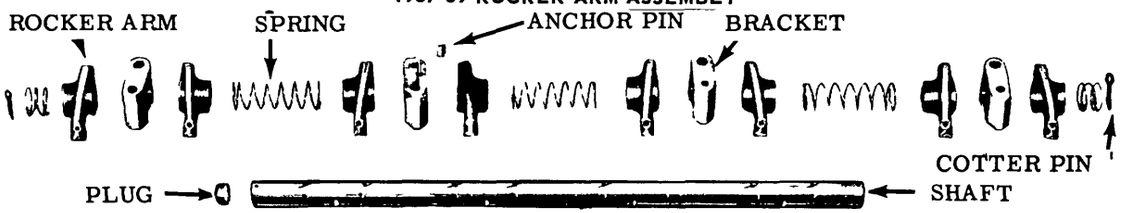
CAMSHAFT & BEARINGS

1954-60 MODELS



CAMSHAFT: Removal - Remove valve lifters, *see "Hydraulic Lifters"* Remove distributor and engine front cover, *see "Engine Front Cover"* Remove camshaft assembly, fuel pump eccentric, camshaft sprocket and timing chain Slide camshaft out front of engine carefully

Installation - *NOTE* - Always replace camshaft when installing new bearings which DO NOT require line reaming Coat camshaft liberally with engine oil mixed with G M Concentrate Part No 567725



Camshaft Bearings - Removal & Installation - *NOTE* - Replacement bearings do not require line reaming Use Tool Set J-4476 to remove and install bearings without removing camshaft plug at rear of block DO NOT DISTURB PLUG

1954-56 ROCKER ARM ASSEMBLY

1957-59 ROCKER ARM ASSEMBLY

1960 ROCKER ARM ASSEMBLY

VALVE SYSTEM

ROCKER ARMS

1954-56 MODELS

ROCKER ARM SHAFT ASSEMBLIES: Identical hollow steel tube shafts (ends plugged) are used. Four removable supports for each shaft, one support doweled to shaft for oil feed (at oil line from #2 camshaft bearing on left side, from #4 camshaft bearing on right side) Three springs used to position center rocker arms against supports. End rocker arms retained by wave washer, flat washer, and cotter key.

Rocker Arm Shaft Disassembly: With assembly off engine, remove cotter key and washers from end of shaft. Remove rocker arms, supports (except doweled support which should not be removed from shaft), and springs.

►***CAUTION—Rocker arms should be stored so that they can be reassembled in their original position.***

Rocker Arm Shaft Reassembly: Assemble supports in proper position as to doweled support (oil supply). Push rod end of rocker arms must be on same side as large cylinder head bolt hole in each support.

1957-59 MODELS

ROCKER ARM SHAFT ASSEMBLIES: Identical hollow steel shafts used (end plugged). Six brackets used on each shaft as follows One type used for RH Front or LH Rear, one type for LH Front or RH Rear, one type for pin hole, and one type for all other positions. Drive pin is flush with top of bracket. Rocker arms are all one type.

Disassembly: Remove cotter pins from ends of shafts and remove brackets, springs, and arms. *NOTE* - If necessary to remove bracket that is pinned to shaft, drill hole in shaft end plug and pry plug out. Use drift in hollow shaft to drive out pin. Drive replacement plug in end of shaft until it seats against shoulder in shaft or approximately 9/16" in from end of shaft.

Reassembly: Reverse disassembly and follow diagram for position of each type of bracket in respect to cylinder head bolt holes and sequence of assembly Tighten bolts to correct specifications shown in cylhead diagram

1960 MODELS

ROCKER ARM SHAFT ASSEMBLY: *NOTE - Early engines may have end brackets For overhaul of this type assembly, see Oldsmobile 1959 Special Data*

Removal - Remove rocker arm cover *NOTE* - On Air Cond Cars it will be necessary to remove compressor and generator bracket bolts and tip compressor rearward to remove R H cover On Power Steering Cars, it will be necessary to remove pump mounting bracket

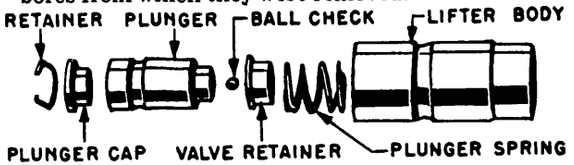
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

bolts and move assembly to one side to remove L.H. cover. Remove rocker arm bracket bolts. If equipped with Air Cond. (right side only), loosen all bracket bolts. Remove cotter key from rear of rocker shaft and remove rocker arms, springs or shaft as required. Remove rocker arm shaft assembly.

Disass mbly - Remove cotter pins from ends of rocker shaft. Remove brackets, springs and rocker arms from shaft. *NOTE* - One bracket is attached to shaft by anchor pin. When necessary to remove this bracket, insert drift through oil passage in bracket to drive out pin. If necessary to remove plug, punch hole in plug and pry plug from end of shaft.

Reass mbly - Reverse disassembly procedure and note the following: Pinned bracket must have pin driven in flush with bracket. Rocker shaft plug must be driven in until outer shoulder is 9/32" into end of shaft.



HYDRAULIC LIFTERS

1954-57 MODELS

VALVE LIFTERS: Hydraulic, Barrel Type. Consisting of plunger and valve assembly operating within a cylinder formed by valve lifter tappet body (See illustration). Oil is introduced to this unit from main oil gallery through hole in side of lifter plunger and body.

Removal: Remove intake manifold, cylinder block cover, valve covers, rocker arm shaft assemblies, push rods and valve lifters.

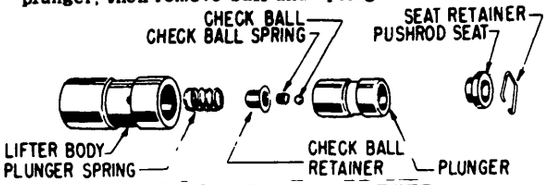
►*CAUTION*—Valve lifters must be installed in same bores from which they were removed.

1954-57 HYDRAULIC LIFTER

Disass mbly - Remove plunger retainer with Lock Spring Tool BT-31. Remove pushrod seat, plunger, ball check valve, ball retainer and spring. If plunger is stuck in lifter body, soak lifter in "D-Carb" for five minutes and use Tool BT-38 (1954-56), Tool 23-16 (1957) and twist plunger counterclockwise to remove from body.

Cleaning & Inspection: Wash all parts in a suitable cargon solvent and remove all trace of carbon and varnish. Inspect plunger and lifter body for scoring or other damage that would prevent free movement. Inspect lower end of lifter body for nicks or indentations. If any exist, replace complete lifter assembly. Dry lifter parts with air, then install plunger in lifter body without other parts and check for free movement. Plunger should drop of own weight into body bore

Reassembly: ***(NOTE—Body and plunger are selectively fit and must not be interchanged, or replaced individually).*** Place plunger over push rod seat and then turn plunger over holding push rod seat in place, and install ball on its seat in plunger. Place ball check valve retainer over ball and then place valve retainer spring over retainer. Carefully assemble valve lifter body over complete assembly. Turn assembly over and while holding push rod seat down, install retaining lock spring, using Tool BT-31.



Identification Note—It is important when replacing lifters that the correct oversize lifter be used. An identification number is etched on all lifter bodies except standard. Lifters are furnished in Std., size and the following oversizes: .001", .002", .003", .005". The cylinder block is marked 1, 2, 3, or 5 for lifter size on rail under engine top cover.

1958-60 MODELS

VALVE LIFTERS: Hydraulic, Barrel Type. Consists of plunger and valve assembly operating in a cylinder formed by valve lifter body (see illustration). Oil is forced into lifter from main oil gallery through hole in side of body and plunger.

Removal - *NOTE - Keep lifters in order for reinstallation in original bores in block.* Remove intake manifold, *see "Intake Manifold"*, engine top cover, valve rocker arm covers and rocker arm shaft assemblies. To remove No. 8 intake or exhaust lifter on air conditioned cars proceed as follows: Loosen R.H. rocker shaft bracket bolts. Lift rocker shaft and pry rocker arms against springs and slide pushrod up between between rocker arm and bracket away from lifter then remove lifter. On all units remove pushrods and use "D-Carb." if necessary to assist in removing lifters.

Disassembly: Use Tool BT-31 or small screwdriver to remove retainer spring. Remove pushrod seat, plunger, and plunger spring. Remove ball check retainer from plunger, then remove ball and spring.

1958-60 HYDRAULIC LIFTER

Cleaning & Inspection: Use cleaning brush J-5099 and clean solvent to remove all foreign material from all parts. Check all parts for nicks, burrs, or scoring. *NOTE* - Ball, ball check retainer, springs, pushrod seat and snap ring are interchangeable or can be replaced individually. Body and plunger are selective fit and are not interchangeable. Replace lifter when body or plunger are worn or damaged. *CAUTION - DO NOT replace lifter when a slight gap appears or lifter shows leakage where foot is welded to body unless leak-down is not within specifications.* Place straightedge across lifter foot. If light appears under straightedge placed across foot of lifter, it indicates a flat or concave surface and lifter should be replaced and camshaft lobe checked for wear. Wear at camshaft cam center is normal, but wear across entire width of cam base circle requires replacing of camshaft.

Reassembly & Testing: Lifter must be assembled while submerged in test fluid to obtain accurate leak-down rate.

1) Install Adapter 105-2 in reservoir of Tester BT-60, then fill reservoir with Hydraulic Lifter Test Fluid BT-50 to ½" of top of reservoir.

2) Assemble ball check, spring, and retainer into plunger with flange pressed tight against bottom of recess in plunger.

3) Install spring over ball check retainer. Hold plunger with spring up and insert into lifter body (to prevent cocking spring). Place assembly in tester cup, then position pushrod seat into plunger. Position ¼" steel test ball on pushrod seat and lower tester ram until it contacts steel ball. *NOTE* - Allow ram to move downward by its own weight until air bubbles disappear.

4) Raise ram, then allow it to lower. Repeat several times or until all air is expelled from lifter. *CAUTION - DO NOT ATTEMPT TO EXPEL AIR FROM LIFTER BY PUMPING RAM.*

5) When all air is removed, allow ram to bleed down lifter to expose ring groove and install retaining ring.

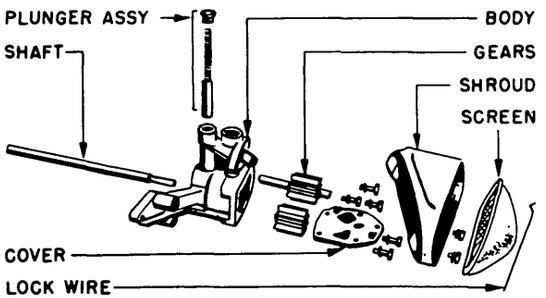
6) Adjust ram screw so it contacts steel ball in pushrod seat when pointer is at start line. Raise ram and start test by resting arm on steel ball.

7) Rotate reservoir one revolution every two seconds, and time indicator from start to stop line. Allowable leak-down time is 12-90 seconds (used lifters), 20-90 seconds (new lifters). *NOTE* - If lifter is within specifications, it can be placed in service without removing fluid.

Identification Note - Production engines used Standard, .001", or .010" oversize lifters. Use correct size when replacing lifters. All lifters have identification numeral (Except Standard) on lifter body. Cylinder block marked "1" or "10" for lifter size on rail under rocker arm cover. When no mark appears, lifters are standard.

OILING SYSTEM

OIL PUMP



1954-60 MODELS

OIL PUMP: Removal & Disassembly - Remove oil pan, see car page, and remove three capscrews and lockwashers, then remove pump. Pull extension drive shaft from pump. *NOTE - Do not remove special washers from extension shaft (serviced as an assembly).* Remove oil screen lockwire and screen. Remove screen shroud attaching screws and remove shroud. Remove oil pump cover screws and cover, then remove oil pump gears. Remove pressure regulator nut, spring and valve.

Cleaning & Inspection: Wash all parts in solvent and blow out passages with compressed air. Inspect all parts for scoring, clean up small imperfections with crocus cloth. Relief valve clearance should be .0025-.005". Gear end clearance should be .0025-.008".

Reassembly - Reverse disassembly procedure and tighten cover screws to 5-8 ft. lbs., shroud screws to 4-7 ft. lbs. *CAUTION* - The end of extension shaft nearest to special washers must be inserted into drive shaft.

CONTINUED ON NEXT PAGE

OLDSMOBILE OIL PUMP

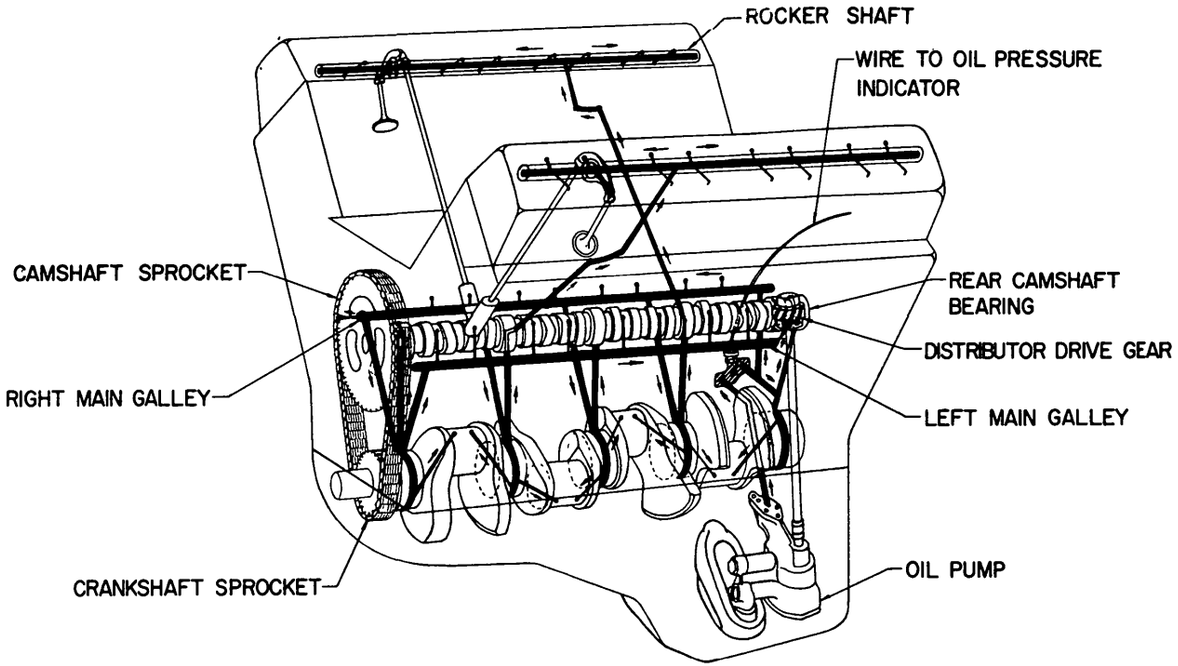
CONTINUED FROM PRECEDING PAGE

ENGINE LUBRICATION

ENGINE LUBRICATION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, camshaft bearings, and to hydraulic valve lifters, fuel pump eccentric and lever, and distributor drive gear. Oil metered by camshaft bearings lubricates other valve parts (rocker arms, pushrods, and valve stems). Other parts are lubricated by oil spray.

OPERATION: Gear type oil pump mounted on rear main bearing cap in crankcase draws oil through fixed oil strainer and intake pipe mounted on pump cover and delivers oil through a passage in the pump body, rear main bearing cap, and crankcase to the oil filter intake port (filter mounted on pad at right rear corner of crankcase). From the filter outlet port on the pad, a horizontal cross passage and vertical passage connect with the right main oil gallery extending the full length of the engine just below the right bank valve lifters. At the forward end of this gallery, a "V" passage connects to front main bearing and to the forward end of the left main oil gallery extending back along the engine just below the left bank valve lifters. Oil is distributed from these main oil galleries as follows:

Crankshaft & Camshaft Bearings - Rear crankshaft and camshaft bearings are lubricated by a vertical passage intersecting the horizontal cross passage from the oil filter (see above). **Other** crankshaft and camshaft bearings are lubricated by a "V" shaped oil passage in each crankcase web leading down from the right main oil gallery to the crankshaft bearing and then up to the camshaft bearing (additional passage at front crankshaft bearing supplies oil to left main oil gallery).



Connecting Rod Bearings - Crankshaft is drilled and each connecting rod is lubricated through passage from adjacent main bearing (separate oil lead to each rod on each crankshaft throw).

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from slot in side of bearing cap of rod for opposite bank of cylinders (slot in rod cap must be upward or toward center of engine to provide this cross-lubrication).

Valve Lifters - Each lifter supplied with oil through short passage leading upward from main gallery at point directly below lifter.

Rocker Arms, Pushrods & Valves - Hollow rocker arm shafts are supplied with oil through passage in block leading from No. 2 camshaft bearing (left bank), No. 4 camshaft bearing (right bank), and connecting passage in head which registers with drilled oil passage in rocker shaft bracket (see Note below). Rocker arm is drilled to provide lubrication for pushrod socket and valve tip. Oil return holes are provided on lower side of heads.

ROCKER SHAFT BRACKET NOTE - Rocker shaft bracket with drilled oil lead has anchor pin which locates shaft properly so that oil hole in bracket and shaft line up (pin is driven in flush with top of bracket). This bracket is No. 2 or 3 (left bank), No. 4 or 3 (right bank) depending on whether end brackets are used (discontinued during 1960 production).

OLDSMOBILE V8 ENGINE OILING SYSTEM

Distributor Drive Gear - Lubricated from drilled hole in plug at rear end of left main oil gallery.

Timing Chain & Sprockets, Fuel Pump Lever & Eccentric - Lubricated from drilled hole in hexagonal headed plug which closes front end of right main oil gallery.

OIL FILTER: Full flow type mounted on pad on right rear of crankcase. Filter has bypass valve to ensure engine lubrication if filter element clogged.

►*CAUTION:* On cars where filter not used, a cover with a channel oil passage connecting the inlet and outlet ports is installed on filter pad to provide oil circulation. If cover removed, install with new gasket (coat both sides of gasket with POB No. 5 sealer), and torque cover bolts to 35-40 ft. lbs.

COOLING SYSTEM

1954-60 MODELS

►*LOSS OF COOLANT & HEATING CORRECTIONS:* When check of thermostat, water pump and hoses, Ranco valve, does not reveal cause for poor heater operation, loss of coolant or for engine overheating, look for restrictions (core flashing) in engine front cover at the following locations:

1) When heater operation is unsatisfactory, remove heater hose from cover connection and look for restriction at cover connection, and if found remove with long bladed screwdriver.

2) Loss of coolant and overheating can be caused by similar restriction in cover where water from pump passes into right cylinder block. This type restriction will cause water to back up in radiator upper tank when engine is decelerated quickly. Remove restriction as described in item #1.

NOTE - When restriction is too heavy to break out, replace engine front cover.

WATER PUMP

WATER PUMP: Disassembly - Remove bearing retainer wire from front of housing. Support outside surface of pump housing in press and press shaft through impeller and housing pressing impeller end of shaft toward front of housing. Remove seal assembly from rear of housing by driving against face of seal with drift. Support hub and press shaft through hub to remove hub.

Reassembly - Place Gauge 33-68 in impeller side of housing, use driver, Tool 5175, to press shaft and bearing assembly into housing from opposite side until shaft bottoms on gauge. Install retainer wire. Support inner end of shaft on press and use Tool BT-16 to press hub on shaft. Coat outer diameter of new seal with C.P. No. 9 Sealer and use Tool 23-17 to press it into place. Clean mating surface of impeller of any foreign particles and use Tool BT-15 to support impeller while pressing shaft through impeller until bottom edges of vanes are 13/16" from machined face at edge of housing.

Installation - Use gasket cement on pump housing to retain gasket on housing, then install pump assembly in front cover and tighten 5/16" bolt to 14-22 ft. lbs., 7/16" bolts to 24-40 ft. lbs. Install fan pulley, spacer and fan. Tighten fan to hub bolts to 10-15 ft. lbs. Install pulley belts and adjust belt tension.

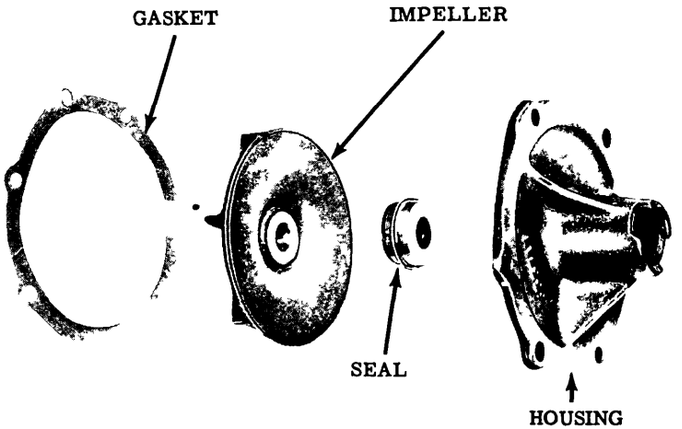
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

PROPELLER SHAFT NOTES

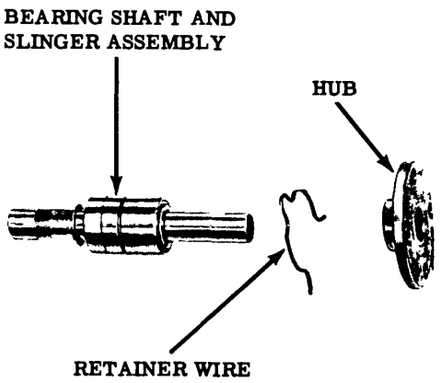
1957-60 MODELS

►*DRIVE LINE VIBRATION CORRECTION (Saginaw Univ rsal J int)* To correct this vibration, check for condition and position of bearing retaining straps, which hold bearing during shipment and which fit into groove in companion flange when universal joint is assembled. Broken or damaged straps should be removed completely. File strap flush with end of companion flange groove should it extend beyond groove.



NOTE - New specification for drive shaft "U" bolt torque is 14-18 ft. lbs.

PROPELLER SHAFT: Shaft assembly consists of two sections a center bearing support and three universal joints The rear propeller shaft or center support can be removed independently of the front shaft Whenever it is necessary to remove the front shaft, the complete shaft assembly must be removed



►*CAUTION·* When removing center bearing support scribe a line from center of support to frame member attaching bolts on frame member to facilitate lateral alignment on reassembly Keep shims grouped so they can be reinstalled in same location

PROPELLER SHAFT ALIGNMENT: Shaft aligned vertically and laterally as follows:

V rtical Alignment: Position Aligning Gauge 6514 against right side flange of transmission oil pan (Hydra-Matic), or right side of engine oil pan (Synchro-mesh) so the contact surfaces of gauge seat squarely against pan with level adjusting screw toward front of car Adjust leveling bubble until bubble is centered in gauge level Position gauge against front propeller shaft so contact surfaces of gauge seat squarely against bottom side of propeller shaft with level adjusting screw toward front of car If bubble is not within 1/16" from center of level it will be necessary to align the front propeller shaft as follows Scribe a line from center of support to frame member attaching bolts on frame member to facilitate lateral alignment on reassembly Add or subtract shims between frame member and support as required (see "Shim Part Numbers" below) until bubble in gauge level is centered (or within 1/16" from center of level)

OLDSMOBILE WATER PUMP

Size	Shim Part Numbers Convertibles	Other Models
060"	570380	570378
120"	570053	570052
180"	570381	570379

►*NOTE· A 060" shim will change level bubble approxi- one graduation of level*

►*HYDRA-MATIC CARS NOTE* Distance between transmission rear oil seal and splined yoke must be 9/32" To adjust, slide propeller shaft assembly fore or aft as required

Lateral Alignment: Attach three plumb lines using string 18" to 24" long to underside of car in such a position that the strings touch side of propeller shaft Position one string at front of front propeller shaft, between front weld and balance weights Put second string at rear of front shaft ahead of center bearing, between the end weld and balance weights and the third plumb line at rear of rear shaft in a similar position Sight along the three plumb lines If center line does not line up with front and rear strings, loosen support-to-frame member bolts and slide center bearing assembly laterally in the elongated holes until alignment is obtained Tighten bolts to 45-55 f t lbs

CENTER BEARING OVERHAUL: **Disassembly** - Pry crimped area of slip yoke nut retainer away from nut, unscrew nut pull propeller shafts apart and remove nut retainer and rear slinger Remove center bearing support assembly with Puller TR-278-R and Adapter TR-278-R-2 Remove bearing retainer-to-mounting plate bolts and separate parts

►*NOTE Center bearing and mounting plate is servic d as an assembly*

Reassembly - Place front slinger on front propell r shaft with dished side to front Apply a bead of No 4 cup grease to dished area of center bearing assembly and position assembly on propeller shaft With Tool J-5922 (or 1½" socket) drive inner bearing race until bearing and front slinger are seated on front shaft Apply an ounce of Special Lubricant No 571035 to splines of front shaft and a bead of No 4 cup grease to dished part at rear of center bearing Place rear slinger against center bearing on front shaft with dished side to rear Now place nut retainer on front shaft Tang of retainer must index with slot of shaft and cupped side of retainer must be to rear Install slip yoke seal and align slip yoke index clip with wide serration in front shaft and insert slip yoke into shaft Tighten slip yoke nut to 50-75 ft lbs and crimp nut retainer against nut in two places

►*AIR CONDITIONED CAR SERVICE CAUTION: B for disconnecting any part of air c nditi ning equipment or lines for access to ngin , see "Air C nditi ning Service C autions" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBERS: On left body pillar post.
Starting Serial Number–1001.

►*SERIAL NUMBER NOTE: Complete serial number (example 557M 1001) includes following identification data in sequence.*

①–Series Designation: 7(88 Series). 8(Super 88 Series), 9 (98 Series).

②–See Assembly Plant Designation following.

③ - Year - 54 (1954), 55 (1955).

Assembly Plant Designation

M–Lansing	L–Linden
A–Atlanta	C–South Gate
B–Framingham	W–Wilmington
K–Kansas City	T–Arlington

ENGINE NUMBER: Stamped on machined pad located on top of left hand cylinder bank of block. The number can be observed between the front and center exhaust manifold ports.
Starting Eng. No. - V-1001 (1954), V400001 (1955).

TUNE-UP

COMPRESSION PRESSURE: 100 lbs., minimum at cranking speed. Reading on low cylinders should not be less than 80% of high cylinder.

VACUUM READING: Steady 17" minimum at idling speed.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatic coil type located on left side between exhaust manifold and exhaust pipe. Stop spring should strike stop before counter-weight touches pin to prevent valve rattle when cold.

►*MANIFOLD HEAT CONTROL VALVE NOTE*–Check for broken valve welds or frozen bearings by allowing manifold to cool, then start engine and with transmission in neutral, "flash" throttle quickly. The valve should open and return to close position immediately. If welds are broken or bearings frozen, valve weight will not move. Replace the valve assembly.

IGNITION

►*IGNITION SECONDARY WIRING NOTE: Resistance type wires used. Center conductor is graphite impregnated nylon making it necessary to use only pre-cut assemblies for replacement. Distributor rotor does not have a resistance unit.*

FIRING ORDER: 1-8-7-3-6-5-4-2.
Cylinders–RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .030".
Spark Plugs - AC No. 46-5, 14mm (1954), 44-5, 14mm (1955). Torque to 23-28 ft. lbs.

COIL: D lc -R my 1115082. 12 V lt.
Ignition Current–2.0 amperes idling. 4.5 stopped.
Resist r–Delco-Remy 1928016. On bracket adjacent to ignition coil.

►*COIL RESISTOR NOTE: R sistor is conn cted in l ad from ignition switch-t -coil. This r sistor is by-pass d during cranking by a lead from starter solenoid-to-coil.*

DISTRIBUTOR: Delco-Remy No. 1110843 (Early 1954), 1110850 (Late 1954-55).
Condenser–Delco-Remy 1869704. **Capacity** .18-.23 mfd.
Contact Point Set–Delco-Remy 1918148.
Breaker Gap–.016" (.012-.0175").
Cam Angle–26-33° (with .016" gap).

►*BREAKER GAP CAUTION:* Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set gap.
Breaker Arm Spring Tension–19-23 ozs.
Rotation–Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		400	0-4		800
7.5-9.5		1000	15-19		2000
11-13		1450	22-26		2900
13-15		1725	26-30		3450

Vacuum Spark Control: Delco-Remy 1116059.
Plunger Travel–7/32-15/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4.5-6-5
10	20	16-17

►*DISTRIBUTOR INSTALLATION CAUTION:* Before installing distributor, make certain that crankshaft is turned to No. 1 firing position (see Ignition Timing following). Install distributor with flat on distributor gear in line with flat on oil pump shaft, push distributor down just enough to engage gear with shaft but do not push distributor all the way down. Turn rotor so that it is in line with No. 8 terminal in distributor cap (in line with breaker terminal on housing), push distributor all the way down. *NOTE*–Rotor will turn to No. 1 spark plug terminal position as gears are meshed. Install and tighten distributor hold-down clamp.

IGNITION TIMING

Setting–5°. BTDC, with engine idling at 850 RPM and vacuum line to distributor disconnected and carburetor opening taped closed.

►*DETONATION CAUTION: If engine detonates (due to low octane fuel or carbon build-up) set timing to 2½° BTDC. For high altitude operation, timing can be adjusted to 7½° BTDC, if detonation does not occur.*
Timing Mark–Slot in rim of crankshaft pulley and pointer on front cover. Leading edge of slot is 5° BTDC. Trailing edge is TDC. Midway between these points is 2½° BTDC.

CARBURETOR

►*CARBURETOR APPLICATION: Carter WGD 2-Bbl. used on 1954 88 Series, Rochester 2GC 2-Bbl. used on 1955 88 Series & Carter WCFB or Rochester 4GC 4-Bbl. used on 1954 & 1955 Super 88 & 98 Series.*

►*IDLE ADJUSTMENT NOTE:* A new "Split Throttle" lever permits idle speed adjustment after Hydra-Matic Throttle Linkage adjustment made (without affecting that adjustment).

►*AIR-CONDITIONED CAR IDLE ADJUSTMENT CAUTION: For Summer op rati n, s t idl spe d with Air C nditi ner turn d "ON". F r Wint r peration, s t idle speed with Air Condition r turned "OFF".*

►*1954 THROTTLE RETURN SPRING BRACKET CAUTION (Synchro-mesh Cars):* Connect throttle spring to TOP holes for 2-Barrel carburetors, and to BOTTOM holes for 4-Barrel carburetors.

THROTTLE LINKAGE ADJUSTMENT (2 & 4-BARREL CARBURETORS): **1)** Remove throttle rod from transmission throttle lever and move throttle lever to rear against its stop, and with Throttle Lever Gauge J-5605 placed flat against rear face of transmission case, rod on gauge should just enter hole in throttle lever. The distance from rear face of transmission case to hole in throttle lever should be 6¾". Adjust by bending lever with tool J-2029. Attach throttle rod to transmission lever.

►*THROTTLE LEVER PRODUCTION CHANGE (R quiring the reworking of Thr ttl L v r Bending T ol J-2029):* The present forged type throttle and manual levers on transmission are being replaced with pressed steel levers. The new pressed steel manual lever can be used for 1954 & 1955 models. The new pressed steel throttle lever can be used only on 1955 models after transmission Serial No. R55-76159.

►*THROTTLE LEVER BENDING TOOL REWORK (F r use with Later Type Pr ss d Steel L v rs):* With movable lever of tool held upward, grind off 1/8" from lower side of top support pin (flush with side of tool).
2) Apply hand brake and allow engine to warm up. Place throttle lever in "Dr" position and adjust engine idle speed to 400 RPM. Turn engine off. Disconnect upper throttle rod from engine bell crank. Check clearance between end of intermediate throttle rod assembly and dash. This distance should be 5/16" to 3/8" with carburetor on slow idle. Adjust intermediate throttle rod assembly as necessary to obtain specified clearance (NOTE–on 4-Barrel carburetors, open side of rod should face away from center of engine, and toward center of engine on 2-Barrel carburetors).
3) Loosen jam nut and remove pin from lower throttle rod at throttle bellcrank, and with bellcrank against its stop and intermediate throttle rod against its stop, the clevis pin should enter holes in clevis of lower throttle rod and hole in throttle bellcrank freely. Adjust clevis on end of lower throttle rod so pin enters hole freely. *CAUTION–Do not shorten r lengthen rod after this setting obtained.*
4) With upper throttle rod assembly held rearward with light pressure to remove lash, the clevis pin should just touch gauge point on throttle bellcrank (gauge point is curved projection above clevis pin hole in bellcrank). Adjust by rotating clevis so clevis pin just touches, or is within ½ turn short of gauge point. Replace clevis pin and tighten jam nut.
5) Hold choke completely open and move upper throttle rod assembly forward until throttle is wide open. Continue pushing upper throttle rod until transmission throttle lever just stops at its forward position (repeat this operation several times until the exact forward position is distinctly felt). Do not force linkage

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

beyond this point. With linkage in this position there should be zero clearance between throttle bellcrank stopscrew and downshift lever. With linkage held forward as outlined, loosen locknut on setscrew and adjust setscrew until it just contacts downshift lever. Release lever and tighten jam nut.

6) Place a wood block 3 7/8" long on top center of floor mat retainer and bring bottom of accelerator pedal down to rest on block. With carburetor in slow idle position (choke completely off) pedal should just touch gauge block. If necessary adjust accelerator position by disconnecting accelerator pedal rod from accelerator bellcrank on dash, and adjust accelerator pedal rod so that clevis just slides over pin with wood block in position and carburetor on slow idle. Reassemble rod, making sure open side of rod end is facing away from center of engine. Remove wood block.

ROCHESTER 2GC

Rochester N . 7006970 (Synchro-mesh & Hydra-Matic).

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrel feeds Cyl. 1-4-6-7, LEFT barrel 2-3-5-8.

Idl Setting—Initial setting for both screws 1½ turns open. With engine at operating temperature, turn each adjusting screw in or out for smoothest possible idle (highest vacuum and RPM), then turn each screw out (rich) ¼ turn. *NOTE*—If engine rolls from richness when throttle snapped closed, turn each screw in 1/8 turn.

Idl Sp d—(Synchro-mesh)—425 RPM. (Hydra-Matic)—400 RPM, with selector lever in "Dr" range. *For "Idl Spe d Setting" on Air Conditioned Cars, see "Carbur t r" ab v .*

Fl at L v l—1 9/32" from air-horn gasket to top of float with assembly inverted. Use Gauge J-5917 so it rests against power piston shaft with outer leg in line with center of float. Adjust by bending float arm between pivot and float.

Fl at Dr p—1 29/32" between air-horn gasket and lowest point on bottom of float. Adjust by bending float tang toward float needle seat to lessen drop and away from seat to increase drop.

Fast Idl : 1400-1500 RPM with fast idle screw on high step of fast idle cam. Adjust screw as necessary to obtain the correct engine RPM.

Aut matic Ch k Setting: Centered (at index).

►*OTHER DATA: S "Rochester 2GC Carburetor" in Carburet r S ction.*

Hydra-Matic Thrott l Linkage Adjustment: *See "CARBURETOR" ab v .*

Fuel Pump Pressur : 4-5 lbs. (16" above outlet at 1800 RPM.

CARTER 2-BARREL

Carter WGD N . 2058S. Dual downdraft type with automatic choke.

Idl S tting—¾-1¼ (1953); 1½-2½ (1954), turns open. Turn screws out for richer mixture.

Idl Sp d (Synchr -m sh)—425 RPM.

Idl Sp d (Hydra-Matic)—400 RPM with selector lever in "Dr" position.

Idl Sp d (Dynafl w)—400 RPM with selector lever in "P" position.

Fl at L v l: ¼" between top of float and bowl cover with float assembly inverted.

Acc l rating Pump—No seasonal adjustment.

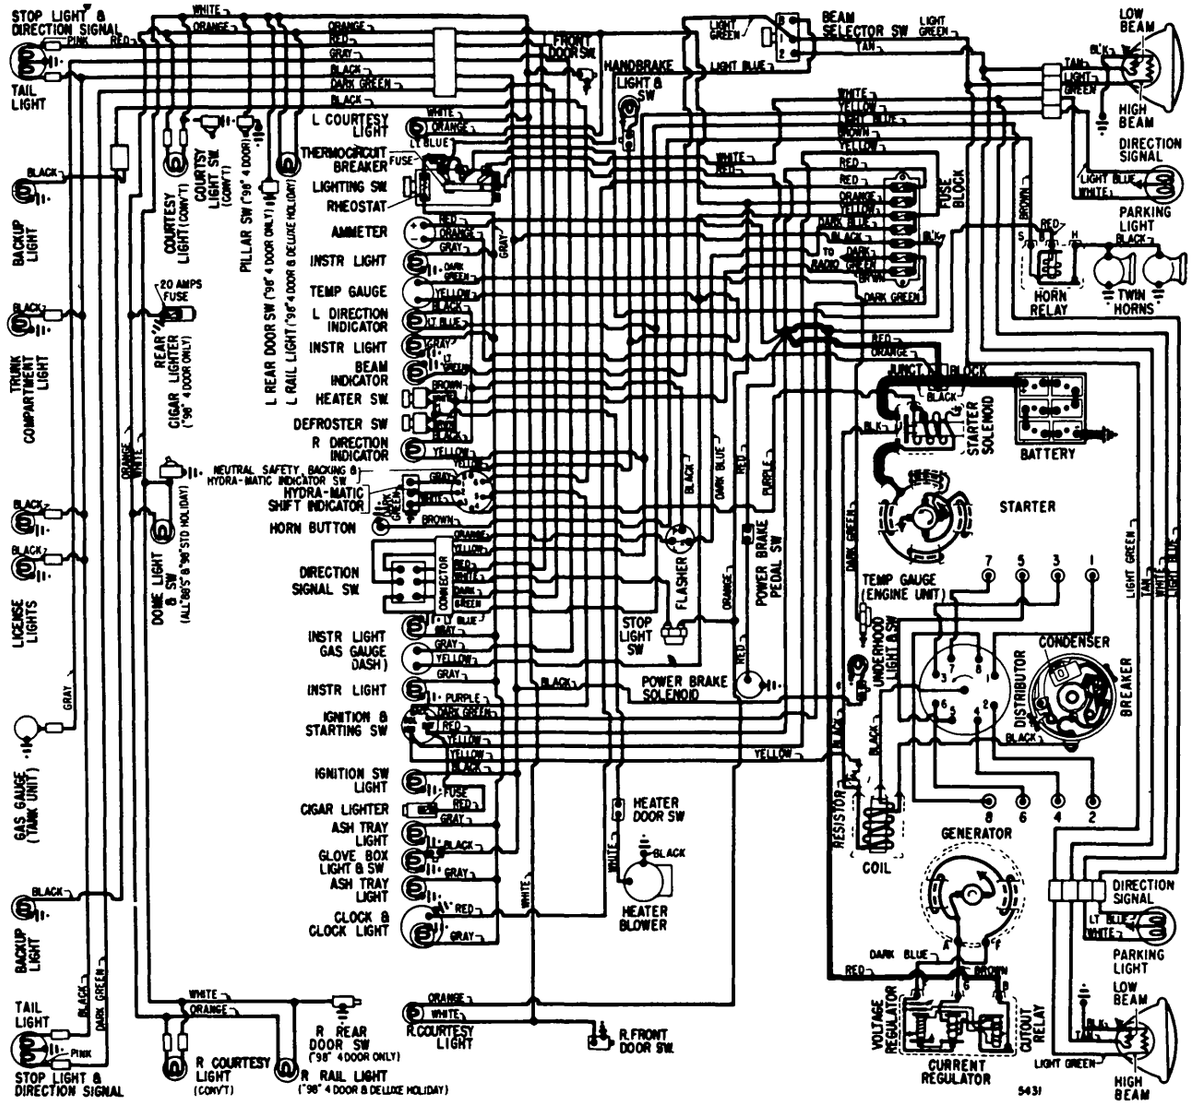
Fast Idl : .020" throttle opening or clearance between valve and wall on side opposite idle ports with choke valve tightly closed. Adjust by turning sleeve on connector rod.

Automatic Choke Setting: Centered (at index).

►*OTHER DATA: See "Carter WGD Carburetor" in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs. at 16" above outlet at 1800 RPM.

CARTER WCFB



Carter No. 2059S (1954), 2246S (1955). Downdraft type with automatic choke.

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrels feed Cyl. 1-4-6-7, LEFT barrels 2-3-5-8.

Idle S tting—With engine at operating temperature, set idle speed (see below), turn each screw in or out for smoothest possible idle (highest vacuum and RPM), then turn each screw out (rich) ¼ turn. NOTE—If engine rolls from richness when throttle snapped closed, turn each screw in (lean) 1/8 turn.

Idle Speed—(Synchro-mesh) 425 RPM, (Hydra-Matic) 400 RPM with selector lever in either "Dr" position. *For "Idle Speed Setting" on Air Conditioned Cars, see "Carburetor" above.*

1954 MODELS

CONTINUED FROM PRECEDING PAGE

►*OTHER DATA: Se "Cart r WCFB Carburetor" in in Carbur tor S cti n.*

Hydra-Matic Throttle Linkage Adjustment: *See "CARBURETOR" above.*

Fu l Pump Pressure: 4-5 lbs. (16" above outlet at 1800 RPM).

ROCHESTER 4GC

Rochester Nos. (Synchro-mesh) - 7005600 (1954), 7006000 (1955).

(Auto. Trans.) - 7005900 (1954), 7007000 (1955).

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrels feed Cyl. 1-4-6-7, LEFT barrels 2-3-5-8.

Idle Setting—With engine at operating temperature, set idle speed (see below), turn each screw in or out for smoothest possible idle (highest vacuum and RPM), then turn each screw out (rich) ¼ turn. *NOTE*—If engine rolls from richness when throttle snapped closed, turn each screw in (lean) 1/8 turn.

Idle Speed—(Synchro-mesh) 425 RPM, (Hydra-Matic) 400 RPM with selector lever in either "Dr" range. *For "Idle Speed Setting" on Air Conditioned Cars, see "Carburetor" above.*

►*OTHER DATA: See "Rochester 4GC Carburetor" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "CARBURETOR" above.*

Fuel Pump Pressure: 4-5 lbs. (16" above outlet at 1800 RPM).

CARB. EQUIPMENT

Fu l Pump: AC No. 9775 (Early 1954), 4140 (Late 1954). 4148 (1955). Fuel & Vacuum.

Pressure—4-5 lbs. at 16" above outlet at 1800 RPM. *See "Fuel Pumps" in Carburetion Equipment Section.*

Gasoline Gauge: AC Electric Type. *NOTE—Gasoline Gauge tank outlet tube is part of gauge tank unit and is equipped with a saran filter.*

Dash Unit—AC No. 1517999.

Tank Unit—AC No. 1518134.

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco 3KM60. *12 volt,* 9 plate, 60 ampere hour capacity (20 hr. rate).

Battery Ground—Negative.

Engine Ground—Connected between engine and forward side of firewall.

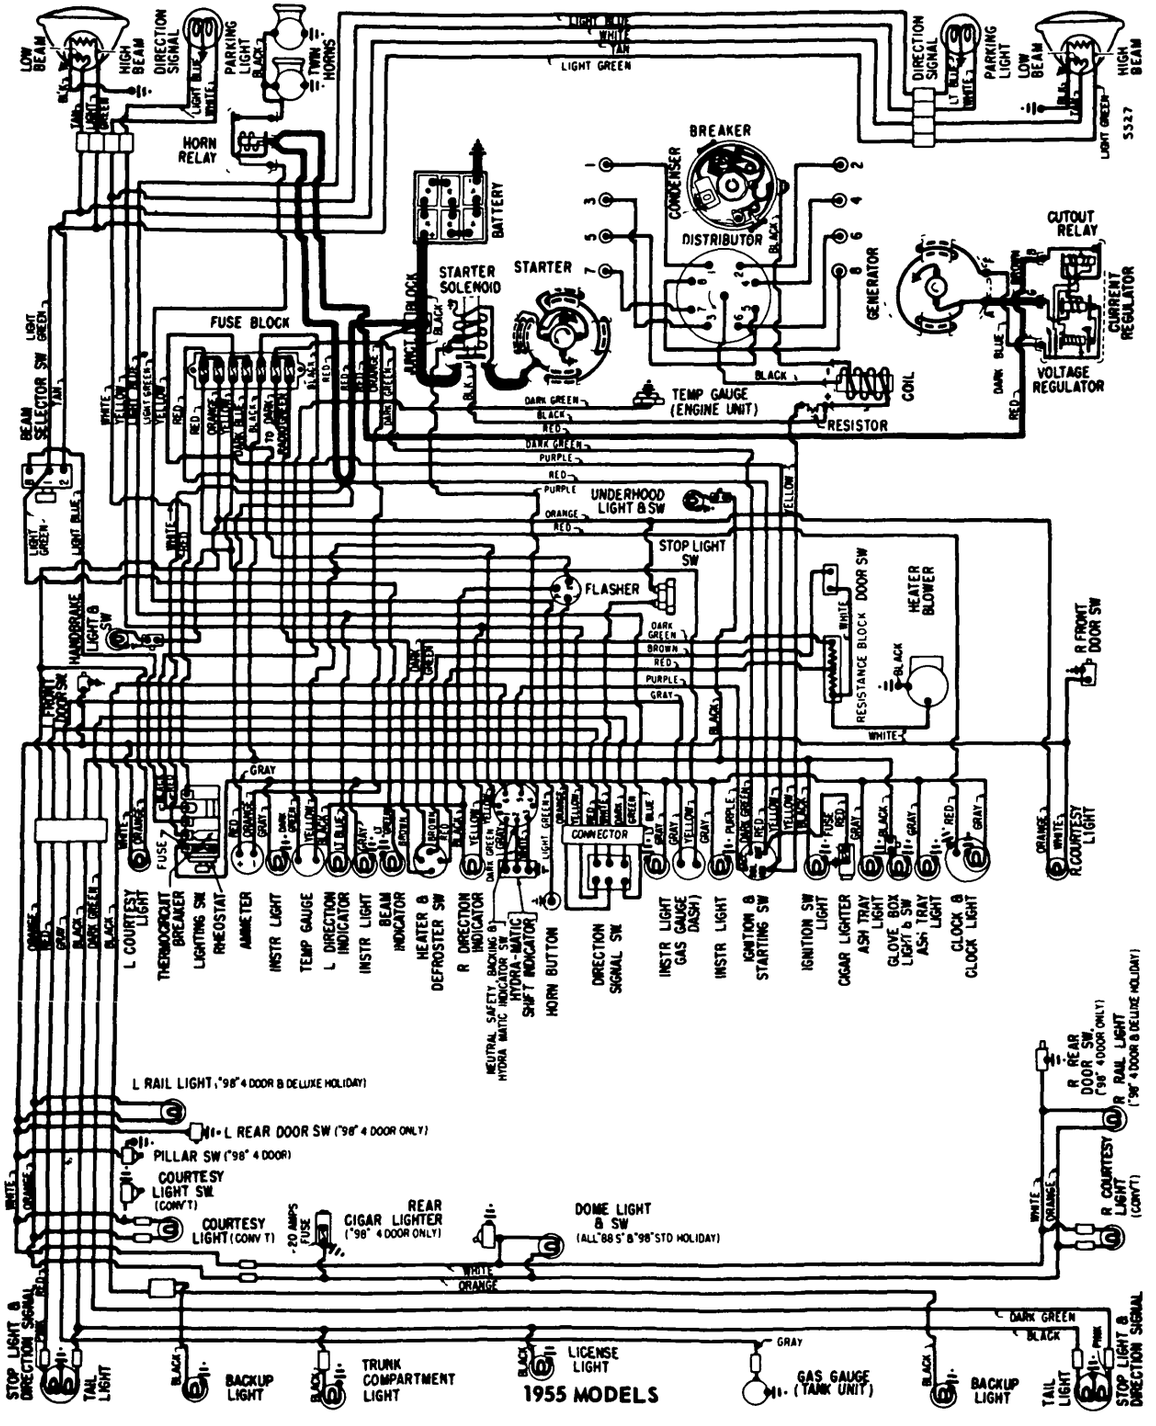
STARTER

Delco-Remy 1107623. *12 Volt.* **Armature—1927343.**

Drive—Overrunning clutch (solenoid pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—30-40 ozs.



Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
11 ft. lbs.	Lock	5.2	460

Starting Switch: Delco-Remy Solenoid 1119761 (no relay used) mounted on starter and controlled by combination Starter & Ignition Switch and Neutral Safety Switch. *NOTE—A N utral Saf ty Switch is used on all mod ls.*

See "Starter Controls" in El ctrical Equipment S ction.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*NEUTRAL SAFETY SWITCH REPLACEMENT CAUTION:* When replacing Neutral Safety Switch, Part No. 1998026 on 1955 model cars make sure that the replacement switch terminals are in the same location as the switch being replaced. The plastic plug used in 1955 carries the switch leads and is designed to fit the second type switch only. *NOTE*–The first type switch can be used providing the leads are removed from the plug and connected individually to the switch

Synchro-Mesh Neutral Safety Switch: Delco-Remy 1998031 (Without Air Conditioning), Delco-Remy 1998094 (With Air Conditioning). Switch is controlled by transmission shift linkage, and allows starter to be operated only when transmission gear shift lever in "Neutral" position

Adjustment–Place transmission in 2nd gear and adjust the Neutral Safety Switch so there is 1/16" clearance between switch arm and stop Check to see that engine will not start with gearshift lever in any position except neutral.

Hydra-Matic Neutral Safety Switch: Delco-Remy 1998026 (Without Air Conditioning), Delco-Remy 1998093 (With Air Conditioning). Combination Neutral Safety Switch, Back-up Light Switch, and Hydra-Matic Indicator Switch

Adjustment–*See "Hydra-Matic Drive" in Transmission Section.*

Hydra-Matic Indicator Switch: *See "Hydra-Matic Transmission" following for description of indicator unit.*

GENERATOR

Delco-Remy 1102003 (Std.), 1102021 (Air-Conditioned Cars). *12 Volt.*

Armature–Delco-Remy 1923535 (All Models)

Maximum Charging Rate–*See Voltage Regulator.*

Performance Data–Cold

Amperes	Volts	RPM
30①	14	2150

①–Not maximum See Regulator

Brush Spring Tension–24-32 ozs

Field Current–1.48-1.62 amps at 12 volts

Rotation–Counter-clockwise at commutator end

Belt Adjustment: Loosen generator attaching bolt and place Tool J-4170 against generator between bracket and generator housing Attach torque wrench to tool to apply torque of 16 ft lbs Tighten generator attaching bolts while holding tension on wrench

REGULATOR

Delco-Remy 1118826. *12 Volt. NOTE–Regulators are "1118825 Series". Specifications below are "Normal" settings*

Cutout Relay

Cuts In–12.8 volts (hot)

Contact Gap–.020"

Air Gap–.020" (with contacts just closed)

Voltage Regulator

Setting–14.5 volts (hot).

Air Gap–.075" with armature pressed down to point where contacts just touching

Checking & Adjusting–*See Electrical Equip. Section*

Current Regulator

Setting–30 amperes (hot)

Air Gap–.075" with armature pressed down to point where contacts just touching

Checking & Adjusting–*See Electrical Equip. Section*

MISC. ELECTRICAL

Headlamps: Sealed Beam *See Electrical Equip. Section*

Autronic Eye: See "Autronic Eye" in Electrical Equipment Section

►*AUTRONIC EYE PRODUCTION CHANGE: See "Autronic Eye" in Electrical Equipment Section.*

Direction Signal: *See Electrical Equipment Section.*

Lighting Switch Removal: Disconnect battery cable and disconnect wires from lighting switch. Pull switch knob out to last notch then depress spring loaded latch button on switch body while pulling rod and knob assembly out of switch Remove switch mounting nut and remove switch and escutcheon from instrument panel.

Stop Light Switch Location (Std. Brakes): Mechanical type on toe board near brake pedal

Stop Light Switch Location (Power Brakes): Directly above brake pedal on firewall. Adjust so lights come on within free travel of brake pedal

FUSES: All fuses (exc. Instrument Panel fuses) are located on a combination fuse and junction block under the instrument panel. A color code is used on the fuse panel corresponding to the color code of circuits protected by each fuse. The following fuses will be found on this panel:

(1) Clock (Std. on 98 Series only) 1 ampere.
(2) Courtesy Lights, Dome & Stop Lights, and Rear Cigar Lighter. 25 amperes.
(3) Fuel & Temp. Gauges, Hand Brake Signal Light, Hydra-Matic Shift Indicator, and Back-up Lights. 9 amperes.
(4) Turn Signal. 9 amperes.
(5) Glove Box, Underhood, Keyhole, Tail, Trunk, & Spot Lights. 9 amperes
(6) Radio. 7.5 amperes.
(7) Heater & Air Conditioner 20 amperes (without Air Conditioner), 25 amperes (with Air Conditioner)
(8) Electric Windows & Antenna. 20 amperes
Instrument Panel Lights–2 amperes located on headlight switch
Cigar Lighter–20 amperes located behind lighter

CIRCUIT BREAKER: 22 amps. Located in headlamp switch

HORNS: Delco-Remy 1999753 (Low Note) **1999754** (High Note) *12 Volt*

Horn Relay: Delco-Remy 1116781. *12 Volt*

Contacts Close–2.75-4.0 volts

Contact Gap–.025" **Air Gap**–.015" (closed)

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section*

►*1954 OLDSMOBILE FRONT MAIN BEARING PRODUCTION CHANGE Beginning with Car Serial V52229 a sl ctiv fit fr nt main b aring ent r d pr duction. There ar two bearings available in addition to th regular Std. siz , .002", .010", & .020" Und rsiz bearings. See "Crankshaft" below.*

ENGINE SPECIFICATIONS: 90° V8 with overhead valves.

Bore	Stroke	Displacement	Rated HP
3 7/8"	3 7/16"	324 cu. ins.	48

Engine	Compr. Ratio	Developed HP
1954①	8.25-1	170 at 4000 RPM
1954②	8.25-1	185 at 4000 RPM
1955①	8.5-1	185 at 4000 RPM
1955②	8.5-1	202 at 4000 RPM

① - Deluxe 88. ② - Super 88 & 98.

Compression & Vacuum Reading–*See Tune-Up.*

CYLINDER HEAD: *See Oldsmobile Special Data.*

INTAKE MANIFOLD INSTALLATION: *See "Cylinder Head & Manifolds" in Oldsmobile Special Data.*

TIGHTENING TORQUES: *See Oldsmobile Special Data.*

OIL PAN REMOVAL: *See Oldsmobile Special Data.*

ENGINE FRONT MOUNT INSTALLATION: *See Oldsmobile Special Data.*

PISTONS

Aluminum alloy, three ring, autothermic, steel strut, slipper skirt, cam ground, tin plated.

Length–4 1/32" **Weight**–21.7 ozs (less rings & pin)

Removal–Pistons and rods removed from above.

►*CAUTION* Mark pistons, rods, and bearing caps with cylinder number before removal to insure correct reinstallation.

Fitting New Pistons: 0005-.0010" skirt clearance measured 1/8" from bottom of skirt with piston pin removed Use a .0015" x 1/2" x 12" feeler between piston (pin removed) and cylinder wall at right angles to pin Pull to withdraw feeler should be 5-12 lbs

►*CAUTION: Allow rebored cylinders to cool to normal room temperature before fitting pistons.*

Replacement Pistons: Standard & .020", .030" Oversize. Pistons furnished only with fitted pins.

Installing Pistons: Mark "F" cast on each side of piston pin hole on front side of piston. Install pistons 1, 3, 5, 7 in left bank, 2, 4, 6, 8 in right bank with letter "F" toward front on all pistons.

PISTON PINS

Floating type with lock rings at each end.

►*CAUTION: Discard old lock rings and install new service type lock rings when installing pins.*

Diameter–.9803-.9807". **Length**–3 9/64".

Clearance in Piston–.0000-.0002" loose

Pin Fit in Piston–Pin should not fall through piston of own weight when using the low limit (.0000" fit) Piston pin can be tapped in place using a brass drift

Pin Fit in Rod Bushing–.0003-.0005" loose.

Replacement Pins: Standard size, and .001", .003" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (#1 & 2)	.077-.078"	①	.001-.003"
Oil (#3)	1.860-1.865"	①	.0018-.0033"

①–Perfect Circle .010-.020". Sealed Power .008-.016".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Replacement Rings: Standard size, .020", .030"Oversize.

Installing Rings: Compression rings with step on inner edge UP. Oil rings marked TOP, installed with mark up.

CONNECTING RODS

Length—6 5/8" (Center to center). **Weight**—29.54 ozs.
Crankpin Journal Diameter—2.2488-2.2498".
Out of Round Limit—.0015".

Bearings—Durex 100A, steel backed, full precision type. Both halves interchangeable. No shims.
Clearance—.0009-.0029".

Sideplay—.002-.011" (total for both rods).

Replacement Bearings: Standard size, .002", .010", .020" Undersize.

Installing Rods: *CAUTION*—Rods have plain side and boss side (two machined bosses at lower end). **Install rods 1, 3, 5, 7 with plain side to front, and 2, 4, 6, 8 with boss side to front** (*NOTE*—Pistons marked "F" on front side). Caps offset and cannot be installed incorrectly. Groove on rod and cap, and pads for numbering caps and rods are on same side.

►*CAUTION—Use Guide tool BT-22 over rod bolts to prevent damaging crankpin journals when removing and installing piston and rod assemblies.*

NOTE—Oil spit hole for lubrication of opposite cylinder wall provided in rod above cap joint.

CRANKSHAFT

Journal Diameter—#1, 2, 3, 4 2.498-2.499"; #5 2.623-2.624".

Bearings—Durex 100A, steel backed, full precision type. Rear bearing flanged.
Clearance—.0005-.002" (Front—See Note below), .002-.0035" (Rear - See Note below), .0005-.003" (Others).

►*FRONT MAIN BEARING NOTE: Selective fit bearing used.* **On cars with Power Steering or Air Conditioning it is very important that front bearing fit be held as close as possible because of the increased pump drive and compressor drive belt load.** Bearing Part No. 565770 (Marked "M" on tang) will reduce bearing clearance .0005". Bearing Part No. 564771 (marked "H" on tang) will reduce bearing clearance .001". These bearings are in addition to regular replacement bearings.

►*REAR BEARING NOTE:* Rear bearings are selective fit during manufacture, 3 sizes used: "M" Medium, "T" Thin, "H" heavy. **Use same size bearing (indicated by letter on tang) when replacing bearing.**

Replacement Bearings: Standard size, .002", .010", .020" Undersize. In addition to lettered bearings used at front and rear. *See Front & Rear Bearing Notes above.*

End Thrust: Taken by rear (#5) flanged bearing.
Endplay—.004-.008"

Crankshaft Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Oldsmobile Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Oldsmobile Special Data.*

Flywheel & Clutch Housing Alignment: *See "Flywheel Housing" in Oldsmobile Special Data.*

CAMSHAFT

Journal Diameters—1.8724-1.8729".
Bearings—Steel backed babbitt.
Clearance—.0014-.0036".

End Thrust: Forward thrust taken by plunger and spring on front of engine, rear thrust at front of cylinder block.

►*CAUTION:* Two main oil gallery holes in block sealed by hex head bolt. A small hole in bolt for right hand gallery provides lubrication to timing chain, fuel pump eccentric and lever.

Camshaft Removal & Installation: *See "Camshaft" in Oldsmobile Special Data.*

Timing Chain:	Link-Belt (Std.)	Morse (Optl.)
Width	27/32"	7/8"
Pitch	.500"	.375"
Length (Links)	48	64

►*NOTE—Morse and Link-Belt chains not interchangeable unless sprockets also changed.*

Engine Front Cover Removal & Installation: *See "Engine Front Cover" in Oldsmobile Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Oldsmobile Special Data.*

Camshaft Setting: Mesh chain with sprocket marks adjacent and in line with a straight edge across shaft centers (or use Tool BT-11).

►*NOTE—Fuel pump eccentric bolted to front of camshaft ahead of sprocket. Assemble with "0" mark to front, machined step against sprocket.*

VALVES

►*INTAKE & EXHAUST VALVE AND SEAL PRODUCTION CHANGE: New valves used in production and for service replacement do not have the oil seal grooves, and valve stem is relieved below the head and at end of stem. A "Top Hat" type oil seal is used with this valve.*

Tappet Clearance: None in service (hydraulic).

Valve	Head Diam.	Stem Diam.	① Length
Intake	1¾"	.3417-.3425"	4.965-4.985"
Exhaust	1.432-1.442"	.3930-.3938"	4.989-5.009"

Valve	Angle	② Lift	Clearance
Intake	45°	.403"	.0022-.0040"
Exhaust	45°	.403"	.0027-.0045"

① - 1954 (Intake) 4.907-4.927", (Exhaust) 4.931-4.951".
② - 1954 Lift .366".

Valve Seat Width—.042-.071" (Intake), .070-.098" (Exhaust).

Intake & Exhaust Valve Stem Seals: First type seals are "O" ring type installed in second groove of valve. Later type valves (see Production Change Above) are a "Top Hat" type seal installed above valve spring.

Valve Springs: Intake and exhaust valve springs are alike. Dampeners used on lower end of all valve springs.
Valve Spring Free Length—2.33".

Valve Spring Specifications

Valve	Pressure	Length
Closed	85-95 lbs.	1.829"
Open	149-163 lbs.	1.463"

►*CAUTION—Lower end of damper and spring must seat in recess in head.*

Valve Guides: Intake guides tapered on lower end. Press guides in head until top of guide is 47/64" (.7344") above face of valve spring seat (Tool J-5158 positions guides correctly in head). Ream inside diameter of guide after installation to .3447-.3457 (Intake), .3965-.3975" (Exhaust).

Hydraulic Valve Lifters: Barrel type.

►*HYDRAULIC LIFTER INSTALLATION CAUTION:* FIVE different sizes used in production as follows (marked as indicated): Standard (unmarked), .001" O.S. (marked "1"), .002" O.S. (marked "2"), .003" O.S. (marked "3"), .005" O.S. (marked "5"). **Lifters** marked by etched number on lifter body. **Cylinder Block** marked by number on rail under engine top cover. *Reinstall lifter in same hole or replace with proper size.*
Diameter—.8424-.8427". **Length**—2" (Overall).
Clearance in Block—.0005-.0018" (Selective).

Replacement Lifters: Standard size, .001", .002", .003", .005" Oversize.

Hydraulic Lifter Overhaul & Testing—*See "Valve System" in Oldsmobile Special Data.*

Rocker Arm Assembly: *See "Valve System" in Oldsmobile Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves—Open 13½° BTDC. Close 50½° ALDC.
Exhaust Valves—Open 49½° BLDC. Close 14½° ATDC.

Valve Timing Check—Remove left hand cylinder head rocker arm assembly and rotate engine so that #1 piston is on top dead center (firing stroke). Trailing edge of notch in vibration dampener will be aligned with pointer on timing chain cover. Install tool J-5374 in place of rear rocker shaft bracket with step plunger over #7 cylinder exhaust push rod. The 7/16" diameter pilot at bottom of tool will fit into cylinder head bolt hole. Screw main body of gauge down so step plunger contacts push rod and small diameter of step plunger is flush with top of main body. Tighten clamp bolt. Rotate engine one complete revolution so that #1 piston is again at TDC (intake stroke). Distributor rotor should now be pointing toward rear of engine. If timing chain is installed properly, top of tool plunger will rise so top of main body of tool is between second and third step. If camshaft is retarded one tooth, the third step will rise above top of main body, and if advanced one tooth, second step will be below main body.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Oldsmobile Special Data.*

Crankcase Capacity: 5 qts. (refill). 6 qts. (dry).
NOTE—1 qt. additional for dry filter.

Normal Oil Pressure: 35-45 lbs. at 50 MPH.
Pressure Regulator Valve—In pump body. Not adjustable.

Oil Pressure Indicator—AC No. 1508118. Not electrical.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Pump: Gear type. In crankcase at rear end.
Pump Ov rhaul—*S "Oil Pump" in Oldsmobile Special Data.*

Oil Filter: AC No. PM-90-3 full flow type (optional). On lower right side of crankcase at rear.
R placement Filter Element—AC No. PF-122.

►*CAUTION*—If filter (or pad cover if filter not used)is replaced, used a new gasket (coat both sides with POB No. 5 Sealer) and tighten bolts to 35-40 ft. lbs. Oil filter or pad mounted externally on lower right side of crankcase at rear. Oil filter is full flow type (all oil from pump delivered to oil filter) requires pad when filter not used to return oil to main oil gallery.

Crankcase Ventilati n: Air intake in oil filler cap has oil-wetted cleaner, AC No. 1551091 (Std.), No. 1551509 (Heavy Duty). Outlet is connected to ventilating baffle at rear of block above right bank. Outlet pipe is push fit at ventilator and extends down below right rear corner of engine.

►*NOTE:* Air cleaner also used in lower section of ventilator outlet tube on cars with heavy duty inlet breather in filler cap and oil bath air cleaner.

COOLING

Wat r Capacity: 20½ qts. (without heater), 21½ qts. (with heater).

Pr ssure Valv : AC Type RC-1, No. 850549. Radiator Filler Cap (stamped 549/7#).

Th rm stat: Oldsmobile No. 563219 (160°). NOTE—use No. 563311 (180°) with permanent type anti-freeze.

Wat r Pump: Packless, sealed ball bearing type.
See "Wat r Pump" in Oldsmobile Special Data.
Pump R m val—Remove fan and fan pulley. Remove six mounting bolts (4 to engine cover, 2 to engine block). Remove pump. *NOTE*—When installing pump, coat one side of pump housing gasket with gasket cement, dip bolts in CP No. 9 Sealer.

Temp ratur Gaug : *12 Volt.* AC Electric. *CAUTION*—Use only 12 Volt type units which are stamped "12 Volt" on threaded side of block unit below nut hex. Later type 12 volt block units also have a copper colored terminal. 6 volt units have a natural brass terminal.
Dash Unit—AC No. 1512810.
Engin Unit—AC No. 1512678.
See "Temp ratur Gaug s" in Miscellaneous Section.

CLUTCH

L ng 11CF-11 Tl. Single plate dry disc type.
S e "Long Clutches" in Clutch Secti n.
Clutch Disc N .—Oldsmobile No. 565059.
P dal Adjustm nt: Pedal free travel 1 1/8-1 3/8". Adjust by turning adjusting nut on clutch connector link at throw-out yoke.

R m val: Remove transmission (see Transmission), remove right and left splash pans, engine breather pipe, and right and left lower flywheel housing bolts. Install Engine Rear Support Tool BT-28, entering pilot supports into lower housing bolt holes. Remove engine rear mount bolts at clutch housing, and remove frame cross member by removing three bolts at each end. Remove clutch housing by removing eight bolts holding housing to flywheel housing. Remove clutch assembly from flywheel.

Clutch Housing Alignment: *See "Flywheel Housing" in Oldsmobile Special Data.*

SYNCHRO-MESH TRANSMISSION

Own. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse) all helical gear type. *See "Oldsmobile Synchro-mesh" in Transmission Section.*

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission and disconnect manual control rods and speedometer cable at transmission. Remove clutch return spring and disconnect clutch linkage at yoke connecting link. Detach drive shaft at rear universal joint, and slide shaft from transmission. Remove transmission.

HYDRA-MATIC DRIVE

"Dual-Range" four speed automatic transmission and fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*NOISE IN LIGHT THROTTLE REVERSE OPERATION CORRECTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level every 1000 miles. Drain & Refill every 25,000 miles. Use only GM Hydra-Matic Drive Fluid.

Checking Fluid Level—Set hand brake, let engine idle and move selector lever to "Lo" position. Raise engine Raise engine hood and remove dipstick located at right rear side of engine, wipe dry. With engine idling, replace dipstick, and remove quickly to check fluid level. Add GM Hydra-Matic Drive Fluid to bring level to "FULL" mark.

►*CAUTION—DO NOT FILL ABOVE "FULL" MARK.*

Hydra-Matic Indicat r: Lights on instrument panel indicate position of Hydra-Matic selector lever. Unit consists of three coils in sealed unit operating five lights on instrument panel. Coils are energized by movement of Hydra-Matic Neutral Safety and Indicator Switch which is connected to Hydra-Matic linkage.

Checking Indicator Unit—Disconnect all three leads from unit. Connect jumper wire from hot side of ignition switch to #1 terminal on unit; "N" should light. Connected to #2 terminal; "S" should light. Connected to to #3 terminal; "R" should light. If indicator does not indicate correctly, replace unit.

►*OTHER HYDRA-MATIC SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics. Roller bearing type.

►***PROPELLER SHAFT YOKE LUBRICATION CAUTION:*** **Remove plug, install fitting and lubricate with hand pressure gun using high melting point, low viscosity lubricant, Oldsmobile Part No. 567196 Remove fitting and replace plug. Do not use chassis grease at this point.**

►*CAUTION*—Rear universal companion flange nut controls rear axle pinion bearing pre-load (must be adjusted whenever nut loosened) *See "Oldsmobile Hypoid" in Rear Axle Section.*

REAR AXLE

Own. Hypoid gear, semi-floating with Hotchkiss drive. *See "Oldsmobile Hypoid" in Rear Axle Section.*

►*PINION SHAFT COMPRESSIBLE SPACER PRODUCTION CHANGE: New type spacer not interchangeabl with those on previous rear axle assemblies. S "Oldsmobile Hypoid" in Rear Axle Section.*

Axle Ratios

Ratio	①C d
3.07-1 (40:13)	0
3.9-1 (39:10)	4
3.64-1 (40:11)	6
3.42-1 (41:12)	8
3.23-1 (42:13)	9

①—Rear axle ratio code number stamped on lower locating boss on forward side of carrier.

Backlash—.004-.006". Screw adjustment.

Axle Shaft Removal: Remove wheel and take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be reused, if nuts damaged, new nuts must be used). Remove backing plate mounting nuts and static collector. Loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal), replace one nut to hold backing plate in position.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Diff r ntial Carri r Ass mbly R m val: Remove axle shafts (see above). Clean differential carrier and axle housing around carrier to prevent dirt entering housing. Disconnect propeller shaft at rear universal joint after having wired trunnion blocks together to avoid loss of rollers. Mark universal joint so it can be replaced in the same position. Drain oil by removing nuts from carrier mounting studs and moving carrier away from housing.

CAUTION—Do not wash exterior of carrier until differential has been disassembled.

Wh el Bearing Adjustment: None required. Bearings are built with .012-.015" endplay between balls. Check endplay before removing axle shaft and if endplay greater than .020", replace bearings. *CAUTION*—If bearings removed from shaft, they cannot be reused.

SHOCK ABSORBERS

Delco. Double Acting used on front. **Direct Acting** used on rear.

Front Shock Absorbers

Model	Right	Delco No.	Left
88 & Super 88 ①	5511190		5511191
98	5513733		5513734

①—Except Air-Conditioned Cars.

Rear Shock Absorbers

Model	Right	Delco No.	Left
88 & Super 88	5511192		5511192
98	5519693		5519693

►*SHOCK ABSORBER LUBRICATION NOTE*—(Front) Check fluid level every 10,000 miles and replenish with Delco Shock Absorber Fluid. (Rear) Not serviced.

FRONT SUSPENSION

Independent. Double acting shock absorber directly connected to steering knuckle support and forms upper control arm.
See *"Oldsmobile" in Front Suspension Section.*

►*STEERING TIE-ROD STRIKING OIL PAN CORRECTION:* To prevent tie-rod from striking oil pan on extreme turns, place a 7/16" flat washer under head of wheel stop bolt on steering knuckle support so that stop bolt protrudes a minimum of 1". If this does not provide at least 1/8" clearance between tie-rod and pan, reform the pan slightly as necessary. *CAUTION—Be very careful not to puncture oil pan.*

Kingpin Inclinati n—5° 51' 10" crosswise.
Cast r— 0° to Neg. ¾°. Variation betwe en both sides should not exceed ½°.
Camber—Neg. ¾° to Pos. ¾°. Variation between both sides should not exceed ½°.
Toe-In—1/16" to 1/8".
Toe-Out on Turns—23°±½° on inner wheel with outer wheel turned 20°.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic power cylinder.
See "Saginaw (GM) Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic (Single Anchor). Conventional two shoe with short molded lining front (Primary), and long molded lining rear (Secondary). Parking brake applies rear wheel service brakes.
See "Bendix Hydraulic" in Brake Section.

►***1954 PARKING BRAKE CABLE PRODUCTION CHANGE & ADJUSTMENT CAUTION:*** **Early 1954 type parking brake rear cables are longer, and front cables are shorter. It is necessary when adjusting the first types that threaded part of rear cables do not protrude into clevis more than ¾". Front cable threaded part should be installed all the way through the clevis. Later type cables have been adjusted for length and do not require the above precautions.**

►*BRAKE ASSEMBLY PRODUCTION CHANGE:* Beginning May 15, the brake assembly has been revised to include a larger retracting spring and parking lever assembly *See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section*
Drums—Diameter 11". Rebore limits .060".

Wheel Cylinder Diameter—Front 1 1/32". Rear 31/32".
Lining—Molded. **Width**—2½" (front wheels), 2" (rear wheels). **Thickness**—7/32".

Length—(Primary) 9 3/8", (Secondary) 12 1/32"

Cl aranc —Adjusting screw backed off 16 notches from point where wheels can just be turned by hand

Braking P w r—50% Front. 44% Rear.

Standard Master Cylinder: On left chassis frame front extension under hood.

Checking Fluid—Fluid reservoir is part of master cylinder. Maintain fluid level to top of reservoir.

Removal—Remove from above. Not necessary to disturb other parts.

Power Brakes: Bendix or Moraine Power Unit (combination vacuum power unit and hydraulic master cylinder) Unit is mounted on under side of toe board and replaces regular master cylinder. *See "B ndix Pow r Unit" or "Moraine Power Unit" in Brak S ction.*

Checking Fluid—Same as for standard master cylinder.

Removal of Power Unit—Disconnect hydraulic line at master cylinder and secure hose so that end is above level of junction assembly. Disconnect vacuum hoses hoses at power cylinder, and remove dipstick. Disconnect leads from stop light switch and fold back floor mat. Remove three brake pedal bracket attaching bolts and remove pedal and bracket. Remove mast jacket grommet retainer and slide grommet up mast jacket. Remove mast jacket cover plate attaching screws, cover plate and power cylinder assembly. Remove two cover plate-to-power cylinder bolts and remove cover plate.

MISC. MECHANICAL

Windshield Wipers: Cable operated Vacuum type. *S e "Windshield Wipers" in Miscellan ous S ction.*

Air Conditioning: Frigidaire type with solenoid controlled compressor clutch (compressor) operates only with air-conditioning switch turned on. *S "Frigidaire Air-Conditioning" in Miscellan us Section.*
Window Regulators: Two systems used:
(1) Electric—Reversible motor in each window.
(2) Hydro-Lectric—Window raised hydraulically, lowered by return spring. *See Misc llaneous S ction for typ s and Model application.*
Power Top Control: Hydro-Lectric. *S "Pow r Top Controls" in Miscellaneous S cti n.*
Power Seat Adjusters: Two systems used:
(1) Electric—Individual reversible motor for vertical and horizontal adjustment.
(2) Hydro-Lectric—Individual cylinder for vertical and horizontal adjustment. *S e Misc llaneous Secti n for types and Model applicati n.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBERS: On left body pillar post.
Starting Serial Number — 1001.

►*SERIAL NUMBER NOTE. Complete serial number (example 567M 1001) includes following identification data in sequence.*

Year	Series①	Assy. Plant②	Serial No.
56	7	M	1001

① — Series Designation 7 — (88 Series). 8 — (Super 88 Series). 9 — (98 Series).

② — See Assembly Plant Designation following.

Assembly Plant Designation

M — Lansing	L — Linden
A — Atlanta	C — South Gate
B — Framingham	W — Wilmington
K — Kansas City	T — Arlington

ENGINE NUMBER: Stamped on machined pad located on top of left hand cylinder bank of block. The number can be observed between the front and center exhaust manifold ports.
Starting Engine Number—V1,000,001

TUNE-UP

COMPRESSION PRESSURE: 100 lbs. minimum at cranking speed. Reading on low cylinders should not be less than 80% of high cylinder.

VACUUM READING: Steady 17" minimum at idling speed.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatic coil type located on left side between exhaust manifold and exhaust pipe. Stop spring should strike stop before counter-weight touches pin to prevent valve rattle when cold.

►*DUAL EXHAUST NOTE:* When heat control valve closed, most exhaust gases are discharged through right exhaust pipe.

►*DUAL EXHAUST INSTALLATION CAUTION (To prevent Excessive Exhaust Noises From Being Transmitted Into Car):* It is important that intermediate bracket clamp be tightened AFTER other clamps and supports are tightened. If tightened first, vibrations will be transmitted to car.

IGNITION

FIRING ORDER: 1—8—7—3—6—5—4—2.
Cylinders—RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.
SPARK PLUG GAP: .030".
Spark Plugs—AC No. 44.14mm. Torque to 23-28 ft. lbs.
COIL: Delco-Remy 1115087. 12 Volt.
Ignition Current—2.0 amperes idling. 4.5 stopped.
Resistor—**Delco-Remy 1928016.** On bracket adjacent to ignition coil.

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by second lead from ignition switch.*

DISTRIBUTOR: Delco-Remy 1110857. 12 Volt. New external adjustment "Window" type. *See "Delco-Remy (Window Type) Distributor" in Electrical Section.*
Condenser—Delco-Remy 1932004. **Capacity** .18-.23 mfd.
Contact Point Set — Delco-Remy 1931988.
Breaker Gap — .016"
Cam Angle — 26-33°
Breaker Arm Spring Tension — 19-23 ozs.
Rotation — Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		400	0-4		800
7¾-9¾		1000	15½-19½		2000
9-11		1200	18-22		2400
11-13		2000	22-26		4000

Vacuum Spark Control: Delco-Remy 1116096.
Plunger Travel — 7/32—15/64".

Vacuum Advance

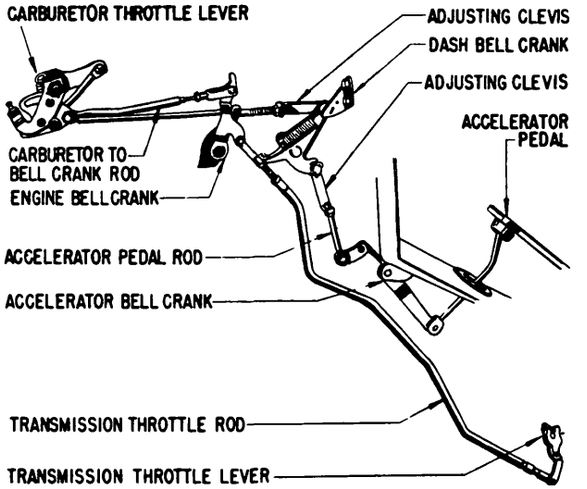
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4.5—6.5
10.75	21.50	15.25—16.0

IGNITION TIMING

Setting—5° BTDC, with engine idling at 850 RPM and vacuum line to distributor disconnected and carburetor opening taped closed.

►*DETONATION CAUTION: If engine detonates (due to low octane fuel or carbon build-up) set timing to 2½° BTDC. For high altitude operation, timing can be adjusted to 7½° BTDC, if detonation does not occur.*
Timing Mark— Slot in rim of crankshaft pulley and pointer on front cover. Leading edge of slot is 5° BTDC. Trailing edge is TDC. Midway between these points is 2½° BTDC.

CARBURETOR



►*CARBURETOR APPLICATION: Rochester 2GC 2-Barrel used on 88 Series, Rochester 4GC 4-Barrel used on Super 88 & 98 Series.*

►*IDLE ADJUSTMENT NOTE: A "Split" throttle lever permits idle speed adjustment after Hydra-Matic Throttle Linkage adjustment made (without affecting that adjustment).*

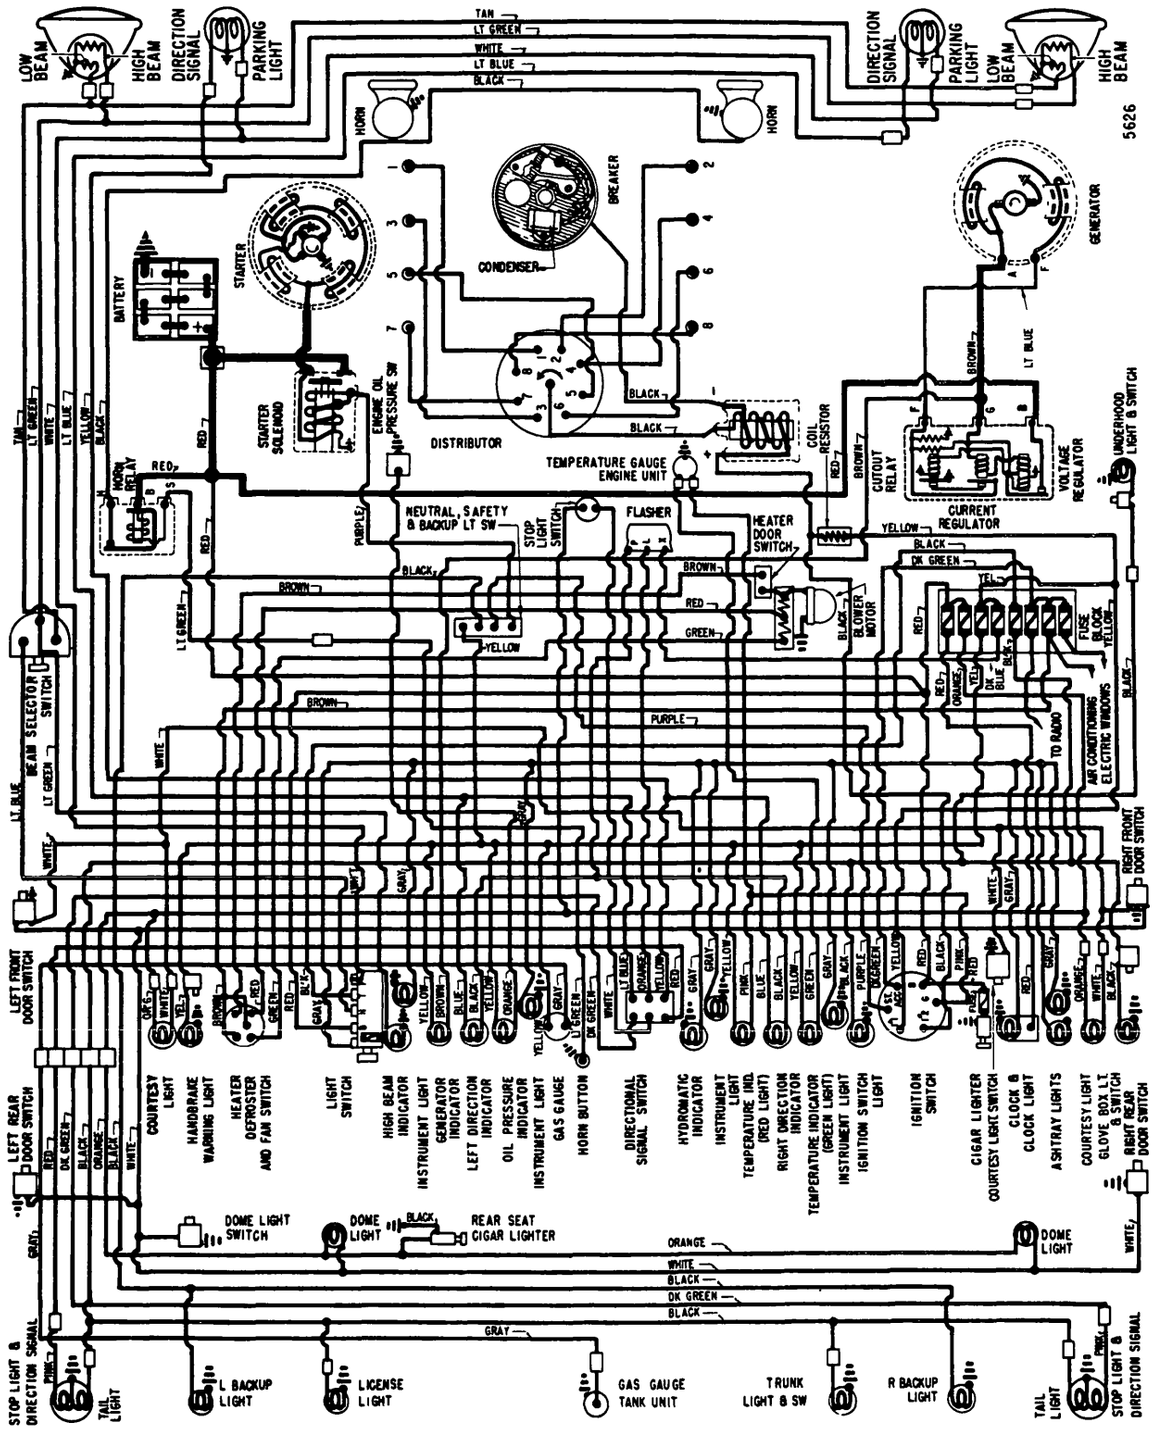
Throttle Return Check Adjustment (Cars with "Jetaway" Hydra-Matic): With transmission in "N" (Neutral) and engine at normal operating temperature, set carburetor on fast idle and adjust to 1500 RPM. Flash throttle and allow to return to slow idle, then turn off the ignition switch. Set carburetor on fast idle and check clearance between throttle return check plunger and throttle lever. Adjust to .020" using two wrenches so that diaphragm is not permitted to turn.

THROTTLE LINKAGE ADJUSTMENT (HYDRA-MATIC DRIVE CARS): Install Throttle Return Check Holding Tool J-6342 to hold plunger away from throttle lever. Proceed as follows:

1) Remove throttle rod from transmission throttle lever and move throttle lever to rear against its stop, and with Throttle Lever Gauge J-5605 (88 Series with Std. Hydra-Matic), Gauge J-6344 (All Series with "Jetaway" Hydra-Matic), placed flat against rear face of transmission case, rod on gauge should just enter hole in throttle lever. Adjust throttle lever by bending with tool J-2029. Attach throttle rod to lever.

HYDRA-MATIC THROTTLE LINKAGE

2) With carburetor on slow idle adjust rod between throttle lever on carburetor and bellcrank on dash so a clearance of 11/32" to 13/32" exists between bellcrank lever and dash *(NOTE — Open side of clevis should face away from engine with 4-Barrel carburetor, and toward engine with 2-Barrel carburetor).*



3) Loosen jam nuts and remove both clevis pins and rods from bellcrank on rear of cylinder head. With bellcrank held against the stop and bellcrank-to-transmission throttle lever rod pushed back against the stop, adjust clevis so pin will enter freely into holes in clevis and bellcrank. Install cotter pin and tighten jam nut (bellcrank should be against the stop. If it is away from the stop, transmission throttle lever rod is too long). Adjust short rod from carburetor-to-bellcrank so that clevis pin just touches gauge point (gauge point is forward face of elongated section of lever directly above upper hole in lever) on bellcrank, or is one-half turn short.

NOTE — Throttle rod should be pulled lightly toward rear of engine to remove slack and bellcrank should be against the stop when adjustments made.

4) Install clevis pin and cotter pin and tighten jam nut.

5) Hold choke wide open and pull forward on bellcrank on dash until throttle is wide open. Then go beyond to the point of maximum transmission lever travel (this point is a matter of feel and care must be taken not to bend or stretch linkage beyond the actual point of maximum transmission lever travel). With throttle held in this position adjust stopscrew on carburetor throttle lever to just touch the tang on the downshift lever

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

(carburetor-to-bellcrank rods are attached to downshift lever). *NOTE* – This adjustment will prevent linkage from bending when a detent downshift is made.

6) Adjust accelerator pedal as follows: Place a wood block 3 7/8" long on the top center of the floor mat retainer and bring bottom of accelerator pedal down to rest on block. With carburetor in the slow idle position (choke completely off), pedal should just touch gauge block. If necessary to adjust, disconnect rod assembly between bellcrank on dash and accelerator pedal bell and adjust rod so that clevis just slides over pin with wood block in position and carburetor in slow idle position. Reassemble rod between dash bellcrank and accelerator bellcrank, making sure that open side of rod is facing away from engine, then remove wood block.

ROCHESTER 2GC (CONCENTRIC BOWL) No. 7007223

The new 2GC (Concentric Bowl) Rochester Carburetor is similar in design to the 2GC (Side Bowl) carburetor used on previous models, the principal difference being the concentric bowl design and the relocation of the metering jets toward the center of the carburetor.

►*ENGINE STALLING WHEN COLD CORRECTION (First Cars)*: Caused by carburetor dropping down to slow idle before engine fully warmed up. Correct by drilling 3/64" hole in end of choke piston to reduce vacuum behind piston. *NOTE–Carburetors tag-dated "B" and later incorporate changes in piston and choke housing DO NOT require this modification.*

►*CARBURETOR PRODUCTION CHANGES (To Correct Cold Drive-away & Low Speed Acceleration Difficulties): See "Rochester 2GC Carburetor" in Carburetion Section.*

Service Replacement Carburetor – Rochester No. 7009300 (Service Package), furnished less Throttle Return Check Assembly.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting – 1 1/2 turns open (initial setting). With engine at normal operating temperature, turn each idle adjusting screw in or out for smoothest possible idle (highest vacuum and RPM), then turn each screw out (rich) 1/4 turn. *NOTE* – If engine rolls from richness when throttle snapped closed, turn each screw in 1/8 turn.

Idle Speed – 425 RPM (Synchro-mesh); 400 RPM (Hydra-Matic – With selector lever in "Dr" range).

Float Level – *NOTE – Double floats used in this carburetor.* With air horn inverted and gasket in place, distance from gasket surface to top of floats should be 1 7/16". Use Float Setting Gauge J-6337 (Oldsmobile), BT-125 (Rochester) and position gauge over both floats so that gauge rests against curvature of air horn. Bend float arm tang until floats just touch the gauge. Align floats vertically in gauge slots.

Float Drop – With air horn held upright, distance from bottom of float to gasket surface should be 2". Bend the float tang toward needle seat to lessen drop and away from seat to increase drop.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fast Idl : 1700 RPM with fast idle screw on high step of fast idle cam. Adjust screw as necessary to obtain the correct engine RPM.

Unl ad r: Index the throttle levers by backing out the idle stop screw, then turn it **in one turn** beyond the point where the outside lever begins to move. With the throttle valves wide open, the large end of Gauge J-6338 (Oldsmobile), BT-127 (Rochester), should just fit between the upper edge of the choke valve and the air horn wall (this distance is .155"). To adjust, bend the throttle lever tang with Tool BT-69.

Aut matic Ch k Setting: One notch rich. *NOTE*–Supersedes previous "Centered (at index)" specification.

►*OTHER DATA: S "Rochester 2GC Carburetor" in Carbur ti n S ction.*

Throttl R turn Ch ck Adjustment (Hydra-Matic Drive Cars): *S e CARBURETOR above.*

Hydra-Matic Thr ttl Linkage Adjustment: *See CARBURETOR abov .*

Fuel Pump Pr ssure: 4 — 5 1/4 lbs. at 450-1000 RPM.

ROCHESTER 4GC

Roch ster N . 7007221 (Hydra-Matic), 7007222 (Synchr -m sh).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idl S tting — With engine at operating temperature, set the idle speed (see below), turn each screw in or out for smoothest possible idle (highest vacuum and RPM), then turn each screw out (rich) 1/4 turn. NOTE — If engine rolls from richness when throttle snapped closed, turn each screw in (lean) 1/8 turn.

Idle Sp ed — 425 RPM (Synchro-mesh); 400 RPM (Hydra-Matic — With selector lever in "Dr" range).

►*OTHER DATA: S "Rochester 4GC Carburetor" in Carburetion Secti n.*

Thr ttl Return Check Adjustment (Hydra-Matic Drive Cars): *S CARBURETOR above.*

Hydra-Matic Thr ttl Linkage Adjustment: *See CARBURETOR abov .*

Fuel Pump Pr ssur : 4-5¼ lbs. at 450-1000 RPM.

CARB. EQUIPMENT

Fu l Pump: AC Replac m nt No. 4317. Fuel & Vacuum.
Pr ssur — 4-5¼ lbs. at 450-1000 RPM.
S "Fu l Pumps" in Carburetion Section.

Gasolin Gaug : AC Electric type.
Dash Unit — AC No. 1518430.
Tank Unit — AC No. 1518409.
See "Fu l Gaug s" in Carburetion Section.

BATTERY

D lc 3KMR62. *12 Volt,* 9 plate, 62 ampere hour capacity (20 hour rate).
Batt ry Ground — Negative.
Engin Gr und—Connected between engine and forward side of firewall.

STARTER

D lc -R my 1107638. *12 V lt.* **Armatur** 1927343.
Driv — Overrunning clutch (solenoid pinion shift).
R tati n — Counter-clockwise at commutator end.
Brush Spring T nsi n — 35 ozs. minimum.

P rf rmanc Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95 max.
10.5 ft. lbs.	Lock	5.4	470 max.

Starting Switch: Solenoid switch, Delco-Remy 1119780, mounted on starter and controlled by combination Starter & Ignition Switch, Delco-Remy 1116521, and Neutral Safety Switch (see below). *NOTE* - Neutral Safety Switch used on all models with automatic transmission.

Hydra-Matic Neutral Safety Switch: Delco-Remy 1998135 (88 Series with Std. Hydra-Matic — 5 - position switch). **Delco-Remy 1998125** - All Series with "Jetaway" Hydra-Matic - 6-position). Combination Neutral Safety and Back-up Light Switch.
Adjustment — *See "Dual Range" or "Dual Coupling" Hydra-Matic in Transmission Section.*

GENERATOR

Delco-Remy 1102003 (Std.), 1102021 (Air Conditioned Cars). *12 Volt. NOTE* — Above listed generators are with pulley. Generator without pulley is Delco-Remy 1102005.

►*GENERATOR WARNING LIGHT NOTE:* Warning light lights when ignition turned on. As generator speed increases, light will go out.

Armature — Delco-Remy 1923535 (All Models).
Maximum Charging Rate — *See Voltage Regulator.*

Performance Data

Amperes	Volts	RPM
30 Ⓒ	14	2150

Ⓒ — Not maximum. See Regulator.
Brush Spring Tension — 28 ozs.
Field Current — 1.48-1.62 amperes at 12 volts.
Rotation — Counter-clockwise at commutator end.

Belt Adjustment: Loosen generator attaching bolt and place Tool J-4170-B against generator between bracket and generator housing. Attach torque wrench to tool to apply torque of 16 ft. lbs. (Std.), 20 ft. lbs. (Air Conditioning). Tighten generator attaching bolts while holding tension on wrench.

REGULATOR

Delco-Remy 1119001. *12 Volt. NOTE - Regulator is "1119000 Series" Specifications below are "Normal" settings.*

Cutout Relay
Cuts In — 11.8-13.5 volts (hot).
Contact Gap — .020".
Air Gap — .020" (with contacts just closed).

Voltage Regulator
Setting — 13.8-14.8 volts (hot).
Air Gap — .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting—*See "1119000 Series Regulator" in Electrical Section.*

Current Regulator
Setting — 27-33 amperes (hot).
Air Gap — .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting — *See "1119000 Series Regulator" in El ctrical S ction.*

MISC. ELECTRICAL

H adlamps: Sealed B am. *See El ctrical S ction.*
Dir cti n Signal: *S El ctrical Secti n.*
Autr nic Ey : *S El ctrical S ction.*

Lighting Switch R m val: Disconnect battery cable and disconnect wires from lighting switch. Pull switch knob out to last notch then depress spring loaded latch button on switch body while pulling rod and knob assembly out of switch. Remove switch mounting nut and remove switch and escutcheon from instrument panel.

Stop Light Switch Location (Std. Brakes): Mechanical type on toe board near brake pedal.

Stop Light Switch Location (Power Brakes): Directly above brake pedal on firewall. Adjust so lights come on within free travel of brake pedal.

FUSES: All fuses (exc. Instrument Panel fuses) are located on a combination fuse and junction block under the instrument panel. A color code is used on the fuse panel corresponding to the color code of circuits protected by each fuse. The following fuses will be found on this panel:

(1) Clock (Std. on 98 Series only). 1 ampere.
(2) Courtesy Lights, Dome & Stop Lights, and Rear Cigar Lighter. 25 amperes.
(3) Fuel & Temp. Gauges, Hand Brake Signal Light, Hydra-Matic Shift Indicator, and Back-up Lights. 9 amperes.
(4) Turn Signal. 9 amperes.
(5) Glove Box, Underhood, Keyhole, Tail, Trunk, & Spot Lights. 9 amperes.
(6) Radio. 7.5 amperes.
(7) Heater & Air Conditioner. 20 amperes (without Air Conditioner), 25 amperes (with Air Conditioner).
(8) Electric Windows & Antenna. 20 amperes.
Instrument Panel Lights—2 amperes located on headlight switch.
Cigar Lighter—20 amperes located behind lighter.

CIRCUIT BREAKER: 22 amps. Located in headlamp switch.

HORNS: Delco-Remy 1999753 (Low Note). **1999754** (High Note). *12 Volt.*
Optional (Trumpet Type) — **Delco-Remy 1999586.** *12 Volt.*

Horn Relay: Delco-Remy 1116781. *12 Volt.*
Contacts Close — 5-9 Volts. Set to 6.5 if outside limits.
Contact Gap — .027". **Air Gap** — .014" (closed).

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Befor disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 90° V8 with overhead valve.

Bore	Stroke	Displacement	Rated HP
3 7/8"	3 7/16"	324 cu. ins.	48

Engine	Compr. Ratio	Developed HP
88	9.25-1	230 at 4400 RPM
Super 88 & 98	9.25-1	240 at 4400 RPM

Compression & Vacuum Reading — *See TUNE-UP.*

CYLINDER HEAD: *See Oldsmobile Special Data.*

INTAKE MANIFOLD INSTALLATION: *See "Cylinder H ad & Manif ld" in Oldsm bil Special Data.*

TIGHTENING TORQUES: *S Oldsm bile Sp cial Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

OIL PAN REMOVAL: *S Oldsmobil Special Data.*

ENGINE FRONT MOUNT INSTALLATION: *See Oldsmobile Special Data.*

PISTONS

Aluminum alloy, three ring, autothermic, steel strut, slipper skirt, cam ground, tin plated.

Length – 4.05". **Weight** – 22.07 ozs. (less rings & pin).

►*CAUTION:* Mark piston, rods, and bearing caps with cylinder number before removal to insure correct reinstallation.

Fitting New Pistons: .0005-.0010" clearance at thrust surface (Selective fit). With piston inverted and pin removed, insert piston into bore. Pull required to withdraw a .0015" x 1/2" x 12" feeler placed at 90° to normal position of pin and piston at center of normal travel, should be 5-12 lbs. *See "Pistons" in Oldsmobile Special Data.*

►*CAUTION: Allow rebored cylinders to cool to normal room temperature before fitting pistons.*

R placement Pistons: Std. & .020", .030" Oversize. Pistons furnished only with fitted pins.

Installing Pistons: Install pistons 1, 3, 5, 7 in left bank, and 2, 4, 6, 8 in right bank with letter "F" cast on each side of piston pin hole, and notch in piston head, toward front of engine.

PISTON PINS

Floating type with lock ring at each end

►*CAUTION: Discard old lock rings and install new service type lock rings when installing pins.*

Diameter – .9803-.9807". **Length** – 3.126".

Pin Fit in Piston – Pin should not fall through piston of own weight when using the low limit (.0000" fit). Piston can be tapped into place using brass drift.

Pin Fit in Rod 3ushing – .0003-.0005" loose.

Replacement Pins: Std. size & .001", .003" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compression	.077-.078"	①	.001-.003"
Oil	.180-.186"	②	.0023-.0039"

① – Perfect Circle .010-.020". Sealed Power .008-.016".
② – Perfect Circle & Sealed Power .013-.033".

R placement Rings: Furnished Std. & .010" Oversize (not in sets), Std. & .030" Oversize (in sets).

Installing Rings: Install upper chrome and lower black compression rings with side marked "TOP" up. Install oil ring (either side up) with gap on same side of piston as rod spit hole. Install oil ring expander with gap on side opposite rod spit hole.

CONNECTING RODS

Length—6 5/8" (Center to center). **Weight**—29.54 ozs.
Crankpin Journal Diameter—2.2488-2.2498".
Out of Round Limit—.0015".

Bearings—Durex 100A, steel backed, full precision type. Both halves interchangeable. No shims.

Clearance – .0009-.0029" (vertical), .0019-.0039" (horizontal).

Sid play—.002-.011" (total for both rods).

R plac m nt B arings: Standard size, .002", .010", .020" Undersize.

Installing R ds: *CAUTION*—Rods have plain side and boss side (two machined bosses at lower end). Install rods **1, 3, 5, 7 with plain side to fr nt, and 2, 4, 6, 8 with boss side to front** (*NOTE*—Pistons marked "F" on front side). Caps offset and cannot be installed incorrectly. Groove on rod and cap, and pads for numbering caps and rods are on same side.

►*CAUTION—Use Guide tool BT-22 over rod bolts to prevent damaging crankpin journals when removing and installing piston and rod assemblies.*

NOTE—Oil spit hole for lubrication of opposite cylinder wall provided in rod above cap joint.

CRANKSHAFT

Journal Diameter—#1, 2, 3, 4 2.498-2.499", #5 2 623-2.624".

Bearings—Durex 100A, steel backed, full precision type. Rear bearing flanged.

Clearance—.0005-.002" (Front—See Note below), .002-.0035" (Rear - See Note below), .0005-.003" (Others).

►*FRONT MAIN BEARING NOTE Selective fit bearing used.* **On cars with Power Steering or Air Conditioning it is very important that front bearing fit be held as close as possible because of the increased pump drive and compressor drive belt load** Bearing Part No 565770 (Marked "M" on tang) will reduce bearing clearance .0005" Bearing Part No. 564771 (marked "H" on tang) will reduce bearing clearance .001". These bearings are in addition to regular replacement bearings

►*REAR BEARING NOTE* Rear bearings are selective fit during manufacture, 3 sizes used· "M" Medium, "T" Thin, "H" heavy **Use same size bearing (indicated by letter on tang) when replacing bearing.**

Replacement Bearings: Standard size, .002", .010", .020" Undersize. In addition to lettered bearings used at front and rear. *See Front & Rear Bearing Notes above.*

End Thrust: Taken by rear (#5) flanged bearing.

Endplay—.004-.008"

Crankshaft Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Oldsmobile Special Data*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Oldsmobile Special Data*

Flywheel & Clutch Housing Alignment· *See "Flywheel Housing" in Oldsmobile Special Data.*

CAMSHAFT

Journal Diameters – 1.9970-1.9975".
Bearings – Steel backed babbitt.
Clearance – .0018-.0038".

End Thrust: Forward thrust taken by plunger and spring on front of engine, rear thrust at front of cylinder block.

►*CAUTION:* Two main oil gallery holes in block sealed by hex head bolt. A small hole in bolt for right hand gallery provides lubrication to timing chain, fuel pump eccentric and lever.

Camshaft R m val & Installati n: *See "Camshaft" in Oldsmobile Sp cial Data.*

Timing Chain:	Link-3 lt	M rs
Width	11/16"	13/16"
Pitch	.500"	.375"
Length (Links)	48	64

►*NOTE—Morse and Link-Belt chains not int rchang able unless sprockets also chang d*

Engine Front Cover Removal & Installati n: *See "Engine Front Cover" in Oldsmobile Special Data*

Engine Front Cover Oil Seal (Crankshaft Fr nt Seal) Installation: *See "Engine Front Cover" in Oldsmobile Special Data*

Camshaft Setting: Mesh chain with sprocket marks adjacent and in line with a straight edge across shaft centers (or use Tool BT-11).

►*NOTE—Fuel pump eccentric bolted to front of camshaft ahead of sprocket. Assemble with "0" mark to front, machined step against sprocket*

VALVES

Valves	Head Diam.	St m Diam.	L ngth
Intake	1.745-1.755"	.3417-.3425"	4.989-5.009"
Exhaust	1.557-1.567"	.3930-.3938"	4.989-5.009"
Valve	**Seat Angle**	**Lift**	**Stem Cl aranc**
Intake	45°	.418"	.0017-.0040"
Exhaust	45°	.418"	.0022-.0045"

Valve Seat - .042-.071" (Intake & Exhaust).

Intake & Exhaust Valve St m Oil S als – A "Top Hat" type oil seal (deflector) is installed on valve stem below valve spring retainer.

Valve Springs: Intake and exhaust valve springs are alike. Dampers are used on lower end of all valve springs.

Valve Spring Sp cificati ns

Valve	Pr ssur	L ngth
Closed	95-105 lbs.	1.880"
Open	183-197 lbs.	1.480"

Spring Free Length – 2.38" approximately.

►*CAUTION:* Lower end of damper and spring must seat in recess in head. Install closely wound spring coils toward cylinder head.

Valve Guides: Press guide in head until top of guide is .787" above top of head. Ream inside diameter of guide, after installation, to .3442-.3457" (Intake), .3960-.3975" (Exhaust).

Hydraulic Valve Lifters: Barrel type.

►*HYDRAULIC LIFTER INSTALLATION CAUTION*

FIVE different sizes used in production as follows (marked as indicated) Standard (unmarked), 001 O S (marked "1"), 002 O S (marked "2"), 003 O S (marked "3"), 005 O S (marked "5") **Lift rs** marked by etched number on lifter body, **Cylind r Bl ck** marked by number on rail under engine top cover *R - install lifter in same hole or r place with proper size.*

Diameter—.8424-.8427". **Length**—2" (Overall).

Clearance in Block—.0005-.0018" (Selective).

Replacement Lifters: Standard size, .001", .002", .003", .005" Oversize.

Hydraulic Lifter Overhaul & Testing—*See "Valve System" in Oldsmobile Special Data*

R ck r Arm Ass mbly: *Se "Valv System" in Oldsmobile Special Data*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

VALVE TIMING

S *"Camshaft S tting" under CAMSHAFT above.*
Intak Valv s – Open 11½° BTDC. Close 52½° ALDC.

Exhaust Valv s – Open 51° BLDC. Close 13° ATDC.

Valv Timing Check–Remove left hand cylinder head rocker arm assembly and rotate engine so that #1 piston is on top dead center (firing stroke). Trailing edge of notch in vibration dampener will be aligned with pointer on timing chain cover. Install tool J-5374 in place of rear rocker shaft bracket with step plunger over #7 cylinder exhaust push rod. The 7/1C" diameter pilot at bottom of tool will fit into cylinder head bolt hole. Screw main body of gauge down so step plunger contacts push rod and small diameter of step plunger is flush with top of main body. Tighten clamp bolt. Rotate engine one complete revolution so that #1 piston is again at TDC (intake stroke). Distributor rotor should now be pointing toward rear of engine. If timing chain is installed properly, top of tool plunger will rise so the top of main body of tool is flush with the third step. If camshaft is retarded one tooth, the third step will rise above top of main body, and if advanced one tooth, second step will be below main body.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" und r OILING SYSTEM in Oldsmobile Special Data.*

Crankcas Capacity: 5 qts. (refill). C qts. (dry).
NOTE– 1 qt. additional for dry filter.

N rmal Oil Pr ssur : 35-45 lbs. at 50 MPH.
Pr ssur R gulat r Valv –In pump body Not adjustable.
Oil Pr ssur Indicat r – Oil pressure warning light on instrument panel and oil pressure switch in engine block or oil filter. Lights when pressure below 3 lbs.
Engin Unit – AC No. 1508319.
S *"Oil Pr ssure Indicators" in Miscellaneous Section.*

Oil Pump: Gear type. In crankcase at rear end.
Pump Ov rhaul–*See "Oil Pump" in Oldsmobile Special Data.*

Oil Filt r: AC No. PM-90-3 full flow type (optional). On lower right side of crankcase at rear.
R plac ment Filt r El ment–AC No PF-122

►*CAUTION*–If filter (or pad cover if filter not used) is replaced, used a new gasket (coat both sides with POB No. 5 Sealer) and tighten bolts to 30-35 ft. lbs. Oil filter or pad mounted externally on lower right side of crankcase at rear. Oil filter is full flow type (all oil from pump delivered to oil filter) requires pad when filter not used to return oil to main oil gallery.

Crankcas Ventilation: Air intake in oil filler cap has oil-wetted cleaner, AC No. 1552233 (Std.) No. 1551509 (Heavy Duty). Outlet is connected to ventilating baffle at rear of block above right bank. Outlet pipe is push fit at ventilator and extends down below right rear corner of engine.

►*NOTE* Air cleaner also used in lower section of ventilator outlet tube on cars with heavy duty inlet breather in filler cap and oil bath air cleaner

COOLING

Water Capacity: 20½ qts. (without heater), 21½ qts. (with heater).
Pressure Valve: AC Type RC-1, No. 850795. Radiator filler cap. 7 lb. type.
Thermostat: Dole or Harrison.

Oldsmobile No.	Dole Type	Harrison Type
160° Ⓒ	563219	3126289
180° Ⓒ	563311	3126290

Ⓒ – Use with alcohol anti-freeze.
Ⓒ – Use with permanent type anti-freeze.

Water Pump: Packless, sealed ball bearing type.
See "Water Pumps" in Oldsmobile Special Data.
Pump Removal–Remove fan and fan pulley. Remove six mounting bolts (4 to engine cover, 2 to engine block). Remove pump. *NOTE*–When installing pump, coat one side of pump housing gasket with gasket cement, dip bolts in CP No. 9 Sealer.

Temperature Indicator: New TWO light system (Red & Green) with temperature switch in engine block. GREEN light is lighted when engine running cold and goes off when engine temperature reaches 111-115° F. RED light remains off during normal engine operation but comes on when engine temperature reaches 218-222° F. *NOTE*– Red light will come on when ignition key turned to "Start" position but should go out when key returned to running position (this tests bulb and circuit each time engine started).
Engine Unit – Delco-Remy No. 1998140.
See "Temperature Indicators" in Miscellaneous Section.

CLUTCH

Long 11CF Type. Single plate, semi-centrifugal type.
See "Long" Clutches in Clutch Section.

Part	Long No.	Oldsmobile No.
Cover Assy. (Std.)	262832	562619
Disc (Std.)	282687	565059

Pedal Adjustment· Pedal free travel 1 1/8-1 3/8". Adjust by turning adjusting nut on clutch connector link at throw-out yoke

Removal Remove transmission (see Transmission), remove right and left splash pans, engine breather pipe, and right and left lower flywheel housing bolts Install Engine Rear Support Tool BT-28, entering pilot supports into lower housing bolt holes. Remove engine rear mount bolts at clutch housing, and remove frame cross member by removing three bolts at each end. Remove clutch housing by removing eight bolts holding housing to flywheel housing. Remove clutch assembly from flywheel.

Clutch Housing Alignment: *See "Flywheel Housing" in Oldsmobile Special Data.*

SYNCHRO-MESH TRANSMISSION

Own. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse) all helical gear type.
See "Oldsmobile Synchro-mesh" in Transmission Section

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission and disconnect manual control rods and speedometer cable at transmission. Remove propeller shaft. Remove bolts holding transmission to clutch housing, and remove transmission by moving rearward until main drive gear clears clutch assembly.

HYDRA-MATIC DRIVE

"Dual Range" or "Dual Coupling". Four speed automatic transmission and fluid coupling.

►*APPLICATION NOTE: Early Series 88 used "Dual Range" Hydra-Matic (same as 1955 Models). Later Series 88, Super 88 & 98 use the new "Jetaway (Dual Coupling)" type.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual Range" or "Dual Coupling" Hydra-Matic Drive in Transmission Section.*

►*TESTING & TROUBLE SHOOTING. See "Dual Range" or "Dual Coupling" Hydra-Matic Drive in Trans. Sect.*

Lubrication – Check fluid level every 1000 miles. Drain and refill every 25,000 miles. Use GM Hydra-Matic Drive Fluid Type "A" (can marked AQ-ATF).

Checking Fluid Level – Check with engine at normal operating temperature, idling, and selector lever in "N" (Neutral) on Series 88 "Dual Range" type, and selector lever in "P" (Park) position on later Series 88, Super 88 and 98 "Dual Coupling" type. Add Hydra-Matic Fluid Type "A" (can marked AQ-ATF) to bring level to "FULL" mark on dipstick.

►*CAUTION· Do not fill above "FULL" mark (will caus foaming and improper operation of the transmission).*

►*OTHER HYDRA-MATIC SERVICE DATA· S "Dual Range" or "Dual Coupling" Hydra-Matic in Trans. S ct.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

UNIVERSALS

Mechanics. Roller bearing type.

►*PROPELLER SHAFT YOKE LUBRICATION CAUTION* Remove plug, install fitting and lubricate with hand pressure gun using high melting point, low viscosity lubricant, Oldsmobile Part No 567196 Remove fitting and replace plug **Do not use chassis grease at this point.**

►*CAUTION*—Rear universal companion flange nut controls rear axle pinion bearing pre-load (must be adjusted whenever nut loosened) *See "Oldsmobile Hypoid" in Rear Axle Section*

REAR AXLE

Own. Hypoid gear, semi-floating type with Hotchkiss drive.
See "Oldsmobile Hypoid" in Rear Axle Section.

Ratio	Axle Ratios	① Code
3.08-1 (40:13)		0
3.64-1 (40·11)		6
3.42-1 (41:12)		8
3.23-1 (42:13)		9

①—Rear axle ratio code number stamped on lower locating boss on forward side of carrier.
Backlash—.004-.008". (*NOTE* - As much as .012" may be necessary in some cases to correct tooth contact for noise).

Axle Shaft Removal: Remove wheel and take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be reused, if nuts damaged, new nuts must be used). Remove backing plate mounting nuts and static collector. Loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal), replace one nut to hold backing plate in position.

Differential Carrier Assembly Removal: Remove axle shafts (see above). Clean differential carrier and axle housing around carrier to prevent dirt entering housing. Disconnect propeller shaft at rear universal joint after having wired trunnion blocks together to avoid loss of rollers. Mark universal joint so it can be replaced in the same position Drain oil by removing nuts from carrier mounting studs and moving carrier away from housing

CAUTION—Do not wash exterior of carrier until differential has been disassembled

Wheel Bearing Adjustment None required Bearings are built with .012-.015" endplay between balls. Check endplay before removing axle shaft and if endplay greater than 020 , replace bearings. *CAUTION*—If bearings removed from shaft, they cannot be reused.

SHOCK ABSORBERS

Delco. Direct acting front and rear. Service by replacement.

Shock Absorbers

Model	Front	Delco No.	Rear
88, Super 88	5352644		5352648
98	5352645		5352649

FRONT SUSPENSION

Independent. Direct acting shock absorbers are mounted within front coil springs.
See "Oldsmobile" in Suspensions & Wheel Alignment Section.

Kingpin Inclination—5° 51' 10' crosswise.
Caster— 0° to Neg. ¾°. Variation between both sides should not exceed ½°.
Camber—Neg. ¾° to Pos. ¾°. Variation between both sides should not exceed ½°
Toe-In—1/16' to 1/8".
Toe-Out on Turns—23°±½° on inner wheel with outer wheel turned 20°.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (In Line). *See "Saginaw (In Line)" Power Steering in Steering Section.*

Steering Linkage *See "Steering Linkage" in Steering Section*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic (Single Anchor). Conventional two shoe with short molded lining front (Primary), and long molded lining rear (Secondary). Parking brake applies rear wheel service brakes
See "Bendix Hydraulic" in Brake Section

Drums—Diameter 11" Rebore limits .060

Wheel Cylinder Diameter—Front 1 1/32". Rear 31/32'
Lining—Molded. **Width**—2½" (front wheels), 2" (rear wheels). **Thickness**—7/32".

Length—(Primary) 9 3/8', (Secondary) 12 1/32

Clearance—Adjusting screw backed off 16 notches from point where wheels can just be turned by hand

Braking Power—50% Front. 44% Rear.

Standard Master Cylinder: On left chassis frame front extension under hood.

Checking Fluid—Fluid reservoir is part of master cylinder. Maintain fluid level to within ½" of top of master cylinder gasket surface.

Removal—Remove from above. Not necessary to disturb other parts.

Power Brakes· Bendix or Moraine Power Unit (combination vacuum power unit and hydraulic master cylinder) Unit is mounted on under side of toe board and replaces regular master cylinder *See "Bendix Power Unit" or "Moraine Power Unit" in Brake Section.*

Checking Fluid—Same as for standard master cylinder.

Removal of Power Unit—Disconnect positive battery cable at junction block on right fender filler plate, disconnect purple solenoid lead wire from wiring harness, then pull cable through sleeve on power brake. Disconnect hydraulic line at master cylinder and secure hose so end is above level of junction assembly. Disconnect vacuum hoses at power cylinder, and remove dipstick. Disconnect leads from stop light switch and fold back floor mat. Remove three brake pedal bracket attaching bolts and remove pedal and bracket. Remove mast jacket grommet retainer and slide grommet up mast jacket. Remove mast jacket cover plate attaching screws, cover plate and power cylinder assembly. Remove two cover plate-to-power cylinder bolts and remove cover plate. Remove power unit through toe pan opening.

MISC. MECHANICAL

Windshield Wipers: Cable operated, vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: *See "Frigidaire & Harrison" Air Conditioning in Miscellaneous Section.*

Power Window Regulators· Electric type with individual motors in each window

See "Power Window Regulators" in Miscellaneous Section

Power Top Control· Hydro-Lectric *See "Power Top Controls" in Miscellaneous Section*

Power Seat Adjuster (Two-way): Electric type with single reversible type motor for horizontal adjustment.
See "GM Two-way Seat Regulators" in Misc. Section.

Power Seat Adjuster (Six-way): Electric type with single reversible motor.
See "GM Six-way Seat Regulators" in Misc. Section.

MODEL IDENTIFICATION

SERIAL NUMBERS: On left body pillar post.
Starting Serial Number - 1001.

► *SERIAL NUMBER NOTE: Complete serial number (example 577M 1001) includes following identification data in sequ nce:*

Y ar	Seri s ①	Assy. Plant ②	Serial No.
57	7	M	1001

① - Series Designation: 7 - (88 Series).8 - (Super 88 Series). 9 - (98 Series).
② - See Assembly Plant Designation following.

Assembly Plant Designation

M - Lansing	L - Linden
A - Atlanta	C - South Gate
B - Framingham	W - Wilmington
K - Kansas City	T - Arlington

ENGINE NUMBER: Stamped on machined pad located on top of left hand cylinder bank of block between the center and rear exhaust manifold ports.
Starting Engine Number - A001001. *NOTE* - Export engines are identified by an "E" after the serial number.

TUNE-UP

COMPRESSION PRESSURE: 100 lbs. minimum at cranking speed. Reading on low cylinders should not be less than 80% of high cylinder.

VALVE TAPPET CLEARANCE: None in service (hydraulic lifters).

MANIFOLD HEAT CONTROL: Thermostatic coil type located on left side between exhaust manifold and exhaust pipe. Install with inner end of coil pointing toward spring pin.

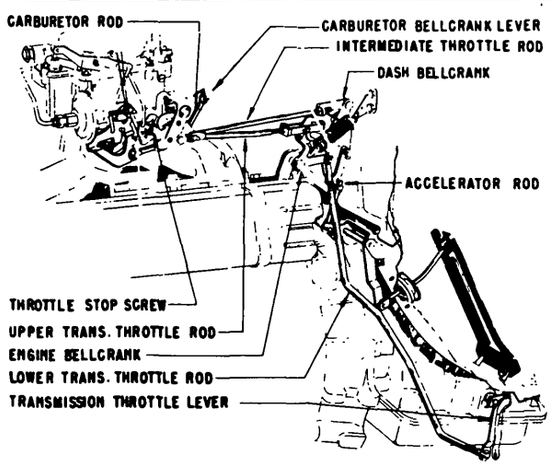
IGNITION

FIRING ORDER: 1–8–7–3–6–5–4–2.
Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .030".
Spark Plugs - AC No. 44. 14mm. Torque to 23-28 ft. lbs.

COIL: D lc -R my 1115087.
Igniti n Current - 2.0 amps. idling, 4.5 stopped.
R sistor - Delco-Remy 1928016. 1.40-1.62 ohms.

► *COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by s c nd lead from ignition switch.*



DISTRIBUTOR: Delc -Remy 1110883. "Window" type with external adjustments. *See "Delco-Remy (Window Typ) Distributor" in El ctrical Section.*

► *CONTACT POINT REPLACEMENT CAUTION:* Mounting plate is slotted (old points can be removed by loosening screws and turning plate out). When installing new point set, center hole in mounting plate over dowel in distributor plate when tightening screws.

C nd nser - Delco-Remy 1932004. **Capacity**.18-.23 mfd.
Contact P int S t - Delco-Remy 1931988.
Breaker Gap - .016".
Cam Angle - 28-32° (set at 30°).

► *BREAKER GAP & CAM ANGLE NOTE:* Setting cam angle at 30° will provide .016" breaker gap.

Br aker Arm Spring T nsion - 19-23 ozs.
Rotati n - Counter-clockwise viewed from above.

HYDRA-MATIC TRANSMISSION THROTTLE LINKAGE

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	400	0-4	800
6.5-8.5	975	13-17	1950
8-10	1200	16-20	2400
11-13	2200	22-26	4400

Vacuum Spark Control: Delco-Remy 1116096.
Plunger Travel - 7/32-15/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4.5-6.5
10	20	15.25-16.0

IGNITION TIMING

Setting - 5° BTDC, with engine idling at 850 RPM and vacuum line to distributor disconnected and carburetor opening taped closed.

► *DETONATION NOTE: If engine detonates (due to low octane fuel or carbon build-up) set timing to 2½° BTDC. For high altitude operation, timing can be adjusted to 7½° BTDC, if detonation does not occur.*

Timing Mark (Early Cars) - Slot in rim of crankshaft balancer and pointer on front cover. Leading edge of slot is 5° BTDC. Trailing edge is TDC. Midway between these points is 2½° BTDC.

Timing Mark (Later Cars) - Three slots in rim of crankshaft balancer and pointer on front cover. Center slot is 5° BTDC. Facing rear of car, left hand slot is TDC. Right hand slot is 10° BTDC.

CARBURETOR

► *CARBURETOR APPLICATION: Rochester 4GC 4-Barrel Std. on all Series, Rochester 2GC Triple Two-barrel Compound Installation Optl. on J-2 Engines.*

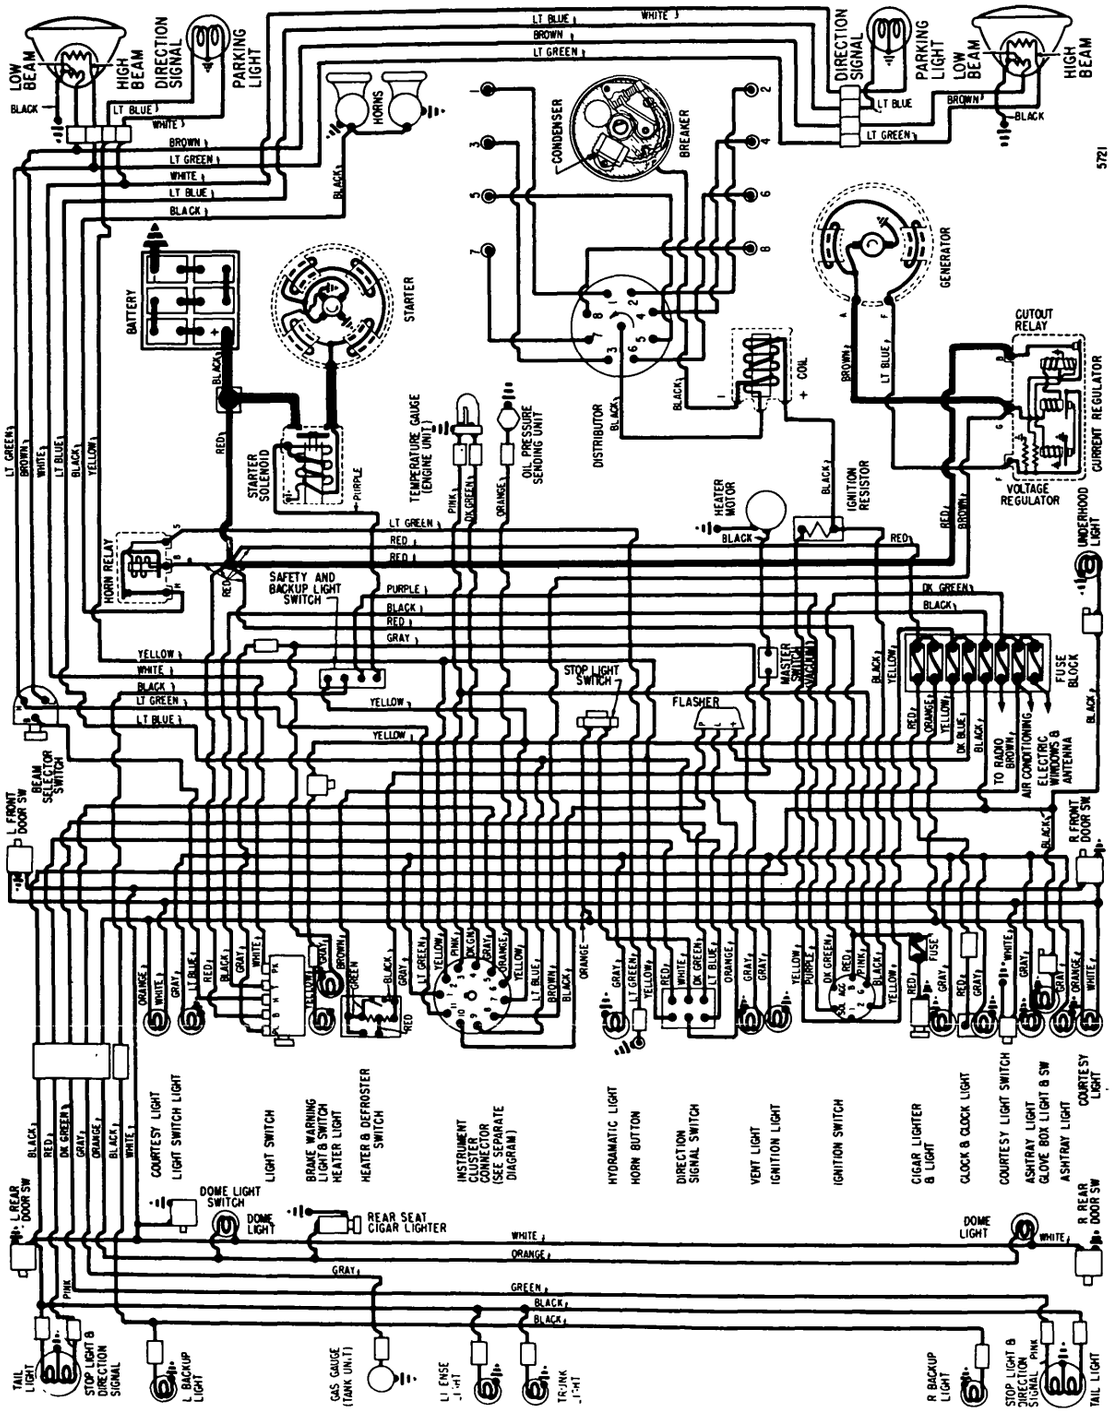
► *IDLE SPEED ADJUSTMENT NOTE: "Slow" idle speed adjustments can be made after Hydra-Matic Throttle Linkage Adjustment completed without affecting relationship between carburetor and transmission.*

Thr ttl R turn Ch ck Adjustm nt: With transmission in "N" (Neutral) and engine at normal operating temperature, set carburetor on fast idle and adjust to 1500 RPM. Flash the throttle and allow to return to slow idle, then turn off the ignition switch. Set carburetor on fast idle and check clearance between throttle return check plunger and throttle lever. Adjust to .020" using two wrenches so that diaphragm is not permitted to turn.

THROTTLE LINKAGE ADJUSTMENT (HYDRA-MATIC DRIVE CARS): Install Throttle Return Check Holding Tool J-6342 to hold plunger away from throttle lever. Proceed as follows:

1) Remove throttle rod from transmission throttle lever and move throttle lever to rear against its stop, and with Throttle Lever Gauge J-6344 placed flat against rear face of transmission case, rod on gauge should just enter hole in throttle lever. Adjust throttle lever by bending with Tool J-6373-01 (*NOTE* - This tool may be revised by cutting 5/8" from top of tool). Attach throttle rod to lever.

2) Back out slow idle adjusting screw until carburetor throttle valves are completely closed. Remove clips from carburetor throttle lever and carburetor bellcrank lever (do not remove carburetor rod). Place Gauge No. 33-67 against rod with hole in gauge over pin on carburetor throttle lever. With gauge held up against bellcrank pivot pin, the open end of the tool should fit over pin on bellcrank lever freely without rotation of the bellcrank. If pin does not enter hole freely, remove rod and place in a vise and increase or decrease the bend.



3) Loosen jam nut on transmission throttle rod at bellcrank and remove clevis pin. Remove clevis pin from end of upper transmission throttle rod at bellcrank. With both bellcrank and transmission lower throttle rod held against their rearward stops, adjust lower throttle rod clevis so that pin will enter freely into holes in clevis and the bellcrank. Install cotter pin and tighten jam nut.

► *"J-2 ENGINE" CAUTION:* On first cars (with Throttle Valve Bellcrank Assy 571315 & Lower Control Rod 571318), it may be necessary to **lengthen** rod when making above adjustment as much as 3½ turns to obtain correct throttle valve oil pressure for correct shift pattern. On cars after Engine No. A-198511, new parts used (Throttle Valve Bellcrank Assy. 572496 & Lower Control Rod 569544) and above setting procedure should be used *NOTE* - If either throttle valve bellcrank or lower control rod require replacement on cars before Engine No A-198511, install both new parts and use standard setting procedure

4) With engine bellcrank against its stop and upper transmission throttle rod pulled lightly toward rear of engine to take up slack, adjust clevis on upper transmission throttle rod so that pin enters freely into holes in clevis and bellcrank. Install cotter pin and tighten jam nut Set carburetor slow idle at 460 RPM with transmission selector lever in "D" (Drive) position, this will pull engine bellcrank forward from stop and provide proper throttle valve adjustment). *CAUTION - On air conditioned cars, slow idle speed must be set with compressor running.*

5) Loosen jam nut and back out throttle stop screw several turns. Hold choke wide open and pull forward on dash bellcrank until throttle valves are wide open, then go beyond to point of maximum transmission throttle lever travel (*CAUTION - This point is a matter of*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

feel and care should be taken to not b nd or stretch linkage b yond this point). With throttle held in this position, adjust throttle stop screw to just touch tang on downshift lever. Allow throttle valves to return to a closed position, **then turn throttl st p scr w in 1½ t 2 turns and tighten jam nut.**

6) If clearance between dash bellcrank and dash is not 3/8" ± 1/32" adjust as follows: Loosen jam nut on intermediate throttle rod; remove pin and clevis from dash bellcrank, adjust throttle rod so there is 3/8" clearance between dash bellcrank and front of dash. Install rod end and clip with open side of rod toward outside of car, and tighten jam nut.

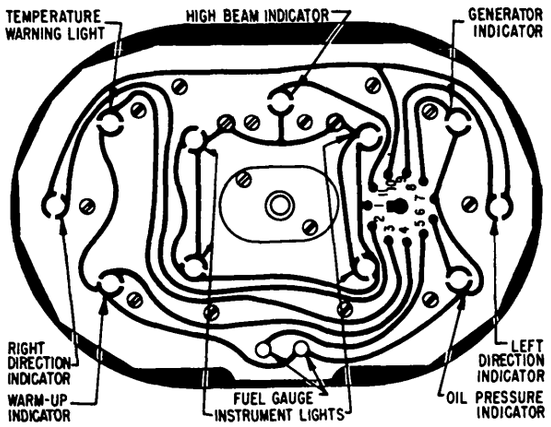
7) Adjust accelerator pedal height as follows: Position a 3 7/8" wooden block between bottom of accelerator pedal and top of floor mat retainer. Remove clip and accelerator rod assembly from dash bellcrank. Loosen jam nut and adjust accelerator rod so that hole just slides over pin on bellcrank with accelerator pedal touching gauge block. Install rod end on bellcrank with open side toward left side of car. Tighten jam nut and remove gauge block.

ROCHESTER 4GC

Rochester 4GC. 4-Barrel type similar to design used on previous models except for addition of **Ch k Modifier.** Used as follows:

	First Cars	Lat r Cars
Synchro-mesh Cars	7009471	7010926
Hydra-Matic Cars	7009470	7010925

Replacement Carburetor Pkg. - Rochester 7015704.



► *CARBURETOR PRODUCTION CHANGES & RECOMMENDED SETTING CHANGES:* See *"Roch ster 4GC 4-Barrel" in Carburetion Section.*

► *MANIFOLD FUEL DISTRIBUTION: Carbur tor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barr l 1-4-6-7.*

► *IDLE ADJUSTMENT·CAUTION:* It is recommended that idle adjustments be made with **Air Cl an r in plac** (Use of Tool BT-1000-S will make this possible).

Idle Setting: With engine warm and operating at correct idle speed, adjust each idle adjusting screw for smooth

CONTINUED ON NEXT PAGE

INSTRUMENT CLUSTER PRINTED CIRCUITS

CONTINUED FROM PRECEDING PAGE

idle and highest RPM and vacuum, then turn each screw out (rich) ¼ turn *NOTE* - If engine rolls from richness when throttle snapped closed, turn each screw in (lean) 1/8 turn.

Idle Spe d - 460 RPM (All Cars) with selector lever in "DR" on Hydra-Matic cars On Air-conditioned cars set control in "Maximum Cooling" position *NOTE* - This setting supersedes previous recommendation of 450 RPM (Synchro-mesh) & 425 RPM (Hydra-Matic)

► *AIR CONDITIONED CAR NOTE: On cars with air conditioning, th compressor must be operating when idle speed adjusted*

► *OTHER DATA: See "Rochester 4GC 4-Barrel Carburetors" in Carbur tion Section*

Thr ttle Return Ch ck Adjustment (Hydra-Matic Drive Cars): *See CARBURETOR above*

Hydra-Matic Throttl Linkag Adjustment: *See CARBURETOR above.*

ROCHESTER 2GC
(Triple Two-barrel Compound)

Rochest r 2GC. "Triple Two-Barrel Compound" installation as follows

	Rochester No.
Front	7010960
Center	7010959
Rear	7010958

For complete adjustment data on these carburetors (including linkage adjustment to insure correct synchronization), see "Oldsmobile Triple Two-Barrel Compound" Carburetors in Carburetion Section

FUEL PUMP PRESSURE: 4-5½ lbs at 450-1000 RPM (1st type with glass filter bowl), 5-6 lbs. at 1800 RPM (later type with pulsator dome)

CARB. EQUIPMENT

Fuel Pump: AC No 4317 (Early cars) No 4397 (Later cars) Fuel and vacuum

Pressure - 4-5¼ lbs at 450-1000 RPM (No 4317), 5-6 lbs at 1800 RPM (No 4397)

See "Fuel Pumps" in Carburetion Section

Gasolin Gauge: AC Electric type

Dash Unit - AC No 1518721

Tank Unit - AC No 1518730

See "Fu l Gauges" in Carburetion Section

Air Cleaner: (Cars with 4-Barrel Carb.) Oil-wetted type (Std), Oil-bath type (Optl),

(Cars with Tripl Compound Carb.) - AC No 1553292 DRY TYPE with paper filter element Clean at 4000 mile intervals (or at engine oil change intervals) Replace element at 10,000 mile intervals or more often under severe conditions Use AC Type A-59C Replacement Element

► *DRY TYPE FILTER CLEANING CAUTION:* Remove filter element from air cleaner and clean by shaking and tapping end plates on a flat surface *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate*

BATTERY

Delc -R ny 3KMR70. *12 Volt,* 11 plate 70 ampere hour capacity (20 hr rate)

Battery Ground - Negative

Engine Ground - From engine to forward side of firewall

STARTER

Delco-Remy No. 1107665. Armature No 1932185

Drive - Overrunning clutch (solenoid pinion shift)

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 35 ozs minimum

Performance Data

Torque	RPM	Volts	① Amperes
0 ft lbs	3600-5100	10 6	65-100
	Lock	3 5	300-360

① - Includes Solenoid Switch

Starter Switch: Solenoid switch, Delco-Remy No 1119798 mounted on starter and controlled by combination Starter & Ignition switch Delco-Remy No 1116534 and Neutral Safety and Back-up Switch (see below)

Hydra-Matic Neutral Safety Switch: Oldsmobile No 570386 Neutral Safety and Back-up Light Switch

Adjustment - *See "Dual-Coupling Hydra-Matic" in Transmission Section*

GENERATOR

Delco-Remy No. 1102085 (Std.), No. 1102067 (Air Cond.) Armature - No 1923535 (1102085 Gen), No 1932900 (1102067 Gen)

Performance Data (Cold)

	Amperes	Volts	RPM
Standard	30	14 0	2210
Air Cond	35	14 0	2400

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 28 ozs

Field Current - 1 48-1 62 amperes at 12 volts (1102085), 1 62-1 82 amperes at 12 volts (1102067)

Belt Adjustment: Place Tool 33-70 on belt Loosen generator adjusting link bolt and then tighten belt until line on gauge is even with pointers of gauge Tighten adjusting link bolt

REGULATOR

Delco-Remy No. 1119001 (1102085 Gen.), No. 1119002 (1102067 Gen.). *NOTE - Specifications are "Normal" Settings*

► *REGULATOR IDENTIFICATION:* Std (1119001) regulator marked by daub of red paint Optl (1119002) regulator by daub of yellow paint on mounting lug

Cut-Out Relay

Cuts In - 11 8-13 5 volts

Contact Gap - 020"

Air Gap - 020" (with contacts just closed)

Voltage Regulator

Setting - 13 8-14 8 volts

Air Gap - 075" with armature pressed down to point where contacts just touch

Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" in Electrical Section*

Current Regulator

Setting - 27-33 amperes (1119001), 32-37 amperes (1119002)

Air Gap - 075" with armature pressed down to point where contacts just touch

Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" in Electrical Section*

MISC. ELECTRICAL

► *INSTRUMENT PANEL PRINTED CIRCUIT NOTE:* Entire instrument cluster served by a printed circuit All units in cluster are connected by a multiple contact plug which is keyed to prevent improper assembly Service of printed circuit is by r placem nt nly.

► *FUSE BLOWING CORRECTION:* If caused by loose fuse clips, replace Fuse Panel Check fuse clips to make certain rivets are staked and clips have sufficient tension to grip fuse ends securely

Headlamps: Sealed Beam *See Electrical Section*

Direction Signal: *See Electrical Section*

Autronic Eye: *See Electrical Section*

Light Switch Removal: Disconnect battery cable and disconnect wires from lighting switch Pull switch knob out to last notch then depress spring loaded latch button on switch body while pulling rod and knob assembly out of switch Remove switch mounting nut and remove switch and escutcheon from panel

Stop Light Switch Location (Std. Brakes): Mechanical type on toe board near brake pedal

Stop Light Switch Location (Power Brakes): Directly above brake pedal on firewall Adjust so lights come on within free travel of brake pedal

FUSES: All fuses (exc Instrument Panel and Cigar Lighter fuses) are located on a combination fuse and junction block under instrument panel A color code is used on fuse panel corresponding to color code of circuits protected by each fuse The following fuses will be found on this panel:

(1) Clock (Std. on 98 Series only). 1 ampere

(2) Courtesy, Dome & Stop Lights; Rear Cigar Lighter. 25 amperes

(3) Temp., Generator, Oil Pressure Lights; Fuel Gaug , Back-up Lights, Hand Brake Signal Light. 9 amperes

(4) Turn Signal. 9 amperes

(5) Glove Box, Underhood, Keyhole, Tail, Trunk, St p Lights. 9 amperes

(6) Radio. 7 5 amperes

(7) Heater & Air Conditioner. 20 amperes (25 amperes with Air Conditioning)

(8) Electric Windows & Antenna. 20 amperes

Instrument Panel Lights - 3 amperes located on headlight switch

Cigar Lighter - 20 amperes located behind lighter

CIRCUIT BREAKER: 25 amperes located in switch

Horn Relay: Delco-Remy No 1116781

ENGINE

► *AIR CONDITIONED CAR SERVICE CAUTION. Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section*

ENGINE SPECIFICATIONS: Own 90°V8 with overhead valves TWO engines used: **T-400** (Std Engine with 4-Barrel Carb), J-2 (Optl Engine with Triple Two-Barrel Compound Carbs)

Eng.	Bore	Stroke	Rated HP	Displacem nt
All	4"	3 11/16"	51	371 cu ins

Engine	Compr. Ratio	Developed HP
T-400	9 5-1	277 at 4400 RPM
J-2	10 0-1	300 at 4600 RPM

Compression & Vacuum Reading - *See TUNE-UP*

► *ENGINE COMPRESSION RATIO NOTE* Std Engine (9 5-1 Ratio) has 050" thick cylinder head gasket

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Special (10.0-1 Ratio) engine has .025" thick gasket. Same cylinder head used on all engines. *NOTE* - Head gasket for Export (Low Octane Gas) Engine is .085" thick.

►*ENGINE OVERHEATING & LOSS OF COOLANT IN NORMAL DRIVING, OR POOR CAR HEATER PERFORMANCE: See "Cooling" in Oldsmobile Special Data.*

►*1957 OLDSMOBILE ENGINE OPERATION IN LOW OCTANE AREAS (FOREIGN TRAVEL):* **Same as for 1958 models.** *See 1958 Oldsmobile Car pages.*

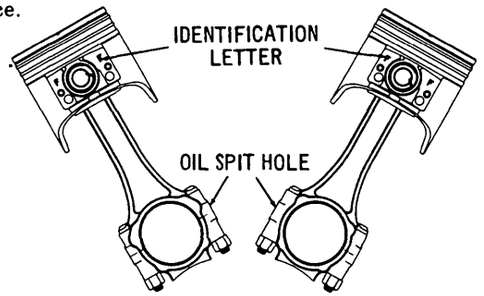
CYLINDER HEAD INSTALLATION: *See "Cylinder Heads & Manifolds" in Oldsmobile Special Data.*

INTAKE MANIFOLD INSTALLATION: *See "Cylinder Head & Manifold" in Oldsmobile Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Oldsmobile Special Data.*

OIL PAN REMOVAL: *See "Oil Pan" in Oldsmobile Special Data.*

PISTONS



Aluminum alloy, three ring, autothermic, steel strut, slipper skirt, cam ground, tin plated.

Length - 4.05". **Weight** - 25.22 ozs. (less rings & pin).

Removal - Pistons & rods removed from above only.

►*CAUTION:* Mark piston, rods, and bearing caps with cylinder number before removal to insure correct reinstallation.

Clearance - .00075-.00125" Selective fit at thrust surface.

OLDSMOBILE PISTON & ROD ASSY.

Fitting New Pistons: With piston inverted and pin removed, insert piston into bore. Pull required to withdraw a .0015" x ½" feeler placed at 90° to normal position of pin and piston at center of normal travel, should be 1-6 lbs.

►*CAUTION: Allow rebored cylinders to cool to normal room temperature before fitting pistons.*

Replacement Pistons: Std., .010", .020" & .030" Oversize. Furnished with fitted pins.

Installing Pistons: Install pistons 1,3,5,7 in left bank, and 2,4,6,8 in right bank with letter "F" cast on each side of piston pin hole, and notch in piston head, toward front of engine.

PISTON PINS

Floating type with lock rings at each end.

►*CAUTION:* Discard old lock rings and install new service type lock rings when installing pins.

Diameter - .9803-.9807". **Length** - 3.126".

Pin Fit in Piston - .0000-.0002" loose. Pin should not fall through piston of own weight when using the low limit (.0000" fit). Pin can be tapped into place using brass drift.

Pin Fit in Rod Bushing - .0003-.0005" loose.

Replacement Pins: Std., .001" & .003" Oversize (in sets).

PISTON RINGS

Two compression and one oil ring used.

Ring	Width	End Gap	Side Clearance
Compr. #1	.0775-.078"	.013-.023"	.001 -.003"
Compr. #2	.0925-.0935"	.013-.023"	.001 - .003"
Oil	.188"(Max.)	①	.0023-.0039"

① Sealed Power .013-.033", Perfect Circle .015-.055".

Replacement Rings: Std. & .010" Oversize, not in sets.

Installing Rings: Install upper chrome and lower black compression rings with side marked "T" or "Top" up.

CONNECTING RODS

Length - 6.625" center-to-center. **Weight** - 29.53 ozs.

Crankpin Journal Diameter - 2.2488-2.2498".

Out of Round Limit - .0045".

Lower Bearing - Aluminum with babbitt overlay, steel backed, both halves interchangeable.

Clearance - .0009-.0030" (vertical), .0019-.0040"(horizontal).

Sideplay - .002-.011" (total for both rods).

Replacement Bearings: Std., .002", .010" & .020" Undersize.

Installing Rods: Bearing index notches on rods and caps, and pads for numbering caps and rods should be to outside of engine. Spit hole for lubrication should be to inside of engine.

►*CAUTION: Use Guide Tool BT-22 over rod bolts to prevent damaging crankpin journals when removing and installing piston and rod assemblies.*

CRANKSHAFT

Journal Diameter - 2.748-2.749". Five bearings.

Bearings - Steel backed aluminum. Rear bearing flanged, upper and lower inserts **not** interchangeable.

Clearance - *Front & Rear bearing clearances are selective fit - See Notes below. CAUTION - Front bearing clearance has been reduced and specification below supersedes previous recommendations.*

Crankshaft Bearing Clearance

Front Bearing (see Note)	.0003-.0015"
Intermediates (2, 3, 4)	.0005-.0031"
Rear Bearing (see Note)	.0020-.0035"

►*FRONT MAIN BEARING NOTE:* Bearings are selective fit during manufacture. Standard size **Upper** bearing insert furnished with standard wall thickness only, **Lower** bearing insert furnished in FOUR wall thicknesses and marked by letter stamped on back of tang as follows: "B" .0006" thicker wall, "D" .0012" thicker wall, "E" .002" thicker wall, "F" .003" thicker wall. These bearings are in addition to regular Undersize Bearings listed below. *When correcting excessive front main bearing clearance, it will only be necessary to replace lower half of bearing insert with one of the selective fit thicker wall inserts listed above.*

►*REAR BEARING NOTE:* Bearings are selective fit during manufacture. Standard size furnished with Thin, Medium and Heavy wall (marked "T", "M", & "H" on tang). These are in addition to regular replacement Undersize Bearings listed below. *Use same thickness bearing (as indicated by letter on tang) unless undersize bearings being installed to correct wear.*

Replacement Bearings: Std. (Front & Rear furnished in special thicknesses - see Notes above), and .002", .010", .020" Undersize.

End Thrust: Taken by rear (#5) flanged bearing.

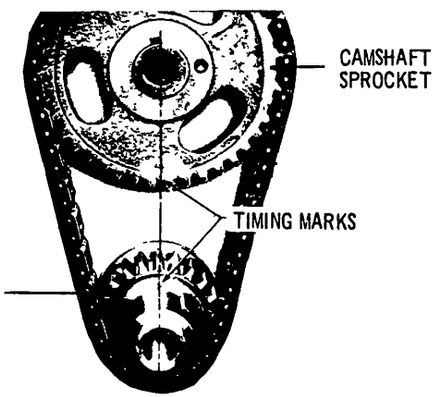
Endplay - .004-.008".

Crankshaft Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Oldsmobile Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Oldsmobile Special Data.*

CAMSHAFT

Bearings - Steel backed babbitt or copper, lead, bronze.



Journal Diameter - 1.9977-1.9985".

Clearance - .001-.0033".

End Thrust: Forward thrust taken by plunger and spring at front end of camshaft.

Timing Chain: Link Belt or Morse. *NOTE - Both chains are completely interchangeable (may be used with either type crankshaft and camshaft sprockets).* **Width** - 27/32". **Pitch** - .50". **Length** - 24" or 48 links.

Camshaft Setting: Mesh chain with sprocket marks adjacent and in line with a straight edge across shaft centers (or use Tool BT-11).

OLDSMOBILE VALVE TIMING MARKS

►*FUEL PUMP ECCENTRIC NOTE:* Fuel pump eccentric bolted to front of camshaft ahead of sprocket. Assemble with cupped side out.

►*CAMSHAFT REPLACEMENT CAUTION:* For initial lubrication of NEW camshaft, it should be liberally coated with mixture of G.M. Concentrate No. 567725 and engine oil before installation (2 Pints of concentrate in 4 qts. of oil) and balance of concentrate should be added to crankcase oil for run-in purposes.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Engine Front Cover Removal & Installation; *See "Engine Front Cover" in Oldsmobile Special Data*

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Oldsmobile Special Data*

VALVES

Tappet Clearance: None in service hydraulic

Valve	Head Diam.	Stem Diam.	Length
Intake	1.745-1.755"	.3417-.3425"	4.989-5.009"
Exhaust	1.557-1.567"	.3930-.3938"	4.989-5.009"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	.419"	.0017-.0035"
Exhaust	45°	.435"	.0022-.0040"

Valve Seat Width - .037-.075" all valves

Valve Stem Seals - A "Top Hat" type oil seal (deflector) is installed on valve stem below valve spring retainer

Valve Springs: Intake and exhaust valve springs are alike Dampers used on lower end of all springs

►*VALVE SPRING PRODUCTION CHANGE*· Beginning Engine No A-176654, larger diameter valve spring (wire diameter size 1/64" larger) with different pressures used Valve spring counterbore in cylinder head was increased .043" in diameter to accommodate this larger spring *NOTE* - First & Later Valve Springs (in Sets) and Cylinder Heads are interchangeable (tolerance limits may cause snug fit if second type spring used with first type head).

Valve Spring Specifications

	First Type		Later Type	
Valve	Pressure	Length	Pressure	Length
Closed	100 lbs	1.880"	90 lbs	1.880"
Open	190 lbs	1.480"	220 lbs	1.480"

Free Length - 2.40"

►*CAUTION.* Lower end of damper and spring must seat in recess in head Install closely wound spring coils toward cylinder head

Valve Guides: Remove guides with Remover Tool J-3062 Drive new guides into top of cylinder head as follows: Lay Gauge Washer J-5158 on valve spring seat, then install guide into cylinder head (with grooved end of guide up) by driving on Tool J-5158-2 until tool seats against gauge washer Guides should extend 25/32" above face of valve spring seat Inside diameter of guide is .3442-.3452" (Intake), .3960-.3970" (Exhaust) *NOTE* - Service guides are Parco-Lubrited and finished to size **DO NOT** ream Guides furnished Std and .010" oversize Oversize guides identified by a groove on O.D. of guide

Hydraulic Valve Lifters: Barrel type, larger in length and diameter than previous models

►*HYDRAULIC LIFTER INSTALLATION CAUTION:* FIVE different sizes used in production as follows (marked as indicated)· Standard (unmarked), .001" O.S. (marked "1"), .002" O.S. (marked "2"), .003" O.S. (marked "3"), .005" O.S. (marked "5") **Lifters** marked by etched number on lifter body **Cylinder Block** marked by number on rail under engine top cover *Reinstall lifter in same hole or replace with proper size*

Diameter - .9210-.9215" (Std.) **Length** - 2.125"

Clearance in Block - .0005-.0020" (Selective)

Replacement Lifters: Std., .001", .002", .003" & .005" Oversize

Hydraulic Lifter Removal, Overhaul & Testing - *See "Valve System" in Oldsmobile Special Data*

Rocker Arm Assembly: *See "Valve System" in Oldsmobile Special Data*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above

Intake Valves - Open 13°30' BTDC Close 54°30' ABDC

Exhaust Valves - Open 51°30' BBDC, Close 20°30' ATDC

Valve Timing Check: Remove left hand cylinder head rocker arm assembly and rotate engine so that #1 piston is on top dead center (firing stroke) Trailing edge of notch in crankshaft pulley will be aligned with pointer on timing chain cover Install Tool J-5374 in place of rear rocker shaft bracket with step plunger over #7 cylinder exhaust pushrod The 7/16" diameter pilot at bottom of tool will fit into cylinder head bolt hole Screw main body of gauge down so step plunger contacts pushrod and small diameter of step plunger is flush with top of main body Tighten clamp bolt Rotate engine one complete revolution so that #1 piston is again at TDC (intake stroke) Distributor rotor should now be pointing toward rear of engine If timing chain is installed properly top of tool plunger will rise so the top of main body of tool is flush with the third step If camshaft is retarded one tooth, the third step will rise above top of main body and if advanced on tooth second step will be below main body

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Oldsmobile Special Data.*

Crankcase Capacity: 5 quarts refill Add 1 quart with filter change

Normal Oil Pressure: 35-45 lbs at 50 MPH

Pressure Regulator - In pump body Not adjustable Valve starts to open at 45 lbs Maximum pump pressure is 45-55 lbs

Oil Pressure Indicator - Oil pressure warning light on instrument panel and oil pressure switch in engine block or oil filter Lights when pressure below 3 lbs

Engine Unit - AC No. 1508319

Oil Pump: Gear type In crankcase at rear end

Oil Pump Removal, Overhaul & Installation - *See "Oil Pump" in Oldsmobile Special Data*

Oil Filter: Full flow type Replace every 5000 miles or sooner if needed Located on lower right side of crankcase at rear

Replacement Filter Element - AC No. PF-122

Crankcase Ventilation: Air intake in oil filler cap has oil-wetted cleaner AC No. 1552233 (Std.), No. 1551509 (Heavy Duty) Outlet is connected to ventilating baffle at rear of block above right bank Outlet pipe is push fit at ventilator and extends down below right rear corner of engine

►*NOTE* Air cleaner also used in lower section of ventilator outlet tube on cars with heavy duty inlet breather in filler cap and oil bath air cleaner

COOLING

Water Capacity: 19½ qts (without heater), 21 qts (with heater)

Pressure Valve: Radiator filler cap AC No. RC-6, 13 lbs (Std.), AC No. RC-15, 15 lbs (Air Cond. Cars)

Thermostat: Choke type Dole or Harrison

Type	Dole	Harrison
160°①	563219	3126289
180°②	563311	3626290

①Use with alcohol base anti-freeze

②Use with permanent type anti-freeze

Water Pump: Packless sealed ball bearing type

See "Water Pumps" in Oldsmobile Special Data.

Pump Removal - Remove fan and fan pulley Remove six mounting bolts (4 to engine cover 2 to engine block) Remove Pump

Temperature Indicator: Two light system (Red & Green) with temperature switch in engine block GREEN light is lighted when engine running cold and goes off when engine temperature reaches 111-115°F RED light remains off during normal engine operation but comes on when engine temperature reaches 230-234°F *NOTE*- Red light will come on when ignition key turned to "Start" position but should go out when key returned to running position (this tests bulb and circuit each time engine started)

Engine Unit - Delco-Remy No. 1998181 (Std.), No. 1998189 (Air Cond. Cars)

See "Temperature Indicator" in Miscellaneous Section.

CLUTCH

Long 11CF Assy. No. L5167, Oldsmobile No. 570035. Semi-centrifugal single plate type

See "Long Clutches" in Clutch Section

Clutch Disc - Long No. 282687, Oldsmobile No. 565059

Pedal Adjustment: Pedal free travel 1-1¼" Adjust by turning adjusting nut on clutch connector link at throw-out yoke

Removal: Remove transmission (see below) Remove left engine filler plate engine breather pipe and right and left rear lower flywheel housing bolts Remove return spring and disconnect adjusting rod at yoke Install Engine Rear Support Tool BT-28 entering pilot supports into lower housing bolt holes Remove engine rear mount bolts at clutch housing, and remove frame crossmember by removing three bolts at each end Remove clutch housing by removing eight bolts holding housing to flywheel housing Remove clutch assembly from flywheel

SYNCHRO-MESH TRANSMISSION

Own. Constant mesh, synchro mesh (second & high), sliding gear (low & reverse), all helical gear type

See "Oldsmobile Synchro-mesh" in Transmission Section

Transmission Controls: *See "Transmission Controls" in Transmission Section*

Removal: Drain transmission and disconnect manual control rods and speedometer cable at transmission Mark location of center bearing support on frame to facilitate lateral alignment Disconnect front and rear companion flanges and center bearing support to frame

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

attaching bolts (*NOTE* - Keep shims grouped so they can be reinstalled in same location) Slide propeller shaft assembly out of frame Remove bolts holding transmission to clutch housing, and remove transmission by moving rearward until main drive gear clears clutch assembly

HYDRA-MATIC DRIVE

"Jetaway" Dual-Coupling Hydra-Matic. Four speed automatic transmission and fluid coupling

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual-Coupling Hydra-Matic" in Transmission Section*

►*TESTING & TROUBLE SHOOTING: See "Dual-Coupling Hydra-Matic" in Transmission Section*

Lubrication - Check fluid level every 1000 miles Drain and refill every 25,000 miles Use GM Hydra-Matic Drive Fluid Type "A" (marked AQ-ATF)

Checking Fluid Level - Check with transmission at normal operating temperature engine idling and selector lever in "P" (Park) position Add Hydra-Matic Fluid Type "A" to bring level to "FULL" mark on dipstick *CAUTION* - Do not fill above "FULL" mark

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER HYDRA-MATIC SERVICE DATA. See "Dual-Coupling Hydra-Matic" in Transmission Section*

UNIVERSALS

Saginaw or Spicer. Cross type three used one each at front and rear and one at center

►*UNIVERSAL JOINT INSTALLATION CAUTION TO PREVENT DRIVE LINE VIBRATION See "Propeller Shaft Notes" in Oldsmobile Special Data*

►*CAUTION:* Rear universal companion flange nut controls rear axle pinion bearing preload (must be adjusted whenever nut loosened) *See "Oldsmobile Hypoid" in Rear Axle Section*

Propeller Shaft Center Bearing Overhaul: *See "Propeller Shaft Notes" in Oldsmobile Special Data*

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Oldsmobile Special Data*

REAR AXLE

Own. Hypoid gear semi-floating type with Hotchkiss drive

See "Oldsmobile Hypoid" in Rear Axle Section

Car Model	Axle Ratios Ratio	①Code
88 & S88 S M Std	3 64-1 (40-11)	6
88 H M Std	3 23-1 (42-13)	9
88 H M With Air Cond	3 42-1 (41-12)	8

98 H M Std (exc Conv)	3 42-1 (41-12)	8
98 H M Std (Conv)	3 64-1 (40-11)	6
98 H M Optl	3 64-1 (40-11)	6
98 H M Optl	3 23-1 (42-13)	9

S M - Synchro-mesh H M - Hydra-Matic

① - Rear axle ratio code number stamped on lower locating boss on forward side of carrier

Backlash - 007- 008' (Limits 003 012")

Axle Shaft Removal: Remove wheel and take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be reused, if nuts damaged, new nuts must be used) Remove backing plate mounting nuts and static collector Loosen bearing retainer (do not move backing plate or brake line may be damaged) Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal), replace one nut to hold backing plate in position

Differential Carrier Assembly Removal: Remove axle shafts (see above) Clean differential carrier and axle housing around carrier to prevent dirt entering housing Disconnect propeller shaft at rear universal joint after having wired trunnion blocks together to avoid loss of rollers Mark universal joint so it can be replaced in the same position Drain oil by removing nuts from carrier mounting studs and moving carrier away from housing

Wheel Bearing Adjustment: None required

SHOCK ABSORBERS

Delco. Direct acting front and rear Service by replacement

Shock Absorbers (Oldsmobile No.)

Model	Front	Rear
88 & S88 (Exc Sta Wgn)	5329177	5531044
98 All	5536671	5531046
All Station Wagons	5532424	5531045

FRONT SUSPENSION

Independent. New "Spherical" joint type with ball joints connecting upper and lower control arms to steering knuckle

See "Oldsmobile" in Suspensions & Wheel Alignment Section

►*NOTE: Following specifications supersede previous recommendations.*

Steering Axis Inclination - 6° at 0° camber.

Caster - 0° to Neg. 1°.

Camber - Neg. ¼° to Pos. ½°, maximum variation between each side of car not to exceed ½°.

►*CASTER & CAMBER ADJUSTMENT NOTE:* Adjusting shims located between upper suspension arm shaft and frame member.

Toe-In - 0 to 1/16".

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be 23° ± ½°

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut

See "Saginaw Ball Bearing Worm & Nut" in Steering Section

Power Steering: Saginaw (In Line). *See "Saginaw In Line Power Steering" in Steering Section*

Steering Linkage: *See "Steering Linkage" in Steering Section*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

BRAKES

Bendix Hydraulic (Single Anchor). Conventional two shoe with short molded lining front (Primary) and long molded lining rear (Secondary) Parking brake applies rear wheel service brakes

See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section

Drum Diam t r - 11"

Wh l Cylind r Diam t r - 1 3/32" (Front), 31/32" (Rear)

Replacement Linings & Sh s - Shoes and linings furnished in half sets of Std and 030" Oversize

Lining Width & L ngth	Front Wh l	R ar Wh l
Primary Shoes	2½" x 9 3/8"	. 2" x 9 3/8"
Secondary Shoes	2½" x 12 1/32"	2" x 12 1 32"

Lining Thickness - 7/32"

Clearance - Adjusting screw backed off 16 notches from point where wheels can just be turned by hand

Braking Power - 56% Front 44% Rear

Standard Master Cylinder: On left chassis frame front extension under hood

Checking Fluid - Maintain fluid level to within ½" of top of master cylinder gasket surface

Removal - Remove from above Not necessary to disturb other parts

Power Brakes: Bendix or M raine. Combination vacuum power unit and hydraulic master cylinder Unit is mounted on underside of toe board and replaces regular master cylinder *See "Bendix Power Unit" or "Moraine Power Unit" in Brake Section*

►*1957 BENDIX POWER UNIT PRODUCTION CHANGE:* Two types Bendix Power Unit used Early production cars have vacuum reaction type Later cars have hydraulic reaction type

Checking Fluid -Same as for standard master cylinder

Removal of Power Unit - Disconnect positive battery cable at junction block on right fender filler plate disconnect purple solenoid lead wire from wiring harness, then pull cable through sleeve on power brake Disconnect hydraulic line at master cylinder and secure hose so end is above level of junction assembly Disconnect vacuum hoses at power cylinder and remove dipstick Disconnect leads from stop light switch and fold back floor mat Remove three brake pedal bracket attaching bolts and remove pedal and bracket Remove mast jacket grommet retainer and slide grommet up mast jacket Remove mast jacket cover plate attaching screws, cover plate and power cylinder assembly Remove two cover plate-to-power cylinder bolts and remove cover plate Remove power unit through toe pan opening

MISC. MECHANICAL

Windshield Wipers: Cable operated vacuum type *See "Windshield Wipers" in Miscellaneous Secti n*

Air Conditioning: *See "Frigidaire & Harrison" Air Conditioning in Miscellaneous Section*

Power Window Regulators: Electric type with individual motors in each window and master control switch on left front cowl *See "Power Window Regulators" in Miscellaneous Section*

Power Top Control: Hydro-Lectric *See "Power Top Controls" in Miscellaneous Section*

Power Seat Adjuster 4-Way: Electric type with single reversible type motor *See "GM 4-Way Seat Controls" in Miscellaneous Secti n*

Power Seat Adjuster 6-Way: Electric type with single reversible type motor *See "GM 6-Way Seat Controls" in Miscellaneous S ction*

►*AIR SUSPENSION CAR CAUTION: B for jacking, hoisting, towing or working und r car, s SERVICE CAUTIONS and TOWING instructions in "Oldsmobil Air Suspension"*

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door pillar. *NOTE* - Number (example below) includes identification data.

① ② ③ ④
58 7 M 01001

① - Year. (1958).
② - Series. **7** - 88, **8** - Super 88, **9** - 98.
③ - Assembly Plant. **M** Lansing, **A** Atlanta, **B** Framingham, **K** Kansas City, Kan., **L** Linden, **C** South Gate, **W** Wilmington, **T** Arlington.
④ - Beginning vehicle number.

ENGINE NUMBER: Stamped on pad located on top of center exhaust port of left cylinder head.

Starting Engin Numb r - B001001. *NOTE* - Export engines identified by "E" after engine number.

TUNE-UP

COMPRESSION PRESSURE: 100 lbs. minimum at cranking speed. Reading on low cylinder must not be less than 80% of reading on high cylinder.

VALVE TAPPET CLEARANCE: None in service (hydraulic lifters).

MANIFOLD HEAT CONTROL: Thermostatic coil type located on left side between exhaust manifold and exhaust pipe. Install with inner end of coil pointing toward spring pin.

IGNITION

FIRING ORDER: 1-8-7-3-6-5-4-2.

Cylind rs - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .030".

Spark Plugs - AC No. 44. 14 mm. Torque to 23-28 lbs.

COIL: D lc -R my 1115104.

Igniti n Curr nt - 2.0 amps. idling, 4.5 stopped.

R sist r - Delco-Remy 1928016 (Early), 1942491 (Late). 1.40-1.62 ohms.

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by s cond lead from ignition switch.*

DISTRIBUTOR: D lc -R my 1110883 (early), 1110929 (lat). "Window" type with external adjustments. *See D lc -R my (Wind w Type) Distributor" in Electrical S ction.*

C nd ns r - Delco-Remy 1932004 (1110883).

Capacity - .18-.23 mfd.

C ntact P int S t - Delco-Remy 1931988 (1110883).

Br ak r Gap - .016".

Cam Angl - 28-32° (set at 30°).

Br ak r Arm Spring T nsion - 19-23 ozs.

R tati n - Counterclockwise viewed from above.

Aut matic Advance

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	8-10
11 25-12 75	22 5-25 5	21

IGNITION TIMING

Setting - 5° BTDC with engine idling at 850 RPM and vacuum line to distributor disconnected and carburetor opening taped closed.

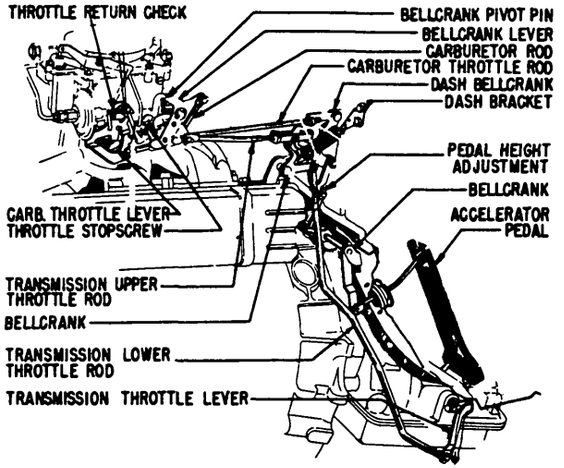
►*DETONATION NOTE: If engine detonates due to low octane fuel or carbon build-up, set timing to 2½° BTDC.*

Timing Mark - Two slots in rim of crankshaft balancer and pointer on upper left side of front cover. First slot is 5° BTDC, second slot is TDC.

CARBURETOR

►*CARBURETOR APPLICATION: Rochester carburetors are used. Series 88 has one 2-barrel carburetor, Series S88 & 98 have one 4-barrel carburetor. J-2 engine option (all series) has three 2-barrel carburetors.*

Throttle Return Check Adjustment: With transmission in "N" (Neutral) and engine at normal operating temperature, set carburetor on fast idle and adjust to 1500 RPM. Flash throttle and allow to return to slow idle, then turn off engine. Set carburetor on fast idle and check clearance between throttle return check plunger and throttle lever. Adjust to .050" (2-barrel carburetor), .020" (4-barrel carburetor) using two wrenches so that diaphragm is not permitted to turn.



THROTTLE LINKAGE ADJUSTMENT: Install Throttle Return Check Holding Tool J-6342 to hold plunger away from throttle lever. *NOTE* - Revise tool by bending to reduce distance between arms 1/16". Proceed as follows:

1) Remove throttle rod from transmission throttle lever and move throttle lever to rear against its stop, and with Throttle Lever Gauge J-6344 placed flat against rear face of transmission case, rod on gauge should just enter hole in throttle lever. Adjust throttle lever by bending with Tool J-6373-01 *(NOTE* - Tool J-6373 may be revised by cutting 5/8" from top of tool). Attach throttle rod to lever.

2) Back out slow idle adjusting screw until carburetor throttle valves are completely closed. Remove clips from carburetor throttle lever and carburetor bellcrank lever (do not remove carburetor rod).

2-Barrel or J-2 Carburetors - With throttle valves completely closed there should be .030" clearance between bellcrank arm and bellcrank stop.

4-Barrel Carburetor - Place Gauge No. 33-67 against rod with hole in gauge over pin on carburetor throttle lever. With gauge held up against bellcrank pivot pin, open end of tool should fit over pin on bellcrank lever freely without rotation of bellcrank. If pin does not enter hole freely, remove rod and place in a vise and increase or decrease bend as necessary.

OLDSMOBILE V8 THROTTLE LINKAGE

3) Replace retainer clips. Loosen jam nut on transmission throttle rod at bellcrank and remove clevis pin. Remove clevis pin from end of upper transmission throttle rod at bellcrank. With both bellcrank and transmission lower throttle rod held against their rearward stops, adjust lower throttle rod clevis so that pin will enter freely into holes in clevis and bellcrank. Install cotter pin and tighten jam nut.

4) With engine bellcrank against its stop and upper transmission throttle rod pulled lightly toward rear of engine to take up slack, adjust clevis on upper transmission throttle rod so that pin enters freely into holes in clevis and bellcrank. Install cotter pin and tighten jam nut. Set carburetor slow idle at 460 RPM with transmission selector lever in "D" (Drive) position. This will pull engine bellcrank forward from stop and provide proper throttle valve adjustment. *CAUTION - On all air conditioned cars, slow idle speed must be s t at 520 RPM with compressor running.*

5) Loosen jam nut and back out throttle stopscrew several turns. Hold choke wide open and pull forward on dash bellcrank until throttle valves are wide open, then go beyond to point of maximum transmission throttle lever travel *(CAUTION - This point is a matter of feel and care should be taken not to bend or str tch linkage beyond this point).* With throttle held in this position, adjust throttle stopscrew to just touch tang on downshift lever. Allow throttle valves to return to a closed position, **then turn throttle stopscrew in 1½ t 2 turns and tighten jam nut.**

6) If clearance between dash bellcrank and dash is not 3/8"±1/32" adjust as follows: Loosen jam nut on intermediate throttle rod, remove clevis from dash bellcrank, adjust throttle rod so there is 3/8" clearance between dash bellcrank and front of dash. Install rod end and clip with open side of rod toward outside of car, and tighten jam nut.

7) Adjust accelerator pedal height as follows: Position a 3 7/8" wooden block between bottom of accelerator pedal and top of floor mat retainer. Remove clip and

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

accelerator rod assembly from dash bellcrank. Loosen jam nut and adjust accelerator rod so that hole just slides over pin on bellcrank with accelerator pedal toughing gauge block. Install rod end on bellcrank with open side toward outside of car. Tighten jam nut and remove gauge block.

ROCHESTER 2GC (Single Carburetor)

Rochester No. 7012450

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting - After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smooth idle with highest vacuum reading and RPM.

Idle Speed - 460 RPM, Hydra-Matic in "D", Synchro-Mesh in Neutral. When Air Conditioning being operated, 520 RPM with control lever at extreme right position, and "Maximum" button pushed in.

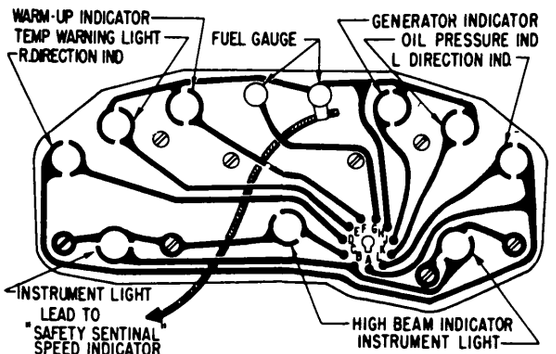
Float Level - 1 25/64" (Gauge BT-137). With air horn inverted and gasket in place, position float level gauge over float so it rests against pump side of power piston shaft, with outer gauge leg in line with center of float. Bend float arm to adjust.

Float Drop - Bend float tang as required to obtain a distance of 1 29/32" from gasket surface to bottom of float, with air horn upright and float hanging free. Use scale or scribed mark on float and pump gauge (BT-137).

Automatic Choke Setting: 1 notch lean.

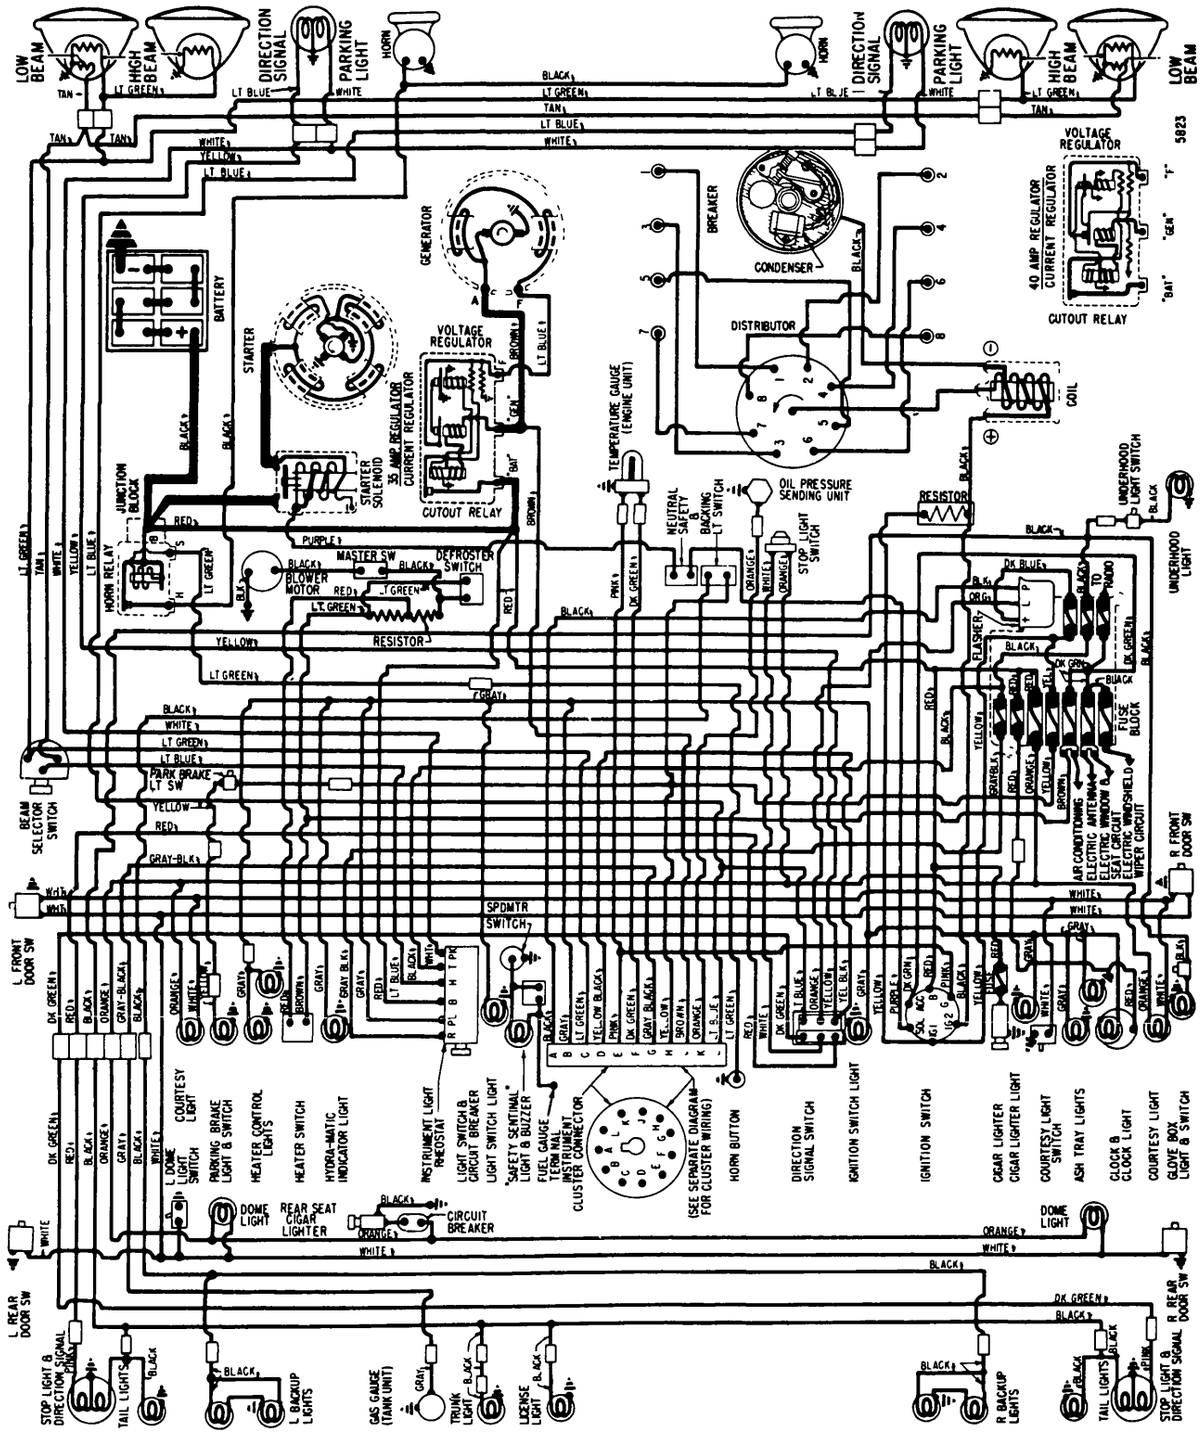
Throttle Return Check Adjustment (Hydra-Matic Cars): *See CARBURETOR above.*

Throttle Linkage Adjustment: *See CARBURETOR above.*



►*OTHER DATA: See "Rochester 2GC Carburetors" in Carburetion Section*

ROCHESTER 2GC
(Triple 2-Barrel Carburetors)



Rochester No. 7011712 (Front), 7011713 (Center, Early), 7012913 (Center, Late), 7011714 (Rear).

For complete adjustment data on these carburetors (including linkage adjustment to insure correct synchronization), see "Triple Carburetors" in Carburetion Section

CONTINUED ON NEXT PAGE

LDSMOBILE INSTRUMENT PANEL PRINTED CIRCUIT

CONTINUED FROM PRECEDING PAGE

ROCHESTER 4GC

Rochester No. 7012400 (Hydra-Matic), 7012401 (Synchro-Mesh).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting - With engine warm and operating at correct idle speed (see below), adjust each idle adjusting screw for smooth idle and highest RPM and vacuum, then turn each screw out (rich) ¼ turn. *NOTE* - If engine rolls from richness when throttle snapped closed, turn each screw in (lean) 1/8 turn.

Idle Speed - 460 RPM, Hydra-Matic in "D", Synchro-Mesh in Neutral. When Air Conditioning being operated, 520 RPM with control lever at extreme right position, and "Maximum" button pushed in.

Throttle Return Check Adjustment (Hydra-Matic Cars): *See CARBURETOR above.*

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4GC Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC No. 4317 (Exc. Air Cond.), No. 4540 (Air Cond.). Fuel & Vacuum.

Pressure - 5-6 lbs. at 1800 RPM with gauge at upper end of pump-to-carburetor line.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: AC Electric type.

Dash Unit - AC No. 1518960.

Tank Unit - AC No. 1518730 (Exc. Air Cond.), No. 5640098 (Air Cond.).

See "Fuel Gauges" in Carburetion Section.

Air Cleaner: Wet type (Std. Series 88). DRY paper element type (Std. Series Super 88 and 98; Optl., Series 88).

►*CLEANING CAUTION (Dry Type):* Clean filter element by tapping and shaking to remove dirt particles. *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

►*TRIPLE CARBURETOR AIR CLEANER REMOVAL & CAUTION:* Remove cleaner wing nut, lift off cover and remove capscrew from inside cleaner assembly. DO NOT drop capscrew in carburetor.

BATTERY

Delco-Remy 3KMR70. 12 Volt, 11 plate, 70 ampere hour capacity (20 hr. rate).

Battery Ground - Negative.

Engine Ground - From engine to forward side of firewall.

►*BATTERY NEGATIVE CABLE POSITION NOTE:* On Power Steering and/or Air Suspension Cars, rotate negative battery cable on post rearward as far as possible in order to clear Power Steering and/or Compressor pulley.

STARTER

Delco-Remy 1107665. **Armature** No. 1932185.

Drive - Overrunning clutch (solenoid pinion shift).

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	①Amperes
0 ft. lbs.	3600-5100	10.6	65-100
	Lock	3.5	300-360

①- Includes Solenoid Switch.

Starter Switch: Solenoid switch, Delco-Remy No. 1119798 mounted on starter and controlled by combination Starter & Ignition switch, Delco-Remy No. 1116534 and Neutral Safety and Back-up Switch (see below).

Hydra-Matic Neutral Safety Switch: Oldsmobile No. 570386. Neutral Safety and Back-up Light Switch.

Adjustment - *See "Dual-Coupling Hydra-Matic" in Transmission Section.*

GENERATOR

Delco-Remy 1102092 (Std.), 1102093 (Air Cond.).

Armature - Delco-Remy 1932900 (1102092 Gen.), 1939837 (1102093 Gen.).

Performance Data (Cold)

Generator	Amperes	Volts	RPM
1102092	35	14.0	2520
1102093	40	14.0	2600

Brush Spring Tension - 28 ozs. ± 4 ozs.

Field Current - 1.62-1.82 amps. (1102092), 2.66-2.86 amps. (1102093), at 12 volts, 80°F.

Rotation - Counterclockwise at commutator end.

Belt Adjustment: Place tension Tool No. 33-70 on generator belt. Loosen generator adjusting link bolt. Tighten belt until line on Tool 33-70 is even with pointer. Tighten adjusting link bolt.

REGULATOR

Delco-Remy 1119002 (1102092 Gen.), 1119600 (1102093).

►*REGULATOR CAUTION: Regulators must be used with generators as indicated above. DO NOT interchange regulators.*

►*"DOUBLE CONTACT" REGULATOR NOTE: Regulator 1119600 has double contacts for voltage regulation. NOTE - Specifications below are "Normal" settings.*

Cutout Relay

Cuts In - 12.8 volts (11.8-13.5 volts, 1119002; 11.8-13.0 volts, 1119600) hot.

Contact Gap - .020".

Air Gap - .020" with contacts just closed.

Voltage Regulator

Setting (1119002) - 14.5 volts (13.8-14.8 volts) at an ambient temperature of 125°F.

Setting (1119600) - 14.5 volts (13.8-14.6 volts) operating on upper contacts. .1-.3 volts lower (operating on lower contacts). At ambient temperature of 125°F.

Contact Gap (1119600) - .016" (upper contacts) with lower contacts just touching.

Air Gap - .075" (1119002), .067" (1119600), with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

Current Regulator

Setting (1119002) - 32-37 amps. (adjust to 35 amps.) hot.

Setting (1119600) - 38-45 amps. (adjust to 40 amps.) hot.

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact Regulators" in Electrical Section.*

MISC. ELECTRICAL

►*INSTRUMENT PANEL PRINTED CIRCUIT NOTE:* Entire instrument cluster served by a printed circuit. All units in cluster are connected by a multiple contact plug which is keyed to prevent improper assembly. Service of printed circuit is by **replacement only.**

Headlamps: Dual headlights (4 headlights). *See "4-Headlight System" in Electrical Section.*

Directional Signal: *See Electrical Section.*

Autronic Eye: *See Electrical Section.*

Light Switch Removal: Disconnect battery. Disconnect wires from light switch. Pull switch out to last position, then depress button on top of switch assembly and remove rod and knob. Remove Autronic-Eye Switch knob set screw (if so equipped) and remove switch knob. Use Allen wrench to remove sleeve then remove escutcheon. Remove headlight switch from rear of instrument panel.

Stop Light Switch Location (Std. Brakes): Mechanical type attached to underside of toe board and operated by movement of brake pedal.

Stop Light Switch Location (Power Brakes): Mounted on brake pedal bracket and operated by an adjustment screw in arm attached to brake pedal arm. Turn screw in until light just goes off with pedal fully released, then turn screw in four additional turns.

CIRCUIT BREAKER: 25 ampere - Protects head, parking and beam indicator lights. Located on headlight switch.

FUSES: *NOTE - Fuse block located on driver's side of cowl.*

20 Ampere (25 ampere on 98 Holiday & 4-Door Sedans) - Protects stop and body lights and rear seat cigar lighter.

25 Ampere - Protects Air Conditioner (only).

25 Ampere - Protects Heater & Air Conditioner.

25 Ampere - Protects Windshield Wipers.

20 Ampere - Protects Heater (only).

20 Ampere - Protects Windows, Antenna, Seat & Top.

20 Ampere - Protects Instrument panel Cigar Lighter. On back of lighter.

14 Ampere - Protects Back-up Lights, Fuel Gauge, and Indicator Lights.

9 Ampere - Protects Turn Signal, Glove Compartment, Underhood, Trunk, Spot and Tail Lights.

3 Ampere - Protects Instruments Lights.

1 Ampere - Protects Clock.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own 90° V8, Valve-in-head.

C mpr ssi n & Vacuum R ading - *S TUNE-UP*

►*ENGINE OPERATION IN LOW OCTANE AREAS (FOREIGN TRAVEL)*· The following modifications should be made to the standard engine before attempting travel in low octane areas (Foreign Travel) to eliminate excessive detonation and resultant engine damage *Lower the compression ratio by making changes listed for fuels of Octane Rating indicated*

Octane Rating	Head Gasket	Compr.Ratio	Ign. Timing
95-93	050"	9 5-1	5°-0° BTDC
91-88 Ⓒ	085"	8 9-1	5°-0° BTDC
86-83	Ⓒ	8 2-1	5°-0° BTDC
82-79	Ⓒ	7 6-1	5°-0° BTDC
80-77	Ⓓ	7 2-1	5°-0° BTDC

Ⓒ - In addition, install Longer Export Pushrods, and Hotter Spark Plugs AC No 46

Ⓒ - Install Kit No 572750 consisting of 125" thick Head Gasket, 060" Intake Manifold Gasket Special Pushrods, and Hotter Spark Plugs AC No 46

Ⓒ - Install Export Pistons, 085" thick Head Gasket, Longer Export Pushrods, and Hotter Spark Plugs AC No 46

Ⓓ - Install Export Pistons and all parts in Kit No 572750 (listed in Ⓒ above)

►*PART THROTTLE DETONATION UPON LIGHT ACCELERATION CORRECTION* When this condition exists on cars prior to Serial No B-210312, and only low octane fuels are available, install Special Vacuum Advance Unit Part No 1116146 (Identified by last three digits "146" stamped on advance unit bracket)

CYLINDER HEAD INSTALLATION: *See "Cylinder Head & Manifold" in Oldsmobile Special Data*

INTAKE MANIFOLD INSTALLATION: *See "Cylinder Head & Manifold" in Oldsmobile Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Oldsmobile Special Data*

OIL PAN REMOVAL: Loosen starter motor, remove exhaust crossover pipe, disconnect idler arm support from frame to lower steering linkage Remove pan

PISTONS

Aluminum alloy, three ring, autothermic, steel strut, slipper skirt, cam ground, tin plated

►*PISTON NOTE* Some production cars may have either 005" or 010" oversize pistons

Length - 4 05" **Weight** - 25 22 ozs (less rings & pin)

Removal - Pistons & rods removed from above only

►*CAUTION*· Mark piston rods, and bearing caps with cylinder number before removal to insure correct reinstallation

Clearance - 00075- 00125" Selective fit at thrust surface

Fitting New Pistons: With piston inverted and pin removed, insert piston into bore Pull required to withdraw a 0015" x ½" feeler placed at 90° to normal position of pin and piston at center of normal travel should be 1-6 lbs

►*CAUTION. Allow rebor d cylind rs to cool to normal room temperatur befor fitting pistons*

R plac m nt Pist ns: Furnished with fitted pins in Std (9 Sizes - see table below) and 010", 020", 030" Oversize

Standard Piston Siz s

Pist n C d	Cyl. C d	Pist n C d	Cyl C d
A	AA & A	W	WW & W
B	BB & B	X	XX & X
C	CC & C	Y	YY & Y
D	DD & D	Z	ZZ& Z
E	EE & E		

Installing Pistons: Install pistons 1,3,5,7 in left bank, and 2,4,6,8 in right bank with letter "F" cast on each side of piston pin hole and notch in piston head, toward front of engine

PISTON PINS

Floating type with lock ring at each end Pins are offset in piston 090" toward right side of engine

►*CAUTION:* Discard old lock rings and install new service type lock rings when installing pins

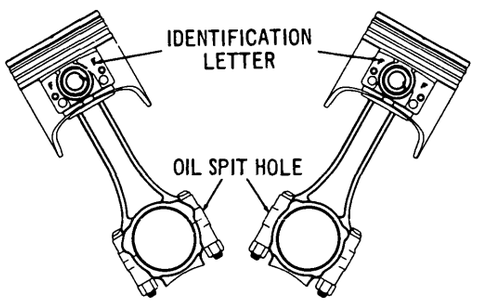
Diameter - 9803- 9807" **Length** - 3 126"

Pin Fit in Piston - 0000- 0002" loose Pin should not fall through piston of own weight when using the low limit (0000" fit) Pin can be tapped into place using brass drift

Pin Fit in Rod Bushing - 0003- 0005" loose

Replacement Pins: Std , 001" & 003" Oversize (in sets)

PISTON RINGS



Two compression and one oil ring used

Ring	Width	End Gap	Side Clearance
Compr #1	0775- 078"	013- 023"	001 -.003"
Compr #2	0925- 0935"	013- 023"	001 - 003"
Oil	188"(Max)	①	0023- 0039"

① Sealed Power 013- 033", Perfect Circle 015- 055"

Replacement Rings: Std & 010" Oversize, not in sets

Installing Rings: Install upper chrome and lower black compression rings with side marked "T" or "Top" up

OLDSMOBILE PISTON & ROD ASSY.

CONNECTING RODS

Length - 6 625" center-to-center **Weight** - 29 53 ozs

Crankpin Journal Diameter - 2 2488-2 2498"

Out of Round Limit - 0045"

Lower Bearing - Aluminum with babbitt overlay steel backed both halves interchangeable

Clearance - 0009- 0030" (vertical), 0019- 0040"(horizontal)

Sid play - 002- 011" (total for both rods)

R plac m nt B arings: Std , 002", 010" & 020" Undersize

Installing Rods: Bearing index notches on rods and caps, and pads for numbering caps and rods should be to outside of engine Spit hole for lubrication should be to inside of engine

►*CAUTION· Use Guide Tool BT-22 ov r rod bolts to prevent damaging crankpin journals when removing and installing piston and rod assembli s*

CRANKSHAFT

Journal Diameter - 2 748-2 749" Five bearings

Bear ings - Steel backed aluminum Rear bearing flanged, upper and lower inserts n t interchangeable

Clearance - 0003- 0019" (Front Bearing), 0005- 0021" (No 2 Bearing), 0005- 0031" (Nos 3 & 4 Bearing), 0015- 0031" (Rear Bearing) Obtained by selective fitting of special Standard Bearings *See Main Bearing Note following*

►*MAIN BEARING NOTE* In production, l w r half of Nos 1, 2 5 bearings are selective fit (standard or thicker bearings are listed below) for correct clearance as given above **Upp r** half of these bearings (and both halves of Nos 3 & 4 bearings) are **standard** thickness When installing new standard bearings, select lower bearing half for correct clearance from available thicknesses listed below Bearings are identified by letter stamped on back of bearing tang *NOTE - Standard thickness bearings are unmarked*

No. 1 (Front) Bearing - Lower bearing half ungrooved and furnished in following thicknesses Standard (unmarked) 0005" thicker (marked "A"), 001" thicker (marked "B")

No. 2 Bearing - Lower bearing half ungrooved and and furnished in following thicknesses Standard (unmarked), 0005" thicker (marked "A"), 001" thicker (marked "B"), 002" thicker (marked "E") 003" thicker (marked "F")

Nos. 3 & 4 Bearings - Lower bearing half furnished standard thickness only (unmarked) *NOTE* - Bearing clearance can be reduced by using any of the thicker lower bearing halves listed for No 2 bearing (above) but bearing clearance must n t be reduced to less than 0005"

No. 5 (Rear Bearing) - Lower bearing half has two holes in bearing groove and is furnished in same thicknesses and same markings as No 1 bearing (above)

►*EARLY PRODUCTION REAR BEARING NOTE* First cars used 1957 type bearing shells marked "M" (medium) "T" (Thin) or "H" (Heavy) Replace with same thickness bearing (as indicated by letter on tang) unless undersize bearings being installed to reduce clearance

Replacement Bearings: Furnished Standard (Special sizes - see Main Bearing Note above), and 002", 010", 020" Undersize

End Thrust: Taken by rear (#5) flanged bearing

Endplay - 004- 008"

Crankshaft Rear Main Bearing Oil S al Installati n: *S "Crankshaft & Main B arings" in Oldsmobil Sp cial Data*

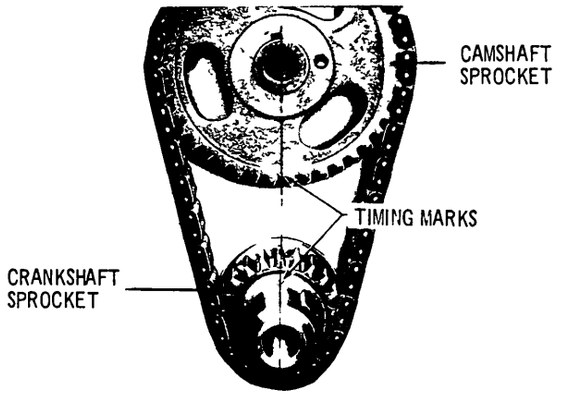
Crankshaft Front Oil S al: *S "Engin Front Cov r" in Oldsmobile Special Data*

CAMSHAFT

B arings - Steel backed babbitt or copper, lead bronze

Journal Diam t r - 1 9977-1 9985"

Cl aranc - 001- 0033"



CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

End Thrust: Forward thrust taken by plunger and spring at front end of camshaft

Timing Chain: Link Belt or Morse *NOTE - Both chains are completely interchangeable (may be used with either type crankshaft and camshaft sprockets)* **Width** - 27/32" **Pitch** - 50" **Length** - 24" or 48 links

Camshaft Setting: Mesh chain with sprocket marks adjacent and in line with a straight edge across shaft centers (or use Tool BT-11)

OLDSMOBILE VALVE TIMING MARKS

►*FUEL PUMP ECCENTRIC NOTE:* Fuel pump eccentric bolted to front of camshaft ahead of sprocket Assemble with cupped side out

►*CAMSHAFT REPLACEMENT CAUTION:* For initial lubrication of NEW camshaft it should be liberally coated with mixture of G M Concentrate No 567725 and engine oil before installation (2 Pints of concentrate in 4 qts of oil) and balance of concentrate should be added to crankcase oil for run-in purposes

Engine Front Cover Removal & Installation; *See "Engine Front Cover" in Oldsmobile Special Data*

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Oldsmobile Special Data*

VALVES

Tappet Clearance: None in service hydraulic

Valve	Head Diam.	Stem Diam.	Length
Intake	1 745-1 755"	3417- 3425"	4 989-5 009"
Exhaust	1 557-1 567"	3930- 3938"	4 989-5 009"

Valve	Seat Angl	Lift	Stem Clearance
Intake	45°	419"	0017- 0035"
Exhaust	45°	435"	0022- 0040"

Valve Seat Width - 037- 075", all valves

Valve Stem Seals - A "Top Hat" type oil seal (deflector) is installed on valve stem below valve spring retainer

Valve Springs: New taper type (larger outside diameter at bottom than at top) No valve dampener spring used with these new valve springs

►*VALVE SPRING REPLACEMENT CAUTION* Use springs are color coded for identification DO NOT use YELLOW coded springs or springs that are not positively identified by another color

Valve Spring Specifications

Valve	Pressure	Length
Open	110 234 lbs	1 437"
Closed	105-115 lbs	1 837"

Free Length - 2 31" (Approx)

Valve Guides: Remove guides with Remover Tool J-3062 Drive new guides into top of cylinder head as follows: Lay Gauge Washer J-5158 on valve spring seat, then install guide into cylinder head (with grooved end of guide up) by driving on Tool J-5158-2 until tool seats against gauge washer Guides should extend 25/32" above face of valve spring seat Inside diameter of guide is 3442- 3452" (Intake), 3960- 3970" (Exhaust) *NOTE* - Service guides are Parco-Lubrited and finished to size **DO NOT** ream Guides furnished Std and 010" oversize Oversize guides identified by a groove on O D of guide

Valve Lifters: Hydraulic lifters standard on all models

►*HYDRAULIC LIFTER INSTALLATION CAUTION* Production engines use Standard, 001", or 010" oversize lifters Use correct size when replacing lifters All lifters have identification numeral (Except Standard) on lifter body Cylinder block marked "1" or "10" for lifter size on rail under rocker arm cover When no mark appears lifters are standard

Diameter - 9210- 9215" (Std) **Length** - 2 125"

Clearance in Block - 0005- 0020" (Selective)

Replacement Lifters: Std 001", 002", 003" & 005" Oversize

Hydraulic Lifter Removal, Overhaul & Testing - *See "Valve System" in Oldsmobile Special Data*

Rocker Arm Assembly: *See "Valve System" in Oldsmobile Special Data*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above

Intake Valves Open 16° BTDC Ⓒ Close 45° ALDC Ⓒ

Exhaust Valves - Open 64° BLDC Ⓒ Close 20° ATDC Ⓒ

Ⓒ - 00538" cam lift Ⓒ - 00749" cam lift

Ⓒ - 00535" cam lift

Valve Timing Check: Remove left hand cylinder head rocker arm assembly and rotate engine so that #1 piston is on top dead center (firing stroke) Trailing edge of notch in crankshaft pulley will be aligned with pointer on timing chain cover Install Tool J-5374 in place of rear rocker shaft bracket with step plunger over #7 cylinder exhaust pushrod The 7 16" diameter pilot at bottom of tool will fit into cylinder head bolt hole Screw main body of gauge down so step plunger contacts pushrod and small diameter of step plunger is flush with top of main body Tighten clamp bolt Rotate engine one complete revolution so that No 1 piston is again at TDC (intake stroke) If timing chain is installed properly third step of plunger will rise 038" above main body If plunger rises more than 038" camshaft is **advanced** one tooth If plunger does not rise above body (just flush) camshaft is **retarded** one tooth

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Oldsmobile Special Data.*

Crankcase Capacity: 4 qts refill Add 1 qt for filter change

Normal Oil Pressure : 35-45 lbs at 50 MPH

Pressure Regulator - In pump body Not adjustable Valve starts to open at 45 lbs Maximum pump pressure is 45-55 lbs

Oil Pressure Indicator - Oil pressure warning light on instrument panel and oil pressure switch in engine block or oil filter Lights when pressure below 3 lbs

Engine Unit: AC No 1508668

Oil Pump: Gear type In crankcase at rear end

Oil Pump Removal, Overhaul & Installation - *See "Oil Pump" in Oldsmobile Special Data*

Oil Filter: Full flow type Replace every 5000 miles or sooner if needed Located on lower right side of crankcase at rear

Replacement Filter Element - AC No PF-122

Crankcase Ventilation: Air intake in oil filler cap has oil-wetted cleaner AC No 1552233 (Std), No 1551509 (Heavy Duty) Outlet is connected to ventilating baffle at rear of block above right bank Outlet pipe is push fit at ventilator and extends down below right rear corner of engine

►*NOTE:* Air cleaner also used in lower section of ventilator outlet tube on cars with heavy duty inlet breather in filler cap and oil bath air cleaner

COOLING

Water Capacity: 20 qts (without heater), 21 qts (with heater)

Pressure Valve: Radiator filler cap AC No RC-6 13 lbs (Std), AC No RC-15, 15 lbs (Air Cond Cars)

Thermostat: Choke type Dole or Harrison

Type	Dole	Harrison
160°①	563219	3126289
180°②	563311	3626290

①Use with alcohol base anti-freeze

②Use with permanent type anti-freeze

Water Pump: Packless sealed ball bearing type

See "Water Pumps" in Oldsmobile Special Data.

Pump Removal - Remove fan and fan pulley Remove six mounting bolts (4 to engine cover 2 to engine block) Remove Pump

Temperature Indicator: Two light system (Red & Green) with temperature switch in engine block GREEN light is lighted when engine running cold and goes off when engine temperature reaches 111-115°F RED light remains off during normal engine operation but comes on when engine temperature reaches 230-234°F *NOTE*- Red light will come on when ignition key turned to "Start" position but should go out when key returned to running position (this tests bulb and circuit each time engine started)

Engine Unit - Delco-Remy No 1998181 (Std), No 1998189 (Air Cond Cars)

See "Temperature Indicator" in Miscellaneous Section.

CLUTCH

Long 11CF Assy. No L5167, Oldsmobile No. 570035

Semi centrifugal single plate type

See "Long Clutches" in Clutch Section

Clutch Disc - Long No 282687 Oldsmobile No 565059

Pedal Adjustment: Pedal free travel 1-1¼" Adjust by

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

turning adjusting nut on clutch connector link at throw-out yoke.

Removal: Remove transmission (see below). Remove left engine filler plate, engine breather pipe, and right and left rear lower flywheel housing bolts. Remove return spring and disconnect adjusting rod at yoke. Install Engine Rear Support Tool 30-13, entering pilot supports into lower housing bolt holes. Remove engine rear mount bolts at clutch housing, and remove frame crossmember by removing three bolts at each end. Remove clutch housing by removing eight bolts holding housing to flywheel housing. Remove clutch assembly from flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gear type. *See "Oldsmobile Synchro-mesh" in Transmission Section.*

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission and disconnect manual control rods and speedometer cable at transmission. Mark location of center bearing support on frame to facilitate lateral alignment. Disconnect front and rear companion flanges and center bearing support to frame attaching bolts. (*NOTE* - Keep shims grouped so they can be reinstalled in same location). Slide propeller shaft assembly out of frame. Remove bolts holding transmission to clutch housing, and remove transmission by moving rearward until main drive gear clears clutch assembly.

HYDRA-MATIC DRIVE

"Jetaway" Dual-Coupling Hydra-Matic. Four speed automatic transmission and fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

Lubrication - Check fluid level every 1000 miles. Drain and refill every 25,000 miles. Use GM Hydra-Matic Drive Fluid Type "A" (marked AQ-ATF).

Checking Fluid Level - Check with transmission at normal operating temperature, engine idling, and selector lever in "P" (Park) position. Add Hydra-Matic Fluid Type "A" to bring level to "FULL" mark on dipstick. *CAUTION* - Do not fill above "FULL" mark

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER HYDRA-MATIC SERVICE DATA: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

UNIVERSALS

Saginaw or Spicer. Cross type, three used, one each at front and rear, and one at center.

►*UNIVERSAL JOINT INSTALLATION CAUTION TO PREVENT DRIVE LINE VIBRATION: See "Propeller Shaft Notes" in Oldsmobile Special Data.*

►*CAUTION:* Rear universal companion flange nut controls rear axle pinion bearing preload (must be adjusted whenever nut loosened). *See "Oldsmobile Hypoid" in Rear Axle Section.*

►*UNIVERSAL JOINT LUBRICATION NOTE:* Special Teflon lubricant is difficult to use in pressure gun Use Synthetic Oil Seal Lubricant on slip yoke splines at 6,000 mile lubrication intervals, but use "Special Teflon Lubricant" for repacking slip yoke whenever propeller shaft is disassembled.

Propeller Shaft Center Bearing Overhaul: *See "Propeller Shaft Notes" in Oldsmobile Special Data.*

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Oldsmobile Special Data.*

REAR AXLE

Own. Hypoid gear, semi-floating type with Hotchkiss drive.

►*ANTI-SPIN DIFFERENTIAL NOTE:* Anti-spin Differential is available as an option and can be identified by letter "L" stamped on differential carrier case pad near gear ratio code stamp. Anti-spin differential requires the use of special lubricant Part No. 531536. *See "Oldsmobile Hypoid" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.*

Axle Ratios

Series	Ratio
88 & S88 S.M. (All)	3.64-1 (40-11)
88 H.M. (Exc. Sta. Wgn.)	3.08-1 (40-13)
88 H.M. Sta. Wgn. & Air Cond.	3.23-1 (42-13)
S88 H.M. (Std.)	3.23-1 (42-13)
S88 H.M. (Air Cond.)	3.42-1 (41-12)
S88 H.M. (Optl.)	3.08-1 (40-13)
98 Std. & Air Cond.	3.42-1 (41-12)
98 Optl	3.08-1 (40-13)
98 Optl. Air Cond.	3.64-1 (40-11)

S.M. - Synchro-mesh. **H.M.** - Hydra-Matic.

►*REAR AXLE IDENTIFICATION NOTE:* Identification code number stamped on boss on lower forward side of carrier as follows:

Ratio	Code	Ratio	Code
3.64-1 (40-11)	6	3.23-1 (42-13)	9
3.42-1 (41-12)	8	3.08-1 (40-13)	0

►*AXLE SHAFT LENGTH CAUTION:* Axle shafts used in cars with Air Suspension are ½" longer than standard axle shaft. When replacing axle shaft (early Standard or Air Cond. Cars) in car equipped with anti-spin differential, it is necessary to grind off 1/16" from splined end of shaft to eliminate interference with internal cross shafts.

Backlash - .007-.008". (Limits .003-.012").

Axle Shaft Removal: Remove wheel and take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be reused, if nuts damaged, new nuts must be used). Remove backing plate mounting nuts and static collector. Loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal), replace one nut to hold backing plate in position.

Differential Carrier Assembly Removal: Remove axle shafts (see above). Clean differential carrier and axle housing around carrier to prevent dirt entering housing. Disconnect propeller shaft at rear universal joint after having wired trunnion blocks together to avoid loss of rollers. Mark universal joint so it can be replaced in the same position. Drain oil by removing nuts from carrier mounting studs and moving carrier away from housing.

Wheel Bearing Adjustment: None required.

SHOCK ABSORBERS

Delco. Direct acting front and rear. Service by replacement.

Shock Absorbers (Oldsmobile No.)

Model	Front	Rear
88, S88 (Exc. Sta. Wgn & Air Susp.)	5329177	5531044
98 (Exc. Air Susp.)	5536671	5531046
All Sta. Wgn. (Exc. Air Susp.)	5532424	5531045
88, S88 Air Susp.	5539214	5539215
98 Air Susp. (Exc. Air Cond.)	5544110	5544111
98 Air Susp. (With Air Cond.)	5544147	5544111

FRONT SUSPENSION

Independent. "Spherical" joint type, with ball joints connecting upper and lower control arms to steering knuckle.

See "Oldsmobile" in Suspension & Wheel Alignment Section.

Steering Axis Inclination - 6° at 0° camber.

Caster - 0° to Neg. 1°.

Camber - Neg. ¼° to Pos. ½°, maximum variation between each side of car not to exceed ½°.

►*CASTER & CAMBER ADJUSTMENT NOTE:* Adjusting shims located between upper suspension arm shaft and frame member.

Toe-In - 0 to 1/16".

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be at 23 ±½°.

REAR SUSPENSION

Conventional leaf springs standard. On Air Suspension Cars, two lower control arms connected between outer ends of rear axle housing and frame side rail. Two upper control arms are connected between rear axle housing and bracket on frame side rail. Track bar not used. *See "Oldsmobile Rear Suspension" in Suspension & Wheel Alignment Section.*

AIR SUSPENSION

Air springs replace coil springs (front), semi-eliptical springs (rear). Optional all models.

See "Front Suspension" above for alignment specifications and "Oldsmobile Now-Matic Suspension" in Suspension & Wheel Alignment Section.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut.

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (In Line). *See "Saginaw In Line Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BRAKES

B ndix Hydraulic (Singl Anchor). Conventional two shoe with short molded lining front (Primary) and long molded lining rear (Secondary). Parking brake applies rear wheel service brakes.

S "B ndix Hydraulic Single Anchor (Without Eccentric)" in Brake S ction.

Drum Diam t r - 11".

Wh l Cylind r Diam t r - 1 3/32" (Front), 31/32" (Rear).

R plac m nt Linings & Shoes - Shoes and linings furnished in half sets of Std. and .030" Oversize.

Lining Width & Length		
	Fr nt Wheel	**Rear Wheel**
Primary Shoes	2½" x 9 3/8"	2" x 9 3/8"
Secondary Shoes	2½" x 12 1/32"	2" x 12 1/32"

Lining Thickn ss - 7/32".

Cl aranc - Adjusting screw backed off 16 notches from point where wheels can just be turned by hand.

Braking P wer - 56% Front, 44% Rear.

Standard Mast r Cylinder: On left chassis frame front extension under hood.

Checking Fluid - Maintain fluid level to within ½" of top of master cyliner gasket surface.

Removal - Remove from above. Not necessary to disturb other parts.

Power Brakes: Bendix or Moraine. Combination vacuum power unit and hydraulic master cylinder. Unit is mounted on underside of toe board and replaces regular master cylinder. *See "Bendix Power Unit" or "Moraine Power Unit" in Brake Section.*

Checking Fluid - Same as for standard master cylinder.

Removal of Power Unit - Disconnect positive battery cable at junction block on right fender filler plate, disconnect purple solenoid lead wire from wiring harness, then pull cable through sleeve on power brake. Disconnect brake line at junction block and plug line with rubber stopper. Remove stop light switch leads and fold back floor mat. Remove pedal bracket and pedal assembly, mast jacket grommet and retainer (slide grommet and retainer up on mast jacket). Remove cover plate screws, speedometer cable from clips, and two cover plate-to-power cylinder bolts, then remove cover plate (rest power brake unit on edge of opening in toe pan). Disconnect vacuum hose, then remove brake unit through toe pan opening. *NOTE* - When reinstalling hose, position clamp so screw head may be reached from below car.

MISC. MECHANICAL

Windshield Wipers: Cable operated, vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: *See "Frigidaire & Harrison" Air Conditioning in Miscellaneous Section.*

Power Window Regulators: Electric type with individual motors in each window and master control switch on left front cowl. *See "Power Window Regulators" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric. *See "Power T p Controls" in Miscellaneous Section.*

Power Seat Adjuster 4-Way: Electric type with single reversible type motor. *See "GM 4-Way Seat Controls" in Miscellaneous Section.*

Power Seat Adjuster 6-Way: Electric type with single reversible type motor. *See "GM 6-Way Seat Controls" in Miscellaneous Section.*

►*STARTING CAR BY PUSHING CAUTION: Car CANNOT be start d by pushing because r ar oil pump has been eliminated in 1959 Hydra-Matic transmission*

MODEL IDENTIFICATION

Series	①Designatio ,	Engine
Dynamic 88	32	371"
Super 88	35	394"
98	38	394"

① - First two digits of series and body style designation following ("59" year number) under STYLE on body identification plate

SERIAL NUMBER: On left front door pillar *NOTE* - Number (example below) includes identification data

① ② ③ ④
59 7 M 01001

① - Year (1959)
② - Series **7** - 88, **8** - Super 88, **9** - 98
③ - Assembly Plant **M** Lansing, **A** Atlanta, **B** Framingham, **K** Kansas City, Kan , **L** Linden, **C** South Gate, **W** Wilmington, **T** Arlington
④ - Beginning vehicle number

ENGINE NUMBER: Stamped on pad located on top of center exhaust port of left cylinder head

►*NOTE* Two engines used **371" Engine** painted gold and has letter "C" prefixed to engine unit number **394" Engine** painted green and has letter "D" prefixed to engine unit number

Starting Engine Number - 001001 (following code letter) *NOTE* - Export engines identified by "E" after engine number

TUNE-UP

►*HARD STARTING IN COLD WEATHER* If failure to start is caused by breaker contact points being burned blue (at relatively low mileage), recurrence of this condition can be prevented as follows **1)** Set voltage regulator to specifications **2)** Install new higher resistance Ignition Coil Resistor Unit, No 1933400 (1 8 ohms - identified by blue color insulator) *NOTE* - Original resistor (1 5 ohms) can be identified by white color insulator

COMPRESSION PRESSURE: 100 lbs minimum at cranking speed Reading on low cylinder must not be less than 80% of reading on high cylinder

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters

MANIFOLD HEAT CONTROL: Thermostatic coil type located on left side between exhaust manifold and exhaust pipe Install with inner end of coil pointing toward spring pin

IGNITION

FIRING ORDER: 1-8-7-3-6-5-4-2
Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7
SPARK PLUG GAP: 030"
Spark Plugs - AC No 44 14 mm Torque to 23-28 lbs
COIL: D lc -R my 1115112.
Igniti n Curr nt - 2 0 amps idling, 4 5 amps stopped
R sist r - Delco-Remy 1942491 1 40-1 62 ohms at 80°F

►*RESISTOR CHANGE TO CORRECT HARD STARTING IN COLD WEATHER S e "Hard Starting in Cold Weather" correction above*

►*COIL RESISTOR NOTE Resistor is connected in lead from ignition switch to coil This resistor is bypassed during cranking by second lead from ignition switch*

DISTRIBUTOR: Delco-Remy No. 1110931. "Window" type with external adjustments *See "Delco-Remy (Window Type) Distributor" in Electrical Section*
Condenser - Delco-Remy 1932004 **Capacity** 18- 23 mfd
Contact Point Set - Delco-Remy 1931988
Breaker Gap - 016"
Cam Angle - 28-32" (set at 30°)
Breaker Arm Spring Tension - 19-23 ozs
Rotation - Counterclockwise viewed from above

Automatic Advance

Degrees Distr	RPM	Degrees Eng.	RPM
Start	400	0-4	800
6 5-8 5	975	13-17	1950
8-10	1200	16-20	2400
11-13	2200	22-26	4400

Vacuum Spark Control: Delco-Remy 1116144

Vacuum Advance

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	8-10
5 5-9	11-18	16
10-12	20-24	19-21

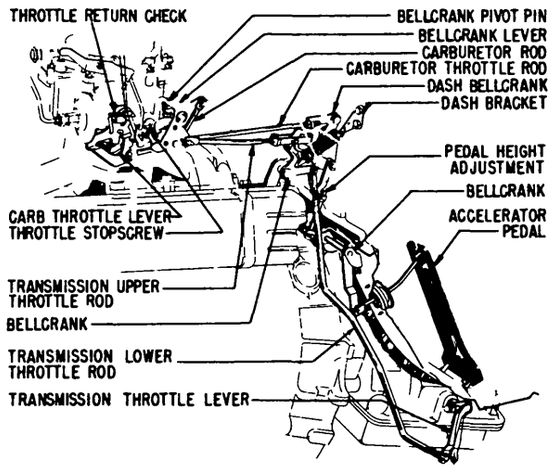
IGNITION TIMING

Setting - 5° BTDC with engine idling at 850 RPM and vacuum line to distributor disconnected and vacuum fitting line,taped closed

►*DETONATION NOTE If engine detonates due to low octane fuel or carbon build-up, set timing to 2½° BTDC*

Timing Mark - Two slots in rim of crankshaft balancer and pointer on upper left side of front cover First slot is 5° BTDC, second slot is TDC

CARBURETOR



►*CARBURETOR APPLICATION Rochester carburetors are used Series 88 has one 2-barrel carburetor, Series S88 & 98 have one 4-barrel carburetor 4-barrel carburetor optional on Series 88*

►*CARBURETORS RUNNING OUT OF FUEL UNDER NORMAL DRIVING CONDITIONS* May be caused by internal collapse of fuel line hose connecting fuel line to fuel pump inlet When installing new hose, check hose by connecting one end to fuel pump inlet and running engine (on fuel in carburetor bowl) while plugging other end of the hose with a thumb Examine hose for collapsed areas

►*ENGINE NOT RETURNING TO NORMAL IDLE SPEED (EARLY CARS)* May be caused by windshield washer pump relay wire interfering with transmission throttle rod or bellcrank and preventing normal travel of the linkage Correct by rerouting of the wire and taping it up out of the way

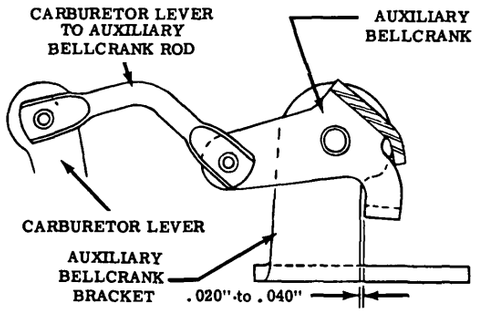
Throttle Return Check Adjustment (88): With transmission in "N" (Neutral) and engine at normal operating temperature, set carburetor on fast idle and adjust to 1900 RPM Turn off engine Rotate fast idle cam so fast idle screw rests on highest step of fast idle cam Clearance between contact screw and contact on throttle lever should be 050" To adjust, turn contact screw using two wrenches so that diaphragm is not permitted to turn *This setting supersedes previous recommendation of 020"*

Throttle Return Check Adjustm nt (S88 & 98): With transmission in "N" (Neutral) and engine at normal operating temperature, set carburetor on fast idle and adjust to 1600 RPM Turn off engine Rotate fast idle cam so fast idle screw rests on highest step of fast idle cam Clearance between contact screw and contact on throttle lever should be 020" To adjust, turn contact screw using two wrenches so that diaphragm is not permitted to turn

OLDSMOBILE V8 THROTTLE LINKAGE

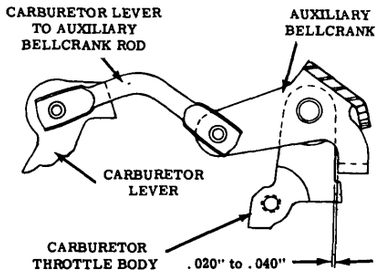
THROTTLE LINKAGE ADJUSTMENT: Install Throttle Return Check Holding Tool J-6342 to hold plunger away from throttle lever *NOTE - It may be necessary to revise tool by bending to reduce distance between arms 1/16"* Proceed as follows

1) Raise car Remove throttle rod from transmission throttle lever Place Throttle Lever Gauge J-6344 against machined surface of rear of transmission (do not touch serial number plate). With throttle lever held at end of its rearward travel, gauge rod should align vertically with hole in throttle lever *CAUTION - Do not insert gauge pointer into hole as gauge will be misaligned* If gauge pointer does not align, bend throttle lever with Tool J-6373-01 or J-6373 modified by cutting 5/8" from top of tool Attach throttle rod to lever Lower car



2) Make sure carburetor throttle valves are completely closed by starting engine, removing air cleaner and blocking choke valve open Then turn off engine and back out slow idle adjusting screw until carburetor throttle valves are closed *NOTE - Wh n valves are closed there will be clearance at end of fast idle screw, slow idle screw, and throttle return check plung r*

CONTINUED ON NEXT PAGE

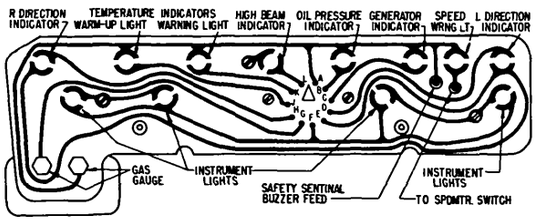


CONTINUED FROM PRECEDING PAGE

3) Clearance between auxiliary bellcrank bracket & auxiliary bellcrank (2-barrel carb.), or between carburetor throttle body and auxiliary bellcrank (4-barrel carb.) should be .020-.040". Adjust by bending carburetor-to-auxiliary bellcrank rod.

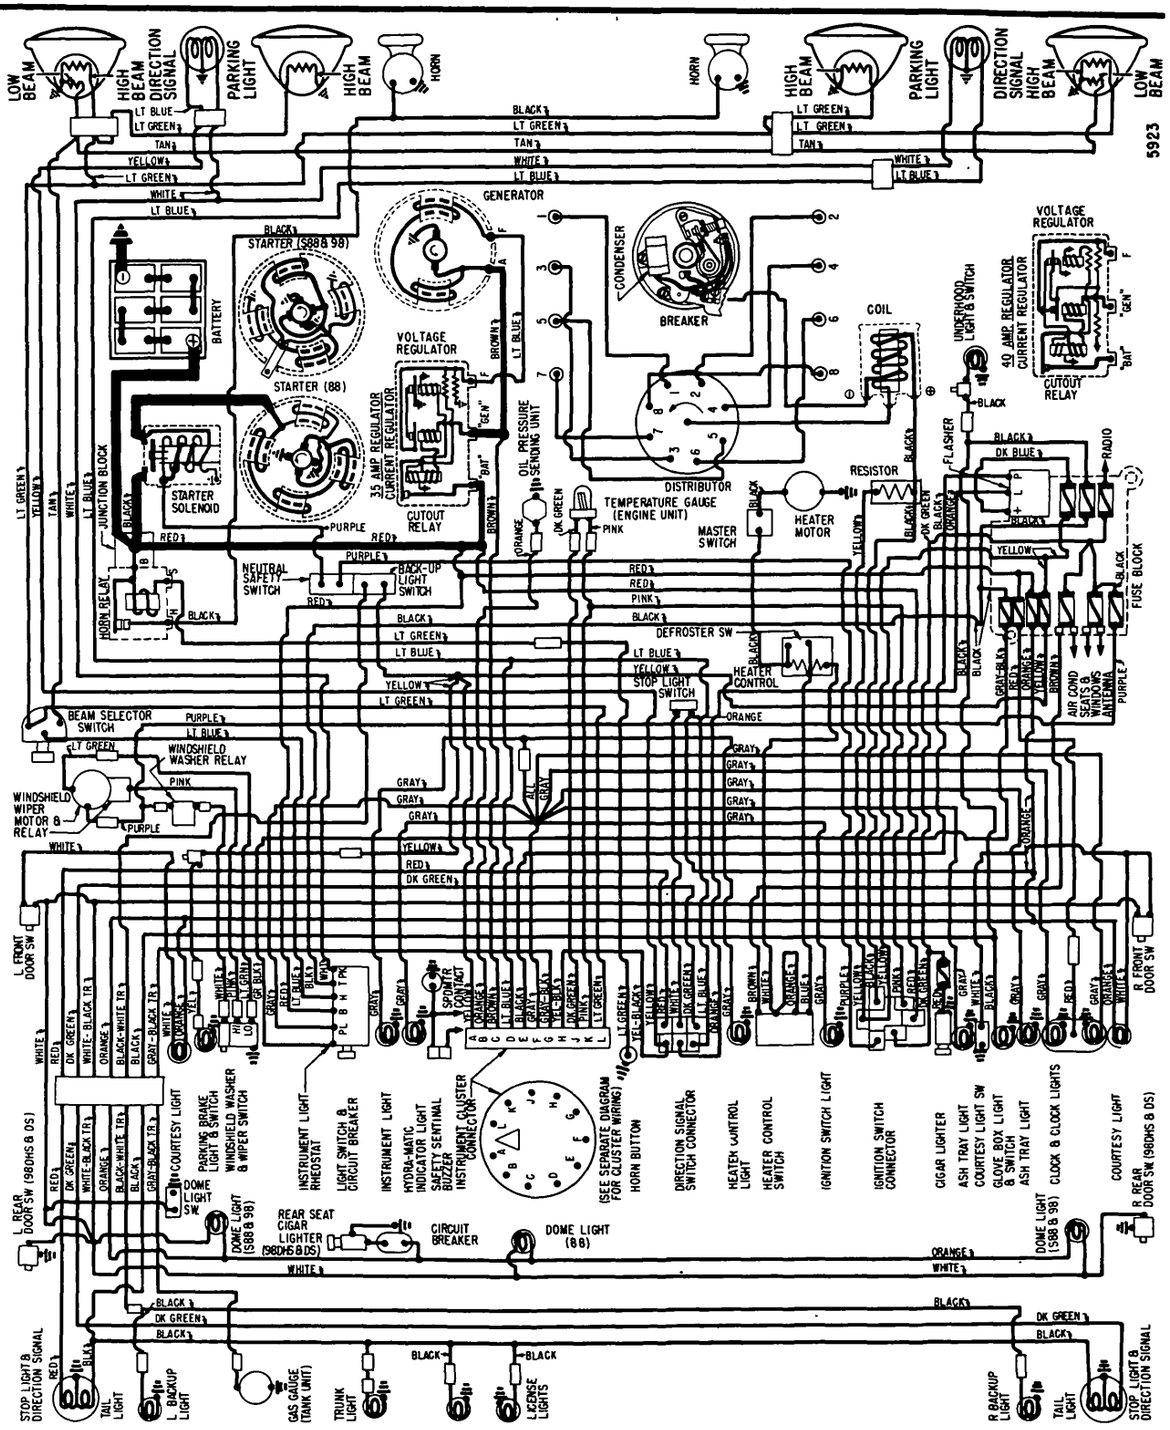
4) Loosen jam nut on lower throttle rod and remove both upper and lower throttle rods from bellcrank.

CARBURETOR ROD ADJUSTMENT (2-BBL.)



CARBURETOR ROD ADJUSTMENT (4-BBL.)

Upper rod has socket and ball stud connections which snap on and off. With bellcrank and lower throttle rod held against their rearward stops, adjust lower rod clevis so pin will enter freely into holes in clevis and bellcrank. Install cotter pin and tighten jam nut.



5) Lubricate upper throttle rod ball joint sockets with Special Lubricant, Part No. 571035. Install rod and adjust by turning ball socket assembly until bellcrank is .002-.005" off its stop. *CAUTION - Do not apply pressure to linkage during this adjustment.*

6) Remove block holding choke valve open, start engine

CONTINUED ON NEXT PAGE

OLDSMOBILE INSTRUMENT CLUSTER PRINTED CIRCUIT

CONTINUED FROM PRECEDING PAGE

and adjust slow idle speed to specifications.

7) With engine stopped and carburetor throttle valves in slow idle position, loosen jam nut on downshift stopscrew and back out stopscrew several turns. Push rearward on accelerator pedal lever until throttle valves are wide open. Hold in this position and rotate throttle bellcrank counterclockwise to limit of transmission lever travel. *CAUTION - This point is a matter of feel and care should be taken not to bend or stretch linkage beyond this point.* Adjust downshift stopscrew so it just touches tang on downshift lever. Return throttle valves to closed position and turn downshift screw in 1½-2 turns. Tighten jam nut.

8) Make sure upper throttle rod is 3 3/16" long. Measure accelerator pedal height from upper top side of pedal to flat washer on dash immediately ahead of pedal. Distance should be 3 13/16". Adjust by turning upper throttle rod adjuster. *NOTE - One turn of adjuster changes pedal height 1/16".*

9) Lubricate all pivot points with light oil, remove Tool J-6342, install air cleaner.

ROCHESTER 2GC

Rochester No. 7013052 (Std.), 7013058 (Air Conditioned). 7015915 Replacement Package for both units. *NOTE* - Carburetors used on factory-installed Air Conditioned cars have Idle Compensator (thermostatically controlled idle air bypass).

►*1959 CARBURETOR PRODUCTION CHANGES FOR IMPROVED PERFORMANCE: See "Rochester 2GC Carburetors" in Carburetion Section.*

►*1959 OLDSMOBILE IMPROVED PERFORMANCE DURING WARM-UP (Rochester 2GC Carburetor):* For improved choke operation during warm-up, new settings are recommended as follows: Fast Idle Speed - 1900 RPM (superseding previous setting of 1600 RPM), Throttle Return Check Setting - .050" (superseding .020").

►*1959 OLDSMOBILE STUMBLE ON LIGHT ACCELERATION (Cars with 2GC Carburetor prior to "M8"):* On carburetors not stamped "M8" or later on brass identification tag, it is recommended that Accelerating Pump Rod setting be increased 1/16". *NOTE* - Carburetors stamped "M8" or later have shorter pump plunger shaft and regular pump rod setting should be used. *See "Rochester 2G & 2GC Carburetors" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel Cyls. 1-4-6-7.*

►*IDLE COMPENSATOR CAUTION:* When making Idle Setting & Idle Speed adjustments, Idle Compensator must be in closed position (remove air cleaner and insert pencil or suitable tool in throttle bore). If engine speed increases when air cleaner installed, do not decrease speed. If engine speed decreases, readjust to correct RPM.

Idl S tting - After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smoothest idle with highest vacuum reading and RPM, then turn each screw out ¼ turn.

Idl Sp d - 460 RPM, Hydra-Matic in "DR" or Synchromesh in Neutral. 520 RPM for Air Conditioned cars. *NOTE - On cars with Idle Comp nsator, air conditioning must be "OFF". On cars without Idle Compensator, air conditioning must be "ON".*

Float Level - Use Gauge 100-31. With air horn inverted and gasket in place, place gauge on gasket so that top edge of gauge just touches bottom edge of seam of float at free end. Bend float arm to adjust.

Float Drop - Bend float tang as required to obtain a distance of 1 29/32" from gasket surface to bottom of float, with air horn upright and float hanging free. Use Gauge 100-31.

Fast Idle - Rotate fast idle cam so fast idle screw is on high step of cam. With engine running at normal operating temperature and transmission in "N" (Neutral), adjust fast idle screw to obtain an engine speed of 1900 RPM. *This setting supersedes previous recommendation of 1600 RPM.*

Automatic Choke Setting: Centered at index.

Throttle Return Check Adjustment (Hydra-Matic Cars): *See CARBURETOR above.*

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 2G & 2GC Carburetors" in Carburetion Section.*

ROCHESTER 4GC

(Std.) Rochester No. 7013050 (Early), 7013950 (Late), (Air Cond.) Rochester No. 7013150 (Early), 7013952 (Late). *NOTE* - Carburetors used on factory-installed Air Conditioned cars have Idle Compensator (thermostatically controlled idle air bypass).

►*CARBURETOR PRODUCTION CHANGE FOR IMPROVED ENGINE IDLE:* Carburetor has new slow idle stop in throttle body. *See "Rochester 4G & 4GC Carburetors" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels Cyls. 1-4-6-7.*

►*IDLE COMPENSATOR CAUTION:* When making Idle Setting & Idle Speed adjustments, Idle Compensator must be in closed position (remove air cleaner and insert pencil or suitable tool in throttle bore). If engine speed increases when air cleaner installed, do not decrease speed. If engine speed decreases, readjust to correct RPM.

Idle Setting - After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smoothest idle with highest vacuum reading and RPM, then turn each screw out ¼ turn.

Idle Speed - 460 RPM, Hydra-Matic in "DR" or Synchromesh in Neutral. 520 RPM for Air Conditioned cars. *NOTE - On cars with Idle Compensator, air conditioning must be "OFF". On cars without Idle Compensator, air conditioning must be "ON".*

Automatic Choke Setting: Centered at index.

Throttle Return Check Adjustment (Hydra-Matic Cars): *See CARBURETOR above.*

Throttle Linkage Adjustm nt: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4G & 4GC Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fu l Pump: AC. Fuel only (Standard), Combination fuel-and-vacuum (With Heater or Air Conditioning).

AC Repl. Pump No.	Us
4726 (Early), 4538 (Later)	Standard
4727 (Early), 4621 (Later)	With Heater
4728 (Early), 4614 (Later)	Heater & Air Cond.

Pressure - 5-6 lbs. at 1800 RPM with gauge at upper end of pump-to-carburetor line.

See "Fuel Pumps" in Carburetion Section.

Gas Gauge: AC Electric type.

Dash Unit - AC No. 5640258.

Tank Unit - AC No. 5640230 (Exc. Air Cond. Cars), 5640231 (Air Cond. Cars).

See "Fuel Gauges" in Carbur tion S ction.

Air Cleaner: Wet type (Std. Series 88), DRY paper element type (Std. Series S88 & 98, Optl. 88).

►*AIR CLEANER PRODUCTION CHANGE & SERVICE CAUTION:* Heavy duty paper element used in later production and furnished for service to replace earlier type element. New element can be identified by whit color paper (previous type had tan color paper). *This filter element should be REPLACED at 10,000 mil intervals (more often in dusty areas).*

►*AIR CLEANER DEFLECTOR BAFFLE INSTALLATION (To prevent element erosion in dusty ar as):* Deflector Baffle, No. 577839, can be installed under air cleaner cover directly in front of snorkel outlet. Baffle will channel air around element and lessen force with which dust particles strike paper element.

BATTERY

Delco-Remy 3KMR70. 12 Volt, 11 plate, 70 ampere hour capacity (20 hr. rate).

Battery Ground - Negative.

Engine Ground - From rear of left cylinder head to firewall.

STARTER

Delco-Remy 1107665 (88), 1107716 (Sup r 88 & 98). *NOTE* - No. 1107716 is new "Two-Shunt" type.

Armature - Delco-Remy 1932185 (88), 1941888 (Super 88 & 98).

Drive - Overrunning clutch (solenoid pinion shift).

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. minimum.

Performance Data - 1107665

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	3600-5100	10.6	65-100
	Lock	3.5	300-360

Performance Data - 1107716

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	4700-5400	10.6	80-120
	Lock	2.0	290-370

Ⓒ - Includes Solenoid.

Start r Switch: Solenoid Switch, Delco-Remy No. 1119798 (88), 1118811 (Super 88 & 98) mounted on starter and controlled by combination Starter & Ignition Switch,

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Delco-Remy No 1116554 and Neutral Safety & Back-up Switch (see below)

Hydra-Matic N utral Safety Switch: Oldsmobile No 570386 Neutral Safety and Back-up Light Switch

GENERATOR

D lc -R my 1102092 (Std. - Early), 1102166 (Std. - Lat r), 1102093 (Air C nd.).

Armatur - Delco-Remy 1932900 (1102092 Gen), 1939837 (1102093 Gen)

►*GENERATOR PRODUCTION CHANGE & REPAIR CAUTION ON FIRST TYPE GENERATOR.* Later 1102166 generator has ball bearing at commutator end with different armature and commutator end frame If commutator end bushing failure experienced on first type 1102092 generator, change generator over to ball bearing type by installing all of the following parts Commutator End Frame No 1946720, Ball Bearing No 904751, and Armature No 1946719 *NOTE* - These are same parts used in 1102166 generator

►*CHARGING CIRCUIT FUSE CAUTION* Battery charging circuit is protected by a fuse, Oldsmobile No 575532, clipped to "BAT" terminal of generator regulator Check for blown fuse when diagnosing Generator, Battery, or Regulator failure

►*GENERATOR GROANING NOISE (EARLY CARS)* On these cars, a groaning noise in "Drive" (off idle) and in 4th gear (at 20-25 MPH or 30-40 MPH), can be corrected by installing later type rubber-mounted generator adjusting link, No 577067 (with longer Attaching Bolt No 456656, Lockwasher No 120382 and special Flat Washer No 446477) *NOTE* - This rubber-mounted adjusting link used in production on later cars

P rf rmance Data (Cold)

Generator	Amperes	Volts	RPM
1102092	35	14 0	2520
1102166	35	14 0	2400
1102093	45	14 0	2600

Brush Spring T nsion - 28 ozs

Fi ld Curr nt - 1 62-1 82 amps (1102092 & 1102166), 2 66-2 86 amps (1102093), at 12 volts, 80°F

R tati n - Counterclockwise at commutator end

B lt Adjustm nt: Place tension Tool No 33-70 on generator belt Loosen generator adjusting link bolt Tighten belt until line on Tool 33-70 is even with pointer Tighten adjusting link bolt

REGULATOR

D lc -R my 1119002 (1102092 Gen.), 1119253 (1102166 G n.), 1119600 (1102093 G n.) *NOTE* - Specifications below are "Normal" settings

►*REGULATOR CAUTION Regulators must be used with generators as indicated above DO NOT interchange regulators*

►*"DOUBLE CONTACT" REGULATOR NOTE· Regulator 1119600 has double contacts for voltage regulation*

►*SEE CHARGING CIRCUIT FUSE CAUTION under Generat r above*

Cut ut R lay

Cuts In - 12 8 volts (11 8-13 5 volts, 1119253 & 1119002, 11 8 - 13 0 volts, 1119600) hot

C ntact Gap - 020"

Air Gap - 020" with contacts closed

Voltage Regulator

Setting (1119253 & 1119002) - 14 5 volts (13 8-14.8 volts) at an ambient temperature of 125°F

Setting (1119600) - 14 5 volts (13 8-14 6 volts) operating on upper contacts 1- 3 volts lower (operating on lower contacts) At ambient temperature of 125°F

Contact Gap (1119600) - 016" (upper contacts) with lower contacts just touching

Air Gap - 075" (1119253 & 1119002), 067" (1119600), with armature pressed down to point where contacts just touch

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section*

Current Regulator

Setting (1119253 & 1119002) - 32-37 amps (adjust to 35 amps) hot

Setting (1119600) - 38-45 amps (adjust to 40 amps) hot

Air Gap - 075" with armature pressed down to points where contacts just touch

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section*

MISC. ELECTRICAL

►*INSTRUMENT PANEL PRINTED CIRCUIT NOTE·* Entire instrument cluster served by a printed circuit All units in cluster are connected by a multiple contact plug which is keyed to prevent improper assembly Service of printed circuit is by **replacement only.**

Headlamps: Dual headlights (4 headlights) *See "4-Headlight System" in Electrical Section*

Directional Signal: *See Electrical Section*

Autronic Eye: *See Electrical Section*

Light Switch Removal: Disconnect battery Disconnect wires from light switch Pull switch out to last position, then depress button on top of switch assembly and remove rod and knob Remove Autronic-Eye Switch knob setscrew (if so equipped) and remove switch knob Use Allen wrench to remove sleeve, then remove escutcheon Remove headlight switch from rear of instrument panel

Stop Light Switch Location - (All Brakes): Mounted on brake pedal bracket and operated by an adjustment screw in arm attached to brake pedal arm Turn screw in until light just goes off with pedal fully released, then turn screw in three additional turns

CIRCUIT BREAKER: 25 Ampere - Protects head, parking and beam indicator lights Located on headlight switch Not adjustable

FUSES: *NOTE - Fuse block located on driver's side of cowl*

20 Amp r (25 amp r on 98 H liday & 4-Do r Sedans) - Protects stop and body lights and rear seat cigar lighter

20 Amp r - Protects Air Conditioner (only).

20 Amp r - Protects Heater & Air Conditioner

20 Amp r - Protects Heater (only)

20 Amp r - Protects Windshield wipers

20 Ampere - Protects Windows, Antenna, Seat & Top

20 Ampere - Protects instrument panel Cigar Lighter On back of lighter

9 Ampere - Protects Back-up Lights, Fuel Gauge, and Indicator Lights

9 Ampere - Protects Turn Signal (only)

9 Ampere - Protects Glove Compartment, Underhood , Trunk, Spot and Tail Lights

3 Ampere - Protects Instrument Lights

1 Ampere - Protects Clock

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Cautions" in Miscellaneous Section*

ENGINE SPECIFICATIONS: Own 90° V8 Valve-in-head Two engines used 371" Engine used in Series 88 394" Engine used in Super 88 & 98

Engine	Bore	Stroke	Displacement

③ - 050" thick

④ - Use Parts Kit No 577046 consisting of 125" thick Head Gaskets, 060" thick Intake Manifold Gaskets, and set of Longer Pushrods

CYLINDER HEAD INSTALLATION: *See "Cylinder Head & Manifold" in Oldsmobile Special Data*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

INTAKE MANIFOLD INSTALLATION: *See "Cylinder Head & Manifold" in Oldsmobile Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Oldsmobile Special Data.*

OIL PAN REMOVAL: Disconnect battery. Position No. 1 piston on bottom of stroke. Remove exhaust crossover pipe. Disconnect idler arm support from frame. Remove starter and lower flywheel housing. Remove pan.

PISTONS

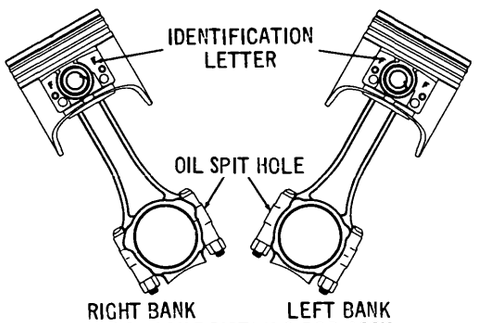
Aluminum alloy, three ring, autothermic, steel strut, slipper skirt, cam ground, tin plated.

Length - 4.05" (all) **Weight** 25.82 ozs. (88), 27.76 ozs. (Super 88 & 98).

Removal - Pistons & rods removed from above only.

►*CAUTION:* Mark piston, rods and bearing caps with cylinder number before removal to insure correct re-installation.

Clearance - .001-.0025" at bottom of skirt. Selective fit.



Fitting New Pistons: With piston inverted and pin removed, insert piston into bore. Pull required to withdraw a .0015 x 1/2" feeler placed at 90° to normal position of pin and piston at center of normal travel, should be 2-6 lbs. (371" Eng.), 3-12 lbs. (394" Eng.).

►*CAUTION: Allow rebored cylinders to cool to normal room temperature before fitting pistons.*

Replacement Pistons: Furnished with fitted pins in Std. 9 sizes (see table below) and .010", .020", .030" O.S.

Standard Piston Sizes

Piston Code	Cyl. Code	Piston Code	Cyl. Code
A	AA & A	W	WW & W
B	BB &B	X	XX & X
C	CC & C	Y	YY & Y
D	DD & D	Z	ZZ & Z
E	EE & E		

OLDSMOBILE PISTON & ROD ASSY.

Installing Pistons: Install pistons 1,3,5,7 in left bank, and 2,4,6,8 in right bank with letter "F" cast on each side of piston pin hole, and notch in piston head, toward front of engine. *See Rod Installation.*

PISTON PIN

Floating type with lock ring at each end. Pins are offset in piston .090" toward right side of engine.

►*CAUTION:* Discard old lock rings and install new service type lock rings when installing pins.

Diameter - .9803 - .9807". **Length** - 3.126".

Pin Fit in Piston - .0003-.0005" loose. Pin should not fall through piston of own weight when using the low limit (.0003"). Can be pushed into place with hand.

Pin Fit in Rod Bushing - .0003-.0005" loose.

Replacement Pins: Std., .001" & .003" Oversize.

PISTON RINGS

Two compression and one oil ring used.

Ring	Width	End Gap	Side Clearance
Compr.(1)	.0775-.078"	.013-.023"	.001-.004"
Compr.(2)	.0925-.0935"	.013-.023"	.001-.004"
Oil	Ⓒ	.015-.055"	Ⓔ

Ⓒ - .1831-.1889" (Perfect Circle), .1840-.1889" (Sealed Power).

Ⓔ - .0006-.0066" (Perfect Circle), .0001-.0051" (Sealed Power).

Replacement Rings: Std. & .010" Oversize.

Installing Rings: Install upper chrome and lower black compression rings with side marked "T" or "Top" up. Sealed Power rings have dimple marked on top of rings.

CONNECTING ROD

Length - 6.998" center-to-center. **Weight** - 35.58 ozs. (88), 34.55 ozs. (S88 & 98).

►*CONNECTING ROD CAUTION:* Rod used in 88 Engine is heavier (heavier bosses at large end) to compensate for lighter piston and is NOT interchangeable with rod used in Super 88 & 98 Engine.

Crankpin Journal Diameter - 2.4992-2.5002".

Lower Bearing - Moraine 400 steel-backed aluminum with babbitt overlay.

Clearance - .0005-.0026" (vertical), .0013-.0034" (horizontal).

Sideplay - .002-.011" (total for both rods).

Replacement Bearings: Std., .002", .010", .020" Undersize.

Installing Rods: Bearing index notches on rods and caps, and pads for numbering caps and rods should be to outside of engine. Spit hole for lubrication should be to inside of engine.

►*CAUTION: Use Guide Tool BT-22 over rod bolts to prevent damaging crankpin journals when removing and installing piston and rod assemblies.*

CRANKSHAFT

Journal Diameter - 2.9990-3.000". Five bearings.

Bearings - Moraine 400 steel-backed aluminum with babbitt overlay (Nos. 1-4), Durex 100A steel-backed babbitt overlay (No. 5).

Clearance - .0008-.0024" (Nos. 1-4), .0015-.0035" (No. 5). Wear limit .005".

►*MAIN BEARING CAUTION:* Main bearing clearances not within specifications should be corrected by installation of new upper and lower bearing shells INSTALLED AS A PAIR. DO NOT install upper or lower bearing shells singly and do not use shims behind shells to compensate for wear.

Replacement Bearings: Complete bearings (upper and lower halves) furnished Standard & .0005", .001", .0015", .002" Undersize. *Install bearings in PAIRS (upper and lower halves).*

End Thrust: Taken by rear (No. 5) flanged bearing.

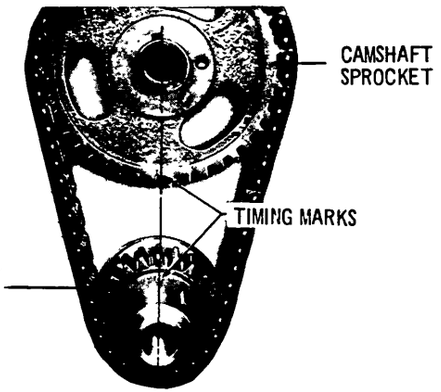
Endplay - .004-.008".

Crankshaft Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Oldsmobile Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Oldsmobile Special Data.*

CAMSHAFT

Bearings - Steel-backed babbitt.



Journal Diameter - 1.9977-1.9985" (All).

Clearance - .001-.0033".

End Thrust: Forward thrust taken by plunger and spring at front end of camshaft.

Timing Chain: (Width) 27/32", **(Pitch)** .50", **(Length)** 24" or 48 Links.

Camshaft Setting: Mesh chain with sprocket marks adjacent and in line with a straight edge across shaft centers (or use Tool BT-11).

OLDSMOBILE VALVE TIMING MARKS

►*FUEL PUMP ECCENTRIC NOTE:* Fuel pump eccentric bolted to front of camshaft ahead of sprocket. Assemble with cupped side out.

►*CAMSHAFT REPLACEMENT CAUTION:* For initial lubrication of NEW camshaft, it should be liberally coated with mixture of G.M. Concentrate No. 567725 and engine oil before installation (2 Pints of concentrate in 4 qts. of oil) and balance of concentrate should be added to crankcase oil for run-in purposes.

Engine Front Cover Removal & Installation; *See "Engine Front Cover" in Oldsmobile Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Oldsmobile Special Data.*

VALVES

►*EXHAUST VALVE OIL SEAL PRODUCTION CHANGE & "DRY ENGINE" VALVE NOISE CORRECTION (Engines before No. D or C-306540):* Correct by installing new deflector seal with **short** skirt on exhaust valve stems. This new seal used in production beginning with above engine numbers.

Tappet Clearance: None in service (hydraulic).

Valve	Head Diam.	Stem Diam.	Length
Intake	1.870-1.880	.3417-.3425"	4.989-5.009"
Exhaust	1.557-1.567	.3930-.3938"	4.989-5.009"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDI NG PAGE

Valv	Seat Angl	Lift	St m Cl arance
Intake	45°	419"	.0017-.0035"
Exhaust	45°	435"	0022- 0040"

Valv S at Width - 037-.075", all valves

Valv St m S als - *See Exhaust Valve Oil Seal Production Change above* Cupped type oil deflector installed on valve stem below spring retainer cup on all valves. To install, force oil deflector down on valve stem as far as possible (cupped end down toward toward head) Deflectors will position themselves properly on valve stem when engine is started

Valv Springs: New taper type (larger outside diameter at bottom than at top). No valve dampener spring used with these valve springs.

Fre L ngth - 2.25" (Approximate)

Valv Spring Specifications

Valv	Pr ssure	Length
Open	175-189 lbs	1.437"
Closed	85-95 lbs	1 837"

Valv Guid s: To remove old guides, support head and drive guides out through top of head using Remover Tool J-3062 Install new guides as follows Place Gauge Washer J-5158-3 on valve spring seat. Use Valve Guide Installer Tool J-5158-2 to drive new guide in head (grooved end of guide up) until tool seats against gauge washer This will correctly position guides in head (guide should extend 25/32" above face of valve spring seat)

Valv Lift rs: Hydraulic lifters standard on all models

►*HYDRAULIC LIFTER INSTALLATION CAUTION* Production engines use Standard, 001", or 010" oversize lifters Use correct size when replacing lifters All lifters have identification numeral (Except Standard) on lifter body Cylinder block marked "1" or "10" for lifter size on rail under rocker arm cover When no mark appears, lifters are standard

Diameter - 9210- 9215" (Std) **Length** - 2 125"

Cl aranc in Block - 0005- 0020" (Selective)

Replacement Lifters· Std , 001", 002", 003" & 005" & .010" Oversize.

Hydraulic Lifter R moval, Overhaul & Testing - *See "Valve System" in Oldsmobile Special Data*

① - 00538" cam lift ② - 00749" cam lift

③ - 00535" cam lift

Valv Timing Check: Remove left hand cylinder head rocker arm assembly and rotate engine so that #1 piston is on top dead center (firing stroke) Trailing edge of notch in crankshaft pulley will be aligned with pointer on timing chain cover Install Tool J-5374 in place of rear rocker shaft bracket with step plunger over #7 cylinder exhaust pushrod The 7 16" diameter pilot at bottom of tool will fit into cylinder head bolt hole Screw main body of gauge down so step plunger contacts pushrod and small diameter of step plunger is flush with top of main body Tighten clamp bolt Rotate engine one complete revolution so that No 1 piston is again at TDC (intake stroke) If timing chain is installed properly third step of plunger will rise 038", above main body If plunger rises more than 038", camshaft is **advanced** one tooth If plunger does not rise above body (just flush), camshaft is **retarded** one tooth

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Oldsmobile Special Data.*

Crankcase Capacity: 4 qts refill Add 1 qt for filter change

Normal Oil Pressure: 35-45 lbs at 50 MPH

Pressure Regulator - In pump body Not adjustable Valve starts to open at 45 lbs Maximum pump pressure is 45-55 lbs

Oil Pressure Indicator - Oil pressure warning light on instrument panel and oil pressure switch in engine block or oil filter Lights when pressure below 3 lbs

Engine Unit: AC No 1508668

Oil Pump: Gear type In crankcase at rear end

Oil Pump Removal, Overhaul & Installation - *See "Oil Pump" in Oldsmobile Special Data*

Oil Filter: Full flow type Replace every 5000 miles or sooner if needed Located on lower right side of crankcase at rear

Replacement Filter Element - AC No. PF-122 (Early), PF-5 (Late)

Crankcase Ventilation: Air intake in oil filler cap has oil-wetted cleaner, AC No. 1554198 (Std), No. 1554199 (Heavy Duty) Outlet is connected to ventilating baffle at rear of block above right bank Outlet pipe is push fit at ventilator and extends down below right rear corner of engine

►*NOTE:* Air cleaner also used in lower section of ventilator outlet tube on cars with heavy duty inlet breather in filler cap and oil bath air cleaner

COOLING

Water Capacity: 20 qts (without heater), 21 qts (with heater)

Pressure Valve: Radiator filler cap AC No RC-6 13 lbs (Std), AC No RC-15, 15 lbs (Air Cond Cars)

Thermostat: Choke type Dole or Harrison

Type	Dole	Harrison
160°①	563219	3126289
180°②	563311	3626290

①Use with alcohol base anti-freeze

②Use with permanent type anti freeze

Water Pump: Packless sealed ball bearing type

See "Water Pumps" in Oldsmobile Special Data.

Pump Removal - Remove fan and fan pulley Remove six mounting bolts (4 to engine cover 2 to engine block) Remove Pump

Temperature Indicator: Two light system (Red & Green) with temperature switch in engine block GREEN light is lighted when engine running cold and goes off when engine temperature reaches 113-115°F RED light remains off during normal engine operation but comes on when engine temperature reaches 238°-240°F *NOTE* - Red light will come on when ignition key turned to "Start" position but should go out when key returned to running position (this tests bulb and circuit each time engine started)

Engine Unit - Delco-Remy No. 1998189 (Std.), No. 1998707 (Air Conditioned Cars).

See "T mp rature Indicators" in Misc llan ous S cti n.

CLUTCH

Long 11CF Assy. No. L5167 (88), 262832 (Super 88 & Heavy Duty). Semi-centrifugal, single plate type. *See "Long Clutches" in Clutch Section*

Clutch Disc - Long No 282687, Oldsmobile No. 565059

Pedal Adjustment: *CAUTION - 1959 clutch linkage is new and must be adjusted as follows·* Install a ¼" gauge pin (piece of steel rod) through holes provided in frame side rail and X-member Remove cotter pin, clevis pin, and spring washer from clevis at upper end of vertical rod (at bellcrank on firewall) Overcenter spring will then hold bottom of rod against gauge pin. Loosen locknut at rear end of horizontal rod (clutch release yoke end of rod) until rod is free of tension Adjust pedal stopscrew at pivot end of pedal until pedal height measured from top of pedal pad to toe pan (roll back floor mat for measurement) is 8". Adjust clevis on upper end of vertical rod until gauge pin is just free in frame holes with rod connected to bellcrank on firewall. Install clevis pin, spring washer, and cotter pin in clevis and tighten locknut Adjust locknut on rear end of horizontal rod for correct pedal free travel of 1-1¼" *NOTE* - After linkage connected, pedal height will be 8¼" with spring load applied

Removal: Remove transmission (see below) Remove left engine filler plate engine breather pipe and right and left rear lower flywheel housing bolts Remove return spring and disconnect adjusting rod at yoke Install Engine Rear Support Tool 30-13 entering pilot supports into lower housing bolt holes Remove engine rear mount bolts at clutch housing, and remove frame crossmember by removing three bolts at each end Remove clutch housing by removing eight bolts holding housing to flywheel housing Remove clutch assembly from flywheel

SYNCHRO-MESH TRANSMISSION

Own. Constant mesh synchro-mesh (second & high), sliding gear (low & reverse), all helical gear type *See "Oldsmobile Synchro-mesh" in Transmission Section*

Transmission Controls: *See "Transmission Controls" in Transmission Section*

Removal: Drain transmission and disconnect manual control rods and speedometer cable at transmission Mark location of center bearing support on frame to facilitate lateral alignment Disconnect front and rear companion flanges and center bearing support to frame attaching bolts (*NOTE* - Keep shims grouped so they can be reinstalled in same location) Slide propeller shaft assembly out of frame Remove bolts holding transmission to clutch housing, and remove transmission by moving rearward until main drive gear clears clutch assembly

HYDRA-MATIC DRIVE

"Jetaway" Dual-Coupling Hydra-Matic. Four speed automatic transmission and fluid coupling

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION. See "Dual-Coupling Hydra-Matic" in Transmission Section*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*TESTING & TROUBLE SHOOTING: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

Lubrication - Check fluid level every 2000 miles. Drain and refill every 26,000 miles. Use only GM Hydra-Matic Fluid Type A - Suffix A

Capacity - 11 qts. (refill), 11½ qts. (refill after pan removed), 13 qts. (after overhaul).

Checking Fluid Level - Check with transmission at normal operating temperature, engine idling, and selector lever in Park "P" position. Maintain fluid level at "FULL" mark on dipstick. *CAUTION - Do not fill above FULL mark.*

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER HYDRA-MATIC SERVICE DATA: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

UNIVERSALS

Saginaw or Spicer. Cross type, three used, one each at front and rear and one at center.

►*UNIVERSAL JOINT INSTALLATION CAUTION TO PREVENT DRIVE LINE VIBRATION: See "Propeller Shaft Notes" in Oldsmobile Special Data.*

►*CAUTION:* Rear universal companion flange nut controls rear axle pinion bearing preload (must be adjusted whenever nut loosened). *See "Oldsmobile Hypoid" in Rear Axle Section.*

Propeller Shaft Center Bearing Overhaul: *See "Propeller Shaft Notes" in Oldsmobile Special Data.*

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Oldsmobile Special Data.*

REAR AXLE

Own. Hypoid gear, semi-floating type with Hotchkiss drive.

►*ANTI-SPIN DIFFERENTIAL NOTE:* Anti-spin Differential is available as an option and can be identified by letter "L" stamped on differential carrier case pad near gear ratio code stamp. Anti-spin differential requires the use of special lubricant Part No. 531536. *See "Oldsmobile Hypoid" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.*

Series	Rear Axle Ratio	Ratio
88 (Synchro-mesh - All)		3.64-1
88 (Hydra-Matic - Std.) exc. Fiesta		3.08-1
88 (Hydra-Matic - Std.) Fiesta Sedan		3.23-1
88 (Hydra-Matic - Plains Ratio)		2.87-1
88 (Hydra-Matic - Export Opt.)		3.23-1
88 (Hydra-Matic - Air Cond.)		3.23-1
Super 88 (Synchro-mesh - All)		3.64-1
Super 88 (Hydra-Matic - Std.)		3.23-1
Super 88 (Hydra-Matic - Plains Ratio)		2.87-1
Super 88 (Hydra-Matic - Air Cond.)		3.42-1
98 (Std. & Air Cond.)		3.42-1
98 (Plains Ratio)		3.08-1

►*REAR AXLE IDENTIFICATION NOTE:* Identification code number stamped on lower right front face of carrier flange as follows:

Cod N.	Axl Rati	Cod N.	Axl Rati
6	3.64-1 (40-11)	9	3.23-1 (42-13)
7	2.87-1 (43-15)	0	3.08-1 (40-13)
8	3.42-1 (41-12)		

Backlash - .007-.008" (limits .005-.009").

Axle Shaft Removal: Remove wheel and take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be reused, if nuts damaged, new nuts must be used). Remove backing plate mounting nuts and static collector. Loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal), replace one nut to hold backing plate in position.

Differential Carrier Assembly Removal: Remove axle shafts (see above). Clean differential carrier and axle housing around carrier to prevent dirt entering housing. Disconnect propeller shaft at rear universal joint after having wired trunnion blocks together to avoid loss of rollers. Mark universal joint so it can be replaced in the same position. Drain oil by removing nuts from carrier mounting studs and moving carrier away from housing.

Wheel Bearing Adjustment: None required.

SHOCK ABSORBERS

Delco. Direct acting front and rear. Service by replacement.

℄ **Shock Absorbers (Oldsmobile No.)**

Model	Front	Rear
88 & Super 88 (exc. Fiesta)	5544569	5531044
88 & Super 88 (Fiesta)	5549225	5531045
98	5549224	5531046

℄ - Except Air Suspension models.

FRONT SUSPENSION

Independent. "Spherical" joint type, with ball joints connecting upper and lower control arms to steering knuckle.

See "Oldsmobile" in Suspension & Wheel Alignment Section.

Steering Axis Inclination - 10° at 0° camber.

Caster - 0° to Neg. 1°.

Camber - Neg. ¼° to Pos. ½°, maximum variation between each side of car not to exceed ½°.

Toe-In - 0 to 1/16".

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be at 23 ±½°.

REAR SUSPENSION

Air Suspension Cars - Upper and lower control arms connected between axle housing and frame side rail at each side of car. *See "Oldsmobile Rear Suspension" in Suspension & Wheel Alignment Section.*

AIR SUSPENSION

Air springs replace coil springs (front), semi-eliptical springs (rear). Optional all models.

See "Front Suspension" above for alignment specifications and "Oldsmobile New-Matic Suspension" in Suspension & Wheel Alignment Section.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut.

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw. New "Rotary Valve" type. *See "Saginaw (Rotary Valve) Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic (Single Anchor). *NOTE* - Anchor pin is fixed type and no anchor pin adjustment is required. *See "Bendix Hydraulic Single Anchor (Without Eccentric) Brakes" in Brake Section.*

Drum Diameter - 11".

Wheel Cylinder Diameter - 1 1/8" (Front), 1" (Rear).

Braking Power - 56% Front, 44% Rear.

Replacement Linings & Shoes - Linings and shoes with linings furnished in half sets of Std. and .030" Oversize.

Lining Thickness - .250" (All).

Lining Width & Length	Front Wheel	Rear Wheel
Primary Shoes	2½" x 9 3/8"	2" x 9 3/8"
Secondary Shoes	2½" x 12 1/32"	2" x 12 1/32"

Clearance - Adjusting screw backed off 16 notches from point where wheels can just be turned by hand.

Std. Master Cylinder: On front face of firewall in engine compartment.

Checking Fluid - Maintain fluid level 1/2" below master cylinder filler cap.

Removal - Disconnect hydraulic line at master cylinder and plug line. Remove four attaching bolts and lockwashers, pull master cylinder forward and clear of firewall. *NOTE* - Boot will come out with master cylinder.

Power Brakes: Bendix or Moraine. Combination vacuum power unit and master cylinder. Mounted on forward face of firewall replacing regular master cylinder. *See "Bendix (Hydraulic Reaction Type)" or "Moraine Power Unit" in Brake Section.*

Removal - Disconnect hydraulic line at master cylinder and plug line, disconnect stop light switch leads. Pull pedal pad from pushrod, take out four pedal bracket attaching screws, remove bracket and pedal assembly. Remove steering column grommet retainer clamp, slide grommet and retainer up mast jacket. Take out floor cover plate attaching screws and cover plate-to-power cylinder bolt, remove cover plate while positioning power brake unit on edge of opening in toe pan. Disconnect vacuum hose. Remove power brake unit through toe pan opening.

MISC. MECHANICAL

Windshield Wiper: Electric crank and link arm type. Three types used: One-Speed (with separate motor driven washer), Two-Speed, and Cam-O-Matic.

See "Windshield Wipers" in Miscellaneous Section.

Air Conditioning: *See "Air Conditioning" in Miscellaneous Section.*

Power Window Regulators: Electric type with individual motor for each window and front door ventilator panes on some models.

See "Power Window Regulators" in Miscellaneous Section.

Power Top Control: Hydro-Lectric. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjustr: 2-Way or 6-Way electric types. *NOTE* - 6-Way seat control is new with individual motors for each movement (3 used).

See "Power Seat Controls" in Miscellaneous Section.

►*STARTING CAR BY PUSHING CAUTION: Car CANNOT b start d by pushing b caus ther is no rear oil pump in 1960 Hydra-Matic transmissi n.*

MODEL IDENTIFICATION

S ri s	① Designation	Engine
Dynamic 88	32	371"
Super 88	35	394"
98	38	394"

① — First two digits of series and body style designation following "60" year number under STYLE on body identification plate.

SERIAL NUMBER: Stamped on plate on left front door pillar. Number (example below) includes identification data.

① ② ③ ④
60 7 M 01001

① — Year (1960).
② — Series — **7** — 88, **8** — Super 88, **9** — 98.
③ — Assembly Plant. **M** Lansing, **A** Atlanta, **B** Framingham, **K** Kansas City, Kan., **L** Linden, **C** South Gate, **W** Wilmington, **T** Arlington.
④ — Beginning vehicle number.

Engin Unit Numb r: Stamped on pad located on top of center exhaust port of left cylinder head.

Starting Unit Numb r — 500001 with prefix and suffix letters as follows:

371" Engin — Painted gold. **Prefix** — C. **Suffix** — H (engines using premium fuel), E (low compression export engines).

394" Engin — Painted green. **Prefix** — D. **Suffix** — E (low compression export).

TUNE-UP

COMPRESSION PRESSURE: 100 lbs. minimum at cranking speed. Reading on low cylinder must not be less than 80% of reading of high cylinder.

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters.

MANIFOLD HEAT CONTROL: Thermostatic coil type located on left side between exhaust manifold and exhaust pipe. Install with inner end of coil pointing away from spring pin.

IGNITION

FIRING ORDER: 1–8–7–3–6–5–4–2.
Cylind rs — RIGHT BANK 2–4–6–8, LEFT BANK 1–3–5–7.

SPARK PLUG GAP: .030".
Spark Plugs — AC No. 45 (371" Eng. with 8.75–1 Compr. ratio), AC No. 44 (All others). 14 mm. Torque to 18–34 ft. lbs.

COIL: D lc -R my N . 1115112.
Igniti n Curr nt — 2.0 amps. idling, 4.0 amps. stopped.
R sist r — Delco-Remy. 1.75–1.85 ohms at 80°F.
►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch to coil. Bypassed during cranking by second lead from ignition switch.*

DISTRIBUTOR: D lc -R my No. 1110931 or 1110968. "Window" type with external adjustments. *See "Delco-R my (Window Typ) Distributors" in Electrical Section*

Condens r — Delco-Remy 1932004. **Capacity** .18–.23 mfd.
Contact P int S t — Delco-Remy 1931988.
Break r Gap — .016".
Cam Angl — 28–32° (set at 30°).
Br ak r Arm Spring T nsi n — 19–23 ozs.
R tati n — Counterclockwise viewed from above.

Automatic Advanc

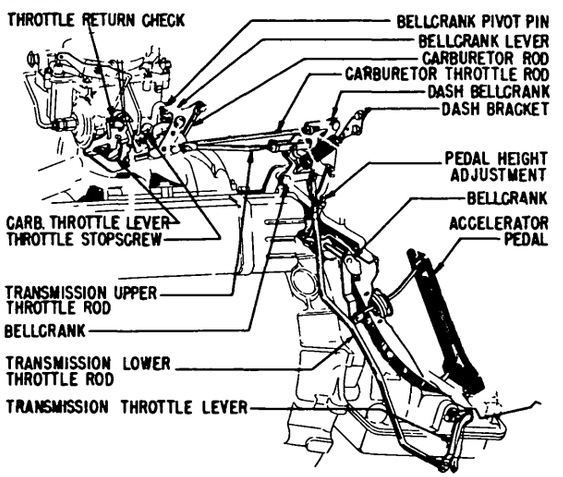
Degrees Distr.	RPM	Degrees Eng.	RPM
0–2	400	0–4	800
6.5–8.5	975	13–17	1950
8–10	1200	16–20	2400
11–13	2200	22–26	4400

Vacuum Spark Control: Delco-Remy 1116144 or 1116168

Vacuum Advance

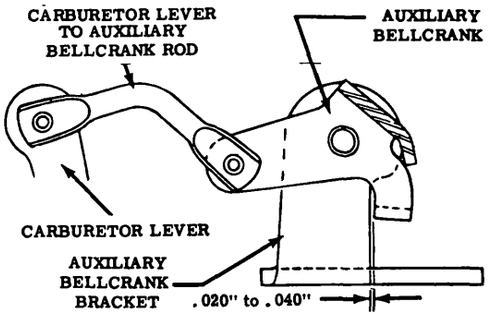
Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	8–10
11	22	19–21

►*VACUUM ADVANCE OPERATIONAL CHECK:* Vacuum advance operation should be checked whenever Ignition Timing is set. After setting ignition timing (with vacuum advance cut off by disconnecting vacuum line), reconnect vacuum line and check ignition timing. If vacuum advance operating correctly, engine RPM should increase and timing should advance, if not, vacuum unit is defective.



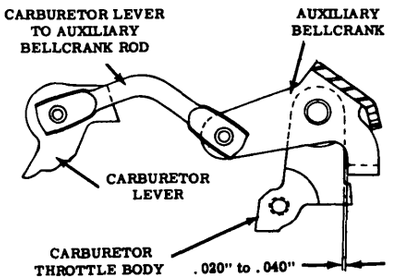
IGNITION TIMING

Setting — 5° BTDC with engine idling at 850 RPM and vacuum line to distributor disconnected and vacuum fitting line taped closed. After setting ignition timing, reconnect vacuum line and check vacuum unit operation. *See above.*
►*DETONATION NOTE: If engine detonates due to low octane fuel or carbon build-up, set timing to 2½° BTDC.*
Timing Mark — Three slots in rim of crankshaft balancer and pointer on upper left side of front cover. Slots indicate 0°, 5° BTDC and 10° BTDC.



CARBURETOR

►*CARBURETOR APPLICATION: Rochester carburetors are used. Series 88 has one 2–barrel carburetor, Series S88 & 98 have one 4–barrel carburetor. 4–barrel carburetor optional on Series 88.*



Throttle Return Check Adjustment: With transmission in "N" (Neutral) and engine at normal operating temperature, set carburetor on fast idle and adjust to 1600 RPM (4–Bbl.), 1900 RPM (2–Bbl.). Turn off engine. Rotate fast idle cam so fast idle screw rests on highest step of fast idle cam. Clearance between contact screw and contact on throttle lever should be .020" (4–Bbl.), .050" (2–Bbl.). To adjust, turn contact screw using two wrenches so that diaphragm is not permitted to turn.

OLDSMOBILE THROTTLE LINKAGE

CARBURETOR ROD ADJUSTMENT (2-BBL.)

CARBURETOR ROD ADJUSTMENT (4-BBL.)

THROTTLE LINKAGE ADJUSTMENT: Install Throttle Return Check Holding Tool J-6342-01 to hold plunger away from throttle lever *(TOOL MODIFICATION NOTE -* It may be necessary to file or grind .015" off flat area of tool to allow it to be inserted between stopscrew and plunger shoulder of return check assembly). Then proceed as follows:

1) Raise car. Remove throttle rod from transmission throttle lever. Place Throttle Lever Gauge J–8497 against machined surface of rear of transmission (do not touch serial number plate). With throttle lever held at end of its rearward travel, gauge rod should align vertically with hole in throttle lever. *CAUTION — Do not insert gauge pointer into hole as gauge will be misaligned.* If gauge pointer does not align, bend throttle lever with Tool J–6373–01 or J–6373 modified by cutting 5/8" from top of tool. Attach throttle rod to lever. Lower car.

2) Make sure carburetor throttle valves are completely closed by starting engine, removing air cleaner and blocking choke valve open. Then turn off engine and back out slow idle adjusting screw until carburetor throttle valves are closed. *NOTE — When valves ar closed, there will be clearance at end of fast idle screw, slow idle screw, and throttle return ch ck plunger.*

3) Clearance between auxiliary bellcrank bracket & auxiliary bellcrank (2–barrel carb.), or between carburetor throttle body and auxiliary bellcrank (4–barrel carb.) should be .020–.040". Adjust by bending carburetor-to-auxiliary bellcrank rod.

4) Loosen jam nut on lower throttle rod and remove both upper and lower throttle rods from bellcrank. *Upp r rod has sock t and ball stud conn ctions which snap n and off.* With bellcrank and lower throttle rod held against their rearward stops, adjust lower rod

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

clevis so pin will enter freely into holes in clevis and bellcrank. Install cotter pin and tighten jam nut.

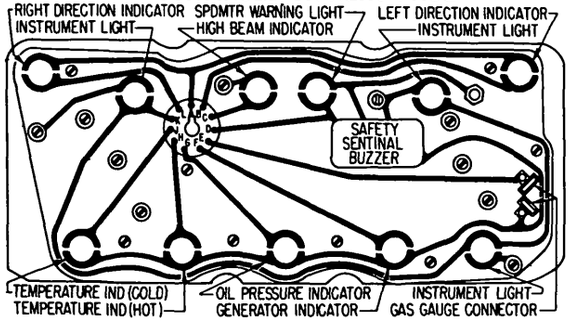
5) Lubricate upper throttle rod ball joint sockets with Special Lubricant, Part No. 567196. Install rod and adjust by turning ball socket assembly until bellcrank is .002–.005" off its stop. *CAUTION – Do not apply pressure to linkage during this adjustment.*

6) Remove block holding choke valve open, start engine and adjust slow idle speed to specifications.

7) With engine stopped, and choke fully released, block the throttle lever in the WIDE OPEN position. Loosen jam nut on downshift stopscrew and back out stopscrew several turns. Rotate throttle valve bellcrank on engine bracket counterclockwise to point of maximum of transmission throttle valve lever travel *(CAUTION - This point is a matter of feel and care must be used not to bend or stretch linkage beyond this point).* With linkage held in this position, adjust downshift stopscrew so that it just contacts tang on downshift lever, then turn screw in an additional 1½-2 turns and tighten jam nut. *NOTE - Above procedure supersedes previously recommended adjustment data.*

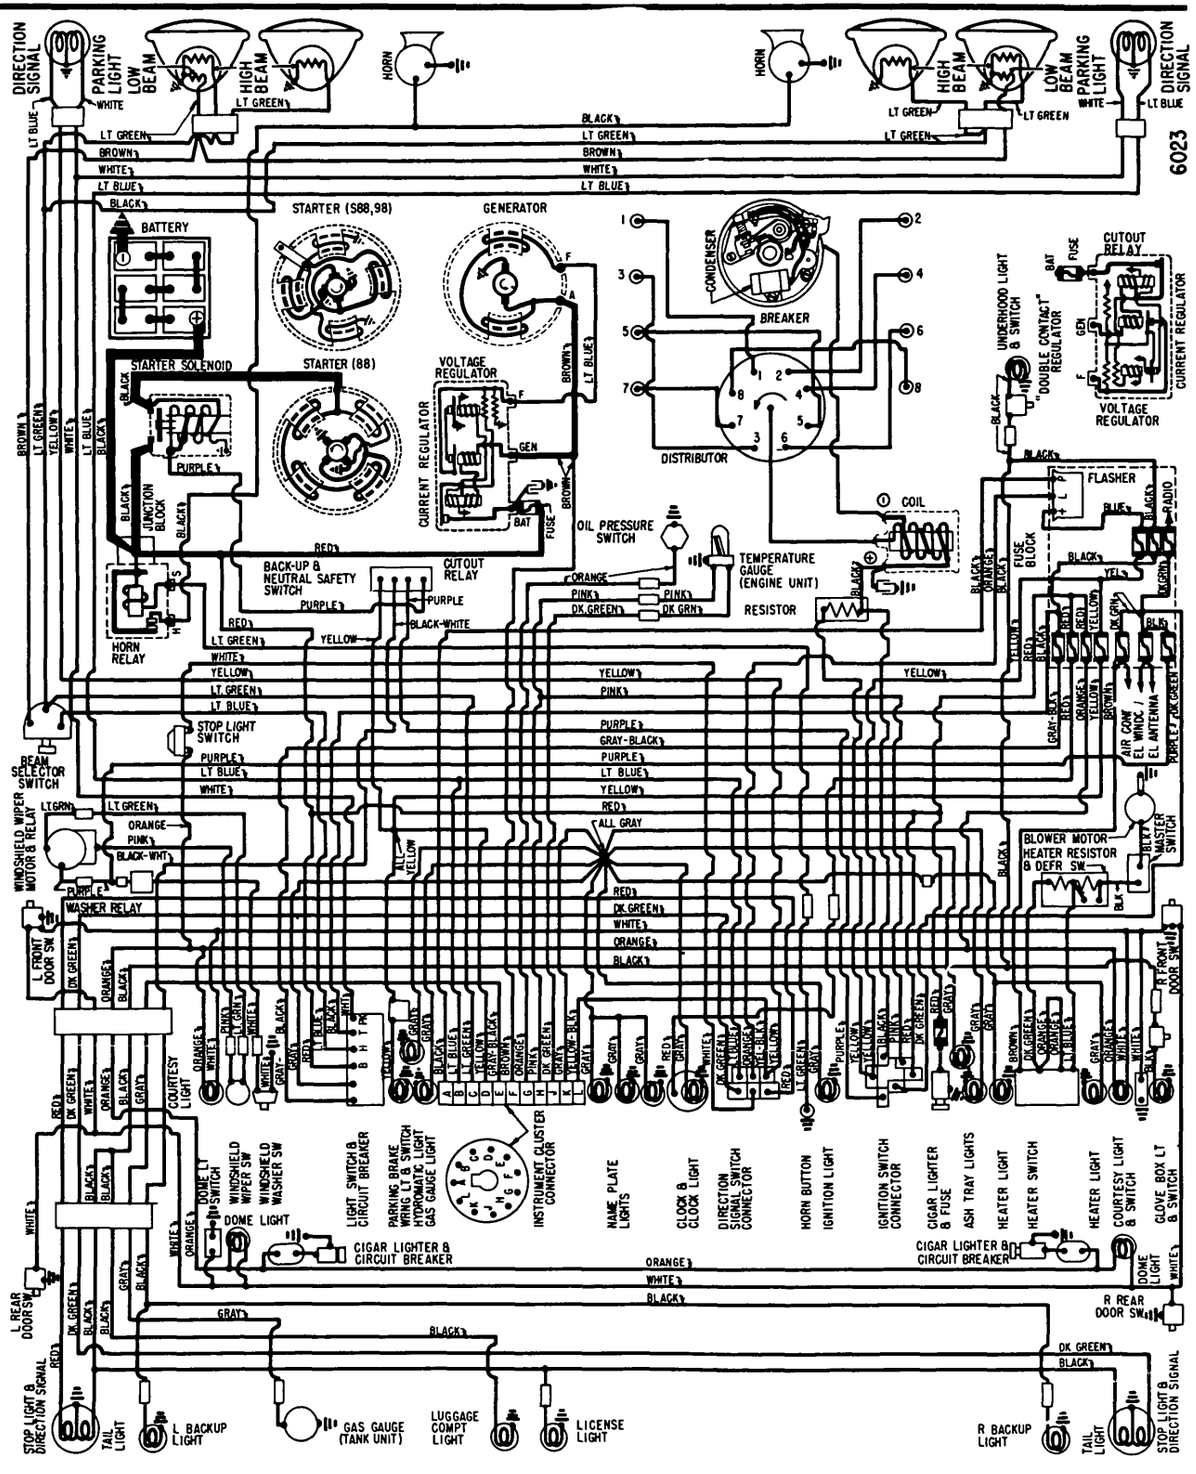
8) Make sure throttle rod is 3 3/16" long. Measure accelerator pedal height from upper top side of pedal to flat washer on dash immediately ahead of pedal. Distance should be 3 13/16". Adjust by turning upper throttle rod adjuster. *NOTE – One turn of adjuster changes pedal height 1/16".*

9) Lubricate all pivot points with light oil, remove Tool J–6342–01, install air cleaner.



ROCHESTER 2GC 2–BARREL

Rochester 7015052 (Std.), 7015058 (Air Cond. Cars). Dual downdraft type. Idle Compensator (thermostatically controlled idle air bypass) used on air conditioned (factory installed) cars.



►*HESITATION & STUMBLE CORRECTION (Early Cars):* On cars with no letter stamped on identification tag, this condition can be corrected by installation of all parts in Parts Kit No. 7017980 (Std. Cars), new Accelerator Pump No. 7016475 only (Air Cond. Cars). New identification tag stamped "MOD" should be installed on carburetor when this change made. *See "Rochester Dual 2G & 2GC Carburetors" in Carburetion Section for modification data.*

►*CHOKE STICKING CORRECTION (Carburetors stamped "A" on identification tag):* Caused by choke link going over center. Correct by installing new intermediate choke lever and shaft furnished in Parts Kit 7017981 and installing new identification tag stamped "B" furn-

CONTINUED ON NEXT PAGE

OLDSMOBILE INSTRUMENT CLUSTER PRINTED CIRCUIT

CONTINUED FROM PRECEDING PAGE

ished with kit. Carburetors marked "B" or "C" on identification tag do not require this modification. *See "Rochester Dual 2G & 2GC Carburetors" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel Cyls. 1-4-6-7.*

►*IDLE COMPENSATOR CAUTION:* When making Idle Setting & Idle Speed adjustments, Idle Compensator must be in closed position (remove air cleaner and insert pencil or suitable tool in throttle bore). If engine speed increases when air cleaner installed, do not decrease speed. If engine speed decreases, readjust to correct RPM.

Idle Setting – After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smoothest idle with highest vacuum reading and RPM, then turn each screw out ¼ turn.

Idle Speed – 460 RPM, Hydra-Matic in "DR" or Synchro-mesh in Neutral. 520 RPM for Air Conditioned cars. *NOTE – On cars with Idle Compensator, air conditioning must be "OFF". On cars without Idle Compensator, air conditioning must be "ON".*

Float Level – 11/16" (Gauge BT–179 or BT–151 modified, see below). With air horn inverted and gasket in place, place edge of gauge acroos air horn gasket at outer end of float with lower edge of float seam touching gauge. Bend float arm to adjust.

►*GAUGE BT–151 MODIFICATION NOTE:* To adapt 1959 gauge for new float level on 1960 carburetors, cut a notch 1/16" deep and ½" wide, 1 1/8" in from end of gauge marked "Float Level". Float should fit in notch on gauge.

Float Drop - Bend float tang to obtain distance of 1 29/32" from gasket surface to bottom of float with air horn upright and float hanging free. Use Gauge BT-151 or BT-179.

Fast Idle – Rotate fast idle cam so fast idle screw is on high step of cam. With engine running at normal operating temperature and transmission in "N" (Neutral), adjust fast idle screw to obtain an engine speed of 1900 RPM (2200 RPM for sub-zero temperatures).

Automatic Choke Setting: 1 Point Rich (Early Carbs. with no letter or with "MOD" notation on brass identification tag), Centered (At Index) for later carburetors marked by letters "A", "B", or "C" on identification tag.

►*CHOKE SETTING "TAILORING" FOR CLIMATIC CONDITIONS (Carburetors marked "B" or "C" on identification tag):* These carburetors have choke shaft lever with three holes for intermediate choke rod engagement. Moving rod to next OUTER hole will provide richer mixture during warm-up for acceleration or load, moving rod to next INNER hole will provide leaner mixture under same operating conditions.

Throttle Linkage & Throttle Return Check Adjustment (Hydra-Matic Cars): *See CARBURETOR above.*

►*OTHER DATA: See "Rochester Dual 2G & 2GC Carburetors" in Carburetion Section.*

ROCHESTER 4GC 4–BARREL

Rochester 7013950 (Std.), 7013952 (Air Cond. Cars). 4–barrel downdraft type. Idle Compensator (thermostatically controlled idle air bypass) used on air conditioned (factory installed) cars.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels Cyls. 1-4-6-7.*

►*IDLE COMPENSATOR CAUTION:* When making Idle Setting & Idle Speed adjustments, Idle Compensator must be in closed position (remove air cleaner and insert pencil or suitable tool in throttle bore). If engine speed increases when air cleaner installed, do not decrease speed. If engine speed decreases, readjust to correct RPM.

Idle Setting – After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smoothest idle with highest vacuum reading and RPM, then turn each screw out ¼ turn.

Idle Speed – 460 RPM, Hydra-Matic in "DR" or Synchro-mesh in Neutral. 520 RPM for Air Conditioned cars. *NOTE – On cars with Idle Compensator, air conditioning must be "OFF". On cars without Idle Compensator, air conditioning must be "ON".*

Throttle Return Check Adjustment (Hydra-Matic Cars): *See CARBURETOR above.*

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4G & 4GC Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC. Three types used.

AC Repl. Pump No.	Type
4726 (Less Heater or AC) ①	Fuel Only
4727 (With Heater Only) ①	Fuel & Vacuum
4728 (With Heater & AC) ②	Fuel & Vacuum

① - Integral fuel filter.

② - Pulsator type pump with external fuel filter and return line to tank.

Pressure - 5-6 lbs. at 1800 RPM measured at upper end of pump-to-carburetor line.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: AC Electric type.

►*GAUGE INDICATOR CAUTION:* Gasoline Gauge "E" and "F" marks are located beyond range of gauge scale and pointer will not reach these points when tank is empty or full (line nearest "E" mark is pointer position when tank empty).

►*FIESTA STATION WAGON GASOLINE GAUGE PRODUCTION CHANGE & WIRING CAUTION:* Later cars have "Two Wire" gauge system and **transposing wires at terminals on either dash or tank unit will cause tank unit resistor to burn out.** Connect wires as follows: **Dash Unit -** Both Yellow & Pink wires connected to terminal nearest pink daub of paint on gauge, Brown wire connected to other terminal. **Tank Unit -** Yellow wire connected to terminal marked "Y", Gray wire connected to terminal marked "G".

Dash Unit - AC No. 5643042 (All Models incl. Early Fiesta Sta. Wgn. "One-wire" Type), AC No. 5643388 (Later Fiesta Sta. Wgn. "Two-wire" Type).

Tank Unit - AC. Used as follows:

	No Air.Cond.	Air Cond.
All exc. Fiesta	5640230	5640231
Fiesta Sta. Wgn. "One-wire"	5640857	5640873
Fiesta Sta.Wgn. "Two-wire"	5641522	5641523

See "Fuel Gauges" in Carburetion Section.

Air Cleaner: Oil wetted type (Std. Series 88), Heavy Duty replaceable paper element type (Std. Super 88 & 98, Optl. Series 88).

►*HEAVY DUTY AIR CLEANER CAUTION:* Replace element at 10,000 mile intervals or oftener in dusty driving conditions. Remove air cleaner, remove element, clean body and install new element.

BATTERY

Series 88 - Delco-Remy No. 462. 12 volt, 9 plate, 62 ampere hour capacity (20 hr. rate).

Super 88 & 98 - Delco-Remy No. 562. 12 volt, 11 plate, 70 ampere hour capacity (20 hr. rate).

Battery Ground - Negative.

Engine Ground - Rear of left cylinder head to firewall.

STARTER

Delco-Remy. No. 1107665 (Series 88), No. 1107716 Early, No. 1107776 Later (Super 88 & 98). *NOTE - 1107716, 776 are "Two-Shunt" type.*

Armature - Delco-Remy No. 1932185 (1107665), No. 1941888 (1107716, 776).

Drive - Overrunning clutch (solenoid pinion shift).

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. minimum.

Performance Data - 1107665

Torque	RPM	Volts	① Amperes
0 ft. lbs.	3600-5100	10.6	65-100
	Lock	3.5	300-360

Performance Data - 1107716 & 776

Torque	RPM	Volts	Amperes
0 ft. lbs.	3900-5400	10.6	80-120
	Lock	2.0	290-370

① - Includes Solenoid.

Starter Switch: Solenoid Switch, Delco-Remy No. 1119798 (1107665), No. 1118811 (1107716), No. 1114257 (1107776) mounted on starter and controlled by combination Starter & Ignition Switch, Delco-Remy No. 1116572 and Neutral Safety & Back-up Switch (see below).

Hydra-Matic Neutral Safety & Back-up Light Switch: Oldsmobile No. 570386.

Adjustment - *See "Dual-Coupling Hydra-Matic" in Transmission Section.*

GENERATOR

Delco-Remy 1102166, 1102168, or 1102183 (Std.), 1102187 (Air Cond. Cars).

Armature - Delco-Remy No. 1946719 (1102166, 168, 183), No. 1939837 (1102187).

►*CHARGING CIRCUIT FUSE CAUTION:* Battery charging circuit is protected by a 50 ampere fuse clipped to "BAT" terminal of generator regulator. Check for blown fuse when diagnosing generator, regulator or battery failure.

Performance Data (Cold)

Generator	Amperes	Volts	RPM
1102166	35	14.0	2400
1102168, 183	35	14.0	2510
1102187	45	14.0	2520

Brush Spring Tension - 28 ozs.

Field Current - 1.62-1.82 amps. (1102166), 1.69-1.79 amps. (1102168, 183), 2.66-2.86 amps. (1102187) at 12 volts and 80°F.

Rotation - Counterclockwise at commutator end.

Belt Adjustment: Place Tension Tool No. 33-70 on generator belt. Loosen generator adjusting link bolt. Tighten belt until line on Tool 33-70 is even with pointer. Tighten adjusting link bolt.

REGULATOR

Delco-Remy No. 1119253 (1102166, 168, 183 Gen.), 1119600 (1102187 Gen.). *NOTE - Regulator 1119600 is "Double Contact" type.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*SEE CHARGING CIRCUIT FUSE CAUTION ABOVE.*

►*REGULATOR CAUTION: Regulators must b us d with generators as indicated above. DO NOT interchange regulators.*

►*REGULATOR 1119253 ADJUSTMENT NOTE:* May be "Post Type" design with nylon adjusting nuts above Voltage & Current Regulator units for air gap adjustment *NOTE – Specifications below are "Normal" settings.*

Cutout Relay

Cuts In – 11 8–13.5 volts (1119253), 11 8–13 0 volts (1119600), hot.
Contact Gap – 020"
Air Gap – .020" with contacts just closed.

Voltage Regulator

S tting (1119253) - 13.8-14.7 volts at ambient temperature of 125°F.
Setting (1119600) – 13 8–14 6 volts operating on upper contacts. 1– 3 volts lower operating on lower contacts. At an ambient temperature of 125°F
Contact Gap (1119600) – 016" (upper contacts) with lower contacts just touching.
Air Gap – 075" (1119253), 067" (1119600), with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "Delco-Remy 1119000 S ries Regulators" and "Delco-Remy (Double Contact) R gulators" in Electrical Section*

Current Regulator

Setting (1119253) - 31-35.5 am ps. (adjust to 35 amps.) hot
S tting (1119600) - 38-45 amps. (adjust to 40 amps) hot.
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) R gulators" in Electrical Section.*

MISC. ELECTRICAL

►*INSTRUMENT PANEL PRINTED CIRCUIT NOTE:* Entire instrument cluster served by a printed circuit. All units in cluster are connected by a multiple contact plug which is keyed to prevent improper assembly. Service of printed circuit is by **replacement only.**

Instrument Cluster Removal: Remove Air Conditioner, Heater or ventilation controls. Remove two instrument panel to cowl braces. Remove headlight and ignition switches. Disconnect wiring harness, clock, safety sentinel and speedometer cable at cluster. Remove cluster to instrument panel nuts and lockwashers. Remove cluster out to left of steering column.

Sp edometer Head Assembly Removal (Cluster Removed): Remove case attaching screws, then carefully lift case from cluster without disturbing light tubes in cluster. Remove indicator face plate. Disconnect Safety Sentinel wire from terminal inside case. Remove speedometer head-to-case screws, special washers, and grommets. Remove speedometer head assembly.

Printed Circuit Removal: *NOTE - Cluster "ON" or "OFF" car.* Disconnect wiring harness and fuel gauge plug from circuit Pull Safety Sentinel Buzzer from plug at rear of cluster. Remove all light sockets. Remove circuit to cluster attaching screws and remove printed circuit assembly. *NOTE* - Two light sockets with extensions are located in upper left and right corners

Light Switch R m val: Disconnect battery. Disconnect wires from light switch (push-in-type). Pull switch out to last position, then depress button on top of switch assembly and remove rod and knob. Remove Guide-Matic switch knob setscrew (if so equipped) and remove knob. Use screwdriver to remove sleeve, then remove escutcheon with Allen wrench. Remove headlight switch from rear of instrument panel

Stop Light Switch Location: Mechanical type. Mounted on pedal stop bracket above brake pedal arm.
Adjusting - With brake pedal released, and adjusting screw backed out to point where lights are on, turn adjusting screw in until lights just go off, then back screw out exactly three turns.

►*STOP LIGHTS REMAINING ON (Early Synchro-mesh Cars)* May be caused by adjusting screw on brake pedal being out of alignment with stop light switch plunger. Correct by bending bracket in which adjusting screw is located.

CIRCUIT BREAKER: 22 Ampere. Protects Headlights, Parking Lights, and Beam Indicator. Located on lighting switch.

FUSES: All fuses mounted on fuse block located under instrument panel near steering column except as noted.

20 Ampere - Heater and Air Conditioning.
25 Ampere - Electric Window & Seat Controls. *NOTE* - Supersedes 20 ampere type used with first type (3 motor) seat control.
20 Ampere - Windshield Wiper Motor.
20 Ampere (88 & S88), 25 Ampere (98) - Stop, Dome. & Courtesy Lights. *NOTE* - Also protects Rear Seat Cigar Lighter on Series 98.
4 Ampere - Deluxe Radio
7.5 Ampere - Super Deluxe Radio.
9 Ampere - Direction Signal.
9 Ampere - Temperature, Oil Pressure, & Generator Indicators, Fuel Gauge & Parking Brake Light, and Back-up Lights,
9 Ampere - Tail Lights, Glove Box, Trunk, & Underhood Lights
3 Ampere - Clock Light, Instrument Cluster Lights, Heater Vent, Air Cond., and Ash Tray Lights.
1 Ampere - Clock

HORN RELAY: Delco-Remy No. 1116946.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. 90° V8, Valve-in-head Different engines used as follows **Series 88 (Regular Fuel)** - 371" 8.75-1 Compr Ratio, **Series 88 (Premium Fuel)** - 371" 9.75-1 Compr. Ratio, **Series S88 & 98** - 394" Engine (9.75-1 Compr Ratio requiring premium fuel).

Engine	Bore	Stroke	Displacement
371"	4"	3 11/16"	371 cu ins.
394"	4 1/8"	3 11/16"	394 cu. ins.

Engine	Compr.Ratio	Rated HP	Developed HP
371"	8 75-1 ①	51	240 at 4400 RPM
371"	9.75-1 ②	51	260 at 4400 RPM
394"	9.75-1 ②	54	315 at 4600 RPM

① - Requires Regular Fuel. ② - Requires Premium Fuel
Compr ssi n & Vacuum R ading - *See TUNE-UP*

►*ENGINE OPERATION IN LOW OCTANE AREAS (FOREIGN TRAVEL):* The following modifications should be made to the standard engine before attempting travel in low octane areas (Foreign Travel) to prevent excessive detonation and resultant engine damage. Lower the compression ratio by making changes listed for fuel of octane rating indicated. *TIMING NOTE* - Set ignition timing in range of 5° BTDC to 0° (TDC).

371" (8.75-1 Rati) Engin

Octane Rating	Head Gasket	Pist n Typ	C mpr. Rati	Spark Plugs
98-95	Std ①	Std.	8 75-1	Std.

84-81	②	Export	7 8-1	AC No 46
80-77	③	Export	7.4-1	AC No 46

① - 025" thick.
② - Use Parts Kit No. 577044 consisting of 100" thick Head Gaskets, .060" thick Intake Manifold Gaskets, and set of longer Pushrods
③ - Use Parts Kit No 577046 consisting of .125" thick Head Gaskets, .060" thick Intake Manifold Gaskets, and set of longer Pushrods
Cylinder Head Gasket Note - Head gaskets for 4" and 4 1/8" bore may be used interchangeably in an engine. *CAUTION* - Whenever head gasket thickness greater than .085" (371" Engine), 060" (394" Engine) is used, a set of longer Pushrods, Part No 577049, must be installed.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Oldsmobile Special Data.*
INTAKE MANIFOLD: *See "Cylinder Head & Manifold" in Oldsmobile Special Data.*
TIGHTENING TORQUES: *See "Tightening Specifications" in Oldsmobile Special Data*
OIL PAN REMOVAL: Turn crankshaft to bring No 1 piston at bottom of stroke (so oil pan will clear counterweights on No. 1 & 2 cyl) Disconnect battery cable and remove exhaust crossover pipe. Disconnect idler arm support from frame. Remove both front engine mount attaching nuts and use Tool J-8568 to raise engine so bolts will just clear crossmember Drain oil and remove pan. *NOTE - Holes provided in front crossmember for access to front oil pan bolts*

PISTONS

Aluminum alloy, three-ring, autothermic, steel strut, slipper skirt, cam ground, tin plated

►*PISTON NON-INTERCHANGEABILITY CAUTION (371" ENGINE):* 8 75-1 Compr Ratio Pistons have "Dished Head" and are identified by TWO notches on head, 9 75-1 Compr Ratio Pistons have "Flat Head" and are identified by ONE notch on head (same as 9 75-1 Flat Head Pistons used on 394" Engine) Do not interchange pistons
Length - 4 05" (All) **Weight** 25 82 ozs (371" engine), 27 76 ozs (394" engine)
Removal - Pistons & Rods removed from above

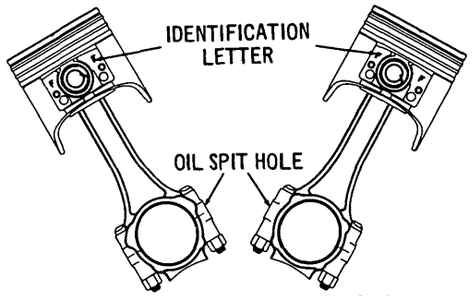
►*CAUTION* Mark pistons, rods, and bearing caps with

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

number of cylinder before removing to insure correct reinstallation.

Clearance - .001-.0015" at thrust surface (selective fit). *NOTE* - Some engines may have .005" or .010" Oversize pistons.



Fitting Pistons - Use a .0015" x ½" x 12" ribbon feeler between inverted piston (pin and rings removed) and cylinder wall at right angles to piston pin position. Pull to withdraw feeler should be 2-6 lbs. (371" Eng.), 3-12 lbs. (394" Eng.).

Replacement Pistons: Furnished with fitted pins in Std. (9 sizes - see table below) and .010", .020", .030" Oversize.

Standard Piston Sizes

Piston Code	Cyl. Code	Piston Code	Cyl. Code
A	AA & A	W	WW & W
B	BB & B	X	XX & X
C	CC & C	Y	YY & Y
D	DD & D	Z	ZZ & Z
E	EE & E		

Installing Pistons: Install piston on same numbered connecting rod with "F" on pin boss and notch or notches toward front of engine. *See Rod Installation.*

OLDSMOBILE PISTON & ROD ASSY.

PISTON PIN

Floating type with lock ring at each end. Pins are offset in piston .090" toward right side of engine.

►*CAUTION.* Discard old lock rings and install new service type lock rings when installing pins.

Diameter - .9803" -.9807". **Length** - 3.126".

Pin Fit in Piston - .0003-.0005" loose. Pin should not fall through piston of own weight when using the low limit (.0003"). Can be pushed into place with hand.

Pin Fit in Rod Bushing - .0003-.0005" loose.

Replacement Pins: Std., .001" & .003" Oversize.

PISTON RINGS

Two compression rings and one oil ring used.

Ring	Width	End Gap	Side Clearance
Compr. (1)	.0775-.078"	.013-.023"	.001-.004"
Compr. (2)	.0925-.0935"	.013-.023"	.001-.004"
Oil	①	.015-.055"	.0005-.007"

① - .1831-.1889" (Perfect Circle), .1840-.1890" (Sealed Power).

Replacement Rings: Std and .010" Oversize.

Installing Rings: Install upper "Chrome" and lower "Parco Lubrite" compression rings with side up that is marked with a dimple (Sealed Power) or word "TOP" (Perfect Circle).

CONNECTING ROD

Length - 6.996-7.000" center-to-center. **Weight** 35.58 ozs. (371" engine), 34.55 ozs. (394" engine).

►*CONNECTING ROD CAUTION.* Rod used in 371" engine is heavier (heavier bosses at large end) to compensate for lighter piston and is NOT interchangeable with rod used in 394" engine.

Crankpin Journal Diameter - 2.4992-2.5002".

Lower Bearing - Moraine 400 steel backed aluminum with babbitt overlay.

Clearance - .0005-.0026" (vertical), .0013-.0034" (horizontal).

Sideplay - .002-.011" (total both rods).

Replacement Bearings: Std. and .002", .010", .020" Undersize.

Installing Rods: Install connecting rod in engine with oil spit hole toward center of engine. Install connecting rod caps with bearing index notches in rod and cap on same side.

►*CAUTION: Use Guide Tool BT-22 over rod bolts to prevent damaging crankpin journals when removing and installing piston and rod assemblies.*

CRANKSHAFT

Journal Diameter - 2.9990-3.000". Five bearings.

Bearings - Moraine 400 steel-backed aluminum with babbitt overlay (Nos. 1 through 4), Durex 100A steel-backed babbitt overlay (No. 5).

Clearance - .0005-.0021" (Nos. 1 & 2), 0008-.0024" (Nos. 3 & 4), .0020-.0034" (No. 5). **Wear Limit** - .0035" (Nos. 1 through 4), .0045" (No. 5).

►*MAIN BEARING CAUTION:* If main bearing clearance not within specifications (above), correct by use of selective bearing shells (see table below for sizes and specifications). **Replace both bearing halves (upper and lower shells) as a pair and do not attempt to shim behind shells.**

Main Bearing Identification

Thickness	Identification (on Tang)
Standard	None
.0005" Undersize	B
.0010" Undersize	C
.0015" Undersize	E

Replacement Bearings: Furnished Std and .0005", .001", .0015", .002", .010" .020" Undersize. See table above for identification. **Install bearings in pairs (upper and lower shells).**

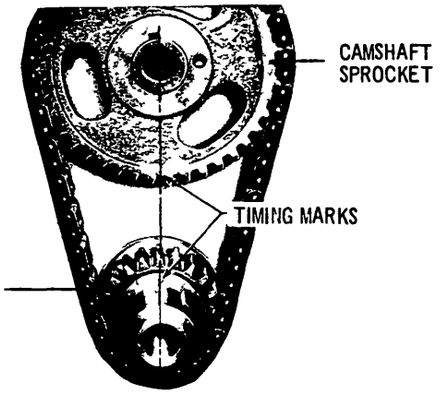
End Thrust: Taken by No 5 (flanged) bearing.

Endplay - .004-.008".

Crankshaft Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Oldsmobile Special Data*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Oldsmobile Special Data.*

CAMSHAFT



►*IDENTIFICATION NOTE: Camshaft used in Series 88 is identified by step on thrust flange.*

Journal Diameter - 1.9977-1.9985"

Bearings - Steel-backed babbitt

Clearance - 001- 0033"

End Thrust: Taken by flange at front of camshaft against front camshaft bearing. Camshaft held to rear by plunger and spring at front end of camshaft.

OLDSMOBILE VALVE TIMING MARKS

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Oldsmobile Special Data.*

Timing Chain: Single flanged side guide type. **Width** - 27/32". **Pitch** - 50" **Length** - 24" or 48 links

Camshaft Setting: Mesh chain with sprocket marks adjacent and in line with a straightedge across shaft centers (or use Tool BT-11)

►*FUEL PUMP ECCENTRIC NOTE:* Fuel pump eccentric bolted to front of camshaft ahead of sprocket with cupped side out

►*CAMSHAFT REPLACEMENT CAUTION:* Coat camshaft liberally with engine oil mixed with G M. Concentrate Part No. 567725 to insure proper installation and provide initial lubrication

Engine Front Cover Removal & Installation: *See "Engine Front Cover" in Oldsmobile Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: Two types used and either type can be removed and installed without removing Engine Front Cover. *See "Engine Front Cover" in Oldsmobile Special Data.*

VALVES

Tappet Clearance: None in service (hydraulic)

Valve	Head Diam.	Stem Diam.	Length
Intake	1.870-1.880"	.3427-.3432"	4.999"
Exhaust	1.557-1.567"	.3940-.3945"	4.999"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	①	.0011-.0025"
Exhaust	45°	.435"	.0015-.0030"

① - .427" (371" Eng.), .437" (394" Eng.)

Valve Seat Width - .037-.075", all valves

Valve Stem Seals - Cup type oil seal (deflector) installed cup side down on valve stem below valve spring retainer on all valves.

Valve Springs: Outside diameter at bottom is larger than at top. No damper springs used

Valve Spring Specifications

Valve	Pressure	Length
Open	175-189 lbs.	1.437"
Closed	85-95 lbs.	1.837"

Free Length - 2.25".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valve Guides: To remove old guides, support head and drive guides out through top of head using Remover Tool J-3062. Install new guides as follows: Place Gauge Washer J-5158-3 on valve spring seat. Use Valve Guide Installer Tool J-5158-2 to drive new guide in head (grooved end of guide up) until tool seats against gauge washer. This will correctly position guides in head (guide should extend 25/32" above face of valve spring seat).

►*OVERSIZE VALVE GUIDE NOTE:* Valve guides with .010" oversize outside diameter may be identified by a groove on guide.

Valve Lifters: Hydraulic lifters standard on all models.

►*HYDRAULIC LIFTER INSTALLATION CAUTION:* Production engines use Standard, .001" or .010" oversize lifters. Use correct size when replacing lifters. All lifters have identification numeral (Except Standard) on lifter body. Cylinder block marked "1" or "10" for lifter size on rail under rocker arm cover. When no mark appears, lifters are standard.

Diameter - .9210-.9215" (Std.). **Length** - 2.125".

Clearance in Block - .0005-.0020" (Selective).

Replacement Lifters: Std., .001", .002", .003", .005" & .010" Oversize.

Hydraulic Lifter Removal, Overhaul & Testing - *See "Valve System" in Oldsmobile Special Data.*

Rocker Arm Assembly: *See "Valve System" in Oldsmobile Special Data.*

►*ROCKER ARM ASSEMBLY NOTE: Early 1960 engines may have end brackets for rocker arm assembly. For overhaul of this type assembly, see Oldsmobile 1959 Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing Specifications - 371" Engine

Intake Valves - Open 14° BTDC. Close 50° ALDC.

Exhaust Valves - Open 54° BLDC, Close 16° ATDC.

Valve Timing Specifications - 394" Engine

Intake Valves - Open 16° BTDC, Close 54° ALDC.

Exhaust Valves - Open 64° BLDC, Close 20° ATDC.

Valve Timing Check: Remove left hand cylinder head rocker arm assembly and rotate engine so that #1 piston is on top dead center (firing stroke). Trailing edge of notch in crankshaft pulley will be aligned with pointer on timing chain cover. Install Tool J-5374 in place of rear rocker shaft bracket with step plunger over #7 cylinder exhaust pushrod. The 7/16" diameter pilot at bottom of tool will fit into cylinder head bolt hole. Screw main body of gauge down so step plunger contacts pushrod and small diameter of step plunger is flush with top of main body. Tighten clamp bolt. Rotate engine one complete revolution so that No. 1 piston is again at TDC (intake stroke). If timing chain is installed properly, third step of plunger will rise .038", above main body. If plunger rises more than .038", camshaft is **advanced** one tooth. If plunger does not rise above body (just flush), camshaft is **retarded** one tooth.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" and "OILING SYSTEM in Oldsmobile Special Data.*

Crankcase Capacity: 4 qts. refill. Add 1 qt. for filter change.

Normal Oil Pressure: 35-45 lbs. at 50 MPH.

Pressure Regulator - In pump body. Not adjustable. Valve starts to open at 45 lbs. Maximum pump pressure is 45-55 lbs.

Oil Pressure Indicator - Oil pressure warning light on instrument panel and oil pressure switch in engine block or oil filter. Lights when pressure below 3 lbs.

Engine Unit: AC No. 1508668.

Oil Pump: Gear type. In crankcase at rear end.

Oil Pump Removal, Overhaul & Installation - *See "Oiling System" in Oldsmobile Special Data.*

Oil Filter: Full flow type. Replace element every 6,000 miles or sooner if needed. Located on lower right side of crankcase.

Replacement Filter Element - AC No. PF-5.

Crankcase Ventilation: Air intake in oil filter cap with oil-wetted cleaner, AC No. 1554198 (Std.), No. 1554199 (Heavy Duty). Outlet is connected to ventilating baffle at rear of block above right bank. Outlet pipe is push fit at ventilator and extends down below right rear corner of engine.

COOLING

Water Capacity: 20 qts. (Less AC & Heater), 21¾ qts. (AC less Heater). Add 1 qt. for Heater.

Pressure Valve: Radiator filler cap. AC No. RC-6, 13 lbs. (Std.), AC No. RC-15, 15 lbs. (Air Cond.).

Thermostat: Choke type, 170°F.

Water Pump: Packless, sealed ball bearing type.

See "Water Pumps" in Oldsmobile Special Data.

Removal - Drain cooling system, and loosen belts. Remove fan, spacer and pulley from pump hub. Remove four pump housing to engine front cover bolts and two pump housing to block bolts, and remove pump.

Temperature Indicator: Two light system (Red & Green) with temperature switch in engine block. GREEN light is lighted when engine running cold and goes out when engine temperature reaches 113°F±2°F. RED light remains off during normal engine operation but comes on when engine temperature reaches 234°F. (Std.), 238°F. (Air Cond. Cars) plus or minus 2°F. *NOTE* - Red light will come on when ignition key turned to "Start" position (to test bulb and circuit) but should go out when key returned to running position.

Engine Unit - Delco-Remy No. 1998740 (Std.), No. 1998741 (Air Cond.).

See "Temperature Indicator" in Miscellaneous Section.

CLUTCH

Long 11CF Assy. No. L5167 (371" Engine). 262832 (394" Engine & Heavy Duty). Semi-centrifugal, single plate type.

See "Long Clutches" in Clutch Section.

Clutch Disc - Long No. 282687, Oldsmobile No. 565059.

Pedal Adjustment: Install a 1/4" gauge pin (piece of steel rod) through holes provided in frame side rail and X member. Remove cotter and clevis pins, and spring washer from clevis at upper end of vertical rod (at bellcrank on firewall). Overcenter spring will then hold bottom of rod against gauge pin. Loosen lock and adjust nut at rear end of horizontal rod (clutch release yoke end of rod) until rod is free of tension. Adjust pedal stopscrew at pivot end of pedal until pedal height measured from top of pedal pad to toe pan (roll back floor mat for measurement) is 8". Adjust clevis on upper end of vertical rod until gauge pin is just free in frame holes with rod connected to bellcrank on firewall. Install clevis pin, spring washer, and cotter pin in clevis and tighten locknut. Adjust locknut on rear end of horizontal rod for correct pedal free travel of 1-1¼". *NOTE* - After linkage connected, pedal height will be 8¼" with spring load applied.

Removal: Remove transmission (see below). Remove left engine filler plate, engine breather pipe, and right and left rear lower flywheel housing bolts. Remove return spring and disconnect adjusting rod at yoke. Install Engine Rear Support Tool 30-13, entering pilot supports into lower housing bolt holes. Remove engine rear mount bolts at clutch housing, and remove frame crossmember by removing three bolts at each end. Remove clutch housing by removing eight bolts holding housing to flywheel housing. Remove clutch assembly from flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gear type. *See "Oldsmobile Synchro-mesh" in Transmission Section*

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission and disconnect manual control rods and speedometer cable at transmission. Mark location of center bearing support on frame to facilitate lateral alignment. Disconnect front and rear companion flanges and center bearing support to frame attaching bolts. (*NOTE* - Keep shims grouped so they can be reinstalled in same location). Slide propeller shaft assembly out of frame. Remove bolts holding transmission to clutch housing, and remove transmission by moving rearward until main drive gear clears clutch assembly.

HYDRA-MATIC DRIVE

"Jetaway" Dual-Coupling Hydra-Matic. Four speed automatic transmission and fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

Lubrication - Check fluid level every 2000 miles. Drain and refill every 26,000 miles. Use only GM Hydra-Matic Fluid Type A - Suffix A

Capacity - 9½ qts. (when drained), 10½ qts. (after oil pan removed), 11½ qts. (after complete overhaul).

Checking Fluid Level - Check with transmission at normal operating temperature, engine idling, and selector lever in Park "P" position. Maintain fluid level at "FULL" mark on dipstick. *CAUTION - Do not fill above FULL mark.*

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER HYDRA-MATIC SERVICE DATA: See "Dual-Coupling Hydra-Matic" in Transmission Section.*

UNIVERSALS

Saginaw or Spicer. Cross type, three used, one each at front and rear and one at center.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*UNIVERSAL JOINT INSTALLATION CAUTION TO PREVENT DRIVE LINE VIBRATION: See "Propeller Shaft Notes" in Oldsmobile Special Data.*

►*CAUTION:* Rear universal companion flange nut controls rear axle pinion bearing preload (must be adjusted whenever nut loosened). *See "Oldsmobile Hypoid" in Rear Axle Section.*

Propeller Shaft Centering Bearing Overhaul: *See "Propeller Shaft Notes" in Oldsmobile Special Data.*

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Oldsmobile Special Data.*

REAR AXLE

Own. Hypoid gear, semi-floating type with Hotchkiss drive.

►*ANTI-SPIN DIFFERENTIAL NOTE:* Anti-spin Differential is available as an option and can be identified by anti-spin lubrication tag attached by a carrier to axle housing nut.
See "Oldsmobile Hypoid" and "Power-Lock Differerential (Plate Clutch Type)" in Rear Axle Section.

►*REAR AXLE RATIO IDENTIFICATION NOTE:* Ratio identification code number stamped on boss on lower forward side of carrier as follows:

Ratio	Code	Ratio	Code
2.87-1 (43-15)	7	3.23-1 (42-13)	9
3.42-1 (41-12)	8	3.08-1 (40-13)	0

Series	Rear Axle Ratios	Ratio
88 & S88 S.M. (All)	③	3.42-1 (41-12)
88 H.M. (Exc. Sta. Wgn.)	①	2.87-1 (43-15)
88 H.M. (Station Wagon)	②	3.08-1 (40-13)
88 H.M. (Air Cond.)	②	3.08-1 (40-13)
88 H.M. (Export)		3.23-1 (42-13)
S88 H.M. (Std.)	②	3.08-1 (40-13)
S88 H.M. (Air Cond.)	②	3.08-1 (40-13)
98 Std. & Air. Cond.	②	3.08-1 (40-13)

① - 3.08-1 (40-13) Optional.
② - 2.87-1 (43-15) Optional.
③ - 3.08-1 (40-13) Std. on 371" Eng. with 9.75-1 compr. ratio.

Backlash - .007-.008" (limits .005-.009").

Axle Shaft Removal: Remove wheel and take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be reused, if nuts damaged, new nuts must be used). Remove backing plate mounting nuts and static collector. Loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal), replace one nut to hold backing plate in position.

Differential Carrier Assembly Removal: Remove axle shafts (see above). Clean differential carrier and axle housing around carrier to prevent dirt entering housing. Disconnect propeller shaft at rear universal joint after having wired trunnion blocks together to avoid loss of rollers. Mark universal joint so it can be replaced in the same position. Drain oil by removing nuts from carrier mounting studs and moving carrier away from housing.

Wheel Bearing Adjustment: None required.

SHOCK ABSORBERS

Delco. Direct acting front and rear. Service by replacement.

Shock Absorber (Oldsmobile No.)

Model	Front	Rear
88, S88 (Exc. Sta. Wgn.)	5552508	5552509
88, S88 (Sta. Wgn.)	5552512	5552513
88, S88 (Pol. & H.D. Exc. Sta. Wgn.)	5552514	5552515
98	5552510	5552511

FRONT SUSPENSION

Independent. "Spherical" joint type, with ball joints connecting upper and lower control arms to steering knuckle.
See "Oldsmobile" in Suspension & Wheel Alignment Section.
Steering Axis Inclination - 10° at 0° camber.
Caster - 0° to Neg. 1°.
Camber - Neg. ¼° to Pos. ½°, maximum variation between each side of car not to exceed ½°.
Toe-In - 0 to 1/16".

Toe-Out on Turns - With outer wheel at 18°, inner wheel should be 22°±½° (Manual Steering), 23°±½° (Power Steering).

Wheel Bearing Adjustment: Tighten adjusting nut to 17 ft. lbs. torque to seat bearings and insure that all parts are free (rotate wheel), then back off adjusting nut and retighten to 4 ft. lbs. torque. If slot in nut and cotter pin hole in spindle do not line up, back off nut to align nearest slot with hole, install cotter pin.

STEERING

►*POWER STEERING PUMP NOISE CORRECTION:* Crunching, rattling noise (may be mistaken for defective water pump bearing) may be caused by pump belt. If this noise disappears after 3-4 miles of driving or can be eliminated temporarily by applying belt dressing to sides of belt, correct by replacing "Dayton Rubber" type belt with belt of another make.

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw. New "Rotary Valve" type.
See "Saginaw (Rotary Valve) Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic (Single Anchor). *NOTE* - Anchor pin is fixed type and no anchor pin adjustment is required.
See "Bendix Hydraulic Single Anchor (Without Eccentric) Brakes" in Brake Section.
Drum Diameter - 11".
Wheel Cylinder Diameter - 1 1/8" (Front), 1" (Rear).
Braking Power - 56% Front, 44% Rear.
Replacement Linings & Shoes - Linings and shoes with linings furnished in half sets of Std. and .030" Oversize.
Lining Thickness - .250" (All).

Lining Width & Length

	Front Wheel	Rear Wheel
Primary Shoes	2½" x 9 3/8"	2" x 9 3/8"
Secondary Shoes	2½" x 12 1/32"	2" x 12 1/32"

Clearance - Adjusting screw backed off 16 notches from point where wheels can just be turned by hand.
Std. Master Cylinder: On front face of firewall in engine compartment.
Checking Fluid - Maintain fluid level 1/2" below master cylinder filler cap.

Removal - Clean around master cylinder, remove hydraulic line at master cylinder and plug or tape line. On Synchro-mesh cars, install gauge pin in holes in frame side rail and "X" member to support clutch linkage, then disconnect clutch linkage from clutch pedal bellcrank and remove bellcrank. Remove master cylinder attaching bolts and remove master cylinder from studs and pushrod.

Power Brakes: Bendix or Moraine. Bendix unit identified by black cylinder, Moraine by bronze cylinder. Combination vacuum power unit and master cylinder. Mounted on forward face of firewall replacing regular master cylinder. Master cylinder can be removed without removing power unit.
See "Moraine Hydraulic (Diaphragm) Reaction Power Unit" and "Bendix Hydraulic (Disc) Reaction Power Unit" in Brake Section.
Removal - Disconnect hydraulic line at master cylinder and plug or tape line. Disconnect vacuum line at vacuum cylinder. Disconnect operating rod from brake pedal and remove four vacuum cylinder to cowl attaching nuts. Remove unit from cowl. *NOTE* - When removing master cylinder from vacuum unit, note number of shims for reassembly.

MISC. MECHANICAL

Windshield Wipers: Electric crank and link arm type. Three types used: One-Speed, Two-Speed and Two-Speed with Wide-Arc. Integral type washer pump Standard on Twp-Speed with Wide-Arc, Optional on others.
See "Windshield Wipers" in Miscellaneous Section.

Air Conditioning: Frigidaire & Harrison, with magnetic compressor clutch (compressor operates only with switch turned "ON").
See "Frigidaire & Harrison (GM) Air Conditioning" in Miscellaneous Section.

Power Window Regulators: Electric type with individual motor for each window, front door ventilator and tail gate window.
See "Power Window Regulators" in Miscellaneous Section.

Power Top Control: Hydro-Lectric. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjuster: 2-Way, 4-Way or 6-Way electric.

►*6-WAY POWER SEAT PRODUCTION CHANGE NOTE:* TWO types used: **1)** Three motor type (separate motor for each movement, **2)** One motor type (with 3 solenoid clutches).
See "G.M. Seat Controls" in Miscellaneous Section.

TIGHTENING SPECIFICATIONS

ENGINE

1954 MODELS

POWER PLANT (ENGINE & TRANSMISSION) REMOVAL: Drain water, engine oil, and transmission lubricant, remove battery, remove hood. Then proceed as follows:

►*ENGINE REMOVAL NOTE—On cars with Power Steering, remove pump belt, and pump with mounting bracket, leaving hose connected. Place pump in a position where it will not be damaged during engine removal.*

(1) Remove upper and lower radiator hoses, disconnect heater lines at cylinder head and radiator tank. Disconnect fuel line at fuel pump, oil line to pressure gauge at connection near rear of block, vacuum line at manifold or combination pump.

(2) Remove air cleaner, disconnect throttle linkage remove fuel pump-to-carburetor line, remove crankcase breather outlet pipe, disconnect exhaust pipe at manifold, free exhaust pipe bracket at flywheel housing.

(3) Disconnect following wires: Temperature gauge engine unit, coil primary lead, generator-to-regulator wires at generator (free wires from clips on side of engine), headlamp wire loom at junction block on right fender skirt (free loom from clips on fan shroud), all wires on starter solenoid.

(4) Disconnect control cable at hood latch. Remove radiator upper baffle assembly. Take out screws mounting fan shroud and radiator on radiator support, remove radiator, then remove shroud.

(5) Remove hood catch plate-to-radiator support brace. NOTE—Radiator support cross brace may be removed for extra clearance if desired (requires removal of four rivets—bolts can be used when brace replaced).

(6) Disconnect and remove gearshift linkage at transmission, disconnect clutch throw-out linkage at clutch fork, remove clutch control bracket from flywheel housing. Disconnect and remove propeller shaft.

(7) Attach hoist to engine (see Caution below), take out bolts attaching engine front insulator to frame. Lift weight of engine off rear insulators, remove bolts holding rear insulators to frame. Carefully hoist engine and transmission out of car, maintaining clearance at all points to prevent damaging parts.

►*CAUTION*—If type of hoist used interferes with any engine accessories, remove following to prevent damage: Generator, Starter, Distributor, Carburetor, Fuel Pump.

►**HYDRA-MATIC DRIVE NOTE—On cars with Hydra-Matic Drive, remove frame cross-member on which engine rear insulators mounted and use extreme care to prevent transmission swinging down when rear mountings disconnected (special precautions required due to extra weight of Hydra-Matic Drive).**

1955-60 MODELS

ENGINE REMOVAL: *NOTE* - Engine may be removed with or without transmission. Detail following includes transmission with engine.

1) Drain water, engine and transmission oil. Remove hood. Disconnect all wires, pipes and throttle linkage. Remove carburetor, crankcase ventilator pipe, heater hoses, cooler lines, radiator and fan, battery and cables.

2) On Power Steering Cars, remove pump belt and pump from mounting bracket and secure assembly out of way.

3) Disconnect exhaust pipe from crossover pipe, and disconnect gearshift linkage.

4) On synchro-mesh cars, disconnect clutch fork linkage and remove clutch countershaft bracket from flywheel housing.

5) Remove propeller shaft assembly. Raise engine slightly by hooking chain to intake manifold, threading chain through holes behind carburetor.

6) Remove front and rear insulator mounting screws. Disconnect cooler lines at timing cover.

7) On Auto-Trans. cars, place transmission jack under transmission and remove frame crossmember. *CAUTION - Without jack for supp rt, transmissi n will swing down when crossmember rem v d.*

8) Hoist engine and transmission out of chassis.

ENGINE MOUNTINGS

1954 MODELS

ENGINE FRONT INSULATOR: Front mounting consists of a single assembly on cross-member bracket directly under front end of engine. Insulator has special rebound clamp assembled over top of insulator.

Removal & Disassembly: Drain cooling system, disconnect hoses at water pump and cylinder head. Remove front cross member-to-radiator cross member apron. Remove self-locking nuts from two front insulator-to-engine support bolts. Place jack under oil pan (use wood block to prevent damage to pan), raise engine sufficiently to remove weight from insulator, take out two insulator-to-frame bolts, remove insulator and rebound clamp as an assembly. Remove rebound clamp by using two clamps to compress exposed ends of insulator so that clamp can be slipped off.

Installation: Force new insulator into position in rebound clamp. Install assembly on engine support with open side of rebound clamp forward, tighten self-locking nuts to 60 ft. lbs. Lower engine but do not install two insulator-to-frame bolts until after rear insulators have been installed and tightened (see below).

NOTE—Front insulator should not touch rebound clamp with engine weight on insulator (will be tight in clamp when off engine).

1955-56 MODELS

FRONT INSULATOR: *NOTE—If new r ar insulators are also to be installed, they should be installed first since the engine locates from the rear insulators.*

Removal: 1) Take weight of engine off insulators using suitable lifting equipment *(CAUTION—Do not use a jack under oil pan).* Remove screws fastening engine support to timing chain cover.

2) Remove screws which fasten insulator to frame front crossmember (these screws can be reached through an access hole in bottom of front crossmember). Raise engine just clear of insulator and support assembly.

3) Disconnect exhaust crossover pipe at both manifolds and exhaust pipe so it can be lowered to provide clearance for removing insulator. Remove insulator and assembly.

Installation: 1) Position insulator and support assembly against timing chain cover and install attaching screws with lockwashers. Tighten to 60 ft. lbs.

2) Connect exhaust crossover pipe to both exhaust manifolds and exhaust pipe, using all new gaskets. Use four thin (.075"), or two thick (.135") gaskets at each flange. Tighten attaching bolts securely. Lower engine and install frame to insulator screws with lockwashers and tighten.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

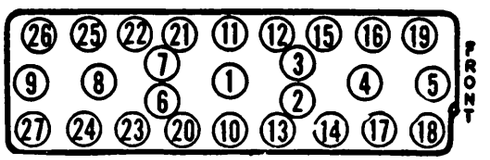
1955-56 MODELS

REAR INSULATOR: *NOTE–Rear insulator locates engine. Front insulator must be allowed to position itself after rear insulator installed.*

Removal: Remove two front insulator to frame bolts. Support engine securely at rear to remove engine weight from rear insulators. *(CAUTION–Do not use jack under oil pan).* Remove two bolts holding each rear insulator to frame crossmember, and then remove insulators by removing two bolts holding each insulator to flywheel housing. Disconnect exhaust pipe from exhaust crossover pipe so exhaust pipe can be moved to gain access to right insulator frame bolts.

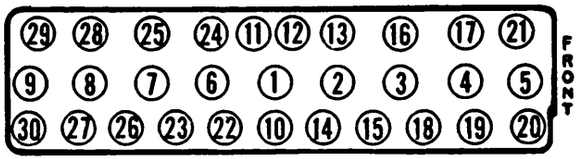
Installation: Install new insulators on flywheel housing using lockwashers under each of two bolts holding insulator. Lower engine so rear insulators are resting on frame crossmember and insert insulator to frame bolts from top. Install self locking nuts and tighten to 35 ft. lbs. Raise front of engine slightly to take weight off front insulator, then lower engine completely so it rests on front insulator and install two front insulator to frame bolts (with lockwasher and flat washer on each).

OIL PAN



1954 MODELS

OIL PAN REMOVAL: Drain crankcase and cooling system, remove radiator hoses at water pump and cylinder head. Take out two bolts mounting steering idler arm support, drop steering linkage down to provide clearance at pan. Remove front cross member-to-radiator cross member apron. Take off two self-locking nuts mounting engine front insulator to engine support. Use jack under oil pan (place wood block on jack to prevent damage to pan) to raise front end of engine approximately 1" (CAUTION—do not raise engine more than necessary to remove front insulator), take out two bolts mounting front insulator and rebound clamp assembly on frame and remove assembly. Install block approximately 2½" high between frame and engine support, lower engine so that it rests securely on this block, remove jack from under pan. Take off flywheel housing lower cover. Remove oil pan (NOTE —Removal of one engine side apron may be necessary to provide clearance for removing the pan.



CYLINDER HEAD & MANIFOLD

1954 MODELS

CYLINDER HEAD INSTALLATION: Use torque indicating wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in diagram. Cast iron heads should be tightened cold and rechecked after engine has been run sufficiently to

1954 6 CYLINDER HEAD

1954 8 CYLINDER HEAD

bring all parts to normal operating temperature. **Tightening Torque**—See Tightening (Torque Wrench) Specifications.

1955-57 V8 MODELS

CYLINDER HEAD: Removal–Remove intake manifold and push rod cover. Remove rocker arm covers (On left bank, remove spark plug wires and wire support). Remove battery and engine ground straps, Hydra-Matic level indicator tube bracket and indicator. Loosen all rocker arm adjusting nuts and move rocker arms off pushrods. Remove pushrods and place in order so they can be reinstalled in the same position (*NOTE*–The rearmost pushrod on left bank (cars with defroster) cannot be removed. withdraw rod part way and tie to head. Remove exhaust crossover pipe to manifold attaching screws and remove screws from cylinder head water outlet fitting. Remove cylinder head (dowel pins will hold head in place) and remove head with exhaust manifold attached (*NOTE*–When left head being removed, raise head off dowels, move it forward and "jockey" the the head in order to clear defroster, power steering, and power brake equipment).

1958-60 MODELS

CYLINDER HEAD: Removal - Remove intake manifold, pushrod and rocker arm covers. Remove ground strap from left cylinder head. Loosen rocker arm retaining nuts and move arms off pushrods. Remove pushrods. *CAUTION - Keep in same order and do not invert.* Remove crossover pipe-to-manifold attaching screws. Remove screws from water inlet fitting. Remove power steering pump and air suspension compressor and brackets, leaving hoses connected. Remove head attaching screws and remove head with exhaust manifold attached, using Lifting Hooks J-4266. *NOTE - Left head must be jockeyed out to clear power steering and power brake units.*

1955-60 MODELS

Installation: *(NOTE–Right and left cylinder heads are interchangeable except for water passage plug in end of water passage which must be installed in correct position if new head installed).* To install, reverse removal procedure and note the following: Head screws are three different lengths and when properly installed, all screws will project an equal distance from head. Do not use sealer of any kind on threads.

1958-60 MODELS

CHOKE HEAT TUBE REPLACEMENT: Unnecessary to replace intake manifold. Proceed as follows: Remove intake manifold and 1/8" pipe plug. With square faced punch drive tube from each end into exhaust chamber and remove. To install, press tube into manifold until it clears vertical passage to choke pipe. Install baffle, 1/8" pipe plug and manifold.

PISTONS

1954 MODELS

REPLACEMENT PISTONS (Standard Size): Standard size pistons are furnished in three sizes since there is an allowable tolerance on size of standard bores and pistons. It is important to select pistons to fit bores or hone bores to give proper piston fit (See Car Model Pages for piston fitting specifications).

Oversize Replacement Pistons:—Finished pistons furnished in following oversizes: .005", .010", .020", .030". NOTE—All factory replacement pistons held to uniform weight within 1/16 oz. and all oversize pistons up to .030" oversize are same weight as standard pistons.

CAUTION—Factory replacement pistons electorplated after being finished to size and must not be ground.

PISTON PINS

1954 8 CYL. MODELS

PISTON PIN FITTING (Pins with Snap Ring Retainers—in Cast Iron Pistons): Fit pins to pistons so that 150-250 lbs. pressure required to press pin through **one** boss (NOTE—With this fit pin will not remain permanently tight in engine, and high mileage engines may be found in which piston pins are free). Use special expansion reamer J-874-19 or similar tool to size piston holes to fit oversize pins. To install pins, coat bushing in connecting rod with light engine oil and insert rod in piston with piston skirt plug J-1325-3. Coat pin holes in piston with graphite grease. Position piston on Block J-1325-1 and press in piston pin. Install snap ring pin retainers making sure rings are fully seated in ring grooves.

1954 6 CYL. MODELS

PISTON PIN FITTING (Aluminum Pistons): Full floating pin used with a clearance of .0000-.0002". This clearance will be correct if pin can be pushed into place with the thumb. Clearance is excessive if pin will slide through of its own weight. Use special expansion reamer J-874-19 or similar tool to size piston pin holes to fit pins. Oil bushings in connecting rod and insert connecting rod in piston so oil hole in rod will be toward camshaft side of cylinder when "F" or notch in piston is toward front.

1958-60 MODELS

Removal: *NOTE - Piston Pin Remover & Replacer Set, J-6901 is used. Individual parts are marked with respective numbers.* Place plunger of Tool J-6901 into piston pin bore and position on arbor press. Put J-6901-5 between connecting rod and piston boss. Put J-6901-3 in pin and press until pin bottoms in J-6901. Remove J-6901-5 and plunger and spring from J-6901. Reposition on arbor press and press pin out of rod.

Installation: Place plunger and spring in J-6901 and place plunger in piston pin bore. Position on arbor press. Coat pin and rod lightly with graphite lubricant. Insert pin, put J-6901-3 in pin and press pin in until it bottoms against plunger of J-6901.Piston must turn freely on pin. *Pin must not move under 1500 lb. minimum load after assembly.*

Oversize Pin Installation - .001" and .003" oversize pins can be installed Connecting rod can be honed to fit **but must be .0008-.0016" smaller than the pin used.**

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CONNECTING ROD & BEARINGS

1954 MODELS

CONNECTING ROD LOWER BEARING: Removable type. No adjustment. Shims should not be used or bearing caps filed. When replacing bearings check crankpins. If scored or out-of-round and taper exceeds .001" crankshaft should be replaced.

Checking Bearing Clearance (Brass Shim Method): Use .0015" brass shim stock ½" wide and ⅞" long. Remove cap and lay shim across bearing. Tighten cap (with shim in place). Check bearing fit as follows:—Rod should be locked when testing end movement by hand but should slide on crankpin when tapped lightly with hammer. With shim removed rod should move freely on pin. If rod can be moved by hand with shim in place install .001" undersize bearing.

Installation—Bearing shells fitted with tangs (Six—one to each edge of bearing. Eight—two on each edge). Install cap with tangs on opposite sides of rod (Six), on opposite ends of crankpin (Eight).

1954 MODELS

CONNECTING ROD BUSHING INSTALLATION: Press out old connecting rod bushing using Bushing Remover J-540-1 and Block J-526. Press new bushings into place using Bushing Replacer J-540-2 and Block J-526. This replacer tool must be used as the thin wall split bushings will distort on pressing into rod without support by shank of replacer tool. Swage or expand bushings into connecting rod by using Burnished Tool J-516 and Block J-526, (CAUTION—It is very essential that bushings be burnished into place as bushing may work out of connecting rod bore). Hone bushing to fit piston pin it is to be used with. A Sunnen hone or similar accurate equipment should be used for honing operation. **Do not use a hand reamer.**

1955-57 MODELS

CONNECTING ROD BUSHING REPLACEMENT: Press out old bushing using Bushing Remover & Installer J-5753-3 and Block J-5753, (*NOTE*—For removal of bushing, the smallest diameter or third shoulder on tool is inserted in bushing). Press new bushing into place using same tools as for removal, but using opposite end of Bushing Remover & Installer. This tool must be used since the thin wall bushing will distort when pressed into rod unless supported by shank of tool. Drill a 5/32" hole in bushing through oil hole in top of rod, using care to prevent end of tool damaging opposite side of bushing. Swage or expand bushing into connecting rod using Burnisher Tool J-5753-1 and Block J-5753, pressing Burnisher Tool through bushing with connecting rod assembly supported on Block. Hone bushing to fit piston pin.

CRANKSHAFT & MAIN BEARINGS

1954 MODELS

Checking Bearing Clearance (Brass Shim Method): To check bearing fit, use .002" brass shim stock ½" wide and 1" long. With cap removed place shim across bearing. Tighten cap (with shim in place). Test bearing fit by rocking flywheel by hand. **Do not rock flywheel more than 1" in either direction** or bearing may be damaged by shim. If crankshaft locks with shim in place and rotates freely with shim removed bearing size correct. If shaft moves with shim in place use .001" undersize bearing. IMPORTANT—Do not file main bearing caps. These caps are not furnished separately.

1954 MODELS

MAIN BEARINGS: Removal. Remove the bearings with caps removed and crankshaft in place by inserting suitable tool (see NOTE following) in oil hole in shaft and rotating shaft in usual direction.

NOTE—Bearing Removal Tool can be made from ⅛"x1½" cotter key. Bend each end of key up 5/16" to make ⅝" long base. With this as a base, bend key to form 59° angle. With this tool inserted in place end will just protrude far enough to engage bearing.

Installation—Insert plain edge of bearing in indented side of bearing support, slowly rotate crankshaft until bearing seated.

1954 MODELS

REAR MAIN BEARING OIL SEAL: Seal consists of oil slinger on crankshaft to rear of main bearing, operating in groove formed in block and cap (drain hole in cap returns oil to crankcase) with asbestos seal fitted in separate groove at rear. Edges of seal groove in cylinder block and rear main bearing cap are chamfered to reduce pressure between seal and crankshaft and prevent pinching of seal. One end of groove in bearing cap is recessed and a portion of seal should be worked into this recess to prevent seal turning in service.

Installation—Remove bearing cap and upper half of bearing insert from first main bearing forward of the rear main bearing. Remove all connecting rod bearing caps. Remove rear main cap and loosen remaining main bearing caps sufficiently to allow crankshaft to be lowered approximately ⅜" at rear. Remove upper half of rear main bearing oil seal and with rear main bearing cap on bench, remove oil seal and insert. Install new seal using tool J-1045, and trim flush. *(CAUTION*—Do not pack seal into locking recess). Carefully remove seal from cap and slide it into groove in block over crankshaft. *(Caution*—Take particular care to install seal so that end of seal which was at locking recess in cap during forming operation, will meet locking recess in cap when cap is installed). Install bearing inserts and cap on main bearing forward of the rear main and torque to 95 ft. lbs. to properly seat crankshaft against new oil seal. (NOTE—Make sure that upper half of seal in rear main is flush with edge of block). *(CAUTION*—If inspection shows seal to be an improper length, remove and discard it, and form a new seal as follows: Install a new seal in bearing cap using tool J-1045 and trim one end flush; carefully remove seal from cap and reinstall in cap, rotating it so that trimmed end is below or above edge of cap the proper distance to correct for the improper length of the first seal. Reseat the seal with tool J-1045 and trim the uncut end flush with edge of cap. Reinstall in block groove). Install new seal in rear main bearing cap using tool J-1045 and pack end of seal into locking recess. Trim the other end flush and replace inserts. Install cap and torque to 120 ft. lbs. Remove rear main bearing cap again and inspect break line between cap and block to be certain that none of the seal material has been compressed between the two. Scrape surfaces to insure seating of cap. Re-install and torque to 120 ft. lbs.

Bearing Cap Seal: After rear bearing cap installed, drive wooden wedge seal into groove on each side of bearing cap next to block. ***CAUTION—Use care not to split these wooden wedges.***

1955-60 MODELS

REAR MAIN BEARING OIL SEAL REPLACEMENT:

1) Drain oil and remove oil pan, oil pump, and oil pump drive shaft. Remove oil baffle and cylinder block to oil baffle tube (lower oil level indicator tube). Remove transmission (See Synchro-mesh Transmission Removal on Car Page or Hydra-Matic Drive in Transmission Section).

2) Remove rear center main bearing cap and upper half of rear center main bearing shell to allow crankshaft to be lowered and to prevent damage to thrust surfaces of bearing. Remove rear main bearing cap and loosen remaining bearing caps sufficiently to allow crankshaft to be lowered approximately 3/8" (1955-58), 1/2" (1959-60) at rear.

3) With crankshaft lowered to provide clearance, remove upper half of rear main bearing oil seal and bearing shell.

4) Install seal in cap with end flush with cap, compress seal using hammer and Seal Compressor J-3048-A (1955-56), No. J-6528 (1957-58), J-7588 (1959-60). Do not pack seal into locking recess in cap. *NOTE - On engines with no cast slots in seal groove in block, rotate seal in cap and compress slightly to eliminate bumps caused by seal retaining slots in cap.* Remove seal from cap and install in groove in block by slipping over crankshaft into cavity in block. Insert end which was flush with cap first. Install rear main bearing cap with bearing shell and tighten to 95 ft. lbs. to pull crankshaft into place against seal. Carefully trim both ends of seal flush with block.

5) Install a new seal in cap, as above, except that seal must be packed into locking recess in cap. Trim seal flush with cap. Install cap with shell and tighten to 95 ft. lbs. (1955-58), 120 ft. lbs. (1959-60). Remove rear main bearing cap again and inspect split line to be certain that none of seal material has been compressed between cap and block. Make sure mating surfaces are clean.

6) Apply a bead of sealer (Permatex No. 3) 3/64" to 1/16" in diameter to mating surface of cap extending from packing seal groove outward to the groove for oil pan cork rear gasket. Install rear main bearing cap and tighten to 120 ft. lbs. torque.

7) Remove rear center main bearing cap and reinstall upper half of bearing shell. Install cap and tighten to 95 ft. lbs. Tighten remaining bearing caps to 95 ft. lbs. Replace transmission, oil pump, oil pump drive shaft, oil baffle, oil pan and flywheel lower cover and shield.

►*CAUTION:* Seal must be installed exactly as detailed above to prevent oil leaks at rear bearing. Make certain that seals not cut too short and that mating surfaces of bearing cap and block are free of any packing material, dirt or oiliness (except for Permatex bead on cap) and that they are not scratched or burred.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

VIBRATION DAMPENER

1954 MODELS

HARMONIC BALANCER SERVICING: No service operations required. Do not attempt to disassemble balancer (serviced by replacement).

Removal & Installation—Drain cooling system and disconnect radiator hoses. Remove radiator (see Radiator Removal), loosen and remove fan belt. Remove harmonic balancer retaining bolt, lockwasher, and balancer washer. Use J-2582-A or similar puller to remove balancer from crankshaft. When installing balancer, see that key in place in shaft keyway and balancer washer installed under retaining bolt lockwasher. Tighten bolt to 95 ft. lbs.

1955-60 MODELS

VIBRATION DAMPENER: Removal—Loosen generator at adjusting strap and remove fan belt from vibration dampener. On card equipped with power steering, also remove power steering pump belt. Position fan so wide angles will be at top and bottom allowing access to balancer. Remove dampener attaching screw (15/16" socket) and retaining washer, and slide dampener off shaft.

Installation: Reverse the removal procedure.

ENGINE FRONT COVER

1955-58 MODELS

ENGINE FRONT COVER: Removal—1) Drain radiator. On cars with power steering, remove pump with mounting bracket from pad on top of engine front cover and lay it back on fender skirt where it will be out of the way. *(CAUTION—Disconnect battery ground strap).* 2) Disconnect wires from generator and remove generator and mounting bracket and adjusting strap. Remove fan belt, power steering pump belt, and fan and pulley. Disconnect upper and lower radiator hoses, remove fan shroud, and remove radiator. Remove water inlet elbows from cylinder heads (leave hose attached). Remove fuel pump and remove vibration dampener.

3) Take weight off engine front insulator using suitable engine lifting equipment. *(CAUTION—Do not use jack und r oil pan).* Remove screws and lockwashers attaching front insulator to engine front cover. Remove four front oil pan-to-engine front cover screws. Remove engine front cover-to-block attaching screws and nuts. Pull cover forward to clear studs and remove.

Installation: See Crankshaft Oil Seal (below), install new front oil pan gasket (cement gasket to oil pan), Position new front cover gasket over studs on front of block, position front cover on engine, install all capscrews and nuts with lockwashers and tighten securely. Install four oil pan-to-front cover capscrews and lockwashers, tighten these screws to 10-12 ft. lbs. (1955), 10 ft. lbs. (1956), 18 ft. lbs. (1957), 15 ft. lbs. (1958). Install front engine support-to-front cover screws loosely, then lower engine and tighten screws to correct torque of 60 ft. lbs. Reassemble engine by reversing removal procedure (above).

1959-60 MODELS

ENGINE FRONT COVER: Removal - Drain cooling system. Remove generator adjusting strap, fan and accessory belts and fan and pulley from water pump. Disconnect radiator hoses and remove fuel pump and vibration damper. Remove four oil pan-to-cover screws, two cover-to-oil cooler line screws, and cover-to-block screws and nuts, then pull cover forward to clear studs and remove.

1955-60 MODELS

CRANKSHAFT FRONT OIL SEAL REPLACEMENT: After front cover removed (above), slide old seal off end of crankshaft. Coat face of new seal with graphite lubricant and install on crankshaft before installing front cover.

FLYWHEEL

1955-56 HYDRA-MATIC DRIVE CARS

FLYWHEEL INSTALLATION: Clean mating surfaces of flywheel and crankshaft thoroughly (use Acetone to clean old Pliobond 30 from surfaces). Apply a thin coat approximately ½" wide) of Pliobond 30 sealing compound on surface of crankshaft at bolt circle. Smooth seal compound around toward outer edge and allow to dry about one minute. *(CAUTION*—In no case will a fibre gasket be used between flywheel and crankshaft. Use only Pliobond 30 sealing compound). Install flywheel on crankshaft flange carefully and enter all flywheel bolts through plates. Tighten bolts diametrically opposite uniformly to correct torque. *(NOTE*—Draw flywheel on evenly during this operation to prevent leakage and excessive runout). Mount a dial indicator so stem or button rests on torus cover gasket seal area and check flywheel runout. Runout should not exceed .005".

CAMSHAFT & BEARINGS

1954 MODELS

CAMSHAFT: Removal. Remove Front Fender and Radiator Assembly (see above), remove fan belt, fan, and harmonic balancer (use Puller J-496). Support front end of engine with jack and remove front engine support, timing chain cover, chain, and sprockets. Remove cylinder head and valve covers, take out valves and lifters (lifters are barrel type and can be removed from above with valves out). Remove oil pump, fuel pump, and distributor. Take out screws and remove camshaft thrust plate, withdraw camshaft at front of engine. Re-install camshaft in same manner making certain that timing chain cover is properly centered (see Timing Chain Cover and Oil Seal data below). After camshaft installed, check Valve Timing, Ignition Timing, and Tappet Clearance.

CAMSHAFT BEARINGS: Use tool No. J-550 to remove and install camshaft bearings (rear bearing on Eight must be pulled out toward front as expansion plug at rear prevents driving on bearing from rear). Use driver to install all bearings making certain that oil hole in bearings is lined up with hole in block (holes are at bottom of bearings). Then line ream all bearings to finished sizes as follows:

Bearing Finished Size:	Six	Eight
#1 (Front)	1.9950-1.9955"	1.9950-1.9955"
#2	1.9637-1.9642"	1.9637-1.9642"
#3	1.9325-1.9330"	1.9325-1.9330"
#4	1.9012-1.9017"	1.9012-1.9017"
#5		1.8700-1.8705"

1956-57 MODELS

CAMSHAFT REMOVAL & INSTALLATION: Drain radiator. Remove intake manifold, crankcase ventilator outlet pipe, pushrod cover and rocker arm covers. Disconnect and move spark plug wires out of way. Loosen rocker arm ball nuts so rocker arms can be disengaged from pushrods and turned sideways. Remove pushrods and hydraulic lifters. Mark or store pushrods and lifters so they can be installed in original positions *(NOTE* - Exhaust valve pushrod of No.7 cylinder cann t be removed because of interference with defroster core. It should be blocked up so that it will not interfere with removal of camshaft. Use spring-loaded clothes pin). Remove radiator and timing chain cover. Remove timing chain cover seal and fuel pump eccentric. Slide timing chain and sprockets off ends of crankshaft and camshaft. Remove camshaft thrust plate attaching screws and remove thrust plate. Slide camshaft out of engine carefully, making sure not to damage bearings in block. Front of engine should be raised as necessary to permit shaft to slide between grille and hood catch support plate. To install camshaft, reverse removal procedure.

1958-60 MODELS

CAMSHAFT REMOVAL & INSTALLATION: Drain radiator. Remove intake manifold, crankcase ventilator outlet pipe, pushrod cover and rocker arm covers. Disconnect and move spark plug wires out of way. Loosen rocker arm ball nuts so rocker arms can be disengaged from pushrods and turned sideways. Remove pushrods and hydraulic lifters. Mark or store pushrods and lifters so they can be installed in original positions Remove radiator and timing chain cover. Remove timing chain cover seal and fuel pump eccentric. Slide timing chain and sprockets off ends of crankshaft and camshaft. On 1959-60 Models, remove distributor. Remove camshaft thrust plate and slide camshaft out of engine carefully, making sure not to damage bearings in block. Front of engine should be raised as necessary to permit shaft to slide between grille and hood catch support plate. To install camshaft, reverse removal procedure.

TIMING CHAIN

1954 MODELS

TIMING CHAIN REPLACEMENT: Timing chain must be installed "endless" with both sprockets off the engine as directed below. CAUTION—Any attempt to install the chain by removing only one sprocket will result in breaking of the chain.

Timing Chain Removal—Remove Front End Sheet Metal Assembly as a unit, remove fan belt and fan, remove Harmonic Balancer (see Vibration Dampener). Support front end of engine with support jack, remove front engine support (see Front Engine Insulator Removal), remove timing chain cover, timing chain and sprockets.

Timing Chain Installation—Mesh sprockets in chain with timing marks on both sprockets lined up for correct valve timing (see Camshaft Setting on car model pages), install both sprockets together being careful not to place any side strain on chain.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1954 MODELS

TIMING CHAIN COVER & OIL SEAL: Consists of cork seal and spring assembled on the crankshaft in front of the chain sprocket so that the cork bears against the inner face of the timing chain cover. **Installing New Cork Seal**—Coat seal with graphite lubricant, rubbing lubricant well into the face of the cork, before installing seal in engine. This lubrication necessary to prevent noise at this point. **Installing Timing Chain Cover**—Use J-546 tool to center timing chain cover before screws tightened. *NOTE:* A timing chain bumper has been incorporated in the timing chain cover on the six cylinder engine. This bumper dampens timing chain vibration. The bumper consists of a synthetic rubber pad which is vulcanized to a steel bracket welded on the left edge of the timing chain cover on the driving side of the chain. The new cover is servicable as an assembly on past 6 cylinder engines.

1955-57 MODELS

►*TIMING CHAIN REMOVAL CAUTION:* **Do not rotate crankshaft with timing chain out of engine.** Damage to valves, pistons, or both will result due to piston striking valve. To rotate camshaft with timing chain off, crankshaft must be positioned so pistons are 45° before or after TDC, to avoid damage to valves.

TIMING CHAIN: Removal—Remove engine front cover (See Engine Front Cover above). Remove fuel pump eccentric. Align timing marks on sprockets. Slide timing chain and sprockets off camshaft and crankshaft.

Installation: Install new timing chain and sprockets making sure that marks on sprockets are aligned exactly on a straight line passing through shaft centers. Install fuel pump eccentric indexing pin on eccentric with hole in sprocket. Install retainer screw and retainer washer and tighten securely. Install engine front cover.

VALVE SYSTEM

►*1959-EARLY 1960 PONTIAC INTAKE VALVE VENT NOTE:* To prevent excessive wear caused by abrasives entering the small holes drilled in cylinder head (to vent the intake valve guides), the manufacturer recommends that a tapered steel plug. Part No. 534989 be installed. Insert plugs in vent holes (4 per head) and tap in flush with casting. On air conditioned cars it is not necessary to install a plug in vent hole located under the compressor. Later 1960 engines (after Oct. 15, 1959) will not have the vent holes.

1955 V8 MODELS

CHECKING VALVE STEM LENGTH: Position rocker arm on stud and hold in place using Rocker Arm Stud Installer J-5716. Slip valve into place and hold it against valve seat. While holding rocker arm and valve in position securely, insert Valve Train Gauge J-5710 through pushrod hole and seat snugly in pushrod seat of rocker arm. With all parts seated, step end of gauge should be at least flush with gasket face of head, but should not project past step on gauge. If gauge projects too far (indicating valve stem too long), grind off tip of valve stem as necessary. *CAUTION*—When grinding end of valve stem be careful not to overheat it which will soften the hardened stem.

1956-60 MODELS

►*NOTE: The following information does not apply to 1956 285 HP Engine which has 3/32" longer valves than regular production engines.*

CHECKING VALVE STEM LENGTH: Position rocker arm on stud and hold in place using Rocker Arm Stud Installer J-6301. Slip valve into place and hold it against valve seat. While holding rocker arm and valve in position securely, insert Valve Train Gauge J-6324 through pushrod hole and seat snugly in pushrod seat of rocker arm. With all parts seated, step end of gauge should be at least flush with gasket face of head, but should not project past step on gauge. If gauge projects too far (indicating valve stem too long), grind off tip of valve stem as necessary. *CAUTION*—When grinding end of valve stem be careful not to overheat it which will soften the hardened stem.

ROCKER ARMS

1955-60 MODELS

ROCKER ARM STUD REPLACEMENT: *NOTE—Use oversize stud (.003") only when original stud is found to be loose in cylinder head. Use Std. size stud for replacement when original stud threads are damaged).*

Removal: 1) Remove cylinder head from engine. With rocker arm removed, file two slots 3/32" to 1/8" deep on opposite sides of rocker arm stud. Top of slots should be 1/4-3/8" below thread travel. Place washer J-6392-3 at bottom of rocker arm stud. Position Rocker Arm Stud Remover J-6392-1 on rocker arm stud and tighten screws securely with 5/32" allen wrench. Place spacer J-6392-2 over stud remover. Thread 7/8" standard nut on stud remover and turn nut until rocker arm stud is out of cylinder head. If oversize stud being installed, ream out stud hole with Reamer J-5715.

2) Remove plugs from ends of cylinder head oil gallery and thoroughly clean out metal deposits and foreign matter from cylinder head (head must be right side up so metal or foreign material will not lodge around studs).

See "OIL PASSAGE PLUG (IN CYLINDER HEAD) REPLACEMENT" under OILING SYSTEM.

Installation: 1) Position rocker arm on rocker arm stud and place Rocker Arm Stud Installer J-5716 (1955), J-6301 (1956-60) on stud in place of rocker arm ball. Carefully press stud into head using a 2 ton press, until it is installed about halfway (7/16").

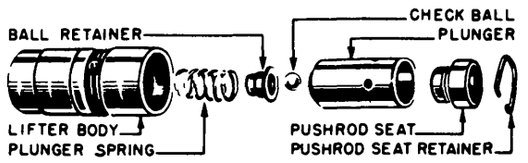
2) Position Valve Train Gauge J-5710 (1955), J-6324 (1956-60) in pushrod hole so that it seats properly in the rocker arm. With valve seated, slowly press rocker arm stud into cylinder head until gauge projects about midway between end of gauge and step with respect to gasket surface of cylinder head.

3) Remove Rocker Arm Stud Installer, rocker arm and ball. Blow air through hole in new stud to insure that passage is not restricted, and blow air through oil gallery. Replace plugs in ends of oil gallery. Check oil passages from oil gallery to all studs. Install rocker arm and ball and install nut loosely. Replace cylinder head.

HYDRAULIC LIFTERS

1955-60 MODELS

HYDRAULIC VALVE LIFTER OVERHAUL: Remove intake manifold, pushrod cover and rocker arm cover. Loosen rocker arm ball nut and move rocker arm off pushrod. Remove pushrods (rear lifter on left bank cannot be removed if car is equipped with defroster, but must be raised and moved out of way for removal of lifter). Remove lifter from bore in cylinder block.



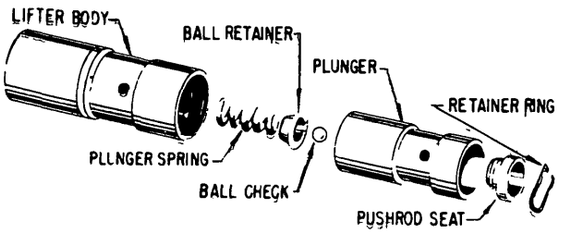
Disassembly: Remove pushrod seat retaining ring by holding down seat with pushrod while dislodging spring from lifter body with pointed tool (*NOTE*—it may be necessary to unseat lifter ball, using plunger unloader J-5097, before plunger can be pushed down). Invert lifter and allow plunger to slide out of body. If plunger sticks, place lifter in large end of Hydraulic Valve Lifter Plunger Remover J-4160-A, with pushrod end of lifter downward. Hold tool firmly in hand with thumb over lifter body and strike sharply against a block of wood until plunger falls out (it may be necessary to soak a lifter with a stuck plunger in cleaning solvent to loosen plunger in body). *CAUTION—If more than one lifter is being disassembled at a time make very sure that parts for each individual lifter be kept together so that parts are not intermixed.*

Inspection: Wash individual lifters separately, keeping parts for each lifter together. If necessary, soak lifter in suitable carbon solvent to dissolve varnish and carbon. Using a lint free cloth, clean each part with a hard wiping action. Use a bristle brush if required. Do not use a wire brush or sandpaper. Inspect lifter body for scoring, and check cam surface at end of lifter for wear. Check plunger, and using a magnifying glass, inspect check ball seat for defects, and outer surface of plunger for scratches or scores. Inspect pushrod seat for roughness and make sure hole in seat is open. Inspect lifter ball for nicks or scoring. If any part of lifter is found defective, replace entire unit.

Assembly: Rinse all parts in clean kerosene before assembly and assemble without drying. Rinse plunger spring and ball retainer and position retainer in spring. Install ball in retainer (check ball spring not used in regular production lifters, used in 1956 285 HP engine) Rinse plunger and place on retainer so seat on plunger mates with ball. Invert plunger with parts assembled thus far and, after rinsing body, install body over spring and plunger. Place lifter body on clean paper; rinse and install pushrod seat and retainer ring.

Checking Leakdown Rate: Fill tester cup in Valve Lifter Leakdown Tester J-5790 to 1" from top with testing

CONTINUED ON NEXT PAGE



1955 HYDRAULIC LIFTER

CONTINUED FROM PRECEDING PAGE

fluid, Swing weight arm up out of way, raise ram, and position lifter in boss in center of tester cup. Place ¼" (1955-56), 7/32" (1957-60) steel ball in pushrod seat of lifter and lower ram onto ball. Adjust ram (with weight arm clear of ram) so that pointer is positioned on set line (marked "S"). Tighten jam nut to maintain setting, Operate lifter through full travel of plunger by pumping weight arm to fill lifter with test fluid and force out air, (Lifter must be completely submerged at all times), Continue pumping for several strokes after definite resistance is felt (*NOTE*–If noticeably weak resistance is felt during any one of last few strokes (of hard pumping), replace ball in lifter and repeat test to this point. Raise weight arm to allow plunger spring to expand fully; lower arm onto ram and commence turning crank slowly (1 revolution every 2 seconds). Time indicator travel from lower line (first line above set line) to line marked .094" (1955) .125" or 1/8" (1956-60), while rotating cup with crank. Lifter is satisfactory if rate is between 9 and 30 seconds (1955), 12-40 seconds (1956-60). Retest 3-4 times before discarding.

Installation: *(CAUTION–If new lifter is to be installed, remove sealer coating from new lifter, making sure that hol in pushrod seat is not plugged with sealer coating. Check l akdown rate).* Place new lifter in lifter boss and replace pushrod exactly as removed (same end against rocker arm). Crank engine until lifter is on base circle of cam (completely off cam lobe), Position rocker arm on pushrod and adjust lifter plunger position as follows: On 1955 engine, turn adjusting nut down until there is no axial movement (clearance between pushrod and rocker arm and lifter seats), making sure that plunger has not been depressed, then turn nut down one complete turn. On later models, position rocker arm on pushrod and tighten nut to 15 ft. lbs. (1956-58), 15-25 ft. lbs. (1959-60). Replace rocker arm cover, pushrod cover and intake manifold.

1956-60 HYDRAULIC LIFTER

OILING SYSTEM

1954 MODELS

CRANKCASE OIL CLEANER: Pontiac type 'controlled flow' design consisting of settling chamber in oil inlet and filter screen housing in crankcase.

Servicing—No service required but Oil Cleaner should be removed and settling chamber cleaned out when oil pan removed for other work, or if car has been upset or turned over. Capacity of cleaner is 1 quart.

Removal & Installation—To remove cleaner with oil pan off engine, disconnect oil suction pipe from crankcase as a unit. Take out attaching screws and remove cleaner from bracket and suction pipe. Remove snap ring on bottom of cleaner and remove oil screen. Take out screws mounting cleaner head to housing shell and remove settling chamber from housing. Wash all parts in gasoline and scrape sediment from settling chamber. When reassembling cleaner see that all gaskets in good condition or use new gaskets. Turn head and housing shell upside down and insert 2 screws and place gasket inside shell, then set settling chamber in place and start screw threads, turn assembly right side up and install remainder of screws, tightening them securely. Assemble all other parts. Fill cleaner with fresh oil and install. CAUTION—Fill cleaner with fresh oil before installing in crankcase (avoids running bearings without oil when engine first started).

1954 MODELS

OIL FILLER CAP & CRANKCASE VENTILATOR CLEANER:—All oil filler caps (Std. & Heavy Duty type) serve as inlet for crankcase ventilating system and must be correctly installed on engine. Install cap with seam on side engaging groove in top of oil filler pipe and opening in cap toward fan. Standard Filler Cap—Wash copper gauze filter element in gasoline and re-oil by dipping in engine oil at 10,000 mile intervals (twice yearly) for ordinary conditions. Service at 2000 mile intervals, or more often if necessary, in dusty areas.
Heavy Duty Filler Cap—Used on cars with heavy duty (oil bath) type carburetor air cleaner. Similar to the standard cap except for greater cleaning capacity. Service in same manner as standard cap and always clean outlet pipe air cleaner at same time.
Crankcase Ventilator Outlet Pipe Air Cleaner—Consists of a copper gauze filtering element in an elbow on the crankcase outlet pipe. Clean in same manner as filler cap (above). NOTE—No outlet pipe cleaner used on cars with Standard Filler Cap.

1955-60 MODELS

OIL PASSAGE PLUG (IN CYLINDER HEAD) REPLACEMENT: *This plug is located on intake side of cylinder head bolt which feeds cylinder head oil gallery (toward rear of head on left bank, and toward front of head on right bank).*

Removal: Remove cylinder head bolt from hole which feeds oil gallery. Attach a piece of rag to a wire for removing rag,, and push rag down into bolt hole past the oil passage in which plug is located. Drive old plug through passage into bolt hole where it will drop onto rag. Pull rag out pulling old plug with it.

Installation: Drive plug into place using a tool which bears into bottom of plug (½" x 3" bolt can be used) until outer edge of plug is flush with surrounding surface of head.

ENGINE LUBRICATION

DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, and to hydraulic valve lifters. Metered oil is supplied to pushrod seats, rocker arms, timing chain and sprockets, and distributor drive gear, All other parts are lubricated by oil spray.

OPERATION: Gear type oil pump mounted on lower face of block in rear of crankcase draws oil up through floating oil strainer and intake pipe mounted on pump body and delivers oil through passages in pump body and crankcase to inlet port on oil filter mounting pad on right side of crankcase. From filter outlet, oil flows through transverse passage in rear end of block to rear end of left main oil gallery which extends along entire length of engine block. At forward end of left main oil gallery a "V" passage extends down to crankshaft bearing and up to forward end of right main oil gallery which also extends along entire length of engine block. Oil is distributed through these oil galleries as follows:

Crankshaft & Camshaft Bearings - Rear bearings are lubricated through short vertical passage extending between crankshaft bearing bore and camshaft bearing bore and intersecting the oil filter outlet passage (above) from which oil is supplied to these bearings. **Other** bearings are lubricated by "V" passage in each crankcase web which extends down from left main oil gallery to crankshaft bearing bore and then up to camshaft bearing bore (additional passage at front crankshaft bearing supplies oil to right main oil gallery).

Connecting Rods - Crankshaft is drilled and each connecting rod bearing is lubricated through drilled hole from adjacent main bearing.

Pistons & Pins - Lubricated by oil jet thrown on cylinder walls through groove between rod and bearing cap of connecting rod for opposite cylinder when this groove lines up with oil hole in crankpin journal. *NOTE* - Rods must be installed with this groove upward or toward camshaft for this cross-lubrication.

Valve Lifters - Hydraulic valve lifters are supplied with oil through short vertical passage extending from main oil gallery directly to lefter bore.

Pushrods, Rocker Arms, & Valves - Pushrods are filled with oil directly through small hole in top of lifter for lubrication of upper and lower pushrod seats. Vertical passages in block at No. 2 camshaft bearing (for right bank), and No. 4 camshaft bearing (left bank) extend up through engine block and matching passages in head (passage in head is around one cylinder head bolt with grooved channel in lower face of head to connect with hole in block) to connect with cylinder head oil gallery which extends along entire length of each cylinder head. Oil in this system is metered by camshaft bearing and is fed intermittenly when oil holes line up. Rocker arm studs (pressed in head) extend down into this cylinder head oil gallery and have drilled oil passage with side hole at rocker arm ball seat through which oil flows to lubricate ball seat and up through grooves in ball to fill channel section of arm. This oil overflows end of rocker arm to lubricate valve tip. Excess oil in rocker chamber drains down pushrod openings into lifter chamber and oil drain holes in floor of lifter chamber (at each side of center crankcase web) return oil to the oil pan.

Timing Chain, Sprockets, & Fuel Pump Eccentric - Drilled holes in camshaft front journal provide a jet of oil when hole in journal lines up with oil hole in bearing. This jet strikes camshaft thrust plate and part of

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

the oil is diverted downward through grooves in front face of engine block and thrust plate for sprocket and chain lubrication. An additional hole in the thrust plate permits an oil jet to pass through opening in camshaft sprocket and lubricate fuel pump eccentric and rocker arm.

Distributor Shaft & Bushings - Lubricated through passage in block from main oil gallery.

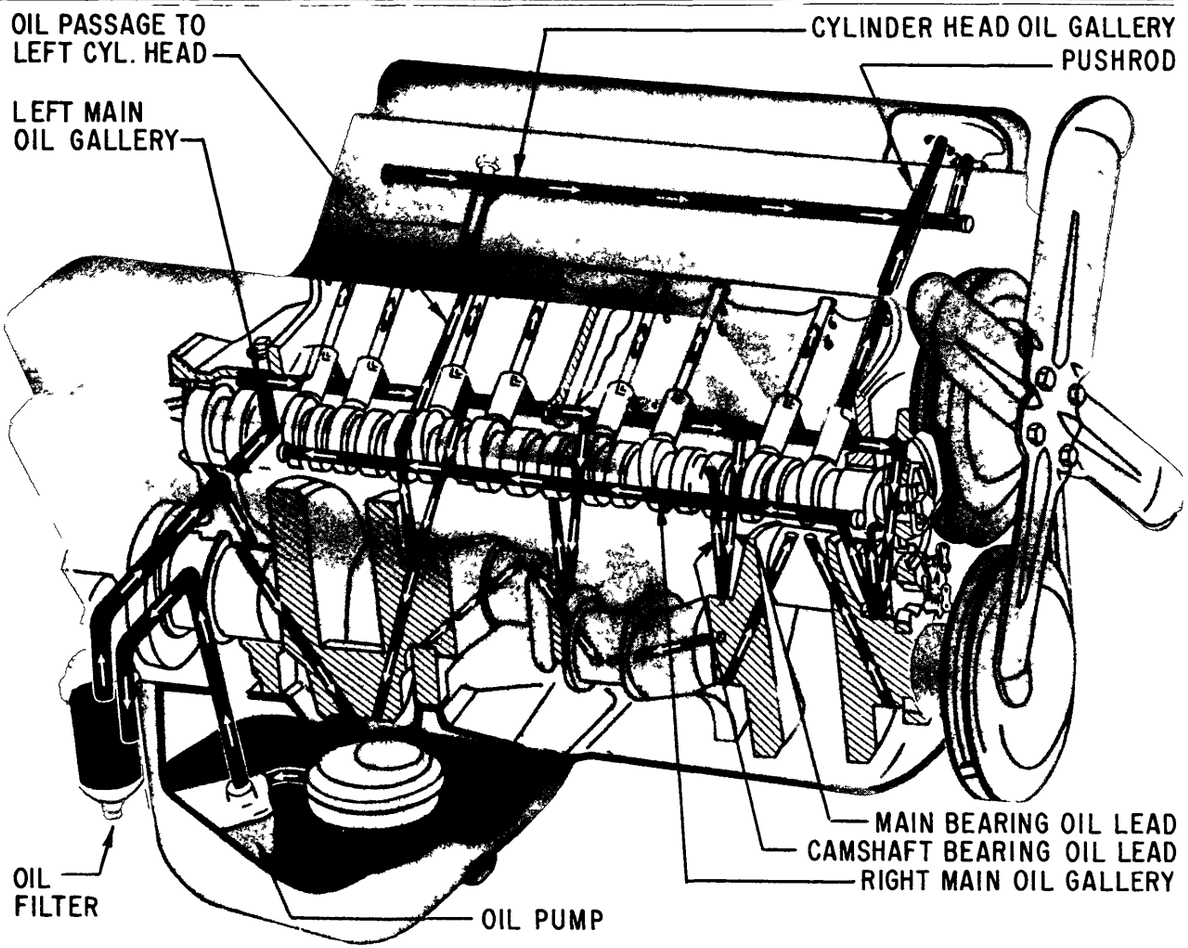
OIL FILTER: Full flow type mounted on base adapter bolted on right side of crankcase. Bypass valve located in filter base assures engine lubrication if filter element clogged.

OIL PUMP

1954 MODELS

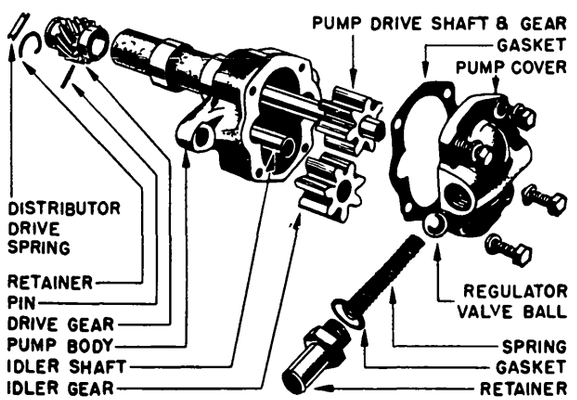
OIL PUMP SERVICING: Pump is gear type mounted externally on right side of engine.

Removal: Turn crankshaft so that #1 piston on top dead center of compression stroke with distributor rotor at #1 firing position. Remove steering idler arm and right hand engine side pan. Take out pump mounting bolts and remove pump.



Overhaul: Remove cover assembly, lift out oil pump driven gear. Take out wire retainer and remove three distributor drive springs. Support pump on bottom surface, press pump shaft out of distributor gear (use drift of slightly smaller diameter than shaft inserted in end of drive gear to press on end of shaft). Take out relief valve plug, remove relief valve parts. Clean all parts thoroughly, replace worn or damaged parts. When re-installing parts, note specifications listed below. NOTE—Oil pump drive gear and shaft furnished as an assembly; distributor drive gear, pump driven gear, and driven gear shaft furnished as individual parts.

Pump Specifications—Driveshaft clearance in body .0025-.0005". Driven gear clearance on shaft .0020-.0005". Shaft fit in body .0025-.001" tight (press fit). Pump gear backlash .004-.006". Gear end clearance in body—Flush to .004" protrusion beyond cover surface of body (with gasket removed). Pump shaft end clearance .002-.006" (press distributor gear on shaft until clearance between gear and end of body is .002-.006".



Relief Valve—Consists of a spring-loaded ball located under plug on pump cover. Not adjustable. Clean valve thoroughly and replace spring if length less than 2 5/16".

Distributor Drive Spring Installation—Install bank of three springs (with maximum thickness of .045" in end of distributor drive gear, install retainer ring with curved end hooked in hole in gear and ring seated in notches in both ends of springs. Check to see that drive springs slip readily in slot in distributor shaft when shaft entered in hole in distributor drive gear.

Installation: With crankshaft turned to #1 firing position, turn pump shaft so that drive springs in drive gear are parallel with center-line of crankshaft and punchmark on end of gear points downward (pump body positioned so that relief valve housing on pump cover toward rear of engine). Install pump in this position using new gasket on engine block.

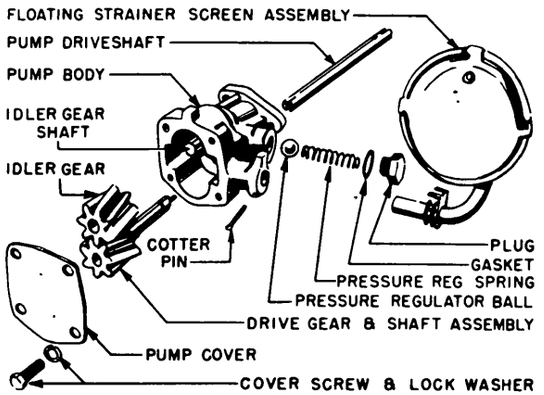
PONTIAC V8 ENGINE OILING SYSTEM

1954 PONTIAC 6 & 8 OIL PUMP

1955-60 MODELS

OIL PUMP OVERHAUL: Rem val—Remove oil pan and remove oil pump attaching screws while holding pump in place. Carefully lower oil pump away from block with one hand while removing oil pump drive shaft with the other hand.

Disassembly: Remove cotter pin which retains floating screen to pump inlet and remove screen. Remove pressure regulator and spring retainer, spring and pressure regulator ball. Remove screws retaining cover to oil pump body and remove cover. Remove driven gear and drive gear with shaft.



Cleaning & Inspection: Clean all parts thoroughly (clean screen with Bendix Cleaner). Inspect pressure regulator spring for distortion, cracks, and wear on sides. Inspect pressure regulator ball for nicks or other damage. Inspect oil pump drive shaft (distributor to pump shaft) for wear or cracks. Inspect all other pump parts for wear. Replace parts as necessary.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Ass mbly: Install drive and driven gears. Install cover and turn drive shaft by hand to insure that it turns freely and has a slight amount of endplay. Install pressure regulator ball, spring and retainer using a new gasket on retainer. *(CAUTION—Do not attempt to change oil pr ssur by varying length of pressure regulator spring).* Install screen assembly on oil pump and install new cotter pin retainer.

Installati n: To install pump, position drive shaft into position in distributor and oil pump drive gear. Place new gasket Part No. 522103 in position between pump and block and install pump on block, indexing drive shaft with pump drive gear shaft. Install two attaching screws and lockwashers and tighten securely. *NOTE* - Removal and installation of pump does not disturb distributor timing. Install oil pan.

1955-60 PONTIAC OIL PUMP

FUEL SYSTEM NOTES

1955-56 MODELS

FUEL FILTER (Draining & Cleaning): Remove drain plug and drain out dirt and water. If filter is excessively dirty remove filter from car and agitate it in a carburetor cleaner or solvent. Direct an air stream through the *outlet port* which will force water and dirt out through inlet port. Rinse filter in kerosene and again flush with air. Install drain plug and reinstall filter.

1957 MODELS

FUEL FILTER: On cars with AC glass bowl type filter at carburetor, remove and clean glass bowl. Replace filter element if it is becoming plugged. *See car model page for filter element production change. NOTE* - Additional filters located in fuel tank and in fuel pump (screen located in fuel passage directly below inlet valve)

1955-57 MODELS

EXCESSIVE FUEL PUMP PRESSURE (Causing Carburetor Fl ding): If fuel pump pressure in excess of 5 lbs., check pump for incorrect diaphragm installation (insufficient slack) before replacing pump:

1) Mount pump in vise with fuel side up, loosen fuel pump cover screws two turns to free diaphragm.

2) Flex diaphragm by moving rocker arm up and down several times (use short piece of pipe fitted over rocker arm to provide leverage).

3) Hold rocker arm in extreme upper position while tightening all cover screws securely. This will provide slack in diaphragm.

4) Reinstall pump and check pressure. If pressure still in excess of 5 lbs., replace pump.

►*CARTER WGD CARBURETOR NOTE: See "Carter WGD Carburetor" in Carburetor Section for other recommended changes to correct flooding.*

PROPELLER SHAFT NOTES

1958 MODELS

Center Bearing Assembly: Center bearing and bracket assembly is attached to a bracket located inside frame tunnel. Aligning shims located between frame bracket and bearing bracket. *CAUTION - Bearing lubricated for life and must not be placed in gasoline or solvent.*

Installation Note - Coat splines of front propeller shaft yoke and fill counterbore in shaft with high melting point grease. Assemble parts of center bearing assembly on front propeller shaft in following order: Dust shield, center bearing and bracket, special washer, lockwasher, packing, retaining ring. Hold all parts together with clamp nut on front propeller shaft.

Propeller Shaft Alignment: Place a straightedge under frame tunnel with 1½" flat washers at each end using "C" clamps to hold straightedge in place. Place Tool J-7119 in center of straightedge with removable pin out and center level bubble in tube between two long lines. (On Synchro-Mesh cars, remove exhaust crossover pipe connector). Install removable pin in Tool J-7119 and place tool against right oil pan flange (Synchro-Mesh), right transmission oil pan flange (Hydra-Matic). If bubble still centered or less than 3/16" to front or rear of long lines, engine angle is within limits. If more than 3/16" proceed as follows: If bubble to front of center long lines, remove a shim from between front engine mount insulator and frame crossmember. If bubble to rear, add a shim. Recheck engine alignment. Now place Tool J-7119 against front propeller shaft. If bubble is centered or less than 3/16" to front or rear of long lines, shaft angle is within limits. If bubble to front, add a shim between propeller shaft center bearing support and frame bracket. If bubble to rear, remove a shim. Recheck shaft alignment.

1959-60 MODELS

►*CAUTION:* DO NOT interchange 1958-59 propeller shafts as severe roughness would result. Single engine mount is at rear on 1959 and later models, changing angle alignment procedure.

Center Bearing Assembly: Center bearing and bracket assembly is attached to a bracket located inside frame tunnel. Aligning shims located between frame bracket and bearing bracket. *CAUTION - Bearing lubricated for life and must not be placed in gasoline or solvent.*

Installation Note - Coat splines of front propeller shaft yoke and fill counterbore in shaft with high melting point grease. Assemble parts of center bearing assembly on front propeller shaft in following order: Dust shield, center bearing and bracket, special washer, lockwasher, packing, retaining ring. Hold all parts together with clamp nut on front propeller shaft.

Propeller Shaft Alignment: *NOTE - J-7119 Gauge must be equipped with J-7119-9 (J-7119-7 and 8) pins, id ntified by "Red" markings on knurled section.*

1) Use "C" clamps to secure straightedge up against frame tunnel with a flat washer located at least 6" in from each end of tunnel. *NOTE* - Overtightening "C" clamps will bend straightedge.

2) Place Tool J-7119 in center of straightedge with removable pin out, then zero gauge (use adjusting screw to center bubble). Install long pin (-7) in Tool J-7119 and place tool against Hydra-Matic Transmission or engine oil pan flange (Synchro-mesh) right side.

3) Engine angle is correct if bubble is centered or less than 3/16" to front or rear of long lines. To correct, add or remove shims at engine rear mount. *CAUTION* - Reset level on gauge if engine lifted to change shims.

4) With engine angle within limits, re-zero gauge, with gauge on flange of Hydra-Matic Trans. or Engine oil pan.

5) Install short removable pin (-8) and place tool up against propeller shaft (use mirror to center bubble). The same specifications apply as for engine angle. To correct, add or remove shims between center bearing support and frame bracket.

►*LOW SPEED (15 MPH) ROUGHNESS NOTE:* When this condition still exists after alignment corrected, look for off-center condition of rear engine mount. To correct, move left front engine mount to front (slightly) and right front engine mount to rear (slightly). This will force rear of engine to left and back on centerline of car

MODEL IDENTIFICATION

SERIAL & ENGINE NUMBERS: (Numbers ar th sam). On left front hinge pillar post and on raised pad at front of left side of cylinder block.
Starting Serial & Engine Number. 1001 Up.

►*SERIAL & ENGINE NUMBER NOTE–Serial & Engine number (example C6ZS-1001) includes following identification in sequence).*

Assy. Plant	No. of Cyls.	Model ① Year	Trans.② Type	Serial No.
See below	6	Z	S	1001 Up

①- Year. Z (1954).

②–S and C are Synchro-mesh Transmissions. H and A are Hydra-Matic Transmissions.

Assembly Plant Designations

A–Atlanta
C–South Gate
F–Framingham
K–Kansas City
L–Linden
T–Arlington
W–Wilmington

TUNE-UP

COMPRESSION PRESSURE: 123-141 lbs. (Synchro-mesh), 139-158 lbs. (Hydra-Matic), both at cranking speed of 200 RPM. •

VACUUM READING: 18-20" idling at 520-540 RPM (Synchro-mesh), at 365-385 RPM (Hydra Matic).

VALVE TAPPET CLEARANCE: .011" to .013", HOT. Use .011" "Go" gauge, .013" "No Go" gauge. **High Speed Setting**–.013" (Exhaust Valve, Hot).
Cold Setting With Engine Stopped– 012- 014". Check for .011-.013" after engine warm

MANIFOLD HEAT CONTROL: Thermostatic coil type, non-adjustable(fixed anchor pin) Counterweight should be securely clamped to shaft in vertical position with valve closed (cold position)

IGNITION

►*IGNITION HIGH TENSION CABLE CAUTION:* Non-metallic conductor cables (with built-in suppression resistance) Marked "Radio-4000 GM" Distributor cap is conventional type without built-in resistor *Do not substitute other type cables.*

FIRING ORDER: 1-5-3-6-2-4 See diagram

SPARK PLUG GAP: 025" (023- 028")

Spark Plug–AC No 44-5 14mm Tighten to 25 ft lbs

COIL: Delco-Remy 1115378 (1953), 1115380 (1954).
Ignition Current–2.5 amps. idling. 4 5 stopped.

DISTRIBUTOR: Delco-Remy 1110235 (Synchro-mesh Cars), 1110234 (Hydra-Matic Cars).
Condenser–Delco-Remy 1869704. **Capacity**–.18-.23 mfd.
Contact Point Set–Delco-Remy 1871678.

CARBURETOR

►*1954 CHOKE SETTING CHANGE (To Correct "Loading" During Engine Warm-up):* Change setting from center index to 2 points lean.

THROTTLE LINKAGE ADJUSTMENT (ALL MODELS): *Adjust exactly as follows:*

1) Carburetor Throttle Rod—Disconnect throttle rod at throttle lever on left side of transmission case. Check and adjust engine idle speed to 365-385 RPM, hot or slow idle with engine at normal operating temperature, transmission warm, and selector lever in "N" position. Install adjusting pin J-2544 through holes in carburdtor intermediate lever on left side of cylinder head and lever bracket. Adjust nuts at trunnion on carburetor throttle rod (back off one nut, tighten opposite nut) until adjusting pin is free with carburetor throttle lever stopscrew against its stop. Tighten trunnion nuts but **do not remove adjusting pin.**

2) Transmission Throttle Front Rod—Check adjustment by inserting a second J-2544 adjusting pin through holes in idler lever (left side of crankcase below starter) and lever bracket. If pin does not enter both holes freely, adjust length of transmission throttle front rod at trunnion on upper end of this rod, then tighten both locknuts securely, and remove both adjusting pins.

3) Accelerator Pedal Rod—Loosen front locknut on pedal rod at throttle control idler lever on left side of engine, depress accelerator pedal until carburetor throttle is just wide open. Check clearance between lower face of accelerator pedal and floor mat. If clearance is not ¼" at closest point, adjust pedal by turning rear nut at trunnion on forward end of rod in or out as required, then tighten front nut securely.

CARTER

Carter WCD 2010S. Dual downdraft type with automatic choke.

Idle Setting—First set screw 1¼ turns open from lightly seated position. With engine warm and idling at correct idle speed, turn idle screw in until engine falters from lean mixture, then turn screw out until engine speed is at maximum. One idle screw only.

Idle Speed—520-540 RPM (Synchro-mesh Cars), 365-385 RPM (Hydra-Matic Cars).

Float Level—*NOTE—Floats operate independently of each other, but are adjusted the same as a single type float.* 5/32" from top of float to gasket seat on bowl cover (with gasket removed) using Gauge T109-196. Sides of float should barely touch vertical uprights on gauge to avoid floats binding on sides of bowl.

Accelerating Pump—No seasonal adjustment.

Fast Idle: With choke valve tightly closed and fast idle screw on high step of fast idle cam, tighten adjusting screw until there is .026" clearance between throttle valve and bore of carburetor on side opposite idle ports.

Automatic Choke Setting: 2 points lean. *NOTE—Superseds previous setting (Centered at index) to correct "Loading" during engine warm-up).*

►*OTHER DATA—See "Carburetors WCD Carburetors" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 4-4¾ lbs.

CARB. EQUIPMENT

Fuel Pump: AC. **Replacement No. 9630** (Fuel & Vacuum).
Pressure—4-4¾ lbs.
See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: AC Electric type.
Dash Unit—AC No. 1517603.
Tank Unit - AC No. 1518093
See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco. 15E6W. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Battery Ground—Negative, to engine.

STARTER

Delco-Remy 1107107. Armature—1917855.
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 ft. lbs.	Lock	3.25	550

Starting Switch: Delco-Remy Solenoid No. 1118140 (no relay) mounted on starter and controlled by Ignition Switch (combination starting & ignition). Neutral Safety Switch used on Hydra-Matic Cars.
See "Starter Controls" in Electrical Equipment Section.

Neutral Safety & Back-up Light Switch: Delco-Remy 1998039. At lower end of steering column. Connected in starter control circuit so that starter operates only when selector lever in "N" (Neutral).
Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy 1102794 (Std.), 1105900 (Hvy. Duty & Police).
Armature—Delco-Remy 1912599 (Std.), 1918009 (Hvy. Duty & Police).

Performance Data—Cold

Gen. No.	Amperes ①	Volts	RPM
1102794	45	8.0	2350
1105900	50	7.0	2100

①—Not maximum. See Regulator.

Brush Spring Tension—28 ozs.
Field Current—1.87-2.00 amps. (1102794), 1.77-1.93 amps. (1105900).
Rotation—Counter-clockwise at commutator end.

Belt Adjustment: Belt deflection midway between generator and fan pulleys should be ¼" with 10 lb. force applied.

REGULATOR

Delco-Remy 1118827 (1102794 Gen.), 1118835 (1105900 Gen.). New "1118825 Series" Regulator.

►*1954 REGULATOR NOTE: Checking procedure is different than for previous models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section. Following specifications are "Normal" settings.*

Cut out Relay

Cuts In—6.4 volts (hot).
Contact Gap—.020".
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.3 volts (hot).

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—47 amps. (1118827), 52 amps (1118835), hot.

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*
Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*

Lighting Switch Removal: Remove one battery cable from battery. Pull headlight switch knob to "on" position, push latch button on side of switch assembly and pull out switch knob assembly. Screw bushing from switch assembly allowing switch assembly to be removed from instrument panel.

Stop Light Switch Location: On brake master cylinder located on left frame side rail forward of brake pedal.

FUSES: Main Fuse Block—Left hand side of firewall in engine compartment. Two fuses (plus 1 spare) as follows.

Gold Color Fuse Holder—14 amp. Protects tail, rear license light, instrument lights, ignition key light, and clock light (dome light on Conv.).

Grey Color Fuse Holder—14 amp. Protects trunk and dome lights (exc. dome light on Conv.).

Accessory Fuse Block—Six fuses mounted on fuse behind instrument panel. All fuses are 20 amperes except Radio fuse which is 14 amperes. (Spare Radio fuse on main fuse block on engine side of firewall).

CIRCUIT BREAKER: 42 amps. Located in headlight switch.

HORNS: Delco-Remy 1999645 (Low note), 1999646 (High note).

Horn Relay: Delco-Remy 1116775.

Contacts Close—2.75-4.0 volts (set to 3.5 volts). **Contact Gap**—.027". **Air Gap**—.014" (closed).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ENGINE

ENGINE SPECIFICATIONS: Own. 6 Cylinder "L" head.
Bore—3 9/16". **Stroke**—4".
Displacement—239.2 cu. in. **Rated H.P.**—30.46.
Developed H.P.—115 at 3800 RPM (7.0-1 Head). 118 at 3800 (7.7-1 Head).
Compression Ratio—7.0-1 (Std. Head, Synchro-mesh). **7.7-1** (Optional Head used with Hydra-Matic).
Compression & Vacuum Reading—See *Tune-Up.*

ENGINE REMOVAL: *See Pontiac Special Data.*

OIL PAN REMOVAL: *See Pontiac Special Data.*

CYLINDER HEAD: *See Pontiac Special Data.*

TIGHTENING TORQUES: *See Pontiac Special Data.*

ENGINE FRONT MOUNTING REMOVAL: *See Pontiac Special Data.*

PISTONS

Aluminum alloy, tin plate, cam ground, Autothermic Steel Strut type.

Removal—Pistons and rods removed from above.

Fitting New Pistons: Clearance .0005-.0010". If micrometer used on pistons, measure perpendicular to piston pin hole and just far enough above bottom of skirt to make sure micrometer is in full contact. Use .0015" x ½" feeler gauge inserted between piston and cylinder wall at right angles to piston pin. Pull to withdraw feeler must be 8-15 lbs.

Replacement Pistons: Std. size and .005", .010", .020" .030" oversize.

Installing Pistons: Piston pin offset in piston. Install piston to connecting rod with "F" on front of piston and notch on top of piston toward front of engine. Oil squirt hole in connecting rod must be toward camshaft side of engine.

PISTON PINS

Full floating type retained in piston with lock rings at both ends.
Diameter—.9369-.9375" selective. **Length**—3 1/16".
Clearance in Piston—.0000-.0002". Clearance will be correct if piston pin can be pushed through piston with thumb, excessive clearance if pin slides through of own weight.
Clearance in Connecting Rod—.0004-.0006".

Replacement Pins: .001" (green), .003" (red), .005" (blue) Oversize. Paint code marked on end of pin.

PISTON RINGS

Ring	End Gap	Side Clearance
Compr.	.008-.016"	.0015-.003"
Oil	.005-.015"	.002-.004"

Installing Rings: Install compression rings with marks "TOP" or "T" toward top of piston. Oil ring can be installed either way.

R plac m nt Rings: Std. .005", .010", .020", .030" Oversize.

CONNECTING R DS

L ngth—7.560-7.565" (center-to-center).
Weight—37 ozs. (less bearings).
Crankpin Journal Diameter—2.1237-2.1247".
Piston Pin Bushing (Upper Bearing)—Split bushings.
See "Connecting Rods & Bearings" in Pontiac Special Data.

Lower Bearing—Steel backed, babbitt lined insert.
Clearance—.0001-.0021". **Sideplay**—.007-.012".

Replacement Bearings: Std. .001", .002" Undersize.

Installing Rods: Oil squirt hole in lower end must be toward camshaft side. Marks on rods must be together (marks do not indicate in which cylinder rod is used).

CRANKSHAFT

►*CRANKSHAFT TO FLYWHEEL BOLT REPLACEMENT & INSTALLATION CAUTION (Synchro-mesh Cars):* ¾" hex head bolts (No. 508463) or 1" hex head bolts (No. 510832) are used. *Either type can be used for replacement but head size must be the same on all bolts or engine balance will be destroyed.*

Journal Diameters—(1) 2.4982-2.4992", (2) 2.5294-2.5304", (3) 2.5919-2.5929", (4) 2.6232-2.6242".
Bearings—Thin type, removable, steel backed, babbitt lined. Upper and lower halves are interchangeable.
Clearance—.0003-.0023".

Replacement Bearings: Std. .001", .002" Undersize.

End Thrust: At No. 3 (rear intermediate) bearing.
Endplay—.003-.008".

Rear Main Bearing Oil Seal Renewal: *See "Crankshaft & Main Bearings" in Pontiac Special Data.*

Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Pontiac Special Data.*

CAMSHAFT

Bearing Diameter & Installation: *See "Camshaft" in Pontiac Special Data.*
Clearance—.0015-.0025" (new).

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with straightedge across centers.

End Thrust: Steel plate behind camshaft sprocket. Replace if worn. **End Play**—.003-.007".

Timing Chain: Morse. Width 1", Pitch 3/8". Length 21", or 56 links. Timing chain bumper is installed to eliminate vibration.

Chain Installati n—S *"Timing Chain" in Pontiac Special Data.*

Timing Chain Cover Oil Seal Installati n: *S e "Timing Chain" in P ntiac Sp cial Data.*

VALVES

Tapp t Cl aranc : .011-.013" HOT. Use .011" "Go" gauge, .013" "No Go" gauge. High Speed Setting—.013" (exhaust valve, Hot).

Valve	Head Diam.	St m Diam.	L ngth
Intake	1 19/32"	.310-.311"	5 23/32"
Exhaust	1 15/32"	.310-.311"	5 23/32"

Valve	Seat Angle	Lift	St m Cl aranc
Intake	30°	19/64"	① Free Fit to .0006"
Exhaust	45°	19/64"	① Free Fit to .0006"

①—Tapered (max. clearance at bottom .0006").
Valve Seat Width—1/16".

Valve Springs: Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length**—2 11/32".

Spring Sp cificati ns	Spring Pr ssur	L ngth
Valve Closed	59-66 lbs.	1 29/32"
Valve Open	97-105 lbs.	1 19/32"

Valve Guides: Guides have tapered hole (.001" taper to inch—greatest clearance at top). Exhaust guides counterbored at top to depth of ¾".

Checking Valve Clearanc in Guid—Clean guide with tool KMO-122, clean counterbore in exhaust guide with Counterbore Cleaner J-2122. Valve should just fall through guide of own weight.

Installing Guides—Use Valve Guide Remover J-2542 to remove and install guides. Drive new guide down in block (counterbored end up on exhaust guides) until upper end 29/32" below top edge of valve seat. Ream guide with PR-131 tapered reamer and finish counterbore with Counterbore Cleaner J-2122.

►*CAUTION—Guides furnished with straight hol which must be taper reamed.*

Valve Lifters: Barrel type, cast iron. Guide holes reamed in block. Lifters furnished .005" Oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed).

VALVE TIMING

See "Camshaft Setting" und r CAMSHAFT above.
Intake Valves—Open 12°30' BTDC. Close 52°30' ALDC.
Exhaust Valves—Open 52°30' BLDC. Close 12°30' ATDC.
Valve Timing Check—With .0166" tappet clearance #6 valve should open with #6 piston 12°30' before top dead center. Reset tappet clearance to .011-.013".

OILING SYSTEM

Crankcase Capacity: 5 qts. (refill), 6 qts. (dry).

Normal Oil Pressure: 30-45 lbs. at 40 MPH.
Pressure Regulator—On oil pump. Opens at 40 lbs. Replace spring if free length less than 2 5/16".

Oil Pr ssur Gaug—AC No. 1507707. Not electric.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Pump: Gear type. On right side of crankcase
Pump Overhaul—See *"Oil Pump" in Pontiac Special Data.*

Oil Cleaner: Precipitation type (in crankcase).
Removal & Installation—See *"Oiling System" in Pontiac Special Data.*

Crankcase Ventilation: Filter element in oil filler cap (inlet). Outlet pipe at valve compartment cover on right rear side of engine (cars with oil bath air cleaner use a 3-piece outlet pipe containing filter element).

►*CAUTION:* Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backwards).

COOLING

Water Capacity: 18¾ qts (without heater), 20½ qts. (with heater).

Pressure Valve: AC No. 850549 Filler cap. Opens at 7 lbs. (6¼-7½ lbs.).

Thermostat: Harrison "Bellows" type. In cylinder head outlet. **(Std.)** Pontiac No. 3126560 opens at 151°. **(High Temp.)** Pontiac No. 3126562 opens at 160° Pontiac No. 3126562 opens at 160°.

Water Pump: Packless, sealed ball bearing shaft.
See "Water Pump" in Pontiac Special Data.

Pump Removal—Drain cooling system, remove hose connections at pump, remove belt, take out water pump mounting bolts and lift pump out.

Temperature Gauge: AC No. 1512458. Not electric.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Inland. Single plate, "Diaphragm", dry disc type with Long driven member.
See "Inland" in Clutch Section.

Clutch Disc No. —Pontiac No. 508403 (Std.), No. 513582 (Heavy Duty).

Pedal Adjustment: Free travel 7/8-1 1/8" (adjusting nut on link at clutch fork).

Removal: Remove transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing) remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing. Tap bearing support from inside clutch housing to aid removal. (CAUTION—Avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure reinstallation in same position to maintain balance), remove clutch cover bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member, lower cover assembly out.

Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retainer ring on transmission main drive gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

SYNCHRO-MESH TRANSMISSION

Own. All helical gear.
See "Pontiac Synchro-Mesh" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear, down and out.

Installation Note—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support). NOTE—These guide pins may be made from 1/2"-13 American National Thread bolts by cutting heads off and reducing overall length to 4¼".

HYDRA-MATIC DRIVE

Dual-Range" four speed automatic transmission and fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level every 2000 miles, drain and refill at 25,000 mile intervals.

Checking Fluid Level—Run engine for approximately 1½ minutes at speed equivalent to 20 MPH with selector lever in "N". Reduce engine speed to **slow idle** and move selector lever to "D" position, measure level with dipstick, add fluid until level is at "FULL" mark with engine idling.

Capacity—Approximately 11 qts. (refill).
Recommended Fluid—Use G.M. Hydra-Matic Fluid or Automatic Transmission Fluid Type A.

►*OTHER HYDRA-MATIC SERVICE DATA*—*See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics or Saginaw. Needle bearing type.

►*CAUTION:* Rear universal companion flange nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See "Pontiac Hypoid" in Rear Axle Section.*

REAR AXLE

Own. Hypoid gear, semi-floating with Hotchkiss Drive.
See "Pontiac Hypoid" in Rear Axle Section.
Axle Identification—Code mark stamped on pad at forwardside of differential carrier between bottom web and right hand horizontal web. Axle shaft also marked with daub of paint on end of shaft to indicate ratio. See Code and Paint Markings in table below:

Axle Ratios & Code Marking

Ratio	Gear Teeth	① Code Mark	② Code Color
3.08-1③	40:13	0	Yellow
3.63-1④	40:11	6	Blue
3.9-1⑤	39:10	4	Red
4.1-1④	41:10	3	Green
4.3-1④	43:10	2	White
3.42-1⑤	41:12	8	Aluminum

①—See Axle Identification above.
②—Paint daub on end of axle shaft.
③—Hydra-Matic Drive Cars.
④—Synchro-mesh Transmission Cars.
⑤—Optional (for standard fuel engine).

Backlash—.003-.012" (new), .012" (used).

Axle Shaft Removal: Remove wheel, brake drum, four brake backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with Puller J-942 (do not drag axle shaft on oil seal).

Wheel Bearing Adjustment: None.

Differential Carrier Assembly Removal: Disconnect rear universal and wire trunnion in place (do not disengage spline joint at transmission), remove axle shafts, and carrier flange capscrews. Withdraw carrier assembly from housing.

►*CAUTION: Rear universal joint companion flange controls pinion bearing preload. Readjust whenever nut loosened.*

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable, sealed (non-refillable). Serviced by replacement.

Model	Front	Rear
Standard	5303492	5303290
Taxi & Police Cars	5519438	5519439

FRONT SUSPENSION

Independent. Shock absorber mounted within front coil springs.
See "Pontiac" in Front Suspension Section.
Kingpin Inclination—4½° at ½° camber.
Caster—0° ± ½°.
Camber—Pos. ½° ± ½°.
Toe-In—0-1/16" measured 9" above floor.
Toe-Out on Turns—With inner wheel at 20°, outer wheel should be 18° 30'.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

STEERING

Manual: Saginaw Worm & Roller. *See "Saginaw Worm & Roller" in Steering Section.*

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic cylinder. *See "Saginaw (GM) Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Bendix Hydraulic. Duo-servo, single anchor **(without eccentric adjustment).** Hand lever applies rear wheel service brakes.

See "Bendix Brakes" in Brake Section.

►*1954 BRAKE PEDAL & MASTER CYLINDER CONNECTING ROD INTERFERENCE CORRECTION:* **Difficulty may be experienced in getting correct pedal height adjustment due to interference between master cylinder connecting rod clevis and brake pedal. If pedal height of 4 3/8-4 5/8" cannot be obtained it can be corrected by grinding a relief in master cylinder connecting rod clevis on the lower side at a point approximately 2" from rod end and extending toward clevis end for 1".**

Drums—Diameter 11".

Wheel Cylinder Diameter—Front 1 1/16". Rear 7/8".

Lining Width & Thickness

	Width	Thickness
Front	2¼"	3/16"
Rear	1¾"	3/16"

Clearance—Tighten adjusting "Star Wheel" to point where wheel can just be turned by hand, then back off star wheel 14 notches.

Braking Power—60% front wheels. 40% rear wheels.

Standard Master Cylinder: Forward of brake pedal on bracket attached to engine rear cross member.

Checking Fluid—Fluid reservoir is part of master cylinder. Maintain fluid level to top of reservoir.

Removal—Remove from engine compartment. Not necessary to disturb other parts.

Power Brakes: Bendix Vacuum Power Unit (combination vacuum power unit and hydraulic master cylinder). Unit mounted on underside of toe board and replaces regular master cylinder.

See "Bendix Power Unit" in Brake Section.

Checking Fluid—Same as for standard master cylinder.

Removal of Power Unit—Disconnect upper end of vacuum hose attached to inlet tube of master cylinder, and hydraulic line from hydraulic cylinder. Remove stop light switch wires. Disconnect push rod from brake pedal and remove brake pedal from pivot bracket. Remove clutch pedal and steering column seals. Remove vacuum cylinder mounting plate screws while holding power unit by push rod. Remove mounting plate, working it over clutch pedal while holding power brake unit in position. Remove power brake unit.

MISC. MECHANICAL

Windshield Wipers: Cable operated Vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

Window Regulators: Electric. Reversible motor in each window. Available on front doors only. *See "Window Regulators" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor. *See "Power Top Controls" in Miscellaneous Section.*

►*1954 AIR-CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air-conditioning equipment or lines. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL & ENGINE NUMBERS (Numbers are the same): On left front hinge pillar post and on raised pad at front of left side of cylinder block.

Starting Serial & Engine Number—1001 Up.

►*ENGINE & SERIAL NUMBER NOTE—Engine & Serial number (example C8ZS-1001) includes following identification in sequence:*

Assy. Plant	No. of Cyls.	Model Year①	Trans.② Type	Serial No.
See below	8	Z	S. .	1001 Up

①-Year. Z (1954).

②-S and C are Synchro-mesh Transmissions, H and A are Hydra-Matic Transmissions.

Assembly Plant Designations

A—Atlanta	L—Linden
C—South Gate	T—Arlington
F—Framingham	W—Wilmington
K—Kansas City	

TUNE-UP

COMPRESSION PRESSURE: 123-141 lbs. (Synchro-mesh), 139-158 lbs. (Hydra-Matic), both at cranking speed of 200 RPM.

VACUUM READING: 18-20" idling at 450-475 RPM (Synchromesh), 365-385 RPM (Hydra-Matic).

VALVE TAPPET CLEARANCE: .011" to .013" HOT. Use .011" "Go" gauge, .013" "No Go" gauge. **High Speed Setting**—.013" (Exhaust Valve, Hot).

►*VALVE TAPPET NOTE (AIR-CONDITIONED CARS):* An access door is provided in right front fender splash apron to eliminate necessity of removing air-conditioner compressor or lines.

Cold Setting With Engine Stopped—.012-.014". Check for .011-.013" after engine warm.

MANIFOLD HEAT CONTROL: Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in vertical position with valve closed (cold position).

IGNITION

►*IGNITION HIGH TENSION CABLE CAUTION:* Non-metallic cables (with built-in suppression resistance). Marked "Radio-4000 GM". Distributor cap is conventional type without built in resistor. *Do not substitute other type cables.*

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAP: .025" (.023-.028").

Spark Plug—AC No. 44-5, 14mm. Tighten to 25 ft. lbs.

COIL: Delco-Remy 1115380.

Ignition Current—2.5 amperes idling, 4.5 stopped.

DISTRIBUTOR: Delco-Remy 1110831.

Condenser—Delco-Remy 1869704. **Capacity** .18-.23 mfd.
Contact Point Set—Delco-Remy 1918148.
Breaker Gap—.016".
Cam Angle—21°-30°.
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	400	0-4	800
5.5-7.5	1200	11-15	2400
6-8	1400	12-16	2800
10-12	1950	20-24	.3900

Vacuum Spark Control: Delco-Remy 1116050.
Plunger Travel—7/32".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	7-9"
10	20	17.5-19.5"

IGNITION TIMING

Setting—6° BTDC (Synchro-mesh Cars). **3° BTDC** (Hydra-Matic Cars).

Timing Marks—Timing marks on dampener indicating **TDC.—3° BTDC.—6° BTDC.** Pointer on chain case cover aligned with correct mark on dampener (See Ignition Timing above).

CARBURETOR

Idle Speed-Up Control Adjustment (Cars With Air-Conditioning): With engine at normal operating temperature and slow idle adjustment completed, turn air-conditioner "ON", and place transmission selector lever in "N" neutral position. Adjust engine idle speed to 750 RPM by loosening locknut on diaphragm shaft and turning knurled nut to obtain specified RPM. Tighten locknut.

Speed-Up Control Switch (Hydra-Matic Cars)—*See (Hydra-Matic Drive Linkage Adjustment) in Transmission Section.*

Speed-Up Control Switch (Synchro-mesh Cars) Two switches used. Adjust as follows:

Gearshift Lever Speed-Up Control Switch—With Air-Conditioner turned "ON" and gear selector lever in neutral position, loosen nut retaining lower gearshift lever-to-switch rod at switch arm. Move switch arm so Speed-Up Control operates engine at fast idle with clutch pedal out (clutch engaged).

Clutch Pedal Speed-Up Control Switch—With Air-Conditioner turned "ON" and gear selector lever in neutral position, loosen bolts retaining clutch switch and move switch so Speed-Up Control operates engine at fast idle with clutch pedal out (clutch engaged), and at normal idle with clutch pedal in (clutch disengaged).

THROTTLE LINKAGE ADJUSTMENT (ALL MODELS): *Adjust exactly as follows:*

1) Carburetor Throttle Rod—Disconnect throttle rod at throttle lever on left side of transmission case. Check and adjust engine idle speed to 365-385 RPM (Cars without Air Conditioning); 460-480 RPM (Cars with Air Conditioning), hot or slow idle with engine at normal operating temperature, transmission warm, and selector lever in "N" position. Install adjusting pin J-2544 through holes in carburetor intermediate lever on left side of cylinder head and lever bracket. Adjust nuts at trunnion on carburetor throttle rod (back off one nut, tighten opposite nut) until adjusting pin is free with carburetor throttle lever stopscrew against its stop. Tighten trunnion nuts but **do not remove adjusting pin.**

2) Transmission Throttle Front Rod—Check adjustment by inserting a second J-2544 adjusting pin through holes in idler lever (left side of crankcase below starter) and lever bracket. If pin does not enter both holes freely, adjust length of transmission throttle front rod at trunnion on upper end of this rod, then tighten both locknuts securely and remove both adjusting pins.

3) Accelerator Pedal Rod—Loosen front locknut on pedal rod at throttle control idler lever on left side of engine, depress accelerator pedal until carburetor throttle is just wide open. Check clearance between lower face of accelerator pedal and floor mat. If clearance is not ¼" at closest point, adjust pedal by turning rear nut at trunnion on forward end of rod in or out as required, then tighten front nut securely.

CARTER

Carter WCD Models. Dual downdraft type with automatic choke control as follows:

Model	Carter No.
1954 Synchro-mesh (Early)	719SA
1954 Synchro-mesh (Late)	①720SA
1954 Hydra-Matic	2122S

①—Approximately 15,000 used on Hydra-Matic Drive cars.

Idle Setting—719SA, 720SA)—¾-1¼ turns open. Turn screw out for richer mixture. NOTE—Two idle screws used.

Idle Setting (2122S)—¾-1¾ turns open. Turn screw out for richer mixture. NOTE—Single idle screw on this carburetor.

Idle Speed—Different settings as follows:

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Model	Idle Speed
Synchro-Mesh Cars	450-475 RPM
Hydra-Matic Cars (without Air-Cond.)	365-385 RPM
Hydra-Matic Cars (with Air-Cond.) ①	460-480 RPM

①—This setting supersedes previous specifications which were same as for cars without air-conditioner.

Float Level—3/16" from top of float to gasket seat on bowl cover (with gasket removed) using gauge T109-162. Sides of float should barely touch vertical uprights on gauge to avoid floats binding on sides of bowl.

Accelerating Pump—Lower hole (min.) Normal.

Fast Idle Setting: With choke valve tightly closed and fast idle screw on high step of fast idle cam, tighten adjusting screw until there is 026" clearance between throttle valve and bore of carburetor on side opposite idle port.

Automatic Choke Setting: Centered (at index).

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Idle Speed-up Control (Air Conditioned Cars): *See "Carburetor" above.*

►*OTHER DATA: See "Carter WCD" Carburetors in Carburetor Section.*

CARB. EQUIPMENT

Fuel Pump: AC. Replacement No. 9640 (Without Air-Conditioner), No. 539 (With Air-Conditioner). Fuel & Vacuum.

Pressure—4 - 4¾ lbs.

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: AC Electric type.

Dash Unit—AC No. 1517603.

Tank Unit - AC No. 1518093.

See "Fuel Gauges" in Carburetion Section.

BATTERY

Standard—Delco 15E6W. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).

Air-Conditioned Car—Delco 19E6W. 6 volt, 19 plate, 130 ampere hour capacity (20 hr. rate).

Battery Ground—Negative to engine.

Engine Ground—Rear of engine to firewall.

STARTER

Delco-Remy 1107957. Armature—1917855.

Drive—Overrunning clutch (solenoid pinion shift)

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft lbs	6000	5.0	60
15 ft lbs	Lock	3.0	600

Starting Switch: Delco-Remy Solenoid No. 1118140 (no relay) mounted on starter and controlled by Ignition Switch (combination starting & ignition). Neutral Safety Switch used on Hydra-Matic Cars.

See "Starter Controls" in Electrical Equipment Section.

Neutral Safety & Backup Light Switch: Delco-Remy 1998039. At lower end of steering column. Connected in starter control circuit so that starter operates only when selector lever in "N" (Neutral).

Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

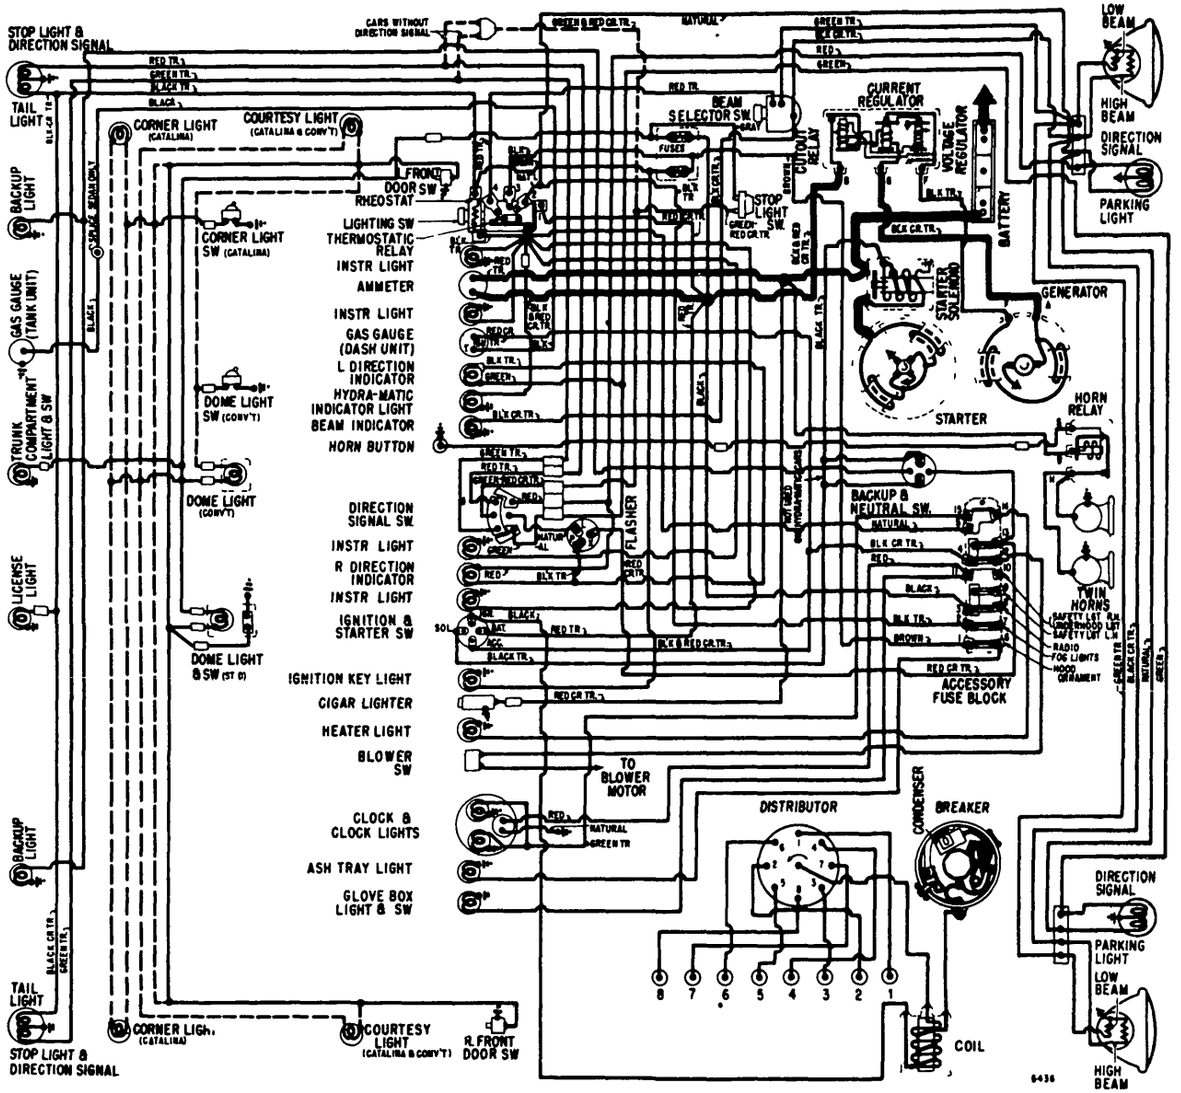
Delco-Remy. Different generators used as follows:

Model	Generator No.	Armature No.
Standard	1102794	1912599
Air Conditioned	1105015	
Hvy Duty & Police	1105900	1918009

Performance Data

Gen. No.	Amperes ①	Volts	RPM
1102794	45	8.0	2350
1105015	50	7.0	2100
1105900	50	7.0	2100

①—Not maximum. See Regulator.



Brush Spring Tension—28 ozs

Field Current—1.87-2.00 amps (1102794), 1.77-1.93 amps (1105015 & 1105900) At 6.0 volts

Rotation—Counter-clockwise at commutator end

Belt Adjustment: Belt deflection midway between generator and fan pulleys should be ¼" with 10 lb. force applied.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REGULATOR

Delco-Remy 1118027 (1102794 Gen.). 1118035 (1105015 & 1105900 Gen.). New "1118825 Series" Regulator.

►*1954 REGULATOR NOTE: Checking procedure is different than for previous models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section. Following Specifications are "Normal" settings.*

Cut out Relay

Cuts In—6.4 volts (hot).
Contact Gap—.020".
Air Gap—.020" (with contacts just closed).

Vibrating Regulator

Setting—7.3 volts (hot)
Air Gap—.075" with armature pressed down to point where contact just touching
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—47 amps. (1118827), 52 amps. (1118835), hot.
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*
Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*

Lighting Switch Removal: Remove one battery cable from battery. Pull headlight switch knob to "on" position, push latch button on side of switch assembly and pull out switch knob assembly Screw bushing from switch assembly allowing switch assembly to be removed from instrument panel.

Stop Light Switch Location: On brake master cylinder located on left frame side rail forward of brake pedal.

FUSES: Main Fuse Block—Left hand side of firewall in engine compartment. Two fuses (plus 1 spare) as follows:
Gold Color Fuse Holder—14 amp. Protects tail, rear license light, instrument lights, ignition key light, and clock light (dome light on Conv.).
Gray Color Fuse Holder—Protects trunk and dome lights (exc. dome light on Conv,).
Accessory Fuse Block—Six fuses mounted on fuse block behind instrument panel. All fuses 20 amps., except radio fuse which is 14 amps. (Spare Radio fuse on main fuse block on engine side of firewall).

CIRCUIT BREAKER: 42 amps. Located in headlight switch.

HORNS: Delco-Remy 1999645 (Low note), 1999646 (High note).

Horn Relay: Delco-Remy 1116775.
Contacts Close—2.75-4.0 volts (set to 3.5 volts).
Contact Gap—.027". **Air Gap**—.014" (closed)

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning system. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. 8 Cylinder "L" head.
Bore—3 3/8". **Stroke**—3 3/4".
Displacement—268.4. cu. ins. **Rated HP**—36.45.
Developed HP (1954)—122 at 3800 RPM (6.8-1 Head). 127 at 3800 RPM (7.7-1 Head).
Displacement—268.4 cu. in. **Rated H.P.**—30.46.
Developed H.P.—122 at 3800 RPM (6.8-1 Head). 127 at 3800 RPM (7.7-1 Head)
Compression Ratio—6.8-1 (Std. Head with Synchro-mesh), 7.7-1 (Optl. Head with Hydra-Matic).
Compression & Vacuum Reading—*See Tune-Up.*
ENGINE REMOVAL: *See Pontiac Special Data.*
OIL PAN REMOVAL: *See Pontiac Special Data.*

CYLINDER HEAD: *See Pontiac Special Data.*
TIGHTENING TORQUES: *See Pontiac Special Data.*
ENGINE FRONT MOUNTING REMOVAL: *See Pontiac Special Data.*

PISTONS

Chrome-nickel alloy iron, tin plated.
Removal—Pistons and rods removed from above.
Taper and Out-of-Round Limits—.001".
Fitting New Pistons: Insert .0015" x ½" feeler gauge between piston and cylinder wall on thrust side. Pull to withdraw feeler must be 10-20 lbs.
Replacement Pistons: Std. size and .010", .020", .030" Oversize.

PISTON PINS

Pressed into pistons and retained in place with retainer rings at each end, floating in connecting rod bushing.
Diameter—.9369-.9375" selective. **Length**—2 7/8".
Pin Fitting in Piston—*See "Piston Pins" in Pontiac Special Data.*
Pin Clearance in Rod Bushing— .0004- .0006".
Piston Pin Removal & Installation—*See "Piston Pins" in Pontiac Special Data.*
Replacement Pins: .001" (green), .003" (red), .005" (blue) Oversize. Paint code marked on end of pin.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Comp. (#1, #2)	3/32"	.008-.015"	.0015-.003"
Oil (#3)	3/16"	.008-.015"	.001-.0025"

Installing Rings: Install compression rings with marks "TOP" or "T" toward top of piston. Oil ring can be installed either way.
Replacement Rings: Std. size, .005", .010", .020", .030" Oversize.

CONNECTING RODS

Length—7.560-7.565" (center-to-center).
Weight—32 ozs. (less bearings).
Crankpin Journal Diameter—1.9987-1.9997".
Piston Pin Bushing (Upper Bearing)—Split aluminum bronze bushing. *See "Connecting Rod & Bearings" in Pontiac Special Data.*

Lower Bearing—Steel backed, babbitt lined insert. No shims.
Clearance—.0001-.0021". **Sideplay**—.007-.012".
Replacement Bearings: Std. .001", .002" Undersize.
Installing Rods: Not offset, install either way. Marks on rods and caps must be together (marks do not indicate in which cylinder rod is used).

CRANKSHAFT

Journal Diameters—(1) 2.3732-2.3742";(2) 2.4044-2.4054"; (3) 2.4357-2.4367"; (4) 2.4469-2.4679"; (5) 2.6232-2.6242".
Bearings—Steel backed babbitt lined inserts. No shims. Upper and lower halves are interchangeable.
Clearance—.003-.0023".
Replacement Bearings: Std. .001", .002" undersize.
End Thrust: Taken at #4 (rear intermediate) bearing.
Endplay—.003-.008".
Rear Main Bearing Oil Seal Renewal: *See "Crankshaft & Main Bearings" in Pontiac Special Data.*
Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Pontiac Special Data.*

CAMSHAFT

Bearing Diameter & Installation: *See "Camshaft" in Pontiac Special Data.*
Clearance—.0015-.0025" (new).
End Thrust: Steel plate behind camshaft sprocket. Replace if worn. **End Play**—.003-.007".
Timing Chain: Morse. Width 27/32". Pitch 3/8". Length 21" or 56 links.
Chain Installation—*See "Timing Chain" in Pontiac Special Data.*
Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that "O" marks are adjacent and in line with straightedge across shaft centers.
Timing Chain Cover Oil Seal Installation: *See "Timing Chain" in Pontiac Special Data.*

VALVES

►*AIR-CONDITIONED CAR NOTE—An access hole is provided in right front fender apron for valve adjustment.*

Tappet Clearance: .011-.013" HOT. Use .011" "Go" gauge .013" "No Go" gauge. High Speed Setting-.013" (exhaust valve).

Valve	Head Diam.	Stem Diam.	Length
Intake	1 15/32"	.310-.311"	5.53"
Exhaust	1 11/32"	.310-.311"	5.53"

Valve Seat Angle		Lift	Stem Clearance
Intake	30°	19/64"	℄ Free Fit to .0006"
Exhaust	45°	19/64"	℄ Free Fit to .0006"

℄—Tapered (max. clearance at bottom .0006").
Valve Seat Width—1/16".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valv Springs: Intake and exhaust valve spring identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring.

Spring Specifications

	Spring Pressure	Length
Valve Closed. .	59-66 lbs.	1 29/32"
Valve Open	97-105 lbs.	1 19/32"

Valve Guides: Valve guides have tapered hole (.001" taper to inch - greatest clearance at top) Exhaust guides counterbored at top to depth of 3/4".
Checking Valve Clearance in Guide—Clean guide with tool KMO-122, clean counterbore in exhaust guide with Counterbore Cleaner J-2122. Valve should just fall through guide of own weight.
Installing Guides—Use Valve Guide Remover J-2542 to remove and install guides. Drive new guide down in block (counterbored end up on exhaust guides) until upper end 29/32" below top edge of valve seat. Ream guide with PR-131 tapered reamer and finish counterbore with Counterbore Cleaner J-2122.

►*CAUTION—Guides furnished with straight hole which must be taper reamed.*

Valve Lifters: Barrel type, cast iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment - valve guides must be removed).
Clearance—Free fit. Lifter should just move freely with finger touch.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves—Open 5° BTDC. Close 39° ALDC.
Exhaust Valves—Open 45° BLDC. Close 5° ATDC.
Valve Timing Check—With .015" clearance, #1 intake valve should open with #1 piston 5° BTDC with first straight line of dampener mark (6°) slightly past pointer on chain cover. Reset Tappet clearance.

OILING SYSTEM

Crankcase Capacity: 5 qts. (refill), 6 qts. (dry).
Normal Oil Pressure: 30-45 lbs. at 40 MPH.
Pressure Regulator—On oil pump. Opens at 40 lbs. Replace spring if free length less than 2 5/16".
Oil Pressure Gauge—AC No. 1507707. Not electric.

Oil Pump: Gear type. On right side of crankcase.
Pump Overhaul—*See "Oil Pump" in Pontiac Special Data.*

Oil Cl an r: Precipitation type (in crankcase).
R m val & Installati n—*S "Oiling System" in Pontiac Special Data.*

Crankcas V ntilati n: Filter element in oil filler cap (inlet). Outlet pipe at valve compartment cover on right rear side of engine (cars with oil bath air cleaner use a 3-piece outlet pipe containing filter element).
►*CAUTION:* Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backwards).

COOLING

►*AIR-CONDITIONED CAR NOTE: Radiator and radiator hoses used on these cars are of heavier construction than standard models.*
Water Capacity: (Without Air-Conditioner): 18¾ qts. (without heater). 20½ qts. (with heater).
With Air-Conditioner—20 qts. (without heater). 21 3/4 qts. (with heater).
Pressure Valve: AC No. 850549 (Without Air-Cond.) opens at 7 lbs. AC No. 850559 (With Air-Cond.) opens at 13 lbs.
►*PRESSURE VALVE CAUTION: Do not use 7 lb. pressure cap with Air-Conditioning.*
Thermostat: Harrison "Pellet" type. In cylinder head outlet. Pontiac No 3132436 opens at 160°.
►*CAUTION: Install with marks "front" & "to rad." toward radiator.*
Water Pump: Packless, sealed ball bearing shaft. *See See "Water Pump" in Pontiac Special Data.*
Pump Removal—Drain cooling system, remove hose connections at pump, remove belt, take out water pump mounting bolts and lift pump out.
Temperature Gauge: AC No. 1512458. Not electric.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Inland. Single plate, "Diaphragm", dry disc type with Long driven member.
See "Inland" in Clutch Section.
Clutch Disc No.—Pontiac No. 513583.
Pedal Adjustment: 7/8-1 1/8" (adjusting nut on link at clutch fork).
Removal: Remove transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing) and remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing. Tap bearing support from inside clutch housing to aid removal (CAUTION—Avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure installation in same position to maintain balance), remove clutch cover bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member, lower clutch cover assembly out.
Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retainer ring on transmission main drive gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).
►*CLUTCH PEDAL SPEED-UP CONTROL SWITCH ADJUSTMENT (AIR-CONDITIONED CARS): S "Sp d-Up Control Switch" under CARBURETOR above.*

SYNCHRO-MESH TRANSMISSION

Own. All helical gear.
See "Pontiac Synchro-Mesh" in Transmission Section.
Transmission Controls: *See "Transmission Controls" in Transmission Section.*
Removal: Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear, down and out.

Installation Note—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support). NOTE—These guide pins may be made from ½"-13 American National Thread bolts by cutting heads off and reducing overall length to 4¼".

►*GEARSHIFT LEVER SPEED-UP CONTROL SWITCH ADJUSTMENT (AIR-CONDITIONED CARS): See "Speed Up Control Switch" under CARBURETOR above.*

HYDRA-MATIC DRIVE

"Dual-Range" four speed automatic transmission and fluid coupling.
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Driv " in Transmission Section.*
►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission S ction.*
Lubrication—Check fluid level every 2000 miles, drain and refill at 25,000 mile intervals.
Checking Fluid Level—Run engine for approximately 1½ minutes at speed equivalent to 20 MPH. with selector lever in "N". Reduce engine speed to **sl w idl** and move selector lever to "D" position, measure level with dipstick, add fluid until level is at "FULL" mark with engine idling.
Capacity—Approximately 11 qts. (refill).
Recommended Fluid—Use G.M. Hydra-Matic Fluid or Automatic Transmission Fluid Type A.
►*OTHER HYDRA-MATIC SERVICE DATA—S "Hydra-Matic Driv " in Transmission S ction.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

UNIVERSALS

M chanics or Saginaw. Needle bearing type.

►*CAUTION:* Rear universal companion flange nut controls rear axle pinion bearing "preload" (must be adjusted whenever nut is loosened). See *"Pontiac Hypoid" in R ar Axle S ction*

REAR AXLE

Own. Hypoid gear, semi-floating with Hotchkiss Drive. See *"P ntiac Hyp id" in R cr Axle Section.*

Axl Identificati n—Code mark stamped on pad at forward side of differential carrier between bottom web and right hand horizontal web. Axle shaft also marked with daub of paint on end of shaft to indicate ratio. See Code and Paint Markings in table below

Axle Ratios & Code Marking

Ratio	Gear Te th	①Code Mark	②Code Color
3 08-1③	40 13	0	Yellow
3.23-1③	42 13	9	Brown
3.42-1⑤	41 12	8	Aluminum
3.63-1④	40 11	6	Blue
3.9-1 ④	39 10	4	Red
4.1-1 ④	41 10	3	Green

①—See Axle Identification above.
②—Paint daub on end of axle shaft.
③—Hydra-Matic Drive Cars.
④—Synchro-mesh Transmission Cars.
⑤—Optional (for standard fuel engines).

Backlash—.003-.012" (new), .012" (used).

Axle Shaft R m val: Removal wheel, brake drum, four brake backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with Puller J-942 (do not drag axle shaft on seal).

Wheel Bearing Adjustment: None.

Differential Carrier Ass mbly Removal: Disconnect rear universal and wire trunnion in place (do not disengage spline joint at transmission), remove axle shafts, and carrier flange capscrews. Withdraw carrier assembly from housing.

►*CAUTION: Rear universal j int companion flange controls pinion bearing prel ad. Readjust whenever nut loos ned.*

SHOCK ABSORBERS

Delc . Direct acting, non-adjustable, sealed (non-refillable). Service by replacement.

Model	Front	Rear
Standard	5303492	5303290
Taxi & Police Cars.	5519438	5519439

FRONT SUSPENSION

►*FRONT SPRING NOTE—Heavi r springs us d on cars with Air-Conditioning.*

Independent. Shock absorber mounted within front coil springs.
See "Pontiac" in Front Suspension Section.
Kingpin Inclination—4½° at ½° camber.
Caster—0° ± ½°.
Camber—½° ± ½°
Toe-In—0-1/16" measured 9" from floor.
Toe-Out on Turns—With inner wheel at 20°, outer wheel should be 18° 30'.

STEERING

Manual: Saginaw Worm & Roller. *See "Saginaw Worm & Roller" in Steering Section.*

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic cylinder. *See "Saginaw (GM) Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Bendix Hydraulic. Duo-servo, single anchor (without eccentric adjustment). Hand lever applies rear wheel service brakes.
See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.

►*1954 BRAKE PEDAL & MASTER CYLINDER CONNECTING ROD INTERFERENCE CORRECTION:* Difficulty may be experienced in getting correct pedal height adjustment due to interference between master cylinder connecting rod clevis and brake pedal. If pedal height of 4 3/8-4 5/8" cannot be obtained it can be corrected by grinding a relief in master cylinder connecting rod clevis on the lower side at a point approximately 2" from rod end and extending toward clevis end for 1".

Drums—Diameter 11".
Whe l Cylinder Diam t r—Front 1 1/16". Rear 7/8".

Lining Width & Thickn ss

	Width	Thickness
Front	2¼"	3/16"
Rear	1¾"	3/16"

Clearance—Tighten adjusting "Star Wheel" to point where wheel can just be turned by hand, then back off star wheel 14 notches.

Braking Power—60% front wheels. 40% rear wheels.

Standard Master Cylinder: Forward of brake pedal on bracket attached to engine rear cross member.

Checking Fluid—Fluid reservoir is part of master cylinder. Maintain fluid level to top of reservoir.

Removal—Remove from engine compartment. Not necessary to disturb other parts.

Power Brakes: Bendix Vacuum Power Unit (combination vacuum power unit and hydraulic master cylinder). Unit mounted on underside of toe board and replaces regular master cylinder.
See "Bendix Power Unit" in Brake Section.

Checking Fluid—Same as for standard master cylinder.

Removal of Power Unit—Disconnect upper end of vacuum hose attached to inlet tube of master cylinder, and hydraulic lines from hydraulic cylinder. Remove stop light wires. Disconnect push rod from brake pedal and remove brake pedal from pivot bracket. Remove clutch pedal and steering column seals. Remove vacuum cylinder mounting plate screws while holding power unit push rod. Remove mounting plate, working it over clutch pedal while holding power unit in position. Remove power brake unit.

MISC. MECHANICAL

Windshield Wipers: Cable operated Vacuum type.
See "Windshield Wipers" in Miscellaneous Section.

Air-Conditioning: Harrison type with magnetic compressor clutch (compressor operates only with air-conditioner switch turned on). *See "Harrison" Air-Conditioning in Miscellaneous Section.*

Window Regulators: Electric. Reversible motor in each window. Available on front doors only. *See "Window Regulators" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor. *See "Power Top Controls" in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconn cting any part of air conditioning equip m nt or lines for acc ss to ngin , se "Air Conditioning Service Cautions" in Miscellaneous Section*

MODEL IDENTIFICATION

SERIAL & ENGINE NUMBERS (Numbers are the same): On left front hinge pillar post and on raised pad at front of right hand cylinder block.

Starting Serial & Engine Number—1001 with prefix as indicated below

►*ENGINE & SERIAL NUMBER NOTE: Engine and Serial number (example P755H 1001) includes following identification data in sequence:*

Assy. Plant	Model ①	Model Year	Trans. ② Type	Serial No.
See below	7	55	H	1001

① —**7**—27 Series. **8**—28 Series.
② —**H**—Hydra-Matic Trans. **S**—Synchro-mesh Trans.

Assembly Plant Designations

P—Pontiac	**K**—Kansas City
C—South Gate	**L**—Linden
W—Wilmington	**A**—Atlanta
F—Framingham	**T**—Arlington

►*7.5-1 COMPRESSION RATIO ENGINE IDENTIFICATION. On Synchro-mesh Cars with 7.5-1 compression ratio, an "L" is stamped on engine number pad.*

TUNE-UP

COMPRESSION PRESSURE: 135-145 lbs. at cranking speed.

VALVE TAPPET CLEARANCE. None in service (hydraulic).

►*ADJUSTMENT (When Cylinder Head or Valve System disturbed): See Valve Tappet Adjustment under "Valves" in ENGINE data.*

MANIFOLD HEAT CONTROL: Thermostatic coil type mounted in right hand exhaust manifold.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders—RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .033-.038".
Spark Plugs - AC No. 44-5 or 45S. 14 mm.

COIL: Delco-Remy 1115087. *12 Volt.*
Resistor—Delco-Remy 1927809.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch-to-coil This resistor is by-passed during cranking by lead from starter solenoid-to-coil

DISTRIBUTOR: Delco-Remy 1110828. *12 Volt.*
Condenser—Delco-Remy 1869704. **Capacity** .18-.23 mfd.
Contact Point Set—Delco-Remy 1918148.
Breaker Gap— 016"
Cam Angle—26-33°.
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Counterclockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	325	0-4	650
10.5-12.5	1200	21-25	2400
12-14	1400	24-28	2800
14-16	1700	28-32	3400

Vacuum Spark C ntr l: Delco-Remy 1116080
Plung r Trav l—11/64-3/16".

Vacuum Advanc

Distr Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6"
8	16	12.5-13.5"

IGNITION TIMING

Setting—5° BTDC. With engine running at 400 RPM (Hydra-Matic Cars), 450 RPM (Synchro-mesh Cars).
Timing Marks—Three marks on harmonic balancer indicating **TDC—3° BTDC-5° BTDC.** Pointer on chain case cover aligned with correct mark on balancer.

CARBURETOR

►*CARBURETOR APPLICATION: Rochester and Carter 2-Barrel used on Hydra-Matic Drive Cars. Carter 2-Barrel used on Synchro-mesh Cars. Carter 4-Barrel WCFB or Rochester 4-Barrel 4GC are optional equipment (Power Pack).*

►*ENGINE LOADING CORRECTION (Cars with Rochester 2GC 2-Barrel Carburetor): New choke piston can be installed to provide greater initial choke opening to prevent loading. See "Rochester 2GC Carburetor" in Carburetor Section.*

►*CARBURETOR FLOODING (Due to Excessive Fuel Pump Pressure): See "Fuel System Notes" in Pontiac Special Data.*

►*HARD STARTING DUE TO UNSATISFACTORY UNLOADER OPERATION AFTER FLOODING (Cars with Carter WCFB 4-Barrel Carburetor): See "Carter WCFB 4-Barrel" in Carburetor Section for recommended rework of Carburetor and Throttle Linkage.*

►*CARBURETOR REPLACEMENT CAUTION:* First type intake manifolds with a curved section at rear of mounting flange will accomodate **Carter carburetors only.** Later manifolds with a fairly straight section at this point will accomodate either Rochester or Carter carburetors. A high vacuum leak will occur if Rochester carburetor used with first type intake manifold.

►*LOST MOTION OR LOOSENESS IN THROTTLE LINKAGE (EARLY SYNCHRO-MESH CARS).* Check distance between throttle rod hole center-lines and if found to be greater than 11.420", indicating an early type rod, increase bend in the rod so that distance between hole center-lines is 11.380-11.420".

►*HYDRA-MATIC TRANSMISSION THROTTLE ROD PRODUCTION CHANGE:* Transmission throttle control rod installed in lower hole on later cars and in upper hole on early cars. To decrease throttle valve pressure and increase accelerator linkage free travel, the rod on early cars can be installed in lower hole. *CAUTION*—When making this change, make sure that rod does not touch left rear engine mount at any point in its travel

THROTTLE LINKAGE ADJUSTMENT: (HYDRA-MATIC DRIVE CARS): With engine at normal operating temperature, idle speed set at 390-410 RPM, and with transmission selector lever in neutral, install linkage adjustment pin J-2544 through holes in lever and bracket at rear of left engine block. Pin should fit free in holes without lever movement. If free fit not obtained, adjust trunnion nuts on carburetor throttle rod until pin is free, then lock nuts securely. Leave gauge pin in hole. Loosen trunnion nuts on transmission throttle control rod and push rod downward until control outer lever is felt to touch end of its travel (top nut must not be touching trunnion) **Sh rt n throttl control r d tw turns** by loosening lower nut two turns and tightening upper nut 2 turns Remove gauge pin. With carburetor throttle in full open positive and Downshift Return Spring fully extended, adjust throttle control intermediate rod trunnion (at lever on engine bracket) so that accelerator pedal clears floor mat by approximately ¼" at closest point, tighten trunnion locknuts. *NOTE—See Hard Starting Corr ction in "Carter WCFB 4-Barrel" in Carburetor Section for special s tting on cars with this carburetor.*

ROCHESTER 2GC 2-BARREL

Rochester Model 2GC No. 7006100 (Hydra-Matic Driv Cars).

►*CARBURETOR CHOKE PISTON CHANGE (t corr ct Engine Loading): See "R ch st r 2GC Carburetor" in Carburetor Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carbur tor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting—1-1/2 turns open from lightly seated position (turn screws out for richer mixture). Adjust as necessary from this preliminary setting to give a smooth idle at correct idle speed (see below).

Idle Speed (Synchro-mesh Cars)—450-470 RPM
Idle Speed (Hydra-Matic Cars)—390-410 RPM

►*AIR-CONDITIONED CAR NOTE: Adjust idl sp d with Air Conditioner turned "ON".*

Float Level—1-15/64" from air-horn gasket to top of float with assembly inverted. Use Gauge BT-105 so it rests against power piston shaft with outer leg in line with center of float. Adjust by bending float arm between pivot and float with Tool BT-69.

Float Drop—1-29/32" between air-horn gasket and lowest point on bottom of float with air-horn held upright (Gauge BT-105). Adjust by bending float tang toward float needle seat to lessen drop, and away from seat to increase drop

Fast Idle: No adjustment of fast idle speed is provided. It is necessary however to correct relationship between fast idle cam position and choke valve position. Check & adjust as follows Place end of idle adjusting screw on next to highest step of fast idle cam. Using Gauge J-5920, slide small end between upper edge of choke valve and carburetor bore, with gauge held vertically. If necessary, bend choke rod until correct clearance is obtained.

Unloader Adjustment—With throttle in wide open position and choke thermostat cover set at index, bend tang on throttle lever so that large end of Tool J-5920 just fits between upper edge of choke valve and inner side of air horn.

Automatic Choke Setting: Centered (at index).

►*OTHER DATA: See "Rochest r 2GC Carbur tor" in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs *CAUTION—Pressur in excess of 5 lbs. will caus carbur tor t flood. Se "Fuel Syst m Not s" in Pontiac Special Dat .*

►*FUEL PUMP, ARM WEAR CORRECTION· Se "Camshaft" below.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CARTER WGD 2-BARREL

M d l	Cart r N .
Synchro-mesh (Early)	2207S
Synchro-mesh (Late)	. 2207SB
Hydra-Matic (Early)	2182S
Hydra-Matic (Later)	2182SA
Hydra-Matic (Late)	2182SB

►*CARBURETOR FLOODING CORRECTION See "Fuel System Not s" in Pontiac Special Data for excessive fu l pump pr ssur . S e also "Carter WGD Carburetor" in Carbur tor S ction for other recommended changes*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barr l fe ds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idl Setting (2207-S & SB)—1/2—1-1/2 turns open. Turn screws out for richer mixture.

Idl Setting (2182S, SA & SB)—1-1/4—2-1/4 turns open. Turn screws out for richer mixture.

Idl Sp d (Synchro-m sh Cars)—450-475 RPM.

Idl Sp d (Hydra-Matic Cars)—390-410 RPM.

►*AIR-CONDITIONED CAR NOTE: Adjust idle speed with Air-Condition r turned "ON".*

Float L v l: 7/32" from top of float to gasket seat on bowl cover (with gasket removed). Use Gauge T109-106. Adjust by bending float arm.

Acc l rating Pump—No seasonal adjustment

Fast Idl Setting: .026" throttle opening or clearance between valve and wall on side opposite idle ports with choke valve tightly closed. Adjust by bending choke connector rod at lower angle.

Unload r Adjustm nt—With fast idle adjustment completed, hold throttle valve wide open and close choke valve as far as possible (do not force choke valve closed). Clearance between upper edge of choke valve and inner wall of air horn should be 5/16" (Gauge T109-154). Adjust by bending choke shaft unloader arm.

Aut matic Ch k Setting: *CAUTION—2 Settings used.* **(Synchro-mesh Cars—2207S, SB)**—1 Point Lean **(Hydra-Matic Cars—2182S, SA, SB)**—1 Point Rich

►*OTHER DATA See "Cart r WGD Carburetor" in Carburetor Section*

Hydra-Matic Throttl Linkage Adjustment: *See "Carburetor" above*

Fu l Pump Pr ssur : 4-5 lbs *CAUTION—Pressure in excess of 5 lbs will cause carburetor to flood See "Fuel System Notes" in Pontiac Special Data*

ROCHESTER 4GC 4-BARREL

Rochest r 4GC No. 7007800 (Hydra-Matic Drive Cars).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle S tting—1½ turns open (preliminary setting) For final setting (with engine at normal operating temperature), adjust both idle mixture screws equally to give a smooth idle at specified RPM Turn screws out for richer mixture

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Idl Sp d (Synchr -m sh Cars)–450-470 RPM.
Idl Spe d (Hydra-Matic Driv Cars)–390-410 RPM.

►*AIR CONDITIONED CAR NOTE: Adjust idle speed with Air Conditioner turned "ON".*

►*OTHER DATA: See "Rochester 4GC 4-Barrel Carburetor" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above,*

Fuel Pump Pressure: 4-5 lbs. *CAUTION–Pressure in excess of 5 lbs. will cause carburetor to flood. See "Fuel System Notes" in Pontiac Special Data.*

►*FUEL PUMP ARM WEAR CORRECTION: See "Camshaft" below.*

CARTER WCFB 4-BARREL

Model	Carter No.
Synchro-mesh	2283S
Hydra-Matic	2268S

►*CARBURETOR UNLOADER IMPROVEMENT (to correct Hard Starting due to unsatisfactory Unloader Operation): See "Carter WCFB 4-Barrel" in Carburetor Section for installation of new throttle lever flex spring.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting–3/4–1-3/4 turns open. Turn screws out for richer mixture.
Idle Speed (Synchro-mesh Cars)–450-470 RPM.
Idle Speed (Hydra-Matic Cars)–390-410 RPM.

►*AIR CONDITIONED CAR NOTE: Adjust idle speed with Air Conditioner turned "ON".*

►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 4-5 lbs. *CAUTION–Pressure in excess of 5 lbs. will cause carburetor to flood. See "Fuel System Notes" in Pontiac Special Data.*

►*FUEL PUMP ARM WEAR CORRECTION: See "Camshaft" below.*

CARB. EQUIPMENT

►*HIGH FUEL PUMP PRESSURE CORRECTION (Causing Carburetor to Flood):* May be caused by the diaphragm being installed with insufficient slack. *See "Fuel System Notes" in Pontiac Special Data.*

►*FUEL PUMP ARM & ECCENTRIC WEAR CORRECTION & INSTALLATION CAUTION: See "Camshaft" below. See "Fuel Pumps" in Carburetion Equipment Section.*

Fuel Pump: AC. Replacement No. 4123 (Fuel & Vacuum).
Pressure–4-5 lbs. *CAUTION–Fuel pump pressure must not exceed 5 lbs. pressure.*

Fu l Filt r: Std. Equipment. This unit is a disc type filter which requires periodic service. *See "Fuel System Notes" in Pontiac Special Data.*

Gas lin Gaug : AC Electric type.
Dash Unit–AC No. 1518131.
Tank Unit–AC No. 1518093 (Exc. Sta. Wgn.). No. 1518250 (Sta. Wgn.).
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Air Conditioned Cars–Delco 3SM70. *12 Volt,* 11 plate, 70 ampere hour capacity (20 hr. rate).
Except Air Conditioned Cars–Delco 2SM50. *12 Volt,* 9 plate, 50 ampere hour capacity (20 hr. rate).
Battery Ground–Negative.
Engine Ground–Between engine and fender at battery ground.

STARTER

Delco-Remy 1107631 (Std.), 1107632 (With Power Steering). *12 Volt.*
Armature–Delco-Remy 1926626.
Drive–Overrunning clutch (solenoid pinion shift).
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
10.5 ft. lbs.	Lock	5.4	470

Starting Switch: Delco-Remy Solenoid 1119760 (no relay) mounted on starter and controlled by Ignition & Starter Switch, Delco-Remy No. 1116472. Neutral Safety Switch used on Hydra-Matic Drive Cars.

Neutral Safety & Back-up Light Switch: Delco-Remy 1998039. At lower end of steering column. Connected in starter control circuit so that starter operates only when selector lever in "N" (Neutral).

Adjustment–*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy Model:	Gen. No.	Armature No.
Standard	1100304	1928952
Hvy. Duty (1st type)	1102012	1923535
Hvy. Duty (2nd type)	1102018	1923535
Hvy. Duty (3rd type)	1102035	
Air. Cond. Car (1st type)	1105944	① 1932900
Air Cond. Car (2nd type)	1102027	②
Air Cond. Car (3rd type)	1102039	

①–Replaces Armature No. 1930814.
②–Replace Generator assembly with No. 1102039.

Maximum Charging Rate–*See Voltage Regulator.*

Performance Data–Cold

Generator	Amperes	Volts	RPM
1100304	25	14.0	2780
1102012	30	14.0	2150
1102018	30	14.0	2150
1102035	35	14.0	
1105944	35	14.0	2150
1102027	35	14.0	2350
1102039	35	14.0	

Rotati n–Counter-clockwise at commutator end.
Brush Spring T nsi n–28 ozs.

Fi ld Curr nt–1.5-1.62 amps. (1100304); 1.48-1.62 amps. (1102012 & 1102018); 1.64-1.82 amps. (1102027); 1.54-1.67 amps. (1105944), all at 12 volts.

Belt Adjustment: ¼" belt deflection with approximately 8 lbs. pressure midway between pulleys.

REGULATOR

Delco-Remy Regulator N.	Us With G n. N.
1118945	1100304
1118826	1102012 & 1102018
1118967	1102027 & 1102035
1118956	1105944

►*NOTE: Regulator is "1118825 Series". Specifications below are for "Normal" s ttings.*

Cut-Out R lay

Cuts In–11.8-13.5 volts (hot).
Contact Gap–.020".
Air Gap–.020" (with contacts just closed).

Voltag R gulat r

Setting–13.8-14.8 volts (hot).
Air Gap–075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section.*

Curr nt R gulat r

Setting (1118945)–23-27 amperes (hot).
Setting (1118826)–27-33 amperes (hot).
Setting (1118956 & 1118967)–32-37 amperes (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
►*LAMP BULB CAUTION: All lights are 12 Volts.*

Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*

Direction Signal: *See "Dir ction Signals" in Electrical Equipment Section.*

►*DIRECTION SIGNAL SHORT CIRCUITING CORRECTION:* Direction signal wiring harness contacts gearshift lever support at upper end of steering column and in some instances may cause a short circuit. To correct, remove direction signal control assembly and replace the wiring harness and switch base assembly. Route the new harness in the guide clamp and push it down through clamp until it lies flush against underside of housing, then bend clamp around harness to hold it securely. Before installing control assembly, bend the clamp and harness toward center of housing to make sure it will not contact gearshift lever support.

Lighting Switch Removal: Remove one battery cable from battery. Pull headlight switch knob to "on" position, push latch button on side of switch assembly and pull out switch knob assembly. Screw bushing from switch

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

assembly allowing switch assembly to be removed from instrument panel

Stop Light Switch Location: Mechanical type switch located on bracket attached to steering column behind instrument panel.

Back-Up Light Switch: Located on left rear side of transmission case.

FUSES: Fuses listed below (except as noted) are located on a fuse block behind instrument panel on dash to left of steering column

Instrument Panel–4 amps.
Hood Ornament & Ash Tray–7½ amps.
Stop Lights, Dome & Courtesy Lights–7½ amps.
Tail Lights–7½ amps.
Back-up Light–7½ amps.
Glove Box & Underhood Light–7½ amps
Directional Signal & Brake Light–7½ amps.
Spot Lights–7½ amps.
Heater & Defroster–7½ amps.
Radio & Clock–7½ amps.
Air Conditioner–30 amp. Located in a line holder either on defroster core housing or if car not equipped with defroster, on front of dash where defroster should be.

LIGHTING THERMOSTATIC CIRCUIT BREAKER: 12 Volt. 22 amperes. Located on lighting switch.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION. Before disconnecting any part of air conditioning equipment or lines see "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*ENGINE "CLICKING" NOISE WHEN IDLING CAUTION.* May be caused by loose rivets in Vibration Dampener and is sometimes diagnosed as Hydraulic Lifter noise. Check vibration dampener before working on lifters Correct by replacing Vibration Dampener. *See "Vibration Damper" in Pontiac Special Data.*

►*GRINDING SOUND IN ENGINE CORRECTION:* Check oil pump drive shaft for evidence of shaft rubbing against hole in cylinder block. This evidence can be seen on outer diameter of shaft above the upset "nibs". Correct by grinding or turning the shaft for clearance. *CAUTION–Do not grind off the "nibs".*

►*OIL CONSUMPTION AT HIGH SPEED CORRECTION:* This condition may be caused by incorrectly installed crankcase ventilator outlet pipe. If ventilator pipe is pushed too far into push rod cover, high velocity air will carry oil directly out through pipe. Make sure that pipe is not forced past the two locating points on outlet pipe.

ENGINE SPECIFICATIONS: Own. V8 Valve-in-head.

Bore	Stroke	Displacement	Rated HP
3.75"	3.25"	287.3 cu. ins.	45

Engine	① Compr. Ratio	Developed HP
Standard	8.0-1	② 180 at 4600 RPM
With Power Pack	8.0-1	200 at 4600 RPM

①–7.5-1 optional compression ratio obtained by using different pistons "L" stamped on engine number pad indicates low compression engine
②–173 HP at 4400 RPM on "Low Compression" engine.

Compression & Vacuum Reading–*See Tune-Up.*

ENGINE REMOVAL: *See "Engine" in Pontiac Special Data.*

OIL PAN REMOVAL: Remove right and left engine side side aprons Remove steering idler lever support attaching screws and lower steering linkage as far as possible. Disconnect exhaust crossover pipe and jockey it around to a position where it can be removed without forcing Remove flywheel housing lower cover and front shield. Loosen crankcase ventilator outlet pipe brace and swing brace out of way.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Pontiac Special Data.*

Oil Passage Plug (In Cylinder Head) Replacement: *See "Oiling System" in Pontiac Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Pontiac Special Data.*

INTAKE MANIFOLD: With **Special** flat washers under attaching nuts, tighten nuts evenly to 40-45 ft lbs.

ENGINE MOUNTINGS: *See "Engine Mountings" in Pontiac Special Data.*

PISTONS

Cast aluminum alloy, slipper skirt, with piston pin offset 1/16" toward right side of engine

►*DIFFERENT PISTONS USED IN "HIGH" & "LOW" COMPRESSION ENGINES.* Pistons identified as follows High compression pistons are flat on top, and low compression pistons are "dished" out. Low compression pistons also have an "L" stamped on rear side near pin boss.

Removal–Pistons and rods removed from above.

Replacement Pistons: Std. size, and 005", .010", .020", .030" Oversize.

Fitting New Pistons: Clearance .0007-.0012' (measured just far enough above bottom of skirt to make sure micrometer is in full contact, and perpendicular to piston pin boss). Use a 0015" x ½" feeler gauge and spring scale. With piston and cylinder clean and dry, insert inverted piston and feeler gauge into lower half of cylinder (feeler 90° from pin hole). Pull required to withdraw feeler should be 8-15 lbs.

Installing Pistons: Install with notch in piston head and "F" mark on side of piston toward front of engine. *See Rod Installation.*

PISTON PINS

Pin is floating in piston and connecting rod and is retained by snap rings at each end

Diameter–.9803-.9807".

Pin Fit in Piston–.0000"-.0002" loose with piston and pin at room temperature. When pin is toward high limit (.0002") pin can be inserted with light hand pressure, *pin should not fall through of its own weight.* When pin toward low limit (.0000"), considerable hand pressure will be required (a brass drift can be used to tap pin into place with light pressure).

Pin Fit in Connecting Rod–.0003"-.0005" loose.

Replacement Pins: Std. size, .001", .003", .005" Oversize.

PISTON RINGS

Upper compression ring is chrome plated. Both compression rings are taper faced and have either a chamfer or a step on inside diameter of top side.

Ring	Width	End Gap	Side Clearance
Upper Compr.	.078"	.010-.020"	.0012-.0027"
Lower Compr.	.078"	.008-.020"	.0012-.0032"
Oil	.183"	.015-.035"	.0025-.0095"

Installing Rings: Install compression rings with chamfer or step (on inside diameter) toward top of cylinder Oil ring can be installed either way.

Replacement Rings: Std. size, .005", .010", .020", .030" Oversize.

CONNECTING RODS

Length–6.623-6.627" (center-to-center)
Crankpin Journal Diameter–2.2488-2.2498".
Connecting Rod Upper Bushing (Piston Pin) Removal & Installation–*See "Connecting Rods & Bearings" in Pontiac Special Data.*
Lower Bearing–Replaceable precision type
Clearance–.0009-.0029" (new).
Sideplay–.006-.011"

Replacement Bearings: Std. size, .001", .002" Undersize

Installing Rods: Install rods **2-4-6-8 (right bank)** with machined boss at lower end of rod toward the **rear.** Install rods **1-3-5-7 (left bank)** with boss toward the **front** of engine. When installed, machined bosses on rods will face each other *See Pistons above.*

CRANKSHAFT

►*FRONT MAIN BEARING NOISE CORRECTION (POWER STEERING CARS):* Noticeable when engine warm and when power steering pump drive belt tightened to the high limit. Check by loosening belt below specified ft. lb. reading. DO NOT LEAVE BELT LOOSE. If noise not eliminated with belt tightened to low limit 58-65 ft. lbs., (new belt), 51-53 ft lbs, (used belt) using Tool J-5574, decrease clearance between crankshaft and main bearing shells on front main bearing to a clearance of .001-.002".

►*MAIN BEARING CAP PRODUCTION CHANGE* New bearing caps used in later production are heavier and have the bolt boss length increased. *Lockwashers are not used under attaching screws.*

Journal Diameter–2.2498-2.499". Five bearings.
Bearings–Steel backed babbitt lined inserts. No shims.
Clearance– 0005-.003" (Except Rear), .0008-.0033" (Rear)

End Thrust: Taken by No. 4 (rear center) main bearing
Endplay–.0035-.0085".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Rear Main Bearings: Std. size, .001", .002" Undersize.

Crankshaft Rear Main Bearing Oil Seal Installation: See *"Crankshaft & Main Bearings" in Pontiac Special Data.*

Crankshaft Front Oil Seal: See *"Engine Front Cover" in Pontiac Special Data.*

Vibration Dampener Removal & Installation: See *"Vibration Dampener" in Pontiac Special Data.*

FLYWHEEL REPLACEMENT (Hydra-Matic Cars): See *FLYWHEEL in Pontiac Special Data.*

CAMSHAFT

►*FUEL PUMP ARM & ECCENTRIC WEAR CORRECTION & INSTALLATION CAUTION:* If wear is found at the fuel pump arm or eccentric, replace 1½" inside diameter thrust plate with the later type having a 1 9/16" inside diameter. All service replacement thrust plates are 1 9/16" type.

Journal Diameters–1 8992-1 8997". Five bearings.
Clearance–.0015-.0025".

End Thrust: Steel thrust plate located behind camshaft sprocket Replace if worn or grooved.
Endplay– 003-.007".

Timing Chain: Length–60 links.
Timing Chain Installation–*See "Timing Chain" in Pontiac Special Data.*

Camshaft Setting: Both sprockets marked '0'. Mesh chain with sprockets turned so that marks are adjacent and in line with straight edge across shaft centers.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Pontiac Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Pontiac Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Pontiac Special Data.*

VALVES

►*INTAKE VALVE STEM OIL SPLASH SHIELD PRODUCTION CHANGE:* Beginning with Engine No. 54487, Oil Splash Shield, Part No. 520996 is installed over top of inner intake valve spring Splash shields may be installed on early 1955 engines

Tappet Clearance: None in service (hydraulic). *See "Initial Tappet Adjustment" below if cylinder head removed or valve system disturbed.*

Valve	Head Diam.	Stem Diam.	Length
Intake	1 778-1 784"	3407- 3417"	5 250"
Exhaust	1 497- 1 503"	3407- 3417"	5 230"

Valve	Seat Angle	Lift	①Stem Clearance
Intake	②30°	327"	.0003- 0006"
Exhaust	②45°	327"	0003-.0006"

① - In small end of taper reamed hole in guide. Correct fit of valve stem in valve guide is when valve will just drop through of its own weight and with no perceptible side play.

② - Face angle - 29° Intake, 44° Exhaust.

Valve Seat Width–3/64-1/16' (Intake), 1/16" (Exhaust)

Valve Stem Oil Seal: Neoprene type installed in second groove of intake valve stems Later engines have an oil baffle installed over inner valve spring. *See "Intake Valve Stem Oil Splash Shield Production Change" above.*

Initial Tappet Adjustment: If cylinder head removed or valve assembly disturbed, adjust valve tappets as follows. Adjust valves for one cylinder at a time with piston in firing position (both valves completely closed). Loosen rocker arm ball nuts until pushrod is free to rotate, then tighten ball nut just until there is no axial movement (do not depress lifter plunger). **Tighten ball nut one complete turn.** Repeat this procedure for each cylinder.

Checking Valve Stem Length: *See "Valve System" in Pontiac Special Data.*

Valve Springs: Inner and outer valve springs used.

Valve Spring Specifications

	Inner Spring		Outer Spring	
Valve	Pressure	Length	Pressure	Length
Open	54-60 lbs	1 153"	98-106 lbs	1 203"
Closed	23-29 lbs	1 483"	55-61 lbs	1 533"

Valve Guides: Pressed into cylinder head. Guides have tapered hole (.0015" taper to inch), with greater clearance at rocker arm end.

Valve Clearance in Guide–Valve should just fall through guide of own weight and with no perceptible side play

Guide Replacement–Drive old guide out from combustion chamber side using Tool J-2542. Start chamfered end of guide into cylinder head and drive into place using Tool J-2542 until end of guide is 1 1/32" below roof of combustion chamber. Ream guides with taper reamer J-5713-2

►*CAUTION Guides furnished with straight hole which must be taper-reamed.*

Valve Lifters: Hydraulic type.

►*HYDRAULIC VALVE LIFTER REPLACEMENT CAUTION:* Lifters are coated with a plastic "wrap" at the factory and in some instances this coating may flow into hole in pushrod seat Make sure that all traces of "wrap" are removed before installation

►*VALVE LIFTER BALL CHECK VALVE SPRING PRODUCTION CHANGE,* This spring has been eliminated in early production and is not used on any of the succeeding type lifters

►*HYDRAULIC VALVE LIFTER PRODUCTION CHANGE* Three types of lifters have been used in production as follows **1st Type**–Narrow groove in body (219" wide), and undercut section at camshaft end. **2nd Type**–Wide groove (400" wide), and undercut section at camshaft end **3rd Type**–Wide groove (.400" wide), without undercut section. *All types are interchangeable in all respects.*

Diameter–.8420- 8427" **Length**- 2.000".
Clearance (In Lifter Bore)– 0005-.0018"

Hydraulic Valve Lifter Overhaul: *See "Valve System" in Pontiac Special Data.*

Rocker Arms: Mounted individually on studs pressed into cylinder head

Rocker Arm Stud Replacement–*See "Valve System" in Pontiac Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves–Open 22° BTDC. Close 67° ALDC.
Exhaust Valves–Open 63° BLDC. Close 27° ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Pontiac Special Data.*

Crankcase Capacity: 5 qts. (refill), 6 qts (when filter changed).

Normal Oil Pressure: 35-45 lbs.
Pressure Regulator–In oil pump body. Not adjustable.

Oil Pump: Gear type, located on right rear bottom of cylinder crankcase and driven by distributor drive gear. Distributor timing is not affected by removal and installation of pump.

►*OIL PUMP NOISE:* "Grinding" noise may be caused by upper end of oil pump drive shaft rubbing in hole in cylinder block Examine outer diameter of shaft above upset nibs for rubbing and correct by reducing shaft diameter in this area by grinding or turning in a lathe. *CAUTION*–Do not remove nibs on shaft.

Pump Overhaul–*See "Oiling System" in Pontiac Special Data.*

Oil Filter: "Full Flow" type (optional). Replace filter element once every year or every 10,000 miles. *Use only AC Type PF-122 filter element.*

Oil Passage Plug (In Cylinder Head) Replacement: *See "Oiling System" in Pontiac Special Data.*

Crankcase Ventilator Air Filters: Located in oil filler cap and in ventilator outlet pipe. Clean and re-oil every 10,000 miles or oftener if necessary.

►*VENTILATOR OUTLET PIPE CAUTION: If pipe is removed from pushrod cover, make sure that when it is installed, it is not pushed into cover beyond the two locating points on pipe. Excessive oil consumption at high speed will result.*

Oil Pressure Gauge: AC No 1508195 Not electric. *See "Oil Gauges" in Miscellaneous Section.*

COOLING

►*LOWER RADIATOR HOSE STRIKING FRAME FRONT CROSSMEMBER CORRECTION Slot radiator mounting holes vertically and raise radiator so there is a minimum clearance of ¼" between hose and crossmember.*

Water Capacity (Without Air Conditioning): 22¾ qts. (without heater), 24½ qts. (with heater).
With Air Conditioning–23 qts (without heater), 25 qts. (with heater).

Pressure Valve: AC No 850549, 7 lbs.

Thermostat: Harrison No. 3133595 (151°), 3133596 (160°), 3133597 (170°)

Water Pump: Packless, sealed ball bearing shaft Serviced as an assembly.

Pump Removal–Drain radiator and engine block. Loosen generator adjusting strap and remove fan belt, fan, and

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

pulley. Remove water pump retaining nuts and lockwashers and remove pump.

Temperature Gauge: AC No. 1512874. Not electric. *See "Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Inland. Single plate, "Diaphragm", dry disc type with Long driven member.
See "Inland" in Clutch Section.
Clutch Disc No.—Pontiac No. 518130.

Pedal Adjustment: 3/4-1 1/8". Adjust at clutch fork-to-countershaft rod.

Overcenter Spring Adjustment—Remove overcenter spring, spring extension, and pushrod. Loosen lock screw which clamps spring lever to countershaft. Install Gauge J-5819, inserting pins which are closest together into holes in overcenter spring link and lever from which pushrod was removed. Then, while applying rotation to clutch countershaft to hold clutch pedal against stop, rotate overcenter spring lever until third pin in gauge can be inserted into overcenter spring lever. Tighten lockscrew securely, and replace spring, spring extension, and pushrod.

Removal: Remove transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing) and remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing. Tap bearing support from inside clutch housing to aid removal (*CAUTION*—Avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure installation in same manner to maintain balance), remove clutch cover bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member. Lower clutch assembly out of car.

Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retainer ring on transmission main drive gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

SYNCHRO-MESH TRANSMISSION

Own. All helical gear type.
See "Pontiac Synchro-Mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

►*TRANSMISSION SELECTOR LEVER INTERFERENCE CORRECTION (Causing inability to shift gears)*: If trunnion pin at steering column end strikes exhaust manifold, reverse pin in trunnion so that it points toward center of car.

Removal: 1) Disconnect speedometer cable, gearshift selector rod, control rod and backup lamp switch wires from transmission.

2) Disconnect rear universal joint (use a wire or rubber band to prevent trunnions from slipping off spider). Remove propeller shaft by sliding it to rear off transmission mainshaft splines.

3) To give clearance for removing upper capscrew holding transmission to clutch housing, remove transmission shift lever spring yoke and extension. Remove shift lever screw while holding shift lever in neutral (center position) to avoid damage to shift levers on shaft inside transmission. Remove shift lever.

4) To give clearance for removing lower capscrew holding transmission to clutch housing, remove transmission outer lever. Remove transmission upper capscrews and install two transmission guide pins (pins can be made by cutting the heads off two transmission capscrews and sawing a screw driver slot in the ends). *CAUTION*—Guide pins must be used since they support transmission and prevent distortion of clutch driven plate hub when lower transmission capscrews are removed.

5) Remove lower capscrews and move transmission to rear, bringing rear bearing extension into intersection of frame "X" members until main drive gear is free, then lower to floor. *CAUTION*—Use care to avoid getting dirt into front bearing when pulling transmission away from clutch housing.

Installation Note: Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support).

HYDRA-MATIC DRIVE

"Dual-Range" four speed automatic transmission and fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level every 2000 miles, drain and refill at 25,000 mile intervals.

Checking Fluid Level—Run engine 1½ minutes at a speed equivalent to 20 MPH with selector lever in "N". Reduce speed to **slow idle** and move selector lever to "D" position. Measure oil level on dipstick (under hood). Add fluid through dipstick tube until level is at "FULL" mark.

Capacity—Approximately 11 qts. (refill).
Recommended Fluid—Use G.M. Hydra-Matic Fluid or Automatic Transmission Fluid Type A.

►*OTHER HYDRA-MATIC SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics or Saginaw. Needle bearing type.

►*CAUTION*: Rear universal joint companion flange nut controls rear axle pinion bearing preload (must be adjusted whenever nut is loosened). *See "Pontiac Hypoid" in Rear Axle Section.*

REAR AXLE

►*REAR SPRING SHACKLE TO FRAME INTERFERENCE CORRECTION*: Make sure spring upper frame bushing is flush with frame bracket toward car centerline. If spring clamp is touching frame, bend as necessary for clearance.

Own. Hypoid gear, semi-floating with Hotchkiss Drive.
See "Pontiac Hypoid" in Rear Axle Section.
Axle Identification—Code mark stamped on pad at forward side of differential carrier between bottom web and right hand horizontal web. Axle shaft also marked with daub of paint on end of shaft to indicate ratio. See Code & Paint Markings in table below.

Axle Ratios & Code Marking

Ratio	Gear Teeth	① Code Mark	② Code Color
3.08-1 ③④⑤	40:13	0	Yellow
3.23-1 ③⑥	42:13	9	Brown
3.64-1 ⑦	40:11	6	Blue
3.90-1 ⑧	39:10	4	Red

①—See Rear Axle Identification.
②—Paint daub on end of axle shaft.
③—Hydra-Matic Drive.
④—Chieftain (27 Series).
⑤—Except Station Wagon.
⑥—Star Chief (28 Series), & Station Wagons.
⑦—Synchro-mesh Transmission (Standard).
⑧—Synchro-mesh Transmission (Optional).

Backlash—.003-.012" (new), .012" (used).
Axle Shaft Removal: Remove wheel, brake drum, four brake backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with Puller J-942 (do not drag axle shaft on seal).
Wheel Bearing Adjustment: None.

Differential Carrier Assembly Removal: Disconnect rear universal and wire trunnion in place (do not disengage spline joint at transmission), remove axle shafts and carrier flange capscrews. Withdraw carrier assembly from housing.

►*CAUTION: Rear universal joint companion flange nut controls rear axle pinion bearing preload. Readjust whenever nut loosened.*

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable, sealed (not refillable). Service by replacement.

Model	Front	Rear
Standard	5352225	5513345
Taxi & Police Cars	5352226	5513346

FRONT SUSPENSION

Independent. Shock absorber mounted within front coil spring.
See "Pontiac" in Front Suspension Section.

Kingpin Inclination—4½° at ½° camber.

Caster—Neg. 1° ±½°.

Camber—Pos. ½° ±½°.

Toe-In—0" to 1/16".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Toe-out on Turns—With inner wheel at 20°, outer wheel should be 18° 30'.

STEERING

Manual: Saginaw Worm & Roller. *See "Saginaw Worm & Roller" in Steering Section.*

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic cylinder. *See "Saginaw (GM) Power Steering" in Steering Section.*

►*POWER STEERING NOISE CORRECTION: See "Saginaw (GM) Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Bendix Hydraulic. Duo-servo, single anchor (without eccentric adjustment). Hand brake applies rear wheel service brakes.

See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.

Drum Diameter—12" (front), 11" (rear).
Wheel Cyl. Diameter—1 1/16" (front), 15/16" (rear).

Lining Width—2½" (front wheels), 1¾" (rear wheels).
Thickness—13/64".

Clearance—Tighten adjusting "star wheel" to point where wheel can just be turned by hand, then back off star wheel 14 notches.

Standard Master Cylinder: Forward of brake pedal on engine side of fire wall.

Checking Fluid Level—Maintain fluid level in master cylinder reservoir to 7/8" from gasket surface of filler neck.

Power Brakes: Bendix or Moraine Power Unit. *See "Moraine Power Unit" or "Bendix Power Unit" in Brake Section.*

Checking Fluid Level—Maintain fluid level in master cylinder reservoir to within ½" of top of filler cap opening.

Removal of Power Unit—Disconnect upper end of vacuum hose attached to inlet at vacuum cylinder, and hydraulic lines at master cylinder. Disconnect pushrod from pedal and wires from stop light switch. Remove nuts from U-bolt retaining pedal pivot bracket to steering column and remove pedal and bracket (with stop light switch assembly attached). Remove clutch pedal and steering column seals at floorboard. On Hydra-Matic cars, remove screws retaining power brake unit to floor pan and remove mounting plate with power unit attached. On Synchro-mesh cars, remove screws retaining power unit to mounting plate (power unit will rest on frame). Remove screws attaching mounting plate to floor pan and remove mounting plate, "jockeying" it as necessary to clear clutch pedal. Remove power unit. *CAUTION*—Do not carry or support brake unit by pushrod as pushrod may be pulled out of cylinder.

MISC. MECHANICAL

Windshield Wipers: Cable operated vacuum type.
See "Windshield Wipers" in Miscellaneous Section.

Air Conditioner: Harrison type with magnetic compressor clutch (compressor operates only with air conditioning switch turned on). *See "Pontiac Air Conditioning" in Miscellaneous Section.*

►*AIR CONDITIONING COMPRESSOR DRIVE BELT MISALIGNMENT CORRECTION: See "Pontiac Air Conditioning" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor.
See "Power Top Controls" in Miscellaneous Section.

Power Window Regulators: Electric. Reversible motor in each window. Available on front and rear door windows. *See "Power Window Regulators" in Miscellaneous Section.*

► *SPECIAL 285 HP "STRATO-STREAK" V8 ENGINE NOTE. This engine furnished as a factory installed option on all models except those with air conditioning. Service adjustments and specifications are included below.*

► *AIR CONDITIONED CAR SERVICE CAUTION Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	Series Designation
Star Chief	56-28
Star Chief Safari	56-27
Eight Seventy (870)	56-27
Eight Sixty (860)	56-27

SERIAL & ENGINE NUMBERS (Numbers are the same): On left front hinge pillar post and on raised pad at front of right hand cylinder block.

► *ENGINE & SERIAL NUMBER NOTE. Engine and Serial number (example P756H 1001) includes following identification information in sequence.*

Assembly Plant	Model ①	Year	Trans. Type ②	Serial No.
See below	7	56	H	1001

① –7 (27 Series). 8 (28 Series).
② –H (Hydra-Matic). S (Synchro-mesh).

Assembly Plant Designations

P–Pontiac	K–Kansas City
C–South Gate	L–Linden
W–Wilmington	A–Atlanta
F–Framingham	T–Arlington

TUNE-UP

► *SPECIAL 285 HP "STRATO-STREAK" V8 ENGINE SERVICE NOTE.* Service specifications and procedures are different than standard engines as noted below.

COMPRESSION PRESSURE: 145-155 lbs. (8.9-1 Head), 120-130 lbs. (7.9-1 Head), at 160-170 RPM cranking speed.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

► *VALVE ADJUSTMENT NOTE: Because of new design, it is no longer necessary to initially adjust the tappet clearance when cylinder head or valve system disturbed.*

MANIFOLD HEAT CONTROL: Thermostatic coil type mounted in right hand exhaust manifold.

► *DUAL EXHAUST NOTE:* Optional equipment on all but 860 four door station wagon. With control valve closed, most exhaust gases are discharged through left exhaust pipe.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders–RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7

SPARK PLUG GAP: .035", (.033-.038").

Spark Plugs - AC No. 46 or 45S. 14 mm. Torque to 25 ft. lbs. max. or finger tight plus ¾ turn with wrench.

COIL: Delco-Remy 1115087 (Exc. 285 HP Engine) 1115099 (285 HP Engine). *12 Volt.*
Ignition Current - (1115087) 1.2 amps. idling, 3.5 amps stopped, (1115099) 1.8 amps. idling, 4.0 amps. stopped. **Resistor** - Delco-Remy 1927809 (Exc. 285 HP Engine). 1931395 (285 HP Engine). **Resistance** - 1.40-1.65 ohms (1927809), .27-.39 ohm (1931395).

► *COIL RESISTOR NOTE Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by lead from starter solenoid to coil.*

DISTRIBUTOR: Delco-Remy 1110862 (Exc. 285 HP Engine); 1110875 (285 HP Engine). *12 Volt.*

► *1110875 DISTRIBUTOR (285 HP ENGINE) NOTE:* This distributor is equipped with a dual set of contacts and has centrifugal advance only (vacuum advance is not provided).

Condenser - Delco-Remy 1869704. **Capacity** - .18-.23 mfd.

Contact Point Set - Delco-Remy 1918148.

Breaker Gap - .016" (Exc. 285 HP Engine), .014-.018" (285 HP Engine).

Cam Angle - 26-33° (Exc. 285 HP Engine), 29°±1° (individual breaker operating), 34°±1° (both breakers operating - 285 HP Engine).

Breaker Arm Spring Tension–19-23 ozs.

Rotation–Counter-clockwise viewed from above.

Automatic Advance–1110862

Degrees Distr.	RPM	Degrees Eng.	RPM
0.5-2.5	525	1-5	1050
7-9	1050	14-18	2100
8-10	1400	16-20	2800
9-11	1800	18-22	3600

Automatic Advance–1110875

Degrees Distr.	RPM	Degrees Eng.	RPM
0-0.5	350	0-1	700
1-3	600	2-6	1200
5-7	1000	10-14	2000
6.5-8.5	1500	13-17	3000
8-10	2000	16-20	4000

Vacuum Spark Control (Exc. 285 HP Engine): 1116080.

Plunger Travel - 11/64-3/16"

Vacuum Advance

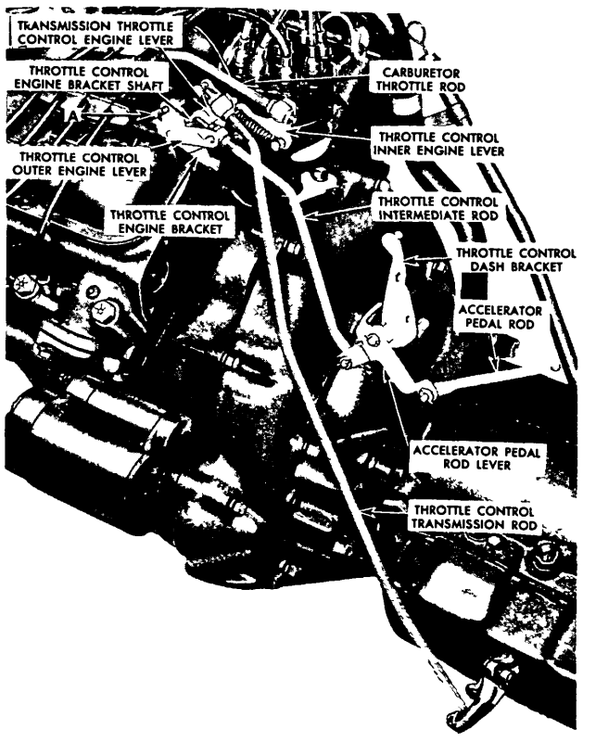
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6"
8	16	12.5-13.5"

IGNITION TIMING

Setting (Exc. 285 HP Engine)–5° BTDC, with distributor vacuum line disconnected and engine idling at 450-470 RPM (transmission selector in "N").

Setting (285 HP Engine) - 10° BTDC, with engine idling at 650 RPM (normal idle speed).

Timing Marks - Two marks on vibration damper, TDC and 5° BTDC. 5° mark is slanted Align correct mark with pointer on timing chain cover.

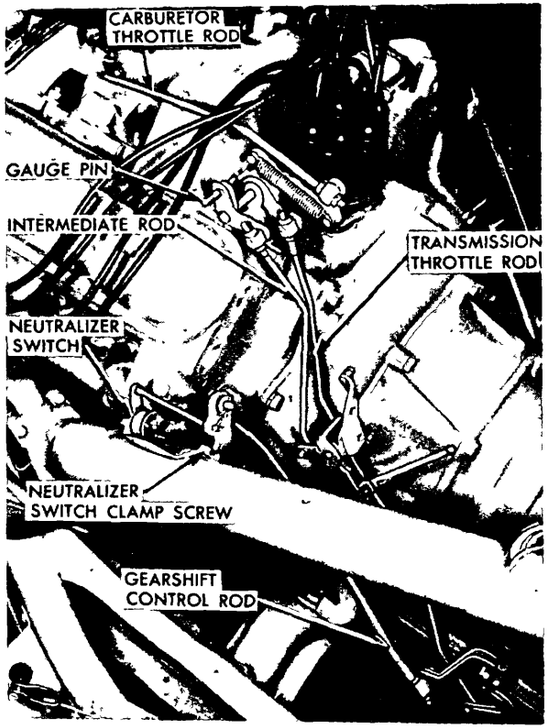


CARBURETOR

► *CARBURETOR APPLICATION: Rochester 2-barrel Carburetors are standard on 56-27 Series Cars. Rochester 4-Barrel Carburetors used on 56-28 Series Cars with Standard Transmission. Rochester or Carter 4-Barrel Carburetors used on 56-28 Series Cars with Hydra-Matic Transmission. Rochester or Carter 4-Barrel carburetors optional on 56-27 Series Cars. Two Rochester 4-Barrel Carburetors are standard on 285 HP Engine.*

► *FUEL FILTER PRODUCTION CHANGE (To Correct Carburetor Flooding Conditions):* New glass bowl, impregnated fiber element, precipitation type fuel filter is now being used in production and is available for installation on earlier cars. Filter Package, Part No. 854345, can be installed using one 90° elbow, Part No. 504500 or 114920.

THROTTLE LINKAGE ADJUSTMENT (DUAL-RANGE HYDRA-MATIC DRIVE CARS): *NOTE–On cars with "Strato-Flight Hydra-Matic" see below.* With engine at normal operating temperature, idle speed set at 450-470 RPM, and with transmission selector lever in "N" (neutral), install linkage adjustment pin J-2544 through holes in lever and bracket at rear of left head. Pin should fit freely in holes without lever movement. If free fit not obtained, adjust trunnion nuts on carburetor throttle valve rod until pin is free then tighten nuts securely. Leave gauge pin in hole. Loosen trunnion nuts on transmission throttle control rod and push rod downward until control outer lever is felt to touch end of its travel (top nut must not be touching trunnion). **Shorten throttle control rod two turns** by loosening lower nut two turns and tightening upper nut two turns. Remove gauge pin. With carburetor throttle in full open position and Downshift Return Spring fully extended, adjust throttle control intermediate rod trunnion (at lever on engine bracket) so that accelerator pedal clears floor mat by approximately 1/4" at closest point, tighten trunnion locknuts.



CONTINUED ON NEXT PAGE

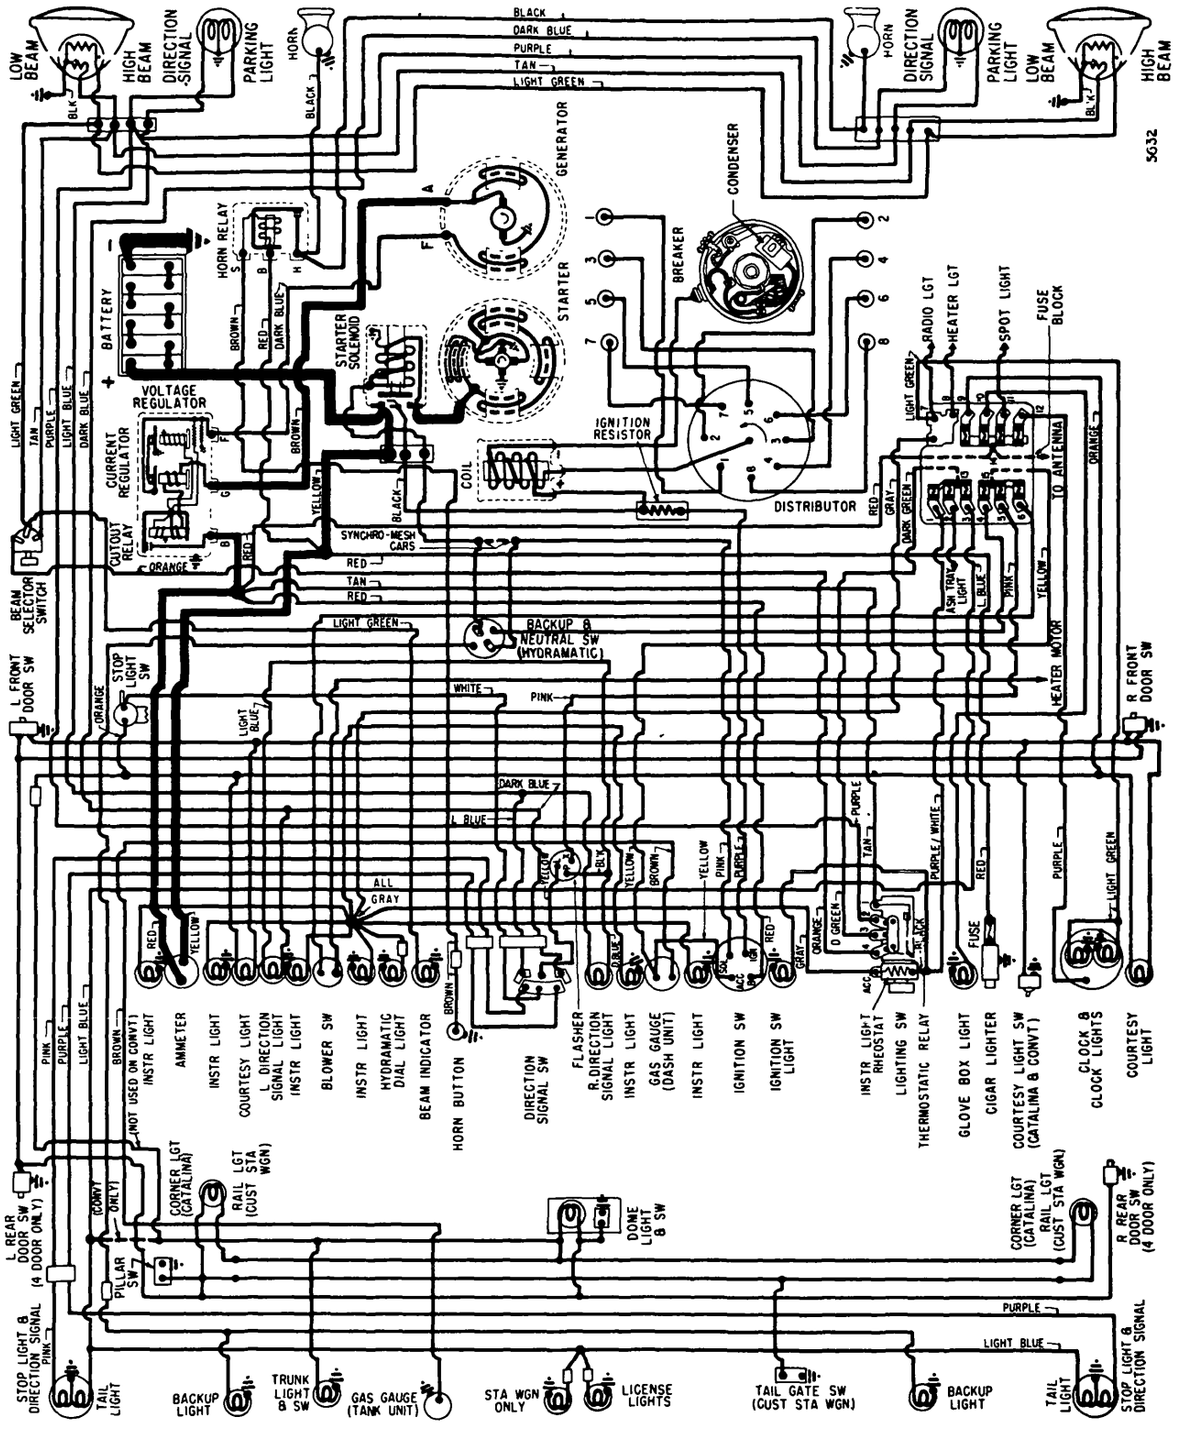
DUAL RANGE HYDRA-MATIC THROTTLE LINKAGE

CONTINUED FROM PRECEDING PAGE

THROTTLE LINKAGE ADJUSTMENT (STRATO-FLIGHT DUAL COUPLING HYDRA-MATIC DRIVE): *NOTE - cars with "Dual-Range Hydra-Matic" see above.* With engine at normal operating temperature and idle speed set to 460 RPM, adjust carburetor throttle rod so that linkage pin fits freely in gauge holes in throttle control bracket assembly. Loosen trunnion on transmission throttle control rod. Push transmission throttle control rod downward until transmission throttle

DUAL COUPLING HYDRA-MATIC THROTTLE LINKAGE

valve control lever is lightly against end of its travel (make sure that top trunnion locknut does not contact trunnion). While holding rod in this position tighten top trunnion locknut until it just touches trunnion, **then two complete turns further.** Tighten lower locknut securely. Adjust throttle control intermediate rod so that with carburetor throttle lever in wide open position there is 1/8" clearance between accelerator rod lever and underside of accelerator rubber bellows.



ROCHESTER 2GC

Rochester 2GC, No. 7008695 (Hydra-Matic Cars); No. 7008696 (Synchro-mesh Cars).

► *MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls 2-3-5-8, LEFT barrel 1-4-6-7.*

Idl S tting—1 1/2 turns open from lightly seated position (turn screws out for richer mixture).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Idle Speed (Except Air Condition ed)—450-470 RPM (with transmission in "N" position).

Idle Speed (Air Condition ed Cars)—510-530 RPM (with Air conditioner turned off).

Float Level—1-15/64" from air horn gasket to top of float assembly with assembly inverted. Use Gauge BT-105

Float Drop—1-29/32" between air horn gasket and lowest point on bottom of float with air horn held upright (Gauge BT-105)

Fast Idle: No adjustment of fast idle is provided. It is necessary however to have correct relationship between fast idle cam position and choke valve position. Check & adjust as follows Turn the idle screw in until it just contacts the second step of the fast idle cam, then with the screw on the second step and against the shoulder of the high step, the small end of Gauge BT-128 (.061"), should just fit into place between the upper edge of the choke valve and the wall of the air horn. To adjust, bend counter-weight tang on choke lever

Automatic Choke Setting: Centered (at index).

►*OTHER DATA. See "Rochester 2GC Carburetor" in Carburetion Section.*

Throttle Linkage Adjustment: See *CARBURETOR above.*

Fuel Pump Pressure - 4-5 lbs. at 450-1000 RPM.

ROCHESTER 4GC
(Standard Engine)

Rochester 4GC, No. 7008697 (Hydra-Matic Cars); No. 7007900 (Synchro-mesh Cars).

Service Replacement Carburetors—Rochester No. 7009906 (7008697), No. 7009905 (7007900).

►*ENGINE STALLING DURING WARM-UP CORRECTION: See "Rochester 4GC" Carburetor in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting—1-1/2 turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed—450-470 RPM (all models—with transmission in "N").

►*AIR CONDITIONED CAR NOTE. Adjust idle speed with Air Conditioner turned "ON".*

►*OTHER DATA: See "Rochester 4GC" Carburetor in Carburetion Section.*

Throttle Linkage Adjustment: See *CARBURETOR above.*

Fuel Pump Pressure: 4-5 lbs. at 450-1000 RPM.

CARTER WCFB
(Standard Engine)

Carter WCFB 2364S, SA (Hydra-Matic Drive Cars).

►*ENGINE STALLING DURING WARM-UP CORRECTION: See "Carter WCFB" Carburetor in Carburetion Section.*

►*LEFT TURN "CUT-OUT" CORRECTION: See "Carter WCFB" Carburetor in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting—1-1/4—2-1/4 turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed—450-470 RPM (all models—with transmission in "N").

►*AIR CONDITIONED CAR NOTE Adjust idle speed with Air Conditioner "ON".*

►*OTHER DATA: See "Carter WCFB" Carburetor in Carburetion Section.*

Throttle Linkage Adjustment: See *CARBURETOR above.*

Fuel Pump Pressure: 4-5 lbs. at 450-1000 RPM.

ROCHESTER 4GC
(285 HP Engine)

Rochester 4GC, No. 7009820 (Two Used).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor. RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Speed, Mixture Adjustment & Synchronization: Turn idle mixture screws in finger tight and then open each screw on both carburetors 2-1/2 turns. Proceed as follows

1) Hold choke valve fully open (use a pump return spring or other light spring meshed over top edge of choke valve and dividing wall of air horn in such a manner as to provide a slight clamping action). Remove cotter pin and anti-rattle spring and disconnect carburetor throttle rod (rod between bellcrank at rear of engine and front carburetor) from throttle lever of front carburetor.

2) Remove cotter pin and anti-rattle spring and disconnect inter-connecting rod (rod between throttle valve levers of front and rear carburetors), and remove inter-connecting rod. Spacer washer between rod and throttle levers may be left in position. Check pins in throttle levers for tightness. Tighten if necessary.

3) Back off idle speed adjusting screws until throttle valves are fully closed (hold throttles closed with suitable springs hooked between throttle levers and some point on engine). Turn idle speed adjusting screws in on both carburetors until they **just touch** fast idle cams *(CAUTION—It is very important that idle screws are contacting cam equally and from this point to completion of adjustment, screws are turned equally to maintain balance between carburetors).*

4) Adjust trunnion on end of throttle inter-connecting rod so that rod can be installed over pins on carburetor throttle levers freely without changing throttle lever position Install inter-connecting rod over pins of both carburetors (trunnion toward rear and front end of rod pointing toward engine). Make sure that spacers are still in position between rod and throttle levers.

5) Turn each idle speed adjusting screw in 1 1/4 turns (to give approximate idle adjustment). Check throttle inter-connecting rod for freeness and if found to be tight, repeat adjustment as outlined above. Remove springs holding throttle valves closed.

6) Install anti-rattle spring and cotter pin at rear end of inter-connecting rod. Install carburetor throttle, anti-rattle spring and cotter pin on throttle lever at front carburetor. Check rods to see that trunnions on rear of both rods are positioned so flats on front ends of rods are parallel with throttle lever. Remove springs holding choke valves open. Start engine and allow to warm up thoroughly Install tachometer.

7) With engine warm and fast idle cam fully released, turn both idle speed screws equally to obtain an idle speed of 650 RPM. Adjust idle mixture screws for best quality and highest engine idle. Recheck engine idle speed and readjust to 650 RPM if necessary.

►*OTHER DATA: See "Rochester 4GC" Carburetor in Carburetion Section.*

Throttle Linkage Adjustment: See *CARBURETOR above. NOTE - Normal idle speed 650 RPM.*

Fuel Pump Pressure: 4-5 lbs. at 450-1000 RPM.

CARB. EQUIPMENT

►*HIGH FUEL PUMP PRESSURE CORRECTION (Causing Carburetor to Flood):* May be caused by the diaphragm being installed with insufficient slack. *See "Fuel System Notes" in Pontiac Special Data*

►*FUEL FILTER PRODUCTION CHANGE: See CARBURETOR above.*

Fuel Pump: AC. Replacement - AC No. 4123 (Fuel & Vacuum - used with vacuum wipers), AC No. 4239 (Fuel only - used with electric wipers).

Pressure - 4-5 lbs. at 450-1000 RPM.

►*FUEL PUMP PRESSURE CAUTION - If pressure too high or too low, replace pump.*

Fuel Filter: Disc type. *See "Fuel System Notes" in Pontiac Special Data & "Production Change" above.*

Gasoline Gauge: AC Electric type.

Dash Unit - AC No. 1518504.

Tank Unit - AC No. 1518395. (Exc. Sta. Wgn.), No. 1518524 (860 Sta. Wgn. - 4-Dr.), No. 1518467 (870 4-Dr., 860 2-Dr., Star Chief Safari Sta. Wgns).

►*PASS. CAR IMPROPER GASOLINE GAUGE READING CORRECTION (EXC. STA. WGN.):* Caused by tank unit rheostat float arm being positioned improperly. To correct condition, remove unit, place in vise, and bend float arm so that it is 7/32" lower in tank. Condition has been corrected in production. Units so corrected have a daub of red paint on tank unit outlet tube (over 90 day period).

See "Fuel Gauges" in Carburetion Section.

BATTERY

Standard - Delco 2SMR53. *12 Volt,* 9 plate, 53 ampere hour capacity (20 hr rate).

Air Conditioning & Police - Delco 3SMR72. *12 Volt,* 11 plate, 72 ampere hour capacity (20 hr. rate).

Battery Ground - Negative Left front corner of left head.

Engine Ground - Between engine and fender at battery ground

STARTER

Delco-Remy 1107641. *12 Volt.*

Armature - Delco-Remy 1932185.

Drive—Overrunning clutch (solenoid pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—35 ozs. minimum

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
10.5 ft. lbs	Lock	5 4	. 470

Starting Switch: Delco-Remy Solenoid 1119781 (no relay) mounted on starter and controlled by Ignition & Starter Switch, Delco-Remy No 1116472. Neutral Safety Switch used on Hydra-Matic Drive Cars

Neutral Safety & Back-up Light Switch: Delco-Remy 1998039. At lower end of steering column Connected

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

in starter control circuit so that starter operates only when selector lever in "N" (Neutral).

Adjustment - *See "Dual Range" or "Dual Coupling" Hydra-Matic Drive in Transmission Section.*

GENERATOR

Delco-Remy. *12 Volt.* Application as follows

Delco-Remy Generator No.	Armature
1100304 (Standard)	1928952
1102052 (Air Cond.) Early	1932900
1102073 (Air Cond.) Later	1932900
1102054 (Hvy. Duty)	1932900
1100333 (285 HP Eng.) Ⓒ	1928952

Ⓒ - Replacement Generator No. 1100313.

Maximum Charging Rate - *See Voltage Regulator.*

Performance Data - Cold

Generator	Amperes	Volts	RPM
1100304	25	14.0	2780
1102052	35	14.0	2380
1102073	35	14.0	2100
1102054	35	14.0	2380
1100333	25	14.0	2570

Rotation - Counter-clockwise at commutator end.

Brush Spring Tension - 28 ozs.

Field Current - 1.5-1.62 amps. (1100304, 1100333), 1.62-1.82 amps. (1102052, 1102073, 1102054). All at 12.0 volts (80°F.).

Belt Adjustment: ¼" belt deflection with approximately 8 lbs. (5 lbs. with Air Conditioning) pressure midway between pulleys.

REGULATOR

Delco-Remy Regulator No.	Use with Gen. No.
1119000	1100304, 1100333
1119002	1102052, 1102073, 1102054

►*NOTE: Regulator is "1119000 Series". Specifications below are for "Normal" settings.*

Checking & Adjusting - *See "1119000 Series" Regulator in Electrical Section.*

Cut-Out Relay

Cuts In–11.8-13.5 volts (hot).

Contact Gap–.020".

Air Gap–.020" (with contacts just closed).

Voltage Regulator

Setting–13.8-14.8 volts (hot)

Air Gap–.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting – *See "1119000 Series" Regulator in Electrical Section.*

Current Regulator

Setting (1119000) - 23-27 amps. (hot).

Setting (1119002) - 32-37 amps. (hot).

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "1119000 Series" Regulator in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*

Direction Signals: *See Electrical Section.*

Automatic Eye: *See Electrical Section.*

Lighting Switch Removal: Remove one battery cable from battery. Pull headlight switch knob to "on" position, push latch button on side of switch assembly and pull out switch knob assembly. Screw bushing from switch assembly allowing switch assembly to be removed from instrument panel.

Stop Light Switch Location: Mechanical type switch located on bracket attached to steering column behind instrument panel.

Back-Up Light Switch (Synchro-mesh Cars): Located on lower steering column shift lever.

FUSES: Fuses listed below (except as noted) are located on a fuse block behind instrument panel on dash to left of steering column.

Instrument Panel–4 amps.
Hood Ornament & Ash Tray–7½ amps.
Stop Lights, Dome & Courtesy Lights–7½ amps.
Tail Lights–7½ amps.
Back-up Light–7½ amps.
Glove Box & Underhood Light–7½ amps.
Direction Signal & Brake Light–7½ amps.
Spot Lights–7½ amps.
Heater & Defroster–7½ amps.
Radio & Clock–7½ amps.
Air Conditioner–30 amp. Located in a line holder either on defroster core housing or if car not equipped with defroster, on front of dash where defroster should be.

LIGHTING THERMOSTATIC CIRCUIT BREAKER: *12 Volt.* 22 amperes. Located on lighting switch.

HORNS: Delco-Remy. Dual horns operated by relay (Std.).

Low Pitch - Delco-Remy 1999763.
High Pitch - Delco-Remy 1999768.
Optional - (Trumpet type) Delco-Remy 1999588, (Tritone type) Delco-Remy 1999793.

Horn Relay: Delco-Remy 1116781. *12 Volt.*

Air Gap - .014". **Point Opening** - .027".
Closing Voltage - 5.0-9.5 volts.

►*HORN RELAY CORROSION CAUTION:* An irregular shaped opening occurs where left hand radiator baffle and radiator cross bar join in front of horn relay. This opening should be sealed with auto body putty or similar compound. At time sealing operation is performed, relay mounting screws should be removed and base inspected for corrosion. If evidence of corrosion exists, relay should be replaced.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. V8 Valve-in-head.

Engine	Bore	Stroke	Displacement
All	3.94"	3.25"	316.6 cu. ins.

Engine	① Compr. Ratio	② Rated HP	Dev. HP
S M ③	8.9-1	49.6	192 at 4400 RPM
S M ④	8.9-1	49.6	216 at 4800 RPM
H M ③	8.9-1	49.6	205 at 4600 RPM
H M ④	8.9-1	49.6	227 at 4800 RPM
Special ⑤	10.0-1	49.6	285 at 5100 RPM

①–S M (Synchro-mesh), H M (Hydra-Matic).
②–7.9-1 Compression Ratio Optional.
③–Standard engine with 2-Barrel Carb.
④–Standard engine with 4-Barrel Carb.
⑤–Special engine optional on all models except Air Conditioner equipped cars.

Compression & Vacuum Reading - *See TUNE-UP above.*

ENGINE REMOVAL: *See "Engine" in Pontiac Special Data.*

OIL PAN REMOVAL: Remove right and left engine side side aprons. Remove steering idler lever support attaching screws and lower steering linkage as far as possible. Disconnect exhaust crossover pipe and jockey it around to a position where it can be removed without forcing. Remove flywheel housing lower cover and front shield. Loosen crankcase ventilator outlet pipe brace and swing brace out of way.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Pontiac Special Data.*

►*CYLINDER HEAD REPLACEMENT CAUTION. 1956 cylinder heads are not interchangeable with previous models.*

►*285 HP ENGINE CYLINDER HEAD CAUTION: This cylinder head not interchangeable with other 1956 models.*

Oil Passage Plug (In Cylinder Head) Replacement: *See "Oiling System" in Pontiac Special Data.*

TIGHTENING TORQUES: *See "Tightning Specifications" in Pontiac Special Data.*

INTAKE MANIFOLD: With **Special** flat washers under attaching nuts, tighten nuts evenly to 40-45 ft. lbs.

ENGINE MOUNTINGS: *See "Engine Mountings" in Pontiac Special Data.*

PISTONS

Cast aluminum alloy, slipper skirt, with piston pin offset 1/16" toward right side of engine.

►*DIFFERENT PISTONS USED IN "HIGH" & "LOW" COMPRESSION ENGINES:* Pistons identified as follows: High compression pistons are flat on top, and low compression pistons are "dished" out. Low compression pistons also have an "L" stamped on rear side near pin boss.

Removal–Pistons and rods removed from above.

Replacement Pistons: Std. size, and .005", .010", .020", .030" Oversize.

Fitting New Pistons: Clearance .0007-.0017" (measured). just far enough above bottom of skirt to make sure micrometer is in full contact, and perpendicular to piston pin boss). Use a .0015" x ½" feeler gauge and spring scale. With piston and cylinder clean and dry, insert inverted piston and feeler gauge into lower half of cylinder (feeler 90° from pin hole). Pull required to withdraw feeler should be 8-15 lbs.

Installing Pistons: Install with notch in piston head and "F" mark on side of piston toward front of engine. *See Rod Installation.*

PISTON PINS

Pin is floating in piston and connecting rod and is retained by snap rings at each end.

Diameter–.9803-.9807".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Pin Fit in Piston - .0000-.0004" loose with piston and pin at room temperature. When pin is toward high limit (.0004") pin can be inserted with light hand pressure, *pin should not fall through of its own weight.* When pin toward low limit (.0000"), considerable hand pressure will be required (a brass drift can be used to tap pin into place with light pressure).

Pin Fit in Connecting Rod - .0001-.0006" loose.

Replacement Pins: Std. size, .001", .003" Oversize.

PISTON RINGS

Upper compression ring is chrome plated. Both compression rings are taper faced and have either a chamfer or a step on inside diameter of top side.

Ring	Width	End Gap	Side Clearance
Upper Compr.	.078"	.010-.020"	.0012-.0027"
Lower Compr.	.078"	.008-.020"	.0012-.0032"
Oil	.183"	.015-.035"	.0025-.0095"

Installing Rings: Install compression rings with chamfer or step (on inside diameter) toward top of cylinder. Oil ring can be installed either way.

Replacement Rings: Std. size, .005", .010", .020", .030" Oversize.

CONNECTING RODS

Length—6.623-6.627" (center-to-center).
Crankpin Journal Diameter—2.2488-2.2498".
Connecting Rod Upper Bushing (Piston Pin) Removal & Installation—*See "Connecting Rods & Bearings" in Pontiac Special Data.*
Lower Bearing—Replaceable precision type.
Clearance—.0009-.0029" (new).
Side play—.006-.011".

Replacement Bearings: Std. size, .001", .002" Undersize.

Installing Rods: Install rods **2-4-6-8 (right bank)** with machined boss at lower end of rod toward the **rear.** Install rods **1-3-5-7 (left bank)** with boss toward the **front** of engine. When installed, machined bosses on rods will face each other. *See Pistons above.*

CRANKSHAFT

►*REAR MAIN BEARING PRODUCTION CHANGE:* Engines built beginning Jan. 3, 1956 have new type rear bearing shell. However, a number of engines were built after Dec. 16, 1955 with grooves machined in block and cap but with first type bearing shells installed. If leaks are encountered on engines having new groove and first type shells, second type shells may be installed. Part No. of new shell is 522825 (one upper and one lower). New shells have oil drain groove and three oil drain holes.

Journal Diameter—2.2498-2.499". Five bearings.
Bearings—Steel backed babbitt lined inserts. No shims.
Clearance—.0005-.003" (Except Rear), .0008-.0033" (Rear).

End Thrust: Taken by No. 4 (rear center) main bearing.
Endplay—.0035-.0085".

Replacement Bearings: Std. size, .001", .002" Undersize.

Crankshaft Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Pontiac Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Pontiac Special Data.*

Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Pontiac Special Data.*

FLYWHEEL INSTALLATION (Hydra-Matic Cars): *See "Flywheel" in Pontiac Special Data.*

CAMSHAFT

►*CAMSHAFT IDENTIFICATION: Camshafts can be identified by numeral stamped on front end of shaft or absence of that numeral. Standard engine with synchro-mesh transmission has numeral "0", standard engine with Hydra-Matic transmission has numeral "4", and 285 HP engine has no marking.*

Journal Diameters—1.8992-1.8997". Five bearings.
Clearance—.0015-.0025".

End Thrust: Steel thrust plate located behind camshaft sprocket. Replace if worn or grooved.
Endplay—.003-.007".

Timing Chain: Length—60 links.
Timing Chain Installation—*See "Timing Chain" in Pontiac Special Data.*

Camshaft Setting: Both sprockets marked '0'. Mesh chain with sprockets turned so that marks are adjacent and in line with straight edge across shaft centers.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Pontiac Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Pontiac Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): Installation - *See "Engine Front Cover" in Pontiac Special Data.*

VALVES

►*VALVE REPLACEMENT CAUTION: Valves used on 285 HP engine are 3/32" longer than valves used on other engines (not interchangeable).*

►*VALVE ADJUSTMENT NOTE: Because of new design, it is no longer necessary to initially adjust the tappet clearance when cylinder head or valve system is disturbed. See "Rocker Arms" below.*

Tappet Clearance: None in service (hydraulic).

Valve Specifications

Valve	Head Diam.	Stem Diam.	Length
Intake	1.778-1.784"	.3407-.3417"	① 5.250"
Exhaust	1.497-1.503"	.3407-.3417"	② 5.230"

Valve	Seat Angle	Lift	③ Stem Clearance
Intake	30° ⑤	.370" ④	.0002-.0008"
Exhaust	45° ⑤	.370" ④	.0002-.0008"

①—5.340" (Special 285 HP Engine).
②—5.330" (Special 285 HP Engine).
③—In small end of taper reamed valve guide hole in head (valve guide integral with head), or hole in valve guide (pressed into head). Correct fit of valve stem in in guide is when valve will just drop through of its own weight and with no perceptible side play.
④—Standard Synchro-mesh Engine. Standard Hydra-Matic Engine (.400"). Special 285 HP Engine, Intake (.409"), Exhaust (.413").
⑤—Valve face angle 29° (Intake), 44° (Exhaust).

Valve Seat Width - 3/64-1/16" (Intake); 1/16" (Exhaust).

Replacement Valves: Furnished Standard size, .001", .003" oversize.

Valve Stem Oil Seal: Neoprene seal installed in second groove of intake valve stems. An oil splash shield is installed over top of inner intake valve spring (except 285 HP Engine).

Checking Valve Stem Length: *See "Valve System" in Pontiac Special Data.*

Valve Springs: Inner and outer valve springs used.

Standard Engines

Valve	Inner Spring Pressure	Inner Spring Length	Outer Spring Pressure	Outer Spring Length
Open	54-60 lbs.	1.153"	98-106 lbs.	1.203"
Closed	23-29 lbs.	1.483"	55-61 lbs.	1.533"

285 HP Engines

Valve	Inner Spring Pressure	Inner Spring Length	Outer Spring Pressure	Outer Spring Length
Open	95 lbs.	1.08"	128 lbs.	1.13"
Closed	33 lbs.	1.48"	59 lbs.	1.53"

►*285 HP ENGINE VALVE SPRING NOTE:* Interference may be found between inner and outer valve springs during assembly. In such a case, springs must be forced together.

Valve Guides: Cast integral with cylinder head. When valve stem clearance excessive, ream guides using Valve Guide Reamer J-5713 (.001"), J-6341 (.003"). *See Valve Guide Note Below.*

►*VALVE GUIDE NOTE:* Some production engines may be found with removable type guides (same as 1955 models). Guides have tapered hole (.0015" taper to inch), with greater clearance at rocker arm end. To replace guide, drive old guide out from combustion chamber side using Tool J-2542. Start chamfered end of guide into cylinder head and drive into place using Tool J-2542 until end of guide is 1 1/32" below roof of combustion chamber. Ream guides with taper reamer J-5712-2. *CAUTION* - Guides furnished with straight hole which must be taper-reamed.

Valve Clearance in Guide - .0002-.0008". Valve should just fall through guide of own weight and with no perceptible side play.

Valve Lifters: Hydraulic type. *NOTE* - Three different type lifters used in production. Lifters used on standard engines have ribs or a radial groove on lifter body. Lifters used in 285 HP engine are identified by letter "A" stamped on lifter body and area that contacts cam has a lubrited (blackened) finish. The 285 HP engine lifter has spring under ball check valve and redesigned ball check valve retainer. *CAUTION* - It is extremely important that regular production lifters are not used in the 285 HP engine.

Diameter - .8424-.8427". **Length** - 2.000".
Clearance (In Lifter Boss) - .0013-.0028".

Hydraulic Valve Lifter Overhaul: *See "Valve System" in Pontiac Special Data.*

Rocker Arms: Mounted individually on studs pressed into cylinder head.

Installation of Rocker Arm to Stud - When valve rocker arm ball retaining nut is tightened to 15 ft. lbs., proper location of rocker arm, with respect to pushrod and valve lifter, is automatically assured.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Rocker Arm Stud Replacement - *See "Valve System" in Pontiac Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Synchro-mesh Engines

Intake - Opens 22° BTDC. Close 67° ALDC.
Exhaust - Opens 63° BLDC. Close 27° ATDC.

Hydra-Matic Engines

Intake - Opens 27° BTDC. Close 73° ALDC.
Exhaust Opens 69° BLDC. Close 31° ATDC.

Special 285 HP Engines

Intake - Opens 34° BTDC. Close 75° ALDC.
Exhaust - Opens 81° BLDC. Close 37° ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Pontiac Special Data.*

Crankcase Capacity: 5 qts. (refill), 6 qts. (when filter changed).

Normal Oil Pressure: 35-45 lbs. at 40 MPH.

Pressure Regulator—In oil pump body. Not adjustable.

Oil Pump: Gear type, located on right rear bottom of cylinder crankcase and driven by distributor drive gear. Distributor timing is not affected by removal and installation of pump.

►*OIL PUMP NOISE:* "Grinding" noise may be caused by upper end of oil pump drive shaft rubbing in hole in cylinder block. Examine outer diameter of shaft above upset nibs for rubbing and correct by reducing shaft diameter in this area by grinding or turning in a lathe. *CAUTION*—Do not remove nibs on shaft.

Pump Overhaul—*See "Oiling System" in Pontiac Special Data.*

Oil Filter: "Full Flow" type (optional). Replace filter element once every year or every 15,000 miles. *Use only AC Type PF-122 filter element.*

Oil Passage Plug (In Cylinder Head) Replacement: *See "Oiling System" in Pontiac Special Data.*

Crankcase Ventilator Air Filters: Located in oil filler cap and in ventilator outlet pipe. Clean and re-oil every 10,000 miles or oftener if necessary.

►*VENTILATOR OUTLET PIPE CAUTION: If pipe is removed from pushrod cover, make sure that when it is installed, it is not pushed into cover beyond the two locating points on pipe. Excessive oil consumption at high speed will result*

Oil Pressure Gauge: AC No. 1508429. Not electric.

COOLING

Water Capacity: Without Heater - 22¾ qts.
With Underseat Heater - 24½ qts.
With Hydra-Matic Drive - 23½ qts.
With Hydra-Matic Drive & Air Cond. - 23 qts.
With Underseat Heater & Air Cond. - 25 qts.

Pressure Valve: AC No. 850795 (Exc. Air Cond.). 7 lb. type. AC No. 850800 (Air Cond.). 13 lb. type. Radiator filler cap.

Thermostat: Harrison No. 3133596 (Exc. Air Cond.) 160° No. 3126289 (Air Cond.) 160°. No. 3133597 (Exc. Air Cond. - use with permanent anti-freeze) 170°.

Water Pump: Packless, sealed ball bearing shaft. Serviced as an assembly.

Temperature Gauge: AC No. 1513171. Not electric. *See "Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Inland. Single plate, "Diaphragm", dry disc type with Long driven member.
See "Inland" in Clutch Section.

Clutch Disc No. - Pontiac No. 518130.

Pedal Adjustment: 7/8-1 1/8". Adjust at clutch fork-to-countershaft rod.

Overcenter Spring Adjustment—Remove overcenter spring, spring extension, and pushrod. Loosen lock screw which clamps spring lever to countershaft. Install Gauge J-5819, inserting pins which are closest together into holes in overcenter spring link and lever from which pushrod was removed. Then, while applying rotation to clutch countershaft to hold clutch pedal against stop, rotate overcenter spring lever until third pin in gauge can be inserted into overcenter spring lever. Tighten lockscrew securely, and replace spring, spring extension, and pushrod.

Removal: Remove transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing) and remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing. Tap bearing support from inside clutch housing to aid removal (*CAUTION*—Avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure installation in same manner to maintain balance), remove clutch cover bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member. Lower clutch assembly out of car.

Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retainer ring on transmission main drive gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

SYNCHRO-MESH TRANSMISSION

Own. All helical gear type.
See "Pontiac Synchro-Mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section*

Removal: 1) Disconnect speedometer cable, gearshift selector rod, control rod and backup lamp switch wires from transmission.

2) Disconnect rear universal joint (use a wire or rubber band to prevent trunnions from slipping off spider). Remove propeller shaft by sliding it to rear off transmission mainshaft splines.

3) To give clearance for removing upper capscrew holding transmission to clutch housing, remove transmission shift lever spring yoke and extension. Remove shift lever screw while holding shift lever in neutral (center position) to avoid damage to shift levers on shaft inside transmission. Remove shift lever.

4) To give clearance for removing lower capscrew holding transmission to clutch housing, remove transmission outer lever. Remove transmission upper capscrews and install two transmission guide pins (pins can be made by cutting the heads off two transmission capscrews and sawing a screw driver slot in the ends). *CAUTION*—Guide pins must be used since they support transmission and prevent distortion of clutch driven plate hub when lower transmission capscrews are removed.

5) Remove lower capscrews and move transmission to rear, bringing rear bearing extension into intersection of frame "X" members until main drive gear is free, then lower to floor. *CAUTION*—Use care to avoid getting dirt into front bearing when pulling transmission away from clutch housing.

Installation Note: Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support).

HYDRA-MATIC DRIVE

"Dual Range" or "Dual Coupling". Four speed automatic transmission and fluid coupling. *NOTE* - "Dual Range" Hydra-Matic used on early Series 27 cars (same as used in 1955). "Strato-Flight (Dual Coupling)" Hydra-Matic used on later Series 27 and other cars.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual Range" or "Dual Coupling" Hydra-Matic Drive in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Dual Range" or "Dual Coupling" Hydra-Matic Drive in Transmission Section.*

Lubrication - Check fluid level every 2000 miles, drain and refill every 25,000 miles. Use "G.M. Hydra-Matic Fluid" or Automatic Transmission Fluid "Type A" (marked AQ-ATF on container).

Checking Fluid Level (Dual Range) - Run engine 1½ minutes at a speed equivalent to 20 MPH with selector lever in "N". Reduce speed to **slow idle** and move selector lever to "D" position. Measure oil level. Add fluid to bring level to "FULL" mark on dipstick.

Checking Fluid Level (Dual Coupling) - With selector lever in "P" position, engine at normal operating temperature and idling at normal idling speed (450-470 RPM) measure oil level. Add fluid to bring level to "FULL" mark on dipstick

Capacity - (Dual Range) 11 qts. refill. (Dual Coupling) 9½ qts. refill.

►*OTHER HYDRA-MATIC SERVICE DATA: See "Dual Range" or "Dual Coupling" Hydra-Matic Drive in Transmission Section.*

UNIVERSALS

Mechanics or Saginaw. Needle bearing type.

►*CAUTION:* Rear universal joint companion flange nut controls rear axle pinion bearing preload (must be adjusted whenever nut is loosened). *See "Pontiac Hypoid" in Rear Axle Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REAR AXLE

►*REAR SPRING SHACKLE TO FRAME INTERFERENCE CORRECTION*· Make sure spring upper frame bushing is flush with frame bracket toward car centerline If spring clamp is touching frame, bend as necessary for clearance

Own. Hypoid gear, semi-floating with Hotchkiss Drive *See "Pontiac Hypoid" in Rear Axle Section.*

Axl Id ntificati n—Code mark stamped on pad at forward side of differential carrier between bottom web and right hand horizontal web Axle shaft also marked with daub of paint on end of shaft to indicate ratio. See Code & Paint Markings in table below

Axl Rati s & Code Marking

Rati	G ar T th	①Code Mark	②Code Color
3 08-1③⑨⑤	40 13	0	Yellow
3.23-1③⑥	42 13	9	Brown
3.64-1⑦	40·11	6	Blue
3.90-1⑧	39 10	4	Red

①—See Rear Axle Identification
②—Paint daub on end of axle shaft.
③—Hydra-Matic Drive
④ — 27 Series.
⑤ — Except Station Wagon.
⑥ — 28 Series & Station Wagons.
⑦—Synchro-mesh Transmission (Standard)
⑧—Synchro-mesh Transmission (Optional)

Backlash—.003- 012' (new), 012" (used)

Axl Shaft R m val: Remove wheel, brake drum, four brake backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged) Pull shaft with Puller J-942 (do not drag axle shaft on seal).

Wh l B aring Adjustment: None

Diff r ntial Carri r Ass mbly Removal· Disconnect rear universal and wire trunnion in place (do not disengage spline joint at transmission), remove axle shafts and carrier flange capscrews. Withdraw carrier assembly from housing

►*CAUTION: R ar universal joint companion flange nut controls r ar axl pinion bearing preload. Readjust whenev r nut loos n d.*

SHOCK ABSORBERS

D lc . Direct acting, non-adjustable, sealed (not refillable) Service by replacement

Model	Front	Rear
Standard	5522515	5524031
Taxi, Police, H D	5352226	5513346

FRONT SUSPENSION

Independent. Shock absorber mounted within front coil spring
See "Pontiac" in Front Suspension Section.

Kingpin Inclination - 1°20' at 0° camber

Caster—Neg 1°±½°

Camber—Pos ½°±½°

Toe-In—0' to 1/16'

Toe-Out on Turns - With inner wheel at 20°, outer wheel should be 18-19°.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (In Line). *See 'Saginaw (In Line)" Power Steering in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic. Duo-servo, single anchor (without eccentric adjustment). Hand brake applies rear wheel service brakes.

See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.

Drum Diameter - 12" (front), 11" (rear).
Wheel Cyl. Diameter - 1 1/16" (front), 15/16" (rear).
Lining Width - 2¼" (front wheels), 1¾" (rear wheels).
Thickness - 13/64".
Clearance—Tighten adjusting "star wheel" to point where wheel can just be turned by hand, then back off star wheel 14 notches.

Standard Mast r Cylind r: Forward of brake pedal on engine side of fire wall.

Ch cking Fluid L v l—Maintain fluid level in master cylinder reservoir to 7/8" from gasket surface of filler neck.

Power Brakes: Bendix or Moraine Power Unit. *S e "Moraine Power Unit" or "Bendix Power Unit" in Brake Section.*

Checking Fluid Level—Maintain fluid level in master cylinder reservoir to within ½" of top of filler cap opening.
